Designing & Maintaining an EIS Database:

Lessons Learned in Developing Library-based Digital Repositories

Robert Cartolano
Associate VP, Digital Program & Technology Services
June 16, 2016

Topics

- Overview of Libraries
- Six Lessons Learned
 - Find Partners and Collaborate
 - Listen to Your Users
 - Preservation and Access
 - Decouple Front-end from Back-end
 - Metadata, metadata, metadata
 - Innovate at the Front-end
- Q & A

Overview of Libraries

- 21 Libraries
- 12 million volumes
- 160,000 journals and serials
- 450 professional and support staff
- 4,000+ study seats
- 1,100 workstations
- Significant technology infrastructure
- Thousands of external vendors
- Over \$10M annual spend on E-resources http://library.columbia.edu/about.html

New Type of Research Library

"While the core features traditionally associated with research libraries continue to play a central role, our services embrace a broader range, extending the conception of the research library."

- James Neal, Former VP for Information Services and University Librarian

1. Find Partners, Collaborate

- Internal and external partners
- Partners share development efforts
- Leverage open source efforts
- Communities support each other
- Communities can help obtain external funding for targeted projects

Academic Preservation Trust (APTrust)

- University of Virginia, 17 partner institutions
- APTrust is working toward TRAC certification
- Repository to be built from the ground up taking TRAC certification into account.
- Certification Working Group established and will be advising and consulting with the APTrust staff and partners on TRAC objectives.
- Initial development work is proceeding at the level of Digital Object Management and Infrastructure.

http://aptrust.org/

External Partners

Blacklight

- discovery software
- http://projectblacklight.org/

Fedora

- digital preservation repository software
- http://www.fedora-commons.org/

Hydra

- digital content management
- http://projecthydra.org/

DuraSpace

- 138 member institutions
- http://duraspace.org/

Resources

"Fedora is the foundation of Columbia's digital preservation storage system. We chose Fedora in order to preserve and make accessible our digital collections because we can leverage the flexibility of the system for a wide variety of uses, and because we can work...

2. Listen to Your Users

- Gather data Assessments, surveys, focus groups, needs analysis
- Real-world user testing capture activity, video session
- Engage users in any way you can

3. Preservation and Access

Preservation - prolong the **existence** and **accessibility** of the collections for current and future students and scholars

http://library.columbia.edu/services/preservation.html

Backup ≠ Preservation

Digital Library Collections

We must preserve and provide access to ...

- Local Digitization Projects
- Preservation-Related Digitization
- Institutional Repository / Data Sets
- Born Digital Archival Content
- Archived Web Sites
- Super Dark Archives highly secure

Census Data

COLUMBIA UNIVERSITY LIBRARIES / INFORMATION SERVICES

4. Decouple Front-end & Back-End

- Separation provides flexibility
 - Risk-averse storage approach
 - Different storage for preservation, access
 - Accommodate multiple front-end systems
 - Leverage national/cloud archive solutions
- Swap out back-end storage
 - 2009 70 Terabytes, 4 copies
 - 2013 300 Terabytes, 3 copies
 - 2016 800 Terabytes, 3 copies

2016 Library Digital Preservation Storage

- Two copies on disk, third copy archived in cloud
- 800 Terabytes effective storage (~2PB total)

Fedora Software Platform

http://fedorarepository.org/

Flexible Extensible Digital Object Repository Architecture

- Open source digital repository software
- Internationally developed, supported, adopted
- Platform for Columbia's digital preservation system

Fedora Overview: http://dx.doi.org/10.7916/D8FF3QDR

Columbia Profile: http://www.fedora-commons.org/profile/101

Key Features of Fedora 4

http://fedorarepository.org/

- Authentication/Authorization
- Backup
- Clustering
- Content modeling
- Fixity services
- Linked data (native RDF support)
- Search (admin and external)
- SPARQL endpoints (semantic protocol, RDF query language)
- Advanced storage capabilities
 - Policy-driven, self-healing, very large files
 - External data source "projection" (aka "virtual ingest")
- Transactions
- Versioning

5. Metadata, Metadata, Metadata

- Citable metadata in standard formats with persistent identifiers fosters long-term access and data management
- Leverage human and computer-generated descriptive metadata for search and discovery
- Assign rights, administrative, provenance, technical, structural and preservation metadata for long-term curation

Leverage Standards

- Portland Content Data Model (PCDM)
- RDF/Linked Data for Libraries
- Text mark-up standards (XML, TEI)
- Preservation Standards (ISO 14721 -OASIS; ISO 16363 - Trustworthy Repositories)
- New and emerging web, content and technology standards

6. Innovate at the Front-End

http://projectblacklight.org/

Blacklight Achieves...

- Search capabilities that meet user expectations
- Speed
- Flexibility to customize
- Unified Discovery
- Vibrant community continuous, iterative development

Blacklight Does Much More...

- Relevance ranking
- Stemming
- Field weighting
- Spell-checking
- Refining original queries
- Support for popular query operators
- Boolean bag o' goods
- Flexible default query processing
- In-line query limiters

- Duplicate detection
- Sort Flexibility
- Character Sets (Unicode UTF-8)
- Faceting
- Advanced search
- Easily customized search results
- Best bets ✓
- Search logging and reporting
- Well-rounded administrative interface

Blacklight Community

- 469 Members (328 in April 2014)
 - o <u>blacklight-development@googlegroups.com</u>
- Over 100 Organizations (estimated)
- Part of the Hydra Project

Unified Discovery - single search box

Search Q

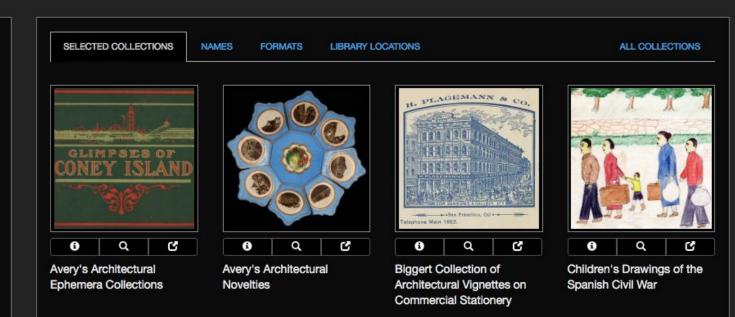

WELCOME

The Digital Library Collections (DLC) website is a gateway to digital reproductions and descriptions of photographs, posters, drawings, objects, ephemera, and manuscripts as well as other archival material from Columbia's rare and special collections. As of January 2016 the DLC repository includes ca. 190,000 digital objects. More »
