

Long-term successful management of an aorto-esophageal fistula secondary to the ingestion of a bone

Submitted by Véronique Bourgeois on Tue, 06/23/2015 - 15:23

Titre	Long-term successful management of an aorto-esophageal fistula secondary to the ingestion of a bone
Type de publication	Article de revue
Auteur	Venara, Aurélien [1], Hamdi, Sarah [2], Desolneux, Grégoire [3], Papon, Xavier [4], Lermite, Emilie [5], Arnaud, Jean-Pierre [6]
Editeur	Elsevier Masson
Type	Article scientifique dans une revue à comité de lecture
Année	2012
Langue	Anglais
Date	Mai 2012
Numéro	5
Pagination	543-546
Volume	41
Section	Letter to the editor
Titre de la revue	La Presse Médicale
ISSN	0755-4982
Mots-clés	Aged [7], Aortic Diseases [8], Bone and Bones [9], Eating [10], Emergencies [11], Endoscopy, Digestive System [12], Esophageal Fistula [13], Female [14], Foreign-Body Migration [15], Humans [16], Time Factors [17], Treatment Outcome [18]
Résumé en anglais	Aorto-esophageal fistula (AOF) is a rare pathology but often lethal disease with a high mortality rate [1]. No consensus exists about the management of this pathology but the current trend is in favour of an endovascular treatment. The limit of this approach is the need of a specific material and a trained and experimented practitioner, not available in every center. We reported the case of a patient who presented an AOF complicated by a hemorrhagic shock successfully treated by a simple aortic suture protected by a sternocleidomastoid muscle flap.
