

A hybrid LDA and genetic algorithm for gene selection and classification of microarray data

Submitted by Emmanuel Lemoine on Mon, 10/06/2014 - 17:47

Titre	A hybrid LDA and genetic algorithm for gene selection and classification of microarray data
Type de publication	Article de revue
Auteur	Huerta, Edmundo Bonilla [1], Duval, Béatrice [2], Hao, Jin-Kao [3]
Editeur	Elsevier
Type	Article scientifique dans une revue à comité de lecture
Année	2010
Langue	Anglais
Date	2010/08
Numéro	13-15
Pagination	2375 - 2383
Volume	73
Titre de la revue	Neurocomputing
ISSN	0925-2312
Mots-clés	classification [4], dedicated genetic algorithm [5], gene selection [6], Linear discriminant analysis [7]
Résumé en anglais	In supervised classification of Microarray data, gene selection aims at identifying a (small) subset of informative genes from the initial data in order to obtain high predictive accuracy. This paper introduces a new embedded approach to this difficult task where a genetic algorithm (GA) is combined with Fisher's linear discriminant analysis (LDA). This LDA-based GA algorithm has the major characteristic that the GA uses not only a LDA classifier in its fitness function, but also LDA's discriminant coefficients in its dedicated crossover and mutation operators. Computational experiments on seven public datasets show that under an unbiased experimental protocol, the proposed algorithm is able to reach high prediction accuracies with a small number of selected genes.
