

Fine structure of the complex hyperbolic Brownian motion and Rudin's question

Submitted by Emmanuel Lemoine on Thu, 12/05/2013 - 15:33

Titre	Fine structure of the complex hyperbolic Brownian motion and Rudin's question
Type de publication	Article de revue
Auteur	Graczyk, Piotr [1], Żak, Tomasz [2]
Pays	Pologne
Editeur	Polish Scientific Publishers
Ville	Warszawa ; Wrocław
Type	Article scientifique dans une revue à comité de lecture
Année	2008
Langue	Anglais
Date	2008
Numéro	2
Pagination	345 - 357
Volume	28
Titre de la revue	Probability and Mathematical Statistics
ISSN	0208-4147
Mots-clés	complex [3], invariant [4]
Résumé en anglais	<p>We investigate the fine structure of the complex hyperbolic Brownian motion in the unit ball of C_n.</p> <p>It turns out that the generator of the process is locally very close to the generator of some simple transformation of the classical Brownian motion. This fact helps us to give an intuitive explanation why the invariant Laplace operator in the unit ball of C_n is a difference of two ordinary Laplace operators - the question set by W. Rudin in his monograph <i>Function Theory in the Unit Ball of C_n</i>.</p> <p>In the second part of the paper we find stochastic differential equations for the complex hyperbolic Brownian motion on the ball model of the complex hyperbolic space and furnish in this way an important tool in a further investigation of this process.</p>
