Volume	2
Titre de la revue	Journal of Generalized Lie Theory and Applications
ISSN	1736-4337
Résumé en anglais	In this paper we discuss classical elliptic current algebras and show that there are two different choices of commutative <i>test function algebras</i> related to a complex torus leading to two different elliptic current algebras. Quantization of these classical current algebras gives rise to two classes of quantized dynamical quasi-Hopf current algebras studied by Enriquez, Felder and Rubtsov and by Arnaudon, Buffenoir, Ragoucy, Roche, Jimbo, Konno, Odake and Shiraishi.
