Editeur	Wiley
Type	Article scientifique dans une revue à comité de lecture
Année	2014
Langue	Anglais
Date	2014
Numéro	1
Pagination	54 - 69
Volume	37
Titre de la revue	Plant, Cell & Environment
ISSN	1365-3040
Mots-clés	Arabidopsis [13], HIF-1 α [14], IOP [15], Medicago [16], NAR1 [17], Oxygen [18], Warburg effect [19]
Résumé en anglais	[FeFe]-hydrogenase-like genes encode [Fe4S4]-containing proteins that are ubiquitous in eukaryotic cells. In humans, iron-only hydrogenase-like protein 1 (IOP1) represses hypoxia inducible factor-1 α subunit (HIF1- α) at normal atmospheric partial O ₂ pressure (normoxia, 21 kPa O ₂). In yeasts, the nar1 mutant cannot grow at 21 kPa O ₂ , but can develop at a lower O ₂ pressure (2 kPa O ₂). We show here that plant [FeFe]-hydrogenase-like GOLLUM genes are essential for plant development and cell cycle progression. The mutant phenotypes of these plants are seen in normoxic conditions, but not under conditions of mild hypoxia (5 kPa O ₂). Transcriptomic and metabolomic experiments showed that the mutation enhances the expression of some hypoxia-induced genes under normal atmospheric O ₂ conditions and changes the cellular content of metabolites related to energy metabolism. In conclusion, [FeFe]-hydrogenase-like proteins play a central role in eukaryotes including the adaptation of plants to the ambient O ₂ partial pressure.
