

Intercellular Communication in Plants: Evidence for an EMF-Generated Signal that Evokes Local and Systemic Transcriptional Responses in Tomato

Submitted by Jose Gentilhomme on Mon, 06/08/2015 - 13:51

Titre	Intercellular Communication in Plants: Evidence for an EMF-Generated Signal that Evokes Local and Systemic Transcriptional Responses in Tomato
Type de publication	Chapitre
Type	Ouvrage scientifique
Année	2013
Langue	Anglais
Pagination	309-321
Titre de l'ouvrage	Long-Distance Systemic Signaling and Communication in Plants
Auteur	Vian, Alain [1], Davies, Eric [2], Bonnet, Pierre [3]
Pays	Allemagne
Editeur	Springer Berlin Heidelberg
Ville	Heidelberg
ISBN	978-3-642-36469-3
Résumé en anglais	Exposing the oldest leaf of a tomato plant to a short (10 min), low-amplitude (5 V.m ⁻¹), high-frequency (900 MHz) electromagnetic field evoked a rapid (15 min) and systemic accumulation of the stress-related transcript LebZIP-1 in the exposed leaf and in the distant, terminal leaf that is protected from EMF radiation. The accumulation was prevented by calcium counteracting drugs both locally and systemically. It was also prevented, but only in the distant tissue, in the ABA tomato mutant Sitiens or in wild-type tomato grown in the presence of the ABA synthesis inhibitor naproxen.
