

Stabilization of space-time laser instability through the finite transverse extension of pumping

Submitted by Emmanuel Lemoine on Wed, 10/29/2014 - 11:43

Titre	Stabilization of space-time laser instability through the finite transverse extension of pumping
Type de publication	Article de revue
Auteur	Amroun-Aliane, D. [1], Leblond, Herv� [2], Brunel, Marc [3], Letellier, C. [4], Sanchez, Fran�ois [5]
Editeur	IOP Publishing
Type	Article scientifique dans une revue � comit� de lecture
Ann�e	2008
Langue	Anglais
Date	2008/09/01
Num�ro	9
Pagination	095101
Volume	10
Titre de la revue	Journal of Optics A: Pure and Applied Optics
ISSN	1464-4258
R�sum� en anglais	We investigate the space-time dynamics of a homogeneously broadened single-mode laser when diffraction is taken into account. It is well known that such a laser displays instability when pumping reaches the second laser threshold. We show that the laser dynamics can be stabilized by pumping in a domain of finite width. The analysis of stationary solutions to the Maxwell-Bloch equations (evanescent waves, travelling waves, localized solutions) allows the stabilization mechanism to be explained.
