

Autonomous Local Search Algorithms with Island Representation

Submitted by Emmanuel Lemoine on Mon, 10/06/2014 - 18:24

Titre	Autonomous Local Search Algorithms with Island Representation
Type de publication	Communication
Type	Communication avec actes dans un congrès
Année	2012
Langue	Anglais
Date du colloque	2012
Titre du colloque	6th International Conference, LION 6
Titre des actes ou de la revue	Learning and Intelligent Optimization
Pagination	390 - 395
Auteur	Goëffon, Adrien [1], Lardeux, Frédéric [2]
Pays	France
Editeur	Springer
Ville	Paris
ISBN	978-3-642-34412-1 / 978-3-642-34413-8
Mots-clés	algorithm analysis and problem complexity [3], Artificial Intelligence (incl. Robotics) [4], Computation by Abstract Devices [5], computer applications [6], Discrete Mathematics in Computer Science [7], Numeric Computing [8]
Résumé en anglais	The aim of this work is to use this dynamic island model to autonomously select local search operators within a classical evolutionary algorithm. In order to assess the relevance of this approach, we will use the model considering a population-based local search algorithm, with no crossover and where each island is associated to a particular local search operator. Here, contrary to recent works [6], the goal is not to forecast the most promising crossovers between individuals like in classical island models, but to detect at each time of the search the most relevant LS operators. This application constitutes an original approach in defining autonomous algorithms.
Notes	Date du colloque : 01/2012
