

A hierarchical modeling approach of Hippocampus local circuit

Submitted by Emmanuel Lemoine on Thu, 01/30/2014 - 14:33

Titre	A hierarchical modeling approach of Hippocampus local circuit
Type de publication	Article de revue
Auteur	Bennani, Omar [1], Chauvet, Gilbert [2], Chauvet, Pierre [3], Dupont, Jean-Marc [4], Jouen, Francois [5]
Editeur	World Scientific Publishing
Type	Article scientifique dans une revue à comité de lecture
Année	2009
Langue	Anglais
Date	2009/03
Numéro	1
Pagination	49 - 76
Volume	8
Titre de la revue	Journal of Integrative Neuroscience
ISSN	0219-6352 / 1757-448X
Mots-clés	CA1 local circuit [6], Computing system [7], hippocampus [8], integrative modeling [9], learning and memory [10], MTIP [11] The modeling and simulation of a realistic nervous tissue are difficult because of the number of implied cell types (neuronal and glial), the topology of the networks, and the various heterogeneous molecular mechanisms. The MTIP (Mathematical Theory of Integrative Physiology) is used as a new modeling approach based on a representation in terms of functional interactions and a formalism (S-Propagator) related to n-level field theory. This work presents the passage from a theoretical description of the biological system to a computing implementation in the general case. The specific case of the hippocampus is presented, as well as how a drug allows learning and memory improvement in the local circuit of the CA1 area of the hippocampus. This in silico result is used to experimentally predict the drug effect in vitro to confirm the accuracy of MTIP.
