

Venous thrombosis in immunocompetent patients with acute cytomegalovirus infection: a complication that may be underestimated

Submitted by Emmanuel Lemoine on Fri, 07/18/2014 - 09:39

Titre	Venous thrombosis in immunocompetent patients with acute cytomegalovirus infection: a complication that may be underestimated
Type de publication	Article de revue
Auteur	Abgueguen, Pierre [1], Delbos, Valerie [2], Ducancelle, Alexandra [3], Jomaa, S. [4], Fanello, Serge [5], Pichard, Eric [6]
Editeur	Wiley
Type	Article scientifique dans une revue à comité de lecture
Année	2010
Langue	Anglais
Date	01/07/2009
Numéro	7
Pagination	851 - 854
Volume	16
Titre de la revue	Clinical Microbiology and Infection
ISSN	1469-0691
Mots-clés	Complications [7], cytomegalovirus infection [8], immunocompetent patient [9], venous thrombosis [10]
Résumé en anglais	<p>In the present study, we retrospectively studied clinical and laboratory findings associated with cytomegalovirus (CMV) infection in immunocompetent patients. We focused on severe CMV infection. Among 38 patients, five had a severe form of infection: one had meningitis, one had symptomatic thrombocytopenia and three had venous thromboses with pulmonary embolism, a rarely described complication. CMV-induced thrombosis has been reported in immunocompromised patients such as transplant recipients and patients with AIDS. Recent case reports have also described thrombotic phenomena in immunocompetent patients with CMV infection. Our study suggests that venous thrombosis during acute CMV infection is an underestimated complication.</p>
