

Osteoblast-Like Cell Behavior on Porous Scaffolds Based on Poly(styrene) Fibers

Submitted by a.bergoend on Fri, 04/24/2015 - 14:01

Titre	Osteoblast-Like Cell Behavior on Porous Scaffolds Based on Poly(styrene) Fibers
Type de publication	Article de revue
Auteur	Serafim, Andrada [1], Mallet, Romain [2], Pasquaretti-Grizon, Florence [3], Stancu, Izabella-Cristina [4], Chappard, Daniel [5]
Editeur	Hindawi Publishing Corporation
Type	Article scientifique dans une revue à comité de lecture
Année	2014
Langue	Anglais
Date	Jan-01-2014
Numéro	41748338
Volume	2014
Titre de la revue	BioMed Research International
ISSN	2314-6133
Résumé en anglais	<p>Scaffolds of nonresorbable biomaterials can represent an interesting alternative for replacing large bone defects in some particular clinical cases with massive bone loss. Poly(styrene) microfibers were prepared by a dry spinning method. They were partially melted to provide 3D porous scaffolds. The quality of the material was assessed by Raman spectroscopy. Surface roughness was determined by atomic force microscopy and vertical interference microscopy. Saos-2 osteoblast-like cells were seeded on the surface of the fibers and left to proliferate. Cell morphology, evaluated by scanning electron microscopy, revealed that they can spread and elongate on the rough microfiber surface. Porous 3D scaffolds made of nonresorbable poly(styrene) fibers are cytocompatible biomaterials mimicking allogenic bone trabeculae and allowing the growth and development of osteoblast-like cells in vitro.</p>
