

Filling up adipocytes with lipids. Lessons from caveolin-1 deficiency.

Submitted by Soazig Le Lay on Tue, 01/27/2015 - 10:28

Titre	Filling up adipocytes with lipids. Lessons from caveolin-1 deficiency.
Type de publication	Article de revue
Auteur	Le Lay, Soazig [1], Blouin, Cédric M. [2], Hajduch, Eric [3], Dugail, Isabelle [4]
Editeur	Elsevier
Type	Article scientifique dans une revue à comité de lecture
Année	2009
Langue	Anglais
Date	06/2009
Numéro	6
Pagination	514-8
Volume	1791
Titre de la revue	Biochimica et Biophysica Acta
ISSN	0006-3002
Mots-clés	Adipocytes [5], Animals [6], Caveolin 1 [7], Genotype [8], Humans [9], Lipogenesis [10], Lipolysis [11], Mice [12], Mice, Knockout [13], Organelles [14], Phenotype [15]
Résumé en anglais	Caveolins are primarily known as the main constituents of the protein coat of caveolae invaginations at the plasma membrane. They have also been found at the surface of intracellular lipid droplets but their function in this lipid storage organelle remains poorly understood. This paper reviews recent studies in adipocytes, the specialized cell type for fatty acid storage, which suggest a role for caveolins in the formation, maintenance or mobilization of lipid droplet stores. These new functions emerged from studies of fat cells in which caveolin expression was invalidated, highlighting the metabolic phenotype of caveolin-deficient mice or human patients who develop progressive lipoatrophy.
