

Molecular Engineering of the Internal Charge Transfer in Thiophene–Triphenylamine Hybrid π -Conjugated Systems

Submitted by Olivier Alévêque on Fri, 11/07/2014 - 16:19

Titre	Molecular Engineering of the Internal Charge Transfer in Thiophene–Triphenylamine Hybrid π -Conjugated Systems
Type de publication	Article de revue
Auteur	Leriche, Philippe [1], Frère, Pierre [2], Cravino, Antonio [3], Alévêque, Olivier [4], Roncali, Jean [5]
Editeur	American Chemical Society
Type	Article scientifique dans une revue à comité de lecture
Année	2007
Langue	Anglais
Date	Jan-10-2007
Numéro	22
Pagination	8332-8336
Volume	72
Titre de la revue	The Journal of Organic Chemistry
ISSN	0022-3263
Résumé en anglais	<p>Introduction of electroaccepting groups at the periphery of triphenylamine-based derivatives leads to an internal charge-transfer band. Syntheses and spectroscopic, electrochemical, and theoretical studies of various derivatives which differ by the strength and the number of electroacceptor groups are presented. These various results show that the ICT band and the acceptor/donor abilities of derivatives can be finely tuned.</p>
