

## Functionalized single wall carbon nanotubes improve the properties of polymer solar cells

Submitted by Pietrick Hudhomme on Fri, 04/24/2015 - 23:01

Titre	Functionalized single wall carbon nanotubes improve the properties of polymer solar cells
Type de publication	Communication
Type	Communication avec actes dans un congrès
Année	2010
Langue	Anglais
Date du colloque	01-03/06/2010
Titre du colloque	Photonics North 2010
Titre des actes ou de la revue	Proceedings of SPIE, the International Society for Optical Engineering
Volume	7750
Auteur	Derbal-Habak, Hassina [1], Bergeret, Céline [2], Cousseau, Jack [3], Nunzi, Jean-Michel [4]
Pays	Canada
Editeur	Society of Photo-Optical Instrumentation Engineers
Ville	Niagara Falls
ISBN	978-0-8194-8241-9
Mots-clés	Carbon nanotubes [5], current density [6], electrical properties [7], Heterojunctions [8], Photonics [9], polymers [10], singlewalled nanotube [11], Solar cells [12], XRD [13]
Résumé en anglais	<p>The optical and electrical properties of bulk polymer RR-P3HT (Regio-Regular Poly(3-hexylthiophène-2,5- diyl):PCBM (Methanofullerene Phenyl-C61-Butyric-Acid-Methyl-Ester) heterojunction incorporating single wall carbon nanotubes (SWCNTs) have been already reported by a number of research groups. We investigated a new approach to functionalize CarboLex single wall carbon nanotubes (SWCNTs-e) for increasing their dispersion in various solvents. The addition of SWCNTs-e in the matrix of P3HT:PCBM improves the photovoltaic (PV) characteristics. Results show that the photovoltaic parameters depend on the concentration of SWCNTs-e. The incorporation of low concentrations of SWCNTs-e in the photoactive layer increases the current density <math>J_{sc}</math> before annealing. We attribute the improved performance to partial crystallisation of the RR-P3HT. As revealed by XRD studies and confirmed by the absorbance spectra which exhibit the characteristic 600 nm shoulder. Interestingly, we observed also that doping the P3HT:PCBM system with the functionalized SWCNTs increases <math>V_{oc}</math> from 0.583 to 0.744 V.</p>
