

Spectral-selective management of dissipative solitons in passive mode-locked fibre lasers

Submitted by Hervé Leblond on Tue, 03/24/2015 - 16:22

Titre	Spectral-selective management of dissipative solitons in passive mode-locked fibre lasers
Type de publication	Article de revue
Auteur	Komarov, Andrey [1], Komarov, Konstantin [2], Leblond, Hervé [3], Sanchez, François [4]
Editeur	IOP Publishing
Type	Article scientifique dans une revue à comité de lecture
Année	2007
Date	Jan-12-2007
Numéro	12
Pagination	1149-1156
Volume	9
Titre de la revue	Journal of Optics A: Pure and Applied Optics
ISSN	1464-4258
Résumé en anglais	We study properties of dissipative solitons in passive mode-locked fibre lasers due to additional intracavity narrow spectral selection. Such selection allows us to control the soliton velocity, the nature of the interaction between solitons (attraction or repulsion), to create a bistable state in which the velocity of a single soliton can have two different values, to realize an elastic particle-like collision between single solitons. In the investigated laser system, the soliton interaction distance can be considerably larger than the soliton duration, which allows the realization of passive harmonic mode-locking.
