

# Influence of Bi doping on the electrical and optical properties of ZnO thin films Superlattices and Microstructures

Submitted by Bouchta Sahraoui on Wed, 06/17/2015 - 16:32

Titre	Influence of Bi doping on the electrical and optical properties of ZnO thin films Superlattices and Microstructures
Type de publication	Article de revue
Auteur	Abed, S. [1], Bougharraf, H. [2], Bouchouit, K. [3], Sofiani, Z. [4], Derkowska-Zielinska, Beata [5], Aida, M.S. [6], Sahraoui, Bouchta [7]
Pays	Royaume-Uni
Editeur	Elsevier
Ville	London
Type	Article scientifique dans une revue à comité de lecture
Année	2015
Langue	Anglais
Pagination	370-378
Volume	85
Titre de la revue	Superlattices and Microstructures
ISSN	0749-6036
Mots-clés	electrical properties [8], Nano photonics [9], Nanoparticles of bismuth [10], nlo [11], Zinc oxide thin films optical [12]  Transparent conducting ZnO doped Bi thin films were prepared on glass substrates by ultrasonic spray method. The influence of Bi doping concentration on the structural, optical and nonlinear optical properties of ZnO thin films was studied. The X-ray diffraction (XRD) analysis show that all studied films have a hexagonal wurtzite structure and are preferentially oriented along the c-axis from substrate surface. Optical transmittance measurements show that all samples have average 80% transparency in the visible light. Optical band gap values range between 3.14 and 3.28 eV. ZnO film with 3 wt% of Bi showed the highest electrical conductivity. In addition, the second and third order nonlinear susceptibilities were determined and their values have been calculated.
