Figure S1. Compositional analysis of $\text{Sr}_{0.5}\text{Ce}_{0.5}\text{FBiS}_{2-x}\text{Se}_x$ ($x = 0.5, 1.0$) samples by SEM-EDAX.

The typical spectra show the presence of all the constituent elements in the selected region (inset).

Many such regions were selected and all the monitored regions had acceptable S and Se contents, thus eliminating the possibility of any phase separation.
