

Radiological treatment of HCC: Interventional radiology at the heart of management

Submitted by Christophe Aube on Tue, 06/23/2015 - 16:51

Titre	Radiological treatment of HCC: Interventional radiology at the heart of management
Type de publication	Article de revue
Auteur	Aubé, Christophe [1], Bouvier, Antoine [2], Lebigot, Jérôme [3], Vervueren, Laurent [4], Cartier, V. [5], Oberti, Frédéric [6]
Editeur	Elsevier Masson
Type	Article scientifique dans une revue à comité de lecture
Année	2015
Langue	Anglais
Date	2015 Jun
Numéro	6
Pagination	625-636
Volume	96
Titre de la revue	Diagnostic and Interventional Imaging
ISSN	2211-5684
Résumé en anglais	<p>Interventional radiology is involved practically at each stage in the treatment of hepatocellular carcinoma, as recommended in the EASL-EORTC guidelines. It is even becoming more important as technological advances progress and as its long-term efficacy is assessed. Used curatively, thermoablation can obtain five-year survival rates of 40 to 70%, with a survival rate of 30% at 10years. As there are many tools available in order to be used, it requires a thorough pre-treatment assessment and discussion in a multidisciplinary team meeting. Regular patient reassessment is needed in order to be able to adjust treatment because of the complementarity of the treatments available and the course of the disease.</p>
