

Fault detection and isolation of faults in a multivariate process with Bayesian network

Submitted by Emmanuel Lemoine on Thu, 01/30/2014 - 14:37

Titre	Fault detection and isolation of faults in a multivariate process with Bayesian network
Type de publication	Article de revue
Auteur	Verron, Sylvain [1], Li, Jing [2], Tiplica, Téodor [3]
Type	Article scientifique dans une revue à comité de lecture
Année	2010
Langue	Anglais
Date	2010/09
Numéro	8
Pagination	902 - 911
Volume	20
Titre de la revue	Journal of Process Control
ISSN	0959-1524
Mots-clés	Bayesian [4], Multivariate [5], T2 [6]
Résumé en anglais	<p>The main objective of this paper is to present a new method of detection and isolation with a Bayesian network. For that, a combination of two original works is made. The first one is the work of Li et al. [1] who proposed a causal decomposition of the T2 statistic. The second one is a previous work on the detection of fault with Bayesian networks [2], notably on the modeling of multivariate control charts in a Bayesian network. Thus, in the context of multivariate processes, we propose an original network structure allowing to decide if a fault has appeared in the process. This structure permits the isolation of the variables implicated in the fault. A particular interest of the method is the fact that the detection and the isolation can be made with a unique tool: a Bayesian network.</p>
