

High order polarizabilities from optical interaction-induced Spectroscopy

Submitted by Jean-Luc Godet on Thu, 09/24/2015 - 18:34

Titre High order polarizabilities from optical interaction-induced Spectroscopy

Type de publication Chapitre

Type Ouvrage scientifique

Année 2006

Langue Anglais

Pagination 421-453

Volume 1

Numéro du chapitre 12

Titre de l'ouvrage Atoms, molecules and clusters in electric fields

Auteur Bancewicz, Tadeusz [1], Le Duff, Yves [2], Godet, Jean-Luc [3]

Pays Royaume-Uni

Editeur Imperial College Press

Ville London

ISBN 1-86094-676-3

Multipolar polarizability contributions to the collision-induced light scattering spectra of optically isotropic molecules may be put in evidence in the Rayleigh wings and in the vicinities of the v_1 Raman vibrational lines. Experiments on CH_4 or CF_4 (tetrahedral symmetry) and SF_6 (octahedral symmetry) make possible evaluations of the multipolar polarizabilities provided that isotropic Rayleigh spectra and anisotropic Raman bands are obtained in some relatively large frequency ranges.

These evaluations — in particular those based on set inversion analysis — constitute experimental references for quantum chemistry computations of the multipolar polarizabilities. In the case of CH_4 , CF_4 and SF_6 , the agreement between experimental and *ab initio* values is quite good.
