Pagination	522 - 5
Volume	61
Titre de la revue	La Revue du Praticien
ISSN	0035-2640
Mots-clés	Genetic Counseling [2], Humans [3], Referral and Consultation [4]
Résumé en anglais	Medical genetics have three components: clinical, chromosomal and molecular. The role of this clinical-biological discipline is to diagnose genetic diseases, participate in the management of patients, offer genetic counselling to family members concerning the probability of occurrence or reoccurrence of genetic diseases, and suggest preventive measures to couples at risk. A specific aspect of genetic counselling is that it is aimed at healthy or affected individuals taking into account all the members of their family.
