

Investigation study on the nonlinear optical properties of natural dyes: Chlorophyll a and b

Submitted by Emmanuel Lemoine on Mon, 06/02/2014 - 18:29

Titre	Investigation study on the nonlinear optical properties of natural dyes: Chlorophyll a and b
Type de publication	Article de revue
Auteur	Kouissa, B. [1], Bouchouit, K. [2], Abed, S. [3], Essaidi, Zacaria [4], Derkowska-Zielinska, Beata [5], Sahraoui, Bouchta [6]
Editeur	Elsevier
Type	Article scientifique dans une revue à comité de lecture
Année	2013
Langue	Anglais
Date	04/2013
Pagination	75-79
Volume	293
Titre de la revue	Optics Communications
ISSN	0030-4018
Mots-clés	3rd-harmonic generation [7], Absorption [8], derivatives [9], DFWM [10], dyes [11], films [12], fused-silica [13], molecules [14], Nonlinear optics [15], SHG [16], THG [17], Thin films [18]
Résumé en anglais	We report the results on third and second order nonlinear optical susceptibilities of two natural pigments extracted from spinach. The last were identified by UV-vis spectral analysis. Thin films were prepared by spin coating technique and deposited on glass substrate. The measurements of third order nonlinear optical susceptibilities were performed in solutions using degenerate four wave mixing technique (DFWM) at measurement wavelength of 532 nm. The third and second order nonlinear optical susceptibilities of the studied pigments were also evaluated on thin films using the third and second harmonics generation (THG and SHG) Maker fringes technique respectively at 1064 nm. All these results were in good agreement with the literature data.
