

A Tabu Search Algorithm with Direct Representation for Strip Packing

Submitted by Emmanuel Lemoine on Mon, 10/06/2014 - 18:25

Titre	A Tabu Search Algorithm with Direct Representation for Strip Packing
Type de publication	Communication
Type	Communication avec actes dans un congrès
Année	2009
Langue	Anglais
Date du colloque	2009
Titre du colloque	9th European Conference, EvoCOP 2009
Titre des actes ou de la revue	Evolutionary Computation in Combinatorial Optimization
Volume	5482
Pagination	61 - 72
Auteur	Hamiez, Jean-Philippe [1], Robet, Julien [2], Hao, Jin-Kao [3]
Pays	Allemagne
Editeur	Springer
Ville	Tübingen
ISBN	978-3-642-01008-8, 978-3-642-01009-5
Mots-clés	algorithm analysis and problem complexity [4], Computation by Abstract Devices [5], Computational Biology/Bioinformatics [6], direct representation [7], Discrete Mathematics in Computer Science [8], multi-neighborhoods [9], Numeric Computing [10], Strip packing [11], tabu search [12]
Résumé en anglais	This paper introduces a new tabu search algorithm for a two-dimensional (2D) Strip Packing Problem (2D-SPP). It integrates several key features: A direct representation of the problem, a satisfaction-based solving scheme, two different complementary neighborhoods, a diversification mechanism and a particular tabu structure. The representation allows inexpensive basic operations. The solving scheme considers the 2D-SPP as a succession of satisfaction problems. The goal of the combination of two neighborhoods is (to try) to reduce the height of the packing while avoiding solutions with (hard to fill) tall and thin wasted spaces. Diversification relies on a set of historically “interesting” packings. The tabu structure avoids visiting similar packings. To assess the proposed approach, experimental results are shown on a set of well-known benchmark instances and compared with previously reported tabu search algorithms as well as the best performing algorithms.
