SMITHSONIAN HERPETOLOGICAL INFORMATION SERVICE

The first number of the SMITHSONIAN HERPETOLOGICAL INFORMATION SERVICE series appeared in 1965. SHIS number 1 was a list of herpetological publications arising from within or through the Smithsonian Institution and its collections entity, the United States National Museum (USNM). The latter exists now as little more than the occasional title for the registration activities of the National Museum of Natural History. No. 1 was prepared and printed by J. A. Peters, then Curator-in-Charge of the Division of Amphibians & Reptiles. The availability of a NASA translation service and assorted indices encouraged him to continue the series and distribute these items on an irregular schedule.

The series continues under that tradition. Specifically, the SHIS series prints and distributes translations, bibliographies, indices, and similar items judged useful to individuals interested in the biology of amphibians and reptiles, and unlikely to be published in the normal technical journals. We wish to encourage individuals to share their bibliographies, translations, etc. with other herpetologists through the SHIS series. If you have such an item, please contact George Zug for its consideration for distribution through the SHIS series. Contributors receive a pdf file for personal distribution

This special publication issue is available only as a CD [\$5.00 each] from the authors at the Division of Amphibians and Reptiles, National Museum of Natural History, Smithsonian Institution, PO Box 37012, Washington, D.C. 20013-7012, U.S.A. Recent issues of SHIS are available as pdf files from our webpage www.mnh.si.edu/rc/. At the time of publication, it is not certain whether the webpage will be able to host this particular SHIS publication owing to its size.

INTRODUCTION

Creation of this EndNote® based bibliography was possible by the support of the United States National Science Foundation (NSF) award DEB-0342918 to Rafael de Sá (RdS) and W. Ronald Heyer (WRH).

The bibliography had its origin in 1966 when WRH was a graduate student at the University of Southern California and beginning his study of the then genus *Leptodactylus* (*Adenomera* and *Leptodactylus* in this bibliography). A three by five inch card file arranged by author and a series of binders of 8.5x11" sheets collated by species listing brief citations and "keywords" were maintained. Only "significant" citations were entered in the bibliography. For example, if a citation included only a locality record, it was not entered into the bibliography. Although the bibliography generally met WRH's research needs, the arbitrary decision of the significance of a publication compromised the bibliography's usefulness.

In the funded proposal to NSF, RdS and WRH included a project to create an electronic database for all publications containing mention of species names for *Adenomera*, *Leptodactylus*, and *Vanzolinius* (*Vanzolinius* has since been synonymized with *Leptodactylus*). At the beginning of the project, there were about 2,000 references on 3x5 cards. Miriam H. Heyer (MHH) was contracted to create the EndNote® file. MHH entered all citations into EndNote® and examined the literature citations in those publications to determine whether any of them contained information on the genera of interest. WRH anticipated that the intensive bibliography would yield a total of 3,000 references for the genera involved. That estimate was too modest – at the end of the NSF funding for the project, 31 May 2008, we had located more than 5,000 citations. The EndNote® file of 31 May 2008 is the basis for this bibliography.

About halfway through the project, the Frost et al. publication (2006) appeared. We made two decisions based on this significant work:

1) We included citations for the genera *Hydrolaetare* and *Lithodytes*. The evidence provided by Frost et al. 2006 is compelling that *Adenomera*, *Hydrolaetare*, *Leptodactylus*, and *Lithodytes* form a robust clade.

2) The relationships of *Lithodytes* and *Adenomera* as sister taxa and both genera being the sister clade to *Leptodactylus* has been confirmed in other primarily molecular studies. The relationships involved thus appear to be robust. We differ philosophically, not on the basis of data, with the conclusion of Frost et al. 2006 to combine *Adenomera*, *Leptodactylus*, and *Lithodytes* into a single genus, *Leptodactylus* and recognize the subgenus *Lithodytes* for the clade *Adenomera* + *Lithodytes*. This topic will be pursued in a future publication involving RdS, WRH, and others.

The guidelines used for inclusion or exclusion of publications are:

The publication has to contain a species name in order to be included, for example, a citation of *Leptodactylus* sp. in a publication is not included in the bibliography;

Gray literature is variably included – with electronic journals and web postings of reports, the definition of gray literature is difficult. We do not include any "gray literature" that is difficult for us to obtain.

We have a separate EndNote® file for each of the preceding two categories.

We have hard copy of each publication in all categories, although some of the copies are abridged.

All publications are currently in a separate library in the MHH+WRH office/laboratory and will be maintained as a discrete unit in the National Museum of Natural History combined fishes and herpetology libraries which is scheduled to be opened in 2011.

We have made diligent efforts to include all species names in the Keywords section of the EndNote® records and to indicate current nomenclatural usage in the Remarks section. The same diligence was not

exercised for the non-species terms and geographic terms in the keywords section. WRH's interpretation of a publication was variable through time, hence inclusion of topics and geography in keywords is not necessarily consistent throughout the production of the bibliography. A list of all keywords was developed to ensure consistency of usage. For example, at the beginning, both larva and tadpole were used as keywords. Soon, all usages of larva were replaced with tadpole, and only the term tadpole is used as a keyword. A list of the topical and geographic keywords is available at <http://learning.richmond.edu/Leptodactylus/bibliography.html>.

The bibliography is divided in two parts. Volume 1 includes complete citations organized alphabetically by last name of the first author. EndNote® record numbers for each citation are not consecutive – references organized by EndNote® record numbers are listed in Volume 2. As in most bibliographies, author's first names are abbreviated. We included an author's full name in the References by EndNote® Number list (Volume 2) if we had access to it. Volume 2 comprises References by EndNote® Number, Species Index, Keyword Index, and Geographic Index.

Given the length of time involved in assembling this bibliography, there are inconsistencies. MHH entered all the citations in the Smithsonian office/laboratory. She included all species names as they appeared in the publications in the keywords field. WRH proofed the entries at home. He added keywords to the entries and added comments that included the current names in use for synonyms or misidentifications, etc. Determined efforts were made to ensure that all species names and current usages were consistent throughout the EndNote® records.

We have confidence that the bibliography contains all records prior to 1990 that have significant research information for the species of interest. Thus, we believe that researchers who begin their work with this bibliography may be confident that they do not have to look elsewhere for citations prior to 1990. We are aware that we have not found all older citations. With the increase in web searchable PDF files of hard to obtain publications, we will certainly find older works that contain information on the species included in this bibliography. The likelihood, however, is that these references will have little or no research value.

An updated version of the EndNote® file will be maintained at <http://learning.richmond.edu/Leptodactylus/bibliography.html>.

We would greatly appreciate learning of any missed citations. Please send such citations (and pdf files of the articles if available) to heyerr@si.edu.

Acknowledgments: We thank the numerous colleagues who responded to our requests for publications that we could not obtain through interlibrary loan. This project would have been impossible without the massive help from the Smithsonian Institution Library staff – Claire Catron, Maggie Dittmore, Carmen Eyzaguirre, Richard Greene, Polly Lasker, Ron Lindsay, Leslie Overstreet, Michael Richardson, Martha Rosen, Ruth Shallert, Courtney Shaw, David Steere, Wanda West, and Daria Wingreen-Mason.

Notes: *L. wagneri* (probably = *L. leptodactyloides*). Aichinger ascribed the reproductive mode for *L. pentadactylus* of eggs in foam nests on or near water, tadpoles in water to Crump (1974, Table 4). This reproductive mode is true for *L. knudseni*, but not *L. pentadactylus*. Aichinger only collected a single specimen of *L. pentadactylus*, which presumably was correctly identified, so the locality data is probably correct, but the reproductive mode is not.

Title: Species diversity in a neotropical rainforest: Amphibians of Nouragues, a nature reserve in French Guiana.

Journal: BOS NiEuWSLETTER

Volume: 15 **Issue:** 2 **Pages:** 25-33

Keywords: andreae; knudseni; longirostris; myersi; mystaceus; pentadactylus; stenodema; life history; species list; French Guiana

Notes: Publication indicated as Number 34. The assignment of reproductive mode (page 30) to *L. pentadactylus* and *L. stenodema* seems to be inferred based on what is known for genus as a whole. *L. pentadactylus* does not have aquatic larvae in the sense that early larval development occurs in the nest

and the larvae complete development in adjacent ponds/streams. All development occurs in the burrows where the eggs are deposited. The larvae of *L. stenodema* are unknown.

Journal: Studies on Neotropical Fauna and Environment

Volume: 30 **Issue:** 1 **Pages:** 15-29

Keywords: andreae; bokermanni; hylaedactyla; lutzi; marmorata; martinezi; bufonius; elenae; fallax; fuscus; labyrinthicus; latinasus; nanus; podicipinus; reproductive mode; tadpole

Notes: *L. bokermanni* (= *L. diptyx*). The citation of *Leptodactylus nanus* on p. 21 has two errors. De la Riva states: "The first data . . . were provided by A. Lutz (1931) on *A. marmorata* (as *Leptodactylus nanus*) . . ." The Lutz paper was published in 1932. In the 1932 paper Lutz considered *Leptodactylus nanus* to be a synonym of *Leptodactylus parvulus* (= *Zachaenus parvulus*).

Notes: All of the reproduction, male characteristics, and tadpole information for *L. pentadactylus* does not pertain to *L. pentadactylus* and likely pertains to *L. knudseni*. The incorrect or ambiguous information for *L. pentadactylus* on pp. 14, 73, 93, 106, 167, 176, 286-287, 384. Tadpole described and illustrated as *L. bolivianus* is not the same species as a tadpole (USNM 343347) that demonstrates characters found in the sister species *L. insularum*. The Cusco Amazonico tadpole tooth row A2 is broadly divided, the Tambopata tadpole tooth row A2 is single, not divided. The Cusco Amazonico tadpoles have short or absent P3 tooth rows, the Tambopata tadpole has a P3 tooth row that is subequal in length to rows P1, P2. Advertisement call of *L. bolivianus* is very different from a vouchered advertisement call of *L. bolivianus* from Tambopata. There is no voucher specimen for the Cusco Amazonico recording and KU Cassette 104/3 cannot be found and has most probably been discarded (W. E. Duellman, pers. comm.). The Cusco Amazonico recording is a *Leptodactylus*, but information provided in the book is inadequate to determine which species the recording belongs to.

Journal: Bulletin of the Maryland Herpetological Society

Volume: 18 **Issue:** 2 **Pages:** 37-142

Keywords: fallax; fuscus; cf. pentadactylus; wagneri; annotated species list; biogeography; checklist

Notes: *L. fuscus*, *L. cf pentadactylus*, and *L. wagneri* (= *L. validus*) included in checklist on page 63; *L. wagneri* (= *L. validus*) also included in Table 1, page 96. *L. cf pentadactylus* discussed on pages 68-69 based on a report of a very large fossil leptodactylid femur from Crusoe Cave, which was unavailable for study - Hardy discusses the situation relative to the names *L. pentadactylus* and *L. fallax*. The statement, "*Leptodactylus pentadactylus* occurs in Trinidad" = *L. knudseni*. The remainder of the *L. pentadactylus* citations are ambiguous. In 1984 Hardy (Bulletin of the Maryland Herpetology Society, 20:16) indicated that the species involved must be either *L. macrosternum* or *L. bolivianus*, but certainly not *L. pentadactylus*.

Notes: "In 1982 I suggested, on the basis of highly speculative information, that *Leptodactylus* cf *pentadactylus* may have occurred on Tobago within recent historic times. If such a frog existed, and if it was con-specific with either of the two large species of *Leptodactylus* now known to occur on Trinidad, it could have been either *Leptodactylus bolivianus* (Boulenger) or *Leptodactylus macrosternum* (Miranda Ribeiro). *Leptodactylus pentadactylus* does not occur in Tobago (Kenny, 1969, 1977). It is perhaps best to regard the unknown Tobago frog as *Leptodactylus* sp." (page 16). *L. pentadactylus* (= *L. ?*).

Book Title: Grzimek's Animal Life Encyclopedia.
Volume 5. Fishes II/Amphibians
City: New York
Publisher: Van Nostrand Reinhold Co.
Pages: 397-456
Total Book Pages: 555
Series Editor: B. Grzimek
Series Title: Grzimek's Animal Life Encyclopedia
Keywords: bolivianus; marmoratus; pentadactylus; encyclopedia
Notes: *L. marmoratus* (= *Adenomera marmorata*) cited as example of species that build terrestrial incubating chambers, distribution map, page 445. *L. bolivianus* cited as example of parental care of young, page 446, distribution map, page 445. *L. pentadactylus* (not *pentadactylus* - the species described on page 446 could be *L. labyrinthicus*, but it is impossible to tell exactly which species it is - the color figure, page 449, looks more like *L. knudseni* than anything else) cited as example of being eaten by humans and using thumb spines for amplexus and defense, page 446, distribution map, page 445.

Title: Studies on the frogs of the genus *Leptodactylus* (Amphibia: Leptodactylidae). VI. Biosystematics of the melanonotus group.

Journal: Natural History Museum of Los Angeles County, Contributions in Science

Volume: (191) **Pages:** 1-48

Keywords: brevipes; dantasi; discodactylus; echinatus; intermedius; labialis; leptodactyloides; melanonotus; microtis; natalensis; nattereri; nigrescens; perlaevis; occidentalis; pallidirostris; petersii; podicipinus; podicipinus petersii; podicipinus podicipinus; pustulatus; validus; wagneri; systematics; species accounts; distribution

Notes: Six species were recognized in this paper: *L. dantasi*, *discodactylus* (synonym, *L. nigrescens*), *melanonotus* (synonyms *C. echinatus*, *C. microtis*, *C. perlaevis*, *L. occidentalis*), *podicipinus* (synonym *L. nattereri*), *pustulatus*, *wagneri* (synonyms *P. petersii*, *L. brevipes*, *L. validus*, *L. pallidirostris*, *L. natalensis*, *L. intermedius*, *E. leptodactyloides*).

Heyer (1994) resurrected as full species *L. natalensis*, *pallidirostris* (= *L. validus*), *petersii*, *validus*. Souza & Haddad (2003) transferred *L. dantasi* to the genus *Hydrolaetare*. *L. labialis* (= *L. fragilis*) is mentioned on page 12 as occurring in Mexico.

Title: Clarification of the names *Rana mystacea* Spix, 1824, *Leptodactylus amazonicus* Heyer, 1978 and a description of a new species, *Leptodactylus spixi* (Amphibia: Leptodactylidae).

Journal: Proceedings of the Biological Society of Washington

Volume: 96 **Issue:** 2 **Pages:** 270-272

Keywords: albilabris; amazonicus; elenae; fragilis; furnarius; fuscus; geminus; gracilis; latinasus; laurae; longirostris; mystacea; notoaktites; poecilochilus; spixi; typhonia; nomenclature; new species

Notes: *L. spixi* new species. *L. amazonicus* put in the synonymy of *L. mystaceus* based on prior designation of lectotype by M  hely (1904). *L. geminus* (= *L. plaumanni*). Apparently this is the first time that *L. laurae* was considered a synonym of *L. furnarius* (without any justification) in the diagnosis section of the new species description.

Notes: Catalogue information page 4 indicates that book was copyrighted in 2003 but published in 2004.

Record Number: 2844

Author: J. Jim and E. F. Spirandeli-Cruz

Year: 1973

Title: Uma nova espécie de *Leptodactylus* da Bahia, Brasil (Amphibia, Anura). [Abstract].

Journal: Anais da Jornada Científica da Faculdade de Ciências Médicas e Biológicas de Botucatu

Volume: 3 **Pages:** 13

Keywords: ocellatus; viridis; new species

Notes: The abstract meets all the requirements for the International Code of Zoological Nomenclature, so this abstract is the original description of *Leptodactylus viridis*, not the expanded paper, Jim & Cruz 1979 Revista Brasileira de Biologia, 39:707-710.

Record Number: 2843

Title: Uma nova espécie de *Leptodactylus* do Estado da Bahia, Brasil (Amphibia, Anura).

Journal: Revista Brasileira de Biologia

Volume: 39 **Issue:** 3 **Pages:** 707-710

Keywords: dantasi; viridis

Notes: This article was apparently intended by the authors to be the paper that described the new species *L. viridis*. However, their previous abstract (Jim & Spirandeli 1973 Anais da Jornada Cient. etc. 3:13) meets the requirements of the code of zoological nomenclature and thus serves as the citation for the description of the new species. *Leptodactylus dantasi* (= *Hydrolaetare dantasi*).

zoological compendium; nomenclature

Notes: *Rana gigas* (= *Rana temporaria*) as cited on p. 226. The description of the Bull Frog, *Rana ocellata*, pp. 242-246, is a mixture of *Lithobates catesbeiana* and *Leptodactylus*, as locality was confused. *Rana pentadactyla* (= *L. pentadactylus*), p. 242, was considered to be a synonym of *Rana ocellata*. *Rana typhonia* (= *L. fuscus*) description on pp. 249-250. Lacépède considered Laurenti's use of *Rana virginica* (which is a *Rana*) to be a synonym of the laced frog, *Rana typhonia* (= *L. fuscus*), pp. 249-250. The specimen illustrated (facing p. 242) is definitely not either *L. ocellatus* or *L. pentadactylus*, but could be *L. knudseni* or *L. savagei*.

Notes: *L. wagneri* (probably = *L. petersii*). If the data point on right in figure 1 is deleted (it has large leverage in a regression analysis), the P value goes from 0.027 to 0.251. As figure 1 (relationship between percentage of species with terrestrial oviposition and index for egg predation pressure) is a critical component of their story, the non-robustness of this relationship casts some doubt on their conclusions.

Pages: 163-173 **Total Book Pages:** 262

Keywords: gracilis; griseigularis; leptodactyloides; rhodonotus; inventory; annotated species list; Bolivia

Notes: Authors state there were two species of *Leptodactylus* taken in their field work. There is an account for only one species, *L. rhodonotus*, p. 170 (color photo p. 172). Species list on p. 172, contains *L. leptodactyloides* and *L. rhodonotus*. Key on p. 173 contains *L. griseigularis* and *L. rhodonotus*. Elevation makes it most probable that the species identified as both *L. griseigularis* and *L. leptodactyloides* is *L. griseigularis*.

Keywords: species description; nomenclature; gigas

Notes: *Rana Pachypus octolineata*, an apparently new name, is used for a brief species description, page 24. In the same section (page 24), a second specimen is described, which was designated as *Rana Pachypus bilineata* (apparently in a previous publication?), is considered to be the same as *Rana Gigas* Spix (= *L. pentadactylus*). It seems as though a new genus name is also proposed for these frogs, *Doryphoros*, which is used in the combination *Doryphoros Gigas* in the legend for Tafel III. figure 8, page 28 and *Rana Doryphoros* in the legend for Tafel V, figure 12. A detailed species description of *Rana Pachypus Gigas* is on pages 24-28. The Amphibians of the World website (Darrel Frost) lists *Rana pachypus octolineatus* Mayer 1835 as a synonym of *Leptodactylus ocellatus* indicating that no type deposition was stated and the type is now presumed lost and that no type locality was given.

Journal: University of Michigan Museum of Zoology, Miscellaneous Publications

Volume: (148) **Pages:** 6 unnumbered + 1-140

Keywords: ocellata; nomenclature; halecina

Notes: "Derived from the Latin word haleco (herring), this name was actually not used until the 12th edition of Systema Naturae and was evidently formalized by Linnaeus (1766) from the Swedish word silhopptassor (herring-hopper) which Kalm said the Swedish immigrants in New Jersey used for this frog. Linnaeus published *Rana halecina* in synonymy of another species (*Leptodactylus [Rana] ocellata*). Daudin (1802) was the first to use the name in a way which would make it available. [page 11]"

Gallardo (1957) cited a similar title as published by Martius in 1840, but with only pages 1-29, which corresponds to the number of pages dealing with frogs in this Spix publication. The 1910 Catalogue of the Books, Manuscripts, Maps and Drawings in the British Museum (Natural History) Volume III L-0, has the Martius citation as given in Gallardo (1957) (for the Ranarum only, not Testudinum) on page 1225, with a notation to see Spix, Vol. 5, 1915. Volume 5, page 1992, of the Catalogue etc., published in 1915 has the following: {Spix (J. B. von)} "[Another edition entitled:] Species novae Testudinum (- Ranarum) quas in itinere annis 1817-20 per Brasiliam ... collegit ... J. B. de Spix ... Tabulas revisit, denuo imprimendas et emendatis coloribus imbuendas curavit ... C. F. P. de Martius. 2 Vol. illust. col. 4^o Monachii, 1840." We have not seen the 1840 edition.

Title: Huéspedes definitivos de *Spirometra mansonoides* (Cestoda, Diphylobothriidae) en el Perú. Definitive hosts of *Spirometra mansonoides* (Cestoda, Diphylobothriidae) in Peru.

Journal: Revista Peruana de Biología

Volume: 12 **Issue:** 1 **Pages:** 153-157

Keywords: ocellatus; parasite host

Notes: Citation of previous study involving *L. ocellatus* in discussion, page 155.

Record Number: 4767

Author: Z. Tárano

Year: 1998

Title: Cover and ambient light influence nesting preferences in the túngara frog *Physalaemus pustulosus*.

Journal: Copeia

Volume: 1998 **Issue:** 1 **Pages:** 250-251

Keywords: pentadactylus; predation

Notes: *L. pentadactylus* (= *L. savagei*), page 250.

Record Number: 4110

Author: Z. Tárano

Year: 2002

Title: Vocal responses to conspecific call variation in the Neotropical frog *Physalaemus eneseftae*.

Journal: Journal of Herpetology

Volume: 36 **Issue:** 4 **Pages:** 615-620

Keywords: albilabris; calling

Notes: Citation of *L. albilabris* lowering dominant frequency of calls in introduction, page 615.

Record Number: 4109

Author: R. E. Tashian and C. Ray

Year: 1957

Title: The relation of oxygen consumption to temperature in some tropical, temperate and boreal anuran amphibians.

Journal: Zoologica

Volume: 42 **Issue:** 2 **Pages:** 63-68

Keywords: typhonius; physiology

Notes: *L. typhonius* (= *L. fuscus*).

Record Number: 774

Author: E. H. Taylor

Year: 1932

Title: *Leptodactylus albilabris* (Günther): A species of toad new to the fauna of the United States.

Journal: The University of Kansas Science Bulletin

Volume: 20 **Issue:** 11 **Pages:** 243-245

Keywords: albilabris; gracilis; labialis; fragilis; description; distribution; United States

Notes: *L. albilabris* (= *L. fragilis*) documented for first time in USA, diagnosed from other close relatives, described, with natural history and habitat notes.

Record Number: 900

Author: E. H. Taylor

Year: 1937 ("1936")

Title: New species of Amphibia from Mexico.

Journal: Transactions of the Kansas Academy of Science

Volume: 39 **Pages:** 349-363

Keywords: occidentalis; melanonotus; new species

Notes: *L. occidentalis* new species (= *L. melanonotus*), diagnosed from *L. melanonotus*, pages 349-352; plate 1, figures 1, 2, 7, page 361.

Record Number: 4108

Author: E. H. Taylor

Year: 1938 ("1936")

Title: Notes on the herpetological fauna of the Mexican State of Sinaloa.

Journal: University of Kansas Science Bulletin

Volume: 14 **Issue:** 20 **Pages:** 505-537

Keywords: melanonotus; occidentalis; annotated species list; Mexico

Notes: *Leptodactylus* information on pages 506, 514. *L. occidentalis* (= *L. melanonotus*).

Record Number: 838

Author: E. H. Taylor

Year: 1944

Title: Present location of certain herpetological and other type specimens.

Journal: The University of Kansas Science Bulletin

Volume: 30, pt. 1 **Issue:** 11 **Pages:** 117-187

Keywords: albilabris; occidentalis; bibliography; type list

Notes: *L. occidentalis* (= *L. melanonotus*) type information, p. 134. *L. albilabris* (= *L. fragilis*) page 166.

Record Number: 876

Author: E. H. Taylor

Title: Distribution and abundance of frogs in a central Amazonian forest.

Academic Department: Biological Science

City: Tallahassee

University: The Florida State University

Number of Pages: xv + 296

Advisor: D. Simberloff

Thesis Type: Ph.D.

Keywords: andreae; hylaedactyla; bolivianus; fragilis; fuscus; cf. fuscus; insularum; knudseni; labrosus; melanonotus; mystaceus; pentadactylus; podicipinus-group; poecilochilus; rhodomystax; riveroi; rugosus; stenodema; ventrimaculatus; wagneri; discodactylus; habitat; ecology; natural history; abundance; inventory techniques; Amazon

Notes: Breeding site p. 27 sounds more likely to be that of *L. knudseni*. "*Leptodactylus pentadactylus* inhabits the area where it predominantly breeds in stream valley (Hero and Magnussen, personal communication); however, I may have confused vocalization by this species with that of *L. stenodema*. [p. 29]" All the data for *L. pentadactylus* in the table on pp. 52, 64, 185, 193 is identified by the author as ambiguous. "Unfortunately, at the time we were unable to distinguish visually among *Leptodactylus knudseni*, *L. pentadactylus*, and juvenile *L. stenodema* and sightings of these species are grouped. [p. 167]." This latter statement suggests that the information for *L. pentadactylus* on pp. 233, Table 4.1 is also ambiguous.
