

Organic solar cells using a multilayer structure MoO₃/Ag/MoO₃ as anode

Submitted by Christian Bernède on Wed, 06/03/2015 - 20:41

Titre	Organic solar cells using a multilayer structure MoO ₃ /Ag/MoO ₃ as anode
Type de publication	Article de revue
Auteur	Cattin, Linda [1], Nguyen, Duc Tuong [2], Morsli, Mustapha [3], Bernède, Jean Christian [4]
Pays	Allemagne
Editeur	Walter de Gruyter
Ville	Berlin
Type	Article scientifique dans une revue à comité de lecture
Année	2011
Langue	Anglais
Date	07/2011
Numéro	4
Pagination	329-332
Volume	31
Titre de la revue	Journal of Polymer Engineering
ISSN	2191-0340
Mots-clés	Anode [5], Molybdenum oxide [6], Organic solar cell [7] MoO ₃ /Ag/MoO ₃ structures have been grown and characterized. It is shown that the transmittance of the films increases when the silver thickness increase from 8 to 10 nm, whereas further increase induces transmittance decrease. The study of the variation of the conductivity vs. Ag thickness shows that the MoO ₃ /Ag/MoO ₃ structures become highly conductive when the Ag thickness reaches 10 nm. Therefore, the optimum structure is obtained when the silver thickness is 10 nm. These MoO ₃ /Ag/MoO ₃ structures have been used as anode in glass/anode/CuPc (35 nm)/C60(40 nm)/Alq3 (9 nm)/Al (120 nm) organic solar cells. These anodes permit achievable promising results, even if their efficiencies stay slightly smaller than that achieved with ITO based devices.
