Volume	11
Titre de la revue	Canadian Social Science
ISSN	1923-6697
Mots-clés	Climate change; risks; social representations; religion; free associations; Cameroon farmers. [4]
Résumé en anglais	<p>The question of climate change is a topical issue as is shown by the numerous publications on the subject during the last few years. However few publications lay emphasis on populations considered to be particularly exposed to the problem of climate change (by location or by activity) and on the impact of religion on these beliefs. In this study, two groups of Cameroon farmers working in two distinctive zones: equatorial and Sudano-Sahelian were interviewed about their social representation of climate change. Results with the free association method highlight two preoccupying social representations. The question of distance from the object is discussed in relation to studies carried out among wider publics. In addition, this study shows that religion can also play an important part in the construction of knowledge of climate change.</p>
