Mots-clés	chronic care [13], glove usage [14], Hand cleansing [15], Monitoring [16]
Résumé en anglais	We monitored hand hygiene and gloving practices by direct observation in 8 health care settings for elderly persons in western France. Compliance with hand hygiene was better than that reported by previous studies, was better for single contacts and before or after a series of successive contacts than inside series, and was closely related to gloving practices. Practices differed among the settings.
