

Aerosolized Chemotherapy

Submitted by Emmanuel Lemoine on Wed, 12/11/2013 - 17:08

Titre Aerosolized Chemotherapy

Type de publication Article de revue

Auteur Gagnadoux, Frédéric [1], Hureaux, José [2], Vecellio, Laurent [3], Urban, Thierry [4], Le Pape, Alain [5], Valo, Isabelle [6], Montharu, Jerome [7], Leblond, Valerie [8], Boisdrone-Celle, Michèle [9], Lerondel, Stephanie [10], Majoral, Caroline [11], Diot, Patrice [12], Racineux, Jean-Louis [13], Lemarie, Etienne [14]

Pays Etats-Unis

Editeur Mary Ann Liebert

Ville New Rochelle

Type Article scientifique dans une revue à comité de lecture

Année 2008

Langue Anglais

Date Mars 2008

Numéro 1

Pagination 61 - 70

Volume 21

Titre de la revue Journal of Aerosol Medicine and Pulmonary Drug Delivery

ISSN 1941-2703

Résumé en anglais

Regional chemotherapy has been proposed as a treatment modality in a number of cancer settings. In primary or metastatic lung cancer, administration of chemotherapy via inhalation could increase exposure of lung tumor to the drug, while minimizing systemic side effects. Several proof of concept studies in animal models of metastatic or primary lung cancer have demonstrated the safety, pharmacokinetic advantage, and antitumor effect of aerosol administration of several chemotherapeutic agents including doxorubicin, gemcitabine and liposome-encapsulated formulations of paclitaxel and 9-nitrocamptothecin (9-NC). Recent phase I studies have demonstrated the feasibility of aerosol delivery of doxorubicin and liposomal formulations of 9-NC and cisplatin in patients with primary and metastatic lung cancer with a limited pharmacokinetic profile consistent with the observed low systemic toxicity. Further studies integrating safety, pharmacokinetic, and efficacy considerations are required to determine whether there is a place for local administration of chemotherapy via inhalation in lung cancer.
