The circles under methylation, RT-qPCR and IHC expression indicate the samples used for the respective analyses. ^aTumor with both pathology of thymic carcinoma and B2 type thymoma. M, male; F, female; S, surgery; CH, chemotherapy; RT, radiotherapy; pre-, preoperative; post-, postoperative; ADOC, cisplatin + doxorubicin + vincristine + cyclophosphamide; CAMP, cisplatin + doxorubicin + methylprednisolone; CODE, cisplatin + vincristine + doxorubicin + etoposide; CP, carboplatin + paclitaxel; T, tumor; N, normal; RT-qPCR, reverse transcription-quantitative PCR; IHC, immunohistochemical.

Table SII. List of primer sets used for PCR.

A, TaqMan gene expression assay	
Gene/primer name	Sequence ID
GAD1 (FAM)	Hs01065893_m1
GAPDH (FAM)	Hs02758991_g1
B, Pyrosequencing for GAD1	
Gene primer name	Sequence
cg15126544	Forward: 5'-TGGTTTTAGGGTTTTTTGG-3' Reverse: 5'-ACAAATACACCCCTTAATCTACTCTCC-3' Sequence for pyrosequencing: 5'-GTAGAAGAGGGAGGAA-3'
GAD1, glutamate decarboxylase 1; FAM, fluorescein.	

Table SIII. Evaluation criteria for immunohistochemistry.

Scores	Observation
Proportion score	
0	0% positive cells
1	<30% positive cells
2	30-70% positive cells
3	>70% positive cells
Intensity score	
0	Weak
1	Moderate
2	Strong
