

Plant Seed : A Pertinent Model to Study Aging Processes

Submitted by Pascal Poupart on Thu, 03/12/2015 - 17:27

Titre	Plant Seed : A Pertinent Model to Study Aging Processes
Type de publication	Chapitre
Type	Ouvrage scientifique
Année	2011
Langue	Anglais
Pagination	87-102
Titre de l'ouvrage	In The Field of Biological Aging: Past, Present and Future
Auteur	Arc, Erwann [1], Ogé, Laurent [2], Grappin, Philippe [3], Rajjou, Loïc [4]
Editeur scientifique	Olgun, A. [5]
Pays	Inde
Ville	Kerala
ISBN	978-81-7895-513-1
Résumé en anglais	<p>Seeds are the major form of dispersal of plants in the environment. Seeds of many plant species are exceptionally adapted to harsh environmental conditions provided they are in a state of desiccation. Spectacular cases of seed longevity have been reported. It's one of the singular case of pluricellular, differentiate eukaryotic organ able to survive several years in anhydrobiosis. Plant scientific community explore these fascinating aspects of seed aging thanks to the immense possibilities now offered to create/modify plants at a much faster rate and in a more accurate way than through classical and molecular genetic approaches and genomic tools. These investigations allowed unveiling seed specificities against aging processes</p>
