Undergraduate Catalog

This catalog is not an agreement or contract between the student and Suffolk University or any other party or parties and should not be regarded as such. The offerings and requirements contained herein are those in effect at the time of publication. The University reserves the right to change, discontinue, or add academic requirements, courses or programs of study at any time. Such changes may be made without notice, although every effort will be made to provide timely notice to students.

All students are expected to abide by all policies included in the Suffolk University Academic Catalog.

Policies

- [Academic Honors](#)
- [Academic Standing](#)
- [Credits](#)
- [Grading](#)
- [Graduation](#)
- [Registration & Attendance](#)
- [Student Record](#)

Students are awarded honors for outstanding academic achievement.

• Dean's List

A student shall be eligible for the Dean's List in any semester in which his or her grade point average is 3.50 or above, and provided he or she receives no grade of "D," "F," or "I," and has earned a minimum of 12 semester-hour credits.

• Graduation Honors

Latin Honors

To be eligible to graduate with Latin Honors, an undergraduate student must have completed at least 60 semester hours of work at Suffolk University. (Courses for which a student receives credit through CLEP examinations may not be counted toward this minimum of 60 semester hours.)

- Summa Cum Laude: You must have a cumulative GPA of 3.85, and have no grades of F or I.

- Magna Cum Laude: You must have a cumulative GPA of 3.7, and have no grades of F or I.
- Cum Laude: You must have a cumulative GPA of at least 3.3, and have no more than one grade of F or I.

• Recognition Day Awards

Highest Class Honors

In the spring of each year, both the College of Arts & Sciences and the Sawyer Business School present Outstanding Student Awards to the individuals (in their respective schools) with the highest cumulative grade point average in the sophomore, junior and senior classes. To be eligible for consideration, a student must have accrued the following minimum credit hours while in attendance at Suffolk University. A grade of "D," "F," or "I" disqualifies a student, regardless of GPA.

Class Minimum Earned Credit Hours at Suffolk University:

- Sophomore 42
- Junior 70
- Senior 106

Major Honors and Awards

In the spring of each year, both the College of Arts & Sciences and the Sawyer Business School present students awards of achievement in their major. Each award is defined and determined by the individual academic departments upon review of their junior and senior majors each spring semester.

- [Grading](#)
- [Graduation](#)
- [Registration & Attendance](#)
- [Student Record](#)

At the conclusion of each semester, students failing to make satisfactory progress are reviewed by the Academic Standing Committee of their respective school.

Suffolk University expects students to maintain an overall grade point average of 2.0 and a grade point average of 2.0 in the major field of study, as well as a 2.0 grade point average in the minor. Failure to maintain these degree requirements may result in academic probation or dismissal.

Students are notified in writing of any actions taken by the Academic Standing Committees.

Actions may include the following:

- **Warning**

Students will receive a warning when their overall GPA is above 2.0, but fail to achieve a semester GPA of 2.0.

Students who earn a GPA below 2.0 in their major, even if only one course has been completed, are alerted to minimum GPA requirements and referred to their major for advising.

Students who earn excess grades of "I" and/or "W" are sent a warning and may have their records frozen for advising.

Students are sent a warning if any single grade of “F” is earned.

• Academic Probation

Students who fail to achieve a cumulative GPA of 2.0 are placed on probation and informed of conditions (to be met in the next semester enrolled) for continued matriculation.

In the semester following the first probationary period:

- If conditions are met and the cumulative GPA is at least 2.0, then the student is removed from probationary status.
- If conditions are met and the cumulative GPA is less than 2.0, then the student is placed on a probation extension.
- If conditions are not met, the student may be dismissed from the University.

Typically, students placed on probation are put on a reduced course load and are instructed to improve their grade point average by the next committee review. Students who are demonstrating academic improvement may have their probation extended until they return to good academic standing. Those failing to demonstrate improvement are in imminent danger of dismissal.

Extracurricular: No student on academic probation shall be eligible to participate in athletics, hold elected or appointed office, or represent the University in extracurricular or intercollegiate activities. However, a student on academic probation may continue membership in extracurricular activities such as clubs or fraternities, and may write for, but not be a member of, the staff of campus publications. In the event a student’s average does not improve, the Academic Standing Committee may require further curtailment of extracurricular activities as a condition of continued academic probation at Suffolk University.

Financial Aid: Academic standing review is an academic process independent of federal guidelines managing access to student aid. It is possible to be allowed to continue at the University academically but be denied financial aid eligibility. ALL students who have financial aid and find themselves in academic difficulty should meet with their financial aid advisor to understand their personal situation.

• Academic Dismissal

Continued failure to make satisfactory progress toward a degree will inevitably result in dismissal from the University. Low grade point average, unexplained semester absences, refusal to complete prescribed remedial coursework, unwillingness to honor the recommendations of the Academic Standing Committee and/or other specific conditions are but a few of the situations that can undermine satisfactory progress and constitute legitimate grounds for dismissal.

Once dismissed for scholastic failure, a student is ineligible to enroll in further courses at the University until s/he is readmitted by the Academic Standing Committee. Dismissal does not suspend a student’s responsibility to meet prior course commitments. Consequently, all Incomplete “I” grades will convert to “F” grades unless attended to within one academic year.

• Applying to Return to the University

Returning from Academic Dismissal

Students who have been academically dismissed may apply for readmission after one semester by providing the appropriate committee with a written letter of petition. The filing deadline for petitioning is August 1 for fall re-admission and December 1 for spring re-admission. Please address the letter to: "The Academic Standing Committee."

This letter should contain three main sections:

1. Address the difficulties you had while you were enrolled at Suffolk University.
2. Describe what steps you have taken while away from Suffolk University to improve your personal situation (such as academic performance, personal issues, medical conditions, financial hardship). Be sure to attach any supporting documentation (such as transcripts from other institutions, letters from a doctor or current faculty member).
3. Create an action plan for your return (if reinstated) and describe what you would do to succeed in the future.

Letters should include your personal contact information for mail, email and phone.

If dismissed from the College of Arts & Sciences, send letters to:

Sharon Lenzie, Assistant Dean
College of Arts & Sciences
41 Temple Street
Boston, MA 02114
Phone: 617-573-8268
slenzie@suffolk.edu

If dismissed from the Sawyer Business School, send letters to:

Michele Rosenthal, Director
Undergraduate Programs
Sawyer Business School
73 Tremont Street
Boston, MA 02108-2770
Phone: 617-994-6429
mjrosenthal@suffolk.edu

Fresh Start

A student dismissed for academic reasons, who is seeking readmission after an absence of five or more years from the University, may petition the Academic Standing Committee to grant him/her grade amnesty for all grades below C under the Fresh Start Program.

If approved, all Suffolk work completed prior to readmission will be reevaluated for relevance and currency, as all students readmitted under this policy are subject to the academic requirements for graduation at the time of readmission. Only coursework with a C or better earned prior to reinstatement and coursework attempted after reinstatement is calculated into the GPA and applied to the degree.

Normally, a student readmitted through the Fresh Start Program is not eligible for scholastic honors. All prior grades are used to compute the student's academic progress for financial aid evaluation.

Returning after Being Administratively Withdrawn for Non-Attendance

Students who have been administratively withdrawn for non-attendance or are attempting to return after an unauthorized absence may apply for reentry to Suffolk through the Office of Undergraduate Admission. If approved, all students readmitted under this policy are subject to the academic requirements for graduation at the time of readmission.

Applicable courses taken eight or more years prior to readmission, whether taken at Suffolk or elsewhere, will be reviewed by the Dean's Office for relevance and currency. If a course is deemed ineligible, students may be required to complete the current course designed to satisfy that particular academic requirement.

- ## Satisfactory Progress

Federal regulations require students to [demonstrate satisfactory academic progress](#) (SAP) in their educational program in order to maintain eligibility for financial aid. SAP is established and reviewed by the Office of Student Financial Services for the College of Arts & Sciences and Sawyer Business School. While it is possible to continue at the University but be denied financial aid eligibility, all students who seek financial aid and find themselves in academic difficulty should meet with their financial aid advisor to understand their personal situation.

• Credit Hour Definition

Suffolk University Follows the Federal Government's Definition of a Credit Hour:

"...as an amount of work represented in intended learning outcomes and verified by evidence of student achievement that is an institutional established equivalence that reasonably approximates not less than -

(1) One hour of classroom or direct faculty instruction and a minimum of two hours of out of class student work each week for approximately fifteen weeks for one semester or trimester hour of credit, or ten to twelve weeks for one quarter hour of credit, or the equivalent amount of work over a different amount of time; or

(2) At least an equivalent amount of work as required in paragraph (1) of this definition for other academic activities as established by the institution including laboratory work, internships, practica, studio work, and other academic work leading to the award of credit hours."

• Class Hours

Classes typically meet during several standard course times: Monday, Wednesday, and Friday for 50 minutes, twice a week Monday and Wednesday or Tuesday and Thursday for 75 minutes, and for 2 hours, 40 minutes once a week. The period between 1pm and 2:15 pm on Tuesday and Thursday is reserved for student activities, faculty meetings, guest lectures, and cultural events. No undergraduate classes are held during this time period.

- **CLEP**

[CLEP](#) examinations provide undergraduate students the opportunity to gain college credit in specific areas of study. The Suffolk University [Center for Learning and Academic Success](#) administers the CLEP program.

- **Class Standing**

The classification of students is determined by the number of credit hours completed. Freshman standing is assigned to students with 1 through 23 completed credit hours; sophomore standing, to those with 24 through 53 completed credit hours; junior standing, to those with 54 through 83 completed credit hours; senior standing, to those with 84 completed credit hours or more.

- **Course Loads**

Federal financial aid regulations stipulate a student must be enrolled in at least 12 credits per semester to be considered full-time, between 9-11 credits per semester to be considered three-quarter time, and at least 6 credits per semester to be considered half-time. During the summer semester, which is subdivided into modules, full-time, three-quarter time, and half-time status is determined based on the number of credits enrolled throughout the entirety of the term. Graduating students in their last semester are considered full-time (except for financial aid purposes) if they are registered for all remaining degree requirements, even if they are registered for less than full-time status.

All international students are required to complete at least 12 credits each fall and spring semester.

Enrollment statuses for fall, spring, and summer terms are listed in the table below:

Full-Time	Three-Quarter Time	Half-Time	Less than Half-Time
12-17 credits	9-11 credits	6-8 credits	<6 credits

Restrictions: English Language Institute (ELI) students can only take 0 credit courses.

• Courses at Other Institutions

Once matriculated into a degree program at Suffolk, students are expected to complete all of their coursework at the University. Exceptions are made for international study or where academic hardship merits consideration. A student must be in good academic standing (2.0 GPA or better with no Incomplete grades) and have transferred fewer than 63 outside credit hours into Suffolk. If approved for a course at another institution, a student must attain a grade of "C" or higher in order to receive transfer credit. It is expected that students will complete their final 30 credit hours at Suffolk University. New students in their first semester without final grades may not be approved for outside courses. Courses taken at other institutions may affect student eligibility for graduation honors.

Students who feel their situation warrants an exception must apply through the Undergraduate Academic Advising Center.

• Excess Courses

Twelve to 17 credits constitutes a normal full-time schedule. Students who meet the following criteria can register for 18 credits (fall and spring term):

- Student has been in attendance at Suffolk University for two full semesters excluding summer sessions
- Student has a minimum GPA of 3.0 or higher

Students who do not meet the above criteria or who wish to enroll in more than 18 credits in either the fall or spring term or more than 8 credits per summer module must [petition](#) the Undergraduate Academic Advising Center.

Students registered for more than 17 credits will be charged an [excess credit rate](#) during the fall and spring terms. Students are charged per credit hour during the summer sessions. Students should NOT assume financial aid will cover excess course charges.

• Independent Study

The purpose of an independent study is to provide students with unique study opportunities with an individual faculty member. The guidelines with respect to independent studies are as follows:

- Students must gain authorization prior to registration by developing a robust and rigorous proposal. A description of the independent study project must be approved by the individual faculty member, by the department chair, and the dean's office of the respective school.

[CAS: Independent Study form](#)

[SBS: Independent Study form](#)

- Adjunct faculty are not eligible to supervise an independent study.
- Independent studies may be taken for variable credit; a single independent study cannot be taken for more than 4 credits in CAS and 3 credits in SBS.

Additional guidelines for BSBA students:

- Only juniors and seniors with a GPA of 3.0 or higher are eligible.
- Independent Studies cannot replace a required course or duplicate an existing course. They allow students to research and study an area of interest not covered by Suffolk courses.
- The deadline to turn in a proposal to the Dean's Office is the first three days of the semester in which you plan to complete an Independent Study. If the proposal is denied, this leaves sufficient time for students to revise and resubmit to the faculty, department chair, and Dean's Office.

• Transfer Credit

Transfer applicants are considered for admission based on work completed at a regionally accredited two- or four-year college or at international institutions approved by the Ministry of Education in the country where the institution resides. In some cases, transfer applicants with less than one year of college completion are also considered based on the results of the high school transcript and test scores. Credit is generally transferable provided that such coursework is successfully completed and equivalent to that offered at Suffolk University.

In the Sawyer Business School, transfer credit is awarded only for courses equivalent to freshman/sophomore years. Courses not required at Suffolk University until the junior/senior years may qualify for validation credit. Students admitted to the Sawyer Business School are required to complete at least 50 percent of business credit hours at Suffolk University.

A minimum of 45 hours in any bachelor degree program must be earned at Suffolk University, including all major and general education requirements. Requirements for specific degrees are listed by major in the undergraduate degree section. In all cases, students must complete all major and University requirements to qualify for a bachelor degree. This may necessitate completing more than the required hours for graduation. In addition, the final 30 credits of any degree must be completed at Suffolk University.

Part-time degree applicants are expected to meet the same requirements as full-time degree students.

In the College of Arts & Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.

In the Sawyer Business School not more than two courses may be transferred in toward any major and no more than one course may be transferred in toward any minor. Capstone requirements may never be transferred into the Business School. All upper level business courses being considered for transfer must be approved by the Sawyer Business School Dean's Office.

• Transcripts

A transcript is an academic document or electronic image maintained by the Office of the Registrar reflecting the unabridged student academic history at Suffolk University. Transcripts include course work from other institutions whose credits are awarded at the time of entrance or approved transfer credit after the student enrolls at the University.

The University reserves the right to refuse to issue a transcript of any student who has not fulfilled all financial obligations due to the University. A financial hold will be placed on a student record if the student is either delinquent or has defaulted on loans and/or has not completed required financial exit interviews or counseling.

[Transcript requests](#) must be submitted online or in writing to the [Office of the Registrar](#).

• Validation Credit: Sawyer Business School

Selected business courses taken elsewhere at the freshman or sophomore level, but offered by Suffolk University at the junior or senior level, require validation in order to be eligible for transfer of credit. In order to validate a course, students must have:

- Earned a grade of “C” or better in the course to be validated; and
- Successfully completed, with a grade of “C” or better at Suffolk University, an advanced course in the subject field for which the transfer course is a foundation.

Upon completion of the advanced course, a student must complete a Validation of Transfer Credit Form in the Registrar’s Office. The course(s) which may be validated will be listed on the student’s Suffolk University transcript and Credit Evaluation. The Credit Evaluation is the student’s original document of transfer credit provided by the Undergraduate Admission Office when the student was first admitted to the University. If a student has taken a junior/senior level course that is not required at Suffolk University, it cannot be validated.

Students May Validate: By Successful Completion (minimum grade of "C") of:

ACCT 321	ACCT 322
FIN 315	FIN 413
ISOM 310	ISOM 313
ISOM 313	ISOM 423
ISOM 423	ISOM 424

When validating, no more than two transfer courses may be applied toward your major requirements.

Questions regarding transfer credit and validation procedures should be referred to the Undergraduate Academic Advising Center, 617-573-8345.

2015-2016 Archived Catalog Information

Policies

- [Academic Honors](#)
- [Academic Standing](#)
- [Credits](#)
- [Grading](#)
- [Graduation](#)
- [Registration & Attendance](#)
- [Student Record](#)

- Grading System

The following grading system applies to all undergraduate students.

Letter Grade	Honor Point Equivalent per Credit
A	4.0
A-	3.7
B+	3.3
B	3.0
B-	2.7
C+	2.3
C	2.0
C-	1.7
D+	1.3
D	1.0

D-	0.7
F	0.0

"A," "A – ," "B+," and "B" are honor grades.

"B – ," "C+," and "C" represent satisfactory work.

"C – ," "D+," "D," and "D – " represent passing but unsatisfactory work.

"F" is a failing grade. It indicates that the student has not completed all course requirements in a satisfactory manner. Students who stop attending a course without having complied with the official withdrawal procedure can anticipate receiving a grade of "F." The "F" grade becomes a permanent part of a student's record and cannot be expunged even if the course is successfully retaken. An undergraduate student who violates the academic honesty policy is subject to an automatic grade of "F".

"I" (Incomplete) indicates a student has done passing work in a course but has not yet submitted all the outstanding work required for a formal evaluation. The "I" is awarded at the instructor's discretion, only if the student has completed at least half of the course requirements satisfactorily at the end of the semester, and there is a reasonable expectation that all course requirements can be completed in one academic year. An "I" must be formally re-evaluated by the instructor within one academic year, resulting in an evaluation grade or an extension of the "I," or it automatically converts to an "F*."

Students must complete coursework with the original instructor. The change in the "I" grade must be made by the original instructor, and in his or her absence, by the department chair. If this is not possible, arrangements must be made through the department chair in concurrence with an assigned instructor.

"IP" (In Progress) can be issued where by nature of the course content the course may not be complete by the end of the term. IP grades automatically convert to an "F*" after one academic year.

"W" signifies official withdrawal from a course. A "W" is assigned administratively if a student:

1. Drops a course, following proper university procedure, between the end of the drop/add period and the withdrawal deadline of the semester, or
2. Drops a course or withdraws from school after the deadline of the semester with the written approval of the Students Affairs office. Permission is given only for valid cause such as debilitating illness, relocation, serious family crisis or other circumstances beyond the student's control.

"AU" (Audit): In an audited course, a student will not receive credit or honor points; however, a student must pay the same tuition as if taking the course for credit. Under no circumstances may a student change from the evaluative letter grade system to audit or vice versa after the first two weeks of classes.

A student who audits a course is responsible for attending classes and completing required coursework.

"P" (Pass): A Pass-Fail option is available to students in lieu of a traditional letter grade subject to the following limitations and regulations:

Eligibility is restricted to students in good academic standing who have completed a minimum of 15 semester hours of coursework at Suffolk University. This option is limited to 12 credits per student. The pass/fail option is only applicable to electives and cannot be used for courses that fulfill specific degree, core, major or minor requirements. Students who are unsure as to whether a course is an elective for their specific program should check with the Undergraduate Academic Advising Center.

Students will designate courses as Pass-Fail after registration, but before the end of the course change period, by completing a [Pass/Fail Declaration Request form](#). No changes from the designation of Pass-Fail to the letter grade system or vice versa are permitted after the course change period has elapsed at the opening of any semester or summer session. A Pass may be applied toward fulfilling degree credits, but may not be applied toward the quality point average.

Students planning to attend law school or other graduate schools should be aware that many professional and graduate schools prefer students to submit traditional letter grades.

"PC" (Pass/Credit) is awarded in courses successfully completed with a grade of "C" or better at an affiliated study abroad program or approved course work at a consortium institution after matriculation at Suffolk University. "PC" grades may be applied toward fulfilling degree credits, but they may not be applied toward the quality point average.

"NP" (No Pass) is awarded in courses unsuccessfully completed at an affiliated study abroad program or approved course work at a consortium institution after matriculation at Suffolk University. "NP" grades do not earn academic credit and are not applied toward the quality grade point average.

Courses officially dropped during the add/drop period will not appear on the student's record.

• Grievances - Grades and Academic Complaints

Note: grade grievances and academic complaints regarding medical science courses are subject to the policy specified in the next section.

Grade Grievances and Academic Complaints

A student who believes that an academic evaluation has no basis in fact or is arbitrary should bring this to the attention of the instructor for resolution, preferably within the semester the course is taken. If the complaint is not resolved with the instructor, the student may then bring the complaint to the department chair. If the complaint is not resolved equitably after meeting with the department chair, the student may raise the issue with the senior associate dean of students, or designee. Written requests for review by the senior associate dean of students, or designee, must be submitted no later than the end of the semester following the semester in which the course was taken. Requests for review by the senior associate dean of students, or designee, for courses taken during summer sessions must be submitted by the end of the following fall semester. Complaints from graduating students must be received by the senior associate dean of students, or designee, at least two weeks prior to graduation. The senior associate dean of students, or designee, will make a recommendation to the academic dean of the college, or designee, in which the course is offered, whose decision shall be final.

Grade Grievances and Academic Complaints Pertaining to Radiation Science Courses

A student who believes that an academic evaluation has no basis in fact or is arbitrary should bring this to the attention of the instructor for resolution, preferably within the semester the course is taken. If the complaint is not resolved with the instructor within 10 business days following the complaint, the student may then bring the complaint to the program director. If the complaint is not resolved equitably after meeting with the program director, or after 10 business days of the director receiving the complaint, the student may raise the issue with the dean of students, or designee. Resolution of the issue, once brought to the dean of students will no longer include any person associated with the Radiation Science Programs, including the director, coordinators, or supervisors. Written requests for review by the dean of students, or designee, must be submitted no later than the end of the semester following the semester in which the course was taken. Requests for review by the dean of students, or designee, for courses taken during summer sessions must be submitted by the end of the following fall semester. Complaints from graduating students must be received by the dean of students, or designee, at least two weeks prior to graduation.

The dean of students, or designee, will make a recommendation to the academic dean of the college, or designee, within 15 business days of receiving the formal complaint. It is the responsibility of the academic dean, or designee, to come to a resolution of the complaint within 15 business days of receiving the recommendation from the dean of students, whose decision shall be final.

• Undergraduate Academic Honesty

Academic Honesty Policy for All Undergraduate Students

Suffolk University fosters engaged learning, rigorous scholarship and innovative thinking in our students, faculty, staff and programs. Academic honesty in one's work, words, ideas and actions are central to this vision. We are committed to academic freedom, the intellectual exchange of ideas and the development of knowledge which can only be achieved when academic integrity is present.

Overview

Students are expected to conduct themselves with integrity. In classrooms and laboratories, at internships, in libraries and in study groups and academic teams, cultivating and practicing honesty lays a foundation for lifelong integrity. Making honest, ethical choices is a necessary step in establishing communities of trust. Academic dishonesty includes four general types of inappropriate behavior: cheating, plagiarism, dishonest conduct and collusion/unauthorized collaboration. Academic dishonesty is not limited to the following examples:

Prohibited Conduct

Cheating on examinations, plagiarism, and/or improper acknowledgement of sources in essays or research papers, using unauthorized materials, prepared answers, teacher's manuals, study guides or written notes, unauthorized collaboration on homework or computer assignments and the use of a single essay, paper or any assignment or work presented in more than one course, without the permission of the instructor, constitute unacceptable academic conduct.

It is dishonest to buy, sell, download, borrow, or lend papers or to copy material from computer resources. It is unacceptable to make up or falsify data that are supposed to be collected from survey, experimentation, or other means. Work that is represented as yours should be your own; if not, the source should be properly identified. This applies to lab reports, computer projects, and group projects as well as to individual assignments. Copying

and pasting material from the Internet or other sources without proper citation is prohibited. Lack of knowledge or ignorance of how to properly cite sources is not an acceptable excuse. Using cell phones, calculators or other electronic means when not approved is prohibited.

If the course expectations around academic integrity are not clear, students are encouraged to seek clarification from the instructor early in the course schedule.

Instructors who suspect academic dishonesty should report incidents to the Office of Student Affairs. Reports will be addressed through the Community Standards and the Student Discipline System. An undergraduate student who has been found to have violated this policy is subject to a range of sanctions as outlined in the Community Standards and Student Discipline System.

- **Early Alert**

The [Early Alert](#) process identifies students who may be academically at risk, before week five of the semester. The Faculty alert students who are at risk of failing a course if they are struggling with course content, not completing assignments, not attending classes regularly, or if they have second language issues or deficiencies. University staff outreach to all alerted students and connect them with the appropriate support services to help them achieve success.

- **Final Examinations**

Final exam dates are posted in the [academic calendar](#). Individual course final exams display in the [online course search](#).

- **Grades**

Grades are available [online](#) soon after the conclusion of each semester.

Students are solely responsible for their academic progress and should confer immediately with their academic advisor in the event their performance becomes substandard. Failure to maintain satisfactory progress can lead to loss of financial aid, academic probation, or dismissal, or other equally serious consequences.

- **Honor Points**

Scholastic averages are computed by multiplying the credit hours by the honor point equivalent. For example, a 4 credit course evaluated as "A" will be counted as 16 honor points (4 credits multiplied by 4.0 = 16). Grades of "I," "W," "P," "IP," "AU," "NC," and "PC" are not computed in determining Honor Points, and have no impact on a student's scholastic average.

A cumulative average of 2.0 (C) and an average of 2.0 (C) or better in one's major, minor, and/or certificate program are required for graduation. Students are required to monitor their average in their major and minor. If students are at risk of falling below the required average, the Academic Standing Committee will notify the academic department of their major.

• Repeating a Course

Students may retake any course for credit by paying the appropriate tuition. When a student repeats a course, all grades will appear on a student's transcript; however, only the most recent evaluative course grade will be used to compute the cumulative grade point average. Grades of "P," "I," "W," "NC," and "PC" issued in repeat courses are excluded in calculating the new GPA. When repeating courses, only one course may be used for credit to fulfill degree requirements. A student may repeat a course a maximum of two times. Students receiving federal financial aid should refer to [Satisfactory Academic Progress](#) regulations for financial aid eligibility when repeating a course.

Eligibility for Degree

In order to be eligible to receive a bachelor's degree from the University, a student must:

- Earn at least 126 semester hours in the College of Arts & Sciences; 124 semester hours in the Sawyer Business School; or 124 semester hours in the New England School of Art and Design
- Achieve not less than a 2.0 cumulative grade point average and earn a minimum 2.0 grade point average or higher in the major
- Achieve a minimum 2.0 grade point average or higher in the minor, if applicable
- Meet all the academic requirements for his/her particular degree (eight years is the normal limit for completion of a part-time or an interrupted degree program)
- Complete a minimum of 45 semester hours at Suffolk
- Complete major residency requirement
- Complete minor residency requirement, if applicable
- Complete the final 30 semester hours at Suffolk
- Complete at least 30 semester hours of business coursework at Suffolk (Sawyer Business School students only)

- Complete at least 60 semester hours of coursework at Suffolk in order to be considered for scholastic honors

• Application for Degree

Students are required to submit an application for degree to the Registrar's Office by the published deadline. It is expected that all obligations to the University, both academic and financial, will be completed at the close of that semester. Failure to comply with this requirement will delay graduation and participation in commencement to some future time.

• Commencement Exercise Eligibility

In addition to those students who have completed in quality and quantity the requirements for their respective degrees, students may participate in commencement if they have officially applied as a September candidate, are enrolled in their remaining requirements in the subsequent summer sessions, have satisfied all other degree requirements, and have fulfilled all financial obligations to the University.

September degree candidates petitioning to participate in the May commencement ceremony must apply and be enrolled in all outstanding requirements in the subsequent summer sessions by the dates established by the [Office of the Registrar](#). Approval of the petition is contingent upon satisfying the conditions listed above.

• Graduating with Honors

See [Academic Honors](#).

• Substitutions & Waivers

Major & Minor:

Students may file a petition for a major or minor requirement substitution with their academic advisor and major department chair. The academic department chair and appropriate Dean's Office must approve major and minor requirement substitutions.

Core & Degree Requirement:

Students may file a petition for core and/or Degree requirement substitutions and waivers only with the appropriate Dean's Office for their degree.

- [Grading](#)
- [Graduation](#)
- [Registration & Attendance](#)
- [Student Record](#)

Registration

Registration materials (program evaluations, transcripts, course schedules, etc.) are available to all students [online](#) prior to faculty advising at the beginning of each term's pre-registration.

Newly accepted and re-entry students will receive information regarding orientation and/or registration from the [Office of Undergraduate Admission](#).

Late Registration

Registration is closed after the first full week of classes in any semester.

Add/Drop or Change of Course

Students may add, drop, or change courses online based upon availability and eligibility during the first week of the term. Refer to the [academic calendar](#) for add and drop dates.

Pass/Fail

See [grading](#) page.

Auditing a Course

In an audited course, a student will not receive credit or honor points; however, a student must pay the same tuition as if taking the course for credit. Under no circumstances may a student change from the evaluative letter grade system to audit or vice versa after the first two weeks of classes.

A student who audits a course is responsible for attending classes and completing required coursework.

• Attendance

Federal regulations require universities receiving federal funding to implement a policy monitoring student attendance in class.

Instructors are responsible for establishing the requirements for attendance and participation in each of their classes and for informing students of these requirements at the beginning of each course.

The Office of Health & Wellness Services does not excuse student absences. The student, when absent from class, has the responsibility of obtaining knowledge of materials covered in classes missed, including information about announced tests, papers, or other assignments.

• Leave of Absence and Withdrawal from the University

There may be times due to personal, medical or other reasons when a student may need to take a leave of absence or withdraw from the university. A leave of absence is taken when a student is away from the university for a portion of a term, a term or longer but intends to return to Suffolk to take classes in the future. A student may withdraw from the University when he/she no longer wishes to take courses for the current term or at any time in the future. Before a student decides to take a leave of absence or withdraw from the University, he/she is encouraged to speak with the Student Affairs Office to discuss options. Students should contact the Student Affairs Office at 617.573.8239 to schedule an in person or telephone appointment or email the office at studentaffairs@suffolk.edu.

Leave of Absence

Students who are temporarily unable to continue their education at Suffolk University may [apply for a leave of absence](#) by submitting a leave of absence form to the Student Affairs Office. A leave of absence may be granted for two consecutive or two non-consecutive semesters (excluding summers). A student applying for a leave of absence must provide an expected date for return. Students on leave will be required to meet the degree requirements under which they were admitted. A leave of absence may not be used for the purpose of taking academic courses at another institution with the intent of transferring the credits to Suffolk University. Students requesting a leave of absence for military duty are permitted to extend their leaves of absence beyond two non-consecutive terms.

A matriculated student who does not return for reregistering at the specified semester will be classified as an official withdrawal and must apply for readmission through the Office of Undergraduate Admission.

Current/Returning Students Wishing to Withdraw from the University

Students who are transferring to another institution or students who do not plan to return to Suffolk University in the future must submit a [Withdrawal Form](#) to the Student Affairs Office. The University's refund policy will determine refunds.

Change of Address/Name

Students are required to notify the Registrar of any change of home or local address within 48 hours of the effective change date, parent or guardian, or any change of legal name. Suffolk University requires a student's legal name be used on academic records and other official University documents.

All Suffolk University students are required to submit (or confirm) current [emergency contact information](#) each semester and when such information changes.

Academic Record Status

Student academic records are sealed at the time the degree is conferred. After this date, changes cannot be made to majors and minors, academic honors, removal of incompletes, grade changes, or other changes to an academic record.

College of Arts & Sciences

College of Arts & Sciences Undergraduate Programs

Mission Statement

The College of Arts & Sciences has as its credo that liberal learning prepares students of all ages and backgrounds to live more fulfilling lives, to appreciate and contribute to the communities of which they are members and to reach their ethical, personal, intellectual and financial goals. To help its students maximize their potential, the College emphasizes critical and analytical thinking through a rigorous “success skills” undergraduate core program in written and oral communication, computing, analyzing and integrating. Faculty scholarship supports diversified liberal arts concentrations available in the humanities, the natural sciences and the social sciences, along with graduate programs in several fields, most offering career-related professional program tracks and practical experience on or off campus.

2015-2016 Archived Catalog Information

Degrees

2015-2016 Undergraduate Degree Requirements

The College of Arts & Sciences offers the following undergraduate degrees:

- [Bachelor of Arts \(BA\)](#)
- [Bachelor of Fine Arts \(BFA\)](#)
- [Bachelor of Science \(BS\)](#)
- [Bachelor of Science in Engineering \(BSE\)](#)
- [Bachelor of Science in Journalism \(BSJ\)](#)
- [Bachelor of General Studies \(BGS\)](#)
- [Associate of Arts \(AA\)](#)
- [Associate of Science \(AS\)](#)
- [Associate of Science in Paralegal Studies \(ASPS\)](#)

Please reference the [archived catalogs](#) for degree requirements for students matriculating prior to fall, 2015.

Each academic department specifies whether students majoring in that department may earn the BA, the BS, or have a choice of the BA or BS. All degree programs provide a broad liberal arts background and specialization within a single major field or divisional concentration.

A minimum of 126 semester hours is required for the bachelor's degree (124-hour requirement for the BFA) and 64 for the associate's degree.

See all [Majors and Minors](#) offered by the College of Arts & Sciences (CAS).

- Degree Requirements

Within the semester-hour requirements for bachelors' and associates' degrees, certain courses and options must be taken as requisites to the degrees. Core Requirements provide the basic knowledge and skills necessary for successful academic work at higher levels, and the breadth of knowledge in many fields that is fundamental to liberal education. Major Requirements provide the specialized knowledge, training, and experience necessary in preparing for a career or vocation.

To complete any major in CAS, students are required to take a minimum of 12 semester hours of courses in the major department at Suffolk University. Students must achieve a minimum 2.0 grade point average in their major. Courses that are taken as part of a student's Major or Complementary Major Requirements, which are also listed under the College Requirements, can be used to satisfy both Major and Core Requirements. These courses count only once toward the 126-hour requirement for bachelors' degrees (124-hour requirement for the BFA) and the 64-hour requirement for associates' degrees. Individual exemptions from Core Requirements, based on examination and recommendation of the appropriate departments, may be granted by the dean of the College of Arts & Sciences. Semester-hour credit is not granted for such exemptions.

Students should have finished WRI-101 and WRI-102 or authorized equivalents by the time they have reached 64 credits. Delaying the first-year writing requirement may impair performance in upper-division courses and make it difficult to graduate on schedule. Upper-division students who have not completed all writing requirements should do so before they achieve senior status.

• Declaring a Major

An academic major program enables a student to concentrate a portion of his or her studies in a specific subject area. Choosing a major is a serious decision, since it will have a significant impact on a student's future. Although many students come to the University with a specific major in mind, many other students decide to postpone the declaration of a major until they find out more about certain fields and concentrations of study. These latter students leave open their choice of a major, and are thus referred to as "open" majors. In general, students do not have to select their major until the second semester of their sophomore year.

Students wishing to declare or change a major need to obtain a [Change of Major Form](#) at either the [Office of the Registrar](#) or the [Undergraduate Academic Advising Center](#). This form should be brought to the new major department for advisor assignment. The form is then submitted either by the new department or by the student to the Office of the Registrar.

• Double Majors

Double majors are permitted, provided:

1. The two majors are in two different departments in the College of Arts & Sciences. (The departments of Communication & Journalism, Mathematics & Computer Science, Physics & Engineering, and World Languages & Cultural Studies are joint departments but should be considered to be two separate departments when interpreting this requirement. Similarly, the Fine Arts, Graphic Design, Illustration, and Interior Design programs should be considered as separate departments for the purposes of double majors.);
2. The student has completed the major requirements and the complementary major requirements for each major field. Advisors for each of the two proposed major departments advise the candidate concerning the proposed double major and help the candidate to plan, coordinate, and implement a program that interrelates (where possible) the two proposed major disciplines. At some point after the first year, but not later than the end of the junior year, the student should declare the double major. The double major approval form, signed by both advisors, must be

submitted to the CAS Dean's Office for approval. A student declaring a double major must have a GPA of 2.0 or higher and must maintain a minimum 2.0 GPA in both majors.

To qualify for a double major, a student may use no more than four courses from a given major toward the second major.

These restrictions on the number of courses that may be counted toward two majors do not apply to prerequisite, co-requisite, or complementary major requirements of the majors.

CAS students wishing to double major with the Sawyer Business School must consult with the SBS double major coordinator during the initial application process and must adhere to the CAS Double Major criteria.

• Dual Degrees

A student may earn two different undergraduate degrees (e.g., BFA/BA) when the requirements of both degrees, plus a minimum of an additional 30 credit hours of academic work, have been completed. A student seeking a dual degree must have a GPA of 2.0 or higher and must maintain a minimum 2.0 GPA in both majors and degrees. The dual degree approval form, signed by both advisors, must be submitted to the CAS Dean's Office for approval.

• Minor Programs

Any department within the College of Arts & Sciences may establish a formal minor program. A department's minor program shall be available to any student not majoring in that department.

A minor program is optional for any student and is not required for graduation. A student should consult as early as possible with his or her advisor, and with a member of the department in which he or she intends to minor, regarding minor requirements. Students must achieve a minimum GPA of 2.0 in their minor.

A student declaring a minor may use no more than two courses from a major to fulfill the requirements for the minor. No more than one course from one minor may count toward the fulfillment of a second minor. Students may not minor in a subject in which they are also completing a major.

The departments of Communication & Journalism, Mathematics & Computer Science, Physics & Engineering, and World Languages & Cultural Studies should each be considered to be two separate departments when considering major/minor combinations. Similarly, the Fine Arts, Foundation, Graphic Design, Illustration, and Interior Design programs should be considered as separate departments for the purposes of minors. Please note that, while Interior Design BFA candidates may minor in another NESAD major program, there is no Interior Design minor. Students majoring in Sociology may complete the minor in Education Studies (administered by the Sociology Department), and students majoring in Government may complete the minor or the certificate in Applied Legal Studies (administered by the Government Department).

These restrictions on the number of courses that may be counted toward the minor do not apply to prerequisite, co-requisite, or complementary requirements of other declared majors or minors.

Students must complete a minimum of eight credits within their minor department at Suffolk University.

• Business Minors for CAS Students

A College of Arts & Sciences student seeking a Business Minor should consult with the [Undergraduate Academic Advising Center](#). Additionally, students may be advised to meet with specific faculty specialists in their area of interest. Please refer to the [Sawyer Business School section](#) of this catalog for program details.

The Sawyer Business School offers two types of business minors to College of Arts & Sciences students:

The **General Business Minor** appeals to students who choose to develop a basic understanding and appreciation of business administration.

The **Functional Business Minor** is for CAS students who would like to minor in a specific business discipline.

• Second Baccalaureate Degree

Students with an earned baccalaureate degree from an accredited four-year institution may apply for admission to an accelerated second bachelor's degree program in the College of Arts & Sciences. By transferring prior coursework to satisfy the Core Requirements and by completing all departmental requirements for the new major, a student could earn a second baccalaureate in as little as one academic year.

All applications must be initiated in the [Office of Undergraduate Admission](#). A candidate will be referred to the appropriate department chair for advising. The Office of Undergraduate Admission will then accept and evaluate all outstanding college requirements.

If accepted, a candidate would be required to successfully complete a minimum of 45 credit hours of new coursework and satisfy any outstanding general Core Requirements. Candidates deemed under-prepared to begin a second baccalaureate degree by the department chair could be required to complete prerequisite studies as a condition of admission to the program.

• Associate Degrees

An associate degree is designed as a two-year program. Credits earned toward the associate degree may be transferred to a four-year program at another institution; may be used to allow the student to re-enter college after an absence; or may be converted to a four-year degree program at Suffolk University if the student's educational objectives change. The College of Arts & Sciences offers an Associate of Arts (AA) degree, an Associate of Science (AS) degree, and an Associate of Science in Paralegal Studies (ASPS) degree.

2015-2016 Archived Catalog Information

Associate of Arts Degree

The AA degree program requires the successful completion of the following courses:

Core Requirements: 12-14 courses, 46-55 credits

- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Literature](#)
- [Ethical & Philosophical Inquiry](#)
- [Social Science](#)
- [Humanities/History/Visual & Performing Arts Theory & History](#)
- [Language](#)

Seminar for Freshmen: 1 course, 4 credits

Students with 15+ transfer credits of college or university work are exempt. Choose one Seminar for Freshmen course from those listed below:

- **SF-101 Fixing the World- Energy and Water: The Science of Solutions**

Credits:

4.00

Description:

Two of the most daunting challenges the world faces (or will face) is how to provide for both its growing energy needs and potable drinking water. Regular news events include climate change, droughts, flooding, and petroleum struggles. Human nature often requires a severe crisis before it responds. This course will investigate the historical science driving the use of energy since the Industrial Revolution to convert energy resources into work, including the steam engine, the electric motor, and the internal combustion engine. It will also consider alternative energy options to fossil fuels, such as solar, wind, geothermal, and ocean power. Along the way we will consider the evidence for Global Warming and Climate Change. We will look into human nature, simple life styles, conspiracy theories, and the influence of those in power to shape human opinion. We will also consider how our water supply is provided and where it goes after being used. What options do developing countries or drought racked areas have to remedy their water needs? Although the course pursues a scientific understanding of these issues, the mathematics used will be gentle, and a larger emphasis will be placed on the intuitive appreciation of these concerns.

- **SF-132 The Beatles: Here, There & Everywhere**

Credits:

4.00

Description:

This seminar will investigate the impact and legacy of the Beatles. The Fab Four deserve our scholarly attention as musical innovators and as cultural avatars of the 1960s, an era that still exerts influence today. We will examine the many ways in which the Beatles rocked the establishment and became defining figures in post-war youth culture. We will also discuss other media (the visual arts, film, fashion, style) and fields of study (mass media, marketing, recording technology, copyright law, English history) using the Beatles as our guides.

- **SF-151 Getting Over It: Dealing With the Aftermath of Group Conflict/Mass Atrocity**

Credits:

4.00

Description:

Once violent conflict between two groups has ended, what is the best way to transition back to normality coming to terms with the past or simply moving on? To answer these questions we will examine the debates surrounding war crime tribunals, truth commissions, lustration policies, and reparations in the second half of the 20th century. Case studies will include post-apartheid South Africa, post-WWII Germany, and the Israeli/Palestinian conflict. We will discuss the philosophical problems raised by each of these instruments, as well as on the political, legal, and practical difficulties their implementation present. Cultural Diversity B

Type:

- **SF-156 The Mask Behind the Face: Personas, Personalities, and Perception. Acting in /Out Life**

Credits:

4.00

Description:

The theatre has always been a metaphor for life. In modern times life has become theatre. This seminar will confront the idea of real life and the eroding boundary between performers and audience. Students will study the roots of the contemporary obsession with stars and stardom, a mania that began in the 18th century and flourished in the 19th century. We will look at performance studies, performers memoirs, plays, and films that dramatize this dilemma.

- **SF-173 Crime in American Society**

Credits:

4.00

Description:

Popular beliefs about crime are often inspired by the media and by specific criminological theories. These theories about and media images of crime will be examined in detail, including the hits and misses.

- **SF-174 Tragedy and Literature**

Credits:

4.00

Description:

This course will focus on classic works of ancient and modern literature that examine the human condition from a tragic perspective. We will concentrate on close readings from the following texts: Homer's Iliad, Sophocles' Antigone, The Bhagavad-Gita, Shakespeare's Othello, Chekhov's short stories, and Joyce's Dubliners.

- **SF-178 Sacred Hoops & Sneaker Pimps: Understanding the American Hoop Dream**

Credits:

4.00

Description:

This course is about the basketball hoop dream played out at the high school and college levels. We will study a wide variety of materials - novels, films, websites, reference works - to understand both the construction, and destruction, of the hoop dream in such diverse places as New York City, Seattle, rural Indiana, suburban Georgia, and the Wind River Reservation in Wyoming. Issues of race and culture will serve as guiding themes as we develop critical theory explaining why the hoop dream has persisted, and adapted, over time, to fit the needs of its believers and supporters.

Type:

Cultural Diversity Opt A

- **SF-182 Heroes, Antiheroes and Outsiders: Reading the Graphic Novel**

Credits:

4.00

Description:

How is it that comics", a genre often viewed as entertainment for children and adolescents, has become one of the most exciting forms of narrative and visual art? To answer this question, this seminar will examine a range of graphic novels, from those that celebrate their origins in superhero comics, such as Alan Moore's Watchmen, to those that treat subjects not usually considered proper to the comics genre, such as Art Spiegelman's Maus, about the Holocaust, and Alison Bechdel's Fun Home, about the complexities of sexual identity. As we read these works, we will look at how the combination of words and still images makes the graphic novel a unique storytelling form, as well as how artists and writers push the envelope to create new styles and challenge our expectations. In addition to class discussions and writing assignments, we will take a field trip to the Museum of Fine Arts and create a collaborative group graphic novel step-by-step over the course of the semester (all abilities welcome).

- **SF-183 Politics, Power and the Media**

Credits:

4.00

Description:

Is there a relationship between accumulated political power and mass media representations? Is news content impacted by existing political power relations? It is the object of this course to critically analyze the role of the mass media within the framework of existing political power relations in the United States. In particular, the course will focus on the role the mass media plays in promoting and reinforcing dominant political practices and ideologies. The course will begin by exploring various theories of the press, notably its function in a democratic society, as well as the concepts of power and propaganda. We will continue with a series of case studies, complemented by secondary sources that highlight how media representations affect the contemporary distribution of political power in the US. Topics of discussion will include the current US war on terrorism, the ongoing health care debate, the public disavowal of big government", and the concept of a liberal media.

- **SF-189 American Gothic: Edgar Allan Poe, Flannery O'Connor and Annie Proulx**

Credits:

4.00

Description:

This literature seminar will study and compare the short stories of Edgar Allan Poe, Flannery O'Connor, and Annie Proulx. Beginning with Poe as the father of the short story genre in America and exploring his critical theory of the grotesque and arabesque", the class will examine the emergence of the gothic literary idiom as a classic American genre. Critical essays on the gothic aesthetic will be analyzed and film adaptations and documentaries will be viewed.

- **SF-191 Film Adaptation Film Adaptation**

Credits:

4.00

Description:

Why did they change the ending of the book? The novel is so much better! We will explore the concept and industry of film adaptation. Students will read novels and watch respective film adaptations to explore how the written word is adapted to the screen; both fiction and non-fiction works will be considered. Also, field trips to past film locations in Boston will be taken to explore why specific settings were chosen for respective situations. Additionally, students will create their own written adaptations of source materials, putting into practice the concepts studied in class.

- **SF-197 Sustainability, Energy, and Technology At Suffolk University**

Credits:

4.00

Description:

In this project and team-based course, students study a sustainability problem at Suffolk University and spend the semester developing proposals to address the problem. At the end of the course students will present their proposals to Suffolk University's sustainability committee, and will exhibit their websites and visual aids in the Donahue lobby to educate the Suffolk community about sustainability. If their proposals are well-researched and well-communicated, students can see their ideas actualized while they are still undergraduates.

- **SF-198 Music and the Brain**

Credits:

4.00

Description:

What accounts for the power of music to move us so profoundly? This course explores how our brains and music evolved together: What music can teach us about the brain, what the brain can teach us about music, and what both can teach us about ourselves.

- **SF-1127 The Vietnam and Iraq Wars: Polarized Perspectives**

Credits:

4.00

Description:

This class will examine some of the many controversies surrounding the Vietnam and Iraq Wars, two conflicts that have been profoundly polarizing for the American people. There are widely divergent perspectives regarding the fundamental questions surrounding each war. Were the reasons for American involvement just? To what extent were the methods used by the United States military during each war just? To what extent did the media play an appropriate role before, during, and after each war? Did opposition to these wars serve primarily to benefit the enemies of the United States or did it constitute a form of patriotism and love of country? This interdisciplinary course will address these and other complex questions by examining the histories, literature, and films (both documentaries and dramatic) that have been produced in response to these wars.

- **SF-1128 Sustainable Media**

Credits:

4.00

Description:

Contrary to a popular perception that information, communication and entertainment technologies are clean, ecologically benign and paperless, the reality of an increasingly digital life is that our fascination with the next best thing in mobile phones, video game consoles, personal computers, digital cameras, tablets, etc., has devastating impacts on our environment. These media devices are manufactured using toxic ingredients in poisonous working condition, require an abundance of energy to operate, and create hazardous waste when disposed. Media technology companies and the advertising industry that markets their wares have successfully persuaded consumers to accept rapid obsolescence and to highly anticipate the latest upgrade. But some consumers, electronics manufacturers, policy makers, and environmental groups are working to change the culture of consumption in favor of sustainable media practices that lessen the environmental footprint of the digital devices we use everyday. The purpose of this course is to understand the problem of unsustainable media, and the possible solutions for a sustainable media system.

- **SF-1129 Beacon Hill: Fact, Fiction, and Fantasy**

Credits:

4.00

Description:

The course will explore the physical geography, history, and image in literature, film, and pop culture of Suffolk University's Beacon Hill neighborhood. The purpose and objective of the course is to provide students with a deep knowledge, understanding, and appreciation of Beacon Hill through examination of written and visual sources, and feet-on and eyes-on experience of the public parts of the Hill.

Type:

Local Engagement Experience

- **SF-1141 Classical Civilizations: Pathways to Wisdom**

Credits:

4.00

Description:

How is it that the knowledge, intelligence, wisdom and values of the Greeks and Romans still educate and edify the world by providing venues towards leading fulfilling and dignified lives? The guiding principles of their respective civilizations rested upon eight pillars: - Humanism: It was recognized that humans have the potential to master their world and live life to the fullest. -The Pursuit of Excellence: To imagine the highest good and strive to attain it. - Self Knowledge: It is imperative to know oneself before seeking to know the world. - Rationalism: Always question, reason and discern truth from falsehood and never consider any matter superficially. - Restless Curiosity: Often the resolution of one issue leads to the revelations

of others mysteries and pursuits which compels further investigation. The wise individual makes this a lifelong endeavor. -Love of Freedom: As long as one brings no harm to others, one must be free to live and discover as much as possible. - Individualism: All are unique and, therefore, must recognize individual strengths and identity. -The Practice of Moderation: The prudence of avoiding extremes in personal and social conduct. In this course, students will read two (brief) texts on the Greek and Roman contributions to the world and then will proceed with specific readings which illuminate the eight principles above for achieving the good life.

- **SF-1143 In the First-Person: Storytelling in the 21st Century**

Credits:

4.00

Description:

This section of the Seminar for Freshmen will consider the forms, venues, and impacts of narrative nonfiction in contemporary culture. From the exploding popularity of personal essays in the digital age to the living, evolving essays we create on social media, we are constantly narrating and archiving our lives, shaping their content for specific audiences. In doing so, we shape what our experiences mean and represent. In order to analyze the power of narrative nonfiction, we will look at a variety of multimodal texts: essays, podcasts, Instagram and Twitter feeds, stand-up comedy, and storytelling slams, as well historical texts such as the essays of Michel de Montaigne and historical artifacts at the National Archives in Boston. We will also write our own narrative nonfiction, and adapt our first-person stories for listening and viewing audiences, such as the MassMouth story slam and podcasts like This American Life. Additionally, we will practice narrative nonfiction for professional audiences, using storytelling as a way to showcase personal strengths to employers, internship coordinators, and the like.

- **SF-1144 Native Americans: Walking in Two Worlds?**

Credits:

4.00

Description:

Native Americans are often described as walking in two worlds, as they attempt to navigate the process of maintaining their tribal identity and heritage while living in mainstream America. In recent years there has been a shift towards tradition and heritage, and a rejection of Western values and norms in both the US and Canada. In this course we will look at how Native people live in the US and Canada today, and examine the extent to which they are either trying to walk in two worlds or perhaps rejecting the two worlds model. To help us answer this question, we will read about reservation life, the Idle No More Movement, Indigenous History, and current events. We will also watch videos and explore indigenous culture.

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

Type:

Diverse Perspectives

- **SF-1146 Fido the Friendly Wolf: A Natural History of Dogs**

Credits:

4.00

Description:

This course explores the evolution of dogs from wolves and the ways in which dogs have adapted to their niche in human society. The ecology, behavior, genetics, and adaptations of dogs will be explored in relation to both their wolf ancestry and artificial selection by humans. The course includes 2 mandatory field trips to a wolf sanctuary and an animal shelter.

- **SF-1147 Global (In) Security: From ISIS to Ebola**

Credits:

4.00

Description:

This course reviews the principal features of global and national security as it is currently practiced by tracing the evolution of theories, policies and circumstances whereby current international security is developed. Students will evaluate the nature and origins of war, arms proliferation, military instability, terrorism, genocide, health threats and natural resources depletion.

- **SF-1148 Brave New Worlds**

Credits:

4.00

Description:

Explores themes of adventure, self-discovery, exile, and culture shock in classic and contemporary travel writing (including fiction, poetry, and non-fiction) as well as film. Students will experiment with creative writing of their own, develop theories of cosmopolitan world citizenship, travel through the city of Boston on field trips, and team up to learn about different countries in Suffolk's global network of study abroad programs.

• SF-1150 Religion in Contemporary Society

Credits:

4.00

Description:

This course is design to provide students with an overview of the social settings and cultural meanings of religion in the contemporary world. Topics that will be covered in reading and discussions include the rise of religious fundamentalism, religion and violence, women's and men's religious experiences, new religions, and portrayals of religion in popular films. In addition to the readings, students will observe and experience religious expressions and activities through fieldwork assignments. The emphasis on films and fieldwork reflects my belief that religion is made up of lived experiences of actual individuals and communities. In order to understand religion in contemporary society we will make every effort to see (in person or in film) a wide range of religious activities. The films we will see include some of the following: Leap of Faith, Devil's Playground, Kadosh, Women of Hizballah, Singing Stream, A Still Small Voice.

• SF-1151 Reproduction and Society

Credits:

4.00

Description:

This course explores relationships between reproductive health and rights both nationally and internationally. Many of our topics fit into two broad areas: conflicts over the control of childbearing (sterilization abuse, birth control, and abortion) and conflicts over who deserves to be a mother, especially when the mothers in question face social stigma and lack political power. Other topics include safe birth and maternal mortality, breastfeeding, infertility and reproductive technology. We also examine the politics of women's sexual and reproductive autonomy, including the policies that shape women's choices to prevent, achieve, abort, or carry to term a pregnancy. Throughout, we are guided by the following questions: Why is reproduction an important site through which to understand society? How do statuses such as race, class, gender, sexuality and ability

influence people's reproductive possibilities? What is the role of the state in shaping these experiences? How have communities supported or resisted efforts at reproductive control? Why is reproductive justice central to these answers?

- **SF-1153 Law, Disease, and Public Health**

Credits:

4.00

Description:

This course is about public health law, which is the study of the legal powers and duties of the various systems of government in the United States (federal, state, and local) in collaboration with their partners (e.g., health care, business, the community, the media, and academe), to ensure the conditions for people to be healthy (to identify, prevent, and ameliorate risks to health in the population), and of the limitations on the power of these systems of government to constrain for the common good the autonomy, privacy, liberty, proprietary, and other legally protected interests of individuals. The prime objective of public health law is to pursue the highest possible level of physical and mental health in the population, consistent with the values of social justice. The course will focus especially on public health law in the area of epidemic disease. Case studies will be made of the Great Influenza of 1918 and the origins and spread of the Ebola virus, culminating in an examination of outbreaks of Ebola in the United States.

- **SF-1154 Introduction to Visual Studies**

Credits:

4.00

Description:

This seminar provides an introduction to Visual Studies, a relatively new interdisciplinary field that examines how images communicate and the roles that they play in society. Students will apply the concepts and techniques of Visual Studies to analyze sites and signs around Boston, such as advertisements, street signs, fashions, newspaper photographs, buildings, and public spaces. Class projects will increase students' awareness of their visual environment and their ability to critically analyze the visual rhetoric that surrounds us and is often used to manipulate us.

Type:

Local Engagement Experience

Students in the CAS Honors Program should choose one Seminar for Freshmen course from those listed below:

- **SF-H116 Enlightened Insanity**

Prerequisites:

CAS Honors students only.

Credits:

4.00

Description:

Rain or shine, the great 18th century Enlightenment philosophers would meet at the famous cafes of Paris to discuss their ideas, and to observe and criticize society. From these informal debates emerged ideas that are at the core of our modern understanding of the nature of society, marginality, human nature, civil rights, the essence of creativity and genius. Come join us in the quest to understand, define, observe, and analyze the key ideas and concepts of these great thinkers, such as Rousseau, Diderot, and Voltaire, still so relevant in our time. We will read key works of these creative thinkers and philosophers. We will enrich our experience and understanding through the use of film, theatre performances, museum visits, as well as the occasional cafe debate.

Type:

Expanded Classroom Requirement, Honors

• SF-H126 The Boston Theatre Scene: The Inside Experience

Credits:

4.00

Description:

Using the current Boston theatre season as its syllabus, this writing- and analysis-intensive course will explore several plays in production at some of Boston's many professional theatres. We will study the script of four to five plays before attending performances of those works. Students will gain insights on the world of theatre through backstage tours and conversations with theatre professionals such as producers, directors, actors, designers, playwrights, and critics. Students must be available for evening (usually Wednesday) performances. A fee for student-rate tickets will be assessed.

Type:

Honors

• SF-H1134 The Meaning of Life

Prerequisites:

CAS honors students only.

Credits:

4.00

Description:

What do we live for? Which beliefs, values, and experiences sustain meaningful, fulfilling existence? Are we authors of our destinies or powerless pawns in an unfathomable cosmic game? Does death render all our efforts superfluous? This award-winning course offers a cross-cultural, interdisciplinary exploration of these questions through philosophical and religious texts, art, fiction, autobiography, and psychological studies. The course opens with the Old Testament's book of Ecclesiastes, followed by three units: 1) A Life Worth Living: Humanity's Ideals focuses on the ancient and modern visions of human flourishing; 2) Threats to Meaning: Humanity's Discontents, discusses the disillusionments leading to the loss of meaning; and 3) Recovery of Meaning: Crises and Hopes, explores the post-crisis possibilities of self-discovery and growth. Please visit <http://meaningoflife.cherkasova.org/>

Type:

Honors

• SF-H1135 Women Warriors: Stories of Captivity, Conversion, and Confession

Credits:

4.00

Description:

Since the beginning of time, women have been doing battle to themselves, while men have gone to battle against others. Whether it is through converting to Christ, yielding to captors in order to survive, or carrying a baby, this course introduces students to the many ways in which, whatever battles they face, women are warriors; they survive. Utilizing an array of captivity, conversion, and confession narratives by women, and pairing them across the centuries, students will make connections and draw conclusions between early-and mid-19th-century-American and contemporary women. Students will connect, for example, the trials of the 17th-century Puritan captive, Mary Rowlandson, and contemporary hostage, Elizabeth Smart, to explore how women (no matter how different they seem) draw upon unique inner resources to survive.

Type:

Honors

- **SF-H1152 The Idea of America: Past, Present, Future**

Credits:

4.00

Description:

A systematic exploration of thinking of and about America, from the founding of the republic to American issues and traditions of thought that reflect upon the founding principles and the unfolding American experiment. The Declaration of Independence and the Constitution will be studied with an eye to their philosophical content and sources. The course will also examine works of philosophers and other thinkers who address conflicts over the meaning of founding principles in the course of the nation's history, from the struggle over slavery to America's contemporary role in the world. Because this course intends to apply theoretical understanding to real life, students will be expected to read contemporary journalism on a regular basis and assess the controversies of today in the light of the nation's philosophical and historical currents.

First-Year Writing: 2 courses, 8 credits

- WRI-101 First Year Writing I

Credits:

4.00

Description:

Study and practice of the writing process and revision in terms of expository writing modes for an academic audience.

- **WRI-102 First Year Writing II**

Prerequisites:

WRI 101.

Credits:

4.00

Description:

Study and practice of argumentative and research writing through further work with writing process and revision and the critical reading of a variety of texts.

A student may be assigned to other writing courses or may be invited to take WRI-H103. Students required to complete ENG-099 may be allowed to waive WRI-101 with a grade of “B” or better and the approval of the English department. Students who are invited to complete WRI-H103 and earn a “B” or better satisfy the two Writing Requirements. Waiving a course does not earn credits.

- **WRI-H103 Advanced First Year Writing**

Prerequisites:

By Invitation Only.

Credits:

4.00

Description:

This course is by invitation only and reserved for incoming Suffolk students with high admission scores. Advanced study and practice of writing process, revision, and research, based on close readings of a variety of texts. Fall semester only.

Creativity & Innovation: 1 course, 3 credits

Choose one 100-level Creativity & Innovation course from those listed below:

- ADF-S171 CI: Integrated Studio 1

Credits:

3.00

Description:

This cross-disciplinary course will integrate the ideas and practices of two-dimensional design, color and drawing emphasis will be placed on understanding the creative process, exploring concepts and developing research skills. Students will undertake individual and collaborative projects in three spaces; the studio classroom, the digital world and the city at large.

Type:

Creativity and Innovation, Arts Admin Minor Elective

• ADF-S172 CI: Integrated Studio II

Prerequisites:

ADF S101

Credits:

3.00

Description:

This course builds on the Integrated Studio 1 experience: synthesizing fundamental visual ideas. IS 2 investigates the construction, documentation, and transformation of volumetric form, environmental space, and time. Projects will explore narrative strategies and the creation of immersive experiences. Students will develop critical and analytical skills while employing a range of traditional and digital media-including video/sound capture and editing-as they explore the creative boundaries of the classroom studio, the city of Boston, and virtual space.

Type:

Creativity and Innovation

• CI-101 Process and Epiphany

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Despite its mystical connotations, creative epiphany is the result of a long engagement with the creative process that results in a surprising and unpredictable understanding of a concept or the solution to a problem. In the way that the discoveries of science are guided by the scientific method, the path to creative innovation is through a directed creative process. All creative innovators follow such a directed creative process, whether they are industrial designers or fine artists, performers or inventors, architects or entrepreneurs. This course explores both historical examples of individuals whose creative innovation changed the world, as well as hands-on collaborative, practical problem solving employing the creative process.

Type:

Creativity and Innovation

• CI-102 The End of Global Poverty

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course is designed to demystify the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking. More than one-third of our global population lives in poverty, earning less than two dollars a day. Governments, businesses, social enterprises, and charitable organizations have tried to solve the global poverty issue with mixed results. What is the solution? Is entrepreneurship the solution, part of the solution, or has no impact whatsoever? In this course, you will gain an understanding of the power of entrepreneurship (in the context of creativity and innovation), the definition and depth of global poverty (in the context of constraints, such as human, financial and physical resources embedded in local, regional, national and global cultures), and successes and failures of past initiatives to reduce poverty. This is not a course about politics or business, but rather finding a solution to a problem that has eluded mankind since the beginning of time.

Type:

Creativity and Innovation

• CI-103 Making Inventions: Sticking Your Neck Out

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course examines cutting edge technologies, the science behind them, and their practical application and follow-up success or failure. It also provides the students a chance to consider the relevance of identified needed inventions from the 1950s, and whether those projections were correct. The history behind some remarkable inventions will be presented. Finally, working in small teams, students will brainstorm to identify something useful to invent and determine several approaches to implementing it.

Type:

Creativity and Innovation

• CI-106 Failing Successfully

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course is designed to demystify the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking. Did you know Netscape was the internet browser? What about MySpace, arguably the Facebook of the last decade? What led Apple from being innovative pioneers of the 70's to the verge of extinction in the 80's to the technological giant they are today? Technologies come and go, but what leads to organizations lasting more than 100 years such as IBM, General Electric, etc.? What role does failure play in successful innovation, decision-making, and business viability? In this course, you will learn about innovation that may have been successful and well-executed. You will also learn about innovation that was a viable business opportunity, but poorly executed: one phase of failure. In addition, you will learn about innovation that had no real market viability, but was launched anyway: another phase of failure. Can failure lead to success? If so, how?

Type:

Creativity and Innovation

- **CI-107 Going Up: Skyscraper Design in Emerging Economies**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The human population is expected to be between 8.5 and 9 billion persons by the mid-21st century. The majority of those individuals will be living in urban communities. With large populations, high real estate costs, and limited land areas, the only way to construct in urban environments is to go up! In this course, students will have an opportunity to look at traditional and novel skyscraper designs, to consider the cultural and economic significance of such structures, and to use their imagination to develop a conceptual design of a skyscraper.

Type:

Creativity and Innovation

- **CI-108 Designing the Next Best Thing**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Demystifies the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking

and risk taking.

Term:

Offered Both Fall and Spring

Creativity and Innovation

- **CI-109 Virtual Globe Trekking: an Alternate View of the World**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will examine creativity and innovation through the lens of place. Modern geography is an all-encompassing discipline that seeks to understand the earth and all of its human and natural complexities - not merely where objects are, but how they have changed and come to be. The world is filled with ideas and perspectives. By changing your location, new perspectives emerge. This course will focus on the creative process to understand that each person creates in their own way. The students will test many methods to draw forth creative thought and seek to identify their own best method for calling on their own inner genius. Often this will involve failure and mixed results, yet this is where the students will learn their strengths and weaknesses.

Type:

Creativity and Innovation

- **CI-110 The Entrepreneur's Cocktail**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

How do you and your story drive business? This course takes an innovative look at human creativity and entrepreneurship. As an entrepreneur needs perseverance and high motivation, we will explore the importance of values, risk taking, problem solving, and the discovery of the market opportunities. In order for you to be creative and essentially create successful ventures, you will discover the nuances between the three factors and explore them further through interactive discussion and debate as well as collaborative group work. You will be encouraged to think in non-conforming ways and apply new concepts and develop your own personal operating principles.

Type:

Creativity and Innovation

- **CI-111 The Future of Boston**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course introduces students to creative and innovative thinking based in the field of communication. Students will work in teams to wrestle with the challenges Boston will face in the future and propose feasible strategies to meet them.

Type:

Creativity and Innovation

- **CI-113 Revising Reality**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Reality and perception have been debated and discussed for millennia. Humans see and experience their world in different ways. How do humans determine what is true and good and what advancements are necessary? In this course, students will creatively explore these big questions and revisit knowledge using new and sometimes divergent perspectives. Students will participate in dirty and courageous learning by crafting products, creating visual projects, and coming into original thought via trial and error. Students will also develop their analytical and critical thinking skills, while learning to communicate effectively and honestly.

Type:

Creativity and Innovation

- **CI-117 Writing for Stage and Screen**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will engage students in the process of script writing. Working in groups of four or five they will craft adaptations of stories, create original scenes, or review sketches. By the end of the semester they will produce a complete script. Each alternating week, one group will serve as the executive committee that will approve the final draft of the script of the week. There will be exams based on the textual study of collaborative and adaptation techniques.

Type:

Creativity and Innovation

• CI-121 Catastrophe Management: From 9/11 to the Boston Marathon Bombings

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will introduce students to the exciting world of emergency management from the perspective of scientists who are often utilized as experts during both small scale adverse events and large scale catastrophes. Students will actively and creatively explore the psychological, economic, and medical dimensions of these events and participate in role play in the classroom and site visits. By the end of the course, students will have a keen appreciation of emergency planning and management on the local and national levels.

Type:

Creativity and Innovation

• CI-123 Comics & Co.

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Using visual narrative as the means of exploration, students will be led through a series of exercises that challenge their assumptions, broaden their perspectives, and excite their imagination. The relationship between critical, creative and inventive thinking will be the basis for individual and collaborative projects.

Type:

Creativity and Innovation

• CI-125 Boston's Creative History in Perspective

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Our collective social consciousness is formed by physical space; through a mixture of exploration, discovery, and making, students will delve into the city that surrounds them, developing a sense of ownership and engagement in Boston's public space. During the course of the semester, students will uncover the ways that art and architecture have shaped the souls of cities around the world, using Boston as a template. In a series of local field trips, students will explore Boston through its art and architecture, focusing not only what is, but on what might have been -- designs that were ultimately unrealized. Through interview and visits with local artists and designers, students will also learn about the process of shaping public space, uncovering the myriad of ways that design decisions are political in nature. As a capstone to the course, students will create their own city plan -- identifying and researching a chosen social or physical challenge the city faces, then developing a proposal that would address their chosen issue. These design proposals will then be enacted using augmented reality. Like a layer of invisible ink, these projects will form a phantom city over the physical realities that surround us, displaying the dramatic potential of the imagination.

Type:

Creativity and Innovation

• CI-127 Visual Perspectives: Coastline, Symmetries and Illusions

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

How do you measure the length of a coastline? How much symmetry is possible? What is an impossible object? How did the Mayans measure proportions? In this course, students will delve into these and other questions with a visual theme. While some will be clear-cut, others will be open-ended and require some choices, estimates or assumptions to be made. Throughout, the emphasis will be on creative problem solving.

Type:

Creativity and Innovation

- **CI-129 Elements of Attraction- Supply and Demand**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The intent of this course is for students to examine and effectively express in writing their ideas on creativity and to inspire undergraduate students to exceed their current levels of learning. Students will learn to meaningfully integrate course content into long term-retained useful skills through applied creative collaborations. This course is based on the idea that exposure and insight development will enable students to better visualize themselves in their desired fields and make informed choices within the variety of options available to them. The focus of the course will help students to assess their personal interests and strengths as they plan for their own educational and professional futures.

Type:

Creativity and Innovation

- **CI-131 Off to the Future: Leadership Through Compromise**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Some past political issues were resolved with great success (the Compromise of 1820), and some resulted in great failures (the US Civil War). In this course, students will study noteworthy political dilemmas of the past, identify the major problem solvers and examine the art of compromise. These investigations will provide guidance and inspiration for students to develop innovative and creative solutions to present day political problems such as climate change, immigration, Social Security, income distribution, higher education affordability, and homelessness. Students will work in teams and propose creative and innovative solutions that will convince the affected interest groups favorably, represented by teams of other students in the class, and result in compromises solving tomorrow's problems today.

Type:

Creativity and Innovation

• CI-133 Franklin and the American Experiment

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

What made Benjamin Franklin such a creative force in American history? We will explore the many facets of Franklin's life (printer, writer, scientist, statesman) and learn about Benjamin Franklin's political and diplomatic ventures, and will recreate some of his scientific experiments.

Type:

Creativity and Innovation

• CI-135 The Design of Everything

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will explore a selection of the genius personalities and their creative work in 5 distinct areas of human creative endeavor; art, science, nature, technology and the built environment. The course explores the underlying similarities in the process of their discovery, invention and creativity across the disciplines. Studying such names as Newton, Warhol, Hawking, Jobs, Gaudi and Banksy, students will uncover the process of design through research, analysis, synthesis, iteration and error. In class group projects will allow a hands-on opportunity to create.

Type:

Creativity and Innovation

- **CI-137 Re-write for Rights: Drafting a New US Constitution**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The American Constitution is an important document, framing the basis for our lives and the lives of our neighbors. Yet it is also a very old document, which may be seen as lacking when it is compared to newer constitutions from around the world, even places that we may regard as undeveloped. In this class we will study many constitutions and also talk to many people to craft a new constitution that reflects contemporary American society and its values.

Type:

Creativity and Innovation

- **CI-139 Creating, Promoting, and Participating in the Literary Arts**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

With the launch of Boston's new Literary Cultural District, we have renewed cause to celebrate the history and industry of literature in our city. This course will immerse students in the world of literary culture and its many branches: writing, editing, reviewing, and publicity. Students will practice the art of creative writing, and learn how writers find publishing venues, how authors build platforms for their work, and how literature reaches the public through readings, social media, book trailers and other marketing campaigns, authors interviews, and reader reviews. Various industry professionals, authors, editors and publicists will speak to the class about the artistic and business opportunities, trends, and futures of literature and literary publishing. Students will apply their knowledge and interests to a variety of projects, including book reviews, author interviews, social media campaigns, literary events, and other collaborative projects. We will also work as a class to launch a new digital literary journal at Suffolk.

Type:

Creativity and Innovation

Note:

Students with 30+ transfer credits are exempt from this requirement.

- **BLE-325 Global Business Ethics**

Prerequisites:

BLE-215, PHIL-119, PHIL-120, PHIL-123 or PHIL-127

Credits:

3.00

Description:

Surveys business ethics as they transcend the diverse perspectives of global business. Explores current global ethics standards and values, ethical challenges, controversies, convergence and trends. Students explore famous global business cases through films, websites and independent research. Emphasizes identification and resolution of global business ethical issues within the context of ethical decision-making and sustainability. Analyzes corporate social responsibility ; hence, transforming global business ethics through business.

Type:

Diverse Perspectives

• CI-204 Prague: Castles to Barbwire

Prerequisites:

At least 24 credits earned.

Credits:

3.00

Description:

Prague offers students a more recent view into history and will serve as a backdrop to learning Design Thinking. The curriculum will use Czech and Central European cultural features as the inspiration for learning the creative process, skills that can be applied broadly and globally across disciplines. WWII and its fall to Communism left the Czech Republic undamaged. Artists played a vital part in the country's rise to a Republic during the Velvet Revolution. These dissidents, including writers, actors, artists and musicians were innovators who were the catalyst for change. One could say that creative minds changed this country. This course is designed to demystify the creative process by introducing the creative practice as a disciplined approach to problem solving and innovation requiring research. This one-month study abroad experience will offer a more worldly insight to the significance of developing skills where divergent thinking and risk taking are one of many key tools in learning to generate new ideas. Travel fee covers accommodations, transfers, some meals and cultural visits. Airfare and tuition not included.

• CJN-216 Intercultural Communication

Credits:

4.00

Description:

An examination of communication variations and cultural viewpoints and their impact on cross-cultural communication. A special emphasis is placed on rituals and message patterns in non-Western cultures.

Term:

Offered Both Fall and Spring

Type:

Cultural Diversity Opt B,Diverse Perspectives

- **CJN-219 Rhetoric of Protest and Reform**

Credits:

4.00

Description:

Examines the persuasive strategies of social reform movements with special emphasis on the civil rights', women's rights, and gay rights movements in the United States.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt A,Humanities & History,BSBA SOCIAL CHANGE,Diverse Perspectives

- **CJN-301 Documentary Film and the Image of Conflict in the Middle East**

Credits:

4.00

Description:

The course focus is on some of the divisions and conflicts within Israeli society. Students analyze and compare mainstream media discourse to alternative representations in documentary film. Analysis also covers media representation of the Israeli-Palestinian conflict.

Term:

Occasional

Type:

Cultural Diversity Opt B,Diverse Perspectives

- **CJN-385 Globalization of Media and Telecommunications**

Credits:

4.00

Description:

A critique of the circulation of media goods and ideologies from both a cultural and political/economic perspective. Topics include global Hollywood, the images of Muslim women in transnational media, the information society, and global social movements.

Term:

Offered Spring Term

Type:

Cultural Diversity Opt B,BSBA SOCIAL CHANGE,Diverse Perspectives

- **EDUC-315 Strategies for Emerging English Learners**

Credits:

4.00

Description:

This course examines the specific needs and challenges of the various language and cultural groups in schools. Topics include: theories of 1st and 2nd language acquisition, strategies for teaching academic content, modifying instruction in the mainstream classroom, creating classroom cultures that invite all students into learning, the role of advocacy and professional collaboration in ESL, and analysis of policies related to assessment and placement of English Language Learners.

Type:

Diverse Perspectives, Social Science

- **ENG-216 World Literature in English**

Prerequisites:

WRI-102 or WRI-103

Credits:

4.00

Description:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

Term:

Offered Both Fall and Spring

Type:

Cultural Diversity Opt B, Humanities Literature Requirement, Diverse Perspectives

- **FR-205 The Francophone World**

Prerequisites:

FR 202 or Instructor's consent

Credits:

4.00

Description:

Explores the francophone world through the study of short stories, print media, and film, by engaging with the rich textured and diverse francophone literary canon. Teaches advance notions of French grammar, write compositions, and the art of conversation related to cultural themes.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt B,BA FOREIGN,Diverse Perspectives

- **GVT-208 Politics / Religion**

Credits:

4.00

Description:

This course explores what major religions say about the status and responsibilities of the state and how, in turn, selective states have, in theory and practice, structured the place of religions in political life. Particular attention is given to issues of politics and religion in the United States. Cultural Diversity A

Type:

Cultural Diversity Opt A,Social Science,BSJ SOCIAL SCIENCE,Diverse Perspectives

- **GVT-359 Hockey, International Development & Politics**

Credits:

4.00

Description:

This class examines the way in which national identity, global and regional economics and international development intersect. It uses the professionalization of the sport of hockey and its subsequent spread around the globe as its case. It will look at the rise of the pro game, the way in

which it shapes national identity in the Canadian case, the way in which the pro business model has changed in response to broad socio-economic changes in North America and geo-political shifts around the globe, especially in Eastern Europe and the Former Soviet Union.

Type:

Social Science,Diverse Perspectives

• GVT-360 Elections and Voting

Credits:

4.00

Description:

How are elections administered in the United States? Do Americans have confidence in the electoral process? Should they? Why or why not? This course will examine elections in the United States in detail -- from how they are funded to how they are administered to how voters behave. Students will have a choice of either serving as poll workers during the November election or organizing and conducting research of potential voters. Students will gain hands-on experience in actual research design, election administration, and non-partisan get-out-the-vote activities. In addition, students will gain a deeper understanding of the relationship between attitudes, opinion, and voting behavior in American politics and institutions. ECR

Type:

Humanities & History,Social Science,BSJ SOCIAL SCIENCE,Diverse Perspectives

• GVT-391 Canada: Multicultural Politics

Prerequisites:

GVT 110/120 or Instructor's permission

Credits:

4.00

Description:

This course examines the Canadian model of incorporating diverse communities into its constitutional and political framework, including the founding British North American Act of 1867, the 1982 Constitution Act, and two later attempts at constitutional reform. Canada's role in balancing two official languages, English and French, is discussed, as is its recognition of a First Nations native-governed territory in the Arctic. This course introduces

to the Canadian polity and compares its parliamentary system with the U.S. separation of powers system. Prerequisites: GVT 110, GVT 120 or instructor's consent. Normally offered alternate years. Cultural Diversity B

Type:

Cultural Diversity Opt B, Social Science, BSJ SOCIAL SCIENCE, Diverse Perspectives

- **GVT-467 Comparative Social Movements**

Prerequisites:

Junior status

Credits:

4.00

Description:

This class examines the political ramifications of social movements primarily but not exclusively within the United States. It looks at ideology, beliefs and mechanisms of mobilization. Another important focus is an analysis of non-white social movements in this country and their impact on domestic politics. Among the movements to be examined are: the Pan-African movement 1919-1939 which will, to some extent, take us outside this country; the U.S. Civil Rights Movement 1955 to 1969 which covers the rise of the Black Power movement; and the U.S. Labor Movement 1900 to 1955 in terms of non-white influence on its programmatic goals. Normally offered alternate years. Cultural Diversity B

- **PHIL-120 Ethics and Civic Life**

Credits:

4.00

Description:

In this class you will be introduced to the perspectives and methods of politics, philosophy, and economics and see how these three disciplines present distinct but interconnected dimensions of current social and political issues.

Type:

Diverse Perspectives

- **PHIL-229 Eco-Feminism**

Prerequisites:

PHIL 119, or PHIL 123, or PHIL 127

Credits:

4.00

Description:

Examines the political, social, and ecological problems facing us as a global community. Having its roots in feminist theory and deep-ecology, eco-feminism provides a critical framework for ecological responsibility and accountability. Writings from eco-feminist thinkers and environmental activists around the world will be used to highlight the philosophical and political conflicts and challenges, including globalization and loss of biodiversity, global warming, international human rights, the relationship of gender and nature, and modes of redress for eco-justice and sustainable development.

Type:

Diverse Perspectives

- **PHIL-261 Eastern Philosophy**

Credits:

4.00

Description:

The exposition and critical evaluation of Hinduism, Buddhism, Confucianism, Taoism, and Islam. Special attention is given to foundation principles as well as to the similarities and differences of each of these philosophies to basic ideas in Western philosophy. 1 term - 4 credits. Normally offered alternate years. C b

- **PHIL-267 Chinese Philosophy**

Credits:

4.00

Description:

A survey of the main developments in Chinese Philosophy. The course begins with the early dynastic concept of humanism and then turns to Confucius and Mencius. Having developed the central Confucian doctrines, students next examine the Taoist response to Confucianism in the writings of Lao Tzu and Chuang Tzu. The course then considers Zen Buddhism, which is called Ch'an Buddhism in China, where it originated. In particular, students study the concept of sudden enlightenment before turning to the Neo-Confucian scholars.

Term:

Type:

Cultural Diversity Opt B, Diverse Perspectives

- **PSYCH-243 Organizational Psychology**

Prerequisites:

Take PSYCH-114;

Credits:

4.00

Description:

Focuses on diversity concerns in various aspects of the psychology of the workforce. This includes job analysis, recruitment, selection, evaluation, training, retention, and termination. Employee morale, well-being, stress, and hardiness are considered.

Type:

Cultural Diversity Opt A, Social Science, Diverse Perspectives

- **RS-111 Introduction to World Religions: Western Traditions**

Credits:

4.00

Description:

This course will explore the comparative history and structure of Western religious traditions, broadly understood, and their impact on other world religions, while attempting to recognize the similarities and the differences among them. Traditions to be studied include Greek and Roman religion, the monotheistic faiths (Judaism, Christianity, and Islam, as well as Zoroastrianism, Sikhism and Bahaism). We will also explore the impact of the Western religions on indigenous traditions, such as African religion, Native American religion, and Pacific Island religion. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. 1 term - 4 credits. Normally offered every year.

Type:

Diverse Perspectives

- **RS-112 Introduction to World Religions: Eastern Traditions**

Credits:

4.00

Description:

This course will examine a variety of Eastern religions, including Hinduism, Buddhism, Jainism, Confucianism, Taoism, and Shintoism. Possible connections to be explored will be the impact of these traditions on others, such as Pacific Islands and African religion, as well as the growing place of Eastern religion in the West. This course will explore the history and structure of each tradition, while attempting to recognize the similarities and the differences among them. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. Normally offered every year. Cultural Diversity B

Type:

Cultural Diversity Opt B,Asian Studies,Diverse Perspectives

- **SIB-550 Global Travel Seminar**

Credits:

3.00

Description:

An in-depth analysis of timely special issues in international business. Specific topics are announced when the course is scheduled.

Type:

- **SF-190 Asia in America Fiction and Fact**

Credits:

4.00

Description:

With a focus on some selected ethnic groups from Asia, Asia in America studies the history and current status of Asian Americans in Boston and other parts of the country. We will examine the major reasons why these immigrants chose to leave their home country as well as their expectations and experiences here in America. We will also discuss the issues Asian immigrants have faced in this adopted home as well as the connections and conflicts among different ethnic groups or even within the same ethnic group due to political and socio-economic reasons. The course will include some level of community engagement, through Chinatown tour and service, which may enable us to have a direct contact with the Asian American population and reflect on what is being discussed in class. Through this course, we hope to gain a better understanding of the racial and cultural history of the country and arrive at a deep appreciation of the dynamics of cultural interactions in the twenty-first century. The course fulfills the SCGP requirement.

Type:

Cultural Diversity Opt A, Global Engagement Experience, Diverse Perspectives, Expanded Classroom Requir

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

Type:

Diverse Perspectives

- **SOC-227 Race in American Society**

Credits:

4.00

Description:

Despite the election of Barack Obama as President of the United States, race remains one of the most divisive forces in U.S. society. While many of us struggle against racism, racial classification continues to affect where we live, where we work, and how we see ourselves. Racial classification affects our access to health care and our encounters with police officers. Distorted images of racial groups fill television and movie screens. Appeals to racism and fear of foreigners are dominant themes in elections to state and national offices. This course examines the formation and re-formation of racial classifications: how particular groups become racially identified, how these classifications change over time, and how conflicts over race have shaped American society. The meanings of race, as seen from a variety of perspectives, will be a consistent theme throughout the course.

Term:

Occasional

Type:

Cultural Diversity Opt A,Diverse Perspectives,Cultural Diversity Opt B

- **SOC-228 Cultural, Global and Social Perspectives**

Credits:

4.00

Description:

Enables students to examine, as well as develop an awareness and appreciation of, diversity within today's society. Providing an overview of the major racial, ethnic, and cultural groups in the U.S., the focus is on the ways in which cultural awareness enhances professional helping relationships and improves the operation of human services systems.

- **SPAN-290 Advanced Composition & Conversation**

Prerequisites:

Prerequisite: Spanish 202, 203 or 250 or Instructor's consent

Credits:

4.00

Description:

Develops written and oral skills in various contexts and registers. Emphasis on strengthening written skills and learning to speak clearly and persuasively in Spanish. Short texts and audio-visual materials provide the basis for classroom activities which include regularly assigned essays, group discussions and debates.

Term:

Offered Fall Term

Type:

BA FOREIGN,Diverse Perspectives

- **SPAN-301 Spanish Culture and Civilization**

Prerequisites:

Spanish 202, 203 or 250. Spanish 290 or 300 are strongly recommended

Credits:

4.00

Description:

Examines the civilization and culture of Spain highlighting its historical development and cultural manifestations from pre-historic times to the nineteenth century. Students improve their four skills through activities that include discussions, oral presentations, and writing assignments based on reading and films.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, BA FOREIGN, Diverse P

- **SPAN-302 Indigenous and Colonial Latin America**

Prerequisites:

Spanish 202, 203 or 250 or Instructor's consent. Span 290 or 300 strongly recommended.

Credits:

4.00

Description:

Introduces students to the complexity Latin America by examining its roots in pre-Columbian America and the impact of Spanish exploration and colonization. Places emphasis on cultural, economic, historical, philosophical, political and religious patterns that define the region. Includes class discussions, oral presentations, and writing assignments based on reading and audio-visual material.

Term:

Alternates Fall & Spring

Type:

- **SPAN-315 Business Spanish**

Prerequisites:

SPAN 290 or SPAN 300 or Instructor's consent.

Credits:

4.00

Description:

Integrates language learning with culture via business context of the Hispanic world. Spanish for banking and finance, marketing and advertising, and international commerce are highlighted. Students increase their cross-cultural understanding and written and oral proficiency in business Spanish through a wide range of assignments.

Type:

Diverse Perspectives

- **SPAN-390 Introduction to Latin American and Caribbean Literature**

Prerequisites:

SPAN 300; SPAN 302 is strongly recommended

Credits:

4.00

Description:

Examines authors from Latin America and the Caribbean in their historical and cultural contexts. Reading and class discussions consider the relationship between the writer and society by covering such topics as colonialism, the oral tradition, modernism and the emergence of new narratives in the twentieth century. The Inca Garcilaso, Sor Juana, Carlos Fuentes, Rigoberta Menchu, and Pablo Neruda are among some writers studied.

- **THETR-260 Broadway Musicals**

Credits:

4.00

Description:

This course is a survey of American musical theatre from its roots in the mid-19th century to the present. It provides the analytical tools and historical insight to more fully appreciate Broadway's greatest musicals and musical theatre artists. Students will explore the ways in which American forms of popular entertainment helped to shape Broadway musicals from their infancy through their adulthood. The course also explores the ways in which musicals provided opportunities for African-Americans, women, immigrants, and the GLBT community.

Term:

Offered Fall Term

Type:

Cultural Diversity Opt A, Humanities Literature Requirement, Diverse Perspectives, Vis. & Perform Thry

- **THETR-267 Introduction to Theatre: Contemporary American**

Credits:

4.00

Description:

This course provides a formal introduction to the theories and practices strategically used by American theatre artists after the Second World War. Special emphasis is placed on theatre artists exploring issues of cultural identity including works by GLBT, African-American, Asian-American, and Latin American playwrights. These playwrights may include Tony Kushner, Paula Vogel, Suzan-Lori Parks, Adrienne Kennedy, August Wilson, David Henry Hwang, Philip Kan Gotanda, Eduardo Machado, and Melinda Lopez. The course will also provide an introduction to trends in post-modern theatre practices related to emerging work of the auteur director, solo performers, and interdisciplinary collectives. Satisfies a core requirement for Theatre majors. Normally offered alternate years.

Science, Technology, & Engineering (STE): 2 courses and corresponding laboratories where applicable, 8 credits

Choose two STE courses (and corresponding laboratory where applicable) from the list below. Courses do not need to be in a sequence. In the case of a course that is a lecture plus a lab, the student must complete both components to earn credit for the STE requirement.

Biology:

- BIO-104 Environmental Biology

Prerequisites:

BIO 101 and BIO L101, can also be taken concurrently BIO L104 must be taken concurrently

Credits:

3.00

Description:

An introduction to basic evolutionary, behavioral and ecological principles. Readings and discussions emphasize the ways that humans are affected by ecological processes and principles as well as how humans and their technology affect ecosystems. May not be taken by Biology majors or minors. This course will not fulfill requirements for a major or a minor in Biology. It is intended for non-biology majors as a follow-up to Biology 101. 3 hours lecture. Days Only. Madrid Campus only.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• BIO-L104 Environmental Bio Lab

Prerequisites:

BIO-104 must be taken concurrently

Credits:

1.00

Description:

Exercises and field trips designed to complement and demonstrate the ecological principles developed in the lecture section. The lab emphasizes the scientific method and employs long term group projects. Madrid Campus only.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• BIO-111 Introduction to the Cell

Prerequisites:

Must take BIO L111 concurrently

Credits:

3.00

Description:

Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L111 Introduction to the Cell Laboratory**

Prerequisites:

Concurrently with BIO 111

Credits:

1.00

Description:

Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-114 Organismal Biology**

Prerequisites:

Must take BIO L114 concurrently.

Credits:

3.00

Description:

Rigorous introduction to organismal biology emphasizing evolution, phylogenetics, form, and function. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L114 Organismal Biology Laboratory**

Prerequisites:

Must take BIO 114 concurrently

Credits:

1.00

Description:

A series of laboratory experiences in evolution, diversity, anatomy and physiology.

Term:

Offered Both Fall and Spring

Type:

- **BIO-201 Biology's Big Questions**

Prerequisites:

Non Science Majors Only.

Credits:

4.00

Description:

This course seeks to answer five current questions from all levels of biology, from the subcellular to the ecosystem level. Topics will be discussed in the context of genetics, evolution, and ecology. We will focus on the process of doing science, including how scientists evaluate ideas and communicate their findings. Emphasis will be placed on topics in biology that impact daily life.

Type:

SCI TECH ENGNR

Chemistry:

- **CHEM-105 Chemical New Product Development**

Prerequisites:

ENT 101

Credits:

4.00

Description:

This course addresses the crucial intersection between chemistry and business, and the impact of these fields on society. It provides an introduction to important chemistry concepts and practices of business management. Primary focus is on understanding the chemistry principles behind some of the consumer products in our everyday lives, and using this knowledge to create and evaluate ideas for new products. The course also introduces the business aspects involved in the development and marketing of new products. An important component of the course is in making effective

presentations; this component concludes the course, culminating in team presentations of a new chemical product to panel of executives and peers. This course satisfies the Sawyer Business School Science requirement.

Type:

SCI TECH ENGR

- **CHEM-106 Biotechnology & Its Applications in Medicine, Agriculture, Law**

Credits:

4.00

Description:

Introduces the latest discoveries and applications of biotechnology. Topics include genetically modified food, stem cells, genetic testing, cloning, and forensics. A combination of lectures, discussions, documentaries, mock congressional hearings, and hands-on activities will provide insight into the numerous medical, social, legal, and ethical issues surrounding this technology.

Type:

SCI TECH ENGR

- **CHEM-111 General Chemistry I**

Prerequisites:

Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:

3.00

Description:

Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **CHEM-L111 General Chemistry I Lab**

Prerequisites:

Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **CHEM-201 Caveman Chemistry**

Credits:

4.00

Description:

Caveman chemistry explores chemical technologies that have led to modern industrial civilization, with an emphasis on the chemistry we encounter in everyday life. Although this is not a laboratory course, it is very much a course about doing things. We will focus on the process of doing science, including how scientists evaluate ideas and communicate their findings, through literature and hands-on activities.

Type:

SCI TECH ENGR

Computer Science:

- **CMPSC-F107 Ants, Rumors and Gridlocks**

Prerequisites:

Math placement level of 2 or above or any MATH course at the level 100 or above

Credits:

4.00

Description:

Do viruses and rumors spread like forest fires? How do ants cooperate? Do spoken languages and biological species evolve in a similar way? Ants, Rumors, and Gridlocks exposes students to introductory aspects of computational science by addressing and answering these and many other questions. Students use and modify virtual experiments preprogrammed in the NetLogo programming language to investigate these topics and others in Social Sciences, Biology, and Environmental Science. No prior knowledge of computer programming or NetLogo is required.

Type:

SCI TECH ENGR,Quantitative Reasoning

Electrical Engineering:

- **ECE-288 Measuring the World**

Credits:

4.00

Description:

The world is addicted to quantifying the essence of everything, from personal IQ, to the speed of a baseball, to our healthiness, or our chances of winning the lottery. Behind most of these numeric values exists a science of measurement. Some of this is referenced to international standards, such as for length, time, weight, or temperature. Others are more arbitrary and subjective, such as ranking Olympic performance in gymnastics, beauty pageants, or popular responses as found in the game show Family Feud. A third category includes controversial areas, such as measuring whether a person is lying when interrogated, or using hype rather than reality to market products. Sometimes statistics are used to predict sports outcomes, such as in the annual March Madness NCAA basketball brackets. Finally, in a world subject to fraud and deception, it can be essential to distinguish legitimate from counterfeit items, such as in money, art, collectibles, and historical documents. Don't get hoodwinked! This course examines all of these, starting with how measurements have been made throughout history, along with a full deck of entertaining terms used during the ages. This may help you sort out your weight, whether given in pounds, kilos, or stones. Often these terms will provide insights into how people lived in different eras. We will also look at some of the technologies currently available to provide these measurements, and unravel the complexities of various sensors that are used. As we consider the meaning of accuracy we may become less naive about how much confidence to ascribe to the results given us. Hovering around all of these measurements should be the question of validity - are they meaningful, useful, or misleading? And the impact they have on society - whether they steer behavior more powerfully than one might originally suspect. Each student will also be given an opportunity to become an expert in an area of measurement of personal interest. By the end o

SCI TECH ENGNR

Engineering Science:

- **ENS-103 Introduction to Engineering**

Prerequisites:

ENS L103 MUST BE TAKEN CONCURRENTLY.

Credits:

3.00

Description:

This course provides exposure to engineering practice, with particular focus on electrical engineering components such as circuit elements and systems. It seeks to go beyond the mathematics and provide an intuitive appreciation of functional devices. Examples taken from a broad swath of technological history illustrate significant crossroads, decisions, and inventiveness. Emphasis is placed on learning to think as an engineer - assessment of problems, candidate solution tradeoffs, and implementations. Frequent exercises in creative engineering design will be used. Students will be required to design several elementary devices, such as a magnet, a capacitor, a timing device, and a motor, which they will enter in a competition for overall strength, compactness, accuracy, or speed. Sometimes assignments relate to "survival on an island" concerns, such as communication or drinking water. Students also learn about reverse engineering by selecting, building, troubleshooting, and presenting an electronic

kit of their choice. A term paper determining the engineering behind a topic of their choice will also be written and presented. On occasion (see ENS L103) there will be team competitions between various smaller groups in the class.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **ENS-L103 Intro to Engineering Lab**

Prerequisites:

Must be taken Concurrently w/ ENS-103

Credits:

1.00

Description:

The Lab is designed to provide opportunities to gain familiarity with engineering tools. Students will be introduced to parts (e.g. learn the resistor color code), test equipment (multimeters, prototyping trainers, signal generators, and oscilloscopes), and construction techniques (wiring, soldering, troubleshooting). Although it varies from year to year, Class Projects can be built during the Lab sessions. In the past these have included a 25 Watt electric generator, various door lock systems (both mechanical and electronic), and an AM transmitter and receiver (all projects made from scratch). It is likely that 2010-2011 may introduce some robotic creations for a competition. Electronic kits and motors can also be built and serviced in the Lab. There is an adjoining machine shop, which can be utilized (with supervision), for fabricating items. Individual creativity is encouraged, and informal problem solving sessions occasionally occupy lab time. However, the lab is accessible outside of the traditional scheduled time.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

Environmental Science:

- **ENVS-111 Majors' Environmental Science**

Prerequisites:

Open to Environmental Science and Environmental Studies majors, or by permission of instructor. Must be taken concurrently with ENVS L111

Credits:

3.00

Description:

Applies the fundamentals of science to environmental issues. Topics include population dynamics and resources, environmental degradation, ecosystems, geologic processes, deforestation, biodiversity, climate change, air, soil, and water resource management, and pollution and risks to health. This course is open to all environmental science and environmental studies majors and minors. Other students will be admitted by permission of the instructor. Must be taken concurrently with ENVS L111. 3 hours lecture. 1 term. 3 credits. Normally offered fall evenings.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **ENVS-L111 Majors' Environmental Science Lab**

Prerequisites:

Open to Environmental Science and Environmental Studies majors, or by permission of instructor. Must be taken concurrently with ENVS 111

Credits:

1.00

Description:

Laboratory exercises are used to illustrate topics covered in ENVS 111. Field testing and analysis of environmental samples. Field trips are required. This course is required for all environmental science and environmental studies majors and minors. Concurrent enrollment in ENVS 111 is required. 3 hour laboratory. Normally offered fall.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

Physics:

- **PHYS-111 College Physics I**

Prerequisites:

Take MATH-121 or MATH-134 or permission of Physics department chair;PHYS L111 taken concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **PHYS-L111 College Physics Lab I**

Prerequisites:

PHYS 111 concurrently

Credits:

1.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course. Error propagation, use of Excel, laboratory notebooks and formal reports required.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **PHYS-151 University Physics I**

Prerequisites:

Take MATH-121 or MATH 165. PHYS L151 concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **PHYS-L151 University Physics Lab I**

Prerequisites:

PHYS 151 concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

• PHYS-152 University Physics II

Prerequisites:

PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

Credits:

3.00

Description:

This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

Term:

Offered Both Fall and Spring

Type:

- **PHYS-L152 University Physics Lab II**

Prerequisites:

PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **PHYS-153 University Physics III**

Prerequisites:

Take MATH-121 or MATH-165;

Credits:

3.00

Description:

This calculus-based course is the introduction of the topics of modern physics. It begins with special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom. Then Schrodinger's equation is introduced with use of wave functions,

particle box, barrier penetration, quantum mechanical tunneling, the Pauli Exclusion principle, the development of the periodic table, and the X-ray spectra. Development of solid state physics with bonding in molecules, band theory of solids and semiconductor behavior. The final topics cover nuclear physics, radioactivity, half-life, nuclear fission and fusion, medical uses of radiation, elementary particle physics and introduction to astrophysics.

Term:

Offered Fall Term

Type:

SCI TECH ENGR

- **PHYS-L153 University Physics III Lab**

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts of special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom.

Type:

SCI TECH ENGR

Science:

- **SCI-108 Introduction to Cancer Care**

Credits:

4.00

Description:

This course will introduce the students to the top ten U.S. adult cancers, as well as the most common pediatric cancers. Topics to be covered include cancer causes, detection, and prevention. Psychosocial aspects of being diagnosed with cancer and the role nutrition plays for cancer patients will be described. The course will also discuss the major treatment modalities for each cancer including radiation therapy, surgery, chemotherapy, and bone marrow transplants. The goals and objectives of the course will be met through the use of various teaching tools including but not limited to: PowerPoint presentations, videos, guest lectures, and a poster project with a presentation component. Cognitive assessment of the students will be accomplished through homework, quizzes, exams, and a group poster and oral presentation. Students with any type of academic background are welcome.

- **SCI-113 A Habitable Earth Within the Solar System**

Credits:

4.00

Description:

This course introduces non-science majors to concepts that are central to making our planet habitable. It presents Earth in context of the solar system with a broad view of global climate change and energy resources in a quest to better understand the workings our planet. This course on Earth and Planetary Science is suitable for students who may have taken their last science and math course several years ago, or are just curious about knowing facts on major issues that pertain to the future of our planet. Together with a reading component, this course aims to give students a flavor of how researchers think, investigate and develop conclusions that directly affect our political and economic future. Topics covered in this course range from the solar system to the study of search for other habitable Earth-like planets, search for extraterrestrial life, and evolution of life on Earth. Other

characteristics of this course are heavy use of audio-visual materials often including computer animations and simulations, in-class experiment demonstration, and intensive use of INTERNET-based resources.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGR

- **SCI-165 Inner Workings of Physics Universe**

Credits:

4.00

Description:

About 15 billion years ago, (data indicate) the big bang occurred and the universe was born. With it came physical laws and a spectacular array of consequences that lead to the universe as we know it. This non-lab , 4 credit course explores the inner workings of the physical universe in terms of the scientific inquiry which lead to Newton's laws, an understanding of energy, waves, light, electricity, atomic structure, chemical reactions, nuclear physics, particle physics, relativity, and the big bang theory. During the course, students will learn to make use of modern resources to access scientific and technical literature to research a scientific topic. They will learn to distinguish between science and technology (e.g. quantum mechanics and nanotechnology, the discovery of the Higgs boson and the large hadron collider that made it possible, etc.) and to understand how the science, technology, and engineering disciplines play a crucial role in recognizing and solving problems of society and the world that we share.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **SCI-171 The Built World: How Humans Engineer Environments**

Credits:

4.00

Description:

The most basic needs of humans have not changed - water, food, and shelter - but the means of meeting these needs has. In this course, we will examine how technology-driven societies operate by studying how cities are built and how they function. Topics will include water supply and distribution systems; transportation systems (including road and bridge design and construction); building design, construction, and operation (including skyscraper and sustainable building design), and waste removal systems (municipal and industrial wastewater removal and treatment, solid

waste removal and treatment). This is not a course about little gadgets and widgets; this is a course about big engineering marvels; and it emphasizes applications of science - how things work - rather than scientific theory.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGR

- **SCI-173 Geographic Information Science (GIS) The Power of Digital Maps**

Prerequisites:

SCI L173 Must be taken concurrently Knowledge of Windows type Application

Credits:

3.00

Description:

Geographic Information Science (GIS) link information (number of fire hydrants on a block) to features on a map (e.g., a point representing street address) that has a designated geographic location (as designated by global coordinates). Unlike paper maps, GIS software allows the production of interactive maps that allows the user to layer data, to indicate spatial patterns, to analyze trends, and to combine different features of the mapped area in novel ways. For example, a business person may wish to use GIS to determine the optimum location of retail outlet (based on the mapped demographics of a neighborhood), while an environmental engineer may use GIS to describe the location of outfalls to see how they correlate to areas of stream pollution. In this course, students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **SCI-L173 GIS Lab**

Prerequisites:

Must be taken concurrently with SCI-173

Credits:

1.00

Description:

This laboratory illustrates concepts and methods taught in SCI 173. In this lab students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **SCI-181 Science and Life in the 21st Century**

Credits:

4.00

Description:

This is a four credit, non-lab, science course that examines the central scientific problems confronting the 21st century. The course studies particular topics and teaches the necessary science around these topics to provide a good understanding of the issues. The topics currently are: Energy, Science and Economic Decisions, Sustainability of Life on Earth, Health and Science.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGR

• SCI-184 Contemporary Science and Innovation

Credits:

4.00

Description:

This is a 4 credit, project based science course that examines the central scientific problems confronting the 21st century. The course consists of lectures, class discussions, field trips, and in-class hands-on activities designed to familiarize the student with different concepts of the lectures. The current focus is on sustainable energy production. A final team project related to the course topics will be given. This is the version of SCI 183 without a separate lab component. Students who have taken SCI 183, L183 are not allowed to take this course.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGNR,NATURAL SCIENCE FOR BS

• SCI-201 Physics for Future Presidents

Credits:

4.00

Description:

This course presents a topical introduction to the key principles and concepts of physics in the context of the world events and natural phenomena that confront world leaders and that require informed decisions and responses. Energy, health, counter-terrorism, remote sensing, space programs, nuclear proliferation, and a host of other modern challenges have technological and scientific dimensions, the understanding of which is essential to avoiding disastrous policy decisions. This course considers the application of physics to these societal challenges. The material is covered at a level and pace that a future world leader should be able to handle; the emphasis is on the development of physical reasoning skills, and not on detailed, mathematical problem solving.

Literature: 1 course, 4 credits

Choose one course from those listed below:

English

- ENG-213 English Literature I

Prerequisites:

WRI-102 or WRI-103

Credits:

4.00

Description:

Study of major writers of England from the beginning to the mid-18th century. Regularly assigned essays on the reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement

- **ENG-214 English Literature II**

Credits:

4.00

Description:

Study of major English writers from the mid-18th century to the present. Regularly assigned essays on the reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement

- **ENG-216 World Literature in English**

Prerequisites:

WRI-102 or WRI-103

Credits:

4.00

Description:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

Term:

Offered Both Fall and Spring

Type:

Cultural Diversity Opt B, Humanities Literature Requirement, Diverse Perspectives

- **ENG-217 American Literature I**

Credits:

4.00

Description:

Study of major American writing from its origins through 1865. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement

- **ENG-218 American Literature II**

Credits:

4.00

Description:

Study of major American writing from 1865 through the present. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement

Women's & Gender Studies:

- **WGS-325 Global Women's Fiction**

Credits:

4.00

Description:

Explores of various cultural worldviews in order to reveal and assess the voices of women from around the world as they respond to important global issues such as sexual violence and gendered oppression. Topics include: national citizenship, sexual politics, legal discourse, aesthetic representation, literary movements, genre, constructions of femininity, sexual identities, and representations of gender in relation to race and class and international cultures, and the relationship of self-image to the body politic.

Term:

Occasional

Type:

Humanities Literature Requirement,Cultural Diversity Opt B,Diverse Perspectives

- **FR-216 Masterpieces of French and Francophone Literature in English Translation**

Credits:

4.00

Description:

Masterpieces of French and Francophone Literature in English Translation. Studies works translated into English by major authors from the Middle Ages to the present. Explores drama, fiction, and poetry from many regions of the world: Africa, Western Europe, North America, the Caribbean, and Vietnam.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt B, Humanities Literature Requirement, Humanities & History, Diverse Perspectives

- **FR-309 Survey of French Literature I**

Prerequisites:

FR 202 or Instructors permission

Credits:

4.00

Description:

Analyzes and discusses canonical works of French literature from medieval times to the eighteenth century.

Term:

Offered Fall Term

Type:

- **FR-310 Survey of French Literature II**

Prerequisites:

FR-202 or instructor's permission

Credits:

4.00

Description:

Study, analyze and discuss canonical works of French-language literature from the nineteenth through the twenty-first centuries, as they relate to important events in the art, culture, and history of the Francophone world.

Term:

Offered Spring Term

Type:

Humanities Literature Requirement,BA FOREIGN

- **GER-216 Masters of German Literature in English Translation Masterpieces**

Credits:

4.00

Description:

Discussion of works by major authors from the 18th century to the present. Drama, fiction, and poetry. The specifically German contributions as related to the European context. Lessing, Goethe, Schiller, Heine, Buchner, Schnitzler, Kafka, T. Mann, Hesse, Brecht, Seghers, Grass, Boll, Wolf and/or others.

Term:

Occasional

Type:

Humanities Literature Requirement

- **SPAN-300 Intro to Cultural Texts**

Prerequisites:

Spanish 202, 203, 250 or Instructor's consent.

Credits:

4.00

Description:

Explores a selection of Peninsular and Latin American cultural materials. Primarily examines texts from different literary genres (narrative, drama, essay, and poetry). Develops critical skills required in more advanced Spanish courses, through close readings and textual analysis. Activities include regularly assigned essays, group discussions, and short scene work.

Term:

Offered Spring Term

Type:

Humanities Literature Requirement, BA FOREIGN

- **SPAN-390 Introduction to Latin American and Caribbean Literature**

Prerequisites:

SPAN 300; SPAN 302 is strongly recommended

Credits:

4.00

Description:

Examines authors from Latin America and the Caribbean in their historical and cultural contexts. Reading and class discussions consider the relationship between the writer and society by covering such topics as colonialism, the oral tradition, modernism and the emergence of new narratives in the twentieth century. The Inca Garcilaso, Sor Juana, Carlos Fuentes, Rigoberta Menchu, and Pablo Neruda are among some writers studied.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities Literature Requirement, BA FOREIGN, Diverse Perspectives

- **SPAN-405 Women's Voices in Latin America**

Prerequisites:

SPAN-300; Spanish 302 or its equivalent is strongly recommended

Credits:

4.00

Description:

Examines the changing roles of women in Mexico, the Caribbean, Central and South America through fiction, non-fiction, drama, poetry and film. Special focus is placed on the impact that changes in social ideology and culture have had on their identity and writings. Texts available in English.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, BA FOREIGN

- **SPAN-407 Latin American Short Narrative**

Prerequisites:

Spanish 300; or Instructor's consent; Spanish 302 is strongly recommended

Credits:

4.00

Description:

Explores some of the major trends in the twentieth century Latin American story telling. Readings reflect the vast array of voices and styles, beginning with fantastic literature of the 1930's, the birth of magical realism and the more contemporary, socio-political narratives. Authors include Isabel Allende, Julio Cortazar, Rosario Castellanos, Gabriel Garcia Marquez, Juan Rulfo, Luisa Valenzuela, among others.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement, BA FOREIGN

• **SPAN-416 Border Crossings the Latino Experience in the USA**

Prerequisites:

ENG-102 or ENG-103 or Instructor's consent. Span 302 is strongly recommended for Spanish and Latin American & Caribbean Studies majors and minors.

Credits:

4.00

Description:

Examines the myth of a singular Latino experience in the United States through a variety of genres and authors. Issues relating to culture, language, family, and religion are among some of the topics explored. Authors include Sandra Cisneros, House on Mango Street, Junot Diaz, The Brief Wondrous Life of Oscar Wao, Julia Alvarez, How the Garcia Girls Lost Their Accents, Tato Laviera, and American.

Ethical & Philosophical Inquiry: 1 course, 4 credits

Choose one course from those listed below:

- **PHIL-119 Ethics**

Credits:

4.00

Description:

A systematic introduction to the major thinkers and their positions on the main issues of ethics, such as: What is morality? What are moral values? How should we live our lives? Are there objective, universal, absolute moral standards? If so, what are they, and what is their basis? 1 term - credits. Normally offered every year.

Term:

Offered Both Fall and Spring

• PHIL-120 Ethics and Civic Life

Credits:

4.00

Description:

In this class you will be introduced to the perspectives and methods of politics, philosophy, and economics and see how these three disciplines present distinct but interconnected dimensions of current social and political issues.

Type:

Diverse Perspectives

• PHIL-123 Social Ethics: The Good Life

Credits:

4.00

Description:

An examination of contemporary Western society, particularly in the United States, in relation to philosophical attempts to define the good life. Current books that exhibit a philosophical approach towards important contemporary social issues will be discussed, as well as classics in philosophy. Topics may include: civic virtue, consumerism, current events, economic justice, popular culture (film, music, television), religion and secularism, etc. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- **PHIL-127 Contemporary Moral Issues**

Credits:

4.00

Description:

A critical examination of a number of contemporary moral issues such as: abortion, affirmative action, animal rights, capital punishment, cloning, drug legalization, environmental ethics, euthanasia, genetic engineering, gun control, pornography, same-sex marriage, suicide, war and terrorism, etc. 1 term - 4 credits. Normally offered every year.

4.00

Description:

Introduction to civil, criminal and constitutional law, with special focus on procedural law and the federal and state court systems. Limitations of the courts, forms of remedies, the law of equity and institutional sources of American law will also be studied. Introduction to judicial cases and brief writing. Normally offered each semester.

Type:

Social Science

- **ALS-266 Criminal Law**

Credits:

4.00

Description:

This course examines criminal law in the United States from a broad perspective. It will present the general principles and doctrines that affect the whole criminal law, such as elements of criminal offenses, defenses to crime, and perspectives on crime and criminal law. In addition, students will learn the elements of specific crimes, such as homicide, criminal sexual conduct, terrorism and related crimes, crimes against public morals, and crimes against property. Discussions of the direction of the criminal law and constitutional limitations on government will be presented as preparation for future study.

Type:

Cultural Diversity Opt A

- **ALS-362 Litigation**

Credits:

4.00

Description:

The Rules of Civil Procedure dictate the steps taken in state and federal lawsuits. This course will acquaint students with rules and the practical requirements of the rules, from filing a complaint to clarifying a judgment and to the duties of paralegals in a litigation office. Normally offered each

semester.

Type:

Social Science

- **ALS-363 Law of Contracts**

Credits:

4.00

Description:

The existence and validity of a contract is determined by specific rules. Students will learn about formation through offer and acceptance, contract enforceability, the necessity of consideration, and breach of contract and will draft contract provisions as a paralegal might in a law office. Normally offered each semester. Sophomore status required.

Type:

Social Science

- **ALS-396 International Law**

Prerequisites:

Take ALS-264 or ALS-360 or instructor's permission

Credits:

4.00

Description:

With the globalization of the world economy, legal professional and business people require knowledge of international law more than ever. This course offers students a survey of selected materials in public international law. Covered will be the practical and theoretical issues of international law, from the Law of the Sea to business implications to definitions of war and international concepts of justice. Normally offered yearly.

Type:

Social Science

Communication:

- **CJN-255 Introduction to Media**

Credits:

4.00

Description:

An introduction to the role of media in contemporary society, focusing on media's influence on cultural, political, and ideological processes. An examination of the historical contexts within which newspapers, radio, television, and new media technologies develop, and how audiences interact with and influence the use of media.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **CJN-285 Media and Pop Culture I**

Credits:

4.00

Description:

Examines the influence of media on contemporary society. Television, radio, film, and print formats are discussed in terms of their persuasive impact on mass culture in the U.S.. Focus is on the period 1950-1970.

Term:

Offered Spring Term

Type:

Social Science

- **CJN-287 Media Criticism**

Prerequisites:

CJN-255

Credits:

4.00

Description:

Critical examination of various mass media including film, television, radio, music, newspapers and magazines. Theories of media criticism discussed and applied to specific media or media products.

Term:

Offered Spring Term

Type:

Social Science

- **CJN-375 Organizational Communication**

Credits:

4.00

Description:

Historical development of the theory of organizations, examination of information flow, network analysis, communication overload and underload, corporate culture, superior-subordinate communications, organizational effectiveness, and change processes.

Term:

Offered Fall Term

Type:

Social Science

- CJNI-400 Media Effects and Audiences

Prerequisites:

Prerequisite: CJNI-255

Credits:

4.00

Description:

Explores the social influence of the media on U.S. society. Attention is given to the theoretical perspectives that inform media research. By the end of the semester, students will develop a critical understanding of the role and influence of the media in U.S. society.

German:

- GER-419 East Germany and the Cold War

Credits:

4.00

Description:

When the German Democratic Republic was founded in 1949, observers in the West viewed it as an artificial construct created to serve the needs of the Soviet empire. The self-image of the GDR as created by its leadership revolved around the idea of an anti-fascist German state designed as a bulwark against any revival of National Socialism. Over a generation after the fall of the Berlin Wall, it is possible to undertake a dispassionate analysis of the forty-year history of the 'other' German state as manifested in its cultural identity and political role during the Cold War.

Sociology:

- **SOC-113 Introduction to Sociology**

Credits:

4.00

Description:

An introduction to the sociological understanding of human interaction, group process and social structures. Students are introduced to basic concepts, theories and methods of sociological investigation. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **SOC-116 Social Justice**

Credits:

4.00

Description:

An examination of traditional and contemporary problems associated with major social institutions such as the family, economics, government and education. Social forces related to ethnicity, social class, health and welfare, and urbanization are also included. Alternative remedial measures based on behavioral science theories are discussed. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **SOC-217 Sociology of Urban Life**

Prerequisites:

Fulfills ECR requirement

Credits:

4.00

Description:

An examination of the effects of the city on human life in its broadest as well as its most specific aspects. Greater Boston and similar communities across the nation will be studied as ecological settings, as producers and shapers of change, and as special contexts for understanding sociological ideas. Comparisons will be made among urban places in the U.S. and in other countries.

Term:

Occasional

Type:

Social Science,Cultural Diversity Opt A,Expanded Classroom Requirement

- **SOC-223 Families in Contemporary Society**

Credits:

4.00

Description:

An exploration of the diversity of contemporary families. Comparisons are made between the cultural myths of the ideal family and the lived realities. Challenges confronting contemporary families and their implications for social policy are examined in such areas as work/family conflicts, gay and lesbian families, welfare, family violence.

Term:

Occasional

Type:

Social Science

- **SOC-224 Families in Contemporary Society (Spain)**

Credits:

4.00

Description:

Spain has experienced major socio-demographic changes since the mid 1970s. These transformations mainly arise from the new role of women in society and, in particular, women's higher levels of education, work experience, and labor market attachment. The changes in women's labor force participation have occurred in conjunction with a progressive postponement of main family events, such as leaving the parental home, forming a partnership and having children, as well as with a reduction in the family size. Spain is, indeed, characterized as having one of the lowest low fertility levels within Western industrialized countries, a pattern that is exacerbating the ongoing process of population aging. This picture partly reflects the

conflicting relationship that currently exists between women's labor force participation and the accommodation of family responsibilities: the so-called work/ family balance. Ongoing differences among countries have been accounted for by different explanatory factors that involve socio-economic, cultural and social policy dimensions. From a comparative perspective, the course is intended to cover recent debates, controversies, and research on family formation and family dilemmas in contemporary Spain.

Type:

Social Science

- **SOC-236 Deviance and Social Control**

Credits:

4.00

Description:

Who and what is deviant? How shall the society respond? The course examines a range of deviance theories and associated social policies. A number of case studies will be used to evaluate these theories, such as body piercing, witchcraft, gay and lesbian sexuality, corporate crime, disability, prostitution, violence against women, racism, anti-Semitism, and gangs.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **SOC-264 Social Media and Society**

Credits:

4.00

Description:

An examination of the ways in which social structures and processes influence and are affected by modern ideas, needs and social practice techniques in technologically advanced societies is considered in conjunction with changes in the way in which we understand the world, the nature of

work and leisure, the processing of information and the character of social institutions. Normally offered alternate years. Fulfills the Social Science Option. Fulfills the Sociology Department's Social Policy requirement.

Type:

Social Science

Women's & Gender Studies:

- **WGS-113 Women, Science, & Society**

Credits:

4.00

Description:

Explores women's lives from the perspective of the social and natural sciences, including examination of recent biological, psychological, and sociological theories about gender and gender roles, as well as the influence of feminist scholarship in these areas. Topics include: the social construction of gender; the psychology and biology of sex and gender; women and work; media representations of women; the female body and eating disorders; women's health and lifecycle; women and sexuality; reproduction, abortion, and motherhood; and sexual violence against women.

Humanities/History/Visual & Performing Arts Theory & History: 1 course, 4 credits

Choose one course from those listed below:

American Studies:

- AMST-111 Defining America and Americans

Credits:

4.00

Description:

Examines artistic, social, and political imaginings of America and Americans. We will read works by American and foreign observers of the United States to ask how Americans define themselves and how others see them. Course assignments will introduce students to themes, perspectives, and methods in the field of American Studies.

Type:

Humanities & History, Humanities Literature Requirement

Art & Design:

- **ADI-234 Introduction to Interior Design Theory & Criticism**

Prerequisites:

Taken concurrently with ADI S201

Credits:

3.00

Description:

This course introduces students to the important individuals, ideas and issues that have shaped the direction of contemporary interior design practice in the twentieth century, building upon the historical foundation established by the Ideas of Western Art and History of Furniture and Architecture classes. Intermixing lectures and readings with visits to important local buildings, it discusses the influences of culture, technology, fashion and media upon the work and thinking of the first generation of modern designers, as well as emerging social, moral and environmental imperatives that will form the basis of future practice; cultural identity, interdisciplinary collaboration, sustainability and universal design.

- **ADF-182 Ideas of Western Art II**

Credits:

4.00

Description:

This course will survey the major concepts and issues of Western Art, from Renaissance to contemporary art. Architecture, sculpture and paintings will be studied individually for their formal elements and visual importance, and also within their own aesthetic, historic and cultural context. Class discussion and visual analysis of works of art will encourage personal interpretation and critical thinking.

Term:

Offered Spring Term

Type:

Humanities & History, Humanities Literature Requirement

- **ADFA-306 Art & Culture of Asia, Africa, South America and Oceania**

Credits:

4.00

Description:

The coursework introduces students to the artistic and visual traditions from South and East Asia, Africa, Oceania and the Americas. In addition to the material culture of the particular region under study, the coursework will consider socio-political ideals, religious belief systems, and cultural principles that 'shaped' or informed the work and the ideology of civilizations beyond the Western hemisphere. Comparative analysis among non-western and western traditions will be used to critically analyze the salient points of influence, rejection and modifications of aesthetic affinities. Class lectures will be supplemented with museum seminars specifically the rich non-western collections at the MFA, Boston. Guided field trips to the museum will allow students to formally analyze the works of art discussed in lecture and text material.

• ADF A-344 Islamic Spain: Art and Architecture

Credits:

4.00

Description:

This course examines the Islamic influence in Spain through its art and architecture from its formative period in the eighth century through the fourteenth century and beyond to see the continuity and change of the Mozarabic style found locally in Madrid, Cordoba, Seville, and Granada. Students will use formal analytical skills to critically explore works of art and architecture and will cultivate a 'lens' through which they will facilitate their understanding of the classic and contemporary material culture and fabric of Spain. Class meetings will be supplemented with field trips. Offered as needed.

Type:

Humanities Literature Requirement,Humanities & History

• ADF A-345 Art of India

Credits:

4.00

Description:

A chronological survey of South Asian art (2300 BCE - 1750 CE) including India, Pakistan, Bangladesh, and Nepal. Examination of art and architecture from their first and still mysterious beginnings in the Indus Valley, through the great masterpieces of Buddhist and Hindu art to the coming of Islam, including the eclectic culture of the Mughal courts and the golden age of miniature paintings. Consideration is given to the multiple aspects of patronage in Indian culture - religious, political, economic - through case studies of individual works of art and architecture. (Formerly HUM 345)

Type:

Humanities & History,Cultural Diversity Opt B,Humanities Literature Requirement,Asian Studies

- **ADFA-346 Art of the Silk Road**

Credits:

4.00

Description:

This course will examine the arts and architecture of the Silk Road, with particular attention to art of Buddhism, Hinduism, and Islam. Historically, Inner Asia was marked by trade routes (the 'Silk Route' or 'Silk Road') which crisscrossed this vast landscape of deserts and mountains between China, India, the Iranian Plateau and the Mediterranean world. In addition to the art of these cultures, we will also look at the records of early Chinese travelers through Central Asia. (Formerly HUM 346) Offered as needed.

Type:

Humanities & History,Cultural Diversity Opt B,Humanities Literature Requirement,Asian Studies

- **ADI-221 History of Furniture & Architecture I**

Credits:

4.00

Description:

The goal of this course is the enhancement of the student's critical comprehension of historic styles and the impact they have on contemporary design solutions. The survey begins with the Egyptian period and provides an overview of the history of furniture and architecture through the mid-1700s, including ancient Greece and Rome, the Gothic and Renaissance, Baroque and Rococo periods. Emphasis will be placed on chronological periods, the visual characteristics of each style including regional idiosyncrasies, and the terminology germane to a study of furniture and architecture.

Term:

Offered Both Fall and Spring

Type:

Humanities & History, Humanities Literature Requirement

• ADI-222 History of Furniture & Architecture II

Prerequisites:

ADI 221

Credits:

4.00

Description:

A continuation of History of Furniture & Architecture I, this course will extend the investigation of furniture and architecture into the 20th century, while addressing issues concerning preservation, restoration, rehabilitation, and adaptive re-use. Drawing on the vast resources of the city of Boston and its environs, students will become actively involved in stylistic progression, local living history, and the benefits of preserving our past for future generations. Field trips will include visits to restored Federal, Victorian and Contemporary venues.

Term:

Offered Both Fall and Spring

Type:

Humanities & History, Humanities Literature Requirement

• ADG-224 History of Graphic Design

Credits:

4.00

Description:

The first part of the course will focus on the history of graphic design from prehistoric times to the Industrial Revolution, including the origins of graphic communications in the ancient world, the development of the alphabet and early printing and typography. The second portion will concentrate on the period from the late 19th century to the present, and will include the Arts and Crafts Movement, the various-isms and their influence on modern art, the Bauhaus and International Style, and contemporary visual systems and image making.

Term:

Offered Fall Term

World Languages & Cultural Studies:

- **FR-320 French & Francophone Cinema**

Credits:

4.00

Description:

A survey of French and Francophone cinema from the late 19th century to the early 21st century. We will explore early works from France by the Lumiere brothers and George Melies, as well as contemporary films from France and French-speaking countries, such as Algeria, Burkina Faso, Canada, Haiti, Senegal. All papers are written in French, and bi-monthly discussion sessions are conducted in French. Normally offered alternate years. Cultural Diversity B. 4 credits.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement

- **FR-410 Contemporary France**

Credits:

4.00

Description:

Studies a specific theme related to art, culture, history, literature and politics from the end of World War II to the present day.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **GER-301 German Civilization I**

Prerequisites:

GER 202 or instructor consent

Credits:

4.00

Description:

A survey of civilization in the German-speaking countries from the Reformation to German unification (1871). Major figures, movements, and periods. Art, literature, music, and philosophy in the context of political and economic developments. Normally offered alternate years.

Type:

- **GER-306 German Cinema**

Credits:

4.00

Description:

A survey of films produced in the German speaking countries from the 1920's to the present. Includes the Weimar republic, the Nazi period, postwar production from both East and West Germany, and new trends since reunification. Film esthetics and socio-historical context. All films shown in German with English subtitles.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **GER-412 Contemporary Germany**

Credits:

4.00

Description:

A survey of German culture, politics, and society from the end of World War II to the present day. Discussion of such topics as the post-fascist mentality, economic efficiency, re-education, Americanization, division and it's legacy, high culture, entertainment for the masses, environmental movements, pacifism, and multiculturalism. Taught in English.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- GER-420 The Greens and Environmentalism

Credits:

4.00

Description:

The rise of the Green Party, from its grass-roots beginnings to participation in the federal government. Background on the development of green consciousness in Germany and Europe since the early 20th century. Present governmental policies and programs (e.g. alternative energy sources, organic farming, recycling, dismantling of nuclear power).

Term:

Offered Spring Term

Type:

Humanities & History, Humanities Literature Requirement

- MUH-211 Music of the United States

Credits:

4.00

Description:

Surveys American music from Colonial times to the present; various attempts to create an indigenous musical style; vernacular and art music genres including folk, concert, and religious music, jazz and musical theatre; includes music of Billings, Amy Beach, Ives, Copland, Bernstein, and Libby Larsen. Normally offered yearly.

Term:

Alternates Fall & Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **SPAN-301 Spanish Culture and Civilization**

Prerequisites:

Spanish 202, 203 or 250. Spanish 290 or 300 are strongly recommended

Credits:

4.00

Description:

Examines the civilization and culture of Spain highlighting its historical development and cultural manifestations from pre-historic times to the nineteenth century. Students improve their four skills through activities that include discussions, oral presentations, and writing assignments based on reading and films.

Term:

Alternates Fall & Spring

Type:

Seminar for Freshmen: 1 course, 4 credits

Students with 15+ transfer credits of college or university work are exempt. Choose one Seminar for Freshmen course from those listed below:

- SF-101 Fixing the World- Energy and Water: The Science of Solutions

Credits:

4.00

Description:

Two of the most daunting challenges the world faces (or will face) is how to provide for both its growing energy needs and potable drinking water. Regular news events include climate change, droughts, flooding, and petroleum struggles. Human nature often requires a severe crisis before it responds. This course will investigate the historical science driving the use of energy since the Industrial Revolution to convert energy resources into work, including the steam engine, the electric motor, and the internal combustion engine. It will also consider alternative energy options to fossil fuels, such as solar, wind, geothermal, and ocean power. Along the way we will consider the evidence for Global Warming and Climate Change. We will look into human nature, simple life styles, conspiracy theories, and the influence of those in power to shape human opinion. We will also consider how our water supply is provided and where it goes after being used. What options do developing countries or drought racked areas have to remedy their water needs? Although the course pursues a scientific understanding of these issues, the mathematics used will be gentle, and a larger emphasis will be placed on the intuitive appreciation of these concerns.

• SF-132 The Beatles: Here, There & Everywhere

Credits:

4.00

Description:

This seminar will investigate the impact and legacy of the Beatles. The Fab Four deserve our scholarly attention as musical innovators and as cultural avatars of the 1960s, an era that still exerts influence today. We will examine the many ways in which the Beatles rocked the establishment and became defining figures in post-war youth culture. We will also discuss other media (the visual arts, film, fashion, style) and fields of study (mass media, marketing, recording technology, copyright law, English history) using the Beatles as our guides.

• SF-151 Getting Over It: Dealing With the Aftermath of Group Conflict/Mass Atrocity

Credits:

4.00

Description:

Once violent conflict between two groups has ended, what is the best way to transition back to normality coming to terms with the past or simply moving on? To answer these questions we will examine the debates surrounding war crime tribunals, truth commissions, lustration policies, and reparations in the second half of the 20th century. Case studies will include post-apartheid South Africa, post-WWII Germany, and the Israeli/Palestinian conflict. We will discuss the philosophical problems raised by each of these instruments, as well as on the political, legal, and practical difficulties their implementation present. Cultural Diversity B

Type:

Cultural Diversity Opt B

- **SF-156 The Mask Behind the Face: Personas, Personalities, and Perception. Acting in /Out Life**

Credits:

4.00

Description:

The theatre has always been a metaphor for life. In modern times life has become theatre. This seminar will confront the idea of real life and the eroding boundary between performers and audience. Students will study the roots of the contemporary obsession with stars and stardom, a mania that began in the 18th century and flourished in the 19th century. We will look at performance studies, performers memoirs, plays, and films that dramatize this dilemma.

- **SF-173 Crime in American Society**

Credits:

4.00

Description:

Popular beliefs about crime are often inspired by the media and by specific criminological theories. These theories about and media images of crime will be examined in detail, including the hits and misses.

- **SF-174 Tragedy and Literature**

Credits:

4.00

Description:

This course will focus on classic works of ancient and modern literature that examine the human condition from a tragic perspective. We will concentrate on close readings from the following texts: Homer's Iliad, Sophocles' Antigone, The Bhagavad-Gita, Shakespeare's Othello, Chekhov's short stories, and Joyce's Dubliners.

- **SF-178 Sacred Hoops & Sneaker Pimps: Understanding the American Hoop Dream**

Credits:

4.00

Description:

This course is about the basketball hoop dream played out at the high school and college levels. We will study a wide variety of materials - novels, films, websites, reference works - to understand both the construction, and destruction, of the hoop dream in such diverse places as New York City, Seattle, rural Indiana, suburban Georgia, and the Wind River Reservation in Wyoming. Issues of race and culture will serve as guiding themes as we develop critical theory explaining why the hoop dream has persisted, and adapted, over time, to fit the needs of its believers and supporters.

Type:

Cultural Diversity Opt A

- **SF-182 Heroes, Antiheroes and Outsiders: Reading the Graphic Novel**

Credits:

4.00

Description:

How is it that comics", a genre often viewed as entertainment for children and adolescents, has become one of the most exciting forms of narrative and visual art? To answer this question, this seminar will examine a range of graphic novels, from those that celebrate their origins in superhero comics, such as Alan Moore's *Watchmen*, to those that treat subjects not usually considered proper to the comics genre, such as Art Spiegelman's *Maus*, about the Holocaust, and Alison Bechdel's *Fun Home*, about the complexities of sexual identity. As we read these works, we will look at how the combination of words and still images makes the graphic novel a unique storytelling form, as well as how artists and writers push the envelope to create new styles and challenge our expectations. In addition to class discussions and writing assignments, we will take a field trip to the Museum of Fine Arts and create a collaborative group graphic novel step-by-step over the course of the semester (all abilities welcome).

- **SF-183 Politics, Power and the Media**

Credits:

4.00

Description:

Is there a relationship between accumulated political power and mass media representations? Is news content impacted by existing political power relations? It is the object of this course to critically analyze the role of the mass media within the framework of existing political power relations in the United States. In particular, the course will focus on the role the mass media plays in promoting and reinforcing dominant political practices and ideologies. The course will begin by exploring various theories of the press, notably its function in a democratic society, as well as the concepts of power and propaganda. We will continue with a series of case studies, complemented by secondary sources that highlight how media representations affect the contemporary distribution of political power in the US. Topics of discussion will include the current US war on terrorism, the ongoing health care debate, the public disavowal of big government", and the concept of a liberal media.

- **SF-189 American Gothic: Edgar Allan Poe, Flannery O'Connor and Annie Proulx**

Credits:

4.00

Description:

This literature seminar will study and compare the short stories of Edgar Allan Poe, Flannery O'Connor, and Annie Proulx. Beginning with Poe as the father of the short story genre in America and exploring his critical theory of the grotesque and arabesque", the class will examine the emergence of the gothic literary idiom as a classic American genre. Critical essays on the gothic aesthetic will be analyzed and film adaptations and documentaries will be viewed.

- **SF-191 Film Adaptation Film Adaptation**

Credits:

4.00

Description:

Why did they change the ending of the book? The novel is so much better! We will explore the concept and industry of film adaptation. Students will read novels and watch respective film adaptations to explore how the written word is adapted to the screen; both fiction and non-fiction works will be considered. Also, field trips to past film locations in Boston will be taken to explore why specific settings were chosen for respective situations. Additionally, students will create their own written adaptations of source materials, putting into practice the concepts studied in class.

- **SF-197 Sustainability, Energy, and Technology At Suffolk University**

Credits:

4.00

Description:

In this project and team-based course, students study a sustainability problem at Suffolk University and spend the semester developing proposals to address the problem. At the end of the course students will present their proposals to Suffolk University's sustainability committee, and will exhibit their websites and visual aids in the Donahue lobby to educate the Suffolk community about sustainability. If their proposals are well-researched and well-communicated, students can see their ideas actualized while they are still undergraduates.

- **SF-198 Music and the Brain**

Credits:

4.00

Description:

What accounts for the power of music to move us so profoundly? This course explores how our brains and music evolved together: What music can teach us about the brain, what the brain can teach us about music, and what both can teach us about ourselves.

- **SF-1127 The Vietnam and Iraq Wars: Polarized Perspectives**

Credits:

4.00

Description:

This class will examine some of the many controversies surrounding the Vietnam and Iraq Wars, two conflicts that have been profoundly polarizing for the American people. There are widely divergent perspectives regarding the fundamental questions surrounding each war. Were the reasons for American involvement just? To what extent were the methods used by the United States military during each war just? To what extent did the media play an appropriate role before, during, and after each war? Did opposition to these wars serve primarily to benefit the enemies of the United States or did it constitute a form of patriotism and love of country? This interdisciplinary course will address these and other complex questions by examining the histories, literature, and films (both documentaries and dramatic) that have been produced in response to these wars.

- **SF-1128 Sustainable Media**

Credits:

4.00

Description:

Contrary to a popular perception that information, communication and entertainment technologies are clean, ecologically benign and paperless, the reality of an increasingly digital life is that our fascination with the next best thing in mobile phones, video game consoles, personal computers, digital cameras, tablets, etc., has devastating impacts on our environment. These media devices are manufactured using toxic ingredients in poisonous working condition, require an abundance of energy to operate, and create hazardous waste when disposed. Media technology companies and the advertising industry that markets their wares have successfully persuaded consumers to accept rapid obsolescence and to highly anticipate the latest upgrade. But some consumers, electronics manufacturers, policy makers, and environmental groups are working to change the culture of consumption in favor of sustainable media practices that lessen the environmental footprint of the digital devices we use everyday. The purpose of this course is to understand the problem of unsustainable media, and the possible solutions for a sustainable media system.

- **SF-1129 Beacon Hill: Fact, Fiction, and Fantasy**

Credits:

4.00

Description:

The course will explore the physical geography, history, and image in literature, film, and pop culture of Suffolk University's Beacon Hill neighborhood. The purpose and objective of the course is to provide students with a deep knowledge, understanding, and appreciation of Beacon Hill through examination of written and visual sources, and feet-on and eyes-on experience of the public parts of the Hill.

Type:

Local Engagement Experience

- **SF-1141 Classical Civilizations: Pathways to Wisdom**

Credits:

4.00

Description:

How is it that the knowledge, intelligence, wisdom and values of the Greeks and Romans still educate and edify the world by providing venues towards leading fulfilling and dignified lives? The guiding principles of their respective civilizations rested upon eight pillars: - Humanism: It was recognized that humans have the potential to master their world and live life to the fullest. -The Pursuit of Excellence: To imagine the highest good and

strive to attain it. - Self Knowledge: It is imperative to know oneself before seeking to know the world. - Rationalism: Always question, reason and discern truth from falsehood and never consider any matter superficially. - Restless Curiosity: Often the resolution of one issue leads to the revelations of others mysteries and pursuits which compels further investigation. The wise individual makes this a lifelong endeavor. -Love of Freedom: As long as one brings no harm to others, one must be free to live and discover as much as possible. - Individualism: All are unique and, therefore, must recognize individual strengths and identity. -The Practice of Moderation: The prudence of avoiding extremes in personal and social conduct. In this course, students will read two (brief) texts on the Greek and Roman contributions to the world and then will proceed with specific readings which illuminate the eight principles above for achieving the good life.

- **SF-1143 In the First-Person: Storytelling in the 21st Century**

Credits:

4.00

Description:

This section of the Seminar for Freshmen will consider the forms, venues, and impacts of narrative nonfiction in contemporary culture. From the exploding popularity of personal essays in the digital age to the living, evolving essays we create on social media, we are constantly narrating and archiving our lives, shaping their content for specific audiences. In doing so, we shape what our experiences mean and represent. In order to analyze the power of narrative nonfiction, we will look at a variety of multimodal texts: essays, podcasts, Instagram and Twitter feeds, stand-up comedy, and storytelling slams, as well historical texts such as the essays of Michel de Montaigne and historical artifacts at the National Archives in Boston. We will also write our own narrative nonfiction, and adapt our first-person stories for listening and viewing audiences, such as the MassMouth story slam and podcasts like This American Life. Additionally, we will practice narrative nonfiction for professional audiences, using storytelling as a way to showcase personal strengths to employers, internship coordinators, and the like.

- **SF-1144 Native Americans: Walking in Two Worlds?**

Credits:

4.00

Description:

Native Americans are often described as walking in two worlds, as they attempt to navigate the process of maintaining their tribal identity and heritage while living in mainstream America. In recent years there has been a shift towards tradition and heritage, and a rejection of Western values and norms in both the US and Canada. In this course we will look at how Native people live in the US and Canada today, and examine the extent to which they are either trying to walk in two worlds or perhaps rejecting the two worlds model. To help us answer this question, we will read about reservation life, the Idle No More Movement, Indigenous History, and current events. We will also watch videos and explore indigenous culture.

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

Type:

Diverse Perspectives

- **SF-1146 Fido the Friendly Wolf: A Natural History of Dogs**

Credits:

4.00

Description:

This course explores the evolution of dogs from wolves and the ways in which dogs have adapted to their niche in human society. The ecology, behavior, genetics, and adaptations of dogs will be explored in relation to both their wolf ancestry and artificial selection by humans. The course includes 2 mandatory field trips to a wolf sanctuary and an animal shelter.

- **SF-1147 Global (In) Security: From ISIS to Ebola**

Credits:

4.00

Description:

This course reviews the principal features of global and national security as it is currently practiced by tracing the evolution of theories, policies and circumstances whereby current international security is developed. Students will evaluate the nature and origins of war, arms proliferation, military instability, terrorism, genocide, health threats and natural resources depletion.

- **SF-1148 Brave New Worlds**

Credits:

4.00

Description:

Explores themes of adventure, self-discovery, exile, and culture shock in classic and contemporary travel writing (including fiction, poetry, and non-fiction) as well as film. Students will experiment with creative writing of their own, develop theories of cosmopolitan world citizenship, travel through the city of Boston on field trips, and team up to learn about different countries in Suffolk's global network of study abroad programs.

- **SF-1150 Religion in Contemporary Society**

Credits:

4.00

Description:

This course is design to provide students with an overview of the social settings and cultural meanings of religion in the contemporary world. Topics that will be covered in reading and discussions include the rise of religious fundamentalism, religion and violence, women's and men's religious experiences, new religions, and portrayals of religion in popular films. In addition to the readings, students will observe and experience religious expressions and activities through fieldwork assignments. The emphasis on films and fieldwork reflects my belief that religion is made up of lived experiences of actual individuals and communities. In order to understand religion in contemporary society we will make every effort to see (in person or in film) a wide range of religious activities. The films we will see include some of the following: Leap of Faith, Devil's Playground, Kadosh, Women of Hizballah, Singing Stream, A Still Small Voice.

- **SF-1151 Reproduction and Society**

Credits:

4.00

Description:

This course explores relationships between reproductive health and rights both nationally and internationally. Many of our topics fit into two broad areas: conflicts over the control of childbearing (sterilization abuse, birth control, and abortion) and conflicts over who deserves to be a mother, especially when the mothers in question face social stigma and lack political power. Other topics include safe birth and maternal mortality, breastfeeding, infertility and reproductive technology. We also examine the politics of women's sexual and reproductive autonomy, including the

policies that shape women's choices to prevent, achieve, abort, or carry to term a pregnancy. Throughout, we are guided by the following questions: Why is reproduction an important site through which to understand society? How do statuses such as race, class, gender, sexuality and ability influence people's reproductive possibilities? What is the role of the state in shaping these experiences? How have communities supported or resisted efforts at reproductive control? Why is reproductive justice central to these answers?

- **SF-1153 Law, Disease, and Public Health**

Credits:

4.00

Description:

This course is about public health law, which is the study of the legal powers and duties of the various systems of government in the United States (federal, state, and local) in collaboration with their partners (e.g., health care, business, the community, the media, and academe), to ensure the conditions for people to be healthy (to identify, prevent, and ameliorate risks to health in the population), and of the limitations on the power of these systems of government to constrain for the common good the autonomy, privacy, liberty, proprietary, and other legally protected interests of individuals. The prime objective of public health law is to pursue the highest possible level of physical and mental health in the population, consistent with the values of social justice. The course will focus especially on public health law in the area of epidemic disease. Case studies will be made of the Great Influenza of 1918 and the origins and spread of the Ebola virus, culminating in an examination of outbreaks of Ebola in the United States.

- **SF-1154 Introduction to Visual Studies**

Credits:

4.00

Description:

This seminar provides an introduction to Visual Studies, a relatively new interdisciplinary field that examines how images communicate and the roles that they play in society. Students will apply the concepts and techniques of Visual Studies to analyze sites and signs around Boston, such as advertisements, street signs, fashions, newspaper photographs, buildings, and public spaces. Class projects will increase students' awareness of their visual environment and their ability to critically analyze the visual rhetoric that surrounds us and is often used to manipulate us.

Type:

Local Engagement Experience

Students in the CAS Honors Program should choose one Seminar for Freshmen course from those listed below:

- **SF-H116 Enlightened Insanity**

Prerequisites:

CAS Honors students only.

Credits:

4.00

Description:

Rain or shine, the great 18th century Enlightenment philosophers would meet at the famous cafes of Paris to discuss their ideas, and to observe and criticize society. From these informal debates emerged ideas that are at the core of our modern understanding of the nature of society, marginality, human nature, civil rights, the essence of creativity and genius. Come join us in the quest to understand, define, observe, and analyze the key ideas and concepts of these great thinkers, such as Rousseau, Diderot, and Voltaire, still so relevant in our time. We will read key works of these creative thinkers and philosophers. We will enrich our experience and understanding through the use of film, theatre performances, museum visits, as well as the occasional cafe debate.

Type:

Expanded Classroom Requirement, Honors

- **SF-H126 The Boston Theatre Scene: The Inside Experience**

Credits:

4.00

Description:

Using the current Boston theatre season as its syllabus, this writing- and analysis-intensive course will explore several plays in production at some of Boston's many professional theatres. We will study the script of four to five plays before attending performances of those works. Students will gain insights on the world of theatre through backstage tours and conversations with theatre professionals such as producers, directors, actors, designers, playwrights, and critics. Students must be available for evening (usually Wednesday) performances. A fee for student-rate tickets will be assessed.

Type:

Honors

- **SF-H1134 The Meaning of Life**

Prerequisites:

CAS honors students only.

Credits:

4.00

Description:

What do we live for? Which beliefs, values, and experiences sustain meaningful, fulfilling existence? Are we authors of our destinies or powerless pawns in an unfathomable cosmic game? Does death render all our efforts superfluous? This award-winning course offers a cross-cultural, interdisciplinary exploration of these questions through philosophical and religious texts, art, fiction, autobiography, and psychological studies. The course opens with the Old Testament's book of Ecclesiastes, followed by three units: 1) A Life Worth Living: Humanity's Ideals focuses on the ancient and modern visions of human flourishing; 2) Threats to Meaning: Humanity's Discontents, discusses the disillusionments leading to the loss of meaning; and 3) Recovery of Meaning: Crises and Hopes, explores the post-crisis possibilities of self-discovery and growth. Please visit <http://meaningoflife.cherkasova.org/>

Type:

Honors

- **SF-H1135 Women Warriors: Stories of Captivity, Conversion, and Confession**

Credits:

4.00

Description:

Since the beginning of time, women have been doing battle to themselves, while men have gone to battle against others. Whether it is through converting to Christ, yielding to captors in order to survive, or carrying a baby, this course introduces students to the many ways in which, whatever battles they face, women are warriors; they survive. Utilizing an array of captivity, conversion, and confession narratives by women, and pairing them across the centuries, students will make connections and draw conclusions between early-and mid-19th-century-American and contemporary women. Students will connect, for example, the trials of the 17th-century Puritan captive, Mary Rowlandson, and contemporary hostage, Elizabeth Smart, to explore how women (no matter how different they seem) draw upon unique inner resources to survive.

Type:

Honors

- **SF-H1152 The Idea of America: Past, Present, Future**

Credits:

4.00

Description:

A systematic exploration of thinking of and about America, from the founding of the republic to American issues and traditions of thought that reflect upon the founding principles and the unfolding American experiment. The Declaration of Independence and the Constitution will be studied with an eye to their philosophical content and sources. The course will also examine works of philosophers and other thinkers who address conflicts over the meaning of founding principles in the course of the nation's history, from the struggle over slavery to America's contemporary role in the world.

Because this course intends to apply theoretical understanding to real life, students will be expected to read contemporary journalism on a regular basis and assess the controversies of today in the light of the nation's philosophical and historical currents.

First-Year Writing: 2 courses, 8 credits

- WRI-101 First Year Writing I

Credits:

4.00

Description:

Study and practice of the writing process and revision in terms of expository writing modes for an academic audience.

- **WRI-102 First Year Writing II**

Prerequisites:

WRI 101.

Credits:

4.00

Description:

Study and practice of argumentative and research writing through further work with writing process and revision and the critical reading of a variety of texts.

A student may be assigned to other writing courses or may be invited to take WRI-H103. Students required to complete ENG-099 may be allowed to waive WRI-101 with a grade of “B” or better and the approval of the English department. Students who are invited to complete WRI-H103 and earn a “B” or better satisfy the two Writing Requirements. Waiving a course does not earn credits.

- **WRI-H103 Advanced First Year Writing**

Prerequisites:

By Invitation Only.

Creativity & Innovation: 1 course, 3 credits

Choose one 100-level Creativity & Innovation course from those listed below:

- ADF-S171 CI: Integrated Studio 1

Credits:

3.00

Description:

This cross-disciplinary course will integrate the ideas and practices of two-dimensional design, color and drawing emphasis will be placed on understanding the creative process, exploring concepts and developing research skills. Students will undertake individual and collaborative projects in three spaces; the studio classroom, the digital world and the city at large.

Type:

Creativity and Innovation, Arts Admin Minor Elective

• ADF-S172 CI: Integrated Studio II

Prerequisites:

ADF S101

Credits:

3.00

Description:

This course builds on the Integrated Studio 1 experience: synthesizing fundamental visual ideas. IS 2 investigates the construction, documentation, and transformation of volumetric form, environmental space, and time. Projects will explore narrative strategies and the creation of immersive experiences. Students will develop critical and analytical skills while employing a range of traditional and digital media-including video/sound capture and editing-as they explore the creative boundaries of the classroom studio, the city of Boston, and virtual space.

Type:

Creativity and Innovation

• CI-101 Process and Epiphany

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Despite its mystical connotations, creative epiphany is the result of a long engagement with the creative process that results in a surprising and unpredictable understanding of a concept or the solution to a problem. In the way that the discoveries of science are guided by the scientific method, the path to creative innovation is through a directed creative process. All creative innovators follow such a directed creative process, whether they are industrial designers or fine artists, performers or inventors, architects or entrepreneurs. This course explores both historical examples of individuals whose creative innovation changed the world, as well as hands-on collaborative, practical problem solving employing the creative process.

Type:

Creativity and Innovation

• CI-102 The End of Global Poverty

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course is designed to demystify the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking. More than one-third of our global population lives in poverty, earning less than two dollars a day. Governments, businesses, social enterprises, and charitable organizations have tried to solve the global poverty issue with mixed results. What is the solution? Is entrepreneurship the solution, part of the solution, or has no impact whatsoever? In this course, you will gain an understanding of the power of entrepreneurship (in the context of creativity and innovation), the definition and depth of global poverty (in the context of constraints, such as human, financial and physical resources embedded in local, regional, national and global cultures), and successes and failures of past initiatives to reduce poverty. This is not a course about politics or business, but rather finding a solution to a problem that has eluded mankind since the beginning of time.

Type:

Creativity and Innovation

• CI-103 Making Inventions: Sticking Your Neck Out

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course examines cutting edge technologies, the science behind them, and their practical application and follow-up success or failure. It also provides the students a chance to consider the relevance of identified needed inventions from the 1950s, and whether those projections were correct. The history behind some remarkable inventions will be presented. Finally, working in small teams, students will brainstorm to identify something useful to invent and determine several approaches to implementing it.

Type:

Creativity and Innovation

• CI-106 Failing Successfully

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course is designed to demystify the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking. Did you know Netscape was the internet browser? What about MySpace, arguably the Facebook of the last decade? What led Apple from being innovative pioneers of the 70's to the verge of extinction in the 80's to the technological giant they are today? Technologies come and go, but what leads to organizations lasting more than 100 years such as IBM, General Electric, etc.? What role does failure play in successful innovation, decision-making, and business viability? In this course, you will learn about innovation that may have been successful

and well-executed. You will also learn about innovation that was a viable business opportunity, but poorly executed: one phase of failure. In addition, you will learn about innovation that had no real market viability, but was launched anyway: another phase of failure. Can failure lead to success? If so, how?

Type:

Creativity and Innovation

- **CI-107 Going Up: Skyscraper Design in Emerging Economies**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The human population is expected to be between 8.5 and 9 billion persons by the mid-21st century. The majority of those individuals will be living in urban communities. With large populations, high real estate costs, and limited land areas, the only way to construct in urban environments is to go up! In this course, students will have an opportunity to look at traditional and novel skyscraper designs, to consider the cultural and economic significance of such structures, and to use their imagination to develop a conceptual design of a skyscraper.

Type:

Creativity and Innovation

- **CI-108 Designing the Next Best Thing**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Demystifies the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking.

Term:

Offered Both Fall and Spring

Type:

Creativity and Innovation

- **CI-109 Virtual Globe Trekking: an Alternate View of the World**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will examine creativity and innovation through the lens of place. Modern geography is an all-encompassing discipline that seeks to understand the earth and all of its human and natural complexities - not merely where objects are, but how they have changed and come to be. The world is filled with ideas and perspectives. By changing your location, new perspectives emerge. This course will focus on the creative process to understand that each person creates in their own way. The students will test many methods to draw forth creative thought and seek to identify their own best method for calling on their own inner genius. Often this will involve failure and mixed results, yet this is where the students will learn their strengths and weaknesses.

Type:

Creativity and Innovation

- **CI-110 The Entrepreneur's Cocktail**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

How do you and your story drive business? This course takes an innovative look at human creativity and entrepreneurship. As an entrepreneur needs perseverance and high motivation, we will explore the importance of values, risk taking, problem solving, and the discovery of the market opportunities. In order for you to be creative and essentially create successful ventures, you will discover the nuances between the three factors and explore them further through interactive discussion and debate as well as collaborative group work. You will be encouraged to think in non-conforming ways and apply new concepts and develop your own personal operating principles.

Type:

Creativity and Innovation

• CI-111 The Future of Boston

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course introduces students to creative and innovative thinking based in the field of communication. Students will work in teams to wrestle with the challenges Boston will face in the future and propose feasible strategies to meet them.

Type:

Creativity and Innovation

• CI-113 Revising Reality

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Reality and perception have been debated and discussed for millennia. Humans see and experience their world in different ways. How do humans determine what is true and good and what advancements are necessary? In this course, students will creatively explore these big questions and revisit knowledge using new and sometimes divergent perspectives. Students will participate in dirty and courageous learning by crafting products, creating visual projects, and coming into original thought via trial and error. Students will also develop their analytical and critical thinking skills, while learning to communicate effectively and honestly.

Type:

Creativity and Innovation

• CI-117 Writing for Stage and Screen

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will engage students in the process of script writing. Working in groups of four or five they will craft adaptations of stories, create original scenes, or review sketches. By the end of the semester they will produce a complete script. Each alternating week, one group will serve as the executive committee that will approve the final draft of the script of the week. There will be exams based on the textual study of collaborative and adaptation techniques.

Type:

- **CI-121 Catastrophe Management: From 9/11 to the Boston Marathon Bombings**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will introduce students to the exciting world of emergency management from the perspective of scientists who are often utilized as experts during both small scale adverse events and large scale catastrophes. Students will actively and creatively explore the psychological, economic, and medical dimensions of these events and participate in role play in the classroom and site visits. By the end of the course, students will have a keen appreciation of emergency planning and management on the local and national levels.

Type:

Creativity and Innovation

- **CI-123 Comics & Co.**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Using visual narrative as the means of exploration, students will be led through a series of exercises that challenge their assumptions, broaden their perspectives, and excite their imagination. The relationship between critical, creative and inventive thinking will be the basis for individual and collaborative projects.

Type:

Creativity and Innovation

- **CI-125 Boston's Creative History in Perspective**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Our collective social consciousness is formed by physical space; through a mixture of exploration, discovery, and making, students will delve into the city that surrounds them, developing a sense of ownership and engagement in Boston's public space. During the course of the semester, students will uncover the ways that art and architecture have shaped the souls of cities around the world, using Boston as a template. In a series of local field trips, students will explore Boston through its art and architecture, focusing not only what is, but on what might have been -- designs that were ultimately unrealized. Through interview and visits with local artists and designers, students will also learn about the process of shaping public space, uncovering the myriad of ways that design decisions are political in nature. As a capstone to the course, students will create their own city plan -- identifying and researching a chosen social or physical challenge the city faces, then developing a proposal that would address their chosen issue. These design proposals will then be enacted using augmented reality. Like a layer of invisible ink, these projects will form a phantom city over the physical realities that surround us, displaying the dramatic potential of the imagination.

Type:

Creativity and Innovation

- **CI-127 Visual Perspectives: Coastline, Symmetries and Illusions**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

How do you measure the length of a coastline? How much symmetry is possible? What is an impossible object? How did the Mayans measure proportions? In this course, students will delve into these and other questions with a visual theme. While some will be clear-cut, others will be open-ended and require some choices, estimates or assumptions to be made. Throughout, the emphasis will be on creative problem solving.

Type:

Creativity and Innovation

- **CI-129 Elements of Attraction- Supply and Demand**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The intent of this course is for students to examine and effectively express in writing their ideas on creativity and to inspire undergraduate students to exceed their current levels of learning. Students will learn to meaningfully integrate course content into long term-retained useful skills through applied creative collaborations. This course is based on the idea that exposure and insight development will enable students to better visualize themselves in their desired fields and make informed choices within the variety of options available to them. The focus of the course will help students to assess their personal interests and strengths as they plan for their own educational and professional futures.

Type:

Creativity and Innovation

- **CI-131 Off to the Future: Leadership Through Compromise**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Some past political issues were resolved with great success (the Compromise of 1820), and some resulted in great failures (the US Civil War). In this course, students will study noteworthy political dilemmas of the past, identify the major problem solvers and examine the art of compromise. These investigations will provide guidance and inspiration for students to develop innovative and creative solutions to present day political problems such as climate change, immigration, Social Security, income distribution, higher education affordability, and homelessness. Students will work in teams and propose creative and innovative solutions that will convince the affected interest groups favorably, represented by teams of other students in the class, and result in compromises solving tomorrow's problems today.

Type:

Creativity and Innovation

- **CI-133 Franklin and the American Experiment**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

What made Benjamin Franklin such a creative force in American history? We will explore the many facets of Franklin's life (printer, writer, scientist, statesman) and learn about Benjamin Franklin's political and diplomatic ventures, and will recreate some of his scientific experiments.

Type:

Creativity and Innovation

- **CI-135 The Design of Everything**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will explore a selection of the genius personalities and their creative work in 5 distinct areas of human creative endeavor; art, science, nature, technology and the built environment. The course explores the underlying similarities in the process of their discovery, invention and creativity across the disciplines. Studying such names as Newton, Warhol, Hawking, Jobs, Gaudi and Banksy, students will uncover the process of design through research, analysis, synthesis, iteration and error. In class group projects will allow a hands-on opportunity to create.

Type:

Creativity and Innovation

• CI-137 Re-write for Rights: Drafting a New US Constitution

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The American Constitution is an important document, framing the basis for our lives and the lives of our neighbors. Yet it is also a very old document, which may be seen as lacking when it is compared to newer constitutions from around the world, even places that we may regard as undeveloped. In this class we will study many constitutions and also talk to many people to craft a new constitution that reflects contemporary American society and its values.

Type:

Creativity and Innovation

• CI-139 Creating, Promoting, and Participating in the Literary Arts

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

With the launch of Boston's new Literary Cultural District, we have renewed cause to celebrate the history and industry of literature in our city. This course will immerse students in the world of literary culture and its many branches: writing, editing, reviewing, and publicity. Students will practice the art of creative writing, and learn how writers find publishing venues, how authors build platforms for their work, and how literature reaches the public through readings, social media, book trailers and other marketing campaigns, authors interviews, and reader reviews. Various industry professionals, authors, editors and publicists will speak to the class about the artistic and business opportunities, trends, and futures of literature and literary publishing. Students will apply their knowledge and interests to a variety of projects, including book reviews, author interviews, social media campaigns, literary events, and other collaborative projects. We will also work as a class to launch a new digital literary journal at Suffolk.

- **BLE-325 Global Business Ethics**

Prerequisites:

BLE-215, PHIL-119, PHIL-120, PHIL-123 or PHIL-127

Credits:

3.00

Description:

Surveys business ethics as they transcend the diverse perspectives of global business. Explores current global ethics standards and values, ethical challenges, controversies, convergence and trends. Students explore famous global business cases through films, websites and independent research. Emphasizes identification and resolution of global business ethical issues within the context of ethical decision-making and sustainability. Analyzes corporate social responsibility ; hence, transforming global business ethics through business.

Type:

Diverse Perspectives

• CI-204 Prague: Castles to Barbwire

Prerequisites:

At least 24 credits earned.

Credits:

3.00

Description:

Prague offers students a more recent view into history and will serve as a backdrop to learning Design Thinking. The curriculum will use Czech and Central European cultural features as the inspiration for learning the creative process, skills that can be applied broadly and globally across disciplines. WWII and its fall to Communism left the Czech Republic undamaged. Artists played a vital part in the country's rise to a Republic during the Velvet Revolution. These dissidents, including writers, actors, artists and musicians were innovators who were the catalyst for change. One could say that creative minds changed this country. This course is designed to demystify the creative process by introducing the creative practice as a disciplined approach to problem solving and innovation requiring research. This one-month study abroad experience will offer a more worldly insight to the significance of developing skills where divergent thinking and risk taking are one of many key tools in learning to generate new ideas. Travel fee covers accommodations, transfers, some meals and cultural visits. Airfare and tuition not included.

Type:

Creativity and Innovation,Diverse Perspectives,Global Engagement Experience,Expanded Classroom Requi

- **CJN-216 Intercultural Communication**

Credits:

4.00

Description:

An examination of communication variations and cultural viewpoints and their impact on cross-cultural communication. A special emphasis is placed on rituals and message patterns in non-Western cultures.

Term:

Offered Both Fall and Spring

Type:

Cultural Diversity Opt B,Diverse Perspectives

- **CJN-219 Rhetoric of Protest and Reform**

Credits:

4.00

Description:

Examines the persuasive strategies of social reform movements with special emphasis on the civil rights', women's rights, and gay rights movements in the United States.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt A,Humanities & History,BSBA SOCIAL CHANGE,Diverse Perspectives

- **CJN-301 Documentary Film and the Image of Conflict in the Middle East**

Credits:

4.00

Description:

The course focus is on some of the divisions and conflicts within Israeli society. Students analyze and compare mainstream media discourse to alternative representations in documentary film. Analysis also covers media representation of the Israeli-Palestinian conflict.

Term:

Occasional

Type:

Cultural Diversity Opt B,Diverse Perspectives

- **CJN-385 Globalization of Media and Telecommunications**

Credits:

4.00

Description:

A critique of the circulation of media goods and ideologies from both a cultural and political/economic perspective. Topics include global Hollywood, the images of Muslim women in transnational media, the information society, and global social movements.

Term:

Offered Spring Term

Type:

Cultural Diversity Opt B,BSBA SOCIAL CHANGE,Diverse Perspectives

- **EDUC-315 Strategies for Emerging English Learners**

Credits:

4.00

Description:

This course examines the specific needs and challenges of the various language and cultural groups in schools. Topics include: theories of 1st and 2nd language acquisition, strategies for teaching academic content, modifying instruction in the mainstream classroom, creating classroom cultures that invite all students into learning, the role of advocacy and professional collaboration in ESL, and analysis of policies related to assessment and placement of English Language Learners.

Type:

Diverse Perspectives, Social Science

- **ENG-216 World Literature in English**

Prerequisites:

WRI-102 or WRI-103

Credits:

4.00

Description:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

Cultural Diversity Opt B,BA FOREIGN,Diverse Perspectives

- **GVT-208 Politics / Religion**

Credits:

4.00

Description:

This course explores what major religions say about the status and responsibilities of the state and how, in turn, selective states have, in theory and practice, structured the place of religions in political life. Particular attention is given to issues of politics and religion in the United States. Cultural Diversity A

Type:

Cultural Diversity Opt A,Social Science,BSJ SOCIAL SCIENCE,Diverse Perspectives

- **GVT-359 Hockey, International Development & Politics**

Credits:

4.00

Description:

This class examines the way in which national identity, global and regional economics and international development intersect. It uses the professionalization of the sport of hockey and its subsequent spread around the globe as its case. It will look at the rise of the pro game, the way in

which it shapes national identity in the Canadian case, the way in which the pro business model has changed in response to broad socio-economic changes in North America and geo-political shifts around the globe, especially in Eastern Europe and the Former Soviet Union.

Type:

Social Science,Diverse Perspectives

• GVT-360 Elections and Voting

Credits:

4.00

Description:

How are elections administered in the United States? Do Americans have confidence in the electoral process? Should they? Why or why not? This course will examine elections in the United States in detail -- from how they are funded to how they are administered to how voters behave. Students will have a choice of either serving as poll workers during the November election or organizing and conducting research of potential voters. Students will gain hands-on experience in actual research design, election administration, and non-partisan get-out-the-vote activities. In addition, students will gain a deeper understanding of the relationship between attitudes, opinion, and voting behavior in American politics and institutions. ECR

Type:

Humanities & History,Social Science,BSJ SOCIAL SCIENCE,Diverse Perspectives

• GVT-391 Canada: Multicultural Politics

Prerequisites:

GVT 110/120 or Instructor's permission

Credits:

4.00

Description:

This course examines the Canadian model of incorporating diverse communities into its constitutional and political framework, including the founding British North American Act of 1867, the 1982 Constitution Act, and two later attempts at constitutional reform. Canada's role in balancing two official languages, English and French, is discussed, as is its recognition of a First Nations native-governed territory in the Arctic. This course introduces

to the Canadian polity and compares its parliamentary system with the U.S. separation of powers system. Prerequisites: GVT 110, GVT 120 or instructor's consent. Normally offered alternate years. Cultural Diversity B

Type:

Cultural Diversity Opt B, Social Science, BSJ SOCIAL SCIENCE, Diverse Perspectives

- **GVT-467 Comparative Social Movements**

Prerequisites:

Junior status

Credits:

4.00

Description:

This class examines the political ramifications of social movements primarily but not exclusively within the United States. It looks at ideology, beliefs and mechanisms of mobilization. Another important focus is an analysis of non-white social movements in this country and their impact on domestic politics. Among the movements to be examined are: the Pan-African movement 1919-1939 which will, to some extent, take us outside this country; the U.S. Civil Rights Movement 1955 to 1969 which covers the rise of the Black Power movement; and the U.S. Labor Movement 1900 to 1955 in terms of non-white influence on its programmatic goals. Normally offered alternate years. Cultural Diversity B

Type:

Cultural Diversity Opt B, Social Science, BSJ SOCIAL SCIENCE, BSBA SOCIAL CHANGE, Diverse Perspectives

- **HST-100 Introduction to Asian Studies: Culture, People, Ideas**

Credits:

4.00

Description:

An interdisciplinary introduction to Asian Studies will touch upon the history, politics, economics, philosophy, geography, arts, and cultures of Asia. Sample topics include political economy, religious and cultural exchanges, international relations, the Asian experience in America, and the role of Asia in the twenty-first century. Students will develop conceptual frameworks for exploring the subjects covered by the Asian Studies curriculum.

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, BSBA SOCIAL CHANGE, D

- **HST-371 U.S. Women's History Colonial to 1865**

Credits:

4.00

Description:

Traces the roles, images and experiences of women in America from colonial times to 1865. Topics include the family, work, religion, education, health care, motherhood, sexuality, social and political activism legal status, labor activism and popular culture. With attention to ethnicity, race, class, age, region of residence, disability and sexual orientation, the course focuses primarily on the everyday lives of ordinary women.

Term:

Offered Fall Term

Type:

Cultural Diversity Opt A, Humanities & History, Humanities Literature Requirement, Diverse Perspectives

- **P.AD-201 Social Change**

Credits:

3.00

Description:

This course will examine social change in the U.S. and abroad. The course will also examine the role of business, nonprofits, and the public sector in addressing social problems. Topics studied may include the Industrial Revolution, the civil rights movement, the women's movement, environmentalism, and the gay and lesbian movement.

Type:

- **P.AD-H201 Honors Social Change**

Credits:

3.00

Description:

This course will examine social change in the U.S. and abroad. The course will also examine the role of business, nonprofits, and the public sector in addressing social problems. Topics studied may include the Industrial Revolution, the civil rights movement, the women's movement, environmentalism, and the gay and lesbian movement.

Type:

Diverse Perspectives,BSBA SOCIAL CHANGE,Honors

- **PHIL-120 Ethics and Civic Life**

Credits:

4.00

Description:

In this class you will be introduced to the perspectives and methods of politics, philosophy, and economics and see how these three disciplines present distinct but interconnected dimensions of current social and political issues.

Type:

Diverse Perspectives

- **PHIL-229 Eco-Feminism**

Prerequisites:

PHIL 119, or PHIL 123, or PHIL 127

Credits:

4.00

Description:

Examines the political, social, and ecological problems facing us as a global community. Having its roots in feminist theory and deep-ecology, eco-feminism provides a critical framework for ecological responsibility and accountability. Writings from eco-feminist thinkers and environmental activists around the world will be used to highlight the philosophical and political conflicts and challenges, including globalization and loss of biodiversity, global warming, international human rights, the relationship of gender and nature, and modes of redress for eco-justice and sustainable development.

Type:

Diverse Perspectives

- **PHIL-261 Eastern Philosophy**

Credits:

4.00

Description:

The exposition and critical evaluation of Hinduism, Buddhism, Confucianism, Taoism, and Islam. Special attention is given to foundation principles as well as to the similarities and differences of each of these philosophies to basic ideas in Western philosophy. 1 term - 4 credits. Normally offered alternate years. C b

Term:

Occasional

Type:

Cultural Diversity Opt B,Cultural Diversity BFA,Humanities & History,Humanities Literature Requireme

- **PHIL-267 Chinese Philosophy**

Credits:

4.00

Description:

A survey of the main developments in Chinese Philosophy. The course begins with the early dynastic concept of humanism and then turns to Confucius and Mencius. Having developed the central Confucian doctrines, students next examine the Taoist response to Confucianism in the writings of Lao Tzu and Chuang Tzu. The course then considers Zen Buddhism, which is called Ch'an Buddhism in China, where it originated. In particular, students study the concept of sudden enlightenment before turning to the Neo-Confucian scholars.

Term:

Occasional

Type:

Cultural Diversity Opt B,Diverse Perspectives

- **PSYCH-243 Organizational Psychology**

Prerequisites:

Take PSYCH-114;

Credits:

4.00

Description:

Focuses on diversity concerns in various aspects of the psychology of the workforce. This includes job analysis, recruitment, selection, evaluation, training, retention, and termination. Employee morale, well-being, stress, and hardiness are considered.

Type:

Cultural Diversity Opt A,Social Science,Diverse Perspectives

- **RS-111 Introduction to World Religions: Western Traditions**

Credits:

4.00

Description:

This course will explore the comparative history and structure of Western religious traditions, broadly understood, and their impact on other world religions, while attempting to recognize the similarities and the differences among them. Traditions to be studied include Greek and Roman religion, the monotheistic faiths (Judaism, Christianity, and Islam, as well as Zoroastrianism, Sikhism and Bahaism). We will also explore the impact of the Western religions on indigenous traditions, such as African religion, Native American religion, and Pacific Island religion. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. 1 term - 4 credits. Normally offered every year.

Type:

Diverse Perspectives

- **RS-112 Introduction to World Religions: Eastern Traditions**

Credits:

4.00

Description:

This course will examine a variety of Eastern religions, including Hinduism, Buddhism, Jainism, Confucianism, Taoism, and Shintoism. Possible connections to be explored will be the impact of these traditions on others, such as Pacific Islands and African religion, as well as the growing place of Eastern religion in the West. This course will explore the history and structure of each tradition, while attempting to recognize the similarities and the differences among them. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. Normally offered every year. Cultural Diversity B

Type:

Cultural Diversity Opt B,Asian Studies,Diverse Perspectives

- **SIB-550 Global Travel Seminar**

Credits:

3.00

Description:

An in-depth analysis of timely special issues in international business. Specific topics are announced when the course is scheduled.

Type:

- **SF-190 Asia in America Fiction and Fact**

Credits:

4.00

Description:

With a focus on some selected ethnic groups from Asia, Asia in America studies the history and current status of Asian Americans in Boston and other parts of the country. We will examine the major reasons why these immigrants chose to leave their home country as well as their expectations and experiences here in America. We will also discuss the issues Asian immigrants have faced in this adopted home as well as the connections and conflicts among different ethnic groups or even within the same ethnic group due to political and socio-economic reasons. The course will include some level of community engagement, through Chinatown tour and service, which may enable us to have a direct contact with the Asian American population and reflect on what is being discussed in class. Through this course, we hope to gain a better understanding of the racial and cultural history of the country and arrive at a deep appreciation of the dynamics of cultural interactions in the twenty-first century. The course fulfills the SCGP requirement.

Type:

Cultural Diversity Opt A, Global Engagement Experience, Diverse Perspectives, Expanded Classroom Requir

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

Type:

Diverse Perspectives

- **SOC-227 Race in American Society**

Credits:

4.00

Description:

Despite the election of Barack Obama as President of the United States, race remains one of the most divisive forces in U.S. society. While many of us struggle against racism, racial classification continues to affect where we live, where we work, and how we see ourselves. Racial classification affects our access to health care and our encounters with police officers. Distorted images of racial groups fill television and movie screens. Appeals to racism and fear of foreigners are dominant themes in elections to state and national offices. This course examines the formation and re-formation of racial classifications: how particular groups become racially identified, how these classifications change over time, and how conflicts over race have shaped American society. The meanings of race, as seen from a variety of perspectives, will be a consistent theme throughout the course.

Term:

Occasional

Type:

Cultural Diversity Opt A,Diverse Perspectives,Cultural Diversity Opt B

- **SOC-228 Cultural, Global and Social Perspectives**

Credits:

4.00

Description:

Enables students to examine, as well as develop an awareness and appreciation of, diversity within today's society. Providing an overview of the major racial, ethnic, and cultural groups in the U.S., the focus is on the ways in which cultural awareness enhances professional helping relationships and improves the operation of human services systems.

Term:

Occasional

Cultural Diversity Opt A,Diverse Perspectives

- **SPAN-290 Advanced Composition & Conversation**

Prerequisites:

Prerequisite: Spanish 202, 203 or 250 or Instructor's consent

Credits:

4.00

Description:

Develops written and oral skills in various contexts and registers. Emphasis on strengthening written skills and learning to speak clearly and persuasively in Spanish. Short texts and audio-visual materials provide the basis for classroom activities which include regularly assigned essays, group discussions and debates.

Term:

Offered Fall Term

Type:

BA FOREIGN,Diverse Perspectives

- **SPAN-301 Spanish Culture and Civilization**

Prerequisites:

Spanish 202, 203 or 250. Spanish 290 or 300 are strongly recommended

Credits:

4.00

Description:

Examines the civilization and culture of Spain highlighting its historical development and cultural manifestations from pre-historic times to the nineteenth century. Students improve their four skills through activities that include discussions, oral presentations, and writing assignments based on reading and films.

Term:

Alternates Fall & Spring

Type:

- **SPAN-315 Business Spanish**

Prerequisites:

SPAN 290 or SPAN 300 or Instructor's consent.

Credits:

4.00

Description:

Integrates language learning with culture via business context of the Hispanic world. Spanish for banking and finance, marketing and advertising, and international commerce are highlighted. Students increase their cross-cultural understanding and written and oral proficiency in business Spanish through a wide range of assignments.

Type:

Diverse Perspectives

• SPAN-390 Introduction to Latin American and Caribbean Literature

Prerequisites:

SPAN 300; SPAN 302 is strongly recommended

Credits:

4.00

Description:

Examines authors from Latin America and the Caribbean in their historical and cultural contexts. Reading and class discussions consider the relationship between the writer and society by covering such topics as colonialism, the oral tradition, modernism and the emergence of new narratives in the twentieth century. The Inca Garcilaso, Sor Juana, Carlos Fuentes, Rigoberta Menchu, and Pablo Neruda are among some writers studied.

Term:

Type:

Cultural Diversity Opt B, Humanities Literature Requirement, BA FOREIGN, Diverse Perspectives

• THETR-260 Broadway Musicals

Credits:

4.00

Description:

This course is a survey of American musical theatre from its roots in the mid-19th century to the present. It provides the analytical tools and historical insight to more fully appreciate Broadway's greatest musicals and musical theatre artists. Students will explore the ways in which American forms of popular entertainment helped to shape Broadway musicals from their infancy through their adulthood. The course also explores the ways in which musicals provided opportunities for African-Americans, women, immigrants, and the GLBT community.

Term:

Offered Fall Term

Type:

Cultural Diversity Opt A, Humanities Literature Requirement, Diverse Perspectives, Vis. & Perform Thry

- **THETR-267 Introduction to Theatre: Contemporary American**

Credits:

4.00

Description:

This course provides a formal introduction to the theories and practices strategically used by American theatre artists after the Second World War. Special emphasis is placed on theatre artists exploring issues of cultural identity including works by GLBT, African-American, Asian-American, and Latin American playwrights. These playwrights may include Tony Kushner, Paula Vogel, Suzan-Lori Parks, Adrienne Kennedy, August Wilson, David Henry Hwang, Philip Kan Gotanda, Eduardo Machado, and Melinda Lopez. The course will also provide an introduction to trends in post-modern theatre practices related to emerging work of the auteur director, solo performers, and interdisciplinary collectives. Satisfies a core requirement for Theatre majors. Normally offered alternate years.

Term:

Occasional

Type:

Humanities & History, Cultural Diversity Opt A, Humanities Literature Requirement, Diverse Perspectives

- **WGS-111 Women, History, & Culture**

Credits:

4.00

Description:

Explores the roles and images of women in Western culture and the realities of women's everyday lives through literature, film, history, art, psychology, and recent feminist scholarship. Analyzes gender inequalities and the influence of gender on social structure, human behavior, and artistic expression. Topics include: the social construction of gender and identity; domestic prescriptions for women; women and work; intersections of gender, class, and race in American society; sexualities and identity; the politics of motherhood and reproductive rights; educating girls; negotiating male privilege and structural inequalities; representations of women in Western art and film; and women as artists and gendered models of creativity in art, film, fiction, and science.

Term:

Offered Both Fall and Spring

Type:

- **WGS-113 Women, Science, & Society**

Credits:

4.00

Description:

Explores women's lives from the perspective of the social and natural sciences, including examination of recent biological, psychological, and sociological theories about gender and gender roles, as well as the influence of feminist scholarship in these areas. Topics include: the social construction of gender; the psychology and biology of sex and gender; women and work; media representations of women; the female body and eating disorders; women's health and lifecycle; women and sexuality; reproduction, abortion, and motherhood; and sexual violence against women.

Term:

Offered Both Fall and Spring

Type:

Cultural Diversity Opt A,Social Science,Diverse Perspectives

- **WGS-115 Introduction to Gender Studies**

Credits:

4.00

Description:

Introduces the key topics and debates that have shaped the field of gender studies, including queer studies, masculinity studies, and women's studies. Through lecture and class discussion of texts from literature, film, history, psychology, and sociology, explores the pervasive influence of gender on the structure of society and our everyday experiences and the role that gender plays in our understanding of love, friendship, sexuality, and even violence. Topics include: biological arguments about gender and sexuality; the social construction of gender and identity; intersections of gender, race, class, and sexuality; masculinity and femininity; and theories of sexual difference and the construction of sexuality.

Science, Technology, & Engineering (STE): 2 courses and corresponding laboratories where applicable, 8 credits

Choose at least one Science course with a laboratory (L). (Some courses may both be designated STE and have a laboratory.)

Choose one STE (Science, Technology, and Engineering) science course (and corresponding laboratory where applicable) from the list below. Courses do not need to be in a sequence. In the case of a course that is a lecture plus a lab, the student must complete both components to earn credit for the STE requirement.

Biology:

- **BIO-104 Environmental Biology**

Prerequisites:

BIO 101 and BIO L101, can also be taken concurrently BIO L104 must be taken concurrently

Credits:

3.00

Description:

An introduction to basic evolutionary, behavioral and ecological principles. Readings and discussions emphasize the ways that humans are affected by ecological processes and principles as well as how humans and their technology affect ecosystems. May not be taken by Biology majors or minors. This course will not fulfill requirements for a major or a minor in Biology. It is intended for non-biology majors as a follow-up to Biology 101. 3 hours lecture. Days Only. Madrid Campus only.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **BIO-L104 Environmental Bio Lab**

Prerequisites:

BIO-104 must be taken concurrently

Credits:

1.00

Description:

Exercises and field trips designed to complement and demonstrate the ecological principles developed in the lecture section. The lab emphasizes the scientific method and employs long term group projects. Madrid Campus only.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **BIO-111 Introduction to the Cell**

Prerequisites:

Must take BIO L111 concurrently

Credits:

3.00

Description:

Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L111 Introduction to the Cell Laboratory**

Prerequisites:

Concurrently with BIO 111

Credits:

1.00

Description:

Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **BIO-114 Organismal Biology**

Prerequisites:

Must take BIO L114 concurrently.

Credits:

3.00

Description:

Rigorous introduction to organismal biology emphasizing evolution, phylogenetics, form, and function. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **BIO-L114 Organismal Biology Laboratory**

Prerequisites:

Must take BIO 114 concurrently

Credits:

1.00

Description:

A series of laboratory experiences in evolution, diversity, anatomy and physiology.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **BIO-201 Biology's Big Questions**

Prerequisites:

Non Science Majors Only.

Credits:

4.00

Description:

This course seeks to answer five current questions from all levels of biology, from the subcellular to the ecosystem level. Topics will be discussed in the context of genetics, evolution, and ecology. We will focus on the process of doing science, including how scientists evaluate ideas and communicate their findings. Emphasis will be placed on topics in biology that impact daily life.

Type:

SCI TECH ENGR

Chemistry:

- **CHEM-105 Chemical New Product Development**

Prerequisites:

ENT 101

Credits:

4.00

Description:

This course addresses the crucial intersection between chemistry and business, and the impact of these fields on society. It provides an introduction to important chemistry concepts and practices of business management. Primary focus is on understanding the chemistry principles behind some of the consumer products in our everyday lives, and using this knowledge to create and evaluate ideas for new products. The course also introduces the business aspects involved in the development and marketing of new products. An important component of the course is in making effective presentations; this component concludes the course, culminating in team presentations of a new chemical product to panel of executives and peers. This course satisfies the Sawyer Business School Science requirement.

Type:

SCI TECH ENGR

- **CHEM-106 Biotechnology & Its Applications in Medicine, Agriculture, Law**

Credits:

4.00

Description:

Introduces the latest discoveries and applications of biotechnology. Topics include genetically modified food, stem cells, genetic testing, cloning, and forensics. A combination of lectures, discussions, documentaries, mock congressional hearings, and hands-on activities will provide insight into the numerous medical, social, legal, and ethical issues surrounding this technology.

Type:

SCI TECH ENGR

- **CHEM-111 General Chemistry I**

Prerequisites:

Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:

3.00

Description:

Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

• CHEM-L111 General Chemistry I Lab**Prerequisites:**

Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

• CHEM-201 Caveman Chemistry

Credits:

4.00

Description:

Caveman chemistry explores chemical technologies that have led to modern industrial civilization, with an emphasis on the chemistry we encounter in everyday life. Although this is not a laboratory course, it is very much a course about doing things. We will focus on the process of doing science, including how scientists evaluate ideas and communicate their findings, through literature and hands-on activities.

Type:

SCI TECH ENGNR

Computer Science:

- **CMPSC-F107 Ants, Rumors and Gridlocks**

Prerequisites:

Math placement level of 2 or above or any MATH course at the level 100 or above

Credits:

4.00

Description:

Do viruses and rumors spread like forest fires? How do ants cooperate? Do spoken languages and biological species evolve in a similar way? Ants, Rumors, and Gridlocks exposes students to introductory aspects of computational science by addressing and answering these and many other questions. Students use and modify virtual experiments preprogrammed in the NetLogo programming language to investigate these topics and others in Social Sciences, Biology, and Environmental Science. No prior knowledge of computer programming or NetLogo is required.

Type:

SCI TECH ENGNR, Quantitative Reasoning

Electrical Engineering:

- **ECE-288 Measuring the World**

Credits:

4.00

Description:

The world is addicted to quantifying the essence of everything, from personal IQ, to the speed of a baseball, to our healthiness, or our chances of winning the lottery. Behind most of these numeric values exists a science of measurement. Some of this is referenced to international standards, such as for length, time, weight, or temperature. Others are more arbitrary and subjective, such as ranking Olympic performance in gymnastics, beauty pageants, or popular responses as found in the game show Family Feud. A third category includes controversial areas, such as measuring whether a person is lying when interrogated, or using hype rather than reality to market products. Sometimes statistics are used to predict sports outcomes, such as in the annual March Madness NCAA basketball brackets. Finally, in a world subject to fraud and deception, it can be essential to distinguish legitimate from counterfeit items, such as in money, art, collectibles, and historical documents. Don't get hoodwinked! This course examines all of these, starting with how measurements have been made throughout history, along with a full deck of entertaining terms used during the ages. This may help you sort out your weight, whether given in pounds, kilos, or stones. Often these terms will provide insights into how people lived in different eras. We will also look at some of the technologies currently available to provide these measurements, and unravel the complexities of various sensors that are used. As we consider the meaning of accuracy we may become less naive about how much confidence to ascribe to the results given us. Hovering around all of these measurements should be the question of validity - are they meaningful, useful, or misleading? And the impact they have on society - whether they steer behavior more powerfully than one might originally suspect. Each student will also be given an opportunity to become an expert in an area of measurement of personal interest. By the end o

Type:

SCI TECH ENGR

Engineering Science:

- **ENS-103 Introduction to Engineering**

Prerequisites:

ENS L103 MUST BE TAKEN CONCURRENTLY.

Credits:

3.00

Description:

This course provides exposure to engineering practice, with particular focus on electrical engineering components such as circuit elements and systems. It seeks to go beyond the mathematics and provide an intuitive appreciation of functional devices. Examples taken from a broad swath of

technological history illustrate significant crossroads, decisions, and inventiveness. Emphasis is placed on learning to think as an engineer - assessment of problems, candidate solution tradeoffs, and implementations. Frequent exercises in creative engineering design will be used. Students will be required to design several elementary devices, such as a magnet, a capacitor, a timing device, and a motor, which they will enter in a competition for overall strength, compactness, accuracy, or speed. Sometimes assignments relate to "survival on an island" concerns, such as communication or drinking water. Students also learn about reverse engineering by selecting, building, troubleshooting, and presenting an electronic kit of their choice. A term paper determining the engineering behind a topic of their choice will also be written and presented. On occasion (see ENS L103) there will be team competitions between various smaller groups in the class.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **ENS-L103 Intro to Engineering Lab**

Prerequisites:

Must be taken Concurrently w/ ENS-103

Credits:

1.00

Description:

The Lab is designed to provide opportunities to gain familiarity with engineering tools. Students will be introduced to parts (e.g. learn the resistor color code), test equipment (multimeters, prototyping trainers, signal generators, and oscilloscopes), and construction techniques (wiring, soldering, troubleshooting). Although it varies from year to year, Class Projects can be built during the Lab sessions. In the past these have included a 25 Watt electric generator, various door lock systems (both mechanical and electronic), and an AM transmitter and receiver (all projects made from scratch). It is likely that 2010-2011 may introduce some robotic creations for a competition. Electronic kits and motors can also be built and serviced in the Lab. There is an adjoining machine shop, which can be utilized (with supervision), for fabricating items. Individual creativity is encouraged, and informal problem solving sessions occasionally occupy lab time. However, the lab is accessible outside of the traditional scheduled time.

Term:

Offered Fall Term

Type:

Environmental Science:

- **ENVS-111 Majors' Environmental Science**

Prerequisites:

Open to Environmental Science and Environmental Studies majors, or by permission of instructor. Must be taken concurrently with ENVS L111

Credits:

3.00

Description:

Applies the fundamentals of science to environmental issues. Topics include population dynamics and resources, environmental degradation, ecosystems, geologic processes, deforestation, biodiversity, climate change, air, soil, and water resource management, and pollution and risks to health. This course is open to all environmental science and environmental studies majors and minors. Other students will be admitted by permission of the instructor. Must be taken concurrently with ENVS L111. 3 hours lecture. 1 term. 3 credits. Normally offered fall evenings.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **ENVS-L111 Majors' Environmental Science Lab**

Prerequisites:

Open to Environmental Science and Environmental Studies majors, or by permission of instructor. Must be taken concurrently with ENVS 111

Credits:

1.00

Description:

Laboratory exercises are used to illustrate topics covered in ENVS 111. Field testing and analysis of environmental samples. Field trips are required. This course is required for all environmental science and environmental studies majors and minors. Concurrent enrollment in ENVS 111 is required. 3 hour laboratory. Normally offered fall.

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **PHYS-L151 University Physics Lab I**

Prerequisites:

PHYS 151 concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **PHYS-152 University Physics II**

Prerequisites:

PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

Credits:

3.00

Description:

This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **PHYS-L152 University Physics Lab II**

Prerequisites:

PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **PHYS-153 University Physics III**

Prerequisites:

Take MATH-121 or MATH-165;

Credits:

3.00

Description:

This calculus-based course is the introduction of the topics of modern physics. It begins with special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom. Then Schrodinger's equation is introduced with use of wave functions, particle box, barrier penetration, quantum mechanical tunneling, the Pauli Exclusion principle, the development of the periodic table, and the X-ray spectra. Development of solid state physics with bonding in molecules, band theory of solids and semiconductor behavior. The final topics cover nuclear physics, radioactivity, half-life, nuclear fission and fusion, medical uses of radiation, elementary particle physics and introduction to astrophysics.

Term:

Offered Fall Term

Type:

SCI TECH ENGR

- **PHYS-L153 University Physics III Lab**

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts of special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom.

Type:

SCI TECH ENGR

Science:

- **SCI-108 Introduction to Cancer Care**

Credits:

4.00

Description:

This course will introduce the students to the top ten U.S. adult cancers, as well as the most common pediatric cancers. Topics to be covered include cancer causes, detection, and prevention. Psychosocial aspects of being diagnosed with cancer and the role nutrition plays for cancer patients will be described. The course will also discuss the major treatment modalities for each cancer including radiation therapy, surgery, chemotherapy, and bone marrow transplants. The goals and objectives of the course will be met through the use of various teaching tools including but not limited to: PowerPoint presentations, videos, guest lectures, and a poster project with a presentation component. Cognitive assessment of the students will be accomplished through homework, quizzes, exams, and a group poster and oral presentation. Students with any type of academic background are welcome.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGNR,NATURAL SCIENCE FOR BS

• **SCI-111 Astronomy I**

Prerequisites:

MATH-128 or higher and SCI-L11 must be taken concurrently.

Credits:

3.00

Description:

History of Astronomy from the ancients to Newton; light; telescopes; sun, earth, moon planets, comets, asteroids, meteors; space programs, science and technology in society. For non-science majors.

Term:

Occasional

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **SCI-L111 Astronomy Lab I**

Prerequisites:

SCI 111 concurrently

Credits:

1.00

Description:

Laboratory experiments and exercises to illustrate the principles discussed in science 111. Observational exercises using the Celestron telescope, astrophotography exercises, and computer simulations.

Term:

Occasional

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **SCI-112 Astronomy II**

Prerequisites:

MATH-128 or higher and SCI-L112 concurrently

Credits:

3.00

Description:

Astronomy of the cosmos; sun, stars, interstellar materials, galaxies, pulsars, quasars, black holes; nature of time relativity, cosmology. For non-science majors.

Term:

Occasional

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **SCI-L112 Astronomy Lab II**

Prerequisites:

SCI 112 concurrently

Credits:

1.00

Description:

Laboratory experiments and exercises to illustrate the principles discussed in Science 112. Observational exercises using the Celestron telescope, astrophotography exercises, and computer simulations.

Term:

Occasional

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGNR,NATURAL SCIENCE FOR BS

- **SCI-113 A Habitable Earth Within the Solar System**

Credits:

4.00

Description:

This course introduces non-science majors to concepts that are central to making our planet habitable. It presents Earth in context of the solar system with a broad view of global climate change and energy resources in a quest to better understand the workings our planet. This course on Earth and Planetary Science is suitable for students who may have taken their last science and math course several years ago, or are just curious about knowing facts on major issues that pertain to the future of our planet. Together with a reading component, this course aims to give students a flavor of

how researchers think, investigate and develop conclusions that directly affect our political and economic future. Topics covered in this course range from the solar system to the study of search for other habitable Earth-like planets, search for extraterrestrial life, and evolution of life on Earth. Other characteristics of this course are heavy use of audio-visual materials often including computer animations and simulations, in-class experiment demonstration, and intensive use of INTERNET-based resources.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGR

- **SCI-165 Inner Workings of Physics Universe**

Credits:

4.00

Description:

About 15 billion years ago, (data indicate) the big bang occurred and the universe was born. With it came physical laws and a spectacular array of consequences that lead to the universe as we know it. This non-lab , 4 credit course explores the inner workings of the physical universe in terms of the scientific inquiry which lead to Newton's laws, an understanding of energy, waves, light, electricity, atomic structure, chemical reactions, nuclear physics, particle physics, relativity, and the big bang theory. During the course, students will learn to make use of modern resources to access scientific and technical literature to research a scientific topic. They will learn to distinguish between science and technology (e.g. quantum mechanics and nanotechnology, the discovery of the Higgs boson and the large hadron collider that made it possible, etc.) and to understand how the science, technology, and engineering disciplines play a crucial role in recognizing and solving problems of society and the world that we share.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **SCI-171 The Built World: How Humans Engineer Environments**

Credits:

4.00

Description:

The most basic needs of humans have not changed - water, food, and shelter - but the means of meeting these needs has. In this course, we will examine how technology-driven societies operate by studying how cities are built and how they function. Topics will include water supply and distribution systems; transportation systems (including road and bridge design and construction); building design, construction, and operation

(including skyscraper and sustainable building design), and waste removal systems (municipal and industrial wastewater removal and treatment, solid waste removal and treatment). This is not a course about little gadgets and widgets; this is a course about big engineering marvels; and it emphasizes applications of science - how things work - rather than scientific theory.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGR

- **SCI-173 Geographic Information Science (GIS) The Power of Digital Maps**

Prerequisites:

SCI L173 Must be taken concurrently Knowledge of Windows type Application

Credits:

3.00

Description:

Geographic Information Science (GIS) link information (number of fire hydrants on a block) to features on a map (e.g., a point representing street address) that has a designated geographic location (as designated by global coordinates). Unlike paper maps, GIS software allows the production of interactive maps that allows the user to layer data, to indicate spatial patterns, to analyze trends, and to combine different features of the mapped area in novel ways. For example, a business person may wish to use GIS to determine the optimum location of retail outlet (based on the mapped demographics of a neighborhood), while an environmental engineer may use GIS to describe the location of outfalls to see how they correlate to areas of stream pollution. In this course, students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **SCI-L173 GIS Lab**

Prerequisites:

Must be taken concurrently with SCI-173

Credits:

1.00

Description:

This laboratory illustrates concepts and methods taught in SCI 173. In this lab students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **SCI-181 Science and Life in the 21st Century**

Credits:

4.00

Description:

This is a four credit, non-lab, science course that examines the central scientific problems confronting the 21st century. The course studies particular topics and teaches the necessary science around these topics to provide a good understanding of the issues. The topics currently are: Energy, Science and Economic Decisions, Sustainability of Life on Earth, Health and Science.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGR

• SCI-184 Contemporary Science and Innovation

Credits:

4.00

Description:

This is a 4 credit, project based science course that examines the central scientific problems confronting the 21st century. The course consists of lectures, class discussions, field trips, and in-class hands-on activities designed to familiarize the student with different concepts of the lectures. The current focus is on sustainable energy production. A final team project related to the course topics will be given. This is the version of SCI 183 without a separate lab component. Students who have taken SCI 183, L183 are not allowed to take this course.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGNR,NATURAL SCIENCE FOR BS

• SCI-201 Physics for Future Presidents

Credits:

4.00

Description:

This course presents a topical introduction to the key principles and concepts of physics in the context of the world events and natural phenomena that confront world leaders and that require informed decisions and responses. Energy, health, counter-terrorism, remote sensing, space programs, nuclear proliferation, and a host of other modern challenges have technological and scientific dimensions, the understanding of which is essential to avoiding disastrous policy decisions. This course considers the application of physics to these societal challenges. The material is covered at a level and pace that a future world leader should be able to handle; the emphasis is on the development of physical reasoning skills, and not on detailed, mathematical problem solving.

Literature: 1 course, 4 credits

Choose one course from those listed below:

English

- ENG-213 English Literature I

Prerequisites:

WRI-102 or WRI-103

Credits:

4.00

Description:

Study of major writers of England from the beginning to the mid-18th century. Regularly assigned essays on the reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement

- **ENG-214 English Literature II**

Credits:

4.00

Description:

Study of major English writers from the mid-18th century to the present. Regularly assigned essays on the reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement

- **ENG-216 World Literature in English**

Prerequisites:

WRI-102 or WRI-103

Credits:

4.00

Description:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

Term:

Offered Both Fall and Spring

Type:

Cultural Diversity Opt B, Humanities Literature Requirement, Diverse Perspectives

• **ENG-217 American Literature I**

Credits:

4.00

Description:

Study of major American writing from its origins through 1865. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement

- **ENG-218 American Literature II**

Credits:

4.00

Description:

Study of major American writing from 1865 through the present. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement

Women's & Gender Studies:

- **WGS-325 Global Women's Fiction**

Credits:

4.00

Description:

Explores of various cultural worldviews in order to reveal and assess the voices of women from around the world as they respond to important global issues such as sexual violence and gendered oppression. Topics include: national citizenship, sexual politics, legal discourse, aesthetic representation, literary movements, genre, constructions of femininity, sexual identities, and representations of gender in relation to race and class and international cultures, and the relationship of self-image to the body politic.

Term:

Occasional

Type:

Humanities Literature Requirement,Cultural Diversity Opt B,Diverse Perspectives

- **FR-216 Masterpieces of French and Francophone Literature in English Translation**

Credits:

4.00

Description:

Masterpieces of French and Francophone Literature in English Translation. Studies works translated into English by major authors from the Middle Ages to the present. Explores drama, fiction, and poetry from many regions of the world: Africa, Western Europe, North America, the Caribbean, and Vietnam.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt B, Humanities Literature Requirement, Humanities & History, Diverse Perspectives

- **FR-309 Survey of French Literature I**

Prerequisites:

FR 202 or Instructors permission

Credits:

4.00

Description:

Analyzes and discusses canonical works of French literature from medieval times to the eighteenth century.

Term:

Offered Fall Term

Type:

- **FR-310 Survey of French Literature II**

Prerequisites:

FR-202 or instructor's permission

Credits:

4.00

Description:

Study, analyze and discuss canonical works of French-language literature from the nineteenth through the twenty-first centuries, as they relate to important events in the art, culture, and history of the Francophone world.

Term:

Offered Spring Term

Type:

Humanities Literature Requirement,BA FOREIGN

- **GER-216 Masters of German Literature in English Translation Masterpieces**

Credits:

4.00

Description:

Discussion of works by major authors from the 18th century to the present. Drama, fiction, and poetry. The specifically German contributions as related to the European context. Lessing, Goethe, Schiller, Heine, Buchner, Schnitzler, Kafka, T. Mann, Hesse, Brecht, Seghers, Grass, Boll, Wolf and/or others.

Term:

Occasional

Type:

Humanities Literature Requirement

- **SPAN-300 Intro to Cultural Texts**

Prerequisites:

Spanish 202, 203, 250 or Instructor's consent.

Credits:

4.00

Description:

Explores a selection of Peninsular and Latin American cultural materials. Primarily examines texts from different literary genres (narrative, drama, essay, and poetry). Develops critical skills required in more advanced Spanish courses, through close readings and textual analysis. Activities include regularly assigned essays, group discussions, and short scene work.

Term:

Offered Spring Term

Type:

Humanities Literature Requirement, BA FOREIGN

- **SPAN-390 Introduction to Latin American and Caribbean Literature**

Prerequisites:

SPAN 300; SPAN 302 is strongly recommended

Credits:

4.00

Description:

Examines authors from Latin America and the Caribbean in their historical and cultural contexts. Reading and class discussions consider the relationship between the writer and society by covering such topics as colonialism, the oral tradition, modernism and the emergence of new narratives in the twentieth century. The Inca Garcilaso, Sor Juana, Carlos Fuentes, Rigoberta Menchu, and Pablo Neruda are among some writers studied.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities Literature Requirement, BA FOREIGN, Diverse Perspectives

- **SPAN-405 Women's Voices in Latin America**

Prerequisites:

SPAN-300; Spanish 302 or its equivalent is strongly recommended

Credits:

4.00

Description:

Examines the changing roles of women in Mexico, the Caribbean, Central and South America through fiction, non-fiction, drama, poetry and film. Special focus is placed on the impact that changes in social ideology and culture have had on their identity and writings. Texts available in English.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, BA FOREIGN

- **SPAN-407 Latin American Short Narrative**

Prerequisites:

Spanish 300; or Instructor's consent; Spanish 302 is strongly recommended

Credits:

4.00

Description:

Explores some of the major trends in the twentieth century Latin American story telling. Readings reflect the vast array of voices and styles, beginning with fantastic literature of the 1930's, the birth of magical realism and the more contemporary, socio-political narratives. Authors include Isabel Allende, Julio Cortazar, Rosario Castellanos, Gabriel Garcia Marquez, Juan Rulfo, Luisa Valenzuela, among others.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement, BA FOREIGN

• **SPAN-416 Border Crossings the Latino Experience in the USA**

Prerequisites:

ENG-102 or ENG-103 or Instructor's consent. Span 302 is strongly recommended for Spanish and Latin American & Caribbean Studies majors and minors.

Credits:

4.00

Description:

Examines the myth of a singular Latino experience in the United States through a variety of genres and authors. Issues relating to culture, language, family, and religion are among some of the topics explored. Authors include Sandra Cisneros, House on Mango Street, Junot Diaz, The Brief Wondrous Life of Oscar Wao, Julia Alvarez, How the Garcia Girls Lost Their Accents, Tato Laviera, and American.

Ethical & Philosophical Inquiry: 1 course, 4 credits

Choose one course from those listed below:

- **PHIL-119 Ethics**

Credits:

4.00

Description:

A systematic introduction to the major thinkers and their positions on the main issues of ethics, such as: What is morality? What are moral values? How should we live our lives? Are there objective, universal, absolute moral standards? If so, what are they, and what is their basis? 1 term - credits. Normally offered every year.

Term:

Offered Both Fall and Spring

• **PHIL-120 Ethics and Civic Life**

Credits:

4.00

Description:

In this class you will be introduced to the perspectives and methods of politics, philosophy, and economics and see how these three disciplines present distinct but interconnected dimensions of current social and political issues.

Type:

Diverse Perspectives

• **PHIL-123 Social Ethics: The Good Life**

Credits:

4.00

Description:

An examination of contemporary Western society, particularly in the United States, in relation to philosophical attempts to define the good life. Current books that exhibit a philosophical approach towards important contemporary social issues will be discussed, as well as classics in philosophy. Topics may include: civic virtue, consumerism, current events, economic justice, popular culture (film, music, television), religion and secularism, etc. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- **PHIL-127 Contemporary Moral Issues**

Credits:

4.00

Description:

A critical examination of a number of contemporary moral issues such as: abortion, affirmative action, animal rights, capital punishment, cloning, drug legalization, environmental ethics, euthanasia, genetic engineering, gun control, pornography, same-sex marriage, suicide, war and terrorism, etc. 1 term - 4 credits. Normally offered every year.

Social Science: 1 course, 4 credits

Choose one course from those listed below:

Applied Legal Studies:

- ALS-264 Introduction to Law and Legal System

Credits:

4.00

Description:

Introduction to civil, criminal and constitutional law, with special focus on procedural law and the federal and state court systems. Limitations of the courts, forms of remedies, the law of equity and institutional sources of American law will also be studied. Introduction to judicial cases and brief writing. Normally offered each semester.

Type:

Social Science

- **ALS-266 Criminal Law**

Credits:

4.00

Description:

This course examines criminal law in the United States from a broad perspective. It will present the general principles and doctrines that affect the whole criminal law, such as elements of criminal offenses, defenses to crime, and perspectives on crime and criminal law. In addition, students will learn the elements of specific crimes, such as homicide, criminal sexual conduct, terrorism and related crimes, crimes against public morals, and crimes against property. Discussions of the direction of the criminal law and constitutional limitations on government will be presented as preparation for future study.

Type:

Cultural Diversity Opt A

- **ALS-362 Litigation**

Credits:

4.00

Description:

The Rules of Civil Procedure dictate the steps taken in state and federal lawsuits. This course will acquaint students with rules and the practical requirements of the rules, from filing a complaint to clarifying a judgment and to the duties of paralegals in a litigation office. Normally offered each semester.

Type:

Social Science

- **ALS-363 Law of Contracts**

Credits:

4.00

Description:

The existence and validity of a contract is determined by specific rules. Students will learn about formation through offer and acceptance, contract enforceability, the necessity of consideration, and breach of contract and will draft contract provisions as a paralegal might in a law office. Normally offered each semester. Sophomore status required.

Type:

Social Science

- **ALS-396 International Law**

Prerequisites:

Take ALS-264 or ALS-360 or instructor's permission

Credits:

4.00

Description:

With the globalization of the world economy, legal professional and business people require knowledge of international law more than ever. This course offers students a survey of selected materials in public international law. Covered will be the practical and theoretical issues of international law, from the Law of the Sea to business implications to definitions of war and international concepts of justice. Normally offered yearly.

Type:

Communication:

- **CJN-255 Introduction to Media**

Credits:

4.00

Description:

An introduction to the role of media in contemporary society, focusing on media's influence on cultural, political, and ideological processes. An examination of the historical contexts within which newspapers, radio, television, and new media technologies develop, and how audiences interact with and influence the use of media.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **CJN-285 Media and Pop Culture I**

Credits:

4.00

Description:

Examines the influence of media on contemporary society. Television, radio, film, and print formats are discussed in terms of their persuasive impact on mass culture in the U.S.. Focus is on the period 1950-1970.

Term:

Offered Spring Term

Type:

Social Science

- **CJN-287 Media Criticism**

Prerequisites:

CJN-255

Credits:

4.00

Description:

Critical examination of various mass media including film, television, radio, music, newspapers and magazines. Theories of media criticism discussed and applied to specific media or media products.

Term:

Offered Spring Term

Type:

Social Science

- **CJN-375 Organizational Communication**

Credits:

4.00

Description:

Historical development of the theory of organizations, examination of information flow, network analysis, communication overload and underload, corporate culture, superior-subordinate communications, organizational effectiveness, and change processes.

Term:

Offered Fall Term

Type:

Social Science

- CJNI-400 Media Effects and Audiences

Prerequisites:

Prerequisite: CJNI-255

Credits:

4.00

Description:

Explores the social influence of the media on U.S. society. Attention is given to the theoretical perspectives that inform media research. By the end of the semester, students will develop a critical understanding of the role and influence of the media in U.S. society.

Term:

Education Studies:

Choose any [Education Studies course](#)

German:

- GER-419 East Germany and the Cold War

Credits:

4.00

Description:

When the German Democratic Republic was founded in 1949, observers in the West viewed it as an artificial construct created to serve the needs of the Soviet empire. The self-image of the GDR as created by its leadership revolved around the idea of an anti-fascist German state designed as a bulwark against any revival of National Socialism. Over a generation after the fall of the Berlin Wall, it is possible to undertake a dispassionate analysis of the forty-year history of the 'other' German state as manifested in its cultural identity and political role during the Cold War.

Sociology:

- **SOC-113 Introduction to Sociology**

Credits:

4.00

Description:

An introduction to the sociological understanding of human interaction, group process and social structures. Students are introduced to basic concepts, theories and methods of sociological investigation. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **SOC-116 Social Justice**

Credits:

4.00

Description:

An examination of traditional and contemporary problems associated with major social institutions such as the family, economics, government and education. Social forces related to ethnicity, social class, health and welfare, and urbanization are also included. Alternative remedial measures based on behavioral science theories are discussed. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **SOC-217 Sociology of Urban Life**

Prerequisites:

Fulfills ECR requirement

Credits:

4.00

Description:

An examination of the effects of the city on human life in its broadest as well as its most specific aspects. Greater Boston and similar communities across the nation will be studied as ecological settings, as producers and shapers of change, and as special contexts for understanding sociological ideas. Comparisons will be made among urban places in the U.S. and in other countries.

Term:

Occasional

Type:

Social Science,Cultural Diversity Opt A,Expanded Classroom Requirement

- **SOC-223 Families in Contemporary Society**

Credits:

4.00

Description:

An exploration of the diversity of contemporary families. Comparisons are made between the cultural myths of the ideal family and the lived realities. Challenges confronting contemporary families and their implications for social policy are examined in such areas as work/family conflicts, gay and lesbian families, welfare, family violence.

Term:

Occasional

Type:

Social Science

- **SOC-224 Families in Contemporary Society (Spain)**

Credits:

4.00

Description:

Spain has experienced major socio-demographic changes since the mid 1970s. These transformations mainly arise from the new role of women in society and, in particular, women's higher levels of education, work experience, and labor market attachment. The changes in women's labor force participation have occurred in conjunction with a progressive postponement of main family events, such as leaving the parental home, forming a partnership and having children, as well as with a reduction in the family size. Spain is, indeed, characterized as having one of the lowest low fertility levels within Western industrialized countries, a pattern that is exacerbating the ongoing process of population aging. This picture partly reflects the

conflicting relationship that currently exists between women's labor force participation and the accommodation of family responsibilities: the so-called work/ family balance. Ongoing differences among countries have been accounted for by different explanatory factors that involve socio-economic, cultural and social policy dimensions. From a comparative perspective, the course is intended to cover recent debates, controversies, and research on family formation and family dilemmas in contemporary Spain.

Type:

Social Science

- **SOC-236 Deviance and Social Control**

Credits:

4.00

Description:

Who and what is deviant? How shall the society respond? The course examines a range of deviance theories and associated social policies. A number of case studies will be used to evaluate these theories, such as body piercing, witchcraft, gay and lesbian sexuality, corporate crime, disability, prostitution, violence against women, racism, anti-Semitism, and gangs.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **SOC-264 Social Media and Society**

Credits:

4.00

Description:

An examination of the ways in which social structures and processes influence and are affected by modern ideas, needs and social practice techniques in technologically advanced societies is considered in conjunction with changes in the way in which we understand the world, the nature of

work and leisure, the processing of information and the character of social institutions. Normally offered alternate years. Fulfills the Social Science Option. Fulfills the Sociology Department's Social Policy requirement.

Type:

Social Science

Women's & Gender Studies:

- **WGS-113 Women, Science, & Society**

Credits:

4.00

Description:

Explores women's lives from the perspective of the social and natural sciences, including examination of recent biological, psychological, and sociological theories about gender and gender roles, as well as the influence of feminist scholarship in these areas. Topics include: the social construction of gender; the psychology and biology of sex and gender; women and work; media representations of women; the female body and eating disorders; women's health and lifecycle; women and sexuality; reproduction, abortion, and motherhood; and sexual violence against women.

Choose one course from those listed below:

American Studies:

- AMST-111 Defining America and Americans

Credits:

4.00

Description:

Examines artistic, social, and political imaginings of America and Americans. We will read works by American and foreign observers of the United States to ask how Americans define themselves and how others see them. Course assignments will introduce students to themes, perspectives, and methods in the field of American Studies.

Type:

Humanities & History, Humanities Literature Requirement

Art & Design:

- **ADF-181 Ideas of Western Art I**

Credits:

4.00

Description:

This course will survey the major concepts and issues of Western Art, from prehistoric to the Early Renaissance. Architecture, sculpture and paintings will be studied individually for their formal elements and visual importance, and also within their own aesthetic, historic and cultural context. Class discussion and visual analysis of works of art will encourage personal interpretation and critical thinking.

Term:

Offered Fall Term

Type:

- **ADF-182 Ideas of Western Art II**

Credits:

4.00

Description:

This course will survey the major concepts and issues of Western Art, from Renaissance to contemporary art. Architecture, sculpture and paintings will be studied individually for their formal elements and visual importance, and also within their own aesthetic, historic and cultural context. Class discussion and visual analysis of works of art will encourage personal interpretation and critical thinking.

Term:

Offered Spring Term

Type:

Humanities & History, Humanities Literature Requirement

- **ADFA-306 Art & Culture of Asia, Africa, South America and Oceania**

Credits:

4.00

Description:

The coursework introduces students to the artistic and visual traditions from South and East Asia, Africa, Oceania and the Americas. In addition to the material culture of the particular region under study, the coursework will consider socio-political ideals, religious belief systems, and cultural principles that 'shaped' or informed the work and the ideology of civilizations beyond the Western hemisphere. Comparative analysis among non-western and western traditions will be used to critically analyze the salient points of influence, rejection and modifications of aesthetic affinities. Class lectures will be supplemented with museum seminars specifically the rich non-western collections at the MFA, Boston. Guided field trips to the museum will allow students to formally analyze the works of art discussed in lecture and text material.

Term:

Occasional

Type:

Cultural Diversity Opt B, Cultural Diversity BFA, Asian Studies, Humanities & History, Expanded Classroom

- **ADFA-344 Islamic Spain: Art and Architecture**

Credits:

4.00

Description:

This course examines the Islamic influence in Spain through its art and architecture from its formative period in the eighth century through the fourteenth century and beyond to see the continuity and change of the Mozarabic style found locally in Madrid, Cordoba, Seville, and Granada. Students will use formal analytical skills to critically explore works of art and architecture and will cultivate a 'lens' through which they will facilitate their understanding of the classic and contemporary material culture and fabric of Spain. Class meetings will be supplemented with field trips. Offered as needed.

Type:

Humanities Literature Requirement, Humanities & History

• ADF A-345 Art of India

Credits:

4.00

Description:

A chronological survey of South Asian art (2300 BCE - 1750 CE) including India, Pakistan, Bangladesh, and Nepal. Examination of art and architecture from their first and still mysterious beginnings in the Indus Valley, through the great masterpieces of Buddhist and Hindu art to the coming of Islam, including the eclectic culture of the Mughal courts and the golden age of miniature paintings. Consideration is given to the multiple aspects of patronage in Indian culture - religious, political, economic - through case studies of individual works of art and architecture. (Formerly HUM 345)

Type:

Humanities & History, Cultural Diversity Opt B, Humanities Literature Requirement, Asian Studies

• ADF A-346 Art of the Silk Road

Credits:

4.00

Description:

This course will examine the arts and architecture of the Silk Road, with particular attention to art of Buddhism, Hinduism, and Islam. Historically, Inner Asia was marked by trade routes (the 'Silk Route' or 'Silk Road') which crisscrossed this vast landscape of deserts and mountains between China, India, the Iranian Plateau and the Mediterranean world. In addition to the art of these cultures, we will also look at the records of early Chinese travelers through Central Asia. (Formerly HUM 346) Offered as needed.

Type:

Humanities & History,Cultural Diversity Opt B,Humanities Literature Requirement,Asian Studies

- **ADI-221 History of Furniture & Architecture I**

Credits:

4.00

Description:

The goal of this course is the enhancement of the student's critical comprehension of historic styles and the impact they have on contemporary design solutions. The survey begins with the Egyptian period and provides an overview of the history of furniture and architecture through the mid-1700s, including ancient Greece and Rome, the Gothic and Renaissance, Baroque and Rococo periods. Emphasis will be placed on chronological periods, the visual characteristics of each style including regional idiosyncrasies, and the terminology germane to a study of furniture and architecture.

Term:

Offered Both Fall and Spring

Type:

Humanities & History,Humanities Literature Requirement

- **ADI-222 History of Furniture & Architecture II**

Prerequisites:

ADI 221

Credits:

4.00

Description:

A continuation of History of Furniture & Architecture I, this course will extend the investigation of furniture and architecture into the 20th century, while addressing issues concerning preservation, restoration, rehabilitation, and adaptive re-use. Drawing on the vast resources of the city of Boston and its environs, students will become actively involved in stylistic progression, local living history, and the benefits of preserving our past for future generations. Field trips will include visits to restored Federal, Victorian and Contemporary venues.

Term:

Offered Both Fall and Spring

Type:

Humanities & History, Humanities Literature Requirement

- **ADG-224 History of Graphic Design**

Credits:

4.00

Description:

The first part of the course will focus on the history of graphic design from prehistoric times to the Industrial Revolution, including the origins of graphic communications in the ancient world, the development of the alphabet and early printing and typography. The second portion will concentrate on the period from the late 19th century to the present, and will include the Arts and Crafts Movement, the various-isms and their influence on modern art, the Bauhaus and International Style, and contemporary visual systems and image making.

• PHIL-219 Philosophy of Art

Credits:

4.00

Description:

What counts as art? What is beauty? Are there objective standards of beauty? This course examines the nature of aesthetic experience, art, beauty, and creativity. Through the classic and contemporary readings, the students will be introduced to philosophical issues concerning the meaning of art, artistic representation, perceptions of art, interpretation, and criticism. Students will be encouraged to reflect on their own experience of art and explore the relationships among the artist, the audience, the artwork, and the world. 1 term - 4 credits. Normally offered every third year.

Type:

Humanities & History, Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **PHIL-250 Social & Political Philosophy**

Credits:

4.00

Description:

An examination of persistent debates in political and social philosophy, such as the meaning of property and welfare, the tensions between liberty and equality, censorship and freedom of expression, the relation of church and state, the possibility of political education and civic virtue, legitimacy of the state and revolution, war and problems of end and means, addressing historic injustice, such as racism, genocide, or sexism, among other topics. The class will focus on no more than two such themes. Students will read both classic and contemporary writings to address both the historical roots and the contemporary treatment of these questions. 1 term - 4 credits. Normally offered every year.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **PHIL-255 Science, Myth, and Society**

Credits:

4.00

Description:

Both mythology and science arise from the human need to explain the world, to understand its laws, and give an account of its origin. This course focuses on the controversial relationship between myth and science and explores their historical roots, their social influence and their respective views of reality, human nature, and origin of the universe. Both historical controversies and contemporary debates, such as evolution vs. intelligent design, will be considered. Topics in the philosophy of science, such as the nature and scope of the scientific method, will also be addressed. 1 term - 4 credits. Normally offered alternate years.

Term:

Associate of Science Degree

The AS degree program requires the successful completion of the following courses:

Core Requirements: 14 courses, 53-55 credits

- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Literature](#)
- [Ethical & Philosophical Inquiry](#)
- [Social Science](#)
- [Humanities/History](#)
- [Visual & Performing Arts Theory & History](#)
- [Quantitative Reasoning](#)

Quantitative Reasoning: 1 course, 4 credits

Choose one course from those listed below:

Biology:

- BIO-273 Biostatistics

Prerequisites:

BIO 111/L111

Credits:

4.00

Description:

Introduction to the statistical methods used to evaluate biological problems. Sampling, probability, confidence intervals, hypothesis tests, experimental design, analysis of variance, regression, and correlation are some of the topics offered. Software for data handling, graphics, and analysis will be used.

Term:

Offered Fall Term

Type:

Quantitative Reasoning

Communication:

- **CJN-210 Communication Research Statistics**

Credits:

4.00

Description:

The course develops an understanding of how statistics are used in the presentation of information and arguments in Communication and Journalism. Emphasizing a conceptual approach to learning statistics, the course focuses on data collection and summarization, correlation, regression, sampling, estimation, and tests of significance. Students perform basic statistical calculations using SPSS software.

Term:

Offered Both Fall and Spring

Type:

Computer Science:

Choose any [Computer Science course](#)

Economics:

- **EC-431 History of Economic Thought**

Prerequisites:

EC-101 and EC-102

Credits:

4.00

Description:

Presents the leading contemporary schools of economic thought as the outcome of theoretical and philosophical controversies that began with the ancient Greeks and that continue today. The course covers the major contributors to economic thought, including Aristotle, Aquinas, the mercantilists, and the contributors to the 18th-century enlightenment, notably Adam Smith and David Hume. Going forward, it considers Marx, the neoclassical school of Jevons, Menger and Walras and the Keynesian school, along with some of the more modern schools such as behaviorism, institutionalism and cognitive economics. The contributions of the economists and philosophers studied in the course are considered in context of the times in which they wrote and lived. Students will acquire a grasp of the principal tenets of contemporary economic theory as well as an understanding of the historical origins of the disputes that still divide economists on major theoretical and philosophical issues.

Type:

BSJ SOCIAL SCIENCE

- **EC-460 Game Theory**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

This course introduces students to the foundations of game theory using applications from economics and everyday decision-making. The course examines the common strategic elements of interactions between consumers and producers, governments and citizens, politicians and their constituencies, countries and their trading partners, and various other participants in social relationships. The course provides a theoretical framework for modeling strategic interaction, beginning with the development of the concept of a Nash equilibrium, reputation, signaling, collective-action problems, and voting procedures and strategies. Normally offered every other year.

Type:

Quantitative Reasoning

Government:

- **GVT-201 Statistics for Political Science**

Prerequisites:

Sophomore Standing GVT 110 and 120 and Math 128 or higher.

Credits:

4.00

Description:

This course is an introduction to statistics and empirical research methods generally used in political science. The course will emphasize the use of statistics and its value in substantive political science research. Statistics is a tool for drawing conclusions and making inferences from observable evidence. As well, the specification of conditions under which evidence is observed affects the conclusions and arguments that political scientists draw about how social and political processes work. The purpose of this course is to equip students with tools to interpret and conduct original data analysis, critique and make an argument based on data, and provide a view into the process of political science research and how political scientists use statistical methods and research design to answer substantive questions about politics. Since most applied data analysis utilizes data management software, students will learn how to use SPSS as a tool for conducting data analysis. Prerequisites: Sophomore Standing, GVT 110 and 120 and Math 130 or instructor's consent. 1 term - 4 credits.

Type:

Quantitative Reasoning

Philosophy:

- **PHIL-212 Formal Logic**

Credits:

4.00

Description:

An introduction to formal (or semi-formal) study of the basic types of deductive arguments (propositional and syllogistic logic). 1 term - 4 credits. Normally offered every year.

Term:

Occasional

Type:

Quantitative Reasoning

Psychology:

- **PSYCH-215 Behavioral Statistics**

Prerequisites:

PSYCH 114; Restricted to majors only unless with permission of instructor.

Credits:

4.00

Description:

Introduces the use of statistics as tools for description and decision-making, including hypothesis testing. Prepares students for the analysis, interpretation, and evaluation of psychological research. Required for psychology majors; should be taken before the junior year. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Quantitative Reasoning

Sociology:

- **SOC-212 Statistics for Sociology**

Prerequisites:

SOC-113 OR SOC-116 and MATH-128 or higher

Credits:

4.00

Description:

In this course, students will be introduced to descriptive and basic inferential statistical techniques. The course will provide information on the following topics: Description - measures of central tendency (mean, median, mode) and measures of dispersion (range, standard deviation); logic of statistical inference, including normal curve and sampling distribution; hypothesis testing with one sample and two samples; measures of association between two variables (bivariate analysis), including chi-square, regression, and correlation; and introduction to multivariate regression. Students will utilize SPSS (Statistical Package for the Social Sciences) software to input and analyze data. The goals of the course are for students to appreciate the need for statistical methods in the broad field of sociology and to gain basic statistical literacy.

Term:

Offered Both Fall and Spring

Type:

Quantitative Reasoning

Statistics:

- **STATS-240 Introduction to Statistics**

Prerequisites:

Math 128 or higher. REMINDER: STATS 240 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

Credits:

4.00

Description:

Topics include: data presentation, measures of central locations and dispersion, probability and probability distributions, estimation, hypothesis testing, simple and multiple regression models. The use of Excel and SPSS will be emphasized throughout the course. 1 term - 4 credits (4 hours per week). Normally offered each semester. STATS 240 satisfies the same requirements as STATS 250

Type:

Quantitative Reasoning

• STATS-250 Applied Statistics

Prerequisites:

MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

Credits:

4.00

Description:

Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

Seminar for Freshmen: 1 course, 4 credits

Students with 15+ transfer credits of college or university work are exempt. Choose one Seminar for Freshmen course from those listed below:

- SF-101 Fixing the World- Energy and Water: The Science of Solutions

Credits:

4.00

Description:

Two of the most daunting challenges the world faces (or will face) is how to provide for both its growing energy needs and potable drinking water. Regular news events include climate change, droughts, flooding, and petroleum struggles. Human nature often requires a severe crisis before it responds. This course will investigate the historical science driving the use of energy since the Industrial Revolution to convert energy resources into work, including the steam engine, the electric motor, and the internal combustion engine. It will also consider alternative energy options to fossil fuels, such as solar, wind, geothermal, and ocean power. Along the way we will consider the evidence for Global Warming and Climate Change. We will look into human nature, simple life styles, conspiracy theories, and the influence of those in power to shape human opinion. We will also consider how our water supply is provided and where it goes after being used. What options do developing countries or drought racked areas have to remedy their water needs? Although the course pursues a scientific understanding of these issues, the mathematics used will be gentle, and a larger emphasis will be placed on the intuitive appreciation of these concerns.

- **SF-132 The Beatles: Here, There & Everywhere**

Credits:

4.00

Description:

This seminar will investigate the impact and legacy of the Beatles. The Fab Four deserve our scholarly attention as musical innovators and as cultural avatars of the 1960s, an era that still exerts influence today. We will examine the many ways in which the Beatles rocked the establishment and became defining figures in post-war youth culture. We will also discuss other media (the visual arts, film, fashion, style) and fields of study (mass media, marketing, recording technology, copyright law, English history) using the Beatles as our guides.

- **SF-151 Getting Over It: Dealing With the Aftermath of Group Conflict/Mass Atrocity**

Credits:

4.00

Description:

Once violent conflict between two groups has ended, what is the best way to transition back to normality coming to terms with the past or simply moving on? To answer these questions we will examine the debates surrounding war crime tribunals, truth commissions, lustration policies, and reparations in the second half of the 20th century. Case studies will include post-apartheid South Africa, post-WWII Germany, and the Israeli/Palestinian conflict. We will discuss the philosophical problems raised by each of these instruments, as well as on the political, legal, and practical difficulties their implementation present. Cultural Diversity B

Type:

Cultural Diversity Opt B

- SF-156 The Mask Behind the Face: Personas, Personalities, and Perception. Acting in /Out Life

Credits:

4.00

Description:

The theatre has always been a metaphor for life. In modern times life has become theatre. This seminar will confront the idea of real life and the eroding boundary between performers and audience. Students will study the roots of the contemporary obsession with stars and stardom, a mania that began in the 18th century and flourished in the 19th century. We will look at performance studies, performers memoirs, plays, and films that dramatize this dilemma.

- SF-173 Crime in American Society

Credits:

4.00

Description:

Popular beliefs about crime are often inspired by the media and by specific criminological theories. These theories about and media images of crime will be examined in detail, including the hits and misses.

- SF-174 Tragedy and Literature

Credits:

4.00

Description:

This course will focus on classic works of ancient and modern literature that examine the human condition from a tragic perspective. We will concentrate on close readings from the following texts: Homer's Iliad, Sophocles' Antigone, The Bhagavad-Gita, Shakespeare's Othello, Chekhov's short stories, and Joyce's Dubliners.

- SF-178 Sacred Hoops & Sneaker Pimps: Understanding the American Hoop Dream

Credits:

4.00

Description:

This course is about the basketball hoop dream played out at the high school and college levels. We will study a wide variety of materials - novels, films, websites, reference works - to understand both the construction, and destruction, of the hoop dream in such diverse places as New York City, Seattle, rural Indiana, suburban Georgia, and the Wind River Reservation in Wyoming. Issues of race and culture will serve as guiding themes as we develop critical theory explaining why the hoop dream has persisted, and adapted, over time, to fit the needs of its believers and supporters.

Type:

Cultural Diversity Opt A

- **SF-182 Heroes, Antiheroes and Outsiders: Reading the Graphic Novel**

Credits:

4.00

Description:

How is it that comics", a genre often viewed as entertainment for children and adolescents, has become one of the most exciting forms of narrative and visual art? To answer this question, this seminar will examine a range of graphic novels, from those that celebrate their origins in superhero comics, such as Alan Moore's Watchmen, to those that treat subjects not usually considered proper to the comics genre, such as Art Spiegelman's Maus, about the Holocaust, and Alison Bechdel's Fun Home, about the complexities of sexual identity. As we read these works, we will look at how the combination of words and still images makes the graphic novel a unique storytelling form, as well as how artists and writers push the envelope to create new styles and challenge our expectations. In addition to class discussions and writing assignments, we will take a field trip to the Museum of Fine Arts and create a collaborative group graphic novel step-by-step over the course of the semester (all abilities welcome).

- **SF-183 Politics, Power and the Media**

Credits:

4.00

Description:

Is there a relationship between accumulated political power and mass media representations? Is news content impacted by existing political power relations? It is the object of this course to critically analyze the role of the mass media within the framework of existing political power relations in the United States. In particular, the course will focus on the role the mass media plays in promoting and reinforcing dominant political practices and ideologies. The course will begin by exploring various theories of the press, notably its function in a democratic society, as well as the concepts of power and propaganda. We will continue with a series of case studies, complemented by secondary sources that highlight how media representations affect the contemporary distribution of political power in the US. Topics of discussion will include the current US war on terrorism, the ongoing health care debate, the public disavowal of big government", and the concept of a liberal media.

- **SF-189 American Gothic: Edgar Allan Poe, Flannery O'Connor and Annie Proulx**

Credits:

4.00

Description:

This literature seminar will study and compare the short stories of Edgar Allan Poe, Flannery O'Connor, and Annie Proulx. Beginning with Poe as the father of the short story genre in America and exploring his critical theory of the grotesque and arabesque", the class will examine the emergence of the gothic literary idiom as a classic American genre. Critical essays on the gothic aesthetic will be analyzed and film adaptations and documentaries will be viewed.

- **SF-191 Film Adaptation Film Adaptation**

Credits:

4.00

Description:

Why did they change the ending of the book? The novel is so much better! We will explore the concept and industry of film adaptation. Students will read novels and watch respective film adaptations to explore how the written word is adapted to the screen; both fiction and non-fiction works will be considered. Also, field trips to past film locations in Boston will be taken to explore why specific settings were chosen for respective situations. Additionally, students will create their own written adaptations of source materials, putting into practice the concepts studied in class.

- **SF-197 Sustainability, Energy, and Technology At Suffolk University**

Credits:

4.00

Description:

In this project and team-based course, students study a sustainability problem at Suffolk University and spend the semester developing proposals to address the problem. At the end of the course students will present their proposals to Suffolk University's sustainability committee, and will exhibit their websites and visual aids in the Donahue lobby to educate the Suffolk community about sustainability. If their proposals are well-researched and well-communicated, students can see their ideas actualized while they are still undergraduates.

- **SF-198 Music and the Brain**

Credits:

4.00

Description:

What accounts for the power of music to move us so profoundly? This course explores how our brains and music evolved together: What music can teach us about the brain, what the brain can teach us about music, and what both can teach us about ourselves.

- **SF-1127 The Vietnam and Iraq Wars: Polarized Perspectives**

Credits:

4.00

Description:

This class will examine some of the many controversies surrounding the Vietnam and Iraq Wars, two conflicts that have been profoundly polarizing for the American people. There are widely divergent perspectives regarding the fundamental questions surrounding each war. Were the reasons for American involvement just? To what extent were the methods used by the United States military during each war just? To what extent did the media play an appropriate role before, during, and after each war? Did opposition to these wars serve primarily to benefit the enemies of the United States or did it constitute a form of patriotism and love of country? This interdisciplinary course will address these and other complex questions by examining the histories, literature, and films (both documentaries and dramatic) that have been produced in response to these wars.

- **SF-1128 Sustainable Media**

Credits:

4.00

Description:

Contrary to a popular perception that information, communication and entertainment technologies are clean, ecologically benign and paperless, the reality of an increasingly digital life is that our fascination with the next best thing in mobile phones, video game consoles, personal computers, digital cameras, tablets, etc., has devastating impacts on our environment. These media devices are manufactured using toxic ingredients in poisonous working condition, require an abundance of energy to operate, and create hazardous waste when disposed. Media technology companies and the advertising industry that markets their wares have successfully persuaded consumers to accept rapid obsolescence and to highly anticipate the latest upgrade. But some consumers, electronics manufacturers, policy makers, and environmental groups are working to change the culture of consumption in favor of sustainable media practices that lessen the environmental footprint of the digital devices we use everyday. The purpose of this course is to understand the problem of unsustainable media, and the possible solutions for a sustainable media system.

- **SF-1129 Beacon Hill: Fact, Fiction, and Fantasy**

Credits:

4.00

Description:

The course will explore the physical geography, history, and image in literature, film, and pop culture of Suffolk University's Beacon Hill neighborhood. The purpose and objective of the course is to provide students with a deep knowledge, understanding, and appreciation of Beacon Hill through examination of written and visual sources, and feet-on and eyes-on experience of the public parts of the Hill.

Type:

Local Engagement Experience

- **SF-1141 Classical Civilizations: Pathways to Wisdom**

Credits:

4.00

Description:

How is it that the knowledge, intelligence, wisdom and values of the Greeks and Romans still educate and edify the world by providing venues towards leading fulfilling and dignified lives? The guiding principles of their respective civilizations rested upon eight pillars: - Humanism: It was recognized that humans have the potential to master their world and live life to the fullest. -The Pursuit of Excellence: To imagine the highest good and strive to attain it. - Self Knowledge: It is imperative to know oneself before seeking to know the world. - Rationalism: Always question, reason and discern truth from falsehood and never consider any matter superficially. - Restless Curiosity: Often the resolution of one issue leads to the revelations

of others mysteries and pursuits which compels further investigation. The wise individual makes this a lifelong endeavor. -Love of Freedom: As long as one brings no harm to others, one must be free to live and discover as much as possible. - Individualism: All are unique and, therefore, must recognize individual strengths and identity. -The Practice of Moderation: The prudence of avoiding extremes in personal and social conduct. In this course, students will read two (brief) texts on the Greek and Roman contributions to the world and then will proceed with specific readings which illuminate the eight principles above for achieving the good life.

- **SF-1143 In the First-Person: Storytelling in the 21st Century**

Credits:

4.00

Description:

This section of the Seminar for Freshmen will consider the forms, venues, and impacts of narrative nonfiction in contemporary culture. From the exploding popularity of personal essays in the digital age to the living, evolving essays we create on social media, we are constantly narrating and archiving our lives, shaping their content for specific audiences. In doing so, we shape what our experiences mean and represent. In order to analyze the power of narrative nonfiction, we will look at a variety of multimodal texts: essays, podcasts, Instagram and Twitter feeds, stand-up comedy, and storytelling slams, as well historical texts such as the essays of Michel de Montaigne and historical artifacts at the National Archives in Boston. We will also write our own narrative nonfiction, and adapt our first-person stories for listening and viewing audiences, such as the MassMouth story slam and podcasts like This American Life. Additionally, we will practice narrative nonfiction for professional audiences, using storytelling as a way to showcase personal strengths to employers, internship coordinators, and the like.

- **SF-1144 Native Americans: Walking in Two Worlds?**

Credits:

4.00

Description:

Native Americans are often described as walking in two worlds, as they attempt to navigate the process of maintaining their tribal identity and heritage while living in mainstream America. In recent years there has been a shift towards tradition and heritage, and a rejection of Western values and norms in both the US and Canada. In this course we will look at how Native people live in the US and Canada today, and examine the extent to which they are either trying to walk in two worlds or perhaps rejecting the two worlds model. To help us answer this question, we will read about reservation life, the Idle No More Movement, Indigenous History, and current events. We will also watch videos and explore indigenous culture.

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

Type:

Diverse Perspectives

- **SF-1146 Fido the Friendly Wolf: A Natural History of Dogs**

Credits:

4.00

Description:

This course explores the evolution of dogs from wolves and the ways in which dogs have adapted to their niche in human society. The ecology, behavior, genetics, and adaptations of dogs will be explored in relation to both their wolf ancestry and artificial selection by humans. The course includes 2 mandatory field trips to a wolf sanctuary and an animal shelter.

- **SF-1147 Global (In) Security: From ISIS to Ebola**

Credits:

4.00

Description:

This course reviews the principal features of global and national security as it is currently practiced by tracing the evolution of theories, policies and circumstances whereby current international security is developed. Students will evaluate the nature and origins of war, arms proliferation, military instability, terrorism, genocide, health threats and natural resources depletion.

- **SF-1148 Brave New Worlds**

Credits:

4.00

Description:

Explores themes of adventure, self-discovery, exile, and culture shock in classic and contemporary travel writing (including fiction, poetry, and non-fiction) as well as film. Students will experiment with creative writing of their own, develop theories of cosmopolitan world citizenship, travel through the city of Boston on field trips, and team up to learn about different countries in Suffolk's global network of study abroad programs.

• SF-1150 Religion in Contemporary Society

Credits:

4.00

Description:

This course is design to provide students with an overview of the social settings and cultural meanings of religion in the contemporary world. Topics that will be covered in reading and discussions include the rise of religious fundamentalism, religion and violence, women's and men's religious experiences, new religions, and portrayals of religion in popular films. In addition to the readings, students will observe and experience religious expressions and activities through fieldwork assignments. The emphasis on films and fieldwork reflects my belief that religion is made up of lived experiences of actual individuals and communities. In order to understand religion in contemporary society we will make every effort to see (in person or in film) a wide range of religious activities. The films we will see include some of the following: Leap of Faith, Devil's Playground, Kadosh, Women of Hizballah, Singing Stream, A Still Small Voice.

• SF-1151 Reproduction and Society

Credits:

4.00

Description:

This course explores relationships between reproductive health and rights both nationally and internationally. Many of our topics fit into two broad areas: conflicts over the control of childbearing (sterilization abuse, birth control, and abortion) and conflicts over who deserves to be a mother, especially when the mothers in question face social stigma and lack political power. Other topics include safe birth and maternal mortality, breastfeeding, infertility and reproductive technology. We also examine the politics of women's sexual and reproductive autonomy, including the policies that shape women's choices to prevent, achieve, abort, or carry to term a pregnancy. Throughout, we are guided by the following questions: Why is reproduction an important site through which to understand society? How do statuses such as race, class, gender, sexuality and ability

influence people's reproductive possibilities? What is the role of the state in shaping these experiences? How have communities supported or resisted efforts at reproductive control? Why is reproductive justice central to these answers?

- **SF-1153 Law, Disease, and Public Health**

Credits:

4.00

Description:

This course is about public health law, which is the study of the legal powers and duties of the various systems of government in the United States (federal, state, and local) in collaboration with their partners (e.g., health care, business, the community, the media, and academe), to ensure the conditions for people to be healthy (to identify, prevent, and ameliorate risks to health in the population), and of the limitations on the power of these systems of government to constrain for the common good the autonomy, privacy, liberty, proprietary, and other legally protected interests of individuals. The prime objective of public health law is to pursue the highest possible level of physical and mental health in the population, consistent with the values of social justice. The course will focus especially on public health law in the area of epidemic disease. Case studies will be made of the Great Influenza of 1918 and the origins and spread of the Ebola virus, culminating in an examination of outbreaks of Ebola in the United States.

- **SF-1154 Introduction to Visual Studies**

Credits:

4.00

Description:

This seminar provides an introduction to Visual Studies, a relatively new interdisciplinary field that examines how images communicate and the roles that they play in society. Students will apply the concepts and techniques of Visual Studies to analyze sites and signs around Boston, such as advertisements, street signs, fashions, newspaper photographs, buildings, and public spaces. Class projects will increase students' awareness of their visual environment and their ability to critically analyze the visual rhetoric that surrounds us and is often used to manipulate us.

Type:

Local Engagement Experience

Students in the CAS Honors Program should choose one Seminar for Freshmen course from those listed below:

- **SF-H116 Enlightened Insanity**

Prerequisites:

CAS Honors students only.

Credits:

4.00

Description:

Rain or shine, the great 18th century Enlightenment philosophers would meet at the famous cafes of Paris to discuss their ideas, and to observe and criticize society. From these informal debates emerged ideas that are at the core of our modern understanding of the nature of society, marginality, human nature, civil rights, the essence of creativity and genius. Come join us in the quest to understand, define, observe, and analyze the key ideas and concepts of these great thinkers, such as Rousseau, Diderot, and Voltaire, still so relevant in our time. We will read key works of these creative thinkers and philosophers. We will enrich our experience and understanding through the use of film, theatre performances, museum visits, as well as the occasional cafe debate.

Type:

Expanded Classroom Requirement, Honors

• SF-H126 The Boston Theatre Scene: The Inside Experience

Credits:

4.00

Description:

Using the current Boston theatre season as its syllabus, this writing- and analysis-intensive course will explore several plays in production at some of Boston's many professional theatres. We will study the script of four to five plays before attending performances of those works. Students will gain insights on the world of theatre through backstage tours and conversations with theatre professionals such as producers, directors, actors, designers, playwrights, and critics. Students must be available for evening (usually Wednesday) performances. A fee for student-rate tickets will be assessed.

Type:

Honors

• SF-H1134 The Meaning of Life

Prerequisites:

CAS honors students only.

Credits:

4.00

Description:

What do we live for? Which beliefs, values, and experiences sustain meaningful, fulfilling existence? Are we authors of our destinies or powerless pawns in an unfathomable cosmic game? Does death render all our efforts superfluous? This award-winning course offers a cross-cultural, interdisciplinary exploration of these questions through philosophical and religious texts, art, fiction, autobiography, and psychological studies. The course opens with the Old Testament's book of Ecclesiastes, followed by three units: 1) A Life Worth Living: Humanity's Ideals focuses on the ancient and modern visions of human flourishing; 2) Threats to Meaning: Humanity's Discontents, discusses the disillusionments leading to the loss of meaning; and 3) Recovery of Meaning: Crises and Hopes, explores the post-crisis possibilities of self-discovery and growth. Please visit <http://meaningoflife.cherkasova.org/>

Type:

Honors

• SF-H1135 Women Warriors: Stories of Captivity, Conversion, and Confession

Credits:

4.00

Description:

Since the beginning of time, women have been doing battle to themselves, while men have gone to battle against others. Whether it is through converting to Christ, yielding to captors in order to survive, or carrying a baby, this course introduces students to the many ways in which, whatever battles they face, women are warriors; they survive. Utilizing an array of captivity, conversion, and confession narratives by women, and pairing them across the centuries, students will make connections and draw conclusions between early-and mid-19th-century-American and contemporary women. Students will connect, for example, the trials of the 17th-century Puritan captive, Mary Rowlandson, and contemporary hostage, Elizabeth Smart, to explore how women (no matter how different they seem) draw upon unique inner resources to survive.

Type:

Honors

• SF-H1152 The Idea of America: Past, Present, Future

Credits:

4.00

Description:

A systematic exploration of thinking of and about America, from the founding of the republic to American issues and traditions of thought that reflect upon the founding principles and the unfolding American experiment. The Declaration of Independence and the Constitution will be studied with an eye to their philosophical content and sources. The course will also examine works of philosophers and other thinkers who address conflicts over the meaning of founding principles in the course of the nation's history, from the struggle over slavery to America's contemporary role in the world. Because this course intends to apply theoretical understanding to real life, students will be expected to read contemporary journalism on a regular basis and assess the controversies of today in the light of the nation's philosophical and historical currents.

Type:

Honors

Major Requirements: 8 courses, 32 credits

Minimum Total Credits Required for Degree Conferral: 64 credits

2015-2016 Archived Catalog Information

Associate of Science in Paralegal Studies

The ASPS degree requires the successful completion of the following courses:

Core Requirements: 10 courses, 39-40 credits

- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Ethical & Philosophical Inquiry](#)
- [Social Science](#)
- [Humanities/History](#)

First-Year Writing: 2 courses, 8 credits

- WRI-101 First Year Writing I

Credits:

4.00

Description:

Study and practice of the writing process and revision in terms of expository writing modes for an academic audience.

- **WRI-102 First Year Writing II**

Prerequisites:

WRI 101.

Credits:

4.00

Description:

Study and practice of argumentative and research writing through further work with writing process and revision and the critical reading of a variety of texts.

A student may be assigned to other writing courses or may be invited to take WRI-H103. Students required to complete ENG-099 may be allowed to waive WRI-101 with a grade of “B” or better and the approval of the English department. Students who are invited to complete WRI-H103 and earn a “B” or better satisfy the two Writing Requirements. Waiving a course does not earn credits.

- **WRI-H103 Advanced First Year Writing**

Prerequisites:

By Invitation Only.

Credits:

4.00

Description:

This course is by invitation only and reserved for incoming Suffolk students with high admission scores. Advanced study and practice of writing process, revision, and research, based on close readings of a variety of texts. Fall semester only.

Social, Cultural, & Global Perspectives: 1 course, 3-4 credits

Choose one course from those listed below:

- AS-100 Introduction to Asian Studies: Culture, People, Ideas

Credits:

4.00

Description:

An interdisciplinary introduction to Asian Studies will touch upon the history, politics, economics, philosophy, geography, arts, and cultures of Asia. Sample topics include political economy, religious and cultural exchanges, international relations, Asian experience in America, and the role of Asia in the twenty-first century. Students will develop conceptual frameworks for exploring the subjects covered by the Asian Studies curriculum.

Term:

Offered Both Fall and Spring

Type:

Asian Studies,Cultural Diversity Opt B,Humanities & History,Humanities Literature Requirement,Divers

- **AS-500 Asian Studies Internship**

Credits:

4.00

Description:

Engages in an internship in a business or non-profit organization that deals with Asia or an Asian American community. Students may complete the internship either in Asia or in the U.S. Students will complete appropriate exercises and reports to document their learning.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement,Global Engagement Experience,Diverse Perspectives

- **BLE-325 Global Business Ethics**

Prerequisites:

BLE-215, PHIL-119, PHIL-120, PHIL-123 or PHIL-127

Credits:

3.00

Description:

Surveys business ethics as they transcend the diverse perspectives of global business. Explores current global ethics standards and values, ethical challenges, controversies, convergence and trends. Students explore famous global business cases through films, websites and independent research. Emphasizes identification and resolution of global business ethical issues within the context of ethical decision-making and sustainability. Analyzes corporate social responsibility ; hence, transforming global business ethics through business.

• CI-204 Prague: Castles to Barbwire

Prerequisites:

At least 24 credits earned.

Credits:

3.00

Description:

Prague offers students a more recent view into history and will serve as a backdrop to learning Design Thinking. The curriculum will use Czech and Central European cultural features as the inspiration for learning the creative process, skills that can be applied broadly and globally across disciplines. WWII and its fall to Communism left the Czech Republic undamaged. Artists played a vital part in the country's rise to a Republic during the Velvet Revolution. These dissidents, including writers, actors, artists and musicians were innovators who were the catalyst for change. One could say that creative minds changed this country. This course is designed to demystify the creative process by introducing the creative practice as a disciplined approach to problem solving and innovation requiring research. This one-month study abroad experience will offer a more worldly insight to the significance of developing skills where divergent thinking and risk taking are one of many key tools in learning to generate new ideas. Travel fee covers accommodations, transfers, some meals and cultural visits. Airfare and tuition not included.

• GVT-208 Politics / Religion

Credits:

4.00

Description:

This course explores what major religions say about the status and responsibilities of the state and how, in turn, selective states have, in theory and practice, structured the place of religions in political life. Particular attention is given to issues of politics and religion in the United States. Cultural Diversity A

Type:

Cultural Diversity Opt A,Social Science,BSJ SOCIAL SCIENCE,Diverse Perspectives

• GVT-359 Hockey, International Development & Politics

Credits:

4.00

Description:

This class examines the way in which national identity, global and regional economics and international development intersect. It uses the professionalization of the sport of hockey and its subsequent spread around the globe as its case. It will look at the rise of the pro game, the way in which it shapes national identity in the Canadian case, the way in which the pro business model has changed in response to broad socio-economic changes in North America and geo-political shifts around the globe, especially in Eastern Europe and the Former Soviet Union.

Type:

Social Science,Diverse Perspectives

- **GVT-360 Elections and Voting**

Credits:

4.00

Description:

How are elections administered in the United States? Do Americans have confidence in the electoral process? Should they? Why or why not? This course will examine elections in the United States in detail -- from how they are funded to how they are administered to how voters behave. Students will have a choice of either serving as poll workers during the November election or organizing and conducting research of potential voters. Students will gain hands-on experience in actual research design, election administration, and non-partisan get-out-the-vote activities. In addition, students will gain a deeper understanding of the relationship between attitudes, opinion, and voting behavior in American politics and institutions. ECR

Type:

Humanities & History,Social Science,BSJ SOCIAL SCIENCE,Diverse Perspectives

- **GVT-391 Canada: Multicultural Politics**

Prerequisites:

GVT 110/120 or Instructor's permission

Credits:

4.00

Description:

This course examines the Canadian model of incorporating diverse communities into its constitutional and political framework, including the founding British North American Act of 1867, the 1982 Constitution Act, and two later attempts at constitutional reform. Canada's role in balancing two official languages, English and French, is discussed, as is its recognition of a First Nations native-governed territory in the Arctic. This course introduces students to the Canadian polity and compares its parliamentary system with the U.S. separation of powers system. Prerequisites: GVT 110, GVT 120 or instructor's consent. Normally offered alternate years. Cultural Diversity B

Type:

Cultural Diversity Opt B, Social Science, BSJ SOCIAL SCIENCE, Diverse Perspectives

• **GVT-467 Comparative Social Movements**

Prerequisites:

Junior status

Credits:

4.00

Description:

This class examines the political ramifications of social movements primarily but not exclusively within the United States. It looks at ideology, beliefs and mechanisms of mobilization. Another important focus is an analysis of non-white social movements in this country and their impact on domestic politics. Among the movements to be examined are: the Pan-African movement 1919-1939 which will, to some extent, take us outside this country; the U.S. Civil Rights Movement 1955 to 1969 which covers the rise of the Black Power movement; and the U.S. Labor Movement 1900 to 1955 in terms of non-white influence on its programmatic goals. Normally offered alternate years. Cultural Diversity B

- **PSYCH-243 Organizational Psychology**

Prerequisites:

Take PSYCH-114;

Credits:

4.00

Description:

Focuses on diversity concerns in various aspects of the psychology of the workforce. This includes job analysis, recruitment, selection, evaluation, training, retention, and termination. Employee morale, well-being, stress, and hardiness are considered.

Type:

Cultural Diversity Opt A, Social Science, Diverse Perspectives

- **RS-111 Introduction to World Religions: Western Traditions**

Credits:

4.00

Description:

This course will explore the comparative history and structure of Western religious traditions, broadly understood, and their impact on other world religions, while attempting to recognize the similarities and the differences among them. Traditions to be studied include Greek and Roman religion, the monotheistic faiths (Judaism, Christianity, and Islam, as well as Zoroastrianism, Sikhism and Bahaism). We will also explore the impact of the

Western religions on indigenous traditions, such as African religion, Native American religion, and Pacific Island religion. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. 1 term - 4 credits. Normally offered every year.

Type:

Diverse Perspectives

- **RS-112 Introduction to World Religions: Eastern Traditions**

Credits:

4.00

Description:

This course will examine a variety of Eastern religions, including Hinduism, Buddhism, Jainism, Confucianism, Taoism, and Shintoism. Possible connections to be explored will be the impact of these traditions on others, such as Pacific Islands and African religion, as well as the growing place of Eastern religion in the West. This course will explore the history and structure of each tradition, while attempting to recognize the similarities and the differences among them. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. Normally offered every year. Cultural Diversity B

Type:

Cultural Diversity Opt B,Asian Studies,Diverse Perspectives

- **SIB-550 Global Travel Seminar**

Description:

An in-depth analysis of timely special issues in international business. Specific topics are announced when the course is scheduled.

Type:

Diverse Perspectives,Global Engagement Experience

- **SF-190 Asia in America Fiction and Fact**

Credits:

4.00

Description:

With a focus on some selected ethnic groups from Asia, Asia in America studies the history and current status of Asian Americans in Boston and other parts of the country. We will examine the major reasons why these immigrants chose to leave their home country as well as their expectations and experiences here in America. We will also discuss the issues Asian immigrants have faced in this adopted home as well as the connections and conflicts among different ethnic groups or even within the same ethnic group due to political and socio-economic reasons. The course will include some level of community engagement, through Chinatown tour and service, which may enable us to have a direct contact with the Asian American population and reflect on what is being discussed in class. Through this course, we hope to gain a better understanding of the racial and cultural history of the country and arrive at a deep appreciation of the dynamics of cultural interactions in the twenty-first century. The course fulfills the SCGP requirement.

Type:

Cultural Diversity Opt A, Global Engagement Experience, Diverse Perspectives, Expanded Classroom Requir

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

Type:

Diverse Perspectives

- **SOC-227 Race in American Society**

Credits:

4.00

Description:

Despite the election of Barack Obama as President of the United States, race remains one of the most divisive forces in U.S. society. While many of us struggle against racism, racial classification continues to affect where we live, where we work, and how we see ourselves. Racial classification affects our access to health care and our encounters with police officers. Distorted images of racial groups fill television and movie screens. Appeals to racism and fear of foreigners are dominant themes in elections to state and national offices. This course examines the formation and re-formation of racial classifications: how particular groups become racially identified, how these classifications change over time, and how conflicts over race have shaped American society. The meanings of race, as seen from a variety of perspectives, will be a consistent theme throughout the course.

Term:

Occasional

Type:

Cultural Diversity Opt A,Diverse Perspectives,Cultural Diversity Opt B

• **SOC-228 Cultural, Global and Social Perspectives**

Credits:

4.00

Description:

Enables students to examine, as well as develop an awareness and appreciation of, diversity within today's society. Providing an overview of the major racial, ethnic, and cultural groups in the U.S., the focus is on the ways in which cultural awareness enhances professional helping relationships and improves the operation of human services systems.

• BIO-L104 Environmental Bio Lab

Prerequisites:

BIO-104 must be taken concurrently

Credits:

1.00

Description:

Exercises and field trips designed to complement and demonstrate the ecological principles developed in the lecture section. The lab emphasizes the scientific method and employs long term group projects. Madrid Campus only.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• BIO-111 Introduction to the Cell

Prerequisites:

Must take BIO L111 concurrently

Credits:

3.00

Description:

Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L111 Introduction to the Cell Laboratory**

Prerequisites:

Concurrently with BIO 111

Credits:

1.00

Description:

Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-114 Organismal Biology**

Prerequisites:

Must take BIO L114 concurrently.

Credits:

3.00

Description:

Rigorous introduction to organismal biology emphasizing evolution, phylogenetics, form, and function. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L114 Organismal Biology Laboratory**

Prerequisites:

Must take BIO 114 concurrently

Credits:

1.00

Description:

A series of laboratory experiences in evolution, diversity, anatomy and physiology.

Term:

Offered Both Fall and Spring

Type:

- **BIO-201 Biology's Big Questions**

Prerequisites:

Non Science Majors Only.

Credits:

4.00

Description:

This course seeks to answer five current questions from all levels of biology, from the subcellular to the ecosystem level. Topics will be discussed in the context of genetics, evolution, and ecology. We will focus on the process of doing science, including how scientists evaluate ideas and communicate their findings. Emphasis will be placed on topics in biology that impact daily life.

Type:

SCI TECH ENGNR

Chemistry:

- **CHEM-105 Chemical New Product Development**

Prerequisites:

ENT 101

Credits:

4.00

Description:

This course addresses the crucial intersection between chemistry and business, and the impact of these fields on society. It provides an introduction to important chemistry concepts and practices of business management. Primary focus is on understanding the chemistry principles behind some of the consumer products in our everyday lives, and using this knowledge to create and evaluate ideas for new products. The course also introduces the business aspects involved in the development and marketing of new products. An important component of the course is in making effective

presentations; this component concludes the course, culminating in team presentations of a new chemical product to panel of executives and peers. This course satisfies the Sawyer Business School Science requirement.

Type:

SCI TECH ENGR

- **CHEM-106 Biotechnology & Its Applications in Medicine, Agriculture, Law**

Credits:

4.00

Description:

Introduces the latest discoveries and applications of biotechnology. Topics include genetically modified food, stem cells, genetic testing, cloning, and forensics. A combination of lectures, discussions, documentaries, mock congressional hearings, and hands-on activities will provide insight into the numerous medical, social, legal, and ethical issues surrounding this technology.

Type:

SCI TECH ENGR

- **CHEM-111 General Chemistry I**

Prerequisites:

Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:

3.00

Description:

Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **CHEM-L111 General Chemistry I Lab**

Prerequisites:

Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **CHEM-201 Caveman Chemistry**

Credits:

4.00

Description:

Caveman chemistry explores chemical technologies that have led to modern industrial civilization, with an emphasis on the chemistry we encounter in everyday life. Although this is not a laboratory course, it is very much a course about doing things. We will focus on the process of doing science, including how scientists evaluate ideas and communicate their findings, through literature and hands-on activities.

Type:

SCI TECH ENGR

Computer Science:

- **CMPSC-F107 Ants, Rumors and Gridlocks**

Prerequisites:

Math placement level of 2 or above or any MATH course at the level 100 or above

Credits:

4.00

Description:

Do viruses and rumors spread like forest fires? How do ants cooperate? Do spoken languages and biological species evolve in a similar way? Ants, Rumors, and Gridlocks exposes students to introductory aspects of computational science by addressing and answering these and many other questions. Students use and modify virtual experiments preprogrammed in the NetLogo programming language to investigate these topics and others in Social Sciences, Biology, and Environmental Science. No prior knowledge of computer programming or NetLogo is required.

Type:

SCI TECH ENGR, Quantitative Reasoning

Electrical Engineering:

- **ECE-288 Measuring the World**

Credits:

4.00

Description:

The world is addicted to quantifying the essence of everything, from personal IQ, to the speed of a baseball, to our healthiness, or our chances of winning the lottery. Behind most of these numeric values exists a science of measurement. Some of this is referenced to international standards, such as for length, time, weight, or temperature. Others are more arbitrary and subjective, such as ranking Olympic performance in gymnastics, beauty pageants, or popular responses as found in the game show Family Feud. A third category includes controversial areas, such as measuring whether a person is lying when interrogated, or using hype rather than reality to market products. Sometimes statistics are used to predict sports outcomes, such as in the annual March Madness NCAA basketball brackets. Finally, in a world subject to fraud and deception, it can be essential to distinguish legitimate from counterfeit items, such as in money, art, collectibles, and historical documents. Don't get hoodwinked! This course examines all of these, starting with how measurements have been made throughout history, along with a full deck of entertaining terms used during the ages. This may help you sort out your weight, whether given in pounds, kilos, or stones. Often these terms will provide insights into how people lived in different eras. We will also look at some of the technologies currently available to provide these measurements, and unravel the complexities of various sensors that are used. As we consider the meaning of accuracy we may become less naive about how much confidence to ascribe to the results given us. Hovering around all of these measurements should be the question of validity - are they meaningful, useful, or misleading? And the impact they have on society - whether they steer behavior more powerfully than one might originally suspect. Each student will also be given an opportunity to become an expert in an area of measurement of personal interest. By the end o

Type:

SCI TECH ENGR

Engineering Science:

- **ENS-103 Introduction to Engineering**

Prerequisites:

ENS L103 MUST BE TAKEN CONCURRENTLY.

Credits:

3.00

Description:

This course provides exposure to engineering practice, with particular focus on electrical engineering components such as circuit elements and systems. It seeks to go beyond the mathematics and provide an intuitive appreciation of functional devices. Examples taken from a broad swath of technological history illustrate significant crossroads, decisions, and inventiveness. Emphasis is placed on learning to think as an engineer - assessment of problems, candidate solution tradeoffs, and implementations. Frequent exercises in creative engineering design will be used. Students will be required to design several elementary devices, such as a magnet, a capacitor, a timing device, and a motor, which they will enter in a competition for overall strength, compactness, accuracy, or speed. Sometimes assignments relate to "survival on an island" concerns, such as communication or drinking water. Students also learn about reverse engineering by selecting, building, troubleshooting, and presenting an electronic

kit of their choice. A term paper determining the engineering behind a topic of their choice will also be written and presented. On occasion (see ENS L103) there will be team competitions between various smaller groups in the class.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **ENS-L103 Intro to Engineering Lab**

Prerequisites:

Must be taken Concurrently w/ ENS-103

Credits:

1.00

Description:

The Lab is designed to provide opportunities to gain familiarity with engineering tools. Students will be introduced to parts (e.g. learn the resistor color code), test equipment (multimeters, prototyping trainers, signal generators, and oscilloscopes), and construction techniques (wiring, soldering, troubleshooting). Although it varies from year to year, Class Projects can be built during the Lab sessions. In the past these have included a 25 Watt electric generator, various door lock systems (both mechanical and electronic), and an AM transmitter and receiver (all projects made from scratch). It is likely that 2010-2011 may introduce some robotic creations for a competition. Electronic kits and motors can also be built and serviced in the Lab. There is an adjoining machine shop, which can be utilized (with supervision), for fabricating items. Individual creativity is encouraged, and informal problem solving sessions occasionally occupy lab time. However, the lab is accessible outside of the traditional scheduled time.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

Environmental Science:

- **ENVS-111 Majors' Environmental Science**

Prerequisites:

Open to Environmental Science and Environmental Studies majors, or by permission of instructor. Must be taken concurrently with ENVS L111

Credits:

3.00

Description:

Applies the fundamentals of science to environmental issues. Topics include population dynamics and resources, environmental degradation, ecosystems, geologic processes, deforestation, biodiversity, climate change, air, soil, and water resource management, and pollution and risks to health. This course is open to all environmental science and environmental studies majors and minors. Other students will be admitted by permission of the instructor. Must be taken concurrently with ENVS L111. 3 hours lecture. 1 term. 3 credits. Normally offered fall evenings.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **ENVS-L111 Majors' Environmental Science Lab**

Prerequisites:

Open to Environmental Science and Environmental Studies majors, or by permission of instructor. Must be taken concurrently with ENVS 111

Credits:

1.00

Description:

Laboratory exercises are used to illustrate topics covered in ENVS 111. Field testing and analysis of environmental samples. Field trips are required. This course is required for all environmental science and environmental studies majors and minors. Concurrent enrollment in ENVS 111 is required. 3 hour laboratory. Normally offered fall.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

Physics:

- **PHYS-111 College Physics I**

Prerequisites:

Take MATH-121 or MATH-134 or permission of Physics department chair;PHYS L111 taken concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **PHYS-L111 College Physics Lab I**

Prerequisites:

PHYS 111 concurrently

Credits:

1.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course. Error propagation, use of Excel, laboratory notebooks and formal reports required.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **PHYS-151 University Physics I**

Prerequisites:

Take MATH-121 or MATH 165. PHYS L151 concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **PHYS-L151 University Physics Lab I**

Prerequisites:

PHYS 151 concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

• PHYS-152 University Physics II

Prerequisites:

PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

Credits:

3.00

Description:

This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

Term:

Offered Both Fall and Spring

Type:

- **PHYS-L152 University Physics Lab II**

Prerequisites:

PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **PHYS-153 University Physics III**

Prerequisites:

Take MATH-121 or MATH-165;

Credits:

3.00

Description:

This calculus-based course is the introduction of the topics of modern physics. It begins with special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom. Then Schrodinger's equation is introduced with use of wave functions,

particle box, barrier penetration, quantum mechanical tunneling, the Pauli Exclusion principle, the development of the periodic table, and the X-ray spectra. Development of solid state physics with bonding in molecules, band theory of solids and semiconductor behavior. The final topics cover nuclear physics, radioactivity, half-life, nuclear fission and fusion, medical uses of radiation, elementary particle physics and introduction to astrophysics.

Term:

Offered Fall Term

Type:

SCI TECH ENGR

- **PHYS-L153 University Physics III Lab**

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts of special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom.

Type:

SCI TECH ENGR

Science:

- **SCI-108 Introduction to Cancer Care**

Credits:

4.00

Description:

This course will introduce the students to the top ten U.S. adult cancers, as well as the most common pediatric cancers. Topics to be covered include cancer causes, detection, and prevention. Psychosocial aspects of being diagnosed with cancer and the role nutrition plays for cancer patients will be described. The course will also discuss the major treatment modalities for each cancer including radiation therapy, surgery, chemotherapy, and bone marrow transplants. The goals and objectives of the course will be met through the use of various teaching tools including but not limited to: PowerPoint presentations, videos, guest lectures, and a poster project with a presentation component. Cognitive assessment of the students will be accomplished through homework, quizzes, exams, and a group poster and oral presentation. Students with any type of academic background are welcome.

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGNR,NATURAL SCIENCE FOR BS

- **SCI-113 A Habitable Earth Within the Solar System**

Credits:

4.00

Description:

This course introduces non-science majors to concepts that are central to making our planet habitable. It presents Earth in context of the solar system with a broad view of global climate change and energy resources in a quest to better understand the workings our planet. This course on Earth and Planetary Science is suitable for students who may have taken their last science and math course several years ago, or are just curious about knowing facts on major issues that pertain to the future of our planet. Together with a reading component, this course aims to give students a flavor of how researchers think, investigate and develop conclusions that directly affect our political and economic future. Topics covered in this course range from the solar system to the study of search for other habitable Earth-like planets, search for extraterrestrial life, and evolution of life on Earth. Other

characteristics of this course are heavy use of audio-visual materials often including computer animations and simulations, in-class experiment demonstration, and intensive use of INTERNET-based resources.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGR

- **SCI-165 Inner Workings of Physics Universe**

Credits:

4.00

Description:

About 15 billion years ago, (data indicate) the big bang occurred and the universe was born. With it came physical laws and a spectacular array of consequences that lead to the universe as we know it. This non-lab , 4 credit course explores the inner workings of the physical universe in terms of the scientific inquiry which lead to Newton's laws, an understanding of energy, waves, light, electricity, atomic structure, chemical reactions, nuclear physics, particle physics, relativity, and the big bang theory. During the course, students will learn to make use of modern resources to access scientific and technical literature to research a scientific topic. They will learn to distinguish between science and technology (e.g. quantum mechanics and nanotechnology, the discovery of the Higgs boson and the large hadron collider that made it possible, etc.) and to understand how the science, technology, and engineering disciplines play a crucial role in recognizing and solving problems of society and the world that we share.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **SCI-171 The Built World: How Humans Engineer Environments**

Credits:

4.00

Description:

The most basic needs of humans have not changed - water, food, and shelter - but the means of meeting these needs has. In this course, we will examine how technology-driven societies operate by studying how cities are built and how they function. Topics will include water supply and distribution systems; transportation systems (including road and bridge design and construction); building design, construction, and operation (including skyscraper and sustainable building design), and waste removal systems (municipal and industrial wastewater removal and treatment, solid

waste removal and treatment). This is not a course about little gadgets and widgets; this is a course about big engineering marvels; and it emphasizes applications of science - how things work - rather than scientific theory.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGR

- **SCI-173 Geographic Information Science (GIS) The Power of Digital Maps**

Prerequisites:

SCI L173 Must be taken concurrently Knowledge of Windows type Application

Credits:

3.00

Description:

Geographic Information Science (GIS) link information (number of fire hydrants on a block) to features on a map (e.g., a point representing street address) that has a designated geographic location (as designated by global coordinates). Unlike paper maps, GIS software allows the production of interactive maps that allows the user to layer data, to indicate spatial patterns, to analyze trends, and to combine different features of the mapped area in novel ways. For example, a business person may wish to use GIS to determine the optimum location of retail outlet (based on the mapped demographics of a neighborhood), while an environmental engineer may use GIS to describe the location of outfalls to see how they correlate to areas of stream pollution. In this course, students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **SCI-L173 GIS Lab**

Prerequisites:

Must be taken concurrently with SCI-173

Credits:

1.00

Description:

This laboratory illustrates concepts and methods taught in SCI 173. In this lab students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **SCI-181 Science and Life in the 21st Century**

Credits:

4.00

Description:

This is a four credit, non-lab, science course that examines the central scientific problems confronting the 21st century. The course studies particular topics and teaches the necessary science around these topics to provide a good understanding of the issues. The topics currently are: Energy, Science and Economic Decisions, Sustainability of Life on Earth, Health and Science.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGR

• SCI-184 Contemporary Science and Innovation

Credits:

4.00

Description:

This is a 4 credit, project based science course that examines the central scientific problems confronting the 21st century. The course consists of lectures, class discussions, field trips, and in-class hands-on activities designed to familiarize the student with different concepts of the lectures. The current focus is on sustainable energy production. A final team project related to the course topics will be given. This is the version of SCI 183 without a separate lab component. Students who have taken SCI 183, L183 are not allowed to take this course.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGNR,NATURAL SCIENCE FOR BS

• SCI-201 Physics for Future Presidents

Credits:

4.00

Description:

This course presents a topical introduction to the key principles and concepts of physics in the context of the world events and natural phenomena that confront world leaders and that require informed decisions and responses. Energy, health, counter-terrorism, remote sensing, space programs, nuclear proliferation, and a host of other modern challenges have technological and scientific dimensions, the understanding of which is essential to avoiding disastrous policy decisions. This course considers the application of physics to these societal challenges. The material is covered at a level and pace that a future world leader should be able to handle; the emphasis is on the development of physical reasoning skills, and not on detailed, mathematical problem solving.

Ethical & Philosophical Inquiry: 1 course, 4 credits

Choose one course from those listed below:

- PHIL-119 Ethics

Credits:

4.00

Description:

A systematic introduction to the major thinkers and their positions on the main issues of ethics, such as: What is morality? What are moral values? How should we live our lives? Are there objective, universal, absolute moral standards? If so, what are they, and what is their basis? 1 term - credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- **PHIL-120 Ethics and Civic Life**

Credits:

4.00

Description:

In this class you will be introduced to the perspectives and methods of politics, philosophy, and economics and see how these three disciplines present distinct but interconnected dimensions of current social and political issues.

Type:

Diverse Perspectives

- **PHIL-123 Social Ethics: The Good Life**

Credits:

4.00

Description:

An examination of contemporary Western society, particularly in the United States, in relation to philosophical attempts to define the good life. Current books that exhibit a philosophical approach towards important contemporary social issues will be discussed, as well as classics in philosophy. Topics may include: civic virtue, consumerism, current events, economic justice, popular culture (film, music, television), religion and secularism, etc. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- **PHIL-127 Contemporary Moral Issues**

Credits:

4.00

Description:

A critical examination of a number of contemporary moral issues such as: abortion, affirmative action, animal rights, capital punishment, cloning, drug legalization, environmental ethics, euthanasia, genetic engineering, gun control, pornography, same-sex marriage, suicide, war and terrorism, etc. 1 term - 4 credits. Normally offered every year.

Credits:

4.00

Description:

This course will survey the major concepts and issues of Western Art, from Renaissance to contemporary art. Architecture, sculpture and paintings will be studied individually for their formal elements and visual importance, and also within their own aesthetic, historic and cultural context. Class

discussion and visual analysis of works of art will encourage personal interpretation and critical thinking.

Term:

Offered Spring Term

Type:

Humanities & History, Humanities Literature Requirement

- **ADFA-306 Art & Culture of Asia, Africa, South America and Oceania**

Credits:

4.00

Description:

The coursework introduces students to the artistic and visual traditions from South and East Asia, Africa, Oceania and the Americas. In addition to the material culture of the particular region under study, the coursework will consider socio-political ideals, religious belief systems, and cultural principles that 'shaped' or informed the work and the ideology of civilizations beyond the Western hemisphere. Comparative analysis among non-western and western traditions will be used to critically analyze the salient points of influence, rejection and modifications of aesthetic affinities. Class lectures will be supplemented with museum seminars specifically the rich non-western collections at the MFA, Boston. Guided field trips to the museum will allow students to formally analyze the works of art discussed in lecture and text material.

Type:

Cultural Diversity Opt B, Cultural Diversity BFA, Asian Studies, Humanities & History, Expanded Classroom

- **ADFA-344 Islamic Spain: Art and Architecture**

Credits:

4.00

Description:

This course examines the Islamic influence in Spain through its art and architecture from its formative period in the eighth century through the fourteenth century and beyond to see the continuity and change of the Mozarabic style found locally in Madrid, Cordoba, Seville, and Granada. Students will use formal analytical skills to critically explore works of art and architecture and will cultivate a 'lens' through which they will facilitate their understanding of the classic and contemporary material culture and fabric of Spain. Class meetings will be supplemented with field trips. Offered as needed.

Type:

Humanities Literature Requirement, Humanities & History

• ADFA-345 Art of India

Credits:

4.00

Description:

A chronological survey of South Asian art (2300 BCE - 1750 CE) including India, Pakistan, Bangladesh, and Nepal. Examination of art and architecture from their first and still mysterious beginnings in the Indus Valley, through the great masterpieces of Buddhist and Hindu art to the coming of Islam, including the eclectic culture of the Mughal courts and the golden age of miniature paintings. Consideration is given to the multiple aspects of patronage in Indian culture - religious, political, economic - through case studies of individual works of art and architecture. (Formerly HUM 345)

Type:

Humanities & History, Cultural Diversity Opt B, Humanities Literature Requirement, Asian Studies

• ADFA-346 Art of the Silk Road

Credits:

4.00

Description:

This course will examine the arts and architecture of the Silk Road, with particular attention to art of Buddhism, Hinduism, and Islam. Historically, Inner Asia was marked by trade routes (the 'Silk Route' or 'Silk Road') which crisscrossed this vast landscape of deserts and mountains between China, India, the Iranian Plateau and the Mediterranean world. In addition to the art of these cultures, we will also look at the records of early Chinese travelers through Central Asia. (Formerly HUM 346) Offered as needed.

Type:

Humanities & History,Cultural Diversity Opt B,Humanities Literature Requirement,Asian Studies

• **ADI-221 History of Furniture & Architecture I**

Credits:

4.00

Description:

The goal of this course is the enhancement of the student's critical comprehension of historic styles and the impact they have on contemporary design solutions. The survey begins with the Egyptian period and provides an overview of the history of furniture and architecture through the mid-1700s, including ancient Greece and Rome, the Gothic and Renaissance, Baroque and Rococo periods. Emphasis will be placed on chronological periods, the visual characteristics of each style including regional idiosyncrasies, and the terminology germane to a study of furniture and architecture.

Term:

Offered Both Fall and Spring

Type:

Humanities & History,Humanities Literature Requirement

• **ADI-222 History of Furniture & Architecture II**

Prerequisites:

ADI 221

Credits:

4.00

Description:

A continuation of History of Furniture & Architecture I, this course will extend the investigation of furniture and architecture into the 20th century, while addressing issues concerning preservation, restoration, rehabilitation, and adaptive re-use. Drawing on the vast resources of the city of Boston and its environs, students will become actively involved in stylistic progression, local living history, and the benefits of preserving our past for future generations. Field trips will include visits to restored Federal, Victorian and Contemporary venues.

Term:

Offered Both Fall and Spring

Type:

Humanities & History, Humanities Literature Requirement

- **ADG-224 History of Graphic Design**

Credits:

4.00

Description:

The first part of the course will focus on the history of graphic design from prehistoric times to the Industrial Revolution, including the origins of graphic communications in the ancient world, the development of the alphabet and early printing and typography. The second portion will concentrate on the period from the late 19th century to the present, and will include the Arts and Crafts Movement, the various-isms and their influence on modern art, the Bauhaus and International Style, and contemporary visual systems and image making.

• PHIL-219 Philosophy of Art

Credits:

4.00

Description:

What counts as art? What is beauty? Are there objective standards of beauty? This course examines the nature of aesthetic experience, art, beauty, and creativity. Through the classic and contemporary readings, the students will be introduced to philosophical issues concerning the meaning of art, artistic representation, perceptions of art, interpretation, and criticism. Students will be encouraged to reflect on their own experience of art and explore the relationships among the artist, the audience, the artwork, and the world. 1 term - 4 credits. Normally offered every third year.

Type:

- **PHIL-250 Social & Political Philosophy**

Credits:

4.00

Description:

An examination of persistent debates in political and social philosophy, such as the meaning of property and welfare, the tensions between liberty and equality, censorship and freedom of expression, the relation of church and state, the possibility of political education and civic virtue, legitimacy of the state and revolution, war and problems of end and means, addressing historic injustice, such as racism, genocide, or sexism, among other topics. The class will focus on no more than two such themes. Students will read both classic and contemporary writings to address both the historical roots and the contemporary treatment of these questions. 1 term - 4 credits. Normally offered every year.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **PHIL-255 Science, Myth, and Society**

Credits:

4.00

Description:

Both mythology and science arise from the human need to explain the world, to understand its laws, and give an account of its origin. This course focuses on the controversial relationship between myth and science and explores their historical roots, their social influence and their respective views of reality, human nature, and origin of the universe. Both historical controversies and contemporary debates, such as evolution vs. intelligent design, will be considered. Topics in the philosophy of science, such as the nature and scope of the scientific method, will also be addressed. 1 term - 4 credits. Normally offered alternate years.

Term:

Seminar for Freshmen: 1 course, 4 credits

Students with 15+ transfer credits of college or university work are exempt. Choose one Seminar for Freshmen course from those listed below:

- **SF-101 Fixing the World- Energy and Water: The Science of Solutions**

Credits:

4.00

Description:

Two of the most daunting challenges the world faces (or will face) is how to provide for both its growing energy needs and potable drinking water. Regular news events include climate change, droughts, flooding, and petroleum struggles. Human nature often requires a severe crisis before it responds. This course will investigate the historical science driving the use of energy since the Industrial Revolution to convert energy resources into work, including the steam engine, the electric motor, and the internal combustion engine. It will also consider alternative energy options to fossil fuels, such as solar, wind, geothermal, and ocean power. Along the way we will consider the evidence for Global Warming and Climate Change. We will look into human nature, simple life styles, conspiracy theories, and the influence of those in power to shape human opinion. We will also consider how our water supply is provided and where it goes after being used. What options do developing countries or drought racked areas have to remedy their water needs? Although the course pursues a scientific understanding of these issues, the mathematics used will be gentle, and a larger emphasis will be placed on the intuitive appreciation of these concerns.

- **SF-132 The Beatles: Here, There & Everywhere**

Credits:

4.00

Description:

This seminar will investigate the impact and legacy of the Beatles. The Fab Four deserve our scholarly attention as musical innovators and as cultural avatars of the 1960s, an era that still exerts influence today. We will examine the many ways in which the Beatles rocked the establishment and became defining figures in post-war youth culture. We will also discuss other media (the visual arts, film, fashion, style) and fields of study (mass media, marketing, recording technology, copyright law, English history) using the Beatles as our guides.

- **SF-151 Getting Over It: Dealing With the Aftermath of Group Conflict/Mass Atrocity**

Credits:

4.00

Description:

Once violent conflict between two groups has ended, what is the best way to transition back to normality coming to terms with the past or simply moving on? To answer these questions we will examine the debates surrounding war crime tribunals, truth commissions, lustration policies, and reparations in the second half of the 20th century. Case studies will include post-apartheid South Africa, post-WWII Germany, and the Israeli/Palestinian conflict. We will discuss the philosophical problems raised by each of these instruments, as well as on the political, legal, and practical difficulties their implementation present. Cultural Diversity B

Type:

- **SF-156 The Mask Behind the Face: Personas, Personalities, and Perception. Acting in /Out Life**

Credits:

4.00

Description:

The theatre has always been a metaphor for life. In modern times life has become theatre. This seminar will confront the idea of real life and the eroding boundary between performers and audience. Students will study the roots of the contemporary obsession with stars and stardom, a mania that began in the 18th century and flourished in the 19th century. We will look at performance studies, performers memoirs, plays, and films that dramatize this dilemma.

- **SF-173 Crime in American Society**

Credits:

4.00

Description:

Popular beliefs about crime are often inspired by the media and by specific criminological theories. These theories about and media images of crime will be examined in detail, including the hits and misses.

- **SF-174 Tragedy and Literature**

Credits:

4.00

Description:

This course will focus on classic works of ancient and modern literature that examine the human condition from a tragic perspective. We will concentrate on close readings from the following texts: Homer's Iliad, Sophocles' Antigone, The Bhagavad-Gita, Shakespeare's Othello, Chekhov's short stories, and Joyce's Dubliners.

- **SF-178 Sacred Hoops & Sneaker Pimps: Understanding the American Hoop Dream**

Credits:

4.00

Description:

This course is about the basketball hoop dream played out at the high school and college levels. We will study a wide variety of materials - novels, films, websites, reference works - to understand both the construction, and destruction, of the hoop dream in such diverse places as New York City, Seattle, rural Indiana, suburban Georgia, and the Wind River Reservation in Wyoming. Issues of race and culture will serve as guiding themes as we develop critical theory explaining why the hoop dream has persisted, and adapted, over time, to fit the needs of its believers and supporters.

Type:

Cultural Diversity Opt A

- **SF-182 Heroes, Antiheroes and Outsiders: Reading the Graphic Novel**

Credits:

4.00

Description:

How is it that comics", a genre often viewed as entertainment for children and adolescents, has become one of the most exciting forms of narrative and visual art? To answer this question, this seminar will examine a range of graphic novels, from those that celebrate their origins in superhero comics, such as Alan Moore's Watchmen, to those that treat subjects not usually considered proper to the comics genre, such as Art Spiegelman's Maus, about the Holocaust, and Alison Bechdel's Fun Home, about the complexities of sexual identity. As we read these works, we will look at how the combination of words and still images makes the graphic novel a unique storytelling form, as well as how artists and writers push the envelope to create new styles and challenge our expectations. In addition to class discussions and writing assignments, we will take a field trip to the Museum of Fine Arts and create a collaborative group graphic novel step-by-step over the course of the semester (all abilities welcome).

- **SF-183 Politics, Power and the Media**

Credits:

4.00

Description:

Is there a relationship between accumulated political power and mass media representations? Is news content impacted by existing political power relations? It is the object of this course to critically analyze the role of the mass media within the framework of existing political power relations in the United States. In particular, the course will focus on the role the mass media plays in promoting and reinforcing dominant political practices and ideologies. The course will begin by exploring various theories of the press, notably its function in a democratic society, as well as the concepts of power and propaganda. We will continue with a series of case studies, complemented by secondary sources that highlight how media representations affect the contemporary distribution of political power in the US. Topics of discussion will include the current US war on terrorism, the ongoing health care debate, the public disavowal of big government", and the concept of a liberal media.

- **SF-189 American Gothic: Edgar Allan Poe, Flannery O'Connor and Annie Proulx**

Credits:

4.00

Description:

This literature seminar will study and compare the short stories of Edgar Allan Poe, Flannery O'Connor, and Annie Proulx. Beginning with Poe as the father of the short story genre in America and exploring his critical theory of the grotesque and arabesque", the class will examine the emergence of the gothic literary idiom as a classic American genre. Critical essays on the gothic aesthetic will be analyzed and film adaptations and documentaries will be viewed.

- **SF-191 Film Adaptation Film Adaptation**

Credits:

4.00

Description:

Why did they change the ending of the book? The novel is so much better! We will explore the concept and industry of film adaptation. Students will read novels and watch respective film adaptations to explore how the written word is adapted to the screen; both fiction and non-fiction works will be considered. Also, field trips to past film locations in Boston will be taken to explore why specific settings were chosen for respective situations. Additionally, students will create their own written adaptations of source materials, putting into practice the concepts studied in class.

- **SF-197 Sustainability, Energy, and Technology At Suffolk University**

Credits:

4.00

Description:

In this project and team-based course, students study a sustainability problem at Suffolk University and spend the semester developing proposals to address the problem. At the end of the course students will present their proposals to Suffolk University's sustainability committee, and will exhibit their websites and visual aids in the Donahue lobby to educate the Suffolk community about sustainability. If their proposals are well-researched and well-communicated, students can see their ideas actualized while they are still undergraduates.

- **SF-198 Music and the Brain**

Credits:

4.00

Description:

What accounts for the power of music to move us so profoundly? This course explores how our brains and music evolved together: What music can teach us about the brain, what the brain can teach us about music, and what both can teach us about ourselves.

- **SF-1127 The Vietnam and Iraq Wars: Polarized Perspectives**

Credits:

4.00

Description:

This class will examine some of the many controversies surrounding the Vietnam and Iraq Wars, two conflicts that have been profoundly polarizing for the American people. There are widely divergent perspectives regarding the fundamental questions surrounding each war. Were the reasons for American involvement just? To what extent were the methods used by the United States military during each war just? To what extent did the media play an appropriate role before, during, and after each war? Did opposition to these wars serve primarily to benefit the enemies of the United States or did it constitute a form of patriotism and love of country? This interdisciplinary course will address these and other complex questions by examining the histories, literature, and films (both documentaries and dramatic) that have been produced in response to these wars.

- **SF-1128 Sustainable Media**

Credits:

4.00

Description:

Contrary to a popular perception that information, communication and entertainment technologies are clean, ecologically benign and paperless, the reality of an increasingly digital life is that our fascination with the next best thing in mobile phones, video game consoles, personal computers, digital cameras, tablets, etc., has devastating impacts on our environment. These media devices are manufactured using toxic ingredients in poisonous working condition, require an abundance of energy to operate, and create hazardous waste when disposed. Media technology companies and the advertising industry that markets their wares have successfully persuaded consumers to accept rapid obsolescence and to highly anticipate the latest upgrade. But some consumers, electronics manufacturers, policy makers, and environmental groups are working to change the culture of consumption in favor of sustainable media practices that lessen the environmental footprint of the digital devices we use everyday. The purpose of this course is to understand the problem of unsustainable media, and the possible solutions for a sustainable media system.

- **SF-1129 Beacon Hill: Fact, Fiction, and Fantasy**

Credits:

4.00

Description:

The course will explore the physical geography, history, and image in literature, film, and pop culture of Suffolk University's Beacon Hill neighborhood. The purpose and objective of the course is to provide students with a deep knowledge, understanding, and appreciation of Beacon Hill through examination of written and visual sources, and feet-on and eyes-on experience of the public parts of the Hill.

Type:

Local Engagement Experience

- **SF-1141 Classical Civilizations: Pathways to Wisdom**

Credits:

4.00

Description:

How is it that the knowledge, intelligence, wisdom and values of the Greeks and Romans still educate and edify the world by providing venues towards leading fulfilling and dignified lives? The guiding principles of their respective civilizations rested upon eight pillars: - Humanism: It was recognized that humans have the potential to master their world and live life to the fullest. -The Pursuit of Excellence: To imagine the highest good and strive to attain it. - Self Knowledge: It is imperative to know oneself before seeking to know the world. - Rationalism: Always question, reason and discern truth from falsehood and never consider any matter superficially. - Restless Curiosity: Often the resolution of one issue leads to the revelations

of others mysteries and pursuits which compels further investigation. The wise individual makes this a lifelong endeavor. -Love of Freedom: As long as one brings no harm to others, one must be free to live and discover as much as possible. - Individualism: All are unique and, therefore, must recognize individual strengths and identity. -The Practice of Moderation: The prudence of avoiding extremes in personal and social conduct. In this course, students will read two (brief) texts on the Greek and Roman contributions to the world and then will proceed with specific readings which illuminate the eight principles above for achieving the good life.

- **SF-1143 In the First-Person: Storytelling in the 21st Century**

Credits:

4.00

Description:

This section of the Seminar for Freshmen will consider the forms, venues, and impacts of narrative nonfiction in contemporary culture. From the exploding popularity of personal essays in the digital age to the living, evolving essays we create on social media, we are constantly narrating and archiving our lives, shaping their content for specific audiences. In doing so, we shape what our experiences mean and represent. In order to analyze the power of narrative nonfiction, we will look at a variety of multimodal texts: essays, podcasts, Instagram and Twitter feeds, stand-up comedy, and storytelling slams, as well historical texts such as the essays of Michel de Montaigne and historical artifacts at the National Archives in Boston. We will also write our own narrative nonfiction, and adapt our first-person stories for listening and viewing audiences, such as the MassMouth story slam and podcasts like This American Life. Additionally, we will practice narrative nonfiction for professional audiences, using storytelling as a way to showcase personal strengths to employers, internship coordinators, and the like.

- **SF-1144 Native Americans: Walking in Two Worlds?**

Credits:

4.00

Description:

Native Americans are often described as walking in two worlds, as they attempt to navigate the process of maintaining their tribal identity and heritage while living in mainstream America. In recent years there has been a shift towards tradition and heritage, and a rejection of Western values and norms in both the US and Canada. In this course we will look at how Native people live in the US and Canada today, and examine the extent to which they are either trying to walk in two worlds or perhaps rejecting the two worlds model. To help us answer this question, we will read about reservation life, the Idle No More Movement, Indigenous History, and current events. We will also watch videos and explore indigenous culture.

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

Type:

Diverse Perspectives

- **SF-1146 Fido the Friendly Wolf: A Natural History of Dogs**

Credits:

4.00

Description:

This course explores the evolution of dogs from wolves and the ways in which dogs have adapted to their niche in human society. The ecology, behavior, genetics, and adaptations of dogs will be explored in relation to both their wolf ancestry and artificial selection by humans. The course includes 2 mandatory field trips to a wolf sanctuary and an animal shelter.

- **SF-1147 Global (In) Security: From ISIS to Ebola**

Credits:

4.00

Description:

This course reviews the principal features of global and national security as it is currently practiced by tracing the evolution of theories, policies and circumstances whereby current international security is developed. Students will evaluate the nature and origins of war, arms proliferation, military instability, terrorism, genocide, health threats and natural resources depletion.

- **SF-1148 Brave New Worlds**

Credits:

4.00

Description:

Explores themes of adventure, self-discovery, exile, and culture shock in classic and contemporary travel writing (including fiction, poetry, and non-fiction) as well as film. Students will experiment with creative writing of their own, develop theories of cosmopolitan world citizenship, travel through the city of Boston on field trips, and team up to learn about different countries in Suffolk's global network of study abroad programs.

• SF-1150 Religion in Contemporary Society

Credits:

4.00

Description:

This course is design to provide students with an overview of the social settings and cultural meanings of religion in the contemporary world. Topics that will be covered in reading and discussions include the rise of religious fundamentalism, religion and violence, women's and men's religious experiences, new religions, and portrayals of religion in popular films. In addition to the readings, students will observe and experience religious expressions and activities through fieldwork assignments. The emphasis on films and fieldwork reflects my belief that religion is made up of lived experiences of actual individuals and communities. In order to understand religion in contemporary society we will make every effort to see (in person or in film) a wide range of religious activities. The films we will see include some of the following: Leap of Faith, Devil's Playground, Kadosh, Women of Hizballah, Singing Stream, A Still Small Voice.

• SF-1151 Reproduction and Society

Credits:

4.00

Description:

This course explores relationships between reproductive health and rights both nationally and internationally. Many of our topics fit into two broad areas: conflicts over the control of childbearing (sterilization abuse, birth control, and abortion) and conflicts over who deserves to be a mother, especially when the mothers in question face social stigma and lack political power. Other topics include safe birth and maternal mortality, breastfeeding, infertility and reproductive technology. We also examine the politics of women's sexual and reproductive autonomy, including the policies that shape women's choices to prevent, achieve, abort, or carry to term a pregnancy. Throughout, we are guided by the following questions: Why is reproduction an important site through which to understand society? How do statuses such as race, class, gender, sexuality and ability

influence people's reproductive possibilities? What is the role of the state in shaping these experiences? How have communities supported or resisted efforts at reproductive control? Why is reproductive justice central to these answers?

- **SF-1153 Law, Disease, and Public Health**

Credits:

4.00

Description:

This course is about public health law, which is the study of the legal powers and duties of the various systems of government in the United States (federal, state, and local) in collaboration with their partners (e.g., health care, business, the community, the media, and academe), to ensure the conditions for people to be healthy (to identify, prevent, and ameliorate risks to health in the population), and of the limitations on the power of these systems of government to constrain for the common good the autonomy, privacy, liberty, proprietary, and other legally protected interests of individuals. The prime objective of public health law is to pursue the highest possible level of physical and mental health in the population, consistent with the values of social justice. The course will focus especially on public health law in the area of epidemic disease. Case studies will be made of the Great Influenza of 1918 and the origins and spread of the Ebola virus, culminating in an examination of outbreaks of Ebola in the United States.

- **SF-1154 Introduction to Visual Studies**

Credits:

4.00

Description:

This seminar provides an introduction to Visual Studies, a relatively new interdisciplinary field that examines how images communicate and the roles that they play in society. Students will apply the concepts and techniques of Visual Studies to analyze sites and signs around Boston, such as advertisements, street signs, fashions, newspaper photographs, buildings, and public spaces. Class projects will increase students' awareness of their visual environment and their ability to critically analyze the visual rhetoric that surrounds us and is often used to manipulate us.

Type:

Local Engagement Experience

Students in the CAS Honors Program should choose one Seminar for Freshmen course from those listed below:

- **SF-H116 Enlightened Insanity**

Prerequisites:

CAS Honors students only.

Credits:

4.00

Description:

Rain or shine, the great 18th century Enlightenment philosophers would meet at the famous cafes of Paris to discuss their ideas, and to observe and criticize society. From these informal debates emerged ideas that are at the core of our modern understanding of the nature of society, marginality, human nature, civil rights, the essence of creativity and genius. Come join us in the quest to understand, define, observe, and analyze the key ideas and concepts of these great thinkers, such as Rousseau, Diderot, and Voltaire, still so relevant in our time. We will read key works of these creative thinkers and philosophers. We will enrich our experience and understanding through the use of film, theatre performances, museum visits, as well as the occasional cafe debate.

Type:

Expanded Classroom Requirement, Honors

• SF-H126 The Boston Theatre Scene: The Inside Experience

Credits:

4.00

Description:

Using the current Boston theatre season as its syllabus, this writing- and analysis-intensive course will explore several plays in production at some of Boston's many professional theatres. We will study the script of four to five plays before attending performances of those works. Students will gain insights on the world of theatre through backstage tours and conversations with theatre professionals such as producers, directors, actors, designers, playwrights, and critics. Students must be available for evening (usually Wednesday) performances. A fee for student-rate tickets will be assessed.

Type:

Honors

• SF-H1134 The Meaning of Life

Prerequisites:

CAS honors students only.

Credits:

4.00

Description:

What do we live for? Which beliefs, values, and experiences sustain meaningful, fulfilling existence? Are we authors of our destinies or powerless pawns in an unfathomable cosmic game? Does death render all our efforts superfluous? This award-winning course offers a cross-cultural, interdisciplinary exploration of these questions through philosophical and religious texts, art, fiction, autobiography, and psychological studies. The course opens with the Old Testament's book of Ecclesiastes, followed by three units: 1) A Life Worth Living: Humanity's Ideals focuses on the ancient and modern visions of human flourishing; 2) Threats to Meaning: Humanity's Discontents, discusses the disillusionments leading to the loss of meaning; and 3) Recovery of Meaning: Crises and Hopes, explores the post-crisis possibilities of self-discovery and growth. Please visit <http://meaningoflife.cherkasova.org/>

Type:

Honors

• SF-H1135 Women Warriors: Stories of Captivity, Conversion, and Confession

Credits:

4.00

Description:

Since the beginning of time, women have been doing battle to themselves, while men have gone to battle against others. Whether it is through converting to Christ, yielding to captors in order to survive, or carrying a baby, this course introduces students to the many ways in which, whatever battles they face, women are warriors; they survive. Utilizing an array of captivity, conversion, and confession narratives by women, and pairing them across the centuries, students will make connections and draw conclusions between early-and mid-19th-century-American and contemporary women. Students will connect, for example, the trials of the 17th-century Puritan captive, Mary Rowlandson, and contemporary hostage, Elizabeth Smart, to explore how women (no matter how different they seem) draw upon unique inner resources to survive.

Type:

Honors

- SF-H1152 The Idea of America: Past, Present, Future

Credits:

4.00

Description:

A systematic exploration of thinking of and about America, from the founding of the republic to American issues and traditions of thought that reflect upon the founding principles and the unfolding American experiment. The Declaration of Independence and the Constitution will be studied with an eye to their philosophical content and sources. The course will also examine works of philosophers and other thinkers who address conflicts over the meaning of founding principles in the course of the nation's history, from the struggle over slavery to America's contemporary role in the world. Because this course intends to apply theoretical understanding to real life, students will be expected to read contemporary journalism on a regular basis and assess the controversies of today in the light of the nation's philosophical and historical currents.

Type:

Honors

Major Requirements Minimum: 8 courses, 32 credits

Complementary Major Requirements, Minor Requirements, and Free Electives: credit varies

Minimum Total Credits Required for Degree Conferral: 126 credits

2015-2016 Archived Catalog Information

Bachelor of Arts

All BA degree programs require the successful completion of the following courses:

Core Requirements: 12-14 courses, 46-55 credits

- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)

First-Year Writing: 2 courses, 8 credits

- WRI-101 First Year Writing I

Credits:

4.00

Description:

Study and practice of the writing process and revision in terms of expository writing modes for an academic audience.

- **WRI-102 First Year Writing II**

Prerequisites:

WRI 101.

Credits:

4.00

Description:

Study and practice of argumentative and research writing through further work with writing process and revision and the critical reading of a variety of texts.

A student may be assigned to other writing courses or may be invited to take WRI-H103. Students required to complete ENG-099 may be allowed to waive WRI-101 with a grade of “B” or better and the approval of the English department. Students who are invited to complete WRI-H103 and earn a “B” or better satisfy the two Writing Requirements. Waiving a course does not earn credits.

- **WRI-H103 Advanced First Year Writing**

Prerequisites:

By Invitation Only.

Credits:

4.00

Description:

This course is by invitation only and reserved for incoming Suffolk students with high admission scores. Advanced study and practice of writing process, revision, and research, based on close readings of a variety of texts. Fall semester only.

Type:

Honors

Major Requirements Minimum: 8 courses, 32 credits

Creativity & Innovation: 1 course, 3 credits

Choose one 100-level Creativity & Innovation course from those listed below:

- ADF-S171 CI: Integrated Studio 1

Credits:

3.00

Description:

This cross-disciplinary course will integrate the ideas and practices of two-dimensional design, color and drawing emphasis will be placed on understanding the creative process, exploring concepts and developing research skills. Students will undertake individual and collaborative projects in three spaces; the studio classroom, the digital world and the city at large.

Type:

Creativity and Innovation, Arts Admin Minor Elective

• ADF-S172 CI: Integrated Studio II

Prerequisites:

ADF S101

Credits:

3.00

Description:

This course builds on the Integrated Studio 1 experience: synthesizing fundamental visual ideas. IS 2 investigates the construction, documentation, and transformation of volumetric form, environmental space, and time. Projects will explore narrative strategies and the creation of immersive experiences. Students will develop critical and analytical skills while employing a range of traditional and digital media-including video/sound capture and editing-as they explore the creative boundaries of the classroom studio, the city of Boston, and virtual space.

Type:

Creativity and Innovation

• CI-101 Process and Epiphany

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Despite its mystical connotations, creative epiphany is the result of a long engagement with the creative process that results in a surprising and unpredictable understanding of a concept or the solution to a problem. In the way that the discoveries of science are guided by the scientific method, the path to creative innovation is through a directed creative process. All creative innovators follow such a directed creative process, whether they are industrial designers or fine artists, performers or inventors, architects or entrepreneurs. This course explores both historical examples of individuals whose creative innovation changed the world, as well as hands-on collaborative, practical problem solving employing the creative process.

Type:

Creativity and Innovation

• CI-102 The End of Global Poverty

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course is designed to demystify the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking. More than one-third of our global population lives in poverty, earning less than two dollars a day. Governments, businesses, social enterprises, and charitable organizations have tried to solve the global poverty issue with mixed results. What is the solution? Is entrepreneurship the solution, part of the solution, or has no impact whatsoever? In this course, you will gain an understanding of the power of entrepreneurship (in the context of creativity and innovation), the definition and depth of global poverty (in the context of constraints, such as human, financial and physical resources embedded in local, regional, national and global cultures), and successes and failures of past initiatives to reduce poverty. This is not a course about politics or business, but rather finding a solution to a problem that has eluded mankind since the beginning of time.

Type:

Creativity and Innovation

• CI-103 Making Inventions: Sticking Your Neck Out

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course examines cutting edge technologies, the science behind them, and their practical application and follow-up success or failure. It also provides the students a chance to consider the relevance of identified needed inventions from the 1950s, and whether those projections were correct. The history behind some remarkable inventions will be presented. Finally, working in small teams, students will brainstorm to identify something useful to invent and determine several approaches to implementing it.

Type:

Creativity and Innovation

• CI-106 Failing Successfully

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course is designed to demystify the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking. Did you know Netscape was the internet browser? What about MySpace, arguably the Facebook of the last decade? What led Apple from being innovative pioneers of the 70's to the verge of extinction in the 80's to the technological giant they are today? Technologies come and go, but what leads to organizations lasting more than 100 years such as IBM, General Electric, etc.? What role does failure play in successful innovation, decision-making, and business viability? In this course, you will learn about innovation that may have been successful and well-executed. You will also learn about innovation that was a viable business opportunity, but poorly executed: one phase of failure. In addition, you will learn about innovation that had no real market viability, but was launched anyway: another phase of failure. Can failure lead to success? If so, how?

Type:

Creativity and Innovation

- **CI-107 Going Up: Skyscraper Design in Emerging Economies**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The human population is expected to be between 8.5 and 9 billion persons by the mid-21st century. The majority of those individuals will be living in urban communities. With large populations, high real estate costs, and limited land areas, the only way to construct in urban environments is to go up! In this course, students will have an opportunity to look at traditional and novel skyscraper designs, to consider the cultural and economic significance of such structures, and to use their imagination to develop a conceptual design of a skyscraper.

Type:

Creativity and Innovation

- **CI-108 Designing the Next Best Thing**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Demystifies the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking

and risk taking.

Term:

Offered Both Fall and Spring

Type:

Creativity and Innovation

- **CI-109 Virtual Globe Trekking: an Alternate View of the World**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will examine creativity and innovation through the lens of place. Modern geography is an all-encompassing discipline that seeks to understand the earth and all of its human and natural complexities - not merely where objects are, but how they have changed and come to be. The world is filled with ideas and perspectives. By changing your location, new perspectives emerge. This course will focus on the creative process to understand that each person creates in their own way. The students will test many methods to draw forth creative thought and seek to identify their own best method for calling on their own inner genius. Often this will involve failure and mixed results, yet this is where the students will learn their strengths and weaknesses.

Type:

Creativity and Innovation

- **CI-110 The Entrepreneur's Cocktail**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

How do you and your story drive business? This course takes an innovative look at human creativity and entrepreneurship. As an entrepreneur needs perseverance and high motivation, we will explore the importance of values, risk taking, problem solving, and the discovery of the market opportunities. In order for you to be creative and essentially create successful ventures, you will discover the nuances between the three factors and explore them further through interactive discussion and debate as well as collaborative group work. You will be encouraged to think in non-conforming ways and apply new concepts and develop your own personal operating principles.

Type:

Creativity and Innovation

- **CI-111 The Future of Boston**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course introduces students to creative and innovative thinking based in the field of communication. Students will work in teams to wrestle with the challenges Boston will face in the future and propose feasible strategies to meet them.

Type:

Creativity and Innovation

- **CI-113 Revising Reality**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Reality and perception have been debated and discussed for millennia. Humans see and experience their world in different ways. How do humans determine what is true and good and what advancements are necessary? In this course, students will creatively explore these big questions and revisit knowledge using new and sometimes divergent perspectives. Students will participate in dirty and courageous learning by crafting products, creating visual projects, and coming into original thought via trial and error. Students will also develop their analytical and critical thinking skills, while learning to communicate effectively and honestly.

Type:

Creativity and Innovation

- **CI-117 Writing for Stage and Screen**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will engage students in the process of script writing. Working in groups of four or five they will craft adaptations of stories, create original scenes, or review sketches. By the end of the semester they will produce a complete script. Each alternating week, one group will serve as the executive committee that will approve the final draft of the script of the week. There will be exams based on the textual study of collaborative and adaptation techniques.

Type:

Creativity and Innovation

• CI-121 Catastrophe Management: From 9/11 to the Boston Marathon Bombings

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will introduce students to the exciting world of emergency management from the perspective of scientists who are often utilized as experts during both small scale adverse events and large scale catastrophes. Students will actively and creatively explore the psychological, economic, and medical dimensions of these events and participate in role play in the classroom and site visits. By the end of the course, students will have a keen appreciation of emergency planning and management on the local and national levels.

Type:

Creativity and Innovation

• CI-123 Comics & Co.

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Using visual narrative as the means of exploration, students will be led through a series of exercises that challenge their assumptions, broaden their perspectives, and excite their imagination. The relationship between critical, creative and inventive thinking will be the basis for individual and collaborative projects.

Type:

Creativity and Innovation

• CI-125 Boston's Creative History in Perspective

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Our collective social consciousness is formed by physical space; through a mixture of exploration, discovery, and making, students will delve into the city that surrounds them, developing a sense of ownership and engagement in Boston's public space. During the course of the semester, students will uncover the ways that art and architecture have shaped the souls of cities around the world, using Boston as a template. In a series of local field trips, students will explore Boston through its art and architecture, focusing not only what is, but on what might have been -- designs that were ultimately unrealized. Through interview and visits with local artists and designers, students will also learn about the process of shaping public space, uncovering the myriad of ways that design decisions are political in nature. As a capstone to the course, students will create their own city plan -- identifying and researching a chosen social or physical challenge the city faces, then developing a proposal that would address their chosen issue. These design proposals will then be enacted using augmented reality. Like a layer of invisible ink, these projects will form a phantom city over the physical realities that surround us, displaying the dramatic potential of the imagination.

Type:

Creativity and Innovation

• CI-127 Visual Perspectives: Coastline, Symmetries and Illusions

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

How do you measure the length of a coastline? How much symmetry is possible? What is an impossible object? How did the Mayans measure proportions? In this course, students will delve into these and other questions with a visual theme. While some will be clear-cut, others will be open-ended and require some choices, estimates or assumptions to be made. Throughout, the emphasis will be on creative problem solving.

Type:

Creativity and Innovation

- **CI-129 Elements of Attraction- Supply and Demand**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The intent of this course is for students to examine and effectively express in writing their ideas on creativity and to inspire undergraduate students to exceed their current levels of learning. Students will learn to meaningfully integrate course content into long term-retained useful skills through applied creative collaborations. This course is based on the idea that exposure and insight development will enable students to better visualize themselves in their desired fields and make informed choices within the variety of options available to them. The focus of the course will help students to assess their personal interests and strengths as they plan for their own educational and professional futures.

Type:

Creativity and Innovation

- **CI-131 Off to the Future: Leadership Through Compromise**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Some past political issues were resolved with great success (the Compromise of 1820), and some resulted in great failures (the US Civil War). In this course, students will study noteworthy political dilemmas of the past, identify the major problem solvers and examine the art of compromise. These investigations will provide guidance and inspiration for students to develop innovative and creative solutions to present day political problems such as climate change, immigration, Social Security, income distribution, higher education affordability, and homelessness. Students will work in teams and propose creative and innovative solutions that will convince the affected interest groups favorably, represented by teams of other students in the class, and result in compromises solving tomorrow's problems today.

Type:

Creativity and Innovation

• CI-133 Franklin and the American Experiment

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

What made Benjamin Franklin such a creative force in American history? We will explore the many facets of Franklin's life (printer, writer, scientist, statesman) and learn about Benjamin Franklin's political and diplomatic ventures, and will recreate some of his scientific experiments.

Type:

Creativity and Innovation

• CI-135 The Design of Everything

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will explore a selection of the genius personalities and their creative work in 5 distinct areas of human creative endeavor; art, science, nature, technology and the built environment. The course explores the underlying similarities in the process of their discovery, invention and creativity across the disciplines. Studying such names as Newton, Warhol, Hawking, Jobs, Gaudi and Banksy, students will uncover the process of design through research, analysis, synthesis, iteration and error. In class group projects will allow a hands-on opportunity to create.

Type:

Creativity and Innovation

- **CI-137 Re-write for Rights: Drafting a New US Constitution**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The American Constitution is an important document, framing the basis for our lives and the lives of our neighbors. Yet it is also a very old document, which may be seen as lacking when it is compared to newer constitutions from around the world, even places that we may regard as undeveloped. In this class we will study many constitutions and also talk to many people to craft a new constitution that reflects contemporary American society and its values.

Creativity and Innovation

- **CI-139 Creating, Promoting, and Participating in the Literary Arts**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

With the launch of Boston's new Literary Cultural District, we have renewed cause to celebrate the history and industry of literature in our city. This course will immerse students in the world of literary culture and its many branches: writing, editing, reviewing, and publicity. Students will practice the art of creative writing, and learn how writers find publishing venues, how authors build platforms for their work, and how literature reaches the public through readings, social media, book trailers and other marketing campaigns, authors interviews, and reader reviews. Various industry professionals, authors, editors and publicists will speak to the class about the artistic and business opportunities, trends, and futures of literature and literary publishing. Students will apply their knowledge and interests to a variety of projects, including book reviews, author interviews, social media campaigns, literary events, and other collaborative projects. We will also work as a class to launch a new digital literary journal at Suffolk.

Type:

Creativity and Innovation

Note:

Students with 30+ transfer credits are exempt from this requirement.

Description:

Surveys business ethics as they transcend the diverse perspectives of global business. Explores current global ethics standards and values, ethical challenges, controversies, convergence and trends. Students explore famous global business cases through films, websites and independent research. Emphasizes identification and resolution of global business ethical issues within the context of ethical decision-making and sustainability. Analyzes corporate social responsibility ; hence, transforming global business ethics through business.

Type:

Diverse Perspectives

- **CI-204 Prague: Castles to Barbwire**

Prerequisites:

At least 24 credits earned.

Credits:

3.00

Description:

Prague offers students a more recent view into history and will serve as a backdrop to learning Design Thinking. The curriculum will use Czech and Central European cultural features as the inspiration for learning the creative process, skills that can be applied broadly and globally across disciplines. WWII and its fall to Communism left the Czech Republic undamaged. Artists played a vital part in the country's rise to a Republic during the Velvet Revolution. These dissidents, including writers, actors, artists and musicians were innovators who were the catalyst for change. One could say that creative minds changed this country. This course is designed to demystify the creative process by introducing the creative practice as a disciplined approach to problem solving and innovation requiring research. This one-month study abroad experience will offer a more worldly insight to the significance of developing skills where divergent thinking and risk taking are one of many key tools in learning to generate new ideas. Travel fee covers accommodations, transfers, some meals and cultural visits. Airfare and tuition not included.

Type:

Creativity and Innovation,Diverse Perspectives,Global Engagement Experience,Expanded Classroom Requi

- **CJN-216 Intercultural Communication**

Credits:

4.00

Description:

An examination of communication variations and cultural viewpoints and their impact on cross-cultural communication. A special emphasis is placed on rituals and message patterns in non-Western cultures.

Term:

Offered Both Fall and Spring

Type:

Cultural Diversity Opt B,Diverse Perspectives

- **CJN-219 Rhetoric of Protest and Reform**

Credits:

4.00

Description:

Examines the persuasive strategies of social reform movements with special emphasis on the civil rights', women's rights, and gay rights movements in the United States.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt A,Humanities & History,BSBA SOCIAL CHANGE,Diverse Perspectives

- **CJN-301 Documentary Film and the Image of Conflict in the Middle East**

Credits:

4.00

Description:

The course focus is on some of the divisions and conflicts within Israeli society. Students analyze and compare mainstream media discourse to alternative representations in documentary film. Analysis also covers media representation of the Israeli-Palestinian conflict.

Term:

Occasional

Type:

Cultural Diversity Opt B, Diverse Perspectives

- **CJN-385 Globalization of Media and Telecommunications**

Credits:

4.00

Description:

A critique of the circulation of media goods and ideologies from both a cultural and political/economic perspective. Topics include global Hollywood, the images of Muslim women in transnational media, the information society, and global social movements.

Term:

Offered Spring Term

Type:

Social Science,Diverse Perspectives

• GVT-360 Elections and Voting

Credits:

4.00

Description:

How are elections administered in the United States? Do Americans have confidence in the electoral process? Should they? Why or why not? This course will examine elections in the United States in detail -- from how they are funded to how they are administered to how voters behave. Students will have a choice of either serving as poll workers during the November election or organizing and conducting research of potential voters. Students will gain hands-on experience in actual research design, election administration, and non-partisan get-out-the-vote activities. In addition, students will gain a deeper understanding of the relationship between attitudes, opinion, and voting behavior in American politics and institutions. ECR

Type:

Humanities & History,Social Science,BSJ SOCIAL SCIENCE,Diverse Perspectives

• GVT-391 Canada: Multicultural Politics

Prerequisites:

GVT 110/120 or Instructor's permission

Credits:

4.00

Description:

This course examines the Canadian model of incorporating diverse communities into its constitutional and political framework, including the founding British North American Act of 1867, the 1982 Constitution Act, and two later attempts at constitutional reform. Canada's role in balancing two official languages, English and French, is discussed, as is its recognition of a First Nations native-governed territory in the Arctic. This course introduces

to the Canadian polity and compares its parliamentary system with the U.S. separation of powers system. Prerequisites: GVT 110, GVT 120 or instructor's consent. Normally offered alternate years. Cultural Diversity B

Type:

Cultural Diversity Opt B, Social Science, BSJ SOCIAL SCIENCE, Diverse Perspectives

- **GVT-467 Comparative Social Movements**

Prerequisites:

Junior status

Credits:

4.00

Description:

This class examines the political ramifications of social movements primarily but not exclusively within the United States. It looks at ideology, beliefs and mechanisms of mobilization. Another important focus is an analysis of non-white social movements in this country and their impact on domestic politics. Among the movements to be examined are: the Pan-African movement 1919-1939 which will, to some extent, take us outside this country; the U.S. Civil Rights Movement 1955 to 1969 which covers the rise of the Black Power movement; and the U.S. Labor Movement 1900 to 1955 in terms of non-white influence on its programmatic goals. Normally offered alternate years. Cultural Diversity B

Type:

• **PSYCH-243 Organizational Psychology**

Prerequisites:

Take PSYCH-114;

Credits:

4.00

Description:

Focuses on diversity concerns in various aspects of the psychology of the workforce. This includes job analysis, recruitment, selection, evaluation, training, retention, and termination. Employee morale, well-being, stress, and hardiness are considered.

Type:

Cultural Diversity Opt A,Social Science,Diverse Perspectives

• **RS-111 Introduction to World Religions: Western Traditions**

Credits:

4.00

Description:

This course will explore the comparative history and structure of Western religious traditions, broadly understood, and their impact on other world religions, while attempting to recognize the similarities and the differences among them. Traditions to be studied include Greek and Roman religion, the monotheistic faiths (Judaism, Christianity, and Islam, as well as Zoroastrianism, Sikhism and Bahaism). We will also explore the impact of the Western religions on indigenous traditions, such as African religion, Native American religion, and Pacific Island religion. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. 1 term - 4 credits. Normally offered every year.

Type:

Diverse Perspectives

- **RS-112 Introduction to World Religions: Eastern Traditions**

Credits:

4.00

Description:

This course will examine a variety of Eastern religions, including Hinduism, Buddhism, Jainism, Confucianism, Taoism, and Shintoism. Possible connections to be explored will be the impact of these traditions on others, such as Pacific Islands and African religion, as well as the growing place of Eastern religion in the West. This course will explore the history and structure of each tradition, while attempting to recognize the similarities and the differences among them. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. Normally offered every year. Cultural Diversity B

Type:

- **SIB-550 Global Travel Seminar**

Credits:

3.00

Description:

An in-depth analysis of timely special issues in international business. Specific topics are announced when the course is scheduled.

Type:

- **SF-190 Asia in America Fiction and Fact**

Credits:

4.00

Description:

With a focus on some selected ethnic groups from Asia, Asia in America studies the history and current status of Asian Americans in Boston and other parts of the country. We will examine the major reasons why these immigrants chose to leave their home country as well as their expectations and experiences here in America. We will also discuss the issues Asian immigrants have faced in this adopted home as well as the connections and conflicts among different ethnic groups or even within the same ethnic group due to political and socio-economic reasons. The course will include some level of community engagement, through Chinatown tour and service, which may enable us to have a direct contact with the Asian American population and reflect on what is being discussed in class. Through this course, we hope to gain a better understanding of the racial and cultural history of the country and arrive at a deep appreciation of the dynamics of cultural interactions in the twenty-first century. The course fulfills the SCGP requirement.

Type:

Cultural Diversity Opt A, Global Engagement Experience, Diverse Perspectives, Expanded Classroom Requir

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

Type:

Diverse Perspectives

- **SOC-227 Race in American Society**

Credits:

4.00

Description:

Despite the election of Barack Obama as President of the United States, race remains one of the most divisive forces in U.S. society. While many of us struggle against racism, racial classification continues to affect where we live, where we work, and how we see ourselves. Racial classification affects our access to health care and our encounters with police officers. Distorted images of racial groups fill television and movie screens. Appeals to racism and fear of foreigners are dominant themes in elections to state and national offices. This course examines the formation and re-formation of racial classifications: how particular groups become racially identified, how these classifications change over time, and how conflicts over race have shaped American society. The meanings of race, as seen from a variety of perspectives, will be a consistent theme throughout the course.

Term:

Occasional

Type:

Cultural Diversity Opt A,Diverse Perspectives,Cultural Diversity Opt B

- **SOC-228 Cultural, Global and Social Perspectives**

Credits:

4.00

Description:

Enables students to examine, as well as develop an awareness and appreciation of, diversity within today's society. Providing an overview of the major racial, ethnic, and cultural groups in the U.S., the focus is on the ways in which cultural awareness enhances professional helping relationships and improves the operation of human services systems.

Science, Technology, & Engineering (STE): 2 courses and corresponding laboratories where applicable, 8 credits

Choose two STE courses (and corresponding laboratory where applicable) from the list below. Courses do not need to be in a sequence. In the case of a course that is a lecture plus a lab, the student must complete both components to earn credit for the STE requirement.

Biology:

- BIO-104 Environmental Biology

Prerequisites:

BIO 101 and BIO L101, can also be taken concurrently BIO L104 must be taken concurrently

Credits:

3.00

Description:

An introduction to basic evolutionary, behavioral and ecological principles. Readings and discussions emphasize the ways that humans are affected by ecological processes and principles as well as how humans and their technology affect ecosystems. May not be taken by Biology majors or minors. This course will not fulfill requirements for a major or a minor in Biology. It is intended for non-biology majors as a follow-up to Biology 101. 3 hours lecture. Days Only. Madrid Campus only.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• BIO-L104 Environmental Bio Lab

Prerequisites:

BIO-104 must be taken concurrently

Credits:

1.00

Description:

Exercises and field trips designed to complement and demonstrate the ecological principles developed in the lecture section. The lab emphasizes the scientific method and employs long term group projects. Madrid Campus only.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• BIO-111 Introduction to the Cell

Prerequisites:

Must take BIO L111 concurrently

Credits:

3.00

Description:

Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L111 Introduction to the Cell Laboratory**

Prerequisites:

Concurrently with BIO 111

Credits:

1.00

Description:

Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-114 Organismal Biology**

Prerequisites:

Must take BIO L114 concurrently.

Credits:

3.00

Description:

Rigorous introduction to organismal biology emphasizing evolution, phylogenetics, form, and function. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L114 Organismal Biology Laboratory**

Prerequisites:

Must take BIO 114 concurrently

Credits:

1.00

Description:

A series of laboratory experiences in evolution, diversity, anatomy and physiology.

Term:

Offered Both Fall and Spring

Type:

- **BIO-201 Biology's Big Questions**

Prerequisites:

Non Science Majors Only.

Credits:

4.00

Description:

This course seeks to answer five current questions from all levels of biology, from the subcellular to the ecosystem level. Topics will be discussed in the context of genetics, evolution, and ecology. We will focus on the process of doing science, including how scientists evaluate ideas and communicate their findings. Emphasis will be placed on topics in biology that impact daily life.

Type:

SCI TECH ENGNR

Chemistry:

- **CHEM-105 Chemical New Product Development**

Prerequisites:

ENT 101

Credits:

4.00

Description:

This course addresses the crucial intersection between chemistry and business, and the impact of these fields on society. It provides an introduction to important chemistry concepts and practices of business management. Primary focus is on understanding the chemistry principles behind some of the consumer products in our everyday lives, and using this knowledge to create and evaluate ideas for new products. The course also introduces the business aspects involved in the development and marketing of new products. An important component of the course is in making effective

presentations; this component concludes the course, culminating in team presentations of a new chemical product to panel of executives and peers. This course satisfies the Sawyer Business School Science requirement.

Type:

SCI TECH ENGR

- **CHEM-106 Biotechnology & Its Applications in Medicine, Agriculture, Law**

Credits:

4.00

Description:

Introduces the latest discoveries and applications of biotechnology. Topics include genetically modified food, stem cells, genetic testing, cloning, and forensics. A combination of lectures, discussions, documentaries, mock congressional hearings, and hands-on activities will provide insight into the numerous medical, social, legal, and ethical issues surrounding this technology.

Type:

SCI TECH ENGR

- **CHEM-111 General Chemistry I**

Prerequisites:

Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:

3.00

Description:

Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **CHEM-L111 General Chemistry I Lab**

Prerequisites:

Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **CHEM-201 Caveman Chemistry**

Credits:

4.00

Description:

Caveman chemistry explores chemical technologies that have led to modern industrial civilization, with an emphasis on the chemistry we encounter in everyday life. Although this is not a laboratory course, it is very much a course about doing things. We will focus on the process of doing science, including how scientists evaluate ideas and communicate their findings, through literature and hands-on activities.

Type:

SCI TECH ENGR

Computer Science:

- **CMPSC-F107 Ants, Rumors and Gridlocks**

Prerequisites:

Math placement level of 2 or above or any MATH course at the level 100 or above

Credits:

4.00

Description:

Do viruses and rumors spread like forest fires? How do ants cooperate? Do spoken languages and biological species evolve in a similar way? Ants, Rumors, and Gridlocks exposes students to introductory aspects of computational science by addressing and answering these and many other questions. Students use and modify virtual experiments preprogrammed in the NetLogo programming language to investigate these topics and others in Social Sciences, Biology, and Environmental Science. No prior knowledge of computer programming or NetLogo is required.

Type:

SCI TECH ENGR,Quantitative Reasoning

Electrical Engineering:

- **ECE-288 Measuring the World**

Credits:

4.00

Description:

The world is addicted to quantifying the essence of everything, from personal IQ, to the speed of a baseball, to our healthiness, or our chances of winning the lottery. Behind most of these numeric values exists a science of measurement. Some of this is referenced to international standards, such as for length, time, weight, or temperature. Others are more arbitrary and subjective, such as ranking Olympic performance in gymnastics, beauty pageants, or popular responses as found in the game show Family Feud. A third category includes controversial areas, such as measuring whether a person is lying when interrogated, or using hype rather than reality to market products. Sometimes statistics are used to predict sports outcomes, such as in the annual March Madness NCAA basketball brackets. Finally, in a world subject to fraud and deception, it can be essential to distinguish legitimate from counterfeit items, such as in money, art, collectibles, and historical documents. Don't get hoodwinked! This course examines all of these, starting with how measurements have been made throughout history, along with a full deck of entertaining terms used during the ages. This may help you sort out your weight, whether given in pounds, kilos, or stones. Often these terms will provide insights into how people lived in different eras. We will also look at some of the technologies currently available to provide these measurements, and unravel the complexities of various sensors that are used. As we consider the meaning of accuracy we may become less naive about how much confidence to ascribe to the results given us. Hovering around all of these measurements should be the question of validity - are they meaningful, useful, or misleading? And the impact they have on society - whether they steer behavior more powerfully than one might originally suspect. Each student will also be given an opportunity to become an expert in an area of measurement of personal interest. By the end o

Type:

SCI TECH ENGNR

Engineering Science:

- **ENS-103 Introduction to Engineering**

Prerequisites:

ENS L103 MUST BE TAKEN CONCURRENTLY.

Credits:

3.00

Description:

This course provides exposure to engineering practice, with particular focus on electrical engineering components such as circuit elements and systems. It seeks to go beyond the mathematics and provide an intuitive appreciation of functional devices. Examples taken from a broad swath of technological history illustrate significant crossroads, decisions, and inventiveness. Emphasis is placed on learning to think as an engineer - assessment of problems, candidate solution tradeoffs, and implementations. Frequent exercises in creative engineering design will be used. Students will be required to design several elementary devices, such as a magnet, a capacitor, a timing device, and a motor, which they will enter in a competition for overall strength, compactness, accuracy, or speed. Sometimes assignments relate to "survival on an island" concerns, such as communication or drinking water. Students also learn about reverse engineering by selecting, building, troubleshooting, and presenting an electronic

kit of their choice. A term paper determining the engineering behind a topic of their choice will also be written and presented. On occasion (see ENS L103) there will be team competitions between various smaller groups in the class.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **ENS-L103 Intro to Engineering Lab**

Prerequisites:

Must be taken Concurrently w/ ENS-103

Credits:

1.00

Description:

The Lab is designed to provide opportunities to gain familiarity with engineering tools. Students will be introduced to parts (e.g. learn the resistor color code), test equipment (multimeters, prototyping trainers, signal generators, and oscilloscopes), and construction techniques (wiring, soldering, troubleshooting). Although it varies from year to year, Class Projects can be built during the Lab sessions. In the past these have included a 25 Watt electric generator, various door lock systems (both mechanical and electronic), and an AM transmitter and receiver (all projects made from scratch). It is likely that 2010-2011 may introduce some robotic creations for a competition. Electronic kits and motors can also be built and serviced in the Lab. There is an adjoining machine shop, which can be utilized (with supervision), for fabricating items. Individual creativity is encouraged, and informal problem solving sessions occasionally occupy lab time. However, the lab is accessible outside of the traditional scheduled time.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

Environmental Science:

- **ENVS-111 Majors' Environmental Science**

Prerequisites:

Open to Environmental Science and Environmental Studies majors, or by permission of instructor. Must be taken concurrently with ENVS L111

Credits:

3.00

Description:

Applies the fundamentals of science to environmental issues. Topics include population dynamics and resources, environmental degradation, ecosystems, geologic processes, deforestation, biodiversity, climate change, air, soil, and water resource management, and pollution and risks to health. This course is open to all environmental science and environmental studies majors and minors. Other students will be admitted by permission of the instructor. Must be taken concurrently with ENVS L111. 3 hours lecture. 1 term. 3 credits. Normally offered fall evenings.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **ENVS-L111 Majors' Environmental Science Lab**

Prerequisites:

Open to Environmental Science and Environmental Studies majors, or by permission of instructor. Must be taken concurrently with ENVS 111

Credits:

1.00

Description:

Laboratory exercises are used to illustrate topics covered in ENVS 111. Field testing and analysis of environmental samples. Field trips are required. This course is required for all environmental science and environmental studies majors and minors. Concurrent enrollment in ENVS 111 is required. 3 hour laboratory. Normally offered fall.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

Physics:

- **PHYS-111 College Physics I**

Prerequisites:

Take MATH-121 or MATH-134 or permission of Physics department chair;PHYS L111 taken concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **PHYS-L111 College Physics Lab I**

Prerequisites:

PHYS 111 concurrently

Credits:

1.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course. Error propagation, use of Excel, laboratory notebooks and formal reports required.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **PHYS-151 University Physics I**

Prerequisites:

Take MATH-121 or MATH 165. PHYS L151 concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **PHYS-L151 University Physics Lab I**

Prerequisites:

PHYS 151 concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• PHYS-152 University Physics II

Prerequisites:

PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

Credits:

3.00

Description:

This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

Term:

Offered Both Fall and Spring

Type:

- **PHYS-L152 University Physics Lab II**

Prerequisites:

PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **PHYS-153 University Physics III**

Prerequisites:

Take MATH-121 or MATH-165;

Credits:

3.00

Description:

This calculus-based course is the introduction of the topics of modern physics. It begins with special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom. Then Schrodinger's equation is introduced with use of wave functions,

particle box, barrier penetration, quantum mechanical tunneling, the Pauli Exclusion principle, the development of the periodic table, and the X-ray spectra. Development of solid state physics with bonding in molecules, band theory of solids and semiconductor behavior. The final topics cover nuclear physics, radioactivity, half-life, nuclear fission and fusion, medical uses of radiation, elementary particle physics and introduction to astrophysics.

Term:

Offered Fall Term

Type:

SCI TECH ENGR

- **PHYS-L153 University Physics III Lab**

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts of special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom.

Type:

SCI TECH ENGR

Science:

- **SCI-108 Introduction to Cancer Care**

Credits:

4.00

Description:

This course will introduce the students to the top ten U.S. adult cancers, as well as the most common pediatric cancers. Topics to be covered include cancer causes, detection, and prevention. Psychosocial aspects of being diagnosed with cancer and the role nutrition plays for cancer patients will be described. The course will also discuss the major treatment modalities for each cancer including radiation therapy, surgery, chemotherapy, and bone marrow transplants. The goals and objectives of the course will be met through the use of various teaching tools including but not limited to: PowerPoint presentations, videos, guest lectures, and a poster project with a presentation component. Cognitive assessment of the students will be accomplished through homework, quizzes, exams, and a group poster and oral presentation. Students with any type of academic background are welcome.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGNR,NATURAL SCIENCE FOR BS

- **SCI-111 Astronomy I**

Prerequisites:

MATH-128 or higher and SCI-L11 must be taken concurrently.

Credits:

3.00

Description:

History of Astronomy from the ancients to Newton; light; telescopes; sun, earth, moon planets, comets, asteroids, meteors; space programs, science and technology in society. For non-science majors.

Term:

Occasional

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **SCI-L111 Astronomy Lab I**

Prerequisites:

SCI 111 concurrently

Credits:

1.00

Description:

Laboratory experiments and exercises to illustrate the principles discussed in science 111. Observational exercises using the Celestron telescope, astrophotography exercises, and computer simulations.

Term:

Occasional

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **SCI-112 Astronomy II**

Prerequisites:

MATH-128 or higher and SCI-L112 concurrently

Credits:

3.00

Description:

Astronomy of the cosmos; sun, stars, interstellar materials, galaxies, pulsars, quasars, black holes; nature of time relativity, cosmology. For non-science majors.

Term:

Occasional

Type:

- **SCI-L112 Astronomy Lab II**

Prerequisites:

SCI 112 concurrently

Credits:

1.00

Description:

Laboratory experiments and exercises to illustrate the principles discussed in Science 112. Observational exercises using the Celestron telescope, astrophotography exercises, and computer simulations.

Term:

Occasional

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGNR,NATURAL SCIENCE FOR BS

- **SCI-113 A Habitable Earth Within the Solar System**

Credits:

4.00

Description:

This course introduces non-science majors to concepts that are central to making our planet habitable. It presents Earth in context of the solar system with a broad view of global climate change and energy resources in a quest to better understand the workings our planet. This course on Earth and Planetary Science is suitable for students who may have taken their last science and math course several years ago, or are just curious about knowing facts on major issues that pertain to the future of our planet. Together with a reading component, this course aims to give students a flavor of how researchers think, investigate and develop conclusions that directly affect our political and economic future. Topics covered in this course range from the solar system to the study of search for other habitable Earth-like planets, search for extraterrestrial life, and evolution of life on Earth. Other

characteristics of this course are heavy use of audio-visual materials often including computer animations and simulations, in-class experiment demonstration, and intensive use of INTERNET-based resources.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGR

- **SCI-165 Inner Workings of Physics Universe**

Credits:

4.00

Description:

About 15 billion years ago, (data indicate) the big bang occurred and the universe was born. With it came physical laws and a spectacular array of consequences that lead to the universe as we know it. This non-lab , 4 credit course explores the inner workings of the physical universe in terms of the scientific inquiry which lead to Newton's laws, an understanding of energy, waves, light, electricity, atomic structure, chemical reactions, nuclear physics, particle physics, relativity, and the big bang theory. During the course, students will learn to make use of modern resources to access scientific and technical literature to research a scientific topic. They will learn to distinguish between science and technology (e.g. quantum mechanics and nanotechnology, the discovery of the Higgs boson and the large hadron collider that made it possible, etc.) and to understand how the science, technology, and engineering disciplines play a crucial role in recognizing and solving problems of society and the world that we share.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **SCI-171 The Built World: How Humans Engineer Environments**

Credits:

4.00

Description:

The most basic needs of humans have not changed - water, food, and shelter - but the means of meeting these needs has. In this course, we will examine how technology-driven societies operate by studying how cities are built and how they function. Topics will include water supply and distribution systems; transportation systems (including road and bridge design and construction); building design, construction, and operation (including skyscraper and sustainable building design), and waste removal systems (municipal and industrial wastewater removal and treatment, solid

waste removal and treatment). This is not a course about little gadgets and widgets; this is a course about big engineering marvels; and it emphasizes applications of science - how things work - rather than scientific theory.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGR

- **SCI-173 Geographic Information Science (GIS) The Power of Digital Maps**

Prerequisites:

SCI L173 Must be taken concurrently Knowledge of Windows type Application

Credits:

3.00

Description:

Geographic Information Science (GIS) link information (number of fire hydrants on a block) to features on a map (e.g., a point representing street address) that has a designated geographic location (as designated by global coordinates). Unlike paper maps, GIS software allows the production of interactive maps that allows the user to layer data, to indicate spatial patterns, to analyze trends, and to combine different features of the mapped area in novel ways. For example, a business person may wish to use GIS to determine the optimum location of retail outlet (based on the mapped demographics of a neighborhood), while an environmental engineer may use GIS to describe the location of outfalls to see how they correlate to areas of stream pollution. In this course, students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **SCI-L173 GIS Lab**

Prerequisites:

Must be taken concurrently with SCI-173

Credits:

1.00

Description:

This laboratory illustrates concepts and methods taught in SCI 173. In this lab students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **SCI-181 Science and Life in the 21st Century**

Credits:

4.00

Description:

This is a four credit, non-lab, science course that examines the central scientific problems confronting the 21st century. The course studies particular topics and teaches the necessary science around these topics to provide a good understanding of the issues. The topics currently are: Energy, Science and Economic Decisions, Sustainability of Life on Earth, Health and Science.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGR

• SCI-184 Contemporary Science and Innovation

Credits:

4.00

Description:

This is a 4 credit, project based science course that examines the central scientific problems confronting the 21st century. The course consists of lectures, class discussions, field trips, and in-class hands-on activities designed to familiarize the student with different concepts of the lectures. The current focus is on sustainable energy production. A final team project related to the course topics will be given. This is the version of SCI 183 without a separate lab component. Students who have taken SCI 183, L183 are not allowed to take this course.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGNR,NATURAL SCIENCE FOR BS

• SCI-201 Physics for Future Presidents

Credits:

4.00

Description:

This course presents a topical introduction to the key principles and concepts of physics in the context of the world events and natural phenomena that confront world leaders and that require informed decisions and responses. Energy, health, counter-terrorism, remote sensing, space programs, nuclear proliferation, and a host of other modern challenges have technological and scientific dimensions, the understanding of which is essential to avoiding disastrous policy decisions. This course considers the application of physics to these societal challenges. The material is covered at a level and pace that a future world leader should be able to handle; the emphasis is on the development of physical reasoning skills, and not on detailed, mathematical problem solving.

Type:

SCI TECH ENGNR

Literature: 1 course, 4 credits

Choose one course from those listed below:

English

- ENG-213 English Literature I

Prerequisites:

WRI-102 or WRI-103

Credits:

4.00

Description:

Study of major writers of England from the beginning to the mid-18th century. Regularly assigned essays on the reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement

- **ENG-214 English Literature II**

Credits:

4.00

Description:

Study of major English writers from the mid-18th century to the present. Regularly assigned essays on the reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement

- **ENG-216 World Literature in English**

Prerequisites:

WRI-102 or WRI-103

Credits:

4.00

Description:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

Term:

Offered Both Fall and Spring

Type:

Cultural Diversity Opt B, Humanities Literature Requirement, Diverse Perspectives

- **ENG-217 American Literature I**

Credits:

4.00

Description:

Study of major American writing from its origins through 1865. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement

- **ENG-218 American Literature II**

Credits:

4.00

Description:

Study of major American writing from 1865 through the present. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement

Women's & Gender Studies:

- **WGS-325 Global Women's Fiction**

Credits:

4.00

Description:

Explores of various cultural worldviews in order to reveal and assess the voices of women from around the world as they respond to important global issues such as sexual violence and gendered oppression. Topics include: national citizenship, sexual politics, legal discourse, aesthetic representation, literary movements, genre, constructions of femininity, sexual identities, and representations of gender in relation to race and class and international cultures, and the relationship of self-image to the body politic.

Term:

Occasional

Type:

Humanities Literature Requirement,Cultural Diversity Opt B,Diverse Perspectives

- **FR-216 Masterpieces of French and Francophone Literature in English Translation**

Credits:

4.00

Description:

Masterpieces of French and Francophone Literature in English Translation. Studies works translated into English by major authors from the Middle Ages to the present. Explores drama, fiction, and poetry from many regions of the world: Africa, Western Europe, North America, the Caribbean, and Vietnam.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt B, Humanities Literature Requirement, Humanities & History, Diverse Perspectives

- **FR-309 Survey of French Literature I**

Prerequisites:

FR 202 or Instructors permission

Credits:

4.00

Description:

Analyzes and discusses canonical works of French literature from medieval times to the eighteenth century.

Term:

Offered Fall Term

Type:

- **FR-310 Survey of French Literature II**

Prerequisites:

FR-202 or instructor's permission

Credits:

4.00

Description:

Study, analyze and discuss canonical works of French-language literature from the nineteenth through the twenty-first centuries, as they relate to important events in the art, culture, and history of the Francophone world.

Term:

Offered Spring Term

Type:

Humanities Literature Requirement,BA FOREIGN

- **GER-216 Masters of German Literature in English Translation Masterpieces**

Credits:

4.00

Description:

Discussion of works by major authors from the 18th century to the present. Drama, fiction, and poetry. The specifically German contributions as related to the European context. Lessing, Goethe, Schiller, Heine, Buchner, Schnitzler, Kafka, T. Mann, Hesse, Brecht, Seghers, Grass, Boll, Wolf and/or others.

Term:

Occasional

Type:

Humanities Literature Requirement

- **SPAN-300 Intro to Cultural Texts**

Prerequisites:

Spanish 202, 203, 250 or Instructor's consent.

Credits:

4.00

Description:

Explores a selection of Peninsular and Latin American cultural materials. Primarily examines texts from different literary genres (narrative, drama, essay, and poetry). Develops critical skills required in more advanced Spanish courses, through close readings and textual analysis. Activities include regularly assigned essays, group discussions, and short scene work.

Term:

Offered Spring Term

Type:

Humanities Literature Requirement, BA FOREIGN

- **SPAN-390 Introduction to Latin American and Caribbean Literature**

Prerequisites:

SPAN 300; SPAN 302 is strongly recommended

Credits:

4.00

Description:

Examines authors from Latin America and the Caribbean in their historical and cultural contexts. Reading and class discussions consider the relationship between the writer and society by covering such topics as colonialism, the oral tradition, modernism and the emergence of new narratives in the twentieth century. The Inca Garcilaso, Sor Juana, Carlos Fuentes, Rigoberta Menchu, and Pablo Neruda are among some writers studied.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities Literature Requirement, BA FOREIGN, Diverse Perspectives

- **SPAN-405 Women's Voices in Latin America**

Prerequisites:

SPAN-300; Spanish 302 or its equivalent is strongly recommended

Credits:

4.00

Description:

Examines the changing roles of women in Mexico, the Caribbean, Central and South America through fiction, non-fiction, drama, poetry and film. Special focus is placed on the impact that changes in social ideology and culture have had on their identity and writings. Texts available in English.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, BA FOREIGN

- **SPAN-407 Latin American Short Narrative**

Prerequisites:

Spanish 300; or Instructor's consent; Spanish 302 is strongly recommended

Credits:

4.00

Description:

Explores some of the major trends in the twentieth century Latin American story telling. Readings reflect the vast array of voices and styles, beginning with fantastic literature of the 1930's, the birth of magical realism and the more contemporary, socio-political narratives. Authors include Isabel Allende, Julio Cortazar, Rosario Castellanos, Gabriel Garcia Marquez, Juan Rulfo, Luisa Valenzuela, among others.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement, BA FOREIGN

• **SPAN-416 Border Crossings the Latino Experience in the USA**

Prerequisites:

ENG-102 or ENG-103 or Instructor's consent. Span 302 is strongly recommended for Spanish and Latin American & Caribbean Studies majors and minors.

Credits:

4.00

Description:

Examines the myth of a singular Latino experience in the United States through a variety of genres and authors. Issues relating to culture, language, family, and religion are among some of the topics explored. Authors include Sandra Cisneros, House on Mango Street, Junot Diaz, The Brief Wondrous Life of Oscar Wao, Julia Alvarez, How the Garcia Girls Lost Their Accents, Tato Laviera, and American.

Ethical & Philosophical Inquiry: 1 course, 4 credits

Choose one course from those listed below:

- **PHIL-119 Ethics**

Credits:

4.00

Description:

A systematic introduction to the major thinkers and their positions on the main issues of ethics, such as: What is morality? What are moral values? How should we live our lives? Are there objective, universal, absolute moral standards? If so, what are they, and what is their basis? 1 term - credits. Normally offered every year.

Term:

Offered Both Fall and Spring

• PHIL-120 Ethics and Civic Life

Credits:

4.00

Description:

In this class you will be introduced to the perspectives and methods of politics, philosophy, and economics and see how these three disciplines present distinct but interconnected dimensions of current social and political issues.

Type:

Diverse Perspectives

• PHIL-123 Social Ethics: The Good Life

Credits:

4.00

Description:

An examination of contemporary Western society, particularly in the United States, in relation to philosophical attempts to define the good life. Current books that exhibit a philosophical approach towards important contemporary social issues will be discussed, as well as classics in philosophy. Topics may include: civic virtue, consumerism, current events, economic justice, popular culture (film, music, television), religion and secularism, etc. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- **PHIL-127 Contemporary Moral Issues**

Credits:

4.00

Description:

A critical examination of a number of contemporary moral issues such as: abortion, affirmative action, animal rights, capital punishment, cloning, drug legalization, environmental ethics, euthanasia, genetic engineering, gun control, pornography, same-sex marriage, suicide, war and terrorism, etc. 1 term - 4 credits. Social Science: 1 course, 4 credits

Choose one course from those listed below:

Applied Legal Studies:

- ALS-264 Introduction to Law and Legal System

Credits:

4.00

Description:

Introduction to civil, criminal and constitutional law, with special focus on procedural law and the federal and state court systems. Limitations of the courts, forms of remedies, the law of equity and institutional sources of American law will also be studied. Introduction to judicial cases and brief writing. Normally offered each semester.

Type:

Social Science

- **ALS-266 Criminal Law**

Credits:

4.00

Description:

This course examines criminal law in the United States from a broad perspective. It will present the general principles and doctrines that affect the whole criminal law, such as elements of criminal offenses, defenses to crime, and perspectives on crime and criminal law. In addition, students will learn the elements of specific crimes, such as homicide, criminal sexual conduct, terrorism and related crimes, crimes against public morals, and crimes against property. Discussions of the direction of the criminal law and constitutional limitations on government will be presented as preparation for future study.

Type:

Cultural Diversity Opt A

- **ALS-362 Litigation**

Credits:

4.00

Description:

The Rules of Civil Procedure dictate the steps taken in state and federal lawsuits. This course will acquaint students with rules and the practical requirements of the rules, from filing a complaint to clarifying a judgment and to the duties of paralegals in a litigation office. Normally offered each

semester.

Type:

Social Science

- **ALS-363 Law of Contracts**

Credits:

4.00

Description:

The existence and validity of a contract is determined by specific rules. Students will learn about formation through offer and acceptance, contract enforceability, the necessity of consideration, and breach of contract and will draft contract provisions as a paralegal might in a law office. Normally offered each semester. Sophomore status required.

Type:

Social Science

- **ALS-396 International Law**

Prerequisites:

Take ALS-264 or ALS-360 or instructor's permission

Credits:

4.00

Description:

With the globalization of the world economy, legal professional and business people require knowledge of international law more than ever. This course offers students a survey of selected materials in public international law. Covered will be the practical and theoretical issues of international law, from the Law of the Sea to business implications to definitions of war and international concepts of justice. Normally offered yearly.

Type:

Social Science

Communication:

- **CJN-255 Introduction to Media**

Credits:

4.00

Description:

An introduction to the role of media in contemporary society, focusing on media's influence on cultural, political, and ideological processes. An examination of the historical contexts within which newspapers, radio, television, and new media technologies develop, and how audiences interact with and influence the use of media.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **CJN-285 Media and Pop Culture I**

Credits:

4.00

Description:

Examines the influence of media on contemporary society. Television, radio, film, and print formats are discussed in terms of their persuasive impact on mass culture in the U.S.. Focus is on the period 1950-1970.

Term:

Offered Spring Term

Type:

Social Science

- **CJN-287 Media Criticism**

Prerequisites:

CJN-255

Credits:

4.00

Description:

Critical examination of various mass media including film, television, radio, music, newspapers and magazines. Theories of media criticism discussed and applied to specific media or media products.

Term:

Offered Spring Term

Type:

Social Science

- **CJN-375 Organizational Communication**

Credits:

4.00

Description:

Historical development of the theory of organizations, examination of information flow, network analysis, communication overload and underload, corporate culture, superior-subordinate communications, organizational effectiveness, and change processes.

Term:

Offered Fall Term

Type:

Social Science

- CJNI-400 Media Effects and Audiences

Prerequisites:

Prerequisite: CJNI-255

Credits:

4.00

Description:

Explores the social influence of the media on U.S. society. Attention is given to the theoretical perspectives that inform media research. By the end of the semester, students will develop a critical understanding of the role and influence of the media in U.S. society.

German:

- GER-419 East Germany and the Cold War

Credits:

4.00

Description:

When the German Democratic Republic was founded in 1949, observers in the West viewed it as an artificial construct created to serve the needs of the Soviet empire. The self-image of the GDR as created by its leadership revolved around the idea of an anti-fascist German state designed as a bulwark against any revival of National Socialism. Over a generation after the fall of the Berlin Wall, it is possible to undertake a dispassionate analysis of the forty-year history of the 'other' German state as manifested in its cultural identity and political role during the Cold War.

Sociology:

- **SOC-113 Introduction to Sociology**

Credits:

4.00

Description:

An introduction to the sociological understanding of human interaction, group process and social structures. Students are introduced to basic concepts, theories and methods of sociological investigation. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **SOC-116 Social Justice**

Credits:

4.00

Description:

An examination of traditional and contemporary problems associated with major social institutions such as the family, economics, government and education. Social forces related to ethnicity, social class, health and welfare, and urbanization are also included. Alternative remedial measures based on behavioral science theories are discussed. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **SOC-217 Sociology of Urban Life**

Prerequisites:

Fulfills ECR requirement

Credits:

4.00

Description:

An examination of the effects of the city on human life in its broadest as well as its most specific aspects. Greater Boston and similar communities across the nation will be studied as ecological settings, as producers and shapers of change, and as special contexts for understanding sociological ideas. Comparisons will be made among urban places in the U.S. and in other countries.

Term:

Occasional

Type:

Social Science,Cultural Diversity Opt A,Expanded Classroom Requirement

- **SOC-223 Families in Contemporary Society**

Credits:

4.00

Description:

An exploration of the diversity of contemporary families. Comparisons are made between the cultural myths of the ideal family and the lived realities. Challenges confronting contemporary families and their implications for social policy are examined in such areas as work/family conflicts, gay and lesbian families, welfare, family violence.

Term:

Occasional

Type:

Social Science

- **SOC-224 Families in Contemporary Society (Spain)**

Credits:

4.00

Description:

Spain has experienced major socio-demographic changes since the mid 1970s. These transformations mainly arise from the new role of women in society and, in particular, women's higher levels of education, work experience, and labor market attachment. The changes in women's labor force participation have occurred in conjunction with a progressive postponement of main family events, such as leaving the parental home, forming a partnership and having children, as well as with a reduction in the family size. Spain is, indeed, characterized as having one of the lowest low fertility levels within Western industrialized countries, a pattern that is exacerbating the ongoing process of population aging. This picture partly reflects the

conflicting relationship that currently exists between women's labor force participation and the accommodation of family responsibilities: the so-called work/ family balance. Ongoing differences among countries have been accounted for by different explanatory factors that involve socio-economic, cultural and social policy dimensions. From a comparative perspective, the course is intended to cover recent debates, controversies, and research on family formation and family dilemmas in contemporary Spain.

Type:

Social Science

- **SOC-236 Deviance and Social Control**

Credits:

4.00

Description:

Who and what is deviant? How shall the society respond? The course examines a range of deviance theories and associated social policies. A number of case studies will be used to evaluate these theories, such as body piercing, witchcraft, gay and lesbian sexuality, corporate crime, disability, prostitution, violence against women, racism, anti-Semitism, and gangs.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **SOC-264 Social Media and Society**

Credits:

4.00

Description:

An examination of the ways in which social structures and processes influence and are affected by modern ideas, needs and social practice techniques in technologically advanced societies is considered in conjunction with changes in the way in which we understand the world, the nature of

work and leisure, the processing of information and the character of social institutions. Normally offered alternate years. Fulfills the Social Science Option. Fulfills the Sociology Department's Social Policy requirement.

Type:

Social Science

Women's & Gender Studies:

- **WGS-113 Women, Science, & Society**

Credits:

4.00

Description:

Explores women's lives from the perspective of the social and natural sciences, including examination of recent biological, psychological, and sociological theories about gender and gender roles, as well as the influence of feminist scholarship in these areas. Topics include: the social construction of gender; the psychology and biology of sex and gender; women and work; media representations of women; the female body and eating disorders; women's health and lifecycle; women and sexuality; reproduction, abortion, and motherhood; and sexual violence against women.

Art & Design:

- **ADI-234 Introduction to Interior Design Theory & Criticism**

Prerequisites:

Taken concurrently with ADI S201

Credits:

3.00

Description:

This course introduces students to the important individuals, ideas and issues that have shaped the direction of contemporary interior design practice in the twentieth century, building upon the historical foundation established by the Ideas of Western Art and History of Furniture and Architecture classes. Intermixing lectures and readings with visits to important local buildings, it discusses the influences of culture, technology, fashion and media upon the work and thinking of the first generation of modern designers, as well as emerging social, moral and environmental imperatives that will form the basis of future practice; cultural identity, interdisciplinary collaboration, sustainability and universal design.

Humanities & History, Humanities Literature Requirement

- **ADFA-306 Art & Culture of Asia, Africa, South America and Oceania**

Credits:

4.00

Description:

The coursework introduces students to the artistic and visual traditions from South and East Asia, Africa, Oceania and the Americas. In addition to the material culture of the particular region under study, the coursework will consider socio-political ideals, religious belief systems, and cultural principles that 'shaped' or informed the work and the ideology of civilizations beyond the Western hemisphere. Comparative analysis among non-western and western traditions will be used to critically analyze the salient points of influence, rejection and modifications of aesthetic affinities. Class lectures will be supplemented with museum seminars specifically the rich non-western collections at the MFA, Boston. Guided field trips to the museum will allow students to formally analyze the works of art discussed in lecture and text material.

• ADF A-344 Islamic Spain: Art and Architecture

Credits:

4.00

Description:

This course examines the Islamic influence in Spain through its art and architecture from its formative period in the eighth century through the fourteenth century and beyond to see the continuity and change of the Mozarabic style found locally in Madrid, Cordoba, Seville, and Granada. Students will use formal analytical skills to critically explore works of art and architecture and will cultivate a 'lens' through which they will facilitate their understanding of the classic and contemporary material culture and fabric of Spain. Class meetings will be supplemented with field trips. Offered as needed.

Type:

Humanities Literature Requirement,Humanities & History

• ADF A-345 Art of India

Credits:

4.00

Description:

A chronological survey of South Asian art (2300 BCE - 1750 CE) including India, Pakistan, Bangladesh, and Nepal. Examination of art and architecture from their first and still mysterious beginnings in the Indus Valley, through the great masterpieces of Buddhist and Hindu art to the coming of Islam, including the eclectic culture of the Mughal courts and the golden age of miniature paintings. Consideration is given to the multiple aspects of patronage in Indian culture - religious, political, economic - through case studies of individual works of art and architecture. (Formerly HUM 345)

Type:

- **ADFA-346 Art of the Silk Road**

Credits:

4.00

Description:

This course will examine the arts and architecture of the Silk Road, with particular attention to art of Buddhism, Hinduism, and Islam. Historically, Inner Asia was marked by trade routes (the 'Silk Route' or 'Silk Road') which crisscrossed this vast landscape of deserts and mountains between China, India, the Iranian Plateau and the Mediterranean world. In addition to the art of these cultures, we will also look at the records of early Chinese travelers through Central Asia. (Formerly HUM 346) Offered as needed.

Type:

Humanities & History,Cultural Diversity Opt B,Humanities Literature Requirement,Asian Studies

- **ADI-221 History of Furniture & Architecture I**

Credits:

4.00

Description:

The goal of this course is the enhancement of the student's critical comprehension of historic styles and the impact they have on contemporary design solutions. The survey begins with the Egyptian period and provides an overview of the history of furniture and architecture through the mid-1700s, including ancient Greece and Rome, the Gothic and Renaissance, Baroque and Rococo periods. Emphasis will be placed on chronological periods, the visual characteristics of each style including regional idiosyncrasies, and the terminology germane to a study of furniture and architecture.

Term:

Offered Both Fall and Spring

Type:

Humanities & History, Humanities Literature Requirement

- **ADI-222 History of Furniture & Architecture II**

Prerequisites:

ADI 221

Credits:

4.00

Description:

A continuation of History of Furniture & Architecture I, this course will extend the investigation of furniture and architecture into the 20th century, while addressing issues concerning preservation, restoration, rehabilitation, and adaptive re-use. Drawing on the vast resources of the city of Boston and its environs, students will become actively involved in stylistic progression, local living history, and the benefits of preserving our past for future generations. Field trips will include visits to restored Federal, Victorian and Contemporary venues.

Term:

Offered Both Fall and Spring

Type:

Humanities & History, Humanities Literature Requirement

- **ADG-224 History of Graphic Design**

Credits:

4.00

Description:

The first part of the course will focus on the history of graphic design from prehistoric times to the Industrial Revolution, including the origins of graphic communications in the ancient world, the development of the alphabet and early printing and typography. The second portion will concentrate on the period from the late 19th century to the present, and will include the Arts and Crafts Movement, the various-isms and their influence on modern art, the Bauhaus and International Style, and contemporary visual systems and image making.

Term:

Description:

A general introduction to the nature of philosophical analysis. Lectures, readings, and discussions will focus on representative issues and thinkers from the main areas of philosophy (such the nature of truth, reality, morality, politics, and religion). 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

Type:

Humanities & History, Humanities Literature Requirement

- **PHIL-210 History of Ancient & Medieval Philosophy**

Credits:

4.00

Description:

The study of philosophical thought from the period of the ancient Greek philosophers through the Medieval thinkers, including such philosophers as Socrates, Plato, Aristotle, Epicurus, Zeno, Parmenides, Pythagoras, Protagoras, Augustine, Aquinas, Anselm, and Abelard. An introductory course designed to equip the student with a well grounded understanding and appreciation of Philosophy. 1 term - 4 credits. Normally offered every year.

Term:

Offered Fall Term

Type:

Humanities & History, Humanities Literature Requirement

• PHIL-211 History of Modern Philosophy

Credits:

4.00

Description:

A study of the prominent modern thinkers, such as Descartes, Leibniz, Spinoza, Locke, Berkeley, Hume, and Kant. The course is an historical survey of the key concepts, problems and developments in modern philosophy including rationalism, empiricism, and skepticism. The following themes central to Modern philosophy will be addressed: the nature of reality; the limits of human knowledge; self and self-identity; mind and body; freedom in theory and practice; reason vs. sentiment in ethics. 1 term - 4 credits. Normally offered every year.

Term:

Offered Spring Term

Type:

Humanities & History, Humanities Literature Requirement

• PHIL-219 Philosophy of Art

Credits:

4.00

Description:

What counts as art? What is beauty? Are there objective standards of beauty? This course examines the nature of aesthetic experience, art, beauty, and creativity. Through the classic and contemporary readings, the students will be introduced to philosophical issues concerning the meaning of art, artistic representation, perceptions of art, interpretation, and criticism. Students will be encouraged to reflect on their own experience of art and explore the relationships among the artist, the audience, the artwork, and the world. 1 term - 4 credits. Normally offered every third year.

Type:

Humanities & History, Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **PHIL-250 Social & Political Philosophy**

Credits:

4.00

Description:

An examination of persistent debates in political and social philosophy, such as the meaning of property and welfare, the tensions between liberty and equality, censorship and freedom of expression, the relation of church and state, the possibility of political education and civic virtue, legitimacy of the state and revolution, war and problems of end and means, addressing historic injustice, such as racism, genocide, or sexism, among other topics. The class will focus on no more than two such themes. Students will read both classic and contemporary writings to address both the historical roots and the contemporary treatment of these questions. 1 term - 4 credits. Normally offered every year.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **PHIL-255 Science, Myth, and Society**

Credits:

4.00

Description:

Both mythology and science arise from the human need to explain the world, to understand its laws, and give an account of its origin. This course focuses on the controversial relationship between myth and science and explores their historical roots, their social influence and their respective views of reality, human nature, and origin of the universe. Both historical controversies and contemporary debates, such as evolution vs. intelligent design, will be considered. Topics in the philosophy of science, such as the nature and scope of the scientific method, will also be addressed. 1 term - 4 credits. Normally offered alternate years.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

• PHIL-260 Philosophy of Religion

Credits:

4.00

Description:

This course analyzes and interprets fundamental religious concepts and beliefs, examines the rational support for religious faith, and addresses the relation between religion and society. Fundamental questions concerning the nature and existence of God, salvation, and immortality will be explored, and for this the primary focus will be Western religious conceptions but may broaden to include other world religions. Other topics may include: whether all religions can be equally valid and true; the relation of religion and the state; the status of miracles; the history and psychology of religion; the conflict between religion and science. 1 term - 4 credits. Normally offered alternate years.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

• PHIL-261 Eastern Philosophy

Credits:

4.00

Description:

The exposition and critical evaluation of Hinduism, Buddhism, Confucianism, Taoism, and Islam. Special attention is given to foundation principles as well as to the similarities and differences of each of these philosophies to basic ideas in Western philosophy. 1 term - 4 credits. Normally offered alternate years. C b

Theatre:

- **THETR-227 Introduction to Theatre Arts III**

Credits:

4.00

Description:

This course provides a formal introduction to the theories and practices strategically used by American theatre artists after the Second World War. Special emphasis is placed on theatre artists exploring issues of cultural identity including works by GLBT, African-American, Asian-American, and Latin American playwrights. These playwrights may include Tony Kushner, Paula Vogel, Suzan-Lori Parks, Adrienne Kennedy, August Wilson, David Henry Hwang, Philip Kan Gotanda, Eduardo Machado, and Melinda Lopez. The course will also provide an introduction to trends in post-modern theatre practices related to emerging work of the auteur director, solo performers, and interdisciplinary collectives. Satisfies a core requirement for Theatre majors. Normally offered alternate years.

• THETR-260 Broadway Musicals

Credits:

4.00

Description:

This course is a survey of American musical theatre from its roots in the mid-19th century to the present. It provides the analytical tools and historical insight to more fully appreciate Broadway's greatest musicals and musical theatre artists. Students will explore the ways in which American forms of popular entertainment helped to shape Broadway musicals from their infancy through their adulthood. The course also explores the ways in which musicals provided opportunities for African-Americans, women, immigrants, and the GLBT community.

Seminar for Freshmen: 1 course, 4 credits

Students with 15+ transfer credits of college or university work are exempt. Choose one Seminar for Freshmen course from those listed below:

- SF-101 Fixing the World- Energy and Water: The Science of Solutions

Credits:

4.00

Description:

Two of the most daunting challenges the world faces (or will face) is how to provide for both its growing energy needs and potable drinking water. Regular news events include climate change, droughts, flooding, and petroleum struggles. Human nature often requires a severe crisis before it responds. This course will investigate the historical science driving the use of energy since the Industrial Revolution to convert energy resources into work, including the steam engine, the electric motor, and the internal combustion engine. It will also consider alternative energy options to fossil fuels, such as solar, wind, geothermal, and ocean power. Along the way we will consider the evidence for Global Warming and Climate Change. We will look into human nature, simple life styles, conspiracy theories, and the influence of those in power to shape human opinion. We will also consider how our water supply is provided and where it goes after being used. What options do developing countries or drought racked areas have to remedy their water needs? Although the course pursues a scientific understanding of these issues, the mathematics used will be gentle, and a larger emphasis will be placed on the intuitive appreciation of these concerns.

- **SF-132 The Beatles: Here, There & Everywhere**

Credits:

4.00

Description:

This seminar will investigate the impact and legacy of the Beatles. The Fab Four deserve our scholarly attention as musical innovators and as cultural avatars of the 1960s, an era that still exerts influence today. We will examine the many ways in which the Beatles rocked the establishment and became defining figures in post-war youth culture. We will also discuss other media (the visual arts, film, fashion, style) and fields of study (mass media, marketing, recording technology, copyright law, English history) using the Beatles as our guides.

- **SF-151 Getting Over It: Dealing With the Aftermath of Group Conflict/Mass Atrocity**

Credits:

4.00

Description:

Once violent conflict between two groups has ended, what is the best way to transition back to normality coming to terms with the past or simply moving on? To answer these questions we will examine the debates surrounding war crime tribunals, truth commissions, lustration policies, and reparations in the second half of the 20th century. Case studies will include post-apartheid South Africa, post-WWII Germany, and the Israeli/Palestinian conflict. We will discuss the philosophical problems raised by each of these instruments, as well as on the political, legal, and practical difficulties their implementation present. Cultural Diversity B

Type:

- **SF-156 The Mask Behind the Face: Personas, Personalities, and Perception. Acting in /Out Life**

Credits:

4.00

Description:

The theatre has always been a metaphor for life. In modern times life has become theatre. This seminar will confront the idea of real life and the eroding boundary between performers and audience. Students will study the roots of the contemporary obsession with stars and stardom, a mania that began in the 18th century and flourished in the 19th century. We will look at performance studies, performers memoirs, plays, and films that dramatize this dilemma.

- **SF-173 Crime in American Society**

Credits:

4.00

Description:

Popular beliefs about crime are often inspired by the media and by specific criminological theories. These theories about and media images of crime will be examined in detail, including the hits and misses.

- **SF-174 Tragedy and Literature**

Credits:

4.00

Description:

This course will focus on classic works of ancient and modern literature that examine the human condition from a tragic perspective. We will concentrate on close readings from the following texts: Homer's Iliad, Sophocles' Antigone, The Bhagavad-Gita, Shakespeare's Othello, Chekhov's short stories, and Joyce's Dubliners.

- **SF-178 Sacred Hoops & Sneaker Pimps: Understanding the American Hoop Dream**

Credits:

4.00

Description:

This course is about the basketball hoop dream played out at the high school and college levels. We will study a wide variety of materials - novels, films, websites, reference works - to understand both the construction, and destruction, of the hoop dream in such diverse places as New York City, Seattle, rural Indiana, suburban Georgia, and the Wind River Reservation in Wyoming. Issues of race and culture will serve as guiding themes as we develop critical theory explaining why the hoop dream has persisted, and adapted, over time, to fit the needs of its believers and supporters.

Type:

Cultural Diversity Opt A

- **SF-182 Heroes, Antiheroes and Outsiders: Reading the Graphic Novel**

Credits:

4.00

Description:

How is it that comics", a genre often viewed as entertainment for children and adolescents, has become one of the most exciting forms of narrative and visual art? To answer this question, this seminar will examine a range of graphic novels, from those that celebrate their origins in superhero comics, such as Alan Moore's Watchmen, to those that treat subjects not usually considered proper to the comics genre, such as Art Spiegelman's Maus, about the Holocaust, and Alison Bechdel's Fun Home, about the complexities of sexual identity. As we read these works, we will look at how the combination of words and still images makes the graphic novel a unique storytelling form, as well as how artists and writers push the envelope to create new styles and challenge our expectations. In addition to class discussions and writing assignments, we will take a field trip to the Museum of Fine Arts and create a collaborative group graphic novel step-by-step over the course of the semester (all abilities welcome).

- **SF-183 Politics, Power and the Media**

Credits:

4.00

Description:

Is there a relationship between accumulated political power and mass media representations? Is news content impacted by existing political power relations? It is the object of this course to critically analyze the role of the mass media within the framework of existing political power relations in the United States. In particular, the course will focus on the role the mass media plays in promoting and reinforcing dominant political practices and ideologies. The course will begin by exploring various theories of the press, notably its function in a democratic society, as well as the concepts of power and propaganda. We will continue with a series of case studies, complemented by secondary sources that highlight how media representations affect the contemporary distribution of political power in the US. Topics of discussion will include the current US war on terrorism, the ongoing health care debate, the public disavowal of big government", and the concept of a liberal media.

- **SF-189 American Gothic: Edgar Allan Poe, Flannery O'Connor and Annie Proulx**

Credits:

4.00

Description:

This literature seminar will study and compare the short stories of Edgar Allan Poe, Flannery O'Connor, and Annie Proulx. Beginning with Poe as the father of the short story genre in America and exploring his critical theory of the grotesque and arabesque", the class will examine the emergence of the gothic literary idiom as a classic American genre. Critical essays on the gothic aesthetic will be analyzed and film adaptations and documentaries will be viewed.

- **SF-191 Film Adaptation Film Adaptation**

Credits:

4.00

Description:

Why did they change the ending of the book? The novel is so much better! We will explore the concept and industry of film adaptation. Students will read novels and watch respective film adaptations to explore how the written word is adapted to the screen; both fiction and non-fiction works will be considered. Also, field trips to past film locations in Boston will be taken to explore why specific settings were chosen for respective situations. Additionally, students will create their own written adaptations of source materials, putting into practice the concepts studied in class.

- **SF-197 Sustainability, Energy, and Technology At Suffolk University**

Credits:

4.00

Description:

In this project and team-based course, students study a sustainability problem at Suffolk University and spend the semester developing proposals to address the problem. At the end of the course students will present their proposals to Suffolk University's sustainability committee, and will exhibit their websites and visual aids in the Donahue lobby to educate the Suffolk community about sustainability. If their proposals are well-researched and well-communicated, students can see their ideas actualized while they are still undergraduates.

- **SF-198 Music and the Brain**

Credits:

4.00

Description:

What accounts for the power of music to move us so profoundly? This course explores how our brains and music evolved together: What music can teach us about the brain, what the brain can teach us about music, and what both can teach us about ourselves.

- **SF-1127 The Vietnam and Iraq Wars: Polarized Perspectives**

Credits:

4.00

Description:

This class will examine some of the many controversies surrounding the Vietnam and Iraq Wars, two conflicts that have been profoundly polarizing for the American people. There are widely divergent perspectives regarding the fundamental questions surrounding each war. Were the reasons for American involvement just? To what extent were the methods used by the United States military during each war just? To what extent did the media play an appropriate role before, during, and after each war? Did opposition to these wars serve primarily to benefit the enemies of the United States or did it constitute a form of patriotism and love of country? This interdisciplinary course will address these and other complex questions by examining the histories, literature, and films (both documentaries and dramatic) that have been produced in response to these wars.

- **SF-1128 Sustainable Media**

Credits:

4.00

Description:

Contrary to a popular perception that information, communication and entertainment technologies are clean, ecologically benign and paperless, the reality of an increasingly digital life is that our fascination with the next best thing in mobile phones, video game consoles, personal computers, digital cameras, tablets, etc., has devastating impacts on our environment. These media devices are manufactured using toxic ingredients in poisonous working condition, require an abundance of energy to operate, and create hazardous waste when disposed. Media technology companies and the advertising industry that markets their wares have successfully persuaded consumers to accept rapid obsolescence and to highly anticipate the latest upgrade. But some consumers, electronics manufacturers, policy makers, and environmental groups are working to change the culture of consumption in favor of sustainable media practices that lessen the environmental footprint of the digital devices we use everyday. The purpose of this course is to understand the problem of unsustainable media, and the possible solutions for a sustainable media system.

- **SF-1129 Beacon Hill: Fact, Fiction, and Fantasy**

Credits:

4.00

Description:

The course will explore the physical geography, history, and image in literature, film, and pop culture of Suffolk University's Beacon Hill neighborhood. The purpose and objective of the course is to provide students with a deep knowledge, understanding, and appreciation of Beacon Hill through examination of written and visual sources, and feet-on and eyes-on experience of the public parts of the Hill.

Type:

Local Engagement Experience

- **SF-1141 Classical Civilizations: Pathways to Wisdom**

Credits:

4.00

Description:

How is it that the knowledge, intelligence, wisdom and values of the Greeks and Romans still educate and edify the world by providing venues towards leading fulfilling and dignified lives? The guiding principles of their respective civilizations rested upon eight pillars: - Humanism: It was recognized that humans have the potential to master their world and live life to the fullest. -The Pursuit of Excellence: To imagine the highest good and strive to attain it. - Self Knowledge: It is imperative to know oneself before seeking to know the world. - Rationalism: Always question, reason and discern truth from falsehood and never consider any matter superficially. - Restless Curiosity: Often the resolution of one issue leads to the revelations

of others mysteries and pursuits which compels further investigation. The wise individual makes this a lifelong endeavor. -Love of Freedom: As long as one brings no harm to others, one must be free to live and discover as much as possible. - Individualism: All are unique and, therefore, must recognize individual strengths and identity. -The Practice of Moderation: The prudence of avoiding extremes in personal and social conduct. In this course, students will read two (brief) texts on the Greek and Roman contributions to the world and then will proceed with specific readings which illuminate the eight principles above for achieving the good life.

- **SF-1143 In the First-Person: Storytelling in the 21st Century**

Credits:

4.00

Description:

This section of the Seminar for Freshmen will consider the forms, venues, and impacts of narrative nonfiction in contemporary culture. From the exploding popularity of personal essays in the digital age to the living, evolving essays we create on social media, we are constantly narrating and archiving our lives, shaping their content for specific audiences. In doing so, we shape what our experiences mean and represent. In order to analyze the power of narrative nonfiction, we will look at a variety of multimodal texts: essays, podcasts, Instagram and Twitter feeds, stand-up comedy, and storytelling slams, as well historical texts such as the essays of Michel de Montaigne and historical artifacts at the National Archives in Boston. We will also write our own narrative nonfiction, and adapt our first-person stories for listening and viewing audiences, such as the MassMouth story slam and podcasts like This American Life. Additionally, we will practice narrative nonfiction for professional audiences, using storytelling as a way to showcase personal strengths to employers, internship coordinators, and the like.

- **SF-1144 Native Americans: Walking in Two Worlds?**

Credits:

4.00

Description:

Native Americans are often described as walking in two worlds, as they attempt to navigate the process of maintaining their tribal identity and heritage while living in mainstream America. In recent years there has been a shift towards tradition and heritage, and a rejection of Western values and norms in both the US and Canada. In this course we will look at how Native people live in the US and Canada today, and examine the extent to which they are either trying to walk in two worlds or perhaps rejecting the two worlds model. To help us answer this question, we will read about reservation life, the Idle No More Movement, Indigenous History, and current events. We will also watch videos and explore indigenous culture.

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

Type:

Diverse Perspectives

- **SF-1146 Fido the Friendly Wolf: A Natural History of Dogs**

Credits:

4.00

Description:

This course explores the evolution of dogs from wolves and the ways in which dogs have adapted to their niche in human society. The ecology, behavior, genetics, and adaptations of dogs will be explored in relation to both their wolf ancestry and artificial selection by humans. The course includes 2 mandatory field trips to a wolf sanctuary and an animal shelter.

- **SF-1147 Global (In) Security: From ISIS to Ebola**

Credits:

4.00

Description:

This course reviews the principal features of global and national security as it is currently practiced by tracing the evolution of theories, policies and circumstances whereby current international security is developed. Students will evaluate the nature and origins of war, arms proliferation, military instability, terrorism, genocide, health threats and natural resources depletion.

- **SF-1148 Brave New Worlds**

Credits:

4.00

Description:

Explores themes of adventure, self-discovery, exile, and culture shock in classic and contemporary travel writing (including fiction, poetry, and non-fiction) as well as film. Students will experiment with creative writing of their own, develop theories of cosmopolitan world citizenship, travel through the city of Boston on field trips, and team up to learn about different countries in Suffolk's global network of study abroad programs.

• SF-1150 Religion in Contemporary Society

Credits:

4.00

Description:

This course is design to provide students with an overview of the social settings and cultural meanings of religion in the contemporary world. Topics that will be covered in reading and discussions include the rise of religious fundamentalism, religion and violence, women's and men's religious experiences, new religions, and portrayals of religion in popular films. In addition to the readings, students will observe and experience religious expressions and activities through fieldwork assignments. The emphasis on films and fieldwork reflects my belief that religion is made up of lived experiences of actual individuals and communities. In order to understand religion in contemporary society we will make every effort to see (in person or in film) a wide range of religious activities. The films we will see include some of the following: Leap of Faith, Devil's Playground, Kadosh, Women of Hizballah, Singing Stream, A Still Small Voice.

• SF-1151 Reproduction and Society

Credits:

4.00

Description:

This course explores relationships between reproductive health and rights both nationally and internationally. Many of our topics fit into two broad areas: conflicts over the control of childbearing (sterilization abuse, birth control, and abortion) and conflicts over who deserves to be a mother, especially when the mothers in question face social stigma and lack political power. Other topics include safe birth and maternal mortality, breastfeeding, infertility and reproductive technology. We also examine the politics of women's sexual and reproductive autonomy, including the policies that shape women's choices to prevent, achieve, abort, or carry to term a pregnancy. Throughout, we are guided by the following questions: Why is reproduction an important site through which to understand society? How do statuses such as race, class, gender, sexuality and ability

influence people's reproductive possibilities? What is the role of the state in shaping these experiences? How have communities supported or resisted efforts at reproductive control? Why is reproductive justice central to these answers?

- **SF-1153 Law, Disease, and Public Health**

Credits:

4.00

Description:

This course is about public health law, which is the study of the legal powers and duties of the various systems of government in the United States (federal, state, and local) in collaboration with their partners (e.g., health care, business, the community, the media, and academe), to ensure the conditions for people to be healthy (to identify, prevent, and ameliorate risks to health in the population), and of the limitations on the power of these systems of government to constrain for the common good the autonomy, privacy, liberty, proprietary, and other legally protected interests of individuals. The prime objective of public health law is to pursue the highest possible level of physical and mental health in the population, consistent with the values of social justice. The course will focus especially on public health law in the area of epidemic disease. Case studies will be made of the Great Influenza of 1918 and the origins and spread of the Ebola virus, culminating in an examination of outbreaks of Ebola in the United States.

- **SF-1154 Introduction to Visual Studies**

Credits:

4.00

Description:

This seminar provides an introduction to Visual Studies, a relatively new interdisciplinary field that examines how images communicate and the roles that they play in society. Students will apply the concepts and techniques of Visual Studies to analyze sites and signs around Boston, such as advertisements, street signs, fashions, newspaper photographs, buildings, and public spaces. Class projects will increase students' awareness of their visual environment and their ability to critically analyze the visual rhetoric that surrounds us and is often used to manipulate us.

Type:

Local Engagement Experience

Students in the CAS Honors Program should choose one Seminar for Freshmen course from those listed below:

- **SF-H116 Enlightened Insanity**

Prerequisites:

CAS Honors students only.

Credits:

4.00

Description:

Rain or shine, the great 18th century Enlightenment philosophers would meet at the famous cafes of Paris to discuss their ideas, and to observe and criticize society. From these informal debates emerged ideas that are at the core of our modern understanding of the nature of society, marginality, human nature, civil rights, the essence of creativity and genius. Come join us in the quest to understand, define, observe, and analyze the key ideas and concepts of these great thinkers, such as Rousseau, Diderot, and Voltaire, still so relevant in our time. We will read key works of these creative thinkers and philosophers. We will enrich our experience and understanding through the use of film, theatre performances, museum visits, as well as the occasional cafe debate.

Type:

Expanded Classroom Requirement, Honors

• SF-H126 The Boston Theatre Scene: The Inside Experience

Credits:

4.00

Description:

Using the current Boston theatre season as its syllabus, this writing- and analysis-intensive course will explore several plays in production at some of Boston's many professional theatres. We will study the script of four to five plays before attending performances of those works. Students will gain insights on the world of theatre through backstage tours and conversations with theatre professionals such as producers, directors, actors, designers, playwrights, and critics. Students must be available for evening (usually Wednesday) performances. A fee for student-rate tickets will be assessed.

Type:

Honors

• SF-H1134 The Meaning of Life

Prerequisites:

CAS honors students only.

Credits:

4.00

Description:

What do we live for? Which beliefs, values, and experiences sustain meaningful, fulfilling existence? Are we authors of our destinies or powerless pawns in an unfathomable cosmic game? Does death render all our efforts superfluous? This award-winning course offers a cross-cultural, interdisciplinary exploration of these questions through philosophical and religious texts, art, fiction, autobiography, and psychological studies. The course opens with the Old Testament's book of Ecclesiastes, followed by three units: 1) A Life Worth Living: Humanity's Ideals focuses on the ancient and modern visions of human flourishing; 2) Threats to Meaning: Humanity's Discontents, discusses the disillusionments leading to the loss of meaning; and 3) Recovery of Meaning: Crises and Hopes, explores the post-crisis possibilities of self-discovery and growth. Please visit <http://meaningoflife.cherkasova.org/>

Honors

• SF-H1135 Women Warriors: Stories of Captivity, Conversion, and Confession

Credits:

4.00

Description:

Since the beginning of time, women have been doing battle to themselves, while men have gone to battle against others. Whether it is through converting to Christ, yielding to captors in order to survive, or carrying a baby, this course introduces students to the many ways in which, whatever battles they face, women are warriors; they survive. Utilizing an array of captivity, conversion, and confession narratives by women, and pairing them across the centuries, students will make connections and draw conclusions between early-and mid-19th-century-American and contemporary women. Students will connect, for example, the trials of the 17th-century Puritan captive, Mary Rowlandson, and contemporary hostage, Elizabeth Smart, to explore how women (no matter how different they seem) draw upon unique inner resources to survive.

Type:

Honors

- **SF-H1152 The Idea of America: Past, Present, Future**

Credits:

4.00

Description:

A systematic exploration of thinking of and about America, from the founding of the republic to American issues and traditions of thought that reflect upon the founding principles and the unfolding American experiment. The Declaration of Independence and the Constitution will be studied with an eye to their philosophical content and sources. The course will also examine works of philosophers and other thinkers who address conflicts over the meaning of founding principles in the course of the nation's history, from the struggle over slavery to America's contemporary role in the world. Because this course intends to apply theoretical understanding to real life, students will be expected to read contemporary journalism on a regular basis and assess the controversies of today in the light of the nation's philosophical and historical currents.

Type:

Honors

Studio Course Requirements Minimum: 24 courses, 72 credits

Foundation studio courses and major department studio courses as described for each Art & Design major.

Art History Requirements: 4 courses, 16 credits

All BFA candidates are required to take an 8-credit hour sequence in the history of the art of western civilization:

- **ARH-101 Art History I**

Credits:

4.00

Description:

Surveys the art of Western civilization from prehistoric caves to medieval cathedrals. Considers works from the Ancient Near East, Ancient Egypt, Ancient Greece and Rome, the Byzantine Era, the Romanesque Period, and the Gothic Period in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **ARH-102 Art History II**

Credits:

4.00

Description:

Surveys the art of Europe and America from the Renaissance to the present. Considers work of painting, sculpture, and architecture from periods such as the Renaissance, the Baroque, the Rococo, Neoclassicism, Romanticism, Impressionism, Abstract Impressionism, and Post-Modernism in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst

Interior Design Majors only are required to take an 8-credit hour sequence in the history of furniture and architecture:

- **ADI-221 History of Furniture & Architecture I**

Credits:

4.00

Description:

The goal of this course is the enhancement of the student's critical comprehension of historic styles and the impact they have on contemporary design solutions. The survey begins with the Egyptian period and provides an overview of the history of furniture and architecture through the mid-1700s, including ancient Greece and Rome, the Gothic and Renaissance, Baroque and Rococo periods. Emphasis will be placed on chronological periods, the visual characteristics of each style including regional idiosyncrasies, and the terminology germane to a study of furniture and architecture.

Term:

Offered Both Fall and Spring

Type:

Humanities & History, Humanities Literature Requirement

- **ADI-222 History of Furniture & Architecture II**

Prerequisites:

ADI 221

Credits:

4.00

Description:

A continuation of History of Furniture & Architecture I, this course will extend the investigation of furniture and architecture into the 20th century, while addressing issues concerning preservation, restoration, rehabilitation, and adaptive re-use. Drawing on the vast resources of the city of Boston and its environs, students will become actively involved in stylistic progression, local living history, and the benefits of preserving our past for future generations. Field trips will include visits to restored Federal, Victorian and Contemporary venues.

Term:

Offered Both Fall and Spring

Type:

Humanities & History, Humanities Literature Requirement

Graphic Design Majors only are required to take a 4-credit hour course on the history of graphic design:

- **ADG-224 History of Graphic Design**

Credits:

4.00

Description:

The first part of the course will focus on the history of graphic design from prehistoric times to the Industrial Revolution, including the origins of graphic communications in the ancient world, the development of the alphabet and early printing and typography. The second portion will concentrate on the period from the late 19th century to the present, and will include the Arts and Crafts Movement, the various-isms and their influence on modern art, the Bauhaus and International Style, and contemporary visual systems and image making.

Term:

Offered Fall Term

Type:

Humanities & History, Humanities Literature Requirement, Vis. & Perform Thry & Hst

Art History Electives

The Art History electives requirement varies according to the student's major, as follows:

Graphic Design Majors: 1 course, 4 credits

Choose any Art History course.

Fine Arts Majors: 2 courses, 8 credits

Fine Arts Majors must choose two courses from the following Art History electives:

- **ARH-305 Art of Greece and Rome**

Credits:

4.00

Description:

Examines the civic, religious, and domestic art and architecture of the Ancient Mediterranean cultures of Greece and Rome. Considers temples, forums, basilicas, city planning, sculpture, pottery, wall painting, mosaics, and engineering achievements in their cultural contexts.

Term:

Occasional

Type:

BFA Humanities Requirement, Humanities & History, Humanities Literature Requirement

- **ARH-307 Art of the Italian Renaissance**

Credits:

4.00

Description:

Examines painting, sculpture and architecture of the 14th, 15th, and 16th centuries in Italy in their cultural context. Artists include Giotto, Masaccio, Donatello, Leonardo da Vinci, Raphael, Michelangelo, and Titian.

Term:

Occasional

Type:

BFA Humanities Requirement, Humanities & History, Humanities Literature Requirement, Vis. & Perform Thr

- **ARH-308 Art of the Baroque & Rococo**

Credits:

4.00

Description:

Explores painting, sculpture and architecture in Italy, Spain and Northern Europe during the 17th and 18th century. Works by Rembrandt, Rubens, Caravaggio, Bernini, Poussin, Velasquez, Watteau, Boucher, Fragonard, Chardin, Hogarth and others considered within their historical contexts.

Term:

Occasional

Type:

BFA Humanities Requirement, Humanities & History, Humanities Literature Requirement, Vis. & Perform Thr

- **ARH-309 Art of the 19th Century**

Credits:

4.00

Description:

Examines Neoclassicism, Romanticism, Realism and Impression in the European painting. Considers works by artists such as David, Ingres, Friedrich, Constable, Delacroix, Goya, Courbet, Millet, Daumier, Manet, Monet, Renoir, Degas, and Cassatt within their historical contexts.

Term:

Occasional

Type:

BFA Humanities Requirement, Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **ARH-310 Modernism in Art**

Credits:

4.00

Description:

Examines European painting and sculpture from around 1880 to 1940, including Symbolism, Post-Impressionism, Fauvism, Expressionism, Cubism, Futurism, The Bauhaus, Dada, and Surrealism. Considers works by artists such as Gauguin, Cezanne, Van Gogh, Matisse, Kandinsky, Picasso, Braque, Mondrian, Duchamp, Magritte, Dali, and Ernst within their historical contexts.

Type:

BFA Humanities Requirement, Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **ARH-311 American Art**

Credits:

4.00

Description:

Surveys American painting, sculpture, photography and architecture from the colonial period through WWII. Considers works by artists such as Smibert, Copley, West, Stuart, Whistler, Sargent, Eakins, Homer, Ryder, Bierstadt, Cole, Inness, Sloan, Sullivan, Wright, Hopper, O' Keefe, Dove, Hartley, Bellows, Stieglitz, Weston, and Steichen.

Term:

First-Year Writing: 2 courses, 8 credits

- WRI-101 First Year Writing I

Credits:

4.00

Description:

Study and practice of the writing process and revision in terms of expository writing modes for an academic audience.

- **WRI-102 First Year Writing II**

Prerequisites:

WRI 101.

Credits:

4.00

Description:

Study and practice of argumentative and research writing through further work with writing process and revision and the critical reading of a variety of texts.

A student may be assigned to other writing courses or may be invited to take WRI-H103. Students required to complete ENG-099 may be allowed to waive WRI-101 with a grade of “B” or better and the approval of the English department. Students who are invited to complete WRI-H103 and earn a “B” or better satisfy the two Writing Requirements. Waiving a course does not earn credits.

- **WRI-H103 Advanced First Year Writing**

Prerequisites:

By Invitation Only.

Credits:

4.00

Description:

This course is by invitation only and reserved for incoming Suffolk students with high admission scores. Advanced study and practice of writing process, revision, and research, based on close readings of a variety of texts. Fall semester only.

Type:

Creativity & Innovation: 1 course, 4 credits

The Creativity & Innovation requirement is satisfied by completion of the BFA Foundation Studies requirement of ADF-S171 or ADF-S172.

- ADF-S171 CI: Integrated Studio 1

Credits:

3.00

Description:

This cross-disciplinary course will integrate the ideas and practices of two-dimensional design, color and drawing emphasis will be placed on understanding the creative process, exploring concepts and developing research skills. Students will undertake individual and collaborative projects in three spaces; the studio classroom, the digital world and the city at large.

Type:

Creativity and Innovation, Arts Admin Minor Elective

• ADF-S172 CI: Integrated Studio II

Prerequisites:

ADF S101

Credits:

3.00

Description:

This course builds on the Integrated Studio 1 experience: synthesizing fundamental visual ideas. IS 2 investigates the construction, documentation, and transformation of volumetric form, environmental space, and time. Projects will explore narrative strategies and the creation of immersive experiences. Students will develop critical and analytical skills while employing a range of traditional and digital media-including video/sound capture and editing-as they explore the creative boundaries of the classroom studio, the city of Boston, and virtual space.

Bachelor of Fine Arts Degree

All BFA degree programs require the successful completion of the following courses:

Core Requirements: 12 courses, 48 credits

- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Literature](#)
- [Ethical & Philosophical Inquiry](#)
- [Social Science](#)
- [Humanities/History/Visual & Performing Arts](#)

Math: 1 course, 4 credits

Choose [MATH-128 or any course above 128](#)

Studio Course Requirements Minimum: 24 courses, 72 credits

Foundation studio courses and major department studio courses as described for each Art & Design major.

Art History Requirements: 4 courses, 16 credits

All BFA candidates are required to take an 8-credit hour sequence in the history of the art of western civilization:

- **ARH-101 Art History I**

Credits:

4.00

Description:

Surveys the art of Western civilization from prehistoric caves to medieval cathedrals. Considers works from the Ancient Near East, Ancient Egypt, Ancient Greece and Rome, the Byzantine Era, the Romanesque Period, and the Gothic Period in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **ARH-102 Art History II**

Credits:

4.00

Description:

Surveys the art of Europe and America from the Renaissance to the present. Considers work of painting, sculpture, and architecture from periods such as the Renaissance, the Baroque, the Rococo, Neoclassicism, Romanticism, Impressionism, Abstract Impressionism, and Post-Modernism in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

Type:

Interior Design Majors only are required to take an 8-credit hour sequence in the history of furniture and architecture:

- **ADI-221 History of Furniture & Architecture I**

Credits:

4.00

Description:

The goal of this course is the enhancement of the student's critical comprehension of historic styles and the impact they have on contemporary design solutions. The survey begins with the Egyptian period and provides an overview of the history of furniture and architecture through the mid-1700s, including ancient Greece and Rome, the Gothic and Renaissance, Baroque and Rococo periods. Emphasis will be placed on chronological periods, the visual characteristics of each style including regional idiosyncrasies, and the terminology germane to a study of furniture and architecture.

Term:

Offered Both Fall and Spring

Type:

Humanities & History, Humanities Literature Requirement

- **ADI-222 History of Furniture & Architecture II**

Prerequisites:

ADI 221

Credits:

4.00

Description:

A continuation of History of Furniture & Architecture I, this course will extend the investigation of furniture and architecture into the 20th century, while addressing issues concerning preservation, restoration, rehabilitation, and adaptive re-use. Drawing on the vast resources of the city of Boston and its

environs, students will become actively involved in stylistic progression, local living history, and the benefits of preserving our past for future generations. Field trips will include visits to restored Federal, Victorian and Contemporary venues.

Term:

Offered Both Fall and Spring

Type:

Humanities & History, Humanities Literature Requirement

Graphic Design Majors only are required to take a 4-credit hour course on the history of graphic design:

- **ADG-224 History of Graphic Design**

Credits:

4.00

Description:

The first part of the course will focus on the history of graphic design from prehistoric times to the Industrial Revolution, including the origins of graphic communications in the ancient world, the development of the alphabet and early printing and typography. The second portion will concentrate on the period from the late 19th century to the present, and will include the Arts and Crafts Movement, the various-isms and their influence on modern art, the Bauhaus and International Style, and contemporary visual systems and image making.

Term:

Offered Fall Term

- **BLE-325 Global Business Ethics**

Prerequisites:

BLE-215, PHIL-119, PHIL-120, PHIL-123 or PHIL-127

Credits:

3.00

Description:

Surveys business ethics as they transcend the diverse perspectives of global business. Explores current global ethics standards and values, ethical challenges, controversies, convergence and trends. Students explore famous global business cases through films, websites and independent research. Emphasizes identification and resolution of global business ethical issues within the context of ethical decision-making and sustainability. Analyzes corporate social responsibility ; hence, transforming global business ethics through business.

Type:

Diverse Perspectives

- **CI-204 Prague: Castles to Barbwire**

Prerequisites:

At least 24 credits earned.

Credits:

3.00

Description:

Prague offers students a more recent view into history and will serve as a backdrop to learning Design Thinking. The curriculum will use Czech and Central European cultural features as the inspiration for learning the creative process, skills that can be applied broadly and globally across disciplines. WWII and its fall to Communism left the Czech Republic undamaged. Artists played a vital part in the country's rise to a Republic during the Velvet Revolution. These dissidents, including writers, actors, artists and musicians were innovators who were the catalyst for change. One could say that creative minds changed this country. This course is designed to demystify the creative process by introducing the creative practice as a disciplined approach to problem solving and innovation requiring research. This one-month study abroad experience will offer a more worldly insight to the significance of developing skills where divergent thinking and risk taking are one of many key tools in learning to generate new ideas. Travel fee covers accommodations, transfers, some meals and cultural visits. Airfare and tuition not included.

Type:

Creativity and Innovation,Diverse Perspectives,Global Engagement Experience,Expanded Classroom Requi

- **CJN-216 Intercultural Communication**

Credits:

4.00

Description:

An examination of communication variations and cultural viewpoints and their impact on cross-cultural communication. A special emphasis is placed on rituals and message patterns in non-Western cultures.

Term:

Offered Both Fall and Spring

Type:

Cultural Diversity Opt B,Diverse Perspectives

- **CJN-219 Rhetoric of Protest and Reform**

Credits:

4.00

Description:

Examines the persuasive strategies of social reform movements with special emphasis on the civil rights', women's rights, and gay rights movements in the United States.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt A,Humanities & History,BSBA SOCIAL CHANGE,Diverse Perspectives

Social Science,Diverse Perspectives

• GVT-360 Elections and Voting

Credits:

4.00

Description:

How are elections administered in the United States? Do Americans have confidence in the electoral process? Should they? Why or why not? This course will examine elections in the United States in detail -- from how they are funded to how they are administered to how voters behave. Students will have a choice of either serving as poll workers during the November election or organizing and conducting research of potential voters. Students will gain hands-on experience in actual research design, election administration, and non-partisan get-out-the-vote activities. In addition, students will gain a deeper understanding of the relationship between attitudes, opinion, and voting behavior in American politics and institutions. ECR

Type:

Humanities & History,Social Science,BSJ SOCIAL SCIENCE,Diverse Perspectives

• GVT-391 Canada: Multicultural Politics

Prerequisites:

GVT 110/120 or Instructor's permission

Credits:

4.00

Description:

This course examines the Canadian model of incorporating diverse communities into its constitutional and political framework, including the founding British North American Act of 1867, the 1982 Constitution Act, and two later attempts at constitutional reform. Canada's role in balancing two official languages, English and French, is discussed, as is its recognition of a First Nations native-governed territory in the Arctic. This course introduces

to the Canadian polity and compares its parliamentary system with the U.S. separation of powers system. Prerequisites: GVT 110, GVT 120 or instructor's consent. Normally offered alternate years. Cultural Diversity B

Type:

Cultural Diversity Opt B, Social Science, BSJ SOCIAL SCIENCE, Diverse Perspectives

- **GVT-467 Comparative Social Movements**

Prerequisites:

Junior status

Credits:

4.00

Description:

This class examines the political ramifications of social movements primarily but not exclusively within the United States. It looks at ideology, beliefs and mechanisms of mobilization. Another important focus is an analysis of non-white social movements in this country and their impact on domestic politics. Among the movements to be examined are: the Pan-African movement 1919-1939 which will, to some extent, take us outside this country; the U.S. Civil Rights Movement 1955 to 1969 which covers the rise of the Black Power movement; and the U.S. Labor Movement 1900 to 1955 in terms of non-white influence on its programmatic goals. Normally offered alternate years. Cultural Diversity B

Type:

• **PSYCH-243 Organizational Psychology**

Prerequisites:

Take PSYCH-114;

Credits:

4.00

Description:

Focuses on diversity concerns in various aspects of the psychology of the workforce. This includes job analysis, recruitment, selection, evaluation, training, retention, and termination. Employee morale, well-being, stress, and hardiness are considered.

Type:

Cultural Diversity Opt A,Social Science,Diverse Perspectives

• **RS-111 Introduction to World Religions: Western Traditions**

Credits:

4.00

Description:

This course will explore the comparative history and structure of Western religious traditions, broadly understood, and their impact on other world religions, while attempting to recognize the similarities and the differences among them. Traditions to be studied include Greek and Roman religion, the monotheistic faiths (Judaism, Christianity, and Islam, as well as Zoroastrianism, Sikhism and Bahaism). We will also explore the impact of the Western religions on indigenous traditions, such as African religion, Native American religion, and Pacific Island religion. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. 1 term - 4 credits. Normally offered every year.

Type:

Diverse Perspectives

- **RS-112 Introduction to World Religions: Eastern Traditions**

Credits:

4.00

Description:

This course will examine a variety of Eastern religions, including Hinduism, Buddhism, Jainism, Confucianism, Taoism, and Shintoism. Possible connections to be explored will be the impact of these traditions on others, such as Pacific Islands and African religion, as well as the growing place of Eastern religion in the West. This course will explore the history and structure of each tradition, while attempting to recognize the similarities and the differences among them. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. Normally offered every year. Cultural Diversity B

Description:

An in-depth analysis of timely special issues in international business. Specific topics are announced when the course is scheduled.

Type:

- **SF-190 Asia in America Fiction and Fact**

Credits:

4.00

Description:

With a focus on some selected ethnic groups from Asia, Asia in America studies the history and current status of Asian Americans in Boston and other parts of the country. We will examine the major reasons why these immigrants chose to leave their home country as well as their expectations and experiences here in America. We will also discuss the issues Asian immigrants have faced in this adopted home as well as the connections and conflicts among different ethnic groups or even within the same ethnic group due to political and socio-economic reasons. The course will include some level of community engagement, through Chinatown tour and service, which may enable us to have a direct contact with the Asian American population and reflect on what is being discussed in class. Through this course, we hope to gain a better understanding of the racial and cultural history of the country and arrive at a deep appreciation of the dynamics of cultural interactions in the twenty-first century. The course fulfills the SCGP requirement.

Type:

Cultural Diversity Opt A, Global Engagement Experience, Diverse Perspectives, Expanded Classroom Requir

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

Type:

Diverse Perspectives

- **SOC-227 Race in American Society**

Credits:

4.00

Description:

Despite the election of Barack Obama as President of the United States, race remains one of the most divisive forces in U.S. society. While many of us struggle against racism, racial classification continues to affect where we live, where we work, and how we see ourselves. Racial classification affects our access to health care and our encounters with police officers. Distorted images of racial groups fill television and movie screens. Appeals to racism and fear of foreigners are dominant themes in elections to state and national offices. This course examines the formation and re-formation of racial classifications: how particular groups become racially identified, how these classifications change over time, and how conflicts over race have shaped American society. The meanings of race, as seen from a variety of perspectives, will be a consistent theme throughout the course.

Type:

Cultural Diversity Opt A,Diverse Perspectives,Cultural Diversity Opt B

- **SOC-228 Cultural, Global and Social Perspectives**

Credits:

4.00

Description:

Enables students to examine, as well as develop an awareness and appreciation of, diversity within today's society. Providing an overview of the major racial, ethnic, and cultural groups in the U.S., the focus is on the ways in which cultural awareness enhances professional helping relationships and improves the operation of human services systems.

Term:

Occasional

Type:

Cultural Diversity Opt A,Diverse Perspectives

- **SPAN-290 Advanced Composition & Conversation**

Prerequisites:

Prerequisite: Spanish 202, 203 or 250 or Instructor's consent

Credits:

4.00

Description:

Develops written and oral skills in various contexts and registers. Emphasis on strengthening written skills and learning to speak clearly and persuasively in Spanish. Short texts and audio-visual materials provide the basis for classroom activities which include regularly assigned essays, group discussions and debates.

Term:

Offered Fall Term

Type:

BA FOREIGN,Diverse Perspectives

- **SPAN-301 Spanish Culture and Civilization**

Prerequisites:

Spanish 202, 203 or 250. Spanish 290 or 300 are strongly recommended

Credits:

4.00

Description:

Examines the civilization and culture of Spain highlighting its historical development and cultural manifestations from pre-historic times to the nineteenth century. Students improve their four skills through activities that include discussions, oral presentations, and writing assignments based on reading and films.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, BA FOREIGN, Diverse P

- **SPAN-302 Indigenous and Colonial Latin America**

Prerequisites:

Spanish 202, 203 or 250 or Instructor's consent. Span 290 or 300 strongly recommended.

Credits:

4.00

Description:

Introduces students to the complexity Latin America by examining its roots in pre-Columbian America and the impact of Spanish exploration and colonization. Places emphasis on cultural, economic, historical, philosophical, political and religious patterns that define the region. Includes class discussions, oral presentations, and writing assignments based on reading and audio-visual material.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, BA FOREIGN, Diverse P

- **SPAN-315 Business Spanish**

Prerequisites:

SPAN 290 or SPAN 300 or Instructor's consent.

Credits:

4.00

Description:

Integrates language learning with culture via business context of the Hispanic world. Spanish for banking and finance, marketing and advertising, and international commerce are highlighted. Students increase their cross-cultural understanding and written and oral proficiency in business Spanish through a wide range of assignments.

Type:

Diverse Perspectives

• SPAN-390 Introduction to Latin American and Caribbean Literature

Prerequisites:

SPAN 300; SPAN 302 is strongly recommended

Credits:

4.00

Description:

Examines authors from Latin America and the Caribbean in their historical and cultural contexts. Reading and class discussions consider the relationship between the writer and society by covering such topics as colonialism, the oral tradition, modernism and the emergence of new narratives in the twentieth century. The Inca Garcilaso, Sor Juana, Carlos Fuentes, Rigoberta Menchu, and Pablo Neruda are among some writers studied.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities Literature Requirement, BA FOREIGN, Diverse Perspectives

• THETR-260 Broadway Musicals

Credits:

4.00

Description:

This course is a survey of American musical theatre from its roots in the mid-19th century to the present. It provides the analytical tools and historical insight to more fully appreciate Broadway's greatest musicals and musical theatre artists. Students will explore the ways in which American forms of popular entertainment helped to shape Broadway musicals from their infancy through their adulthood. The course also explores the ways in which musicals provided opportunities for African-Americans, women, immigrants, and the GLBT community.

Term:

Offered Fall Term

Type:

Cultural Diversity Opt A, Humanities Literature Requirement, Diverse Perspectives, Vis. & Perform Thry

- **THETR-267 Introduction to Theatre: Contemporary American**

Credits:

4.00

Description:

This course provides a formal introduction to the theories and practices strategically used by American theatre artists after the Second World War. Special emphasis is placed on theatre artists exploring issues of cultural identity including works by GLBT, African-American, Asian-American, and Latin American playwrights. These playwrights may include Tony Kushner, Paula Vogel, Suzan-Lori Parks, Adrienne Kennedy, August Wilson, David Henry Hwang, Philip Kan Gotanda, Eduardo Machado, and Melinda Lopez. The course will also provide an introduction to trends in post-modern theatre practices related to emerging work of the auteur director, solo performers, and interdisciplinary collectives. Satisfies a core requirement for Theatre majors. Normally offered alternate years.

Term:

Occasional

Type:

Humanities & History, Cultural Diversity Opt A, Humanities Literature Requirement, Diverse Perspectives

- **WGS-111 Women, History, & Culture**

Credits:

4.00

Description:

Explores the roles and images of women in Western culture and the realities of women's everyday lives through literature, film, history, art, psychology, and recent feminist scholarship. Analyzes gender inequalities and the influence of gender on social structure, human behavior, and artistic expression. Topics include: the social construction of gender and identity; domestic prescriptions for women; women and work; intersections of gender, class, and race in American society; sexualities and identity; the politics of motherhood and reproductive rights; educating girls; negotiating male privilege and structural inequalities; representations of women in Western art and film; and women as artists and gendered models of creativity in art, film, fiction, and science.

Term:

Offered Both Fall and Spring

Type:

Cultural Diversity Opt A,Cultural Diversity BFA,Humanities & History,Humanities Literature Requireme

• **WGS-H111 Women, History, & Culture**

Prerequisites:

At least a 3.3 GPA required.

Credits:

4.00

Description:

Explores the roles and images of women in Western culture and the realities of women's everyday lives through literature, film, history, art, psychology, and recent feminist scholarship. Analyzes gender inequalities and the influence of gender on social structure, human behavior, and artistic expression. Topics include: the social construction of gender and identity; domestic prescriptions for women; women and work; intersections of gender, class, and race in American society; sexualities and identity; the politics of motherhood and reproductive rights; educating girls; negotiating male privilege and structural inequalities; representations of women in Western art and film; and women as artists and gendered models of creativity in art, film, fiction, and science.

Term:

Offered Both Fall and Spring

Type:

Cultural Diversity Opt A,Cultural Diversity BFA,Humanities & History,Humanities Literature Requireme

- **WGS-113 Women, Science, & Society**

Credits:

4.00

Description:

Explores women's lives from the perspective of the social and natural sciences, including examination of recent biological, psychological, and sociological theories about gender and gender roles, as well as the influence of feminist scholarship in these areas. Topics include: the social construction of gender; the psychology and biology of sex and gender; women and work; media representations of women; the female body and eating disorders; women's health and lifecycle; women and sexuality; reproduction, abortion, and motherhood; and sexual violence against women.

Term:

Offered Both Fall and Spring

Type:

Cultural Diversity Opt A,Social Science,Diverse Perspectives

- **WGS-115 Introduction to Gender Studies**

Credits:

4.00

Description:

Introduces the key topics and debates that have shaped the field of gender studies, including queer studies, masculinity studies, and women's studies. Through lecture and class discussion of texts from literature, film, history, psychology, and sociology, explores the pervasive influence of gender on the structure of society and our everyday experiences and the role that gender plays in our understanding of love, friendship, sexuality, and even violence. Topics include: biological arguments about gender and sexuality; the social construction of gender and identity; intersections of gender, race, class, and sexuality; masculinity and femininity; and theories of sexual difference and the construction of sexuality.

Term:

Occasional

Type:

Cultural Diversity Opt A, Diverse Perspectives

Courses may simultaneously fulfill Core Requirements, Major Requirements, Complementary Major Requirements, or Minor Requirements, or may be used as electives.

Studio Course Requirements Minimum: 24 courses, 72 credits

Foundation studio courses and major department studio courses as described for each Art & Design major.

Art History Requirements: 4 courses, 16 credits

All BFA candidates are required to take an 8-credit hour sequence in the history of the art of western civilization:

- **ARH-101 Art History I**

Credits:

4.00

Description:

Surveys the art of Western civilization from prehistoric caves to medieval cathedrals. Considers works from the Ancient Near East, Ancient Egypt, Ancient Greece and Rome, the Byzantine Era, the Romanesque Period, and the Gothic Period in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **ARH-102 Art History II**

Credits:

4.00

Description:

Surveys the art of Europe and America from the Renaissance to the present. Considers work of painting, sculpture, and architecture from periods such as the Renaissance, the Baroque, the Rococo, Neoclassicism, Romanticism, Impressionism, Abstract Impressionism, and Post-Modernism in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst

Interior Design Majors only are required to take an 8-credit hour sequence in the history of furniture and architecture:

- **ADI-221 History of Furniture & Architecture I**

Credits:

4.00

Description:

The goal of this course is the enhancement of the student's critical comprehension of historic styles and the impact they have on contemporary design solutions. The survey begins with the Egyptian period and provides an overview of the history of furniture and architecture through the mid-1700s, including ancient Greece and Rome, the Gothic and Renaissance, Baroque and Rococo periods. Emphasis will be placed on chronological periods, the visual characteristics of each style including regional idiosyncrasies, and the terminology germane to a study of furniture and architecture.

Term:

Offered Both Fall and Spring

Type:

Humanities & History, Humanities Literature Requirement

• ADI-222 History of Furniture & Architecture II

Prerequisites:

ADI 221

Credits:

4.00

Description:

A continuation of History of Furniture & Architecture I, this course will extend the investigation of furniture and architecture into the 20th century, while addressing issues concerning preservation, restoration, rehabilitation, and adaptive re-use. Drawing on the vast resources of the city of Boston and its environs, students will become actively involved in stylistic progression, local living history, and the benefits of preserving our past for future generations. Field trips will include visits to restored Federal, Victorian and Contemporary venues.

Term:

Offered Both Fall and Spring

Type:

Humanities & History, Humanities Literature Requirement

Graphic Design Majors only are required to take a 4-credit hour course on the history of graphic design:

• ADG-224 History of Graphic Design

Credits:

4.00

Description:

The first part of the course will focus on the history of graphic design from prehistoric times to the Industrial Revolution, including the origins of graphic communications in the ancient world, the development of the alphabet and early printing and typography. The second portion will concentrate on the period from the late 19th century to the present, and will include the Arts and Crafts Movement, the various-isms and their influence on modern art, the Bauhaus and International Style, and contemporary visual systems and image making.

Term:

Offered Fall Term

Type:

Humanities & History, Humanities Literature Requirement, Vis. & Perform Thry & Hst

Art History Electives

The Art History electives requirement varies according to the student's major, as follows:

Graphic Design Majors: 1 course, 4 credits

Choose any Art History course.

Fine Arts Majors: 2 courses, 8 credits

Fine Arts Majors must choose two courses from the following Art History electives:

- **ARH-305 Art of Greece and Rome**

Credits:

4.00

Description:

Examines the civic, religious, and domestic art and architecture of the Ancient Mediterranean cultures of Greece and Rome. Considers temples, forums, basilicas, city planning, sculpture, pottery, wall painting, mosaics, and engineering achievements in their cultural contexts.

Term:

Occasional

Type:

BFA Humanities Requirement, Humanities & History, Humanities Literature Requirement

- **ARH-307 Art of the Italian Renaissance**

Credits:

4.00

Description:

Examines painting, sculpture and architecture of the 14th, 15th, and 16th centuries in Italy in their cultural context. Artists include Giotto, Masaccio, Donatello, Leonardo da Vinci, Raphael, Michelangelo, and Titian.

Term:

Occasional

Type:

BFA Humanities Requirement, Humanities & History, Humanities Literature Requirement, Vis. & Perform Thr

- **ARH-308 Art of the Baroque & Rococo**

Credits:

4.00

Description:

Explores painting, sculpture and architecture in Italy, Spain and Northern Europe during the 17th and 18th century. Works by Rembrandt, Rubens, Caravaggio, Bernini, Poussin, Velasquez, Watteau, Boucher, Fragonard, Chardin, Hogarth and others considered within their historical contexts.

Term:

Occasional

Type:

BFA Humanities Requirement, Humanities & History, Humanities Literature Requirement, Vis. & Perform Thr

- **ARH-309 Art of the 19th Century**

Credits:

4.00

Description:

Examines Neoclassicism, Romanticism, Realism and Impression in the European painting. Considers works by artists such as David, Ingres, Friedrich, Constable, Delacroix, Goya, Courbet, Millet, Daumier, Manet, Monet, Renoir, Degas, and Cassatt within their historical contexts.

Term:

Occasional

Type:

BFA Humanities Requirement, Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **ARH-310 Modernism in Art**

Credits:

4.00

Description:

Examines European painting and sculpture from around 1880 to 1940, including Symbolism, Post-Impressionism, Fauvism, Expressionism, Cubism, Futurism, The Bauhaus, Dada, and Surrealism. Considers works by artists such as Gauguin, Cezanne, Van Gogh, Matisse, Kandinsky, Picasso, Braque, Mondrian, Duchamp, Magritte, Dali, and Ernst within their historical contexts.

Type:

BFA Humanities Requirement, Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **ARH-311 American Art**

Credits:

4.00

Description:

Surveys American painting, sculpture, photography and architecture from the colonial period through WWII. Considers works by artists such as Smibert, Copley, West, Stuart, Whistler, Sargent, Eakins, Homer, Ryder, Bierstadt, Cole, Inness, Sloan, Sullivan, Wright, Hopper, O' Keefe, Dove, Hartley, Bellows, Stieglitz, Weston, and Steichen.

Term:

Occasional

Type:

BFA Humanities Requirement, Humanities & History, Humanities Literature Requirement, Vis. & Perform Thr

• ARH-312 Art of the Northern Renaissance

Credits:

4.00

Description:

Examines painting, sculpture, and architecture of the 14th, 15th and 16th centuries in Northern Europe, within their historical context. Topics include the rise of oil painting, the development of woodcut and engraving, the effect of the Reformation on art. Artists include van Eyck, Bosch, Durer, Holbein and Brueghel.

Term:

Occasional

Type:

BFA Humanities Requirement, Humanities Literature Requirement, Vis. & Perform Thry & Hst

• ARH-316 Contemporary Art

Credits:

4.00

Description:

Explores European and American art since WWII, including Abstract Expressionism, Colorfield Painting, Pop Art, Minimalism, Neo-Dada, Performance Art, Feminism, Neo-Expressionism and Post-Modernism. Artists include Bacon, Giacometti, Pollock, De Kooning, Frankenthaler, Rothko, Stella, Judd, Calder, David Smith, Serra, Johns, Rauschenberg, Warhol, Lichtenstein, Smithson, Christo, Nevelson, Kosuth, Kruger, Sherman, Basquiat, Kiefer, and Haring.

Term:

Occasional

Type:

BFA Humanities Requirement, Humanities & History, Humanities Literature Requirement, Arts Admin Minor E

- **ARH-321 Women, Art & Society**

Credits:

4.00

Description:

Surveys women artists from the sixteenth century to the present and examines new direction in art-historical scholarship developed by feminist art historians during recent decades.

Term:

Offered Spring Term

Type:

Cultural Diversity Opt A, Cultural Diversity Opt B, BFA Humanities Requirement, Cultural Diversity BFA,

Minimum Total Credits Required for Degree Conferral: 124 credits

2015-2016 Archived Catalog Information

Bachelor of Fine Arts Degree

All BFA degree programs require the successful completion of the following courses:

Core Requirements: 12 courses, 48 credits

- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Literature](#)
- [Ethical & Philosophical Inquiry](#)
- [Social Science](#)
- [Humanities/History/Visual & Performing Arts](#)

Science, Technology, & Engineering (STE): 2 courses and corresponding laboratories where applicable, 8 credits

Choose two STE courses (and corresponding laboratory where applicable) from the list below. Courses do not need to be in a sequence. In the case of a course that is a lecture plus a lab, the student must complete both components to earn credit for the STE requirement.

Biology:

- BIO-104 Environmental Biology

Prerequisites:

BIO 101 and BIO L101, can also be taken concurrently BIO L104 must be taken concurrently

Credits:

3.00

Description:

An introduction to basic evolutionary, behavioral and ecological principles. Readings and discussions emphasize the ways that humans are affected by ecological processes and principles as well as how humans and their technology affect ecosystems. May not be taken by Biology majors or minors. This course will not fulfill requirements for a major or a minor in Biology. It is intended for non-biology majors as a follow-up to Biology 101. 3 hours lecture. Days Only. Madrid Campus only.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• BIO-L104 Environmental Bio Lab

Prerequisites:

BIO-104 must be taken concurrently

Credits:

1.00

Description:

Exercises and field trips designed to complement and demonstrate the ecological principles developed in the lecture section. The lab emphasizes the scientific method and employs long term group projects. Madrid Campus only.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• BIO-111 Introduction to the Cell

Prerequisites:

Must take BIO L111 concurrently

Credits:

3.00

Description:

Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L111 Introduction to the Cell Laboratory**

Prerequisites:

Concurrently with BIO 111

Credits:

1.00

Description:

Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-114 Organismal Biology**

Prerequisites:

Must take BIO L114 concurrently.

Credits:

3.00

Description:

Rigorous introduction to organismal biology emphasizing evolution, phylogenetics, form, and function. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L114 Organismal Biology Laboratory**

Prerequisites:

Must take BIO 114 concurrently

Credits:

1.00

Description:

A series of laboratory experiences in evolution, diversity, anatomy and physiology.

Term:

Offered Both Fall and Spring

Type:

- **BIO-201 Biology's Big Questions**

Prerequisites:

Non Science Majors Only.

Credits:

4.00

Description:

This course seeks to answer five current questions from all levels of biology, from the subcellular to the ecosystem level. Topics will be discussed in the context of genetics, evolution, and ecology. We will focus on the process of doing science, including how scientists evaluate ideas and communicate their findings. Emphasis will be placed on topics in biology that impact daily life.

Type:

SCI TECH ENGNR

Chemistry:

- **CHEM-105 Chemical New Product Development**

Prerequisites:

ENT 101

Credits:

4.00

Description:

This course addresses the crucial intersection between chemistry and business, and the impact of these fields on society. It provides an introduction to important chemistry concepts and practices of business management. Primary focus is on understanding the chemistry principles behind some of the consumer products in our everyday lives, and using this knowledge to create and evaluate ideas for new products. The course also introduces the business aspects involved in the development and marketing of new products. An important component of the course is in making effective

presentations; this component concludes the course, culminating in team presentations of a new chemical product to panel of executives and peers. This course satisfies the Sawyer Business School Science requirement.

Type:

SCI TECH ENGR

- **CHEM-106 Biotechnology & Its Applications in Medicine, Agriculture, Law**

Credits:

4.00

Description:

Introduces the latest discoveries and applications of biotechnology. Topics include genetically modified food, stem cells, genetic testing, cloning, and forensics. A combination of lectures, discussions, documentaries, mock congressional hearings, and hands-on activities will provide insight into the numerous medical, social, legal, and ethical issues surrounding this technology.

Type:

SCI TECH ENGR

- **CHEM-111 General Chemistry I**

Prerequisites:

Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:

3.00

Description:

Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **CHEM-L111 General Chemistry I Lab**

Prerequisites:

Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **CHEM-201 Caveman Chemistry**

Credits:

4.00

Description:

Caveman chemistry explores chemical technologies that have led to modern industrial civilization, with an emphasis on the chemistry we encounter in everyday life. Although this is not a laboratory course, it is very much a course about doing things. We will focus on the process of doing science, including how scientists evaluate ideas and communicate their findings, through literature and hands-on activities.

Type:

SCI TECH ENGR

Computer Science:

- **CMPSC-F107 Ants, Rumors and Gridlocks**

Prerequisites:

Math placement level of 2 or above or any MATH course at the level 100 or above

Credits:

4.00

Description:

Do viruses and rumors spread like forest fires? How do ants cooperate? Do spoken languages and biological species evolve in a similar way? Ants, Rumors, and Gridlocks exposes students to introductory aspects of computational science by addressing and answering these and many other questions. Students use and modify virtual experiments preprogrammed in the NetLogo programming language to investigate these topics and others in Social Sciences, Biology, and Environmental Science. No prior knowledge of computer programming or NetLogo is required.

Type:

SCI TECH ENGR,Quantitative Reasoning

Electrical Engineering:

- **ECE-288 Measuring the World**

Credits:

4.00

Description:

The world is addicted to quantifying the essence of everything, from personal IQ, to the speed of a baseball, to our healthiness, or our chances of winning the lottery. Behind most of these numeric values exists a science of measurement. Some of this is referenced to international standards, such as for length, time, weight, or temperature. Others are more arbitrary and subjective, such as ranking Olympic performance in gymnastics, beauty pageants, or popular responses as found in the game show Family Feud. A third category includes controversial areas, such as measuring whether a person is lying when interrogated, or using hype rather than reality to market products. Sometimes statistics are used to predict sports outcomes, such as in the annual March Madness NCAA basketball brackets. Finally, in a world subject to fraud and deception, it can be essential to distinguish legitimate from counterfeit items, such as in money, art, collectibles, and historical documents. Don't get hoodwinked! This course examines all of these, starting with how measurements have been made throughout history, along with a full deck of entertaining terms used during the ages. This may help you sort out your weight, whether given in pounds, kilos, or stones. Often these terms will provide insights into how people lived in different eras. We will also look at some of the technologies currently available to provide these measurements, and unravel the complexities of various sensors that are used. As we consider the meaning of accuracy we may become less naive about how much confidence to ascribe to the results given us. Hovering around all of these measurements should be the question of validity - are they meaningful, useful, or misleading? And the impact they have on society - whether they steer behavior more powerfully than one might originally suspect. Each student will also be given an opportunity to become an expert in an area of measurement of personal interest. By the end o

Type:

SCI TECH ENGR

Engineering Science:

- **ENS-103 Introduction to Engineering**

Prerequisites:

ENS L103 MUST BE TAKEN CONCURRENTLY.

Credits:

3.00

Description:

This course provides exposure to engineering practice, with particular focus on electrical engineering components such as circuit elements and systems. It seeks to go beyond the mathematics and provide an intuitive appreciation of functional devices. Examples taken from a broad swath of technological history illustrate significant crossroads, decisions, and inventiveness. Emphasis is placed on learning to think as an engineer - assessment of problems, candidate solution tradeoffs, and implementations. Frequent exercises in creative engineering design will be used. Students will be required to design several elementary devices, such as a magnet, a capacitor, a timing device, and a motor, which they will enter in a competition for overall strength, compactness, accuracy, or speed. Sometimes assignments relate to "survival on an island" concerns, such as communication or drinking water. Students also learn about reverse engineering by selecting, building, troubleshooting, and presenting an electronic

kit of their choice. A term paper determining the engineering behind a topic of their choice will also be written and presented. On occasion (see ENS L103) there will be team competitions between various smaller groups in the class.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **ENS-L103 Intro to Engineering Lab**

Prerequisites:

Must be taken Concurrently w/ ENS-103

Credits:

1.00

Description:

The Lab is designed to provide opportunities to gain familiarity with engineering tools. Students will be introduced to parts (e.g. learn the resistor color code), test equipment (multimeters, prototyping trainers, signal generators, and oscilloscopes), and construction techniques (wiring, soldering, troubleshooting). Although it varies from year to year, Class Projects can be built during the Lab sessions. In the past these have included a 25 Watt electric generator, various door lock systems (both mechanical and electronic), and an AM transmitter and receiver (all projects made from scratch). It is likely that 2010-2011 may introduce some robotic creations for a competition. Electronic kits and motors can also be built and serviced in the Lab. There is an adjoining machine shop, which can be utilized (with supervision), for fabricating items. Individual creativity is encouraged, and informal problem solving sessions occasionally occupy lab time. However, the lab is accessible outside of the traditional scheduled time.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

Environmental Science:

- **ENVS-111 Majors' Environmental Science**

Prerequisites:

Open to Environmental Science and Environmental Studies majors, or by permission of instructor. Must be taken concurrently with ENVS L111

Credits:

3.00

Description:

Applies the fundamentals of science to environmental issues. Topics include population dynamics and resources, environmental degradation, ecosystems, geologic processes, deforestation, biodiversity, climate change, air, soil, and water resource management, and pollution and risks to health. This course is open to all environmental science and environmental studies majors and minors. Other students will be admitted by permission of the instructor. Must be taken concurrently with ENVS L111. 3 hours lecture. 1 term. 3 credits. Normally offered fall evenings.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **ENVS-L111 Majors' Environmental Science Lab**

Prerequisites:

Open to Environmental Science and Environmental Studies majors, or by permission of instructor. Must be taken concurrently with ENVS 111

Credits:

1.00

Description:

Laboratory exercises are used to illustrate topics covered in ENVS 111. Field testing and analysis of environmental samples. Field trips are required. This course is required for all environmental science and environmental studies majors and minors. Concurrent enrollment in ENVS 111 is required. 3 hour laboratory. Normally offered fall.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

Physics:

- **PHYS-111 College Physics I**

Prerequisites:

Take MATH-121 or MATH-134 or permission of Physics department chair;PHYS L111 taken concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **PHYS-L111 College Physics Lab I**

Prerequisites:

PHYS 111 concurrently

Credits:

1.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course. Error propagation, use of Excel, laboratory notebooks and formal reports required.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **PHYS-151 University Physics I**

Prerequisites:

Take MATH-121 or MATH 165. PHYS L151 concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **PHYS-L151 University Physics Lab I**

Prerequisites:

PHYS 151 concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

• PHYS-152 University Physics II

Prerequisites:

PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

Credits:

3.00

Description:

This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

Term:

Offered Both Fall and Spring

Type:

- **PHYS-L152 University Physics Lab II**

Prerequisites:

PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **PHYS-153 University Physics III**

Prerequisites:

Take MATH-121 or MATH-165;

Credits:

3.00

Description:

This calculus-based course is the introduction of the topics of modern physics. It begins with special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom. Then Schrodinger's equation is introduced with use of wave functions,

particle box, barrier penetration, quantum mechanical tunneling, the Pauli Exclusion principle, the development of the periodic table, and the X-ray spectra. Development of solid state physics with bonding in molecules, band theory of solids and semiconductor behavior. The final topics cover nuclear physics, radioactivity, half-life, nuclear fission and fusion, medical uses of radiation, elementary particle physics and introduction to astrophysics.

Term:

Offered Fall Term

Type:

SCI TECH ENGR

- **PHYS-L153 University Physics III Lab**

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts of special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom.

Type:

SCI TECH ENGR

Science:

- **SCI-108 Introduction to Cancer Care**

Credits:

4.00

Description:

This course will introduce the students to the top ten U.S. adult cancers, as well as the most common pediatric cancers. Topics to be covered include cancer causes, detection, and prevention. Psychosocial aspects of being diagnosed with cancer and the role nutrition plays for cancer patients will be described. The course will also discuss the major treatment modalities for each cancer including radiation therapy, surgery, chemotherapy, and bone marrow transplants. The goals and objectives of the course will be met through the use of various teaching tools including but not limited to: PowerPoint presentations, videos, guest lectures, and a poster project with a presentation component. Cognitive assessment of the students will be accomplished through homework, quizzes, exams, and a group poster and oral presentation. Students with any type of academic background are welcome.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGNR,NATURAL SCIENCE FOR BS

- **SCI-111 Astronomy I**

Prerequisites:

MATH-128 or higher and SCI-L11 must be taken concurrently.

Credits:

3.00

Description:

History of Astronomy from the ancients to Newton; light; telescopes; sun, earth, moon planets, comets, asteroids, meteors; space programs, science and technology in society. For non-science majors.

Term:

Occasional

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **SCI-L111 Astronomy Lab I**

Prerequisites:

SCI 111 concurrently

Credits:

1.00

Description:

Laboratory experiments and exercises to illustrate the principles discussed in science 111. Observational exercises using the Celestron telescope, astrophotography exercises, and computer simulations.

Term:

Occasional

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **SCI-112 Astronomy II**

Prerequisites:

MATH-128 or higher and SCI-L112 concurrently

Credits:

3.00

Description:

Astronomy of the cosmos; sun, stars, interstellar materials, galaxies, pulsars, quasars, black holes; nature of time relativity, cosmology. For non-science majors.

Term:

Occasional

Type:

- **SCI-L112 Astronomy Lab II**

Prerequisites:

SCI 112 concurrently

Credits:

1.00

Description:

Laboratory experiments and exercises to illustrate the principles discussed in Science 112. Observational exercises using the Celestron telescope, astrophotography exercises, and computer simulations.

Term:

Occasional

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGNR,NATURAL SCIENCE FOR BS

- **SCI-113 A Habitable Earth Within the Solar System**

Credits:

4.00

Description:

This course introduces non-science majors to concepts that are central to making our planet habitable. It presents Earth in context of the solar system with a broad view of global climate change and energy resources in a quest to better understand the workings our planet. This course on Earth and Planetary Science is suitable for students who may have taken their last science and math course several years ago, or are just curious about knowing facts on major issues that pertain to the future of our planet. Together with a reading component, this course aims to give students a flavor of how researchers think, investigate and develop conclusions that directly affect our political and economic future. Topics covered in this course range from the solar system to the study of search for other habitable Earth-like planets, search for extraterrestrial life, and evolution of life on Earth. Other

characteristics of this course are heavy use of audio-visual materials often including computer animations and simulations, in-class experiment demonstration, and intensive use of INTERNET-based resources.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGR

- **SCI-165 Inner Workings of Physics Universe**

Credits:

4.00

Description:

About 15 billion years ago, (data indicate) the big bang occurred and the universe was born. With it came physical laws and a spectacular array of consequences that lead to the universe as we know it. This non-lab , 4 credit course explores the inner workings of the physical universe in terms of the scientific inquiry which lead to Newton's laws, an understanding of energy, waves, light, electricity, atomic structure, chemical reactions, nuclear physics, particle physics, relativity, and the big bang theory. During the course, students will learn to make use of modern resources to access scientific and technical literature to research a scientific topic. They will learn to distinguish between science and technology (e.g. quantum mechanics and nanotechnology, the discovery of the Higgs boson and the large hadron collider that made it possible, etc.) and to understand how the science, technology, and engineering disciplines play a crucial role in recognizing and solving problems of society and the world that we share.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **SCI-171 The Built World: How Humans Engineer Environments**

Credits:

4.00

Description:

The most basic needs of humans have not changed - water, food, and shelter - but the means of meeting these needs has. In this course, we will examine how technology-driven societies operate by studying how cities are built and how they function. Topics will include water supply and distribution systems; transportation systems (including road and bridge design and construction); building design, construction, and operation (including skyscraper and sustainable building design), and waste removal systems (municipal and industrial wastewater removal and treatment, solid

waste removal and treatment). This is not a course about little gadgets and widgets; this is a course about big engineering marvels; and it emphasizes applications of science - how things work - rather than scientific theory.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGR

- **SCI-173 Geographic Information Science (GIS) The Power of Digital Maps**

Prerequisites:

SCI L173 Must be taken concurrently Knowledge of Windows type Application

Credits:

3.00

Description:

Geographic Information Science (GIS) link information (number of fire hydrants on a block) to features on a map (e.g., a point representing street address) that has a designated geographic location (as designated by global coordinates). Unlike paper maps, GIS software allows the production of interactive maps that allows the user to layer data, to indicate spatial patterns, to analyze trends, and to combine different features of the mapped area in novel ways. For example, a business person may wish to use GIS to determine the optimum location of retail outlet (based on the mapped demographics of a neighborhood), while an environmental engineer may use GIS to describe the location of outfalls to see how they correlate to areas of stream pollution. In this course, students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **SCI-L173 GIS Lab**

Prerequisites:

Must be taken concurrently with SCI-173

Credits:

1.00

Description:

This laboratory illustrates concepts and methods taught in SCI 173. In this lab students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **SCI-181 Science and Life in the 21st Century**

Credits:

4.00

Description:

This is a four credit, non-lab, science course that examines the central scientific problems confronting the 21st century. The course studies particular topics and teaches the necessary science around these topics to provide a good understanding of the issues. The topics currently are: Energy, Science and Economic Decisions, Sustainability of Life on Earth, Health and Science.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGR

• SCI-184 Contemporary Science and Innovation

Credits:

4.00

Description:

This is a 4 credit, project based science course that examines the central scientific problems confronting the 21st century. The course consists of lectures, class discussions, field trips, and in-class hands-on activities designed to familiarize the student with different concepts of the lectures. The current focus is on sustainable energy production. A final team project related to the course topics will be given. This is the version of SCI 183 without a separate lab component. Students who have taken SCI 183, L183 are not allowed to take this course.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGNR,NATURAL SCIENCE FOR BS

• SCI-201 Physics for Future Presidents

Credits:

4.00

Description:

This course presents a topical introduction to the key principles and concepts of physics in the context of the world events and natural phenomena that confront world leaders and that require informed decisions and responses. Energy, health, counter-terrorism, remote sensing, space programs, nuclear proliferation, and a host of other modern challenges have technological and scientific dimensions, the understanding of which is essential to avoiding disastrous policy decisions. This course considers the application of physics to these societal challenges. The material is covered at a level and pace that a future world leader should be able to handle; the emphasis is on the development of physical reasoning skills, and not on detailed, mathematical problem solving.

Type:

SCI TECH ENGNR

Studio Course Requirements Minimum: 24 courses, 72 credits

Foundation studio courses and major department studio courses as described for each Art & Design major.

Art History Requirements: 4 courses, 16 credits

All BFA candidates are required to take an 8-credit hour sequence in the history of the art of western civilization:

- **ARH-101 Art History I**

Credits:

4.00

Description:

Surveys the art of Western civilization from prehistoric caves to medieval cathedrals. Considers works from the Ancient Near East, Ancient Egypt, Ancient Greece and Rome, the Byzantine Era, the Romanesque Period, and the Gothic Period in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **ARH-102 Art History II**

Credits:

4.00

Description:

Surveys the art of Europe and America from the Renaissance to the present. Considers work of painting, sculpture, and architecture from periods such as the Renaissance, the Baroque, the Rococo, Neoclassicism, Romanticism, Impressionism, Abstract Impressionism, and Post-Modernism in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst

Interior Design Majors only are required to take an 8-credit hour sequence in the history of furniture and architecture:

- **ADI-221 History of Furniture & Architecture I**

Credits:

4.00

Description:

The goal of this course is the enhancement of the student's critical comprehension of historic styles and the impact they have on contemporary design solutions. The survey begins with the Egyptian period and provides an overview of the history of furniture and architecture through the mid-1700s, including ancient Greece and Rome, the Gothic and Renaissance, Baroque and Rococo periods. Emphasis will be placed on chronological periods, the visual characteristics of each style including regional idiosyncrasies, and the terminology germane to a study of furniture and architecture.

Term:

Offered Both Fall and Spring

Type:

Humanities & History, Humanities Literature Requirement

- **ADI-222 History of Furniture & Architecture II**

Prerequisites:

ADI 221

Credits:

4.00

Description:

A continuation of History of Furniture & Architecture I, this course will extend the investigation of furniture and architecture into the 20th century, while addressing issues concerning preservation, restoration, rehabilitation, and adaptive re-use. Drawing on the vast resources of the city of Boston and its environs, students will become actively involved in stylistic progression, local living history, and the benefits of preserving our past for future generations. Field trips will include visits to restored Federal, Victorian and Contemporary venues.

Term:

Offered Both Fall and Spring

Type:

Humanities & History, Humanities Literature Requirement

Graphic Design Majors only are required to take a 4-credit hour course on the history of graphic design:

- **ADG-224 History of Graphic Design**

Credits:

4.00

Description:

The first part of the course will focus on the history of graphic design from prehistoric times to the Industrial Revolution, including the origins of graphic communications in the ancient world, the development of the alphabet and early printing and typography. The second portion will concentrate on the period from the late 19th century to the present, and will include the Arts and Crafts Movement, the various-isms and their influence on modern art, the Bauhaus and International Style, and contemporary visual systems and image making.

Term:

Offered Fall Term

Type:

Humanities & History, Humanities Literature Requirement, Vis. & Perform Thry & Hst

The Art History electives requirement varies according to the student's major, as follows:

Graphic Design Majors: 1 course, 4 credits

Choose any Art History course.

Fine Arts Majors: 2 courses, 8 credits

Fine Arts Majors must choose two courses from the following Art History electives:

- **ARH-305 Art of Greece and Rome**

Credits:

4.00

Description:

Examines the civic, religious, and domestic art and architecture of the Ancient Mediterranean cultures of Greece and Rome. Considers temples, forums, basilicas, city planning, sculpture, pottery, wall painting, mosaics, and engineering achievements in their cultural contexts.

Term:

Occasional

Type:

BFA Humanities Requirement, Humanities & History, Humanities Literature Requirement

- **ARH-307 Art of the Italian Renaissance**

Credits:

4.00

Description:

Examines painting, sculpture and architecture of the 14th, 15th, and 16th centuries in Italy in their cultural context. Artists include Giotto, Masaccio, Donatello, Leonardo da Vinci, Raphael, Michelangelo, and Titian.

Term:

Occasional

Type:

BFA Humanities Requirement, Humanities & History, Humanities Literature Requirement, Vis. & Perform Thr

- **ARH-308 Art of the Baroque & Rococo**

Credits:

4.00

Description:

Explores painting, sculpture and architecture in Italy, Spain and Northern Europe during the 17th and 18th century. Works by Rembrandt, Rubens, Caravaggio, Bernini, Poussin, Velasquez, Watteau, Boucher, Fragonard, Chardin, Hogarth and others considered within their historical contexts.

Term:

Occasional

Type:

BFA Humanities Requirement, Humanities & History, Humanities Literature Requirement, Vis. & Perform Thr

- **ARH-309 Art of the 19th Century**

Credits:

4.00

Description:

Examines Neoclassicism, Romanticism, Realism and Impression in the European painting. Considers works by artists such as David, Ingres, Friedrich, Constable, Delacroix, Goya, Courbet, Millet, Daumier, Manet, Monet, Renoir, Degas, and Cassatt within their historical contexts.

Term:

Occasional

Type:

- **ARH-310 Modernism in Art**

Credits:

4.00

Description:

Examines European painting and sculpture from around 1880 to 1940, including Symbolism, Post-Impressionism, Fauvism, Expressionism, Cubism, Futurism, The Bauhaus, Dada, and Surrealism. Considers works by artists such as Gauguin, Cezanne, Van Gogh, Matisse, Kandinsky, Picasso, Braque, Mondrian, Duchamp, Magritte, Dali, and Ernst within their historical contexts.

Type:

BFA Humanities Requirement, Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **ARH-311 American Art**

Credits:

4.00

Description:

Surveys American painting, sculpture, photography and architecture from the colonial period through WWII. Considers works by artists such as Smibert, Copley, West, Stuart, Whistler, Sargent, Eakins, Homer, Ryder, Bierstadt, Cole, Inness, Sloan, Sullivan, Wright, Hopper, O' Keefe, Dove, Hartley, Bellows, Stieglitz, Weston, and Steichen.

Term:

Occasional

Type:

BFA Humanities Requirement, Humanities & History, Humanities Literature Requirement, Vis. & Perform Thr

- **ARH-312 Art of the Northern Renaissance**

Credits:

4.00

Description:

Examines painting, sculpture, and architecture of the 14th, 15th and 16th centuries in Northern Europe, within their historical context. Topics include the rise of oil painting, the development of woodcut and engraving, the effect of the Reformation on art. Artists include van Eyck, Bosch, Durer, Holbein and Brueghel.

Term:

Occasional

Type:

BFA Humanities Requirement, Humanities Literature Requirement, Vis. & Perform Thry & Hst

• **ARH-316 Contemporary Art**

Credits:

4.00

Description:

Explores European and American art since WWII, including Abstract Expressionism, Colorfield Painting, Pop Art, Minimalism, Neo-Dada, Performance Art, Feminism, Neo-Expressionism and Post-Modernism. Artists include Bacon, Giacometti, Pollock, De Kooning, Frankenthaler, Rothko, Stella, Judd, Calder, David Smith, Serra, Johns, Rauschenberg, Warhol, Lichtenstein, Smithson, Christo, Nevelson, Kosuth, Kruger, Sherman, Basquiat, Kiefer, and Haring.

Term:

Occasional

Type:

BFA Humanities Requirement, Humanities & History, Humanities Literature Requirement, Arts Admin Minor E

• **ARH-321 Women, Art & Society**

Credits:

4.00

Description:

Surveys women artists from the sixteenth century to the present and examines new direction in art-historical scholarship developed by feminist art historians during recent decades.

Literature: 1 course, 4 credits

Choose one course from those listed below:

English

- ENG-213 English Literature I

Prerequisites:

WRI-102 or WRI-103

Credits:

4.00

Description:

Study of major writers of England from the beginning to the mid-18th century. Regularly assigned essays on the reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement

- **ENG-214 English Literature II**

Credits:

4.00

Description:

Study of major English writers from the mid-18th century to the present. Regularly assigned essays on the reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement

- **ENG-216 World Literature in English**

Prerequisites:

WRI-102 or WRI-103

Credits:

4.00

Description:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

Term:

Offered Both Fall and Spring

Type:

Cultural Diversity Opt B, Humanities Literature Requirement, Diverse Perspectives

- **ENG-217 American Literature I**

Credits:

4.00

Description:

Study of major American writing from its origins through 1865. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement

- **ENG-218 American Literature II**

Credits:

4.00

Description:

Study of major American writing from 1865 through the present. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement

Women's & Gender Studies:

- **WGS-325 Global Women's Fiction**

Credits:

4.00

Description:

Explores of various cultural worldviews in order to reveal and assess the voices of women from around the world as they respond to important global issues such as sexual violence and gendered oppression. Topics include: national citizenship, sexual politics, legal discourse, aesthetic representation, literary movements, genre, constructions of femininity, sexual identities, and representations of gender in relation to race and class and international cultures, and the relationship of self-image to the body politic.

Term:

Occasional

Type:

Humanities Literature Requirement,Cultural Diversity Opt B,Diverse Perspectives

- **FR-216 Masterpieces of French and Francophone Literature in English Translation**

Credits:

4.00

Description:

Masterpieces of French and Francophone Literature in English Translation. Studies works translated into English by major authors from the Middle Ages to the present. Explores drama, fiction, and poetry from many regions of the world: Africa, Western Europe, North America, the Caribbean, and Vietnam.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt B, Humanities Literature Requirement, Humanities & History, Diverse Perspectives

- **FR-309 Survey of French Literature I**

Prerequisites:

FR 202 or Instructors permission

Credits:

4.00

Description:

Analyzes and discusses canonical works of French literature from medieval times to the eighteenth century.

Term:

Offered Fall Term

Type:

- **FR-310 Survey of French Literature II**

Prerequisites:

FR-202 or instructor's permission

Credits:

4.00

Description:

Study, analyze and discuss canonical works of French-language literature from the nineteenth through the twenty-first centuries, as they relate to important events in the art, culture, and history of the Francophone world.

Term:

Offered Spring Term

Type:

Humanities Literature Requirement,BA FOREIGN

- **GER-216 Masters of German Literature in English Translation Masterpieces**

Credits:

4.00

Description:

Discussion of works by major authors from the 18th century to the present. Drama, fiction, and poetry. The specifically German contributions as related to the European context. Lessing, Goethe, Schiller, Heine, Buchner, Schnitzler, Kafka, T. Mann, Hesse, Brecht, Seghers, Grass, Boll, Wolf and/or others.

Term:

Occasional

Type:

Humanities Literature Requirement

- **SPAN-300 Intro to Cultural Texts**

Prerequisites:

Spanish 202, 203, 250 or Instructor's consent.

Credits:

4.00

Description:

Explores a selection of Peninsular and Latin American cultural materials. Primarily examines texts from different literary genres (narrative, drama, essay, and poetry). Develops critical skills required in more advanced Spanish courses, through close readings and textual analysis. Activities include regularly assigned essays, group discussions, and short scene work.

Term:

Offered Spring Term

Type:

Humanities Literature Requirement, BA FOREIGN

- **SPAN-390 Introduction to Latin American and Caribbean Literature**

Prerequisites:

SPAN 300; SPAN 302 is strongly recommended

Credits:

4.00

Description:

Examines authors from Latin America and the Caribbean in their historical and cultural contexts. Reading and class discussions consider the relationship between the writer and society by covering such topics as colonialism, the oral tradition, modernism and the emergence of new narratives in the twentieth century. The Inca Garcilaso, Sor Juana, Carlos Fuentes, Rigoberta Menchu, and Pablo Neruda are among some writers studied.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities Literature Requirement, BA FOREIGN, Diverse Perspectives

- **SPAN-405 Women's Voices in Latin America**

Prerequisites:

SPAN-300; Spanish 302 or its equivalent is strongly recommended

Credits:

4.00

Description:

Examines the changing roles of women in Mexico, the Caribbean, Central and South America through fiction, non-fiction, drama, poetry and film. Special focus is placed on the impact that changes in social ideology and culture have had on their identity and writings. Texts available in English.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, BA FOREIGN

- **SPAN-407 Latin American Short Narrative**

Prerequisites:

Spanish 300; or Instructor's consent; Spanish 302 is strongly recommended

Credits:

4.00

Description:

Explores some of the major trends in the twentieth century Latin American story telling. Readings reflect the vast array of voices and styles, beginning with fantastic literature of the 1930's, the birth of magical realism and the more contemporary, socio-political narratives. Authors include Isabel Allende, Julio Cortazar, Rosario Castellanos, Gabriel Garcia Marquez, Juan Rulfo, Luisa Valenzuela, among others.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement, BA FOREIGN

• **SPAN-416 Border Crossings the Latino Experience in the USA**

Prerequisites:

ENG-102 or ENG-103 or Instructor's consent. Span 302 is strongly recommended for Spanish and Latin American & Caribbean Studies majors and minors.

Credits:

4.00

Description:

Examines the myth of a singular Latino experience in the United States through a variety of genres and authors. Issues relating to culture, language, family, and religion are among some of the topics explored. Authors include Sandra Cisneros, House on Mango Street, Junot Diaz, The Brief Wondrous Life of Oscar Wao, Julia Alvarez, How the Garcia Girls Lost Their Accents, Tato Laviera, and American.

Term:

Occasional

Type:

Cultural Diversity Opt A, Humanities Literature Requirement

Bachelor of Fine Arts Degree

All BFA degree programs require the successful completion of the following courses:

Core Requirements: 12 courses, 48 credits

- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Literature](#)
- [Ethical & Philosophical Inquiry](#)
- [Social Science](#)
- [Humanities/History/Visual & Performing Arts](#)

Ethical & Philosophical Inquiry: 1 course, 4 credits

Choose one course from those listed below:

- **PHIL-119 Ethics**

Credits:

4.00

Description:

A systematic introduction to the major thinkers and their positions on the main issues of ethics, such as: What is morality? What are moral values? How should we live our lives? Are there objective, universal, absolute moral standards? If so, what are they, and what is their basis? 1 term - credits. Normally offered every year.

Term:

Offered Both Fall and Spring

• PHIL-120 Ethics and Civic Life

Credits:

4.00

Description:

In this class you will be introduced to the perspectives and methods of politics, philosophy, and economics and see how these three disciplines present distinct but interconnected dimensions of current social and political issues.

Type:

Diverse Perspectives

• PHIL-123 Social Ethics: The Good Life

Credits:

4.00

Description:

An examination of contemporary Western society, particularly in the United States, in relation to philosophical attempts to define the good life. Current books that exhibit a philosophical approach towards important contemporary social issues will be discussed, as well as classics in philosophy. Topics may include: civic virtue, consumerism, current events, economic justice, popular culture (film, music, television), religion and secularism, etc. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- **PHIL-127 Contemporary Moral Issues**

Credits:

4.00

Description:

A critical examination of a number of contemporary moral issues such as: abortion, affirmative action, animal rights, capital punishment, cloning, drug legalization, environmental ethics, euthanasia, genetic engineering, gun control, pornography, same-sex marriage, suicide, war and terrorism, etc. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

Studio Course Requirements Minimum: 24 courses, 72 credits

Foundation studio courses and major department studio courses as described for each Art & Design major.

Art History Requirements: 4 courses, 16 credits

All BFA candidates are required to take an 8-credit hour sequence in the history of the art of western civilization:

- **ARH-101 Art History I**

Credits:

4.00

Description:

Surveys the art of Western civilization from prehistoric caves to medieval cathedrals. Considers works from the Ancient Near East, Ancient Egypt, Ancient Greece and Rome, the Byzantine Era, the Romanesque Period, and the Gothic Period in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **ARH-102 Art History II**

Credits:

4.00

Description:

Surveys the art of Europe and America from the Renaissance to the present. Considers work of painting, sculpture, and architecture from periods such as the Renaissance, the Baroque, the Rococo, Neoclassicism, Romanticism, Impressionism, Abstract Impressionism, and Post-Modernism in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst

Interior Design Majors only are required to take an 8-credit hour sequence in the history of furniture and architecture:

- **ADI-221 History of Furniture & Architecture I**

Credits:

4.00

Description:

The goal of this course is the enhancement of the student's critical comprehension of historic styles and the impact they have on contemporary design solutions. The survey begins with the Egyptian period and provides an overview of the history of furniture and architecture through the mid-1700s, including ancient Greece and Rome, the Gothic and Renaissance, Baroque and Rococo periods. Emphasis will be placed on chronological periods, the visual characteristics of each style including regional idiosyncrasies, and the terminology germane to a study of furniture and architecture.

Term:

Offered Both Fall and Spring

Type:

Humanities & History, Humanities Literature Requirement

- **ADI-222 History of Furniture & Architecture II**

Prerequisites:

ADI 221

Credits:

4.00

Description:

A continuation of History of Furniture & Architecture I, this course will extend the investigation of furniture and architecture into the 20th century, while addressing issues concerning preservation, restoration, rehabilitation, and adaptive re-use. Drawing on the vast resources of the city of Boston and its environs, students will become actively involved in stylistic progression, local living history, and the benefits of preserving our past for future generations. Field trips will include visits to restored Federal, Victorian and Contemporary venues.

Term:

Offered Both Fall and Spring

Social Science: 1 course, 4 credits

Choose one course from those listed below:

Applied Legal Studies:

- ALS-264 Introduction to Law and Legal System

Credits:

4.00

Description:

Introduction to civil, criminal and constitutional law, with special focus on procedural law and the federal and state court systems. Limitations of the courts, forms of remedies, the law of equity and institutional sources of American law will also be studied. Introduction to judicial cases and brief writing. Normally offered each semester.

Type:

Social Science

- **ALS-266 Criminal Law**

Credits:

4.00

Description:

This course examines criminal law in the United States from a broad perspective. It will present the general principles and doctrines that affect the whole criminal law, such as elements of criminal offenses, defenses to crime, and perspectives on crime and criminal law. In addition, students will learn the elements of specific crimes, such as homicide, criminal sexual conduct, terrorism and related crimes, crimes against public morals, and crimes against property. Discussions of the direction of the criminal law and constitutional limitations on government will be presented as preparation for future study.

Type:

Cultural Diversity Opt A

- **ALS-362 Litigation**

Credits:

4.00

Description:

The Rules of Civil Procedure dictate the steps taken in state and federal lawsuits. This course will acquaint students with rules and the practical requirements of the rules, from filing a complaint to clarifying a judgment and to the duties of paralegals in a litigation office. Normally offered each

semester.

Type:

Social Science

- **ALS-363 Law of Contracts**

Credits:

4.00

Description:

The existence and validity of a contract is determined by specific rules. Students will learn about formation through offer and acceptance, contract enforceability, the necessity of consideration, and breach of contract and will draft contract provisions as a paralegal might in a law office. Normally offered each semester. Sophomore status required.

Type:

Social Science

- **ALS-396 International Law**

Prerequisites:

Take ALS-264 or ALS-360 or instructor's permission

Credits:

4.00

Description:

With the globalization of the world economy, legal professional and business people require knowledge of international law more than ever. This course offers students a survey of selected materials in public international law. Covered will be the practical and theoretical issues of international law, from the Law of the Sea to business implications to definitions of war and international concepts of justice. Normally offered yearly.

Type:

Social Science

Communication:

- **CJN-255 Introduction to Media**

Credits:

4.00

Description:

An introduction to the role of media in contemporary society, focusing on media's influence on cultural, political, and ideological processes. An examination of the historical contexts within which newspapers, radio, television, and new media technologies develop, and how audiences interact with and influence the use of media.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **CJN-285 Media and Pop Culture I**

Credits:

4.00

Description:

Examines the influence of media on contemporary society. Television, radio, film, and print formats are discussed in terms of their persuasive impact on mass culture in the U.S.. Focus is on the period 1950-1970.

Term:

Offered Spring Term

Type:

Social Science

- **CJN-287 Media Criticism**

Prerequisites:

CJN-255

Credits:

4.00

Description:

Critical examination of various mass media including film, television, radio, music, newspapers and magazines. Theories of media criticism discussed and applied to specific media or media products.

Term:

Offered Spring Term

Type:

Social Science

- **CJN-375 Organizational Communication**

Credits:

4.00

Description:

Historical development of the theory of organizations, examination of information flow, network analysis, communication overload and underload, corporate culture, superior-subordinate communications, organizational effectiveness, and change processes.

Term:

Offered Fall Term

Type:

Social Science

- CJNI-400 Media Effects and Audiences

Prerequisites:

Prerequisite: CJNI-255

Credits:

4.00

Description:

Explores the social influence of the media on U.S. society. Attention is given to the theoretical perspectives that inform media research. By the end of the semester, students will develop a critical understanding of the role and influence of the media in U.S. society.

German:

- GER-419 East Germany and the Cold War

Credits:

4.00

Description:

When the German Democratic Republic was founded in 1949, observers in the West viewed it as an artificial construct created to serve the needs of the Soviet empire. The self-image of the GDR as created by its leadership revolved around the idea of an anti-fascist German state designed as a bulwark against any revival of National Socialism. Over a generation after the fall of the Berlin Wall, it is possible to undertake a dispassionate analysis of the forty-year history of the 'other' German state as manifested in its cultural identity and political role during the Cold War.

Term:

Psychology:

Choose any [Psychology course except PSYCH-215](#)

Sociology:

- **SOC-113 Introduction to Sociology**

Credits:

4.00

Description:

An introduction to the sociological understanding of human interaction, group process and social structures. Students are introduced to basic concepts, theories and methods of sociological investigation. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **SOC-116 Social Justice**

Credits:

4.00

Description:

An examination of traditional and contemporary problems associated with major social institutions such as the family, economics, government and education. Social forces related to ethnicity, social class, health and welfare, and urbanization are also included. Alternative remedial measures based on behavioral science theories are discussed. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **SOC-217 Sociology of Urban Life**

Prerequisites:

Fulfills ECR requirement

Credits:

4.00

Description:

An examination of the effects of the city on human life in its broadest as well as its most specific aspects. Greater Boston and similar communities across the nation will be studied as ecological settings, as producers and shapers of change, and as special contexts for understanding sociological ideas. Comparisons will be made among urban places in the U.S. and in other countries.

Term:

Occasional

Type:

Social Science,Cultural Diversity Opt A,Expanded Classroom Requirement

- **SOC-223 Families in Contemporary Society**

Credits:

4.00

Description:

An exploration of the diversity of contemporary families. Comparisons are made between the cultural myths of the ideal family and the lived realities. Challenges confronting contemporary families and their implications for social policy are examined in such areas as work/family conflicts, gay and lesbian families, welfare, family violence.

Term:

Occasional

Type:

Social Science

- **SOC-224 Families in Contemporary Society (Spain)**

Credits:

4.00

Description:

Spain has experienced major socio-demographic changes since the mid 1970s. These transformations mainly arise from the new role of women in society and, in particular, women's higher levels of education, work experience, and labor market attachment. The changes in women's labor force participation have occurred in conjunction with a progressive postponement of main family events, such as leaving the parental home, forming a partnership and having children, as well as with a reduction in the family size. Spain is, indeed, characterized as having one of the lowest low fertility levels within Western industrialized countries, a pattern that is exacerbating the ongoing process of population aging. This picture partly reflects the

conflicting relationship that currently exists between women's labor force participation and the accommodation of family responsibilities: the so-called work/ family balance. Ongoing differences among countries have been accounted for by different explanatory factors that involve socio-economic, cultural and social policy dimensions. From a comparative perspective, the course is intended to cover recent debates, controversies, and research on family formation and family dilemmas in contemporary Spain.

Type:

Social Science

- **SOC-236 Deviance and Social Control**

Credits:

4.00

Description:

Who and what is deviant? How shall the society respond? The course examines a range of deviance theories and associated social policies. A number of case studies will be used to evaluate these theories, such as body piercing, witchcraft, gay and lesbian sexuality, corporate crime, disability, prostitution, violence against women, racism, anti-Semitism, and gangs.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **SOC-264 Social Media and Society**

Credits:

4.00

Description:

An examination of the ways in which social structures and processes influence and are affected by modern ideas, needs and social practice techniques in technologically advanced societies is considered in conjunction with changes in the way in which we understand the world, the nature of

work and leisure, the processing of information and the character of social institutions. Normally offered alternate years. Fulfills the Social Science Option. Fulfills the Sociology Department's Social Policy requirement.

Type:

Social Science

Women's & Gender Studies:

- **WGS-113 Women, Science, & Society**

Credits:

4.00

Description:

Explores women's lives from the perspective of the social and natural sciences, including examination of recent biological, psychological, and sociological theories about gender and gender roles, as well as the influence of feminist scholarship in these areas. Topics include: the social construction of gender; the psychology and biology of sex and gender; women and work; media representations of women; the female body and eating disorders; women's health and lifecycle; women and sexuality; reproduction, abortion, and motherhood; and sexual violence against women.

- **ARH-308 Art of the Baroque & Rococo**

Credits:

4.00

Description:

Explores painting, sculpture and architecture in Italy, Spain and Northern Europe during the 17th and 18th century. Works by Rembrandt, Rubens, Caravaggio, Bernini, Poussin, Velasquez, Watteau, Boucher, Fragonard, Chardin, Hogarth and others considered within their historical contexts.

Term:

Occasional

Type:

BFA Humanities Requirement, Humanities & History, Humanities Literature Requirement, Vis. & Perform Thr

- **ARH-309 Art of the 19th Century**

Credits:

4.00

Description:

Examines Neoclassicism, Romanticism, Realism and Impression in the European painting. Considers works by artists such as David, Ingres, Friedrich, Constable, Delacroix, Goya, Courbet, Millet, Daumier, Manet, Monet, Renoir, Degas, and Cassatt within their historical contexts.

Term:

Occasional

Type:

BFA Humanities Requirement, Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **ARH-310 Modernism in Art**

Credits:

4.00

Description:

Examines European painting and sculpture from around 1880 to 1940, including Symbolism, Post-Impressionism, Fauvism, Expressionism, Cubism, Futurism, The Bauhaus, Dada, and Surrealism. Considers works by artists such as Gauguin, Cezanne, Van Gogh, Matisse, Kandinsky, Picasso, Braque, Mondrian, Duchamp, Magritte, Dali, and Ernst within their historical contexts.

Type:

BFA Humanities Requirement, Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **ARH-311 American Art**

Credits:

4.00

Description:

Surveys American painting, sculpture, photography and architecture from the colonial period through WWII. Considers works by artists such as Smibert, Copley, West, Stuart, Whistler, Sargent, Eakins, Homer, Ryder, Bierstadt, Cole, Inness, Sloan, Sullivan, Wright, Hopper, O' Keefe, Dove, Hartley, Bellows, Stieglitz, Weston, and Steichen.

Term:

Occasional

2015-2016 Archived Catalog Information

Bachelor of Fine Arts Degree

All BFA degree programs require the successful completion of the following courses:

Core Requirements: 12 courses, 48 credits

- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Literature](#)
- [Ethical & Philosophical Inquiry](#)
- [Social Science](#)
- [Humanities/History/Visual & Performing Arts](#)

Humanities/History/Visual & Performing Arts: 1 course, 4 credits

The Humanities/History/Visual & Performing Arts requirement is satisfied by the completion of the BFA Art History requirement.

Studio Course Requirements Minimum: 24 courses, 72 credits

Foundation studio courses and major department studio courses as described for each Art & Design major.

Art History Requirements: 4 courses, 16 credits

All BFA candidates are required to take an 8-credit hour sequence in the history of the art of western civilization:

- **ARH-101 Art History I**

Credits:

4.00

Description:

Surveys the art of Western civilization from prehistoric caves to medieval cathedrals. Considers works from the Ancient Near East, Ancient Egypt, Ancient Greece and Rome, the Byzantine Era, the Romanesque Period, and the Gothic Period in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **ARH-102 Art History II**

Credits:

4.00

Description:

Surveys the art of Europe and America from the Renaissance to the present. Considers work of painting, sculpture, and architecture from periods such as the Renaissance, the Baroque, the Rococo, Neoclassicism, Romanticism, Impressionism, Abstract Impressionism, and Post-Modernism in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst

Interior Design Majors only are required to take an 8-credit hour sequence in the history of furniture and architecture:

- **ADI-221 History of Furniture & Architecture I**

Credits:

4.00

Description:

The goal of this course is the enhancement of the student's critical comprehension of historic styles and the impact they have on contemporary design solutions. The survey begins with the Egyptian period and provides an overview of the history of furniture and architecture through the mid-1700s, including ancient Greece and Rome, the Gothic and Renaissance, Baroque and Rococo periods. Emphasis will be placed on chronological periods, the visual characteristics of each style including regional idiosyncrasies, and the terminology germane to a study of furniture and architecture.

Term:

Offered Both Fall and Spring

Type:

Humanities & History, Humanities Literature Requirement

- **ADI-222 History of Furniture & Architecture II**

Prerequisites:

ADI 221

Credits:

4.00

Description:

A continuation of History of Furniture & Architecture I, this course will extend the investigation of furniture and architecture into the 20th century, while addressing issues concerning preservation, restoration, rehabilitation, and adaptive re-use. Drawing on the vast resources of the city of Boston and its environs, students will become actively involved in stylistic progression, local living history, and the benefits of preserving our past for future generations. Field trips will include visits to restored Federal, Victorian and Contemporary venues.

Term:

Offered Both Fall and Spring

Type:

Humanities & History, Humanities Literature Requirement

Graphic Design Majors only are required to take a 4-credit hour course on the history of graphic design:

- **ADG-224 History of Graphic Design**

Credits:

4.00

Description:

The first part of the course will focus on the history of graphic design from prehistoric times to the Industrial Revolution, including the origins of graphic communications in the ancient world, the development of the alphabet and early printing and typography. The second portion will concentrate on the period from the late 19th century to the present, and will include the Arts and Crafts Movement, the various-isms and their influence on modern art, the Bauhaus and International Style, and contemporary visual systems and image making.

Term:

Offered Fall Term

Type:

Humanities & History, Humanities Literature Requirement, Vis. & Perform Thry & Hst

Art History Electives

The Art History electives requirement varies according to the student's major, as follows:

Graphic Design Majors: 1 course, 4 credits

Choose any Art History course.

Fine Arts Majors: 2 courses, 8 credits

Fine Arts Majors must choose two courses from the following Art History electives:

- **ARH-305 Art of Greece and Rome**

Credits:

4.00

Description:

Examines the civic, religious, and domestic art and architecture of the Ancient Mediterranean cultures of Greece and Rome. Considers temples, forums, basilicas, city planning, sculpture, pottery, wall painting, mosaics, and engineering achievements in their cultural contexts.

Term:

Occasional

Type:

BFA Humanities Requirement, Humanities & History, Humanities Literature Requirement

- **ARH-307 Art of the Italian Renaissance**

Credits:

4.00

Description:

Examines painting, sculpture and architecture of the 14th, 15th, and 16th centuries in Italy in their cultural context. Artists include Giotto, Masaccio, Donatello, Leonardo da Vinci, Raphael, Michelangelo, and Titian.

Term:

Occasional

Type:

BFA Humanities Requirement, Humanities & History, Humanities Literature Requirement, Vis. & Perform Thr

- **ARH-308 Art of the Baroque & Rococo**

Credits:

4.00

Description:

Explores painting, sculpture and architecture in Italy, Spain and Northern Europe during the 17th and 18th century. Works by Rembrandt, Rubens, Caravaggio, Bernini, Poussin, Velasquez, Watteau, Boucher, Fragonard, Chardin, Hogarth and others considered within their historical contexts.

Term:

Bachelor of General Studies

The Bachelor of General Studies (BGS) degree is an alternative to the traditional department-centered baccalaureate program. A student follows the core requirements of the Bachelor of Science degree and then takes 44 hours within one of the five interdepartmental clusters -- Humanities, Social Sciences, Life Sciences, Physical Sciences, or Visual Arts -- in place of a single departmental concentration.

The degree is designed principally to meet the needs of transfer students and adult learners returning to college after an absence of several years. The degree allows the student with an eclectic set of transfer credits to earn a bachelor's degree. The BGS is not appropriate for most students planning to go on to graduate or professional study. A student seeking a BGS should consult with the Office of Undergraduate Admission and a department chair in the proposed Interdepartmental Cluster prior to enrolling in this degree program.

Composition of the Interdepartmental Clusters:

Humanities:

- Communication & Journalism (courses as designated by the department)
- Theatre Arts
- English
- History
- World Languages & Cultural Studies
- Philosophy
- Women's & Gender Studies (courses with a humanities focus)

Social Sciences:

- Communication & Journalism (courses as designated by the department)
- Economics
- Education Studies

- Government
- History
- Psychology
- Sociology
- Women's & Gender Studies (courses with a social science focus)

Life Sciences:

- Biology
- Chemistry
- Radiation Science

Physical Sciences:

- Chemistry
- Computer Science
- Electrical Engineering
- Environmental Science
- Environmental Studies
- Mathematics
- Physics

Visual Arts:

- Art Foundation Studies
- Art History
- Fine Arts
- Graphic Design
- Illustration
- Interior Design

2015-2016 Archived Catalog Information

Bachelor of Science Degree

All BS degree programs require the successful completion of the following courses:

Core Requirements: 14 courses, 53-55 credits

- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)

- [Humanities/History](#)
- [Visual & Performing Arts Theory & History](#)
- [Quantitative Reasoning](#)

Seminar for Freshmen: 1 course, 4 credits

Students with 15+ transfer credits of college or university work are exempt. Choose one Seminar for Freshmen course from those listed below:

- SF-101 Fixing the World- Energy and Water: The Science of Solutions

Credits:

4.00

Description:

Two of the most daunting challenges the world faces (or will face) is how to provide for both its growing energy needs and potable drinking water. Regular news events include climate change, droughts, flooding, and petroleum struggles. Human nature often requires a severe crisis before it responds. This course will investigate the historical science driving the use of energy since the Industrial Revolution to convert energy resources into work, including the steam engine, the electric motor, and the internal combustion engine. It will also consider alternative energy options to fossil fuels, such as solar, wind, geothermal, and ocean power. Along the way we will consider the evidence for Global Warming and Climate Change. We will look into human nature, simple life styles, conspiracy theories, and the influence of those in power to shape human opinion. We will also consider how our water supply is provided and where it goes after being used. What options do developing countries or drought racked areas have to remedy their water needs? Although the course pursues a scientific understanding of these issues, the mathematics used will be gentle, and a larger emphasis will be placed on the intuitive appreciation of these concerns.

• SF-132 The Beatles: Here, There & Everywhere

Credits:

4.00

Description:

This seminar will investigate the impact and legacy of the Beatles. The Fab Four deserve our scholarly attention as musical innovators and as cultural avatars of the 1960s, an era that still exerts influence today. We will examine the many ways in which the Beatles rocked the establishment and became defining figures in post-war youth culture. We will also discuss other media (the visual arts, film, fashion, style) and fields of study (mass media, marketing, recording technology, copyright law, English history) using the Beatles as our guides.

• SF-151 Getting Over It: Dealing With the Aftermath of Group Conflict/Mass Atrocity

Credits:

4.00

Description:

Once violent conflict between two groups has ended, what is the best way to transition back to normality coming to terms with the past or simply moving on? To answer these questions we will examine the debates surrounding war crime tribunals, truth commissions, lustration policies, and reparations in the second half of the 20th century. Case studies will include post-apartheid South Africa, post-WWII Germany, and the Israeli/Palestinian conflict. We will discuss the philosophical problems raised by each of these instruments, as well as on the political, legal, and practical difficulties their implementation present. Cultural Diversity B

Type:

Cultural Diversity Opt B

- **SF-156 The Mask Behind the Face: Personas, Personalities, and Perception. Acting in /Out Life**

Credits:

4.00

Description:

The theatre has always been a metaphor for life. In modern times life has become theatre. This seminar will confront the idea of real life and the eroding boundary between performers and audience. Students will study the roots of the contemporary obsession with stars and stardom, a mania that began in the 18th century and flourished in the 19th century. We will look at performance studies, performers memoirs, plays, and films that dramatize this dilemma.

- **SF-173 Crime in American Society**

Credits:

4.00

Description:

Popular beliefs about crime are often inspired by the media and by specific criminological theories. These theories about and media images of crime will be examined in detail, including the hits and misses.

- **SF-174 Tragedy and Literature**

Credits:

4.00

Description:

This course will focus on classic works of ancient and modern literature that examine the human condition from a tragic perspective. We will concentrate on close readings from the following texts: Homer's Iliad, Sophocles' Antigone, The Bhagavad-Gita, Shakespeare's Othello, Chekhov's short stories, and Joyce's Dubliners.

- **SF-178 Sacred Hoops & Sneaker Pimps: Understanding the American Hoop Dream**

Credits:

4.00

Description:

This course is about the basketball hoop dream played out at the high school and college levels. We will study a wide variety of materials - novels, films, websites, reference works - to understand both the construction, and destruction, of the hoop dream in such diverse places as New York City, Seattle, rural Indiana, suburban Georgia, and the Wind River Reservation in Wyoming. Issues of race and culture will serve as guiding themes as we develop critical theory explaining why the hoop dream has persisted, and adapted, over time, to fit the needs of its believers and supporters.

Type:

Cultural Diversity Opt A

- **SF-182 Heroes, Antiheroes and Outsiders: Reading the Graphic Novel**

Credits:

4.00

Description:

How is it that comics", a genre often viewed as entertainment for children and adolescents, has become one of the most exciting forms of narrative and visual art? To answer this question, this seminar will examine a range of graphic novels, from those that celebrate their origins in superhero comics, such as Alan Moore's *Watchmen*, to those that treat subjects not usually considered proper to the comics genre, such as Art Spiegelman's *Maus*, about the Holocaust, and Alison Bechdel's *Fun Home*, about the complexities of sexual identity. As we read these works, we will look at how the combination of words and still images makes the graphic novel a unique storytelling form, as well as how artists and writers push the envelope to create new styles and challenge our expectations. In addition to class discussions and writing assignments, we will take a field trip to the Museum of Fine Arts and create a collaborative group graphic novel step-by-step over the course of the semester (all abilities welcome).

- **SF-183 Politics, Power and the Media**

Credits:

4.00

Description:

Is there a relationship between accumulated political power and mass media representations? Is news content impacted by existing political power relations? It is the object of this course to critically analyze the role of the mass media within the framework of existing political power relations in the United States. In particular, the course will focus on the role the mass media plays in promoting and reinforcing dominant political practices and ideologies. The course will begin by exploring various theories of the press, notably its function in a democratic society, as well as the concepts of power and propaganda. We will continue with a series of case studies, complemented by secondary sources that highlight how media representations affect the contemporary distribution of political power in the US. Topics of discussion will include the current US war on terrorism, the ongoing health care debate, the public disavowal of big government", and the concept of a liberal media.

- **SF-189 American Gothic: Edgar Allan Poe, Flannery O'Connor and Annie Proulx**

Credits:

4.00

Description:

This literature seminar will study and compare the short stories of Edgar Allan Poe, Flannery O'Connor, and Annie Proulx. Beginning with Poe as the father of the short story genre in America and exploring his critical theory of the grotesque and arabesque", the class will examine the emergence of the gothic literary idiom as a classic American genre. Critical essays on the gothic aesthetic will be analyzed and film adaptations and documentaries will be viewed.

- **SF-191 Film Adaptation Film Adaptation**

Credits:

4.00

Description:

Why did they change the ending of the book? The novel is so much better! We will explore the concept and industry of film adaptation. Students will read novels and watch respective film adaptations to explore how the written word is adapted to the screen; both fiction and non-fiction works will be considered. Also, field trips to past film locations in Boston will be taken to explore why specific settings were chosen for respective situations. Additionally, students will create their own written adaptations of source materials, putting into practice the concepts studied in class.

- **SF-197 Sustainability, Energy, and Technology At Suffolk University**

Credits:

4.00

Description:

In this project and team-based course, students study a sustainability problem at Suffolk University and spend the semester developing proposals to address the problem. At the end of the course students will present their proposals to Suffolk University's sustainability committee, and will exhibit their websites and visual aids in the Donahue lobby to educate the Suffolk community about sustainability. If their proposals are well-researched and well-communicated, students can see their ideas actualized while they are still undergraduates.

- **SF-198 Music and the Brain**

Credits:

4.00

Description:

What accounts for the power of music to move us so profoundly? This course explores how our brains and music evolved together: What music can teach us about the brain, what the brain can teach us about music, and what both can teach us about ourselves.

- **SF-1127 The Vietnam and Iraq Wars: Polarized Perspectives**

Credits:

4.00

Description:

This class will examine some of the many controversies surrounding the Vietnam and Iraq Wars, two conflicts that have been profoundly polarizing for the American people. There are widely divergent perspectives regarding the fundamental questions surrounding each war. Were the reasons for American involvement just? To what extent were the methods used by the United States military during each war just? To what extent did the media play an appropriate role before, during, and after each war? Did opposition to these wars serve primarily to benefit the enemies of the United States or did it constitute a form of patriotism and love of country? This interdisciplinary course will address these and other complex questions by examining the histories, literature, and films (both documentaries and dramatic) that have been produced in response to these wars.

- **SF-1128 Sustainable Media**

Credits:

4.00

Description:

Contrary to a popular perception that information, communication and entertainment technologies are clean, ecologically benign and paperless, the reality of an increasingly digital life is that our fascination with the next best thing in mobile phones, video game consoles, personal computers, digital cameras, tablets, etc., has devastating impacts on our environment. These media devices are manufactured using toxic ingredients in poisonous working condition, require an abundance of energy to operate, and create hazardous waste when disposed. Media technology companies and the advertising industry that markets their wares have successfully persuaded consumers to accept rapid obsolescence and to highly anticipate the latest upgrade. But some consumers, electronics manufacturers, policy makers, and environmental groups are working to change the culture of consumption in favor of sustainable media practices that lessen the environmental footprint of the digital devices we use everyday. The purpose of this course is to understand the problem of unsustainable media, and the possible solutions for a sustainable media system.

- **SF-1129 Beacon Hill: Fact, Fiction, and Fantasy**

Credits:

4.00

Description:

The course will explore the physical geography, history, and image in literature, film, and pop culture of Suffolk University's Beacon Hill neighborhood. The purpose and objective of the course is to provide students with a deep knowledge, understanding, and appreciation of Beacon Hill through examination of written and visual sources, and feet-on and eyes-on experience of the public parts of the Hill.

Type:

Local Engagement Experience

- **SF-1141 Classical Civilizations: Pathways to Wisdom**

Credits:

4.00

Description:

How is it that the knowledge, intelligence, wisdom and values of the Greeks and Romans still educate and edify the world by providing venues towards leading fulfilling and dignified lives? The guiding principles of their respective civilizations rested upon eight pillars: - Humanism: It was recognized that humans have the potential to master their world and live life to the fullest. -The Pursuit of Excellence: To imagine the highest good and

strive to attain it. - Self Knowledge: It is imperative to know oneself before seeking to know the world. - Rationalism: Always question, reason and discern truth from falsehood and never consider any matter superficially. - Restless Curiosity: Often the resolution of one issue leads to the revelations of others mysteries and pursuits which compels further investigation. The wise individual makes this a lifelong endeavor. -Love of Freedom: As long as one brings no harm to others, one must be free to live and discover as much as possible. - Individualism: All are unique and, therefore, must recognize individual strengths and identity. -The Practice of Moderation: The prudence of avoiding extremes in personal and social conduct. In this course, students will read two (brief) texts on the Greek and Roman contributions to the world and then will proceed with specific readings which illuminate the eight principles above for achieving the good life.

- **SF-1143 In the First-Person: Storytelling in the 21st Century**

Credits:

4.00

Description:

This section of the Seminar for Freshmen will consider the forms, venues, and impacts of narrative nonfiction in contemporary culture. From the exploding popularity of personal essays in the digital age to the living, evolving essays we create on social media, we are constantly narrating and archiving our lives, shaping their content for specific audiences. In doing so, we shape what our experiences mean and represent. In order to analyze the power of narrative nonfiction, we will look at a variety of multimodal texts: essays, podcasts, Instagram and Twitter feeds, stand-up comedy, and storytelling slams, as well historical texts such as the essays of Michel de Montaigne and historical artifacts at the National Archives in Boston. We will also write our own narrative nonfiction, and adapt our first-person stories for listening and viewing audiences, such as the MassMouth story slam and podcasts like This American Life. Additionally, we will practice narrative nonfiction for professional audiences, using storytelling as a way to showcase personal strengths to employers, internship coordinators, and the like.

- **SF-1144 Native Americans: Walking in Two Worlds?**

Credits:

4.00

Description:

Native Americans are often described as walking in two worlds, as they attempt to navigate the process of maintaining their tribal identity and heritage while living in mainstream America. In recent years there has been a shift towards tradition and heritage, and a rejection of Western values and norms in both the US and Canada. In this course we will look at how Native people live in the US and Canada today, and examine the extent to which they are either trying to walk in two worlds or perhaps rejecting the two worlds model. To help us answer this question, we will read about reservation life, the Idle No More Movement, Indigenous History, and current events. We will also watch videos and explore indigenous culture.

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

Type:

Diverse Perspectives

- **SF-1146 Fido the Friendly Wolf: A Natural History of Dogs**

Credits:

4.00

Description:

This course explores the evolution of dogs from wolves and the ways in which dogs have adapted to their niche in human society. The ecology, behavior, genetics, and adaptations of dogs will be explored in relation to both their wolf ancestry and artificial selection by humans. The course includes 2 mandatory field trips to a wolf sanctuary and an animal shelter.

- **SF-1147 Global (In) Security: From ISIS to Ebola**

Credits:

4.00

Description:

This course reviews the principal features of global and national security as it is currently practiced by tracing the evolution of theories, policies and circumstances whereby current international security is developed. Students will evaluate the nature and origins of war, arms proliferation, military instability, terrorism, genocide, health threats and natural resources depletion.

- **SF-1148 Brave New Worlds**

Credits:

4.00

Description:

Explores themes of adventure, self-discovery, exile, and culture shock in classic and contemporary travel writing (including fiction, poetry, and non-fiction) as well as film. Students will experiment with creative writing of their own, develop theories of cosmopolitan world citizenship, travel through the city of Boston on field trips, and team up to learn about different countries in Suffolk's global network of study abroad programs.

- **SF-1150 Religion in Contemporary Society**

Credits:

4.00

Description:

This course is design to provide students with an overview of the social settings and cultural meanings of religion in the contemporary world. Topics that will be covered in reading and discussions include the rise of religious fundamentalism, religion and violence, women's and men's religious experiences, new religions, and portrayals of religion in popular films. In addition to the readings, students will observe and experience religious expressions and activities through fieldwork assignments. The emphasis on films and fieldwork reflects my belief that religion is made up of lived experiences of actual individuals and communities. In order to understand religion in contemporary society we will make every effort to see (in person or in film) a wide range of religious activities. The films we will see include some of the following: Leap of Faith, Devil's Playground, Kadosh, Women of Hizballah, Singing Stream, A Still Small Voice.

- **SF-1151 Reproduction and Society**

Credits:

4.00

Description:

This course explores relationships between reproductive health and rights both nationally and internationally. Many of our topics fit into two broad areas: conflicts over the control of childbearing (sterilization abuse, birth control, and abortion) and conflicts over who deserves to be a mother, especially when the mothers in question face social stigma and lack political power. Other topics include safe birth and maternal mortality, breastfeeding, infertility and reproductive technology. We also examine the politics of women's sexual and reproductive autonomy, including the

policies that shape women's choices to prevent, achieve, abort, or carry to term a pregnancy. Throughout, we are guided by the following questions: Why is reproduction an important site through which to understand society? How do statuses such as race, class, gender, sexuality and ability influence people's reproductive possibilities? What is the role of the state in shaping these experiences? How have communities supported or resisted efforts at reproductive control? Why is reproductive justice central to these answers?

- **SF-1153 Law, Disease, and Public Health**

Credits:

4.00

Description:

This course is about public health law, which is the study of the legal powers and duties of the various systems of government in the United States (federal, state, and local) in collaboration with their partners (e.g., health care, business, the community, the media, and academe), to ensure the conditions for people to be healthy (to identify, prevent, and ameliorate risks to health in the population), and of the limitations on the power of these systems of government to constrain for the common good the autonomy, privacy, liberty, proprietary, and other legally protected interests of individuals. The prime objective of public health law is to pursue the highest possible level of physical and mental health in the population, consistent with the values of social justice. The course will focus especially on public health law in the area of epidemic disease. Case studies will be made of the Great Influenza of 1918 and the origins and spread of the Ebola virus, culminating in an examination of outbreaks of Ebola in the United States.

- **SF-1154 Introduction to Visual Studies**

Credits:

4.00

Description:

This seminar provides an introduction to Visual Studies, a relatively new interdisciplinary field that examines how images communicate and the roles that they play in society. Students will apply the concepts and techniques of Visual Studies to analyze sites and signs around Boston, such as advertisements, street signs, fashions, newspaper photographs, buildings, and public spaces. Class projects will increase students' awareness of their visual environment and their ability to critically analyze the visual rhetoric that surrounds us and is often used to manipulate us.

Type:

Local Engagement Experience

Students in the CAS Honors Program should choose one Seminar for Freshmen course from those listed below:

- **SF-H116 Enlightened Insanity**

Prerequisites:

CAS Honors students only.

Credits:

4.00

Description:

Rain or shine, the great 18th century Enlightenment philosophers would meet at the famous cafes of Paris to discuss their ideas, and to observe and criticize society. From these informal debates emerged ideas that are at the core of our modern understanding of the nature of society, marginality, human nature, civil rights, the essence of creativity and genius. Come join us in the quest to understand, define, observe, and analyze the key ideas and concepts of these great thinkers, such as Rousseau, Diderot, and Voltaire, still so relevant in our time. We will read key works of these creative thinkers and philosophers. We will enrich our experience and understanding through the use of film, theatre performances, museum visits, as well as the occasional cafe debate.

Type:

Expanded Classroom Requirement, Honors

- **SF-H126 The Boston Theatre Scene: The Inside Experience**

Credits:

4.00

Description:

Using the current Boston theatre season as its syllabus, this writing- and analysis-intensive course will explore several plays in production at some of Boston's many professional theatres. We will study the script of four to five plays before attending performances of those works. Students will gain insights on the world of theatre through backstage tours and conversations with theatre professionals such as producers, directors, actors, designers, playwrights, and critics. Students must be available for evening (usually Wednesday) performances. A fee for student-rate tickets will be assessed.

Type:

Honors

• SF-H1134 The Meaning of Life

Prerequisites:

CAS honors students only.

Credits:

4.00

Description:

What do we live for? Which beliefs, values, and experiences sustain meaningful, fulfilling existence? Are we authors of our destinies or powerless pawns in an unfathomable cosmic game? Does death render all our efforts superfluous? This award-winning course offers a cross-cultural, interdisciplinary exploration of these questions through philosophical and religious texts, art, fiction, autobiography, and psychological studies. The course opens with the Old Testament's book of Ecclesiastes, followed by three units: 1) A Life Worth Living: Humanity's Ideals focuses on the ancient and modern visions of human flourishing; 2) Threats to Meaning: Humanity's Discontents, discusses the disillusionments leading to the loss of meaning; and 3) Recovery of Meaning: Crises and Hopes, explores the post-crisis possibilities of self-discovery and growth. Please visit <http://meaningoflife.cherkasova.org/>

Type:

Honors

• SF-H1135 Women Warriors: Stories of Captivity, Conversion, and Confession

Credits:

4.00

Description:

Since the beginning of time, women have been doing battle to themselves, while men have gone to battle against others. Whether it is through converting to Christ, yielding to captors in order to survive, or carrying a baby, this course introduces students to the many ways in which, whatever battles they face, women are warriors; they survive. Utilizing an array of captivity, conversion, and confession narratives by women, and pairing them across the centuries, students will make connections and draw conclusions between early-and mid-19th-century-American and contemporary women. Students will connect, for example, the trials of the 17th-century Puritan captive, Mary Rowlandson, and contemporary hostage, Elizabeth Smart, to explore how women (no matter how different they seem) draw upon unique inner resources to survive.

Type:

Honors

- **SF-H1152 The Idea of America: Past, Present, Future**

Credits:

4.00

Description:

A systematic exploration of thinking of and about America, from the founding of the republic to American issues and traditions of thought that reflect upon the founding principles and the unfolding American experiment. The Declaration of Independence and the Constitution will be studied with an eye to their philosophical content and sources. The course will also examine works of philosophers and other thinkers who address conflicts over the meaning of founding principles in the course of the nation's history, from the struggle over slavery to America's contemporary role in the world.

Because this course intends to apply theoretical understanding to real life, students will be expected to read contemporary journalism on a regular basis and assess the controversies of today in the light of the nation's philosophical and historical currents.

Type:

Honors

Major Requirements Minimum: 8 courses, 32 credits

Complementary Major Requirements, Minor Requirements, and Free Electives: credit varies

Minimum Total Credits Required for Degree Conferral: 126 credits

Note:

Core Requirements may also count toward major if taken at appropriate level.

Some degree programs exceed 126 credits.

2015-2016 Archived Catalog Information

Bachelor of Science Degree

All BS degree programs require the successful completion of the following courses:

Core Requirements: 14 courses, 53-55 credits

- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Literature](#)

- [Quantitative Reasoning](#)

First-Year Writing: 2 courses, 8 credits

- WRI-101 First Year Writing I

Credits:

4.00

Description:

Study and practice of the writing process and revision in terms of expository writing modes for an academic audience.

- **WRI-102 First Year Writing II**

Prerequisites:

WRI 101.

Credits:

4.00

Description:

Study and practice of argumentative and research writing through further work with writing process and revision and the critical reading of a variety of texts.

A student may be assigned to other writing courses or may be invited to take WRI-H103. Students required to complete ENG-099 may be allowed to waive WRI-101 with a grade of “B” or better and the approval of the English department. Students who are invited to complete WRI-H103 and earn a “B” or better satisfy the two Writing Requirements. Waiving a course does not earn credits.

- **WRI-H103 Advanced First Year Writing**

Prerequisites:

By Invitation Only.

Credits:

4.00

Description:

This course is by invitation only and reserved for incoming Suffolk students with high admission scores. Advanced study and practice of writing process, revision, and research, based on close readings of a variety of texts. Fall semester only.

Type:

Honors

Creativity & Innovation: 1 course, 3 credits

Choose one 100-level Creativity & Innovation course from those listed below:

- ADF-S171 CI: Integrated Studio 1

Credits:

3.00

Description:

This cross-disciplinary course will integrate the ideas and practices of two-dimensional design, color and drawing emphasis will be placed on understanding the creative process, exploring concepts and developing research skills. Students will undertake individual and collaborative projects in three spaces; the studio classroom, the digital world and the city at large.

Type:

Creativity and Innovation, Arts Admin Minor Elective

• ADF-S172 CI: Integrated Studio II

Prerequisites:

ADF S101

Credits:

3.00

Description:

This course builds on the Integrated Studio 1 experience: synthesizing fundamental visual ideas. IS 2 investigates the construction, documentation, and transformation of volumetric form, environmental space, and time. Projects will explore narrative strategies and the creation of immersive experiences. Students will develop critical and analytical skills while employing a range of traditional and digital media-including video/sound capture and editing-as they explore the creative boundaries of the classroom studio, the city of Boston, and virtual space.

Type:

Creativity and Innovation

• CI-101 Process and Epiphany

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Despite its mystical connotations, creative epiphany is the result of a long engagement with the creative process that results in a surprising and unpredictable understanding of a concept or the solution to a problem. In the way that the discoveries of science are guided by the scientific method, the path to creative innovation is through a directed creative process. All creative innovators follow such a directed creative process, whether they are industrial designers or fine artists, performers or inventors, architects or entrepreneurs. This course explores both historical examples of individuals whose creative innovation changed the world, as well as hands-on collaborative, practical problem solving employing the creative process.

Type:

Creativity and Innovation

• CI-102 The End of Global Poverty

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course is designed to demystify the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking. More than one-third of our global population lives in poverty, earning less than two dollars a day. Governments, businesses, social enterprises, and charitable organizations have tried to solve the global poverty issue with mixed results. What is the solution? Is entrepreneurship the solution, part of the solution, or has no impact whatsoever? In this course, you will gain an understanding of the power of entrepreneurship (in the context of creativity and innovation), the definition and depth of global poverty (in the context of constraints, such as human, financial and physical resources embedded in local, regional, national and global cultures), and successes and failures of past initiatives to reduce poverty. This is not a course about politics or business, but rather finding a solution to a problem that has eluded mankind since the beginning of time.

Type:

Creativity and Innovation

• CI-103 Making Inventions: Sticking Your Neck Out

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course examines cutting edge technologies, the science behind them, and their practical application and follow-up success or failure. It also provides the students a chance to consider the relevance of identified needed inventions from the 1950s, and whether those projections were correct. The history behind some remarkable inventions will be presented. Finally, working in small teams, students will brainstorm to identify something useful to invent and determine several approaches to implementing it.

Type:

Creativity and Innovation

• CI-106 Failing Successfully

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course is designed to demystify the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking. Did you know Netscape was the internet browser? What about MySpace, arguably the Facebook of the last decade? What led Apple from being innovative pioneers of the 70's to the verge of extinction in the 80's to the technological giant they are today? Technologies come and go, but what leads to organizations lasting more than 100 years such as IBM, General Electric, etc.? What role does failure play in successful innovation, decision-making, and business viability? In this course, you will learn about innovation that may have been successful

and well-executed. You will also learn about innovation that was a viable business opportunity, but poorly executed: one phase of failure. In addition, you will learn about innovation that had no real market viability, but was launched anyway: another phase of failure. Can failure lead to success? If so, how?

Type:

Creativity and Innovation

- **CI-107 Going Up: Skyscraper Design in Emerging Economies**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The human population is expected to be between 8.5 and 9 billion persons by the mid-21st century. The majority of those individuals will be living in urban communities. With large populations, high real estate costs, and limited land areas, the only way to construct in urban environments is to go up! In this course, students will have an opportunity to look at traditional and novel skyscraper designs, to consider the cultural and economic significance of such structures, and to use their imagination to develop a conceptual design of a skyscraper.

Type:

Creativity and Innovation

- **CI-108 Designing the Next Best Thing**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Demystifies the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking.

Term:

Offered Both Fall and Spring

Type:

Creativity and Innovation

- **CI-109 Virtual Globe Trekking: an Alternate View of the World**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will examine creativity and innovation through the lens of place. Modern geography is an all-encompassing discipline that seeks to understand the earth and all of its human and natural complexities - not merely where objects are, but how they have changed and come to be. The world is filled with ideas and perspectives. By changing your location, new perspectives emerge. This course will focus on the creative process to understand that each person creates in their own way. The students will test many methods to draw forth creative thought and seek to identify their own best method for calling on their own inner genius. Often this will involve failure and mixed results, yet this is where the students will learn their strengths and weaknesses.

Type:

Creativity and Innovation

- **CI-110 The Entrepreneur's Cocktail**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

How do you and your story drive business? This course takes an innovative look at human creativity and entrepreneurship. As an entrepreneur needs perseverance and high motivation, we will explore the importance of values, risk taking, problem solving, and the discovery of the market opportunities. In order for you to be creative and essentially create successful ventures, you will discover the nuances between the three factors and explore them further through interactive discussion and debate as well as collaborative group work. You will be encouraged to think in non-conforming ways and apply new concepts and develop your own personal operating principles.

Type:

Creativity and Innovation

• CI-111 The Future of Boston

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course introduces students to creative and innovative thinking based in the field of communication. Students will work in teams to wrestle with the challenges Boston will face in the future and propose feasible strategies to meet them.

Type:

Creativity and Innovation

• CI-113 Revising Reality

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Reality and perception have been debated and discussed for millennia. Humans see and experience their world in different ways. How do humans determine what is true and good and what advancements are necessary? In this course, students will creatively explore these big questions and revisit knowledge using new and sometimes divergent perspectives. Students will participate in dirty and courageous learning by crafting products, creating visual projects, and coming into original thought via trial and error. Students will also develop their analytical and critical thinking skills, while learning to communicate effectively and honestly.

Type:

Creativity and Innovation

• CI-117 Writing for Stage and Screen

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will engage students in the process of script writing. Working in groups of four or five they will craft adaptations of stories, create original scenes, or review sketches. By the end of the semester they will produce a complete script. Each alternating week, one group will serve as the executive committee that will approve the final draft of the script of the week. There will be exams based on the textual study of collaborative and adaptation techniques.

Type:

- **CI-121 Catastrophe Management: From 9/11 to the Boston Marathon Bombings**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will introduce students to the exciting world of emergency management from the perspective of scientists who are often utilized as experts during both small scale adverse events and large scale catastrophes. Students will actively and creatively explore the psychological, economic, and medical dimensions of these events and participate in role play in the classroom and site visits. By the end of the course, students will have a keen appreciation of emergency planning and management on the local and national levels.

Type:

Creativity and Innovation

- **CI-123 Comics & Co.**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Using visual narrative as the means of exploration, students will be led through a series of exercises that challenge their assumptions, broaden their perspectives, and excite their imagination. The relationship between critical, creative and inventive thinking will be the basis for individual and collaborative projects.

Type:

Creativity and Innovation

- **CI-125 Boston's Creative History in Perspective**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Our collective social consciousness is formed by physical space; through a mixture of exploration, discovery, and making, students will delve into the city that surrounds them, developing a sense of ownership and engagement in Boston's public space. During the course of the semester, students will uncover the ways that art and architecture have shaped the souls of cities around the world, using Boston as a template. In a series of local field trips, students will explore Boston through its art and architecture, focusing not only what is, but on what might have been -- designs that were ultimately unrealized. Through interview and visits with local artists and designers, students will also learn about the process of shaping public space, uncovering the myriad of ways that design decisions are political in nature. As a capstone to the course, students will create their own city plan -- identifying and researching a chosen social or physical challenge the city faces, then developing a proposal that would address their chosen issue. These design proposals will then be enacted using augmented reality. Like a layer of invisible ink, these projects will form a phantom city over the physical realities that surround us, displaying the dramatic potential of the imagination.

Type:

Creativity and Innovation

- **CI-127 Visual Perspectives: Coastline, Symmetries and Illusions**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

How do you measure the length of a coastline? How much symmetry is possible? What is an impossible object? How did the Mayans measure proportions? In this course, students will delve into these and other questions with a visual theme. While some will be clear-cut, others will be open-ended and require some choices, estimates or assumptions to be made. Throughout, the emphasis will be on creative problem solving.

Type:

Creativity and Innovation

- **CI-129 Elements of Attraction- Supply and Demand**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The intent of this course is for students to examine and effectively express in writing their ideas on creativity and to inspire undergraduate students to exceed their current levels of learning. Students will learn to meaningfully integrate course content into long term-retained useful skills through applied creative collaborations. This course is based on the idea that exposure and insight development will enable students to better visualize themselves in their desired fields and make informed choices within the variety of options available to them. The focus of the course will help students to assess their personal interests and strengths as they plan for their own educational and professional futures.

Type:

Creativity and Innovation

- **CI-131 Off to the Future: Leadership Through Compromise**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Some past political issues were resolved with great success (the Compromise of 1820), and some resulted in great failures (the US Civil War). In this course, students will study noteworthy political dilemmas of the past, identify the major problem solvers and examine the art of compromise. These investigations will provide guidance and inspiration for students to develop innovative and creative solutions to present day political problems such as climate change, immigration, Social Security, income distribution, higher education affordability, and homelessness. Students will work in teams and propose creative and innovative solutions that will convince the affected interest groups favorably, represented by teams of other students in the class, and result in compromises solving tomorrow's problems today.

Type:

Creativity and Innovation

- **CI-133 Franklin and the American Experiment**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

What made Benjamin Franklin such a creative force in American history? We will explore the many facets of Franklin's life (printer, writer, scientist, statesman) and learn about Benjamin Franklin's political and diplomatic ventures, and will recreate some of his scientific experiments.

Type:

Creativity and Innovation

- **CI-135 The Design of Everything**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will explore a selection of the genius personalities and their creative work in 5 distinct areas of human creative endeavor; art, science, nature, technology and the built environment. The course explores the underlying similarities in the process of their discovery, invention and creativity across the disciplines. Studying such names as Newton, Warhol, Hawking, Jobs, Gaudi and Banksy, students will uncover the process of design through research, analysis, synthesis, iteration and error. In class group projects will allow a hands-on opportunity to create.

Type:

Creativity and Innovation

• CI-137 Re-write for Rights: Drafting a New US Constitution

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The American Constitution is an important document, framing the basis for our lives and the lives of our neighbors. Yet it is also a very old document, which may be seen as lacking when it is compared to newer constitutions from around the world, even places that we may regard as undeveloped. In this class we will study many constitutions and also talk to many people to craft a new constitution that reflects contemporary American society and its values.

Type:

Creativity and Innovation

• CI-139 Creating, Promoting, and Participating in the Literary Arts

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

With the launch of Boston's new Literary Cultural District, we have renewed cause to celebrate the history and industry of literature in our city. This course will immerse students in the world of literary culture and its many branches: writing, editing, reviewing, and publicity. Students will practice the art of creative writing, and learn how writers find publishing venues, how authors build platforms for their work, and how literature reaches the public through readings, social media, book trailers and other marketing campaigns, authors interviews, and reader reviews. Various industry professionals, authors, editors and publicists will speak to the class about the artistic and business opportunities, trends, and futures of literature and literary publishing. Students will apply their knowledge and interests to a variety of projects, including book reviews, author interviews, social media campaigns, literary events, and other collaborative projects. We will also work as a class to launch a new digital literary journal at Suffolk.

Type:

Creativity and Innovation

Note:

Students with 30+ transfer credits are exempt from this requirement.

Major Requirements Minimum: 8 courses, 32 credits

Complementary Major Requirements, Minor Requirements, and Free Electives: credit varies

Minimum Total Credits Required for Degree Conferral: 126 credits

Note:

Core Requirements may also count toward major if taken at appropriate level.

Some degree programs exceed 126 credits.

Social, Cultural, & Global Perspectives: 1 course, 3-4 credits

Choose one course from those listed below:

- **AS-100 Introduction to Asian Studies: Culture, People, Ideas**

Credits:

4.00

Description:

An interdisciplinary introduction to Asian Studies will touch upon the history, politics, economics, philosophy, geography, arts, and cultures of Asia. Sample topics include political economy, religious and cultural exchanges, international relations, Asian experience in America, and the role of Asia in the twenty-first century. Students will develop conceptual frameworks for exploring the subjects covered by the Asian Studies curriculum.

Term:

Offered Both Fall and Spring

Type:

Asian Studies,Cultural Diversity Opt B,Humanities & History,Humanities Literature Requirement,Divers

- **AS-500 Asian Studies Internship**

Credits:

4.00

Description:

Engages in an internship in a business or non-profit organization that deals with Asia or an Asian American community. Students may complete the internship either in Asia or in the U.S. Students will complete appropriate exercises and reports to document their learning.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement,Global Engagement Experience,Diverse Perspectives

- **BLE-325 Global Business Ethics**

Prerequisites:

BLE-215, PHIL-119, PHIL-120, PHIL-123 or PHIL-127

Credits:

3.00

Description:

Surveys business ethics as they transcend the diverse perspectives of global business. Explores current global ethics standards and values, ethical challenges, controversies, convergence and trends. Students explore famous global business cases through films, websites and independent research. Emphasizes identification and resolution of global business ethical issues within the context of ethical decision-making and sustainability. Analyzes corporate social responsibility ; hence, transforming global business ethics through business.

Type:

Diverse Perspectives

• CI-204 Prague: Castles to Barbwire

Prerequisites:

At least 24 credits earned.

Credits:

3.00

Description:

Prague offers students a more recent view into history and will serve as a backdrop to learning Design Thinking. The curriculum will use Czech and Central European cultural features as the inspiration for learning the creative process, skills that can be applied broadly and globally across disciplines. WWII and its fall to Communism left the Czech Republic undamaged. Artists played a vital part in the country's rise to a Republic during the Velvet Revolution. These dissidents, including writers, actors, artists and musicians were innovators who were the catalyst for change. One could say that creative minds changed this country. This course is designed to demystify the creative process by introducing the creative practice as a disciplined approach to problem solving and innovation requiring research. This one-month study abroad experience will offer a more worldly insight to the significance of developing skills where divergent thinking and risk taking are one of many key tools in learning to generate new ideas. Travel fee covers accommodations, transfers, some meals and cultural visits. Airfare and tuition not included.

Type:

Creativity and Innovation,Diverse Perspectives,Global Engagement Experience,Expanded Classroom Requi

- **CJN-216 Intercultural Communication**

Credits:

4.00

Description:

An examination of communication variations and cultural viewpoints and their impact on cross-cultural communication. A special emphasis is placed on rituals and message patterns in non-Western cultures.

Term:

Offered Both Fall and Spring

Type:

Cultural Diversity Opt B,Diverse Perspectives

- **CJN-219 Rhetoric of Protest and Reform**

Credits:

4.00

Description:

Examines the persuasive strategies of social reform movements with special emphasis on the civil rights', women's rights, and gay rights movements in the United States.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt A,Humanities & History,BSBA SOCIAL CHANGE,Diverse Perspectives

- **CJN-301 Documentary Film and the Image of Conflict in the Middle East**

Credits:

4.00

Description:

The course focus is on some of the divisions and conflicts within Israeli society. Students analyze and compare mainstream media discourse to alternative representations in documentary film. Analysis also covers media representation of the Israeli-Palestinian conflict.

Term:

Occasional

Type:

Cultural Diversity Opt B,Diverse Perspectives

- **CJN-385 Globalization of Media and Telecommunications**

Credits:

4.00

Description:

A critique of the circulation of media goods and ideologies from both a cultural and political/economic perspective. Topics include global Hollywood, the images of Muslim women in transnational media, the information society, and global social movements.

Term:

Offered Spring Term

Type:

Cultural Diversity Opt B,BSBA SOCIAL CHANGE,Diverse Perspectives

- **EDUC-315 Strategies for Emerging English Learners**

Credits:

4.00

Description:

This course examines the specific needs and challenges of the various language and cultural groups in schools. Topics include: theories of 1st and 2nd language acquisition, strategies for teaching academic content, modifying instruction in the mainstream classroom, creating classroom cultures that invite all students into learning, the role of advocacy and professional collaboration in ESL, and analysis of policies related to assessment and placement of English Language Learners.

Type:

Diverse Perspectives, Social Science

- **ENG-216 World Literature in English**

Prerequisites:

WRI-102 or WRI-103

Credits:

4.00

Description:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

Social Science,Diverse Perspectives

• GVT-360 Elections and Voting

Credits:

4.00

Description:

How are elections administered in the United States? Do Americans have confidence in the electoral process? Should they? Why or why not? This course will examine elections in the United States in detail -- from how they are funded to how they are administered to how voters behave. Students will have a choice of either serving as poll workers during the November election or organizing and conducting research of potential voters. Students will gain hands-on experience in actual research design, election administration, and non-partisan get-out-the-vote activities. In addition, students will gain a deeper understanding of the relationship between attitudes, opinion, and voting behavior in American politics and institutions. ECR

• GVT-391 Canada: Multicultural Politics

Prerequisites:

GVT 110/120 or Instructor's permission

Credits:

4.00

Description:

This course examines the Canadian model of incorporating diverse communities into its constitutional and political framework, including the founding British North American Act of 1867, the 1982 Constitution Act, and two later attempts at constitutional reform. Canada's role in balancing two official languages, English and French, is discussed, as is its recognition of a First Nations native-governed territory in the Arctic. This course introduces

to the Canadian polity and compares its parliamentary system with the U.S. separation of powers system. Prerequisites: GVT 110, GVT 120 or instructor's consent. Normally offered alternate years. Cultural Diversity B

Type:

Cultural Diversity Opt B, Social Science, BSJ SOCIAL SCIENCE, Diverse Perspectives

• GVT-467 Comparative Social Movements

Prerequisites:

Junior status

Credits:

4.00

Description:

This class examines the political ramifications of social movements primarily but not exclusively within the United States. It looks at ideology, beliefs and mechanisms of mobilization. Another important focus is an analysis of non-white social movements in this country and their impact on domestic politics. Among the movements to be examined are: the Pan-African movement 1919-1939 which will, to some extent, take us outside this country; the U.S. Civil Rights Movement 1955 to 1969 which covers the rise of the Black Power movement; and the U.S. Labor Movement 1900 to 1955 in terms of non-white influence on its programmatic goals. Normally offered alternate years. Cultural Diversity B

- **PHIL-120 Ethics and Civic Life**

Credits:

4.00

Description:

In this class you will be introduced to the perspectives and methods of politics, philosophy, and economics and see how these three disciplines present distinct but interconnected dimensions of current social and political issues.

Type:

Diverse Perspectives

- **PHIL-229 Eco-Feminism**

Prerequisites:

PHIL 119, or PHIL 123, or PHIL 127

Credits:

4.00

Description:

Examines the political, social, and ecological problems facing us as a global community. Having its roots in feminist theory and deep-ecology, eco-feminism provides a critical framework for ecological responsibility and accountability. Writings from eco-feminist thinkers and environmental activists around the world will be used to highlight the philosophical and political conflicts and challenges, including globalization and loss of biodiversity, global warming, international human rights, the relationship of gender and nature, and modes of redress for eco-justice and sustainable development.

Type:

Diverse Perspectives

- **PHIL-261 Eastern Philosophy**

Credits:

4.00

Description:

The exposition and critical evaluation of Hinduism, Buddhism, Confucianism, Taoism, and Islam. Special attention is given to foundation principles as well as to the similarities and differences of each of these philosophies to basic ideas in Western philosophy. 1 term - 4 credits. Normally offered alternate years. C b

• **PSYCH-243 Organizational Psychology**

Prerequisites:

Take PSYCH-114;

Credits:

4.00

Description:

Focuses on diversity concerns in various aspects of the psychology of the workforce. This includes job analysis, recruitment, selection, evaluation, training, retention, and termination. Employee morale, well-being, stress, and hardiness are considered.

Type:

Cultural Diversity Opt A,Social Science,Diverse Perspectives

• **RS-111 Introduction to World Religions: Western Traditions**

Credits:

4.00

Description:

This course will explore the comparative history and structure of Western religious traditions, broadly understood, and their impact on other world religions, while attempting to recognize the similarities and the differences among them. Traditions to be studied include Greek and Roman religion, the monotheistic faiths (Judaism, Christianity, and Islam, as well as Zoroastrianism, Sikhism and Bahaism). We will also explore the impact of the Western religions on indigenous traditions, such as African religion, Native American religion, and Pacific Island religion. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. 1 term - 4 credits. Normally offered every year.

Type:

Diverse Perspectives

- **RS-112 Introduction to World Religions: Eastern Traditions**

Credits:

4.00

Description:

This course will examine a variety of Eastern religions, including Hinduism, Buddhism, Jainism, Confucianism, Taoism, and Shintoism. Possible connections to be explored will be the impact of these traditions on others, such as Pacific Islands and African religion, as well as the growing place of Eastern religion in the West. This course will explore the history and structure of each tradition, while attempting to recognize the similarities and the differences among them. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. Normally offered every year. Cultural Diversity B

Type:

- **SIB-550 Global Travel Seminar**

Credits:

3.00

Description:

An in-depth analysis of timely special issues in international business. Specific topics are announced when the course is scheduled.

Type:

- **SF-190 Asia in America Fiction and Fact**

Credits:

4.00

Description:

With a focus on some selected ethnic groups from Asia, Asia in America studies the history and current status of Asian Americans in Boston and other parts of the country. We will examine the major reasons why these immigrants chose to leave their home country as well as their expectations and experiences here in America. We will also discuss the issues Asian immigrants have faced in this adopted home as well as the connections and conflicts among different ethnic groups or even within the same ethnic group due to political and socio-economic reasons. The course will include some level of community engagement, through Chinatown tour and service, which may enable us to have a direct contact with the Asian American population and reflect on what is being discussed in class. Through this course, we hope to gain a better understanding of the racial and cultural history of the country and arrive at a deep appreciation of the dynamics of cultural interactions in the twenty-first century. The course fulfills the SCGP requirement.

Type:

Cultural Diversity Opt A, Global Engagement Experience, Diverse Perspectives, Expanded Classroom Requir

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

Type:

Diverse Perspectives

- **SOC-227 Race in American Society**

Credits:

4.00

Description:

Despite the election of Barack Obama as President of the United States, race remains one of the most divisive forces in U.S. society. While many of us struggle against racism, racial classification continues to affect where we live, where we work, and how we see ourselves. Racial classification affects our access to health care and our encounters with police officers. Distorted images of racial groups fill television and movie screens. Appeals to racism and fear of foreigners are dominant themes in elections to state and national offices. This course examines the formation and re-formation of racial classifications: how particular groups become racially identified, how these classifications change over time, and how conflicts over race have shaped American society. The meanings of race, as seen from a variety of perspectives, will be a consistent theme throughout the course.

Term:

Occasional

Type:

Cultural Diversity Opt A,Diverse Perspectives,Cultural Diversity Opt B

- **SOC-228 Cultural, Global and Social Perspectives**

Credits:

4.00

Description:

Enables students to examine, as well as develop an awareness and appreciation of, diversity within today's society. Providing an overview of the major racial, ethnic, and cultural groups in the U.S., the focus is on the ways in which cultural awareness enhances professional helping relationships and improves the operation of human services systems.

- **SPAN-315 Business Spanish**

Prerequisites:

SPAN 290 or SPAN 300 or Instructor's consent.

Credits:

4.00

Description:

Integrates language learning with culture via business context of the Hispanic world. Spanish for banking and finance, marketing and advertising, and international commerce are highlighted. Students increase their cross-cultural understanding and written and oral proficiency in business Spanish through a wide range of assignments.

Type:

Diverse Perspectives

• SPAN-390 Introduction to Latin American and Caribbean Literature

Prerequisites:

SPAN 300; SPAN 302 is strongly recommended

Credits:

4.00

Description:

Examines authors from Latin America and the Caribbean in their historical and cultural contexts. Reading and class discussions consider the relationship between the writer and society by covering such topics as colonialism, the oral tradition, modernism and the emergence of new narratives in the twentieth century. The Inca Garcilaso, Sor Juana, Carlos Fuentes, Rigoberta Menchu, and Pablo Neruda are among some writers studied.

Term:

Science, Technology, & Engineering (STE): 2 courses and corresponding laboratories where applicable, 8 credits

Choose at least one Science course with a laboratory (L). (Some courses may both be designated STE and have a laboratory.)

Choose one STE (Science, Technology, and Engineering) science course (and corresponding laboratory where applicable) from the list below. Courses do not need to be in a sequence. In the case of a course that is a lecture plus a lab, the student must complete both components to earn credit for the STE requirement.

Biology:

- **BIO-104 Environmental Biology**

Prerequisites:

BIO 101 and BIO L101, can also be taken concurrently BIO L104 must be taken concurrently

Credits:

3.00

Description:

An introduction to basic evolutionary, behavioral and ecological principles. Readings and discussions emphasize the ways that humans are affected by ecological processes and principles as well as how humans and their technology affect ecosystems. May not be taken by Biology majors or minors. This course will not fulfill requirements for a major or a minor in Biology. It is intended for non-biology majors as a follow-up to Biology 101. 3 hours lecture. Days Only. Madrid Campus only.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **BIO-L104 Environmental Bio Lab**

Prerequisites:

BIO-104 must be taken concurrently

Credits:

1.00

Description:

Exercises and field trips designed to complement and demonstrate the ecological principles developed in the lecture section. The lab emphasizes the scientific method and employs long term group projects. Madrid Campus only.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **BIO-111 Introduction to the Cell**

Prerequisites:

Must take BIO L111 concurrently

Credits:

3.00

Description:

Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L111 Introduction to the Cell Laboratory**

Prerequisites:

Concurrently with BIO 111

Credits:

1.00

Description:

Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **BIO-114 Organismal Biology**

Prerequisites:

Must take BIO L114 concurrently.

Credits:

3.00

Description:

Rigorous introduction to organismal biology emphasizing evolution, phylogenetics, form, and function. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **BIO-L114 Organismal Biology Laboratory**

Prerequisites:

Must take BIO 114 concurrently

Credits:

1.00

Description:

A series of laboratory experiences in evolution, diversity, anatomy and physiology.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **BIO-201 Biology's Big Questions**

Prerequisites:

Non Science Majors Only.

Credits:

4.00

Description:

This course seeks to answer five current questions from all levels of biology, from the subcellular to the ecosystem level. Topics will be discussed in the context of genetics, evolution, and ecology. We will focus on the process of doing science, including how scientists evaluate ideas and communicate their findings. Emphasis will be placed on topics in biology that impact daily life.

Type:

SCI TECH ENGR

Chemistry:

- **CHEM-105 Chemical New Product Development**

Prerequisites:

ENT 101

Credits:

4.00

Description:

This course addresses the crucial intersection between chemistry and business, and the impact of these fields on society. It provides an introduction to important chemistry concepts and practices of business management. Primary focus is on understanding the chemistry principles behind some of the consumer products in our everyday lives, and using this knowledge to create and evaluate ideas for new products. The course also introduces the business aspects involved in the development and marketing of new products. An important component of the course is in making effective presentations; this component concludes the course, culminating in team presentations of a new chemical product to panel of executives and peers. This course satisfies the Sawyer Business School Science requirement.

Type:

SCI TECH ENGR

- **CHEM-106 Biotechnology & Its Applications in Medicine, Agriculture, Law**

Credits:

4.00

Description:

Introduces the latest discoveries and applications of biotechnology. Topics include genetically modified food, stem cells, genetic testing, cloning, and forensics. A combination of lectures, discussions, documentaries, mock congressional hearings, and hands-on activities will provide insight into the numerous medical, social, legal, and ethical issues surrounding this technology.

Type:

SCI TECH ENGR

- **CHEM-111 General Chemistry I**

Prerequisites:

Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:

3.00

Description:

Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

• CHEM-L111 General Chemistry I Lab**Prerequisites:**

Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

• CHEM-201 Caveman Chemistry

Credits:

4.00

Description:

Caveman chemistry explores chemical technologies that have led to modern industrial civilization, with an emphasis on the chemistry we encounter in everyday life. Although this is not a laboratory course, it is very much a course about doing things. We will focus on the process of doing science, including how scientists evaluate ideas and communicate their findings, through literature and hands-on activities.

Type:

SCI TECH ENGNR

Computer Science:

- **CMPSC-F107 Ants, Rumors and Gridlocks**

Prerequisites:

Math placement level of 2 or above or any MATH course at the level 100 or above

Credits:

4.00

Description:

Do viruses and rumors spread like forest fires? How do ants cooperate? Do spoken languages and biological species evolve in a similar way? Ants, Rumors, and Gridlocks exposes students to introductory aspects of computational science by addressing and answering these and many other questions. Students use and modify virtual experiments preprogrammed in the NetLogo programming language to investigate these topics and others in Social Sciences, Biology, and Environmental Science. No prior knowledge of computer programming or NetLogo is required.

Type:

SCI TECH ENGNR,Quantitative Reasoning

Electrical Engineering:

- **ECE-288 Measuring the World**

Credits:

4.00

Description:

The world is addicted to quantifying the essence of everything, from personal IQ, to the speed of a baseball, to our healthiness, or our chances of winning the lottery. Behind most of these numeric values exists a science of measurement. Some of this is referenced to international standards, such as for length, time, weight, or temperature. Others are more arbitrary and subjective, such as ranking Olympic performance in gymnastics, beauty pageants, or popular responses as found in the game show Family Feud. A third category includes controversial areas, such as measuring whether a person is lying when interrogated, or using hype rather than reality to market products. Sometimes statistics are used to predict sports outcomes, such as in the annual March Madness NCAA basketball brackets. Finally, in a world subject to fraud and deception, it can be essential to distinguish legitimate from counterfeit items, such as in money, art, collectibles, and historical documents. Don't get hoodwinked! This course examines all of these, starting with how measurements have been made throughout history, along with a full deck of entertaining terms used during the ages. This may help you sort out your weight, whether given in pounds, kilos, or stones. Often these terms will provide insights into how people lived in different eras. We will also look at some of the technologies currently available to provide these measurements, and unravel the complexities of various sensors that are used. As we consider the meaning of accuracy we may become less naive about how much confidence to ascribe to the results given us. Hovering around all of these measurements should be the question of validity - are they meaningful, useful, or misleading? And the impact they have on society - whether they steer behavior more powerfully than one might originally suspect. Each student will also be given an opportunity to become an expert in an area of measurement of personal interest. By the end o

SCI TECH ENGR

Engineering Science:

- **ENS-103 Introduction to Engineering**

Prerequisites:

ENS L103 MUST BE TAKEN CONCURRENTLY.

Credits:

3.00

Description:

This course provides exposure to engineering practice, with particular focus on electrical engineering components such as circuit elements and systems. It seeks to go beyond the mathematics and provide an intuitive appreciation of functional devices. Examples taken from a broad swath of

technological history illustrate significant crossroads, decisions, and inventiveness. Emphasis is placed on learning to think as an engineer - assessment of problems, candidate solution tradeoffs, and implementations. Frequent exercises in creative engineering design will be used. Students will be required to design several elementary devices, such as a magnet, a capacitor, a timing device, and a motor, which they will enter in a competition for overall strength, compactness, accuracy, or speed. Sometimes assignments relate to "survival on an island" concerns, such as communication or drinking water. Students also learn about reverse engineering by selecting, building, troubleshooting, and presenting an electronic kit of their choice. A term paper determining the engineering behind a topic of their choice will also be written and presented. On occasion (see ENS L103) there will be team competitions between various smaller groups in the class.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **ENS-L103 Intro to Engineering Lab**

Prerequisites:

Must be taken Concurrently w/ ENS-103

Credits:

1.00

Description:

The Lab is designed to provide opportunities to gain familiarity with engineering tools. Students will be introduced to parts (e.g. learn the resistor color code), test equipment (multimeters, prototyping trainers, signal generators, and oscilloscopes), and construction techniques (wiring, soldering, troubleshooting). Although it varies from year to year, Class Projects can be built during the Lab sessions. In the past these have included a 25 Watt electric generator, various door lock systems (both mechanical and electronic), and an AM transmitter and receiver (all projects made from scratch). It is likely that 2010-2011 may introduce some robotic creations for a competition. Electronic kits and motors can also be built and serviced in the Lab. There is an adjoining machine shop, which can be utilized (with supervision), for fabricating items. Individual creativity is encouraged, and informal problem solving sessions occasionally occupy lab time. However, the lab is accessible outside of the traditional scheduled time.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **PHYS-153 University Physics III**

Prerequisites:

Take MATH-121 or MATH-165;

Credits:

3.00

Description:

This calculus-based course is the introduction of the topics of modern physics. It begins with special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom. Then Schrodinger's equation is introduced with use of wave functions, particle box, barrier penetration, quantum mechanical tunneling, the Pauli Exclusion principle, the development of the periodic table, and the X-ray spectra. Development of solid state physics with bonding in molecules, band theory of solids and semiconductor behavior. The final topics cover nuclear physics, radioactivity, half-life, nuclear fission and fusion, medical uses of radiation, elementary particle physics and introduction to astrophysics.

SCI TECH ENGR

Science:

- **SCI-108 Introduction to Cancer Care**

Credits:

4.00

Description:

This course will introduce the students to the top ten U.S. adult cancers, as well as the most common pediatric cancers. Topics to be covered include cancer causes, detection, and prevention. Psychosocial aspects of being diagnosed with cancer and the role nutrition plays for cancer patients will be described. The course will also discuss the major treatment modalities for each cancer including radiation therapy, surgery, chemotherapy, and bone marrow transplants. The goals and objectives of the course will be met through the use of various teaching tools including but not limited to: PowerPoint presentations, videos, guest lectures, and a poster project with a presentation component. Cognitive assessment of the students will be accomplished through homework, quizzes, exams, and a group poster and oral presentation. Students with any type of academic background are welcome.

- **SCI-113 A Habitable Earth Within the Solar System**

Credits:

4.00

Description:

This course introduces non-science majors to concepts that are central to making our planet habitable. It presents Earth in context of the solar system with a broad view of global climate change and energy resources in a quest to better understand the workings our planet. This course on Earth and Planetary Science is suitable for students who may have taken their last science and math course several years ago, or are just curious about knowing facts on major issues that pertain to the future of our planet. Together with a reading component, this course aims to give students a flavor of

how researchers think, investigate and develop conclusions that directly affect our political and economic future. Topics covered in this course range from the solar system to the study of search for other habitable Earth-like planets, search for extraterrestrial life, and evolution of life on Earth. Other characteristics of this course are heavy use of audio-visual materials often including computer animations and simulations, in-class experiment demonstration, and intensive use of INTERNET-based resources.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGR

- **SCI-165 Inner Workings of Physics Universe**

Credits:

4.00

Description:

About 15 billion years ago, (data indicate) the big bang occurred and the universe was born. With it came physical laws and a spectacular array of consequences that lead to the universe as we know it. This non-lab , 4 credit course explores the inner workings of the physical universe in terms of the scientific inquiry which lead to Newton's laws, an understanding of energy, waves, light, electricity, atomic structure, chemical reactions, nuclear physics, particle physics, relativity, and the big bang theory. During the course, students will learn to make use of modern resources to access scientific and technical literature to research a scientific topic. They will learn to distinguish between science and technology (e.g. quantum mechanics and nanotechnology, the discovery of the Higgs boson and the large hadron collider that made it possible, etc.) and to understand how the science, technology, and engineering disciplines play a crucial role in recognizing and solving problems of society and the world that we share.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **SCI-171 The Built World: How Humans Engineer Environments**

Credits:

4.00

Description:

The most basic needs of humans have not changed - water, food, and shelter - but the means of meeting these needs has. In this course, we will examine how technology-driven societies operate by studying how cities are built and how they function. Topics will include water supply and distribution systems; transportation systems (including road and bridge design and construction); building design, construction, and operation

(including skyscraper and sustainable building design), and waste removal systems (municipal and industrial wastewater removal and treatment, solid waste removal and treatment). This is not a course about little gadgets and widgets; this is a course about big engineering marvels; and it emphasizes applications of science - how things work - rather than scientific theory.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGR

- **SCI-173 Geographic Information Science (GIS) The Power of Digital Maps**

Prerequisites:

SCI L173 Must be taken concurrently Knowledge of Windows type Application

Credits:

3.00

Description:

Geographic Information Science (GIS) link information (number of fire hydrants on a block) to features on a map (e.g., a point representing street address) that has a designated geographic location (as designated by global coordinates). Unlike paper maps, GIS software allows the production of interactive maps that allows the user to layer data, to indicate spatial patterns, to analyze trends, and to combine different features of the mapped area in novel ways. For example, a business person may wish to use GIS to determine the optimum location of retail outlet (based on the mapped demographics of a neighborhood), while an environmental engineer may use GIS to describe the location of outfalls to see how they correlate to areas of stream pollution. In this course, students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **SCI-L173 GIS Lab**

Prerequisites:

Must be taken concurrently with SCI-173

Credits:

1.00

Description:

This laboratory illustrates concepts and methods taught in SCI 173. In this lab students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **SCI-181 Science and Life in the 21st Century**

Credits:

4.00

Description:

This is a four credit, non-lab, science course that examines the central scientific problems confronting the 21st century. The course studies particular topics and teaches the necessary science around these topics to provide a good understanding of the issues. The topics currently are: Energy, Science and Economic Decisions, Sustainability of Life on Earth, Health and Science.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGR

• SCI-184 Contemporary Science and Innovation

Credits:

4.00

Description:

This is a 4 credit, project based science course that examines the central scientific problems confronting the 21st century. The course consists of lectures, class discussions, field trips, and in-class hands-on activities designed to familiarize the student with different concepts of the lectures. The current focus is on sustainable energy production. A final team project related to the course topics will be given. This is the version of SCI 183 without a separate lab component. Students who have taken SCI 183, L183 are not allowed to take this course.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGNR,NATURAL SCIENCE FOR BS

• SCI-201 Physics for Future Presidents

Credits:

4.00

Description:

This course presents a topical introduction to the key principles and concepts of physics in the context of the world events and natural phenomena that confront world leaders and that require informed decisions and responses. Energy, health, counter-terrorism, remote sensing, space programs, nuclear proliferation, and a host of other modern challenges have technological and scientific dimensions, the understanding of which is essential to avoiding disastrous policy decisions. This course considers the application of physics to these societal challenges. The material is covered at a level and pace that a future world leader should be able to handle; the emphasis is on the development of physical reasoning skills, and not on detailed, mathematical problem solving.

Type:

Choose one course from those listed below:

English

- ENG-213 English Literature I

Prerequisites:

WRI-102 or WRI-103

Credits:

4.00

Description:

Study of major writers of England from the beginning to the mid-18th century. Regularly assigned essays on the reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement

- **ENG-214 English Literature II**

Credits:

4.00

Description:

Study of major English writers from the mid-18th century to the present. Regularly assigned essays on the reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement

- **ENG-216 World Literature in English**

Prerequisites:

WRI-102 or WRI-103

Credits:

4.00

Description:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

Term:

Offered Both Fall and Spring

Type:

Cultural Diversity Opt B, Humanities Literature Requirement, Diverse Perspectives

• **ENG-217 American Literature I**

Credits:

4.00

Description:

Study of major American writing from its origins through 1865. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement

- **ENG-218 American Literature II**

Credits:

4.00

Description:

Study of major American writing from 1865 through the present. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement

Women's & Gender Studies:

- **WGS-325 Global Women's Fiction**

Credits:

4.00

Description:

Explores of various cultural worldviews in order to reveal and assess the voices of women from around the world as they respond to important global issues such as sexual violence and gendered oppression. Topics include: national citizenship, sexual politics, legal discourse, aesthetic representation, literary movements, genre, constructions of femininity, sexual identities, and representations of gender in relation to race and class and international cultures, and the relationship of self-image to the body politic.

Term:

Occasional

Type:

Humanities Literature Requirement,Cultural Diversity Opt B,Diverse Perspectives

- **FR-216 Masterpieces of French and Francophone Literature in English Translation**

Credits:

4.00

Description:

Masterpieces of French and Francophone Literature in English Translation. Studies works translated into English by major authors from the Middle Ages to the present. Explores drama, fiction, and poetry from many regions of the world: Africa, Western Europe, North America, the Caribbean, and Vietnam.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt B, Humanities Literature Requirement, Humanities & History, Diverse Perspectives

- **FR-309 Survey of French Literature I**

Prerequisites:

FR 202 or Instructors permission

Credits:

4.00

Description:

Analyzes and discusses canonical works of French literature from medieval times to the eighteenth century.

Term:

Offered Fall Term

Type:

- **FR-310 Survey of French Literature II**

Prerequisites:

FR-202 or instructor's permission

Credits:

4.00

Description:

Study, analyze and discuss canonical works of French-language literature from the nineteenth through the twenty-first centuries, as they relate to important events in the art, culture, and history of the Francophone world.

Term:

Offered Spring Term

Type:

Humanities Literature Requirement,BA FOREIGN

- **GER-216 Masters of German Literature in English Translation Masterpieces**

Credits:

4.00

Description:

Discussion of works by major authors from the 18th century to the present. Drama, fiction, and poetry. The specifically German contributions as related to the European context. Lessing, Goethe, Schiller, Heine, Buchner, Schnitzler, Kafka, T. Mann, Hesse, Brecht, Seghers, Grass, Boll, Wolf and/or others.

Term:

Occasional

Type:

Humanities Literature Requirement

- **SPAN-300 Intro to Cultural Texts**

Prerequisites:

Spanish 202, 203, 250 or Instructor's consent.

Credits:

4.00

Description:

Explores a selection of Peninsular and Latin American cultural materials. Primarily examines texts from different literary genres (narrative, drama, essay, and poetry). Develops critical skills required in more advanced Spanish courses, through close readings and textual analysis. Activities include regularly assigned essays, group discussions, and short scene work.

Term:

Offered Spring Term

Type:

Humanities Literature Requirement, BA FOREIGN

- **SPAN-390 Introduction to Latin American and Caribbean Literature**

Prerequisites:

SPAN 300; SPAN 302 is strongly recommended

Credits:

4.00

Description:

Examines authors from Latin America and the Caribbean in their historical and cultural contexts. Reading and class discussions consider the relationship between the writer and society by covering such topics as colonialism, the oral tradition, modernism and the emergence of new narratives in the twentieth century. The Inca Garcilaso, Sor Juana, Carlos Fuentes, Rigoberta Menchu, and Pablo Neruda are among some writers studied.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities Literature Requirement, BA FOREIGN, Diverse Perspectives

- **SPAN-405 Women's Voices in Latin America**

Prerequisites:

SPAN-300; Spanish 302 or its equivalent is strongly recommended

Credits:

4.00

Description:

Examines the changing roles of women in Mexico, the Caribbean, Central and South America through fiction, non-fiction, drama, poetry and film. Special focus is placed on the impact that changes in social ideology and culture have had on their identity and writings. Texts available in English.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, BA FOREIGN

- **SPAN-407 Latin American Short Narrative**

Prerequisites:

Spanish 300; or Instructor's consent; Spanish 302 is strongly recommended

Credits:

4.00

Description:

Explores some of the major trends in the twentieth century Latin American story telling. Readings reflect the vast array of voices and styles, beginning with fantastic literature of the 1930's, the birth of magical realism and the more contemporary, socio-political narratives. Authors include Isabel Allende, Julio Cortazar, Rosario Castellanos, Gabriel Garcia Marquez, Juan Rulfo, Luisa Valenzuela, among others.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement, BA FOREIGN

• **SPAN-416 Border Crossings the Latino Experience in the USA**

Prerequisites:

ENG-102 or ENG-103 or Instructor's consent. Span 302 is strongly recommended for Spanish and Latin American & Caribbean Studies majors and minors.

Credits:

4.00

Description:

Examines the myth of a singular Latino experience in the United States through a variety of genres and authors. Issues relating to culture, language, family, and religion are among some of the topics explored. Authors include Sandra Cisneros, House on Mango Street, Junot Diaz, The Brief Wondrous Life of Oscar Wao, Julia Alvarez, How the Garcia Girls Lost Their Accents, Tato Laviera, and American.

Ethical & Philosophical Inquiry: 1 course, 4 credits

Choose one course from those listed below:

- **PHIL-119 Ethics**

Credits:

4.00

Description:

A systematic introduction to the major thinkers and their positions on the main issues of ethics, such as: What is morality? What are moral values? How should we live our lives? Are there objective, universal, absolute moral standards? If so, what are they, and what is their basis? 1 term - credits. Normally offered every year.

Term:

Offered Both Fall and Spring

• **PHIL-120 Ethics and Civic Life**

Credits:

4.00

Description:

In this class you will be introduced to the perspectives and methods of politics, philosophy, and economics and see how these three disciplines present distinct but interconnected dimensions of current social and political issues.

Type:

Diverse Perspectives

• **PHIL-123 Social Ethics: The Good Life**

Credits:

4.00

Description:

An examination of contemporary Western society, particularly in the United States, in relation to philosophical attempts to define the good life. Current books that exhibit a philosophical approach towards important contemporary social issues will be discussed, as well as classics in philosophy. Topics may include: civic virtue, consumerism, current events, economic justice, popular culture (film, music, television), religion and secularism, etc. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- **PHIL-127 Contemporary Moral Issues**

Credits:

4.00

Description:

A critical examination of a number of contemporary moral issues such as: abortion, affirmative action, animal rights, capital punishment, cloning, drug legalization, environmental ethics, euthanasia, genetic engineering, gun control, pornography, same-sex marriage, suicide, war and terrorism, etc. 1 term - 4 credits. Normally offered every year.

Social Science: 1 course, 4 credits

Choose one course from those listed below:

Applied Legal Studies:

- ALS-264 Introduction to Law and Legal System

Credits:

4.00

Description:

Introduction to civil, criminal and constitutional law, with special focus on procedural law and the federal and state court systems. Limitations of the courts, forms of remedies, the law of equity and institutional sources of American law will also be studied. Introduction to judicial cases and brief writing. Normally offered each semester.

Type:

Social Science

- **ALS-266 Criminal Law**

Credits:

4.00

Description:

This course examines criminal law in the United States from a broad perspective. It will present the general principles and doctrines that affect the whole criminal law, such as elements of criminal offenses, defenses to crime, and perspectives on crime and criminal law. In addition, students will learn the elements of specific crimes, such as homicide, criminal sexual conduct, terrorism and related crimes, crimes against public morals, and crimes against property. Discussions of the direction of the criminal law and constitutional limitations on government will be presented as preparation for future study.

Type:

Cultural Diversity Opt A

- **ALS-362 Litigation**

Credits:

4.00

Description:

The Rules of Civil Procedure dictate the steps taken in state and federal lawsuits. This course will acquaint students with rules and the practical requirements of the rules, from filing a complaint to clarifying a judgment and to the duties of paralegals in a litigation office. Normally offered each semester.

Type:

Social Science

- **ALS-363 Law of Contracts**

Credits:

4.00

Description:

The existence and validity of a contract is determined by specific rules. Students will learn about formation through offer and acceptance, contract enforceability, the necessity of consideration, and breach of contract and will draft contract provisions as a paralegal might in a law office. Normally offered each semester. Sophomore status required.

Type:

Social Science

- **ALS-396 International Law**

Prerequisites:

Take ALS-264 or ALS-360 or instructor's permission

Credits:

4.00

Description:

With the globalization of the world economy, legal professional and business people require knowledge of international law more than ever. This course offers students a survey of selected materials in public international law. Covered will be the practical and theoretical issues of international law, from the Law of the Sea to business implications to definitions of war and international concepts of justice. Normally offered yearly.

Type:

Communication:

- **CJN-255 Introduction to Media**

Credits:

4.00

Description:

An introduction to the role of media in contemporary society, focusing on media's influence on cultural, political, and ideological processes. An examination of the historical contexts within which newspapers, radio, television, and new media technologies develop, and how audiences interact with and influence the use of media.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **CJN-285 Media and Pop Culture I**

Credits:

4.00

Description:

Examines the influence of media on contemporary society. Television, radio, film, and print formats are discussed in terms of their persuasive impact on mass culture in the U.S.. Focus is on the period 1950-1970.

Term:

Offered Spring Term

Type:

Social Science

- **CJN-287 Media Criticism**

Prerequisites:

CJN-255

Credits:

4.00

Description:

Critical examination of various mass media including film, television, radio, music, newspapers and magazines. Theories of media criticism discussed and applied to specific media or media products.

Term:

Offered Spring Term

Type:

Social Science

- **CJN-375 Organizational Communication**

Credits:

4.00

Description:

Historical development of the theory of organizations, examination of information flow, network analysis, communication overload and underload, corporate culture, superior-subordinate communications, organizational effectiveness, and change processes.

Term:

Offered Fall Term

Type:

Social Science

- CJNI-400 Media Effects and Audiences

Prerequisites:

Prerequisite: CJNI-255

Credits:

4.00

Description:

Explores the social influence of the media on U.S. society. Attention is given to the theoretical perspectives that inform media research. By the end of the semester, students will develop a critical understanding of the role and influence of the media in U.S. society.

Choose any [Education Studies course](#)

German:

- GER-419 East Germany and the Cold War

Credits:

4.00

Description:

When the German Democratic Republic was founded in 1949, observers in the West viewed it as an artificial construct created to serve the needs of the Soviet empire. The self-image of the GDR as created by its leadership revolved around the idea of an anti-fascist German state designed as a bulwark against any revival of National Socialism. Over a generation after the fall of the Berlin Wall, it is possible to undertake a dispassionate analysis of the forty-year history of the 'other' German state as manifested in its cultural identity and political role during the Cold War.

Sociology:

- **SOC-113 Introduction to Sociology**

Credits:

4.00

Description:

An introduction to the sociological understanding of human interaction, group process and social structures. Students are introduced to basic concepts, theories and methods of sociological investigation. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **SOC-116 Social Justice**

Credits:

4.00

Description:

An examination of traditional and contemporary problems associated with major social institutions such as the family, economics, government and education. Social forces related to ethnicity, social class, health and welfare, and urbanization are also included. Alternative remedial measures based on behavioral science theories are discussed. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **SOC-217 Sociology of Urban Life**

Prerequisites:

Fulfills ECR requirement

Credits:

4.00

Description:

An examination of the effects of the city on human life in its broadest as well as its most specific aspects. Greater Boston and similar communities across the nation will be studied as ecological settings, as producers and shapers of change, and as special contexts for understanding sociological ideas. Comparisons will be made among urban places in the U.S. and in other countries.

Term:

Occasional

Type:

Social Science,Cultural Diversity Opt A,Expanded Classroom Requirement

- **SOC-223 Families in Contemporary Society**

Credits:

4.00

Description:

An exploration of the diversity of contemporary families. Comparisons are made between the cultural myths of the ideal family and the lived realities. Challenges confronting contemporary families and their implications for social policy are examined in such areas as work/family conflicts, gay and lesbian families, welfare, family violence.

Term:

Occasional

Type:

Social Science

- **SOC-224 Families in Contemporary Society (Spain)**

Credits:

4.00

Description:

Spain has experienced major socio-demographic changes since the mid 1970s. These transformations mainly arise from the new role of women in society and, in particular, women's higher levels of education, work experience, and labor market attachment. The changes in women's labor force participation have occurred in conjunction with a progressive postponement of main family events, such as leaving the parental home, forming a partnership and having children, as well as with a reduction in the family size. Spain is, indeed, characterized as having one of the lowest low fertility levels within Western industrialized countries, a pattern that is exacerbating the ongoing process of population aging. This picture partly reflects the

conflicting relationship that currently exists between women's labor force participation and the accommodation of family responsibilities: the so-called work/ family balance. Ongoing differences among countries have been accounted for by different explanatory factors that involve socio-economic, cultural and social policy dimensions. From a comparative perspective, the course is intended to cover recent debates, controversies, and research on family formation and family dilemmas in contemporary Spain.

Type:

Social Science

- **SOC-236 Deviance and Social Control**

Credits:

4.00

Description:

Who and what is deviant? How shall the society respond? The course examines a range of deviance theories and associated social policies. A number of case studies will be used to evaluate these theories, such as body piercing, witchcraft, gay and lesbian sexuality, corporate crime, disability, prostitution, violence against women, racism, anti-Semitism, and gangs.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **SOC-264 Social Media and Society**

Credits:

4.00

Description:

An examination of the ways in which social structures and processes influence and are affected by modern ideas, needs and social practice techniques in technologically advanced societies is considered in conjunction with changes in the way in which we understand the world, the nature of

work and leisure, the processing of information and the character of social institutions. Normally offered alternate years. Fulfills the Social Science Option. Fulfills the Sociology Department's Social Policy requirement.

Type:

Social Science

Women's & Gender Studies:

- **WGS-113 Women, Science, & Society**

Credits:

4.00

Description:

Explores women's lives from the perspective of the social and natural sciences, including examination of recent biological, psychological, and sociological theories about gender and gender roles, as well as the influence of feminist scholarship in these areas. Topics include: the social construction of gender; the psychology and biology of sex and gender; women and work; media representations of women; the female body and eating disorders; women's health and lifecycle; women and sexuality; reproduction, abortion, and motherhood; and sexual violence against women.

- **ADFA-306 Art & Culture of Asia, Africa, South America and Oceania**

Credits:

4.00

Description:

The coursework introduces students to the artistic and visual traditions from South and East Asia, Africa, Oceania and the Americas. In addition to the material culture of the particular region under study, the coursework will consider socio-political ideals, religious belief systems, and cultural principles that 'shaped' or informed the work and the ideology of civilizations beyond the Western hemisphere. Comparative analysis among non-western and western traditions will be used to critically analyze the salient points of influence, rejection and modifications of aesthetic affinities. Class lectures will be supplemented with museum seminars specifically the rich non-western collections at the MFA, Boston. Guided field trips to the museum will allow students to formally analyze the works of art discussed in lecture and text material.

Term:

Occasional

Type:

Cultural Diversity Opt B, Cultural Diversity BFA, Asian Studies, Humanities & History, Expanded Classroom

- **ADFA-344 Islamic Spain: Art and Architecture**

Credits:

4.00

Description:

This course examines the Islamic influence in Spain through its art and architecture from its formative period in the eighth century through the fourteenth century and beyond to see the continuity and change of the Mozarabic style found locally in Madrid, Cordoba, Seville, and Granada. Students will use formal analytical skills to critically explore works of art and architecture and will cultivate a 'lens' through which they will facilitate their understanding of the classic and contemporary material culture and fabric of Spain. Class meetings will be supplemented with field trips. Offered as needed.

Type:

Humanities Literature Requirement, Humanities & History

• ADF A-345 Art of India

Credits:

4.00

Description:

A chronological survey of South Asian art (2300 BCE - 1750 CE) including India, Pakistan, Bangladesh, and Nepal. Examination of art and architecture from their first and still mysterious beginnings in the Indus Valley, through the great masterpieces of Buddhist and Hindu art to the coming of Islam, including the eclectic culture of the Mughal courts and the golden age of miniature paintings. Consideration is given to the multiple aspects of patronage in Indian culture - religious, political, economic - through case studies of individual works of art and architecture. (Formerly HUM 345)

Type:

Humanities & History, Cultural Diversity Opt B, Humanities Literature Requirement, Asian Studies

• ADF A-346 Art of the Silk Road

Credits:

4.00

Description:

This course will examine the arts and architecture of the Silk Road, with particular attention to art of Buddhism, Hinduism, and Islam. Historically, Inner Asia was marked by trade routes (the 'Silk Route' or 'Silk Road') which crisscrossed this vast landscape of deserts and mountains between China, India, the Iranian Plateau and the Mediterranean world. In addition to the art of these cultures, we will also look at the records of early Chinese travelers through Central Asia. (Formerly HUM 346) Offered as needed.

Humanities & History,Cultural Diversity Opt B,Humanities Literature Requirement,Asian Studies

- **ADI-221 History of Furniture & Architecture I**

Credits:

4.00

Description:

The goal of this course is the enhancement of the student's critical comprehension of historic styles and the impact they have on contemporary design solutions. The survey begins with the Egyptian period and provides an overview of the history of furniture and architecture through the mid-1700s, including ancient Greece and Rome, the Gothic and Renaissance, Baroque and Rococo periods. Emphasis will be placed on chronological periods, the visual characteristics of each style including regional idiosyncrasies, and the terminology germane to a study of furniture and architecture.

Term:

Offered Both Fall and Spring

Type:

4.00

Description:

Studies a specific theme related to art, culture, history, literature and politics from the end of World War II to the present day.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **GER-301 German Civilization I**

Prerequisites:

GER 202 or instructor consent

Credits:

4.00

Description:

A survey of civilization in the German-speaking countries from the Reformation to German unification (1871). Major figures, movements, and periods. Art, literature, music, and philosophy in the context of political and economic developments. Normally offered alternate years.

Type:

- **GER-306 German Cinema**

Credits:

4.00

Description:

A survey of films produced in the German speaking countries from the 1920's to the present. Includes the Weimar republic, the Nazi period, postwar production from both East and West Germany, and new trends since reunification. Film esthetics and socio-historical context. All films shown in German with English subtitles.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **GER-412 Contemporary Germany**

Credits:

4.00

Description:

A survey of German culture, politics, and society from the end of World War II to the present day. Discussion of such topics as the post-fascist mentality, economic efficiency, re-education, Americanization, division and it's legacy, high culture, entertainment for the masses, environmental movements, pacifism, and multiculturalism. Taught in English.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- GER-420 The Greens and Environmentalism

Credits:

4.00

Description:

The rise of the Green Party, from its grass-roots beginnings to participation in the federal government. Background on the development of green consciousness in Germany and Europe since the early 20th century. Present governmental policies and programs (e.g. alternative energy sources, organic farming, recycling, dismantling of nuclear power).

Term:

Offered Spring Term

Type:

Humanities & History, Humanities Literature Requirement

- SPAN-301 Spanish Culture and Civilization

Prerequisites:

Spanish 202, 203 or 250. Spanish 290 or 300 are strongly recommended

Credits:

4.00

Description:

Examines the civilization and culture of Spain highlighting its historical development and cultural manifestations from pre-historic times to the nineteenth century. Students improve their four skills through activities that include discussions, oral presentations, and writing assignments based on reading and films.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, BA FOREIGN, Diverse P

• **SPAN-302 Indigenous and Colonial Latin America**

Prerequisites:

Spanish 202, 203 or 250 or Instructor's consent. Span 290 or 300 strongly recommended.

Credits:

4.00

Description:

Introduces students to the complexity Latin America by examining its roots in pre-Columbian America and the impact of Spanish exploration and colonization. Places emphasis on cultural, economic, historical, philosophical, political and religious patterns that define the region. Includes class discussions, oral presentations, and writing assignments based on reading and audio-visual material.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, BA FOREIGN, Diverse P

• **SPAN-408 Latin American Cinema**

Prerequisites:

Take ENG-102 or ENG-103 or Instructor's consent. Span 302 is strongly recommended for Spanish and Latin American & Caribbean Studies majors and minors.

Credits:

4.00

Description:

Begins with the Cuban revolution as a point of departure and examines films from Argentina, Chile, Colombia, Mexico, and other Latin American countries. Students explore the relationship between film & society and consider how knowledge of a culture and its history is influenced and shaped by what is seen on the screen. Films in Spanish with English subtitles.

Visual & Performing Arts Theory and History: 1 course, 3-4 credits

Choose one course from those listed below:

- ADI-234 Introduction to Interior Design Theory & Criticism

Prerequisites:

Taken concurrently with ADI S201

Credits:

3.00

Description:

This course introduces students to the important individuals, ideas and issues that have shaped the direction of contemporary interior design practice in the twentieth century, building upon the historical foundation established by the Ideas of Western Art and History of Furniture and Architecture classes. Intermixing lectures and readings with visits to important local buildings, it discusses the influences of culture, technology, fashion and media upon the work and thinking of the first generation of modern designers, as well as emerging social, moral and environmental imperatives that will form the basis of future practice; cultural identity, interdisciplinary collaboration, sustainability and universal design.

Term:

Offered Fall Term

Type:

Vis. & Perform Thry & Hst

- **ARH-101 Art History I**

Credits:

4.00

Description:

Surveys the art of Western civilization from prehistoric caves to medieval cathedrals. Considers works from the Ancient Near East, Ancient Egypt, Ancient Greece and Rome, the Byzantine Era, the Romanesque Period, and the Gothic Period in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **ARH-102 Art History II**

Credits:

4.00

Description:

Surveys the art of Europe and America from the Renaissance to the present. Considers work of painting, sculpture, and architecture from periods such as the Renaissance, the Baroque, the Rococo, Neoclassicism, Romanticism, Impressionism, Abstract Impressionism, and Post-Modernism in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **ARH-309 Art of the 19th Century**

Credits:

4.00

Description:

Examines Neoclassicism, Romanticism, Realism and Impression in the European painting. Considers works by artists such as David, Ingres, Friedrich, Constable, Delacroix, Goya, Courbet, Millet, Daumier, Manet, Monet, Renoir, Degas, and Cassatt within their historical contexts.

Term:

Occasional

Type:

BFA Humanities Requirement, Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **ARH-312 Art of the Northern Renaissance**

Credits:

4.00

Description:

Examines painting, sculpture, and architecture of the 14th, 15th and 16th centuries in Northern Europe, within their historical context. Topics include the rise of oil painting, the development of woodcut and engraving, the effect of the Reformation on art. Artists include van Eyck, Bosch, Durer, Holbein and Brueghel.

Term:

Occasional

Type:

BFA Humanities Requirement, Humanities Literature Requirement, Vis. & Perform Thry & Hst

• **CJN-292 Film History: From Silent Cinema to the Modern Era**

Credits:

4.00

Description:

An introductory film studies course that covers the history of the film medium from its birth until the 1970s. It provides an introduction to major film theory concepts, such as genre and/or auteur studies, as well as key films and stars in movie history.

Term:

Alternates Fall & Spring

Type:

Vis. & Perform Thry & Hst

• **MUH-211 Music of the United States**

Credits:

4.00

Description:

Surveys American music from Colonial times to the present; various attempts to create an indigenous musical style; vernacular and art music genres including folk, concert, and religious music, jazz and musical theatre; includes music of Billings, Amy Beach, Ives, Copland, Bernstein, and Libby Larsen. Normally offered yearly.

Term:

Alternates Fall & Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst

• **THETR-260 Broadway Musicals**

Credits:

4.00

Description:

This course is a survey of American musical theatre from its roots in the mid-19th century to the present. It provides the analytical tools and historical insight to more fully appreciate Broadway's greatest musicals and musical theatre artists. Students will explore the ways in which American forms of popular entertainment helped to shape Broadway musicals from their infancy through their adulthood. The course also explores the ways in which musicals provided opportunities for African-Americans, women, immigrants, and the GLBT community.

Quantitative Reasoning: 1 course, 4 credits

Choose one course from those listed below:

Biology:

- BIO-273 Biostatistics

Prerequisites:

BIO 111/L111

Credits:

4.00

Description:

Introduction to the statistical methods used to evaluate biological problems. Sampling, probability, confidence intervals, hypothesis tests, experimental design, analysis of variance, regression, and correlation are some of the topics offered. Software for data handling, graphics, and analysis will be used.

Term:

Offered Fall Term

Type:

Quantitative Reasoning

Communication:

- **CJN-210 Communication Research Statistics**

Credits:

4.00

Description:

The course develops an understanding of how statistics are used in the presentation of information and arguments in Communication and Journalism. Emphasizing a conceptual approach to learning statistics, the course focuses on data collection and summarization, correlation, regression, sampling, estimation, and tests of significance. Students perform basic statistical calculations using SPSS software.

Term:

Offered Both Fall and Spring

Type:

Computer Science:

Choose any [Computer Science course](#)

Economics:

- **EC-431 History of Economic Thought**

Prerequisites:

EC-101 and EC-102

Credits:

4.00

Description:

Presents the leading contemporary schools of economic thought as the outcome of theoretical and philosophical controversies that began with the ancient Greeks and that continue today. The course covers the major contributors to economic thought, including Aristotle, Aquinas, the mercantilists, and the contributors to the 18th-century enlightenment, notably Adam Smith and David Hume. Going forward, it considers Marx, the neoclassical school of Jevons, Menger and Walras and the Keynesian school, along with some of the more modern schools such as behaviorism, institutionalism and cognitive economics. The contributions of the economists and philosophers studied in the course are considered in context of the times in which they wrote and lived. Students will acquire a grasp of the principal tenets of contemporary economic theory as well as an understanding of the historical origins of the disputes that still divide economists on major theoretical and philosophical issues.

Type:

BSJ SOCIAL SCIENCE

- **EC-460 Game Theory**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

This course introduces students to the foundations of game theory using applications from economics and everyday decision-making. The course examines the common strategic elements of interactions between consumers and producers, governments and citizens, politicians and their constituencies, countries and their trading partners, and various other participants in social relationships. The course provides a theoretical framework for modeling strategic interaction, beginning with the development of the concept of a Nash equilibrium, reputation, signaling, collective-action problems, and voting procedures and strategies. Normally offered every other year.

Type:

Quantitative Reasoning

Government:

- **GVT-201 Statistics for Political Science**

Prerequisites:

Sophomore Standing GVT 110 and 120 and Math 128 or higher.

Credits:

4.00

Description:

This course is an introduction to statistics and empirical research methods generally used in political science. The course will emphasize the use of statistics and its value in substantive political science research. Statistics is a tool for drawing conclusions and making inferences from observable evidence. As well, the specification of conditions under which evidence is observed affects the conclusions and arguments that political scientists draw about how social and political processes work. The purpose of this course is to equip students with tools to interpret and conduct original data analysis, critique and make an argument based on data, and provide a view into the process of political science research and how political scientists use statistical methods and research design to answer substantive questions about politics. Since most applied data analysis utilizes data management software, students will learn how to use SPSS as a tool for conducting data analysis. Prerequisites: Sophomore Standing, GVT 110 and 120 and Math 130 or instructor's consent. 1 term - 4 credits.

Type:

Quantitative Reasoning

Philosophy:

- **PHIL-212 Formal Logic**

Credits:

4.00

Description:

An introduction to formal (or semi-formal) study of the basic types of deductive arguments (propositional and syllogistic logic). 1 term - 4 credits. Normally offered every year.

Term:

Occasional

Type:

Quantitative Reasoning

Psychology:

- **PSYCH-215 Behavioral Statistics**

Prerequisites:

PSYCH 114; Restricted to majors only unless with permission of instructor.

Credits:

4.00

Description:

Introduces the use of statistics as tools for description and decision-making, including hypothesis testing. Prepares students for the analysis, interpretation, and evaluation of psychological research. Required for psychology majors; should be taken before the junior year. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Quantitative Reasoning

Sociology:

- **SOC-212 Statistics for Sociology**

Prerequisites:

SOC-113 OR SOC-116 and MATH-128 or higher

Credits:

4.00

Description:

In this course, students will be introduced to descriptive and basic inferential statistical techniques. The course will provide information on the following topics: Description - measures of central tendency (mean, median, mode) and measures of dispersion (range, standard deviation); logic of statistical inference, including normal curve and sampling distribution; hypothesis testing with one sample and two samples; measures of association between two variables (bivariate analysis), including chi-square, regression, and correlation; and introduction to multivariate regression. Students will utilize SPSS (Statistical Package for the Social Sciences) software to input and analyze data. The goals of the course are for students to appreciate the need for statistical methods in the broad field of sociology and to gain basic statistical literacy.

Term:

Offered Both Fall and Spring

Type:

Quantitative Reasoning

Statistics:

- **STATS-240 Introduction to Statistics**

Prerequisites:

Math 128 or higher. REMINDER: STATS 240 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

Credits:

4.00

Description:

Topics include: data presentation, measures of central locations and dispersion, probability and probability distributions, estimation, hypothesis testing, simple and multiple regression models. The use of Excel and SPSS will be emphasized throughout the course. 1 term - 4 credits (4 hours per week). Normally offered each semester. STATS 240 satisfies the same requirements as STATS 250

Type:

Quantitative Reasoning

• STATS-250 Applied Statistics

Prerequisites:

MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

Credits:

4.00

Description:

Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

Type:

Seminar for Freshmen: 1 course, 4 credits

Students with 15+ transfer credits of college or university work are exempt. Choose one Seminar for Freshmen course from those listed below:

- **SF-101 Fixing the World- Energy and Water: The Science of Solutions**

Credits:

4.00

Description:

Two of the most daunting challenges the world faces (or will face) is how to provide for both its growing energy needs and potable drinking water. Regular news events include climate change, droughts, flooding, and petroleum struggles. Human nature often requires a severe crisis before it responds. This course will investigate the historical science driving the use of energy since the Industrial Revolution to convert energy resources into work, including the steam engine, the electric motor, and the internal combustion engine. It will also consider alternative energy options to fossil fuels, such as solar, wind, geothermal, and ocean power. Along the way we will consider the evidence for Global Warming and Climate Change. We will look into human nature, simple life styles, conspiracy theories, and the influence of those in power to shape human opinion. We will also consider how our water supply is provided and where it goes after being used. What options do developing countries or drought racked areas have to remedy their water needs? Although the course pursues a scientific understanding of these issues, the mathematics used will be gentle, and a larger emphasis will be placed on the intuitive appreciation of these concerns.

- **SF-132 The Beatles: Here, There & Everywhere**

Credits:

4.00

Description:

This seminar will investigate the impact and legacy of the Beatles. The Fab Four deserve our scholarly attention as musical innovators and as cultural avatars of the 1960s, an era that still exerts influence today. We will examine the many ways in which the Beatles rocked the establishment and became defining figures in post-war youth culture. We will also discuss other media (the visual arts, film, fashion, style) and fields of study (mass media, marketing, recording technology, copyright law, English history) using the Beatles as our guides.

- **SF-151 Getting Over It: Dealing With the Aftermath of Group Conflict/Mass Atrocity**

Credits:

4.00

Description:

Once violent conflict between two groups has ended, what is the best way to transition back to normality coming to terms with the past or simply moving on? To answer these questions we will examine the debates surrounding war crime tribunals, truth commissions, lustration policies, and reparations in the second half of the 20th century. Case studies will include post-apartheid South Africa, post-WWII Germany, and the Israeli/Palestinian conflict. We will discuss the philosophical problems raised by each of these instruments, as well as on the political, legal, and practical difficulties their implementation present. Cultural Diversity B

Type:

- **SF-156 The Mask Behind the Face: Personas, Personalities, and Perception. Acting in /Out Life**

Credits:

4.00

Description:

The theatre has always been a metaphor for life. In modern times life has become theatre. This seminar will confront the idea of real life and the eroding boundary between performers and audience. Students will study the roots of the contemporary obsession with stars and stardom, a mania that began in the 18th century and flourished in the 19th century. We will look at performance studies, performers memoirs, plays, and films that dramatize this dilemma.

- **SF-173 Crime in American Society**

Credits:

4.00

Description:

Popular beliefs about crime are often inspired by the media and by specific criminological theories. These theories about and media images of crime will be examined in detail, including the hits and misses.

- **SF-174 Tragedy and Literature**

Credits:

4.00

Description:

This course will focus on classic works of ancient and modern literature that examine the human condition from a tragic perspective. We will concentrate on close readings from the following texts: Homer's Iliad, Sophocles' Antigone, The Bhagavad-Gita, Shakespeare's Othello, Chekhov's short stories, and Joyce's Dubliners.

- **SF-178 Sacred Hoops & Sneaker Pimps: Understanding the American Hoop Dream**

Credits:

4.00

Description:

This course is about the basketball hoop dream played out at the high school and college levels. We will study a wide variety of materials - novels, films, websites, reference works - to understand both the construction, and destruction, of the hoop dream in such diverse places as New York City, Seattle, rural Indiana, suburban Georgia, and the Wind River Reservation in Wyoming. Issues of race and culture will serve as guiding themes as we develop critical theory explaining why the hoop dream has persisted, and adapted, over time, to fit the needs of its believers and supporters.

Type:

Cultural Diversity Opt A

- **SF-182 Heroes, Antiheroes and Outsiders: Reading the Graphic Novel**

Credits:

4.00

Description:

How is it that comics", a genre often viewed as entertainment for children and adolescents, has become one of the most exciting forms of narrative and visual art? To answer this question, this seminar will examine a range of graphic novels, from those that celebrate their origins in superhero comics, such as Alan Moore's Watchmen, to those that treat subjects not usually considered proper to the comics genre, such as Art Spiegelman's Maus, about the Holocaust, and Alison Bechdel's Fun Home, about the complexities of sexual identity. As we read these works, we will look at how the combination of words and still images makes the graphic novel a unique storytelling form, as well as how artists and writers push the envelope to create new styles and challenge our expectations. In addition to class discussions and writing assignments, we will take a field trip to the Museum of Fine Arts and create a collaborative group graphic novel step-by-step over the course of the semester (all abilities welcome).

- **SF-183 Politics, Power and the Media**

Credits:

4.00

Description:

Is there a relationship between accumulated political power and mass media representations? Is news content impacted by existing political power relations? It is the object of this course to critically analyze the role of the mass media within the framework of existing political power relations in the United States. In particular, the course will focus on the role the mass media plays in promoting and reinforcing dominant political practices and ideologies. The course will begin by exploring various theories of the press, notably its function in a democratic society, as well as the concepts of power and propaganda. We will continue with a series of case studies, complemented by secondary sources that highlight how media representations affect the contemporary distribution of political power in the US. Topics of discussion will include the current US war on terrorism, the ongoing health care debate, the public disavowal of big government", and the concept of a liberal media.

- **SF-189 American Gothic: Edgar Allan Poe, Flannery O'Connor and Annie Proulx**

Credits:

4.00

Description:

This literature seminar will study and compare the short stories of Edgar Allan Poe, Flannery O'Connor, and Annie Proulx. Beginning with Poe as the father of the short story genre in America and exploring his critical theory of the grotesque and arabesque", the class will examine the emergence of the gothic literary idiom as a classic American genre. Critical essays on the gothic aesthetic will be analyzed and film adaptations and documentaries will be viewed.

- **SF-191 Film Adaptation Film Adaptation**

Credits:

4.00

Description:

Why did they change the ending of the book? The novel is so much better! We will explore the concept and industry of film adaptation. Students will read novels and watch respective film adaptations to explore how the written word is adapted to the screen; both fiction and non-fiction works will be considered. Also, field trips to past film locations in Boston will be taken to explore why specific settings were chosen for respective situations. Additionally, students will create their own written adaptations of source materials, putting into practice the concepts studied in class.

- **SF-197 Sustainability, Energy, and Technology At Suffolk University**

Credits:

4.00

Description:

In this project and team-based course, students study a sustainability problem at Suffolk University and spend the semester developing proposals to address the problem. At the end of the course students will present their proposals to Suffolk University's sustainability committee, and will exhibit their websites and visual aids in the Donahue lobby to educate the Suffolk community about sustainability. If their proposals are well-researched and well-communicated, students can see their ideas actualized while they are still undergraduates.

- **SF-198 Music and the Brain**

Credits:

4.00

Description:

What accounts for the power of music to move us so profoundly? This course explores how our brains and music evolved together: What music can teach us about the brain, what the brain can teach us about music, and what both can teach us about ourselves.

- **SF-1127 The Vietnam and Iraq Wars: Polarized Perspectives**

Credits:

4.00

Description:

This class will examine some of the many controversies surrounding the Vietnam and Iraq Wars, two conflicts that have been profoundly polarizing for the American people. There are widely divergent perspectives regarding the fundamental questions surrounding each war. Were the reasons for American involvement just? To what extent were the methods used by the United States military during each war just? To what extent did the media play an appropriate role before, during, and after each war? Did opposition to these wars serve primarily to benefit the enemies of the United States or did it constitute a form of patriotism and love of country? This interdisciplinary course will address these and other complex questions by examining the histories, literature, and films (both documentaries and dramatic) that have been produced in response to these wars.

- **SF-1128 Sustainable Media**

Credits:

4.00

Description:

Contrary to a popular perception that information, communication and entertainment technologies are clean, ecologically benign and paperless, the reality of an increasingly digital life is that our fascination with the next best thing in mobile phones, video game consoles, personal computers, digital cameras, tablets, etc., has devastating impacts on our environment. These media devices are manufactured using toxic ingredients in poisonous working condition, require an abundance of energy to operate, and create hazardous waste when disposed. Media technology companies and the advertising industry that markets their wares have successfully persuaded consumers to accept rapid obsolescence and to highly anticipate the latest upgrade. But some consumers, electronics manufacturers, policy makers, and environmental groups are working to change the culture of consumption in favor of sustainable media practices that lessen the environmental footprint of the digital devices we use everyday. The purpose of this course is to understand the problem of unsustainable media, and the possible solutions for a sustainable media system.

- **SF-1129 Beacon Hill: Fact, Fiction, and Fantasy**

Credits:

4.00

Description:

The course will explore the physical geography, history, and image in literature, film, and pop culture of Suffolk University's Beacon Hill neighborhood. The purpose and objective of the course is to provide students with a deep knowledge, understanding, and appreciation of Beacon Hill through examination of written and visual sources, and feet-on and eyes-on experience of the public parts of the Hill.

Type:

Local Engagement Experience

- **SF-1141 Classical Civilizations: Pathways to Wisdom**

Credits:

4.00

Description:

How is it that the knowledge, intelligence, wisdom and values of the Greeks and Romans still educate and edify the world by providing venues towards leading fulfilling and dignified lives? The guiding principles of their respective civilizations rested upon eight pillars: - Humanism: It was recognized that humans have the potential to master their world and live life to the fullest. -The Pursuit of Excellence: To imagine the highest good and strive to attain it. - Self Knowledge: It is imperative to know oneself before seeking to know the world. - Rationalism: Always question, reason and discern truth from falsehood and never consider any matter superficially. - Restless Curiosity: Often the resolution of one issue leads to the revelations

of others mysteries and pursuits which compels further investigation. The wise individual makes this a lifelong endeavor. -Love of Freedom: As long as one brings no harm to others, one must be free to live and discover as much as possible. - Individualism: All are unique and, therefore, must recognize individual strengths and identity. -The Practice of Moderation: The prudence of avoiding extremes in personal and social conduct. In this course, students will read two (brief) texts on the Greek and Roman contributions to the world and then will proceed with specific readings which illuminate the eight principles above for achieving the good life.

- **SF-1143 In the First-Person: Storytelling in the 21st Century**

Credits:

4.00

Description:

This section of the Seminar for Freshmen will consider the forms, venues, and impacts of narrative nonfiction in contemporary culture. From the exploding popularity of personal essays in the digital age to the living, evolving essays we create on social media, we are constantly narrating and archiving our lives, shaping their content for specific audiences. In doing so, we shape what our experiences mean and represent. In order to analyze the power of narrative nonfiction, we will look at a variety of multimodal texts: essays, podcasts, Instagram and Twitter feeds, stand-up comedy, and storytelling slams, as well historical texts such as the essays of Michel de Montaigne and historical artifacts at the National Archives in Boston. We will also write our own narrative nonfiction, and adapt our first-person stories for listening and viewing audiences, such as the MassMouth story slam and podcasts like This American Life. Additionally, we will practice narrative nonfiction for professional audiences, using storytelling as a way to showcase personal strengths to employers, internship coordinators, and the like.

- **SF-1144 Native Americans: Walking in Two Worlds?**

Credits:

4.00

Description:

Native Americans are often described as walking in two worlds, as they attempt to navigate the process of maintaining their tribal identity and heritage while living in mainstream America. In recent years there has been a shift towards tradition and heritage, and a rejection of Western values and norms in both the US and Canada. In this course we will look at how Native people live in the US and Canada today, and examine the extent to which they are either trying to walk in two worlds or perhaps rejecting the two worlds model. To help us answer this question, we will read about reservation life, the Idle No More Movement, Indigenous History, and current events. We will also watch videos and explore indigenous culture.

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

Type:

Diverse Perspectives

- **SF-1146 Fido the Friendly Wolf: A Natural History of Dogs**

Credits:

4.00

Description:

This course explores the evolution of dogs from wolves and the ways in which dogs have adapted to their niche in human society. The ecology, behavior, genetics, and adaptations of dogs will be explored in relation to both their wolf ancestry and artificial selection by humans. The course includes 2 mandatory field trips to a wolf sanctuary and an animal shelter.

- **SF-1147 Global (In) Security: From ISIS to Ebola**

Credits:

4.00

Description:

This course reviews the principal features of global and national security as it is currently practiced by tracing the evolution of theories, policies and circumstances whereby current international security is developed. Students will evaluate the nature and origins of war, arms proliferation, military instability, terrorism, genocide, health threats and natural resources depletion.

- **SF-1148 Brave New Worlds**

Credits:

4.00

Description:

Explores themes of adventure, self-discovery, exile, and culture shock in classic and contemporary travel writing (including fiction, poetry, and non-fiction) as well as film. Students will experiment with creative writing of their own, develop theories of cosmopolitan world citizenship, travel through the city of Boston on field trips, and team up to learn about different countries in Suffolk's global network of study abroad programs.

• SF-1150 Religion in Contemporary Society

Credits:

4.00

Description:

This course is design to provide students with an overview of the social settings and cultural meanings of religion in the contemporary world. Topics that will be covered in reading and discussions include the rise of religious fundamentalism, religion and violence, women's and men's religious experiences, new religions, and portrayals of religion in popular films. In addition to the readings, students will observe and experience religious expressions and activities through fieldwork assignments. The emphasis on films and fieldwork reflects my belief that religion is made up of lived experiences of actual individuals and communities. In order to understand religion in contemporary society we will make every effort to see (in person or in film) a wide range of religious activities. The films we will see include some of the following: Leap of Faith, Devil's Playground, Kadosh, Women of Hizballah, Singing Stream, A Still Small Voice.

• SF-1151 Reproduction and Society

Credits:

4.00

Description:

This course explores relationships between reproductive health and rights both nationally and internationally. Many of our topics fit into two broad areas: conflicts over the control of childbearing (sterilization abuse, birth control, and abortion) and conflicts over who deserves to be a mother, especially when the mothers in question face social stigma and lack political power. Other topics include safe birth and maternal mortality, breastfeeding, infertility and reproductive technology. We also examine the politics of women's sexual and reproductive autonomy, including the policies that shape women's choices to prevent, achieve, abort, or carry to term a pregnancy. Throughout, we are guided by the following questions: Why is reproduction an important site through which to understand society? How do statuses such as race, class, gender, sexuality and ability

influence people's reproductive possibilities? What is the role of the state in shaping these experiences? How have communities supported or resisted efforts at reproductive control? Why is reproductive justice central to these answers?

- **SF-1153 Law, Disease, and Public Health**

Credits:

4.00

Description:

This course is about public health law, which is the study of the legal powers and duties of the various systems of government in the United States (federal, state, and local) in collaboration with their partners (e.g., health care, business, the community, the media, and academe), to ensure the conditions for people to be healthy (to identify, prevent, and ameliorate risks to health in the population), and of the limitations on the power of these systems of government to constrain for the common good the autonomy, privacy, liberty, proprietary, and other legally protected interests of individuals. The prime objective of public health law is to pursue the highest possible level of physical and mental health in the population, consistent with the values of social justice. The course will focus especially on public health law in the area of epidemic disease. Case studies will be made of the Great Influenza of 1918 and the origins and spread of the Ebola virus, culminating in an examination of outbreaks of Ebola in the United States.

- **SF-1154 Introduction to Visual Studies**

Credits:

4.00

Description:

This seminar provides an introduction to Visual Studies, a relatively new interdisciplinary field that examines how images communicate and the roles that they play in society. Students will apply the concepts and techniques of Visual Studies to analyze sites and signs around Boston, such as advertisements, street signs, fashions, newspaper photographs, buildings, and public spaces. Class projects will increase students' awareness of their visual environment and their ability to critically analyze the visual rhetoric that surrounds us and is often used to manipulate us.

Type:

Local Engagement Experience

Students in the CAS Honors Program should choose one Seminar for Freshmen course from those listed below:

- **SF-H116 Enlightened Insanity**

Prerequisites:

CAS Honors students only.

Credits:

4.00

Description:

Rain or shine, the great 18th century Enlightenment philosophers would meet at the famous cafes of Paris to discuss their ideas, and to observe and criticize society. From these informal debates emerged ideas that are at the core of our modern understanding of the nature of society, marginality, human nature, civil rights, the essence of creativity and genius. Come join us in the quest to understand, define, observe, and analyze the key ideas and concepts of these great thinkers, such as Rousseau, Diderot, and Voltaire, still so relevant in our time. We will read key works of these creative thinkers and philosophers. We will enrich our experience and understanding through the use of film, theatre performances, museum visits, as well as the occasional cafe debate.

Type:

Expanded Classroom Requirement, Honors

• SF-H126 The Boston Theatre Scene: The Inside Experience

Credits:

4.00

Description:

Using the current Boston theatre season as its syllabus, this writing- and analysis-intensive course will explore several plays in production at some of Boston's many professional theatres. We will study the script of four to five plays before attending performances of those works. Students will gain insights on the world of theatre through backstage tours and conversations with theatre professionals such as producers, directors, actors, designers, playwrights, and critics. Students must be available for evening (usually Wednesday) performances. A fee for student-rate tickets will be assessed.

Type:

Honors

• SF-H1134 The Meaning of Life

Prerequisites:

CAS honors students only.

Credits:

4.00

Description:

What do we live for? Which beliefs, values, and experiences sustain meaningful, fulfilling existence? Are we authors of our destinies or powerless pawns in an unfathomable cosmic game? Does death render all our efforts superfluous? This award-winning course offers a cross-cultural, interdisciplinary exploration of these questions through philosophical and religious texts, art, fiction, autobiography, and psychological studies. The course opens with the Old Testament's book of Ecclesiastes, followed by three units: 1) A Life Worth Living: Humanity's Ideals focuses on the ancient and modern visions of human flourishing; 2) Threats to Meaning: Humanity's Discontents, discusses the disillusionments leading to the loss of meaning; and 3) Recovery of Meaning: Crises and Hopes, explores the post-crisis possibilities of self-discovery and growth. Please visit <http://meaningoflife.cherkasova.org/>

Type:

Honors

• SF-H1135 Women Warriors: Stories of Captivity, Conversion, and Confession

Credits:

4.00

Description:

Since the beginning of time, women have been doing battle to themselves, while men have gone to battle against others. Whether it is through converting to Christ, yielding to captors in order to survive, or carrying a baby, this course introduces students to the many ways in which, whatever battles they face, women are warriors; they survive. Utilizing an array of captivity, conversion, and confession narratives by women, and pairing them across the centuries, students will make connections and draw conclusions between early-and mid-19th-century-American and contemporary women. Students will connect, for example, the trials of the 17th-century Puritan captive, Mary Rowlandson, and contemporary hostage, Elizabeth Smart, to explore how women (no matter how different they seem) draw upon unique inner resources to survive.

Type:

Honors

• SF-H1152 The Idea of America: Past, Present, Future

Credits:

4.00

Description:

A systematic exploration of thinking of and about America, from the founding of the republic to American issues and traditions of thought that reflect upon the founding principles and the unfolding American experiment. The Declaration of Independence and the Constitution will be studied with an eye to their philosophical content and sources. The course will also examine works of philosophers and other thinkers who address conflicts over the meaning of founding principles in the course of the nation's history, from the struggle over slavery to America's contemporary role in the world. Because this course intends to apply theoretical understanding to real life, students will be expected to read contemporary journalism on a regular basis and assess the controversies of today in the light of the nation's philosophical and historical currents.

Type:

Honors

Major Requirements: credit varies

The specific requirements are determined by each Engineering program. These include basic Math and Science courses, as well as engineering topics.

Electives: credit varies

Minimum Total Credits Required for Degree Conferral: 126 credits

Note:

Core Requirements may also count toward major if taken at appropriate level.

Some degree programs exceed 126 credits.

2015-2016 Archived Catalog Information

Bachelor of Science in Engineering Degree

The BSE degree program requires the successful completion of the following courses:

Core Requirements: 13 courses, 49-51 credits

- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Literature](#)
- [Ethical & Philosophical Inquiry](#)
- [Social Science](#)
- [Humanities/History](#)
- [Visual & Performing Arts Theory & History](#)

First-Year Writing: 2 courses, 8 credits

- WRI-101 First Year Writing I

Credits:

4.00

Description:

Study and practice of the writing process and revision in terms of expository writing modes for an academic audience.

- **WRI-102 First Year Writing II**

Prerequisites:

WRI 101.

Credits:

4.00

Description:

Study and practice of argumentative and research writing through further work with writing process and revision and the critical reading of a variety of texts.

A student may be assigned to other writing courses or may be invited to take WRI-H103. Students required to complete ENG-099 may be allowed to waive WRI-101 with a grade of “B” or better and the approval of the English department. Students who are invited to complete WRI-H103 and earn a “B” or better satisfy the two Writing Requirements. Waiving a course does not earn credits.

- **WRI-H103 Advanced First Year Writing**

Prerequisites:

By Invitation Only.

Credits:

4.00

Description:

This course is by invitation only and reserved for incoming Suffolk students with high admission scores. Advanced study and practice of writing process, revision, and research, based on close readings of a variety of texts. Fall semester only.

Type:

Creativity & Innovation: 1 course, 3 credits

Choose one 100-level Creativity & Innovation course from those listed below:

- ADF-S171 CI: Integrated Studio 1

Credits:

3.00

Description:

This cross-disciplinary course will integrate the ideas and practices of two-dimensional design, color and drawing emphasis will be placed on understanding the creative process, exploring concepts and developing research skills. Students will undertake individual and collaborative projects in three spaces; the studio classroom, the digital world and the city at large.

Type:

Creativity and Innovation, Arts Admin Minor Elective

• ADF-S172 CI: Integrated Studio II

Prerequisites:

ADF S101

Credits:

3.00

Description:

This course builds on the Integrated Studio 1 experience: synthesizing fundamental visual ideas. IS 2 investigates the construction, documentation, and transformation of volumetric form, environmental space, and time. Projects will explore narrative strategies and the creation of immersive experiences. Students will develop critical and analytical skills while employing a range of traditional and digital media-including video/sound capture and editing-as they explore the creative boundaries of the classroom studio, the city of Boston, and virtual space.

Type:

Creativity and Innovation

• CI-101 Process and Epiphany

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Despite its mystical connotations, creative epiphany is the result of a long engagement with the creative process that results in a surprising and unpredictable understanding of a concept or the solution to a problem. In the way that the discoveries of science are guided by the scientific method, the path to creative innovation is through a directed creative process. All creative innovators follow such a directed creative process, whether they are industrial designers or fine artists, performers or inventors, architects or entrepreneurs. This course explores both historical examples of individuals whose creative innovation changed the world, as well as hands-on collaborative, practical problem solving employing the creative process.

Type:

Creativity and Innovation

• CI-102 The End of Global Poverty

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course is designed to demystify the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking. More than one-third of our global population lives in poverty, earning less than two dollars a day. Governments, businesses, social enterprises, and charitable organizations have tried to solve the global poverty issue with mixed results. What is the solution? Is entrepreneurship the solution, part of the solution, or has no impact whatsoever? In this course, you will gain an understanding of the power of entrepreneurship (in the context of creativity and innovation), the definition and depth of global poverty (in the context of constraints, such as human, financial and physical resources embedded in local, regional, national and global cultures), and successes and failures of past initiatives to reduce poverty. This is not a course about politics or business, but rather finding a solution to a problem that has eluded mankind since the beginning of time.

Type:

Creativity and Innovation

• CI-103 Making Inventions: Sticking Your Neck Out

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course examines cutting edge technologies, the science behind them, and their practical application and follow-up success or failure. It also provides the students a chance to consider the relevance of identified needed inventions from the 1950s, and whether those projections were correct. The history behind some remarkable inventions will be presented. Finally, working in small teams, students will brainstorm to identify something useful to invent and determine several approaches to implementing it.

Type:

Creativity and Innovation

• CI-106 Failing Successfully

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course is designed to demystify the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking. Did you know Netscape was the internet browser? What about MySpace, arguably the Facebook of the last decade? What led Apple from being innovative pioneers of the 70's to the verge of extinction in the 80's to the technological giant they are today? Technologies come and go, but what leads to organizations lasting more than 100 years such as IBM, General Electric, etc.? What role does failure play in successful innovation, decision-making, and business viability? In this course, you will learn about innovation that may have been successful and well-executed. You will also learn about innovation that was a viable business opportunity, but poorly executed: one phase of failure. In addition, you will learn about innovation that had no real market viability, but was launched anyway: another phase of failure. Can failure lead to success? If so, how?

Type:

Creativity and Innovation

- **CI-107 Going Up: Skyscraper Design in Emerging Economies**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The human population is expected to be between 8.5 and 9 billion persons by the mid-21st century. The majority of those individuals will be living in urban communities. With large populations, high real estate costs, and limited land areas, the only way to construct in urban environments is to go up! In this course, students will have an opportunity to look at traditional and novel skyscraper designs, to consider the cultural and economic significance of such structures, and to use their imagination to develop a conceptual design of a skyscraper.

Type:

Creativity and Innovation

- **CI-108 Designing the Next Best Thing**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Demystifies the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking

and risk taking.

Term:

Offered Both Fall and Spring

Type:

Creativity and Innovation

- **CI-109 Virtual Globe Trekking: an Alternate View of the World**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will examine creativity and innovation through the lens of place. Modern geography is an all-encompassing discipline that seeks to understand the earth and all of its human and natural complexities - not merely where objects are, but how they have changed and come to be. The world is filled with ideas and perspectives. By changing your location, new perspectives emerge. This course will focus on the creative process to understand that each person creates in their own way. The students will test many methods to draw forth creative thought and seek to identify their own best method for calling on their own inner genius. Often this will involve failure and mixed results, yet this is where the students will learn their strengths and weaknesses.

Type:

Creativity and Innovation

- **CI-110 The Entrepreneur's Cocktail**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

How do you and your story drive business? This course takes an innovative look at human creativity and entrepreneurship. As an entrepreneur needs perseverance and high motivation, we will explore the importance of values, risk taking, problem solving, and the discovery of the market opportunities. In order for you to be creative and essentially create successful ventures, you will discover the nuances between the three factors and explore them further through interactive discussion and debate as well as collaborative group work. You will be encouraged to think in non-conforming ways and apply new concepts and develop your own personal operating principles.

Type:

Creativity and Innovation

- **CI-111 The Future of Boston**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course introduces students to creative and innovative thinking based in the field of communication. Students will work in teams to wrestle with the challenges Boston will face in the future and propose feasible strategies to meet them.

Type:

Creativity and Innovation

- **CI-113 Revising Reality**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Reality and perception have been debated and discussed for millennia. Humans see and experience their world in different ways. How do humans determine what is true and good and what advancements are necessary? In this course, students will creatively explore these big questions and revisit knowledge using new and sometimes divergent perspectives. Students will participate in dirty and courageous learning by crafting products, creating visual projects, and coming into original thought via trial and error. Students will also develop their analytical and critical thinking skills, while learning to communicate effectively and honestly.

Type:

Creativity and Innovation

- **CI-117 Writing for Stage and Screen**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will engage students in the process of script writing. Working in groups of four or five they will craft adaptations of stories, create original scenes, or review sketches. By the end of the semester they will produce a complete script. Each alternating week, one group will serve as the executive committee that will approve the final draft of the script of the week. There will be exams based on the textual study of collaborative and adaptation techniques.

Type:

Creativity and Innovation

• CI-121 Catastrophe Management: From 9/11 to the Boston Marathon Bombings

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will introduce students to the exciting world of emergency management from the perspective of scientists who are often utilized as experts during both small scale adverse events and large scale catastrophes. Students will actively and creatively explore the psychological, economic, and medical dimensions of these events and participate in role play in the classroom and site visits. By the end of the course, students will have a keen appreciation of emergency planning and management on the local and national levels.

Type:

Creativity and Innovation

• CI-123 Comics & Co.

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Using visual narrative as the means of exploration, students will be led through a series of exercises that challenge their assumptions, broaden their perspectives, and excite their imagination. The relationship between critical, creative and inventive thinking will be the basis for individual and collaborative projects.

Type:

Creativity and Innovation

• CI-125 Boston's Creative History in Perspective

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Our collective social consciousness is formed by physical space; through a mixture of exploration, discovery, and making, students will delve into the city that surrounds them, developing a sense of ownership and engagement in Boston's public space. During the course of the semester, students will uncover the ways that art and architecture have shaped the souls of cities around the world, using Boston as a template. In a series of local field trips, students will explore Boston through its art and architecture, focusing not only what is, but on what might have been -- designs that were ultimately unrealized. Through interview and visits with local artists and designers, students will also learn about the process of shaping public space, uncovering the myriad of ways that design decisions are political in nature. As a capstone to the course, students will create their own city plan -- identifying and researching a chosen social or physical challenge the city faces, then developing a proposal that would address their chosen issue. These design proposals will then be enacted using augmented reality. Like a layer of invisible ink, these projects will form a phantom city over the physical realities that surround us, displaying the dramatic potential of the imagination.

Type:

Creativity and Innovation

• CI-127 Visual Perspectives: Coastline, Symmetries and Illusions

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

How do you measure the length of a coastline? How much symmetry is possible? What is an impossible object? How did the Mayans measure proportions? In this course, students will delve into these and other questions with a visual theme. While some will be clear-cut, others will be open-ended and require some choices, estimates or assumptions to be made. Throughout, the emphasis will be on creative problem solving.

Type:

Creativity and Innovation

- **CI-129 Elements of Attraction- Supply and Demand**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The intent of this course is for students to examine and effectively express in writing their ideas on creativity and to inspire undergraduate students to exceed their current levels of learning. Students will learn to meaningfully integrate course content into long term-retained useful skills through applied creative collaborations. This course is based on the idea that exposure and insight development will enable students to better visualize themselves in their desired fields and make informed choices within the variety of options available to them. The focus of the course will help students to assess their personal interests and strengths as they plan for their own educational and professional futures.

Type:

Creativity and Innovation

- **CI-131 Off to the Future: Leadership Through Compromise**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Some past political issues were resolved with great success (the Compromise of 1820), and some resulted in great failures (the US Civil War). In this course, students will study noteworthy political dilemmas of the past, identify the major problem solvers and examine the art of compromise. These investigations will provide guidance and inspiration for students to develop innovative and creative solutions to present day political problems such as climate change, immigration, Social Security, income distribution, higher education affordability, and homelessness. Students will work in teams and propose creative and innovative solutions that will convince the affected interest groups favorably, represented by teams of other students in the class, and result in compromises solving tomorrow's problems today.

Type:

Creativity and Innovation

• CI-133 Franklin and the American Experiment

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

What made Benjamin Franklin such a creative force in American history? We will explore the many facets of Franklin's life (printer, writer, scientist, statesman) and learn about Benjamin Franklin's political and diplomatic ventures, and will recreate some of his scientific experiments.

Type:

Creativity and Innovation

• CI-135 The Design of Everything

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will explore a selection of the genius personalities and their creative work in 5 distinct areas of human creative endeavor; art, science, nature, technology and the built environment. The course explores the underlying similarities in the process of their discovery, invention and creativity across the disciplines. Studying such names as Newton, Warhol, Hawking, Jobs, Gaudi and Banksy, students will uncover the process of design through research, analysis, synthesis, iteration and error. In class group projects will allow a hands-on opportunity to create.

Type:

Creativity and Innovation

- **CI-137 Re-write for Rights: Drafting a New US Constitution**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The American Constitution is an important document, framing the basis for our lives and the lives of our neighbors. Yet it is also a very old document, which may be seen as lacking when it is compared to newer constitutions from around the world, even places that we may regard as undeveloped. In this class we will study many constitutions and also talk to many people to craft a new constitution that reflects contemporary American society and its values.

Type:

Creativity and Innovation

- **CI-139 Creating, Promoting, and Participating in the Literary Arts**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

With the launch of Boston's new Literary Cultural District, we have renewed cause to celebrate the history and industry of literature in our city. This course will immerse students in the world of literary culture and its many branches: writing, editing, reviewing, and publicity. Students will practice the art of creative writing, and learn how writers find publishing venues, how authors build platforms for their work, and how literature reaches the public through readings, social media, book trailers and other marketing campaigns, authors interviews, and reader reviews. Various industry professionals, authors, editors and publicists will speak to the class about the artistic and business opportunities, trends, and futures of literature and literary publishing. Students will apply their knowledge and interests to a variety of projects, including book reviews, author interviews, social media campaigns, literary events, and other collaborative projects. We will also work as a class to launch a new digital literary journal at Suffolk.

Type:

Creativity and Innovation

Note:

Students with 30+ transfer credits are exempt from this requirement.

Major Requirements: credit varies

The specific requirements are determined by each Engineering program. These include basic Math and Science courses, as well as engineering topics.

Bachelor of Science in Engineering Degree

The BSE degree program requires the successful completion of the following courses:

Core Requirements: 13 courses, 49-51 credits

- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Literature](#)
- [Ethical & Philosophical Inquiry](#)
- [Social Science](#)
- [Humanities/History](#)
- [Visual & Performing Arts Theory & History](#)

Social, Cultural, & Global Perspectives: 1 course, 3-4 credits

Choose one course from those listed below:

- **AS-100 Introduction to Asian Studies: Culture, People, Ideas**

Credits:

4.00

Description:

An interdisciplinary introduction to Asian Studies will touch upon the history, politics, economics, philosophy, geography, arts, and cultures of Asia. Sample topics include political economy, religious and cultural exchanges, international relations, Asian experience in America, and the role of Asia in the twenty-first century. Students will develop conceptual frameworks for exploring the subjects covered by the Asian Studies curriculum.

Term:

Offered Both Fall and Spring

Type:

Asian Studies,Cultural Diversity Opt B,Humanities & History,Humanities Literature Requirement,Divers

- **AS-500 Asian Studies Internship**

Credits:

4.00

Description:

Engages in an internship in a business or non-profit organization that deals with Asia or an Asian American community. Students may complete the internship either in Asia or in the U.S. Students will complete appropriate exercises and reports to document their learning.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement,Global Engagement Experience,Diverse Perspectives

- **BLE-325 Global Business Ethics**

Prerequisites:

BLE-215, PHIL-119, PHIL-120, PHIL-123 or PHIL-127

Credits:

3.00

Description:

Surveys business ethics as they transcend the diverse perspectives of global business. Explores current global ethics standards and values, ethical challenges, controversies, convergence and trends. Students explore famous global business cases through films, websites and independent research. Emphasizes identification and resolution of global business ethical issues within the context of ethical decision-making and sustainability. Analyzes corporate social responsibility ; hence, transforming global business ethics through business.

Type:

Diverse Perspectives

- **CI-204 Prague: Castles to Barbwire**

Prerequisites:

At least 24 credits earned.

Credits:

3.00

Description:

Prague offers students a more recent view into history and will serve as a backdrop to learning Design Thinking. The curriculum will use Czech and Central European cultural features as the inspiration for learning the creative process, skills that can be applied broadly and globally across disciplines. WWII and its fall to Communism left the Czech Republic undamaged. Artists played a vital part in the country's rise to a Republic during the Velvet Revolution. These dissidents, including writers, actors, artists and musicians were innovators who were the catalyst for change. One could say that creative minds changed this country. This course is designed to demystify the creative process by introducing the creative practice as a disciplined approach to problem solving and innovation requiring research. This one-month study abroad experience will offer a more worldly insight to the significance of developing skills where divergent thinking and risk taking are one of many key tools in learning to generate new ideas. Travel fee covers accommodations, transfers, some meals and cultural visits. Airfare and tuition not included.

Type:

Creativity and Innovation,Diverse Perspectives,Global Engagement Experience,Expanded Classroom Requi

- **CJN-216 Intercultural Communication**

Credits:

4.00

Description:

An examination of communication variations and cultural viewpoints and their impact on cross-cultural communication. A special emphasis is placed on rituals and message patterns in non-Western cultures.

Term:

Offered Both Fall and Spring

Type:

Cultural Diversity Opt B,Diverse Perspectives

- **CJN-219 Rhetoric of Protest and Reform**

Credits:

4.00

Description:

Examines the persuasive strategies of social reform movements with special emphasis on the civil rights', women's rights, and gay rights movements in the United States.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt A,Humanities & History,BSBA SOCIAL CHANGE,Diverse Perspectives

- **CJN-301 Documentary Film and the Image of Conflict in the Middle East**

Credits:

4.00

Description:

The course focus is on some of the divisions and conflicts within Israeli society. Students analyze and compare mainstream media discourse to alternative representations in documentary film. Analysis also covers media representation of the Israeli-Palestinian conflict.

Term:

Occasional

Type:

Cultural Diversity Opt B, Diverse Perspectives

- **CJN-385 Globalization of Media and Telecommunications**

Credits:

4.00

Description:

A critique of the circulation of media goods and ideologies from both a cultural and political/economic perspective. Topics include global Hollywood, the images of Muslim women in transnational media, the information society, and global social movements.

Term:

Offered Spring Term

Type:

Cultural Diversity Opt B, BSBA SOCIAL CHANGE, Diverse Perspectives

- **EDUC-315 Strategies for Emerging English Learners**

Credits:

4.00

Description:

This course examines the specific needs and challenges of the various language and cultural groups in schools. Topics include: theories of 1st and 2nd language acquisition, strategies for teaching academic content, modifying instruction in the mainstream classroom, creating classroom cultures that invite all students into learning, the role of advocacy and professional collaboration in ESL, and analysis of policies related to assessment and placement of English Language Learners.

Type:

Diverse Perspectives, Social Science

- **ENG-216 World Literature in English**

Prerequisites:

WRI-102 or WRI-103

Credits:

4.00

Description:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

Term:

Offered Both Fall and Spring

Type:

Cultural Diversity Opt B, Humanities Literature Requirement, Diverse Perspectives

- **FR-205 The Francophone World**

Prerequisites:

FR 202 or Instructor's consent

Credits:

4.00

Description:

Explores the francophone world through the study of short stories, print media, and film, by engaging with the rich textured and diverse francophone literary canon. Teaches advance notions of French grammar, write compositions, and the art of conversation related to cultural themes.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt B,BA FOREIGN,Diverse Perspectives

- **GVT-208 Politics / Religion**

Credits:

4.00

Description:

This course explores what major religions say about the status and responsibilities of the state and how, in turn, selective states have, in theory and practice, structured the place of religions in political life. Particular attention is given to issues of politics and religion in the United States. Cultural Diversity A

Type:

Cultural Diversity Opt A,Social Science,BSJ SOCIAL SCIENCE,Diverse Perspectives

- **GVT-359 Hockey, International Development & Politics**

Credits:

4.00

Description:

This class examines the way in which national identity, global and regional economics and international development intersect. It uses the professionalization of the sport of hockey and its subsequent spread around the globe as its case. It will look at the rise of the pro game, the way in

which it shapes national identity in the Canadian case, the way in which the pro business model has changed in response to broad socio-economic changes in North America and geo-political shifts around the globe, especially in Eastern Europe and the Former Soviet Union.

Type:

Social Science,Diverse Perspectives

• GVT-360 Elections and Voting

Credits:

4.00

Description:

How are elections administered in the United States? Do Americans have confidence in the electoral process? Should they? Why or why not? This course will examine elections in the United States in detail -- from how they are funded to how they are administered to how voters behave. Students will have a choice of either serving as poll workers during the November election or organizing and conducting research of potential voters. Students will gain hands-on experience in actual research design, election administration, and non-partisan get-out-the-vote activities. In addition, students will gain a deeper understanding of the relationship between attitudes, opinion, and voting behavior in American politics and institutions. ECR

Type:

Humanities & History,Social Science,BSJ SOCIAL SCIENCE,Diverse Perspectives

• GVT-391 Canada: Multicultural Politics

Prerequisites:

GVT 110/120 or Instructor's permission

Credits:

4.00

Description:

This course examines the Canadian model of incorporating diverse communities into its constitutional and political framework, including the founding British North American Act of 1867, the 1982 Constitution Act, and two later attempts at constitutional reform. Canada's role in balancing two official languages, English and French, is discussed, as is its recognition of a First Nations native-governed territory in the Arctic. This course introduces

to the Canadian polity and compares its parliamentary system with the U.S. separation of powers system. Prerequisites: GVT 110, GVT 120 or instructor's consent. Normally offered alternate years. Cultural Diversity B

Type:

Cultural Diversity Opt B, Social Science, BSJ SOCIAL SCIENCE, Diverse Perspectives

- **GVT-467 Comparative Social Movements**

Prerequisites:

Junior status

Credits:

4.00

Description:

This class examines the political ramifications of social movements primarily but not exclusively within the United States. It looks at ideology, beliefs and mechanisms of mobilization. Another important focus is an analysis of non-white social movements in this country and their impact on domestic politics. Among the movements to be examined are: the Pan-African movement 1919-1939 which will, to some extent, take us outside this country; the U.S. Civil Rights Movement 1955 to 1969 which covers the rise of the Black Power movement; and the U.S. Labor Movement 1900 to 1955 in terms of non-white influence on its programmatic goals. Normally offered alternate years. Cultural Diversity B

Type:

Cultural Diversity Opt B, Social Science, BSJ SOCIAL SCIENCE, BSBA SOCIAL CHANGE, Diverse Perspectives

- **HST-100 Introduction to Asian Studies: Culture, People, Ideas**

Credits:

4.00

Description:

An interdisciplinary introduction to Asian Studies will touch upon the history, politics, economics, philosophy, geography, arts, and cultures of Asia. Sample topics include political economy, religious and cultural exchanges, international relations, the Asian experience in America, and the role of Asia in the twenty-first century. Students will develop conceptual frameworks for exploring the subjects covered by the Asian Studies curriculum.

• HST-263 Comparative Race Relations

Credits:

4.00

Description:

Compares and analyzes the history of race and politics in South Africa and the United States from the 17th century to the present. Examines how race as a social and ideological construct influenced and informed political conflicts over land, labor, and social relations in the two countries including slavery, segregation, apartheid, and the struggle to create racial democracies.

Term:

Offered Fall Term

Type:

Cultural Diversity Opt B,Humanities & History,Humanities Literature Requirement,BSBA SOCIAL CHANGE,D

• HST-275 Women in 20TH-CENTURY Europe

Credits:

4.00

Description:

Examines the changing place of women in European society since 1900. Topics include: women's suffrage and the political advances of the 1920s and 1930s; the revolution in sexual mores,birth control, and the rise of companionate marriage; women and the consumer economy; the anti-woman policies of Fascist Italy and Germany under National Socialism; liberation of women and retrenchment in the Soviet Union; World War II; feminism, sexual liberation, and women's political engagement since the 1960s; and, throughout the twentieth century, women's continuing negotiation of work and family responsibilities.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, BSBA SOCIAL CHANGE, D

- **HST-371 U.S. Women's History Colonial to 1865**

Credits:

4.00

Description:

Traces the roles, images and experiences of women in America from colonial times to 1865. Topics include the family, work, religion, education, health care, motherhood, sexuality, social and political activism legal status, labor activism and popular culture. With attention to ethnicity, race, class, age, region of residence, disability and sexual orientation, the course focuses primarily on the everyday lives of ordinary women.

Term:

Offered Fall Term

Type:

Cultural Diversity Opt A, Humanities & History, Humanities Literature Requirement, Diverse Perspectives

- **P.AD-201 Social Change**

Credits:

3.00

Description:

This course will examine social change in the U.S. and abroad. The course will also examine the role of business, nonprofits, and the public sector in addressing social problems. Topics studied may include the Industrial Revolution, the civil rights movement, the women's movement, environmentalism, and the gay and lesbian movement.

Type:

- **P.AD-H201 Honors Social Change**

Credits:

3.00

Description:

This course will examine social change in the U.S. and abroad. The course will also examine the role of business, nonprofits, and the public sector in addressing social problems. Topics studied may include the Industrial Revolution, the civil rights movement, the women's movement, environmentalism, and the gay and lesbian movement.

Type:

Diverse Perspectives,BSBA SOCIAL CHANGE,Honors

- **PHIL-120 Ethics and Civic Life**

Credits:

4.00

Description:

In this class you will be introduced to the perspectives and methods of politics, philosophy, and economics and see how these three disciplines present distinct but interconnected dimensions of current social and political issues.

Type:

Diverse Perspectives

- **PHIL-229 Eco-Feminism**

Prerequisites:

PHIL 119, or PHIL 123, or PHIL 127

Credits:

4.00

Description:

Examines the political, social, and ecological problems facing us as a global community. Having its roots in feminist theory and deep-ecology, eco-feminism provides a critical framework for ecological responsibility and accountability. Writings from eco-feminist thinkers and environmental activists around the world will be used to highlight the philosophical and political conflicts and challenges, including globalization and loss of biodiversity, global warming, international human rights, the relationship of gender and nature, and modes of redress for eco-justice and sustainable development.

Type:

Diverse Perspectives

- **PHIL-261 Eastern Philosophy**

Credits:

4.00

Description:

The exposition and critical evaluation of Hinduism, Buddhism, Confucianism, Taoism, and Islam. Special attention is given to foundation principles as well as to the similarities and differences of each of these philosophies to basic ideas in Western philosophy. 1 term - 4 credits. Normally offered alternate years. C b

Term:

Occasional

Type:

Cultural Diversity Opt B,Cultural Diversity BFA,Humanities & History,Humanities Literature Requireme

- **PHIL-267 Chinese Philosophy**

Credits:

4.00

Description:

A survey of the main developments in Chinese Philosophy. The course begins with the early dynastic concept of humanism and then turns to Confucius and Mencius. Having developed the central Confucian doctrines, students next examine the Taoist response to Confucianism in the writings of Lao Tzu and Chuang Tzu. The course then considers Zen Buddhism, which is called Ch'an Buddhism in China, where it originated. In particular, students study the concept of sudden enlightenment before turning to the Neo-Confucian scholars.

Term:

Occasional

Type:

Cultural Diversity Opt B,Diverse Perspectives

- **PSYCH-243 Organizational Psychology**

Prerequisites:

Take PSYCH-114;

Credits:

4.00

Description:

Focuses on diversity concerns in various aspects of the psychology of the workforce. This includes job analysis, recruitment, selection, evaluation, training, retention, and termination. Employee morale, well-being, stress, and hardiness are considered.

Type:

Cultural Diversity Opt A,Social Science,Diverse Perspectives

- **RS-111 Introduction to World Religions: Western Traditions**

Credits:

4.00

Description:

This course will explore the comparative history and structure of Western religious traditions, broadly understood, and their impact on other world religions, while attempting to recognize the similarities and the differences among them. Traditions to be studied include Greek and Roman religion, the monotheistic faiths (Judaism, Christianity, and Islam, as well as Zoroastrianism, Sikhism and Bahaism). We will also explore the impact of the Western religions on indigenous traditions, such as African religion, Native American religion, and Pacific Island religion. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. 1 term - 4 credits. Normally offered every year.

Type:

Diverse Perspectives

- **RS-112 Introduction to World Religions: Eastern Traditions**

Credits:

4.00

Description:

This course will examine a variety of Eastern religions, including Hinduism, Buddhism, Jainism, Confucianism, Taoism, and Shintoism. Possible connections to be explored will be the impact of these traditions on others, such as Pacific Islands and African religion, as well as the growing place of Eastern religion in the West. This course will explore the history and structure of each tradition, while attempting to recognize the similarities and the differences among them. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. Normally offered every year. Cultural Diversity B

Type:

Cultural Diversity Opt B,Asian Studies,Diverse Perspectives

- **SIB-550 Global Travel Seminar**

Credits:

3.00

Description:

An in-depth analysis of timely special issues in international business. Specific topics are announced when the course is scheduled.

Type:

- **SF-190 Asia in America Fiction and Fact**

Credits:

4.00

Description:

With a focus on some selected ethnic groups from Asia, Asia in America studies the history and current status of Asian Americans in Boston and other parts of the country. We will examine the major reasons why these immigrants chose to leave their home country as well as their expectations and experiences here in America. We will also discuss the issues Asian immigrants have faced in this adopted home as well as the connections and conflicts among different ethnic groups or even within the same ethnic group due to political and socio-economic reasons. The course will include some level of community engagement, through Chinatown tour and service, which may enable us to have a direct contact with the Asian American population and reflect on what is being discussed in class. Through this course, we hope to gain a better understanding of the racial and cultural history of the country and arrive at a deep appreciation of the dynamics of cultural interactions in the twenty-first century. The course fulfills the SCGP requirement.

Type:

Cultural Diversity Opt A, Global Engagement Experience, Diverse Perspectives, Expanded Classroom Requir

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

Type:

Diverse Perspectives

- **SOC-227 Race in American Society**

Credits:

4.00

Description:

Despite the election of Barack Obama as President of the United States, race remains one of the most divisive forces in U.S. society. While many of us struggle against racism, racial classification continues to affect where we live, where we work, and how we see ourselves. Racial classification affects our access to health care and our encounters with police officers. Distorted images of racial groups fill television and movie screens. Appeals to racism and fear of foreigners are dominant themes in elections to state and national offices. This course examines the formation and re-formation of racial classifications: how particular groups become racially identified, how these classifications change over time, and how conflicts over race have shaped American society. The meanings of race, as seen from a variety of perspectives, will be a consistent theme throughout the course.

Term:

Occasional

Type:

Cultural Diversity Opt A,Diverse Perspectives,Cultural Diversity Opt B

- **SOC-228 Cultural, Global and Social Perspectives**

Credits:

4.00

Description:

Enables students to examine, as well as develop an awareness and appreciation of, diversity within today's society. Providing an overview of the major racial, ethnic, and cultural groups in the U.S., the focus is on the ways in which cultural awareness enhances professional helping relationships and improves the operation of human services systems.

Term:

Occasional

Type:

Cultural Diversity Opt A,Diverse Perspectives

- **SPAN-290 Advanced Composition & Conversation**

Prerequisites:

Prerequisite: Spanish 202, 203 or 250 or Instructor's consent

Credits:

4.00

Description:

Develops written and oral skills in various contexts and registers. Emphasis on strengthening written skills and learning to speak clearly and persuasively in Spanish. Short texts and audio-visual materials provide the basis for classroom activities which include regularly assigned essays, group discussions and debates.

Term:

Offered Fall Term

Type:

BA FOREIGN,Diverse Perspectives

- **SPAN-301 Spanish Culture and Civilization**

Prerequisites:

Spanish 202, 203 or 250. Spanish 290 or 300 are strongly recommended

Credits:

4.00

Description:

Examines the civilization and culture of Spain highlighting its historical development and cultural manifestations from pre-historic times to the nineteenth century. Students improve their four skills through activities that include discussions, oral presentations, and writing assignments based on reading and films.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, BA FOREIGN, Diverse P

- **SPAN-302 Indigenous and Colonial Latin America**

Prerequisites:

Spanish 202, 203 or 250 or Instructor's consent. Span 290 or 300 strongly recommended.

Credits:

4.00

Description:

Introduces students to the complexity Latin America by examining its roots in pre-Columbian America and the impact of Spanish exploration and colonization. Places emphasis on cultural, economic, historical, philosophical, political and religious patterns that define the region. Includes class discussions, oral presentations, and writing assignments based on reading and audio-visual material.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, BA FOREIGN, Diverse P

- **SPAN-315 Business Spanish**

Prerequisites:

SPAN 290 or SPAN 300 or Instructor's consent.

Credits:

4.00

Description:

Integrates language learning with culture via business context of the Hispanic world. Spanish for banking and finance, marketing and advertising, and international commerce are highlighted. Students increase their cross-cultural understanding and written and oral proficiency in business Spanish through a wide range of assignments.

Type:

Diverse Perspectives

• SPAN-390 Introduction to Latin American and Caribbean Literature

Prerequisites:

SPAN 300; SPAN 302 is strongly recommended

Credits:

4.00

Description:

Examines authors from Latin America and the Caribbean in their historical and cultural contexts. Reading and class discussions consider the relationship between the writer and society by covering such topics as colonialism, the oral tradition, modernism and the emergence of new narratives in the twentieth century. The Inca Garcilaso, Sor Juana, Carlos Fuentes, Rigoberta Menchu, and Pablo Neruda are among some writers studied.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities Literature Requirement, BA FOREIGN, Diverse Perspectives

• THETR-260 Broadway Musicals

Credits:

4.00

Description:

This course is a survey of American musical theatre from its roots in the mid-19th century to the present. It provides the analytical tools and historical insight to more fully appreciate Broadway's greatest musicals and musical theatre artists. Students will explore the ways in which American forms of popular entertainment helped to shape Broadway musicals from their infancy through their adulthood. The course also explores the ways in which musicals provided opportunities for African-Americans, women, immigrants, and the GLBT community.

Term:

Offered Fall Term

Type:

Cultural Diversity Opt A, Humanities Literature Requirement, Diverse Perspectives, Vis. & Perform Thry

- **THETR-267 Introduction to Theatre: Contemporary American**

Credits:

4.00

Description:

This course provides a formal introduction to the theories and practices strategically used by American theatre artists after the Second World War. Special emphasis is placed on theatre artists exploring issues of cultural identity including works by GLBT, African-American, Asian-American, and Latin American playwrights. These playwrights may include Tony Kushner, Paula Vogel, Suzan-Lori Parks, Adrienne Kennedy, August Wilson, David Henry Hwang, Philip Kan Gotanda, Eduardo Machado, and Melinda Lopez. The course will also provide an introduction to trends in post-modern theatre practices related to emerging work of the auteur director, solo performers, and interdisciplinary collectives. Satisfies a core requirement for Theatre majors. Normally offered alternate years.

Term:

Occasional

Type:

Humanities & History, Cultural Diversity Opt A, Humanities Literature Requirement, Diverse Perspectives

- **WGS-111 Women, History, & Culture**

Credits:

4.00

Description:

Explores the roles and images of women in Western culture and the realities of women's everyday lives through literature, film, history, art, psychology, and recent feminist scholarship. Analyzes gender inequalities and the influence of gender on social structure, human behavior, and artistic expression. Topics include: the social construction of gender and identity; domestic prescriptions for women; women and work; intersections of gender, class, and race in American society; sexualities and identity; the politics of motherhood and reproductive rights; educating girls; negotiating male privilege and structural inequalities; representations of women in Western art and film; and women as artists and gendered models of creativity in art, film, fiction, and science.

Term:

Offered Both Fall and Spring

Type:

Cultural Diversity Opt A,Cultural Diversity BFA,Humanities & History,Humanities Literature Requireme

- **WGS-H111 Women, History, & Culture**

Prerequisites:

At least a 3.3 GPA required.

Credits:

4.00

Description:

Explores the roles and images of women in Western culture and the realities of women's everyday lives through literature, film, history, art, psychology, and recent feminist scholarship. Analyzes gender inequalities and the influence of gender on social structure, human behavior, and artistic expression. Topics include: the social construction of gender and identity; domestic prescriptions for women; women and work; intersections of gender, class, and race in American society; sexualities and identity; the politics of motherhood and reproductive rights; educating girls; negotiating male privilege and structural inequalities; representations of women in Western art and film; and women as artists and gendered models of creativity in art, film, fiction, and science.

Term:

Offered Both Fall and Spring

Cultural Diversity Opt A,Cultural Diversity BFA,Humanities & History,Humanities Literature Requireme

- **WGS-113 Women, Science, & Society**

Credits:

4.00

Description:

Explores women's lives from the perspective of the social and natural sciences, including examination of recent biological, psychological, and sociological theories about gender and gender roles, as well as the influence of feminist scholarship in these areas. Topics include: the social construction of gender; the psychology and biology of sex and gender; women and work; media representations of women; the female body and eating disorders; women's health and lifecycle; women and sexuality; reproduction, abortion, and motherhood; and sexual violence against women.

Term:

Offered Both Fall and Spring

Type:

Cultural Diversity Opt A,Social Science,Diverse Perspectives

- **WGS-115 Introduction to Gender Studies**

Credits:

4.00

Description:

Introduces the key topics and debates that have shaped the field of gender studies, including queer studies, masculinity studies, and women's studies. Through lecture and class discussion of texts from literature, film, history, psychology, and sociology, explores the pervasive influence of gender on the structure of society and our everyday experiences and the role that gender plays in our understanding of love, friendship, sexuality, and even violence. Topics include: biological arguments about gender and sexuality; the social construction of gender and identity; intersections of gender, race, class, and sexuality; masculinity and femininity; and theories of sexual difference and the construction of sexuality.

Courses may simultaneously fulfill Core Requirements, Major Requirements, Complementary Major Requirements, or Minor Requirements, or may be used as electives.

Major Requirements: credit varies

The specific requirements are determined by each Engineering program. These include basic Math and Science courses, as well as engineering topics.

Electives: credit varies

Minimum Total Credits Required for Degree Conferral: 126 credits

Note:

Core Requirements may also count toward major if taken at appropriate level.

Some degree programs exceed 126 credits.

2015-2016 Archived Catalog Information

Bachelor of Science in Engineering Degree

The BSE degree program requires the successful completion of the following courses:

Core Requirements: 13 courses, 49-51 credits

- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Literature](#)
- [Ethical & Philosophical Inquiry](#)
- [Social Science](#)
- [Humanities/History](#)
- [Visual & Performing Arts Theory & History](#)

Science, Technology, & Engineering (STE): 2 courses, 8 credits

The STE requirement is satisfied by the completion of the Engineering major requirements of ECE-101, ECE-L101, ENS-103, and ENS-L103.

- **ECE-101 Digital Electronics**

Prerequisites:

ECE L101 MUST BE TAKEN CONCURRENTLY

Credits:

3.00

Description:

This course introduces the elements and tools of digital design. The course covers Boolean algebra, Karnaugh maps, Logic gates and digital circuits, analysis and design of combinational and sequential circuits, and timing issues. Adders, decoders, multiplexers, flip-flops, counters, and registers are implemented using TTL or CMOS ICs as well as VHDL-programmed FPGAs. Formerly ECE 203

Term:

Offered Fall Term

- **ECE-L101 Digital Electronics-Lab**

Prerequisites:

ECE 101 MUST BE TAKEN CONCURRENTLY.

Credits:

1.00

Description:

Illustrates the concepts of ECE-101. Exercises in various forms of Combinational and Sequential Logic design. Use of test equipment. Design projects will include a digital security system, use of PSPICE to verify feasibility of some designs. FPGA board citing Xilinx, software development tools from Xilinx and other third parties are introduced. Offered yearly. Formerly ECE L203

Term:

Offered Fall Term

- **ENS-103 Introduction to Engineering**

Prerequisites:

ENS L103 MUST BE TAKEN CONCURRENTLY.

Credits:

3.00

Description:

This course provides exposure to engineering practice, with particular focus on electrical engineering components such as circuit elements and systems. It seeks to go beyond the mathematics and provide an intuitive appreciation of functional devices. Examples taken from a broad swath of technological history illustrate significant crossroads, decisions, and inventiveness. Emphasis is placed on learning to think as an engineer - assessment of problems, candidate solution tradeoffs, and implementations. Frequent exercises in creative engineering design will be used. Students will be required to design several elementary devices, such as a magnet, a capacitor, a timing device, and a motor, which they will enter in a competition for overall strength, compactness, accuracy, or speed. Sometimes assignments relate to "survival on an island" concerns, such as communication or drinking water. Students also learn about reverse engineering by selecting, building, troubleshooting, and presenting an electronic kit of their choice. A term paper determining the engineering behind a topic of their choice will also be written and presented. On occasion (see ENS L103) there will be team competitions between various smaller groups in the class.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

• ENS-L103 Intro to Engineering Lab

Prerequisites:

Must be taken Concurrently w/ ENS-103

Credits:

1.00

Description:

The Lab is designed to provide opportunities to gain familiarity with engineering tools. Students will be introduced to parts (e.g. learn the resistor color code), test equipment (multimeters, prototyping trainers, signal generators, and oscilloscopes), and construction techniques (wiring, soldering, troubleshooting). Although it varies from year to year, Class Projects can be built during the Lab sessions. In the past these have included a 25 Watt electric generator, various door lock systems (both mechanical and electronic), and an AM transmitter and receiver (all projects made from scratch). It is likely that 2010-2011 may introduce some robotic creations for a competition. Electronic kits and motors can also be built and serviced in the Lab. There is an adjoining machine shop, which can be utilized (with supervision), for fabricating items. Individual creativity is encouraged, and informal problem solving sessions occasionally occupy lab time. However, the lab is accessible outside of the traditional scheduled time.

Literature: 1 course, 4 credits

Choose one course from those listed below:

English

- ENG-213 English Literature I

Prerequisites:

WRI-102 or WRI-103

Credits:

4.00

Description:

Study of major writers of England from the beginning to the mid-18th century. Regularly assigned essays on the reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement

- **ENG-214 English Literature II**

Credits:

4.00

Description:

Study of major English writers from the mid-18th century to the present. Regularly assigned essays on the reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement

- **ENG-216 World Literature in English**

Prerequisites:

WRI-102 or WRI-103

Credits:

4.00

Description:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

Term:

Offered Both Fall and Spring

Type:

Cultural Diversity Opt B, Humanities Literature Requirement, Diverse Perspectives

- **ENG-217 American Literature I**

Credits:

4.00

Description:

Study of major American writing from its origins through 1865. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement

- **ENG-218 American Literature II**

Credits:

4.00

Description:

Study of major American writing from 1865 through the present. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement

Women's & Gender Studies:

- **WGS-325 Global Women's Fiction**

Credits:

4.00

Description:

Explores of various cultural worldviews in order to reveal and assess the voices of women from around the world as they respond to important global issues such as sexual violence and gendered oppression. Topics include: national citizenship, sexual politics, legal discourse, aesthetic representation, literary movements, genre, constructions of femininity, sexual identities, and representations of gender in relation to race and class and international cultures, and the relationship of self-image to the body politic.

Term:

Occasional

Type:

Humanities Literature Requirement,Cultural Diversity Opt B,Diverse Perspectives

- **FR-216 Masterpieces of French and Francophone Literature in English Translation**

Credits:

4.00

Description:

Masterpieces of French and Francophone Literature in English Translation. Studies works translated into English by major authors from the Middle Ages to the present. Explores drama, fiction, and poetry from many regions of the world: Africa, Western Europe, North America, the Caribbean, and Vietnam.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt B, Humanities Literature Requirement, Humanities & History, Diverse Perspectives

- **FR-309 Survey of French Literature I**

Prerequisites:

FR 202 or Instructors permission

Credits:

4.00

Description:

Analyzes and discusses canonical works of French literature from medieval times to the eighteenth century.

Term:

Offered Fall Term

Type:

- **FR-310 Survey of French Literature II**

Prerequisites:

FR-202 or instructor's permission

Credits:

4.00

Description:

Study, analyze and discuss canonical works of French-language literature from the nineteenth through the twenty-first centuries, as they relate to important events in the art, culture, and history of the Francophone world.

Term:

Offered Spring Term

Type:

Humanities Literature Requirement,BA FOREIGN

- **GER-216 Masters of German Literature in English Translation Masterpieces**

Credits:

4.00

Description:

Discussion of works by major authors from the 18th century to the present. Drama, fiction, and poetry. The specifically German contributions as related to the European context. Lessing, Goethe, Schiller, Heine, Buchner, Schnitzler, Kafka, T. Mann, Hesse, Brecht, Seghers, Grass, Boll, Wolf and/or others.

Term:

Occasional

Type:

Humanities Literature Requirement

- **SPAN-300 Intro to Cultural Texts**

Prerequisites:

Spanish 202, 203, 250 or Instructor's consent.

Credits:

4.00

Description:

Explores a selection of Peninsular and Latin American cultural materials. Primarily examines texts from different literary genres (narrative, drama, essay, and poetry). Develops critical skills required in more advanced Spanish courses, through close readings and textual analysis. Activities include regularly assigned essays, group discussions, and short scene work.

Term:

Offered Spring Term

Type:

Humanities Literature Requirement,BA FOREIGN

- **SPAN-390 Introduction to Latin American and Caribbean Literature**

Prerequisites:

SPAN 300; SPAN 302 is strongly recommended

Credits:

4.00

Description:

Examines authors from Latin America and the Caribbean in their historical and cultural contexts. Reading and class discussions consider the relationship between the writer and society by covering such topics as colonialism, the oral tradition, modernism and the emergence of new narratives in the twentieth century. The Inca Garcilaso, Sor Juana, Carlos Fuentes, Rigoberta Menchu, and Pablo Neruda are among some writers studied.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities Literature Requirement, BA FOREIGN, Diverse Perspectives

- **SPAN-405 Women's Voices in Latin America**

Prerequisites:

SPAN-300; Spanish 302 or its equivalent is strongly recommended

Credits:

4.00

Description:

Examines the changing roles of women in Mexico, the Caribbean, Central and South America through fiction, non-fiction, drama, poetry and film. Special focus is placed on the impact that changes in social ideology and culture have had on their identity and writings. Texts available in English.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, BA FOREIGN

- **SPAN-407 Latin American Short Narrative**

Prerequisites:

Spanish 300; or Instructor's consent; Spanish 302 is strongly recommended

Credits:

4.00

Description:

Explores some of the major trends in the twentieth century Latin American story telling. Readings reflect the vast array of voices and styles, beginning with fantastic literature of the 1930's, the birth of magical realism and the more contemporary, socio-political narratives. Authors include Isabel Allende, Julio Cortazar, Rosario Castellanos, Gabriel Garcia Marquez, Juan Rulfo, Luisa Valenzuela, among others.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement, BA FOREIGN

• **SPAN-416 Border Crossings the Latino Experience in the USA**

Prerequisites:

ENG-102 or ENG-103 or Instructor's consent. Span 302 is strongly recommended for Spanish and Latin American & Caribbean Studies majors and minors.

Credits:

4.00

Description:

Examines the myth of a singular Latino experience in the United States through a variety of genres and authors. Issues relating to culture, language, family, and religion are among some of the topics explored. Authors include Sandra Cisneros, House on Mango Street, Junot Diaz, The Brief Wondrous Life of Oscar Wao, Julia Alvarez, How the Garcia Girls Lost Their Accents, Tato Laviera, and American.

Ethical & Philosophical Inquiry: 1 course, 4 credits

Choose one course from those listed below:

- **PHIL-119 Ethics**

Credits:

4.00

Description:

A systematic introduction to the major thinkers and their positions on the main issues of ethics, such as: What is morality? What are moral values? How should we live our lives? Are there objective, universal, absolute moral standards? If so, what are they, and what is their basis? 1 term - credits. Normally offered every year.

Term:

Offered Both Fall and Spring

• PHIL-120 Ethics and Civic Life

Credits:

4.00

Description:

In this class you will be introduced to the perspectives and methods of politics, philosophy, and economics and see how these three disciplines present distinct but interconnected dimensions of current social and political issues.

Type:

Diverse Perspectives

• PHIL-123 Social Ethics: The Good Life

Credits:

4.00

Description:

An examination of contemporary Western society, particularly in the United States, in relation to philosophical attempts to define the good life. Current books that exhibit a philosophical approach towards important contemporary social issues will be discussed, as well as classics in philosophy. Topics may include: civic virtue, consumerism, current events, economic justice, popular culture (film, music, television), religion and secularism, etc. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- **PHIL-127 Contemporary Moral Issues**

Credits:

4.00

Description:

A critical examination of a number of contemporary moral issues such as: abortion, affirmative action, animal rights, capital punishment, cloning, drug legalization, environmental ethics, euthanasia, genetic engineering, gun control, pornography, same-sex marriage, suicide, war and terrorism, etc. 1 term - 4 credits. Normally offered every year.

Social Science: 1 course, 4 credits

- EC-101 Applied Microeconomics

Prerequisites:

Non CAS majors need to have completed at least 15 credits.

Credits:

3.00

Description:

This course introduces students to foundational principles of microeconomic theory, with an emphasis on applications of concepts to management decision-making in specific industry and market settings. It describes and analyzes the interaction of supply and demand and the behavior of the prices of goods, services. It explains the determinations of costs, output, strategic pricing, and governance by firms under conditions of perfect and imperfect competition in a global economy. In addition, it describes the supply demand for factors of production and the impact of taxes and government regulation and intervention on firms and consumers.

American Studies:

- AMST-111 Defining America and Americans

Credits:

4.00

Description:

Examines artistic, social, and political imaginings of America and Americans. We will read works by American and foreign observers of the United States to ask how Americans define themselves and how others see them. Course assignments will introduce students to themes, perspectives, and methods in the field of American Studies.

Type:

Humanities & History, Humanities Literature Requirement

Art & Design:

- ADF-181 Ideas of Western Art I

Credits:

4.00

Description:

This course will survey the major concepts and issues of Western Art, from prehistoric to the Early Renaissance. Architecture, sculpture and paintings will be studied individually for their formal elements and visual importance, and also within their own aesthetic, historic and cultural context. Class discussion and visual analysis of works of art will encourage personal interpretation and critical thinking.

Term:

Offered Fall Term

Humanities & History, Humanities Literature Requirement

• ADF A-306 Art & Culture of Asia, Africa, South America and Oceania

Credits:

4.00

Description:

The coursework introduces students to the artistic and visual traditions from South and East Asia, Africa, Oceania and the Americas. In addition to the material culture of the particular region under study, the coursework will consider socio-political ideals, religious belief systems, and cultural principles that 'shaped' or informed the work and the ideology of civilizations beyond the Western hemisphere. Comparative analysis among non-western and western traditions will be used to critically analyze the salient points of influence, rejection and modifications of aesthetic affinities. Class lectures will be supplemented with museum seminars specifically the rich non-western collections at the MFA, Boston. Guided field trips to the museum will allow students to formally analyze the works of art discussed in lecture and text material.

Term:

Occasional

Type:

Cultural Diversity Opt B, Cultural Diversity BFA, Asian Studies, Humanities & History, Expanded Classroom

• ADF A-344 Islamic Spain: Art and Architecture

Credits:

4.00

Description:

This course examines the Islamic influence in Spain through its art and architecture from its formative period in the eighth century through the fourteenth century and beyond to see the continuity and change of the Mozarabic style found locally in Madrid, Cordoba, Seville, and Granada. Students will use formal analytical skills to critically explore works of art and architecture and will cultivate a 'lens' through which they will facilitate their understanding of the classic and contemporary material culture and fabric of Spain. Class meetings will be supplemented with field trips. Offered as needed.

Type:

Humanities Literature Requirement, Humanities & History

- **ADFA-345 Art of India**

Credits:

4.00

Description:

A chronological survey of South Asian art (2300 BCE - 1750 CE) including India, Pakistan, Bangladesh, and Nepal. Examination of art and architecture from their first and still mysterious beginnings in the Indus Valley, through the great masterpieces of Buddhist and Hindu art to the coming of Islam, including the eclectic culture of the Mughal courts and the golden age of miniature paintings. Consideration is given to the multiple aspects of patronage in Indian culture - religious, political, economic - through case studies of individual works of art and architecture. (Formerly HUM 345)

Type:

Humanities & History, Cultural Diversity Opt B, Humanities Literature Requirement, Asian Studies

- **ADFA-346 Art of the Silk Road**

Credits:

4.00

Description:

This course will examine the arts and architecture of the Silk Road, with particular attention to art of Buddhism, Hinduism, and Islam. Historically, Inner Asia was marked by trade routes (the 'Silk Route' or 'Silk Road') which crisscrossed this vast landscape of deserts and mountains between China, India, the Iranian Plateau and the Mediterranean world. In addition to the art of these cultures, we will also look at the records of early Chinese travelers through Central Asia. (Formerly HUM 346) Offered as needed.

Type:

Humanities & History,Cultural Diversity Opt B,Humanities Literature Requirement,Asian Studies

- **ADI-221 History of Furniture & Architecture I**

Credits:

4.00

Description:

The goal of this course is the enhancement of the student's critical comprehension of historic styles and the impact they have on contemporary design solutions. The survey begins with the Egyptian period and provides an overview of the history of furniture and architecture through the mid-1700s, including ancient Greece and Rome, the Gothic and Renaissance, Baroque and Rococo periods. Emphasis will be placed on chronological periods, the visual characteristics of each style including regional idiosyncrasies, and the terminology germane to a study of furniture and architecture.

Term:

Offered Both Fall and Spring

Type:

Humanities & History,Humanities Literature Requirement

- **ADI-222 History of Furniture & Architecture II**

Prerequisites:

ADI 221

Credits:

4.00

Description:

A continuation of History of Furniture & Architecture I, this course will extend the investigation of furniture and architecture into the 20th century, while addressing issues concerning preservation, restoration, rehabilitation, and adaptive re-use. Drawing on the vast resources of the city of Boston and its environs, students will become actively involved in stylistic progression, local living history, and the benefits of preserving our past for future generations. Field trips will include visits to restored Federal, Victorian and Contemporary venues.

Term:

Offered Both Fall and Spring

Type:

Humanities & History, Humanities Literature Requirement

- **ADG-224 History of Graphic Design**

Credits:

4.00

Description:

The first part of the course will focus on the history of graphic design from prehistoric times to the Industrial Revolution, including the origins of graphic communications in the ancient world, the development of the alphabet and early printing and typography. The second portion will concentrate on the period from the late 19th century to the present, and will include the Arts and Crafts Movement, the various-isms and their influence on modern art, the Bauhaus and International Style, and contemporary visual systems and image making.

Term:

Offered Fall Term

Type:

Humanities & History, Humanities Literature Requirement, Vis. & Perform Thry & Hst

Black Studies:

- **BLKST-100 Introduction to Black Studies I: Survey of the Discipline**

Credits:

4.00

Description:

Introduces students to the basic concepts, literature and interdisciplinary nature of Black Studies. Provides a conceptual framework for the investigation and analysis of black history and culture as well.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

Communication:

- **CJN-114 Great Works of Journalism**

Credits:

4.00

Description:

An examination of important contributions to the literature of journalism through an analysis of major writers and news coverage of significant events from a journalistic perspective.

Term:

Occasional

Type:

Humanities & History

- **CJN-L218 Photojournalism**

Credits:

4.00

Description:

An introduction to the role of photography in the journalistic process. A discussion of photography as communication and a survey of the history of photography.

Term:

Offered Both Fall and Spring

Type:

Humanities & History

- **CJN-325 World Cinema**

Credits:

4.00

Description:

This course examines films from cultures around the globe, including masterpieces of cinema from European, Asian, South American, and African nations. (Films are often subtitled.)

Term:

Occasional

Type:

Humanities & History

- **CJN-366 Great Film Directors**

Credits:

4.00

Description:

An in-depth look at the films of one great film director, either American or foreign, demonstrating how the filmmaker develops his/her themes over the course of a career. Can be taken for credit more than once, but only counts once towards the major. A different director is studied each time.

Term:

Occasional

Type:

Humanities & History

- **CJN-485 Rhetoric of Protest & Reform**

Credits:

4.00

Description:

Examines the persuasive strategies of social reform movements with an emphasis on the civil rights', women's rights, and gay rights movements in the United States.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt A, Humanities & History, BSBA SOCIAL CHANGE, Diverse Perspectives

Philosophy:

- **PHIL-113 Critical Thinking and Argumentation**

Credits:

4.00

Description:

An introduction to non-formal methods of analyzing and formulating arguments, including treatment of such concepts/topics as: the nature of argument, induction, deduction, validity, soundness, aspects of language which tend to interfere with logical thought, definition, role of emotion, types of disagreement, and fallacies. The course also emphasizes the practical application of sound reasoning in both evaluating arguments and making arguments of one's own about matters of issues facing society. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

Type:

Humanities & History, Humanities Literature Requirement

- **PHIL-115 Introduction to Philosophy**

Credits:

4.00

Description:

A general introduction to the nature of philosophical analysis. Lectures, readings, and discussions will focus on representative issues and thinkers from the main areas of philosophy (such the nature of truth, reality, morality, politics, and religion). 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

Type:

Humanities & History, Humanities Literature Requirement

- **PHIL-210 History of Ancient & Medieval Philosophy**

Credits:

4.00

Description:

The study of philosophical thought from the period of the ancient Greek philosophers through the Medieval thinkers, including such philosophers as Socrates, Plato, Aristotle, Epicurus, Zeno, Parmenides, Pythagoras, Protagoras, Augustine, Aquinas, Anselm, and Abelard. An introductory course designed to equip the student with a well grounded understanding and appreciation of Philosophy. 1 term - 4 credits. Normally offered every year.

Term:

Offered Fall Term

Type:

Humanities & History, Humanities Literature Requirement

• PHIL-211 History of Modern Philosophy

Credits:

4.00

Description:

A study of the prominent modern thinkers, such as Descartes, Leibniz, Spinoza, Locke, Berkeley, Hume, and Kant. The course is an historical survey of the key concepts, problems and developments in modern philosophy including rationalism, empiricism, and skepticism. The following themes central to Modern philosophy will be addressed: the nature of reality; the limits of human knowledge; self and self-identity; mind and body; freedom in theory and practice; reason vs. sentiment in ethics. 1 term - 4 credits. Normally offered every year.

Term:

Offered Spring Term

Type:

Humanities & History, Humanities Literature Requirement

• PHIL-219 Philosophy of Art

Credits:

4.00

Description:

What counts as art? What is beauty? Are there objective standards of beauty? This course examines the nature of aesthetic experience, art, beauty, and creativity. Through the classic and contemporary readings, the students will be introduced to philosophical issues concerning the meaning of art, artistic representation, perceptions of art, interpretation, and criticism. Students will be encouraged to reflect on their own experience of art and explore the relationships among the artist, the audience, the artwork, and the world. 1 term - 4 credits. Normally offered every third year.

Type:

Humanities & History, Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **PHIL-250 Social & Political Philosophy**

Credits:

4.00

Description:

An examination of persistent debates in political and social philosophy, such as the meaning of property and welfare, the tensions between liberty and equality, censorship and freedom of expression, the relation of church and state, the possibility of political education and civic virtue, legitimacy of the state and revolution, war and problems of end and means, addressing historic injustice, such as racism, genocide, or sexism, among other topics. The class will focus on no more than two such themes. Students will read both classic and contemporary writings to address both the historical roots and the contemporary treatment of these questions. 1 term - 4 credits. Normally offered every year.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **PHIL-255 Science, Myth, and Society**

Credits:

4.00

Description:

Both mythology and science arise from the human need to explain the world, to understand its laws, and give an account of its origin. This course focuses on the controversial relationship between myth and science and explores their historical roots, their social influence and their respective views of reality, human nature, and origin of the universe. Both historical controversies and contemporary debates, such as evolution vs. intelligent design, will be considered. Topics in the philosophy of science, such as the nature and scope of the scientific method, will also be addressed. 1 term - 4 credits. Normally offered alternate years.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

• PHIL-260 Philosophy of Religion

Credits:

4.00

Description:

This course analyzes and interprets fundamental religious concepts and beliefs, examines the rational support for religious faith, and addresses the relation between religion and society. Fundamental questions concerning the nature and existence of God, salvation, and immortality will be explored, and for this the primary focus will be Western religious conceptions but may broaden to include other world religions. Other topics may include: whether all religions can be equally valid and true; the relation of religion and the state; the status of miracles; the history and psychology of religion; the conflict between religion and science. 1 term - 4 credits. Normally offered alternate years.

Term:

4.00

Description:

This survey course provides students with an historical, philosophical, and aesthetic overview of theatre practices from the Golden Age of Greek drama to 19th-century melodrama and early experiments in realism. Through readings, lectures, and discussions, the class will explore the theatre's persistent capacity to mirror the societies that produce it. Satisfies a core requirement for Theatre majors and the Humanities requirement. Normally offered alternate years.

Term:

Type:

Humanities & History, Humanities Literature Requirement

- **THETR-489 Performance Studies**

Credits:

4.00

Description:

This course provides an overview of the modern concept of performance and how it has evolved in a variety of interdisciplinary fields. Encompassing the areas of dance, music, theatre, installation work, 'happenings' and spectacles, students will explore the ways performance is understood by ethnographers, anthropologists, linguists, cultural theorists, social scientists, and artists. Using the theoretical base covered during the semester, students will conceive, develop, and present a final performance piece appropriate to their chosen discipline.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **WGS-111 Women, History, & Culture**

Credits:

4.00

Description:

Explores the roles and images of women in Western culture and the realities of women's everyday lives through literature, film, history, art, psychology, and recent feminist scholarship. Analyzes gender inequalities and the influence of gender on social structure, human behavior, and artistic expression. Topics include: the social construction of gender and identity; domestic prescriptions for women; women and work; intersections of gender, class, and race in American society; sexualities and identity; the politics of motherhood and reproductive rights; educating girls; negotiating male privilege and structural inequalities; representations of women in Western art and film; and women as artists and gendered models of creativity in art, film, fiction, and science.

Term:

Offered Both Fall and Spring

Type:

Cultural Diversity Opt A,Cultural Diversity BFA,Humanities & History,Humanities Literature Requireme

- **FR-320 French & Francophone Cinema**

Credits:

4.00

Description:

A survey of French and Francophone cinema from the late 19th century to the early 21st century. We will explore early works from France by the Lumiere brothers and George Melies, as well as contemporary films from France and French-speaking countries, such as Algeria, Burkina Faso, Canada, Haiti, Senegal. All papers are written in French, and bi-monthly discussion sessions are conducted in French. Normally offered alternate years. Cultural Diversity B. 4 credits.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement

- **FR-410 Contemporary France**

Credits:

4.00

Description:

Studies a specific theme related to art, culture, history, literature and politics from the end of World War II to the present day.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **GER-301 German Civilization I**

Prerequisites:

GER 202 or instructor consent

Credits:

4.00

Description:

A survey of civilization in the German-speaking countries from the Reformation to German unification (1871). Major figures, movements, and periods. Art, literature, music, and philosophy in the context of political and economic developments. Normally offered alternate years.

Type:

- GER-306 German Cinema

Credits:

4.00

Description:

A survey of films produced in the German speaking countries from the 1920's to the present. Includes the Weimar republic, the Nazi period, postwar production from both East and West Germany, and new trends since reunification. Film esthetics and socio-historical context. All films shown in German with English subtitles.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- GER-412 Contemporary Germany

Credits:

4.00

Description:

A survey of German culture, politics, and society from the end of World War II to the present day. Discussion of such topics as the post-fascist mentality, economic efficiency, re-education, Americanization, division and it's legacy, high culture, entertainment for the masses, environmental movements, pacifism, and multiculturalism. Taught in English.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **GER-420 The Greens and Environmentalism**

Credits:

4.00

Description:

The rise of the Green Party, from its grass-roots beginnings to participation in the federal government. Background on the development of green consciousness in Germany and Europe since the early 20th century. Present governmental policies and programs (e.g. alternative energy sources, organic farming, recycling, dismantling of nuclear power).

Term:

Offered Spring Term

• **SPAN-302 Indigenous and Colonial Latin America**

Prerequisites:

Spanish 202, 203 or 250 or Instructor's consent. Span 290 or 300 strongly recommended.

Credits:

4.00

Description:

Introduces students to the complexity Latin America by examining its roots in pre-Columbian America and the impact of Spanish exploration and colonization. Places emphasis on cultural, economic, historical, philosophical, political and religious patterns that define the region. Includes class discussions, oral presentations, and writing assignments based on reading and audio-visual material.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, BA FOREIGN, Diverse P

• **SPAN-408 Latin American Cinema**

Prerequisites:

Take ENG-102 or ENG-103 or Instructor's consent. Span 302 is strongly recommended for Spanish and Latin American & Caribbean Studies majors and minors.

Credits:

4.00

Description:

Begins with the Cuban revolution as a point of departure and examines films from Argentina, Chile, Colombia, Mexico, and other Latin American countries. Students explore the relationship between film & society and consider how knowledge of a culture and its history is influenced and shaped by what is seen on the screen. Films in Spanish with English subtitles.

Visual & Performing Arts Theory and History: 1 course, 3-4 credits

Choose one course from those listed below:

- **ADI-234 Introduction to Interior Design Theory & Criticism**

Prerequisites:

Taken concurrently with ADI S201

Credits:

3.00

Description:

This course introduces students to the important individuals, ideas and issues that have shaped the direction of contemporary interior design practice in the twentieth century, building upon the historical foundation established by the Ideas of Western Art and History of Furniture and Architecture classes. Intermixing lectures and readings with visits to important local buildings, it discusses the influences of culture, technology, fashion and media upon the work and thinking of the first generation of modern designers, as well as emerging social, moral and environmental imperatives that will form the basis of future practice; cultural identity, interdisciplinary collaboration, sustainability and universal design.

Term:

Offered Fall Term

Type:

Vis. & Perform Thry & Hst

• **ARH-101 Art History I**

Credits:

4.00

Description:

Surveys the art of Western civilization from prehistoric caves to medieval cathedrals. Considers works from the Ancient Near East, Ancient Egypt, Ancient Greece and Rome, the Byzantine Era, the Romanesque Period, and the Gothic Period in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst

• **ARH-102 Art History II**

Credits:

4.00

Description:

Surveys the art of Europe and America from the Renaissance to the present. Considers work of painting, sculpture, and architecture from periods such as the Renaissance, the Baroque, the Rococo, Neoclassicism, Romanticism, Impressionism, Abstract Impressionism, and Post-Modernism in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst

• **ARH-309 Art of the 19th Century**

Credits:

4.00

Description:

Examines Neoclassicism, Romanticism, Realism and Impression in the European painting. Considers works by artists such as David, Ingres, Friedrich, Constable, Delacroix, Goya, Courbet, Millet, Daumier, Manet, Monet, Renoir, Degas, and Cassatt within their historical contexts.

Term:

Occasional

Type:

BFA Humanities Requirement, Humanities Literature Requirement, Vis. & Perform Thry & Hst

• **ARH-312 Art of the Northern Renaissance**

Credits:

4.00

Description:

Examines painting, sculpture, and architecture of the 14th,15th and 16th centuries in Northern Europe, within their historical context. Topics include the rise of oil painting, the development of woodcut and engraving, the effect of the Reformation on art. Artists include van Eyck,Bosch, Durer, Holbein and Brueghel.

Term:

Occasional

Type:

BFA Humanities Requirement,Humanities Literature Requirement,Vis. & Perform Thry & Hst

- **CJN-292 Film History: From Silent Cinema to the Modern Era**

Credits:

4.00

Description:

An introductory film studies course that covers the history of the film medium from its birth until the 1970s. It provides an introduction to major film theory concepts, such as genre and/or auteur studies, as well as key films and stars in movie history.

Term:

Alternates Fall & Spring

- **MUH-211 Music of the United States**

Credits:

4.00

Description:

Surveys American music from Colonial times to the present; various attempts to create an indigenous musical style; vernacular and art music genres including folk, concert, and religious music, jazz and musical theatre; includes music of Billings, Amy Beach, Ives, Copland, Bernstein, and Libby Larsen. Normally offered yearly.

Term:

Alternates Fall & Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **THETR-260 Broadway Musicals**

Credits:

4.00

Description:

This course is a survey of American musical theatre from its roots in the mid-19th century to the present. It provides the analytical tools and historical insight to more fully appreciate Broadway's greatest musicals and musical theatre artists. Students will explore the ways in which American forms of popular entertainment helped to shape Broadway musicals from their infancy through their adulthood. The course also explores the ways in which musicals provided opportunities for African-Americans, women, immigrants, and the GLBT community.

Seminar for Freshmen: 1 course, 4 credits

Students with 15+ transfer credits of college or university work are exempt. Choose one Seminar for Freshmen course from those listed below:

- SF-101 Fixing the World- Energy and Water: The Science of Solutions

Credits:

4.00

Description:

Two of the most daunting challenges the world faces (or will face) is how to provide for both its growing energy needs and potable drinking water. Regular news events include climate change, droughts, flooding, and petroleum struggles. Human nature often requires a severe crisis before it responds. This course will investigate the historical science driving the use of energy since the Industrial Revolution to convert energy resources into work, including the steam engine, the electric motor, and the internal combustion engine. It will also consider alternative energy options to fossil fuels, such as solar, wind, geothermal, and ocean power. Along the way we will consider the evidence for Global Warming and Climate Change. We will look into human nature, simple life styles, conspiracy theories, and the influence of those in power to shape human opinion. We will also consider how our water supply is provided and where it goes after being used. What options do developing countries or drought racked areas have to remedy their water needs? Although the course pursues a scientific understanding of these issues, the mathematics used will be gentle, and a larger emphasis will be placed on the intuitive appreciation of these concerns.

- **SF-132 The Beatles: Here, There & Everywhere**

Credits:

4.00

Description:

This seminar will investigate the impact and legacy of the Beatles. The Fab Four deserve our scholarly attention as musical innovators and as cultural avatars of the 1960s, an era that still exerts influence today. We will examine the many ways in which the Beatles rocked the establishment and became defining figures in post-war youth culture. We will also discuss other media (the visual arts, film, fashion, style) and fields of study (mass media, marketing, recording technology, copyright law, English history) using the Beatles as our guides.

- **SF-151 Getting Over It: Dealing With the Aftermath of Group Conflict/Mass Atrocity**

Credits:

4.00

Description:

Once violent conflict between two groups has ended, what is the best way to transition back to normality coming to terms with the past or simply moving on? To answer these questions we will examine the debates surrounding war crime tribunals, truth commissions, lustration policies, and reparations in the second half of the 20th century. Case studies will include post-apartheid South Africa, post-WWII Germany, and the Israeli/Palestinian conflict. We will discuss the philosophical problems raised by each of these instruments, as well as on the political, legal, and practical difficulties their implementation present. Cultural Diversity B

Type:

- **SF-156 The Mask Behind the Face: Personas, Personalities, and Perception. Acting in /Out Life**

Credits:

4.00

Description:

The theatre has always been a metaphor for life. In modern times life has become theatre. This seminar will confront the idea of real life and the eroding boundary between performers and audience. Students will study the roots of the contemporary obsession with stars and stardom, a mania that began in the 18th century and flourished in the 19th century. We will look at performance studies, performers memoirs, plays, and films that dramatize this dilemma.

- **SF-173 Crime in American Society**

Credits:

4.00

Description:

Popular beliefs about crime are often inspired by the media and by specific criminological theories. These theories about and media images of crime will be examined in detail, including the hits and misses.

- **SF-174 Tragedy and Literature**

Credits:

4.00

Description:

This course will focus on classic works of ancient and modern literature that examine the human condition from a tragic perspective. We will concentrate on close readings from the following texts: Homer's Iliad, Sophocles' Antigone, The Bhagavad-Gita, Shakespeare's Othello, Chekhov's short stories, and Joyce's Dubliners.

- **SF-178 Sacred Hoops & Sneaker Pimps: Understanding the American Hoop Dream**

Credits:

4.00

Description:

This course is about the basketball hoop dream played out at the high school and college levels. We will study a wide variety of materials - novels, films, websites, reference works - to understand both the construction, and destruction, of the hoop dream in such diverse places as New York City, Seattle, rural Indiana, suburban Georgia, and the Wind River Reservation in Wyoming. Issues of race and culture will serve as guiding themes as we develop critical theory explaining why the hoop dream has persisted, and adapted, over time, to fit the needs of its believers and supporters.

Type:

Cultural Diversity Opt A

- **SF-182 Heroes, Antiheroes and Outsiders: Reading the Graphic Novel**

Credits:

4.00

Description:

How is it that comics", a genre often viewed as entertainment for children and adolescents, has become one of the most exciting forms of narrative and visual art? To answer this question, this seminar will examine a range of graphic novels, from those that celebrate their origins in superhero comics, such as Alan Moore's Watchmen, to those that treat subjects not usually considered proper to the comics genre, such as Art Spiegelman's Maus, about the Holocaust, and Alison Bechdel's Fun Home, about the complexities of sexual identity. As we read these works, we will look at how the combination of words and still images makes the graphic novel a unique storytelling form, as well as how artists and writers push the envelope to create new styles and challenge our expectations. In addition to class discussions and writing assignments, we will take a field trip to the Museum of Fine Arts and create a collaborative group graphic novel step-by-step over the course of the semester (all abilities welcome).

- **SF-183 Politics, Power and the Media**

Credits:

4.00

Description:

Is there a relationship between accumulated political power and mass media representations? Is news content impacted by existing political power relations? It is the object of this course to critically analyze the role of the mass media within the framework of existing political power relations in the United States. In particular, the course will focus on the role the mass media plays in promoting and reinforcing dominant political practices and ideologies. The course will begin by exploring various theories of the press, notably its function in a democratic society, as well as the concepts of power and propaganda. We will continue with a series of case studies, complemented by secondary sources that highlight how media representations affect the contemporary distribution of political power in the US. Topics of discussion will include the current US war on terrorism, the ongoing health care debate, the public disavowal of big government", and the concept of a liberal media.

- **SF-189 American Gothic: Edgar Allan Poe, Flannery O'Connor and Annie Proulx**

Credits:

4.00

Description:

This literature seminar will study and compare the short stories of Edgar Allan Poe, Flannery O'Connor, and Annie Proulx. Beginning with Poe as the father of the short story genre in America and exploring his critical theory of the grotesque and arabesque", the class will examine the emergence of the gothic literary idiom as a classic American genre. Critical essays on the gothic aesthetic will be analyzed and film adaptations and documentaries will be viewed.

- **SF-191 Film Adaptation Film Adaptation**

Credits:

4.00

Description:

Why did they change the ending of the book? The novel is so much better! We will explore the concept and industry of film adaptation. Students will read novels and watch respective film adaptations to explore how the written word is adapted to the screen; both fiction and non-fiction works will be considered. Also, field trips to past film locations in Boston will be taken to explore why specific settings were chosen for respective situations. Additionally, students will create their own written adaptations of source materials, putting into practice the concepts studied in class.

- **SF-197 Sustainability, Energy, and Technology At Suffolk University**

Credits:

4.00

Description:

In this project and team-based course, students study a sustainability problem at Suffolk University and spend the semester developing proposals to address the problem. At the end of the course students will present their proposals to Suffolk University's sustainability committee, and will exhibit their websites and visual aids in the Donahue lobby to educate the Suffolk community about sustainability. If their proposals are well-researched and well-communicated, students can see their ideas actualized while they are still undergraduates.

- **SF-198 Music and the Brain**

Credits:

4.00

Description:

What accounts for the power of music to move us so profoundly? This course explores how our brains and music evolved together: What music can teach us about the brain, what the brain can teach us about music, and what both can teach us about ourselves.

- **SF-1127 The Vietnam and Iraq Wars: Polarized Perspectives**

Credits:

4.00

Description:

This class will examine some of the many controversies surrounding the Vietnam and Iraq Wars, two conflicts that have been profoundly polarizing for the American people. There are widely divergent perspectives regarding the fundamental questions surrounding each war. Were the reasons for American involvement just? To what extent were the methods used by the United States military during each war just? To what extent did the media play an appropriate role before, during, and after each war? Did opposition to these wars serve primarily to benefit the enemies of the United States or did it constitute a form of patriotism and love of country? This interdisciplinary course will address these and other complex questions by examining the histories, literature, and films (both documentaries and dramatic) that have been produced in response to these wars.

- **SF-1128 Sustainable Media**

Credits:

4.00

Description:

Contrary to a popular perception that information, communication and entertainment technologies are clean, ecologically benign and paperless, the reality of an increasingly digital life is that our fascination with the next best thing in mobile phones, video game consoles, personal computers, digital cameras, tablets, etc., has devastating impacts on our environment. These media devices are manufactured using toxic ingredients in poisonous working condition, require an abundance of energy to operate, and create hazardous waste when disposed. Media technology companies and the advertising industry that markets their wares have successfully persuaded consumers to accept rapid obsolescence and to highly anticipate the latest upgrade. But some consumers, electronics manufacturers, policy makers, and environmental groups are working to change the culture of consumption in favor of sustainable media practices that lessen the environmental footprint of the digital devices we use everyday. The purpose of this course is to understand the problem of unsustainable media, and the possible solutions for a sustainable media system.

- **SF-1129 Beacon Hill: Fact, Fiction, and Fantasy**

Credits:

4.00

Description:

The course will explore the physical geography, history, and image in literature, film, and pop culture of Suffolk University's Beacon Hill neighborhood. The purpose and objective of the course is to provide students with a deep knowledge, understanding, and appreciation of Beacon Hill through examination of written and visual sources, and feet-on and eyes-on experience of the public parts of the Hill.

Type:

Local Engagement Experience

- **SF-1141 Classical Civilizations: Pathways to Wisdom**

Credits:

4.00

Description:

How is it that the knowledge, intelligence, wisdom and values of the Greeks and Romans still educate and edify the world by providing venues towards leading fulfilling and dignified lives? The guiding principles of their respective civilizations rested upon eight pillars: - Humanism: It was recognized that humans have the potential to master their world and live life to the fullest. -The Pursuit of Excellence: To imagine the highest good and strive to attain it. - Self Knowledge: It is imperative to know oneself before seeking to know the world. - Rationalism: Always question, reason and discern truth from falsehood and never consider any matter superficially. - Restless Curiosity: Often the resolution of one issue leads to the revelations

of others mysteries and pursuits which compels further investigation. The wise individual makes this a lifelong endeavor. -Love of Freedom: As long as one brings no harm to others, one must be free to live and discover as much as possible. - Individualism: All are unique and, therefore, must recognize individual strengths and identity. -The Practice of Moderation: The prudence of avoiding extremes in personal and social conduct. In this course, students will read two (brief) texts on the Greek and Roman contributions to the world and then will proceed with specific readings which illuminate the eight principles above for achieving the good life.

- **SF-1143 In the First-Person: Storytelling in the 21st Century**

Credits:

4.00

Description:

This section of the Seminar for Freshmen will consider the forms, venues, and impacts of narrative nonfiction in contemporary culture. From the exploding popularity of personal essays in the digital age to the living, evolving essays we create on social media, we are constantly narrating and archiving our lives, shaping their content for specific audiences. In doing so, we shape what our experiences mean and represent. In order to analyze the power of narrative nonfiction, we will look at a variety of multimodal texts: essays, podcasts, Instagram and Twitter feeds, stand-up comedy, and storytelling slams, as well historical texts such as the essays of Michel de Montaigne and historical artifacts at the National Archives in Boston. We will also write our own narrative nonfiction, and adapt our first-person stories for listening and viewing audiences, such as the MassMouth story slam and podcasts like This American Life. Additionally, we will practice narrative nonfiction for professional audiences, using storytelling as a way to showcase personal strengths to employers, internship coordinators, and the like.

- **SF-1144 Native Americans: Walking in Two Worlds?**

Credits:

4.00

Description:

Native Americans are often described as walking in two worlds, as they attempt to navigate the process of maintaining their tribal identity and heritage while living in mainstream America. In recent years there has been a shift towards tradition and heritage, and a rejection of Western values and norms in both the US and Canada. In this course we will look at how Native people live in the US and Canada today, and examine the extent to which they are either trying to walk in two worlds or perhaps rejecting the two worlds model. To help us answer this question, we will read about reservation life, the Idle No More Movement, Indigenous History, and current events. We will also watch videos and explore indigenous culture.

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

Type:

Diverse Perspectives

- **SF-1146 Fido the Friendly Wolf: A Natural History of Dogs**

Credits:

4.00

Description:

This course explores the evolution of dogs from wolves and the ways in which dogs have adapted to their niche in human society. The ecology, behavior, genetics, and adaptations of dogs will be explored in relation to both their wolf ancestry and artificial selection by humans. The course includes 2 mandatory field trips to a wolf sanctuary and an animal shelter.

- **SF-1147 Global (In) Security: From ISIS to Ebola**

Credits:

4.00

Description:

This course reviews the principal features of global and national security as it is currently practiced by tracing the evolution of theories, policies and circumstances whereby current international security is developed. Students will evaluate the nature and origins of war, arms proliferation, military instability, terrorism, genocide, health threats and natural resources depletion.

- **SF-1148 Brave New Worlds**

Credits:

4.00

Description:

Explores themes of adventure, self-discovery, exile, and culture shock in classic and contemporary travel writing (including fiction, poetry, and non-fiction) as well as film. Students will experiment with creative writing of their own, develop theories of cosmopolitan world citizenship, travel through the city of Boston on field trips, and team up to learn about different countries in Suffolk's global network of study abroad programs.

• SF-1150 Religion in Contemporary Society

Credits:

4.00

Description:

This course is design to provide students with an overview of the social settings and cultural meanings of religion in the contemporary world. Topics that will be covered in reading and discussions include the rise of religious fundamentalism, religion and violence, women's and men's religious experiences, new religions, and portrayals of religion in popular films. In addition to the readings, students will observe and experience religious expressions and activities through fieldwork assignments. The emphasis on films and fieldwork reflects my belief that religion is made up of lived experiences of actual individuals and communities. In order to understand religion in contemporary society we will make every effort to see (in person or in film) a wide range of religious activities. The films we will see include some of the following: Leap of Faith, Devil's Playground, Kadosh, Women of Hizballah, Singing Stream, A Still Small Voice.

• SF-1151 Reproduction and Society

Credits:

4.00

Description:

This course explores relationships between reproductive health and rights both nationally and internationally. Many of our topics fit into two broad areas: conflicts over the control of childbearing (sterilization abuse, birth control, and abortion) and conflicts over who deserves to be a mother, especially when the mothers in question face social stigma and lack political power. Other topics include safe birth and maternal mortality, breastfeeding, infertility and reproductive technology. We also examine the politics of women's sexual and reproductive autonomy, including the policies that shape women's choices to prevent, achieve, abort, or carry to term a pregnancy. Throughout, we are guided by the following questions: Why is reproduction an important site through which to understand society? How do statuses such as race, class, gender, sexuality and ability

influence people's reproductive possibilities? What is the role of the state in shaping these experiences? How have communities supported or resisted efforts at reproductive control? Why is reproductive justice central to these answers?

- **SF-1153 Law, Disease, and Public Health**

Credits:

4.00

Description:

This course is about public health law, which is the study of the legal powers and duties of the various systems of government in the United States (federal, state, and local) in collaboration with their partners (e.g., health care, business, the community, the media, and academe), to ensure the conditions for people to be healthy (to identify, prevent, and ameliorate risks to health in the population), and of the limitations on the power of these systems of government to constrain for the common good the autonomy, privacy, liberty, proprietary, and other legally protected interests of individuals. The prime objective of public health law is to pursue the highest possible level of physical and mental health in the population, consistent with the values of social justice. The course will focus especially on public health law in the area of epidemic disease. Case studies will be made of the Great Influenza of 1918 and the origins and spread of the Ebola virus, culminating in an examination of outbreaks of Ebola in the United States.

- **SF-1154 Introduction to Visual Studies**

Credits:

4.00

Description:

This seminar provides an introduction to Visual Studies, a relatively new interdisciplinary field that examines how images communicate and the roles that they play in society. Students will apply the concepts and techniques of Visual Studies to analyze sites and signs around Boston, such as advertisements, street signs, fashions, newspaper photographs, buildings, and public spaces. Class projects will increase students' awareness of their visual environment and their ability to critically analyze the visual rhetoric that surrounds us and is often used to manipulate us.

Type:

Local Engagement Experience

Students in the CAS Honors Program should choose one Seminar for Freshmen course from those listed below:

- **SF-H116 Enlightened Insanity**

Prerequisites:

CAS Honors students only.

Credits:

4.00

Description:

Rain or shine, the great 18th century Enlightenment philosophers would meet at the famous cafes of Paris to discuss their ideas, and to observe and criticize society. From these informal debates emerged ideas that are at the core of our modern understanding of the nature of society, marginality, human nature, civil rights, the essence of creativity and genius. Come join us in the quest to understand, define, observe, and analyze the key ideas and concepts of these great thinkers, such as Rousseau, Diderot, and Voltaire, still so relevant in our time. We will read key works of these creative thinkers and philosophers. We will enrich our experience and understanding through the use of film, theatre performances, museum visits, as well as the occasional cafe debate.

Type:

Expanded Classroom Requirement, Honors

• SF-H126 The Boston Theatre Scene: The Inside Experience

Credits:

4.00

Description:

Using the current Boston theatre season as its syllabus, this writing- and analysis-intensive course will explore several plays in production at some of Boston's many professional theatres. We will study the script of four to five plays before attending performances of those works. Students will gain insights on the world of theatre through backstage tours and conversations with theatre professionals such as producers, directors, actors, designers, playwrights, and critics. Students must be available for evening (usually Wednesday) performances. A fee for student-rate tickets will be assessed.

Type:

Honors

• SF-H1134 The Meaning of Life

Prerequisites:

CAS honors students only.

Credits:

4.00

Description:

What do we live for? Which beliefs, values, and experiences sustain meaningful, fulfilling existence? Are we authors of our destinies or powerless pawns in an unfathomable cosmic game? Does death render all our efforts superfluous? This award-winning course offers a cross-cultural, interdisciplinary exploration of these questions through philosophical and religious texts, art, fiction, autobiography, and psychological studies. The course opens with the Old Testament's book of Ecclesiastes, followed by three units: 1) A Life Worth Living: Humanity's Ideals focuses on the ancient and modern visions of human flourishing; 2) Threats to Meaning: Humanity's Discontents, discusses the disillusionments leading to the loss of meaning; and 3) Recovery of Meaning: Crises and Hopes, explores the post-crisis possibilities of self-discovery and growth. Please visit <http://meaningoflife.cherkasova.org/>

Type:

Honors

• SF-H1135 Women Warriors: Stories of Captivity, Conversion, and Confession

Credits:

4.00

Description:

Since the beginning of time, women have been doing battle to themselves, while men have gone to battle against others. Whether it is through converting to Christ, yielding to captors in order to survive, or carrying a baby, this course introduces students to the many ways in which, whatever battles they face, women are warriors; they survive. Utilizing an array of captivity, conversion, and confession narratives by women, and pairing them across the centuries, students will make connections and draw conclusions between early-and mid-19th-century-American and contemporary women. Students will connect, for example, the trials of the 17th-century Puritan captive, Mary Rowlandson, and contemporary hostage, Elizabeth Smart, to explore how women (no matter how different they seem) draw upon unique inner resources to survive.

Type:

Honors

• SF-H1152 The Idea of America: Past, Present, Future

Credits:

4.00

Description:

A systematic exploration of thinking of and about America, from the founding of the republic to American issues and traditions of thought that reflect upon the founding principles and the unfolding American experiment. The Declaration of Independence and the Constitution will be studied with an eye to their philosophical content and sources. The course will also examine works of philosophers and other thinkers who address conflicts over the meaning of founding principles in the course of the nation's history, from the struggle over slavery to America's contemporary role in the world. Because this course intends to apply theoretical understanding to real life, students will be expected to read contemporary journalism on a regular basis and assess the controversies of today in the light of the nation's philosophical and historical currents.

Type:

Honors

Major Requirements Minimum: 8 courses, 32 credits

Complementary Major Requirements, Minor Requirements, and Free Electives: credit varies

Minimum Total Credits Required for Degree Conferral: 126 credits

Bachelor of Science in Journalism

The Bachelor of Science in Journalism is available to Journalism and Public Relations majors only.

The BSJ degree requires the successful completion of the following courses:

Core Requirements: 13 courses, 50-52 credits

- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Ethical & Philosophical Inquiry](#)
- [Social Science](#)
- [Humanities/History](#)

First-Year Writing: 2 courses, 8 credits

- WRI-101 First Year Writing I

Credits:

4.00

Description:

Study and practice of the writing process and revision in terms of expository writing modes for an academic audience.

- **WRI-102 First Year Writing II**

Prerequisites:

WRI 101.

Credits:

4.00

Description:

Study and practice of argumentative and research writing through further work with writing process and revision and the critical reading of a variety of texts.

A student may be assigned to other writing courses or may be invited to take WRI-H103. Students required to complete ENG-099 may be allowed to waive WRI-101 with a grade of “B” or better and the approval of the English department. Students who are invited to complete WRI-H103 and earn a “B” or better satisfy the two Writing Requirements. Waiving a course does not earn credits.

- **WRI-H103 Advanced First Year Writing**

Prerequisites:

By Invitation Only.

Credits:

4.00

Description:

This course is by invitation only and reserved for incoming Suffolk students with high admission scores. Advanced study and practice of writing process, revision, and research, based on close readings of a variety of texts. Fall semester only.

Type:

Honors

Creativity & Innovation: 1 course, 3 credits

Choose one 100-level Creativity & Innovation course from those listed below:

- ADF-S171 CI: Integrated Studio 1

Credits:

3.00

Description:

This cross-disciplinary course will integrate the ideas and practices of two-dimensional design, color and drawing emphasis will be placed on understanding the creative process, exploring concepts and developing research skills. Students will undertake individual and collaborative projects in three spaces; the studio classroom, the digital world and the city at large.

Type:

Creativity and Innovation, Arts Admin Minor Elective

• ADF-S172 CI: Integrated Studio II

Prerequisites:

ADF S101

Credits:

3.00

Description:

This course builds on the Integrated Studio 1 experience: synthesizing fundamental visual ideas. IS 2 investigates the construction, documentation, and transformation of volumetric form, environmental space, and time. Projects will explore narrative strategies and the creation of immersive experiences. Students will develop critical and analytical skills while employing a range of traditional and digital media-including video/sound capture and editing-as they explore the creative boundaries of the classroom studio, the city of Boston, and virtual space.

Type:

Creativity and Innovation

• CI-101 Process and Epiphany

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Despite its mystical connotations, creative epiphany is the result of a long engagement with the creative process that results in a surprising and unpredictable understanding of a concept or the solution to a problem. In the way that the discoveries of science are guided by the scientific method, the path to creative innovation is through a directed creative process. All creative innovators follow such a directed creative process, whether they are industrial designers or fine artists, performers or inventors, architects or entrepreneurs. This course explores both historical examples of individuals whose creative innovation changed the world, as well as hands-on collaborative, practical problem solving employing the creative process.

Type:

Creativity and Innovation

• CI-102 The End of Global Poverty

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course is designed to demystify the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking. More than one-third of our global population lives in poverty, earning less than two dollars a day. Governments, businesses, social enterprises, and charitable organizations have tried to solve the global poverty issue with mixed results. What is the solution? Is entrepreneurship the solution, part of the solution, or has no impact whatsoever? In this course, you will gain an understanding of the power of entrepreneurship (in the context of creativity and innovation), the definition and depth of global poverty (in the context of constraints, such as human, financial and physical resources embedded in local, regional, national and global cultures), and successes and failures of past initiatives to reduce poverty. This is not a course about politics or business, but rather finding a solution to a problem that has eluded mankind since the beginning of time.

Type:

Creativity and Innovation

• CI-103 Making Inventions: Sticking Your Neck Out

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course examines cutting edge technologies, the science behind them, and their practical application and follow-up success or failure. It also provides the students a chance to consider the relevance of identified needed inventions from the 1950s, and whether those projections were correct. The history behind some remarkable inventions will be presented. Finally, working in small teams, students will brainstorm to identify something useful to invent and determine several approaches to implementing it.

Type:

Creativity and Innovation

• CI-106 Failing Successfully

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course is designed to demystify the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking. Did you know Netscape was the internet browser? What about MySpace, arguably the Facebook of the last decade? What led Apple from being innovative pioneers of the 70's to the verge of extinction in the 80's to the technological giant they are today? Technologies come and go, but what leads to organizations lasting more than 100 years such as IBM, General Electric, etc.? What role does failure play in successful innovation, decision-making, and business viability? In this course, you will learn about innovation that may have been successful and well-executed. You will also learn about innovation that was a viable business opportunity, but poorly executed: one phase of failure. In addition, you will learn about innovation that had no real market viability, but was launched anyway: another phase of failure. Can failure lead to success? If so, how?

Type:

Creativity and Innovation

- **CI-107 Going Up: Skyscraper Design in Emerging Economies**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The human population is expected to be between 8.5 and 9 billion persons by the mid-21st century. The majority of those individuals will be living in urban communities. With large populations, high real estate costs, and limited land areas, the only way to construct in urban environments is to go up! In this course, students will have an opportunity to look at traditional and novel skyscraper designs, to consider the cultural and economic significance of such structures, and to use their imagination to develop a conceptual design of a skyscraper.

Type:

Creativity and Innovation

- **CI-108 Designing the Next Best Thing**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Demystifies the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking

and risk taking.

Term:

Offered Both Fall and Spring

Type:

Creativity and Innovation

- **CI-109 Virtual Globe Trekking: an Alternate View of the World**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will examine creativity and innovation through the lens of place. Modern geography is an all-encompassing discipline that seeks to understand the earth and all of its human and natural complexities - not merely where objects are, but how they have changed and come to be. The world is filled with ideas and perspectives. By changing your location, new perspectives emerge. This course will focus on the creative process to understand that each person creates in their own way. The students will test many methods to draw forth creative thought and seek to identify their own best method for calling on their own inner genius. Often this will involve failure and mixed results, yet this is where the students will learn their strengths and weaknesses.

Type:

Creativity and Innovation

- **CI-110 The Entrepreneur's Cocktail**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

How do you and your story drive business? This course takes an innovative look at human creativity and entrepreneurship. As an entrepreneur needs perseverance and high motivation, we will explore the importance of values, risk taking, problem solving, and the discovery of the market opportunities. In order for you to be creative and essentially create successful ventures, you will discover the nuances between the three factors and explore them further through interactive discussion and debate as well as collaborative group work. You will be encouraged to think in non-conforming ways and apply new concepts and develop your own personal operating principles.

Type:

Creativity and Innovation

• **CI-111 The Future of Boston**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course introduces students to creative and innovative thinking based in the field of communication. Students will work in teams to wrestle with the challenges Boston will face in the future and propose feasible strategies to meet them.

Type:

Creativity and Innovation

• **CI-113 Revising Reality**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Reality and perception have been debated and discussed for millennia. Humans see and experience their world in different ways. How do humans determine what is true and good and what advancements are necessary? In this course, students will creatively explore these big questions and revisit knowledge using new and sometimes divergent perspectives. Students will participate in dirty and courageous learning by crafting products, creating visual projects, and coming into original thought via trial and error. Students will also develop their analytical and critical thinking skills, while learning to communicate effectively and honestly.

Type:

Creativity and Innovation

- **CI-117 Writing for Stage and Screen**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will engage students in the process of script writing. Working in groups of four or five they will craft adaptations of stories, create original scenes, or review sketches. By the end of the semester they will produce a complete script. Each alternating week, one group will serve as the executive committee that will approve the final draft of the script of the week. There will be exams based on the textual study of collaborative and adaptation techniques.

Type:

Creativity and Innovation

• CI-121 Catastrophe Management: From 9/11 to the Boston Marathon Bombings

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will introduce students to the exciting world of emergency management from the perspective of scientists who are often utilized as experts during both small scale adverse events and large scale catastrophes. Students will actively and creatively explore the psychological, economic, and medical dimensions of these events and participate in role play in the classroom and site visits. By the end of the course, students will have a keen appreciation of emergency planning and management on the local and national levels.

Type:

Creativity and Innovation

• CI-123 Comics & Co.

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Using visual narrative as the means of exploration, students will be led through a series of exercises that challenge their assumptions, broaden their perspectives, and excite their imagination. The relationship between critical, creative and inventive thinking will be the basis for individual and collaborative projects.

Type:

Creativity and Innovation

• CI-125 Boston's Creative History in Perspective

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Our collective social consciousness is formed by physical space; through a mixture of exploration, discovery, and making, students will delve into the city that surrounds them, developing a sense of ownership and engagement in Boston's public space. During the course of the semester, students will uncover the ways that art and architecture have shaped the souls of cities around the world, using Boston as a template. In a series of local field trips, students will explore Boston through its art and architecture, focusing not only what is, but on what might have been -- designs that were ultimately unrealized. Through interview and visits with local artists and designers, students will also learn about the process of shaping public space, uncovering the myriad of ways that design decisions are political in nature. As a capstone to the course, students will create their own city plan -- identifying and researching a chosen social or physical challenge the city faces, then developing a proposal that would address their chosen issue. These design proposals will then be enacted using augmented reality. Like a layer of invisible ink, these projects will form a phantom city over the physical realities that surround us, displaying the dramatic potential of the imagination.

Type:

Creativity and Innovation

• CI-127 Visual Perspectives: Coastline, Symmetries and Illusions

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

How do you measure the length of a coastline? How much symmetry is possible? What is an impossible object? How did the Mayans measure proportions? In this course, students will delve into these and other questions with a visual theme. While some will be clear-cut, others will be open-ended and require some choices, estimates or assumptions to be made. Throughout, the emphasis will be on creative problem solving.

Type:

Creativity and Innovation

- **CI-129 Elements of Attraction- Supply and Demand**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The intent of this course is for students to examine and effectively express in writing their ideas on creativity and to inspire undergraduate students to exceed their current levels of learning. Students will learn to meaningfully integrate course content into long term-retained useful skills through applied creative collaborations. This course is based on the idea that exposure and insight development will enable students to better visualize themselves in their desired fields and make informed choices within the variety of options available to them. The focus of the course will help students to assess their personal interests and strengths as they plan for their own educational and professional futures.

Type:

Creativity and Innovation

- **CI-131 Off to the Future: Leadership Through Compromise**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Some past political issues were resolved with great success (the Compromise of 1820), and some resulted in great failures (the US Civil War). In this course, students will study noteworthy political dilemmas of the past, identify the major problem solvers and examine the art of compromise. These investigations will provide guidance and inspiration for students to develop innovative and creative solutions to present day political problems such as climate change, immigration, Social Security, income distribution, higher education affordability, and homelessness. Students will work in teams and propose creative and innovative solutions that will convince the affected interest groups favorably, represented by teams of other students in the class, and result in compromises solving tomorrow's problems today.

Type:

Creativity and Innovation

• CI-133 Franklin and the American Experiment

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

What made Benjamin Franklin such a creative force in American history? We will explore the many facets of Franklin's life (printer, writer, scientist, statesman) and learn about Benjamin Franklin's political and diplomatic ventures, and will recreate some of his scientific experiments.

Type:

Creativity and Innovation

• CI-135 The Design of Everything

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will explore a selection of the genius personalities and their creative work in 5 distinct areas of human creative endeavor; art, science, nature, technology and the built environment. The course explores the underlying similarities in the process of their discovery, invention and creativity across the disciplines. Studying such names as Newton, Warhol, Hawking, Jobs, Gaudi and Banksy, students will uncover the process of design through research, analysis, synthesis, iteration and error. In class group projects will allow a hands-on opportunity to create.

Type:

Creativity and Innovation

- **CI-137 Re-write for Rights: Drafting a New US Constitution**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The American Constitution is an important document, framing the basis for our lives and the lives of our neighbors. Yet it is also a very old document, which may be seen as lacking when it is compared to newer constitutions from around the world, even places that we may regard as undeveloped. In this class we will study many constitutions and also talk to many people to craft a new constitution that reflects contemporary American society and its values.

Type:

Creativity and Innovation

- **CI-139 Creating, Promoting, and Participating in the Literary Arts**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

With the launch of Boston's new Literary Cultural District, we have renewed cause to celebrate the history and industry of literature in our city. This course will immerse students in the world of literary culture and its many branches: writing, editing, reviewing, and publicity. Students will practice the art of creative writing, and learn how writers find publishing venues, how authors build platforms for their work, and how literature reaches the public through readings, social media, book trailers and other marketing campaigns, authors interviews, and reader reviews. Various industry professionals, authors, editors and publicists will speak to the class about the artistic and business opportunities, trends, and futures of literature and literary publishing. Students will apply their knowledge and interests to a variety of projects, including book reviews, author interviews, social media campaigns, literary events, and other collaborative projects. We will also work as a class to launch a new digital literary journal at Suffolk.

Type:

Creativity and Innovation

Note:

Students with 30+ transfer credits are exempt from this requirement.

Major Requirements Minimum: 8 courses, 32 credits

Complementary Major Requirements, Minor Requirements, and Free Electives: credit varies

Minimum Total Credits Required for Degree Conferral: 126 credits

Note:

Courses may also count toward major if taken at appropriate level.

Some degree programs exceed 126 credits.

Social, Cultural, & Global Perspectives: 1 course, 3-4 credits

Choose one course from those listed below:

- AS-100 Introduction to Asian Studies: Culture, People, Ideas

Credits:

4.00

Description:

An interdisciplinary introduction to Asian Studies will touch upon the history, politics, economics, philosophy, geography, arts, and cultures of Asia. Sample topics include political economy, religious and cultural exchanges, international relations, Asian experience in America, and the role of Asia in the twenty-first century. Students will develop conceptual frameworks for exploring the subjects covered by the Asian Studies curriculum.

Term:

Offered Both Fall and Spring

Type:

Asian Studies,Cultural Diversity Opt B,Humanities & History,Humanities Literature Requirement,Divers

- **AS-500 Asian Studies Internship**

Credits:

4.00

Description:

Engages in an internship in a business or non-profit organization that deals with Asia or an Asian American community. Students may complete the internship either in Asia or in the U.S. Students will complete appropriate exercises and reports to document their learning.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement,Global Engagement Experience,Diverse Perspectives

- **BLE-325 Global Business Ethics**

Prerequisites:

BLE-215, PHIL-119, PHIL-120, PHIL-123 or PHIL-127

Credits:

3.00

Description:

Surveys business ethics as they transcend the diverse perspectives of global business. Explores current global ethics standards and values, ethical challenges, controversies, convergence and trends. Students explore famous global business cases through films, websites and independent research. Emphasizes identification and resolution of global business ethical issues within the context of ethical decision-making and sustainability. Analyzes corporate social responsibility ; hence, transforming global business ethics through business.

Type:

Diverse Perspectives

- **CI-204 Prague: Castles to Barbwire**

Prerequisites:

At least 24 credits earned.

Credits:

3.00

Description:

Prague offers students a more recent view into history and will serve as a backdrop to learning Design Thinking. The curriculum will use Czech and Central European cultural features as the inspiration for learning the creative process, skills that can be applied broadly and globally across disciplines. WWII and its fall to Communism left the Czech Republic undamaged. Artists played a vital part in the country's rise to a Republic during the Velvet Revolution. These dissidents, including writers, actors, artists and musicians were innovators who were the catalyst for change. One could say that creative minds changed this country. This course is designed to demystify the creative process by introducing the creative practice as a disciplined approach to problem solving and innovation requiring research. This one-month study abroad experience will offer a more worldly insight to the significance of developing skills where divergent thinking and risk taking are one of many key tools in learning to generate new ideas. Travel fee covers accommodations, transfers, some meals and cultural visits. Airfare and tuition not included.

Type:

Creativity and Innovation,Diverse Perspectives,Global Engagement Experience,Expanded Classroom Requi

- **CJN-216 Intercultural Communication**

Credits:

4.00

Description:

An examination of communication variations and cultural viewpoints and their impact on cross-cultural communication. A special emphasis is placed on rituals and message patterns in non-Western cultures.

Term:

Offered Both Fall and Spring

Type:

Cultural Diversity Opt B,Diverse Perspectives

- **CJN-219 Rhetoric of Protest and Reform**

Credits:

4.00

Description:

Examines the persuasive strategies of social reform movements with special emphasis on the civil rights', women's rights, and gay rights movements in the United States.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt A,Humanities & History,BSBA SOCIAL CHANGE,Diverse Perspectives

- **CJN-301 Documentary Film and the Image of Conflict in the Middle East**

Credits:

4.00

Description:

The course focus is on some of the divisions and conflicts within Israeli society. Students analyze and compare mainstream media discourse to alternative representations in documentary film. Analysis also covers media representation of the Israeli-Palestinian conflict.

Term:

Occasional

4.00

Description:

A critique of the circulation of media goods and ideologies from both a cultural and political/economic perspective. Topics include global Hollywood, the images of Muslim women in transnational media, the information society, and global social movements.

Term:

Offered Spring Term

Type:

Cultural Diversity Opt B,BSBA SOCIAL CHANGE,Diverse Perspectives

- **EDUC-315 Strategies for Emerging English Learners**

Credits:

4.00

Description:

This course examines the specific needs and challenges of the various language and cultural groups in schools. Topics include: theories of 1st and 2nd language acquisition, strategies for teaching academic content, modifying instruction in the mainstream classroom, creating classroom cultures that invite all students into learning, the role of advocacy and professional collaboration in ESL, and analysis of policies related to assessment and placement of English Language Learners.

Type:

Diverse Perspectives, Social Science

- **ENG-216 World Literature in English**

Prerequisites:

WRI-102 or WRI-103

Credits:

4.00

Description:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

Term:

Offered Both Fall and Spring

Type:

Cultural Diversity Opt B, Humanities Literature Requirement, Diverse Perspectives

- **FR-205 The Francophone World**

Prerequisites:

FR 202 or Instructor's consent

Credits:

4.00

Description:

Explores the francophone world through the study of short stories, print media, and film, by engaging with the rich textured and diverse francophone literary canon. Teaches advance notions of French grammar, write compositions, and the art of conversation related to cultural themes.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt B,BA FOREIGN,Diverse Perspectives

- **GVT-208 Politics / Religion**

Credits:

4.00

Description:

This course explores what major religions say about the status and responsibilities of the state and how, in turn, selective states have, in theory and practice, structured the place of religions in political life. Particular attention is given to issues of politics and religion in the United States. Cultural Diversity A

Type:

Cultural Diversity Opt A,Social Science,BSJ SOCIAL SCIENCE,Diverse Perspectives

- **GVT-359 Hockey, International Development & Politics**

Credits:

4.00

Description:

This class examines the way in which national identity, global and regional economics and international development intersect. It uses the professionalization of the sport of hockey and its subsequent spread around the globe as its case. It will look at the rise of the pro game, the way in

which it shapes national identity in the Canadian case, the way in which the pro business model has changed in response to broad socio-economic changes in North America and geo-political shifts around the globe, especially in Eastern Europe and the Former Soviet Union.

Type:

Social Science,Diverse Perspectives

• GVT-360 Elections and Voting

Credits:

4.00

Description:

How are elections administered in the United States? Do Americans have confidence in the electoral process? Should they? Why or why not? This course will examine elections in the United States in detail -- from how they are funded to how they are administered to how voters behave. Students will have a choice of either serving as poll workers during the November election or organizing and conducting research of potential voters. Students will gain hands-on experience in actual research design, election administration, and non-partisan get-out-the-vote activities. In addition, students will gain a deeper understanding of the relationship between attitudes, opinion, and voting behavior in American politics and institutions. ECR

Type:

Humanities & History,Social Science,BSJ SOCIAL SCIENCE,Diverse Perspectives

• GVT-391 Canada: Multicultural Politics

Prerequisites:

GVT 110/120 or Instructor's permission

Credits:

4.00

Description:

This course examines the Canadian model of incorporating diverse communities into its constitutional and political framework, including the founding British North American Act of 1867, the 1982 Constitution Act, and two later attempts at constitutional reform. Canada's role in balancing two official languages, English and French, is discussed, as is its recognition of a First Nations native-governed territory in the Arctic. This course introduces

to the Canadian polity and compares its parliamentary system with the U.S. separation of powers system. Prerequisites: GVT 110, GVT 120 or instructor's consent. Normally offered alternate years. Cultural Diversity B

Type:

Cultural Diversity Opt B, Social Science, BSJ SOCIAL SCIENCE, Diverse Perspectives

- **GVT-467 Comparative Social Movements**

Prerequisites:

Junior status

Credits:

4.00

Description:

This class examines the political ramifications of social movements primarily but not exclusively within the United States. It looks at ideology, beliefs and mechanisms of mobilization. Another important focus is an analysis of non-white social movements in this country and their impact on domestic politics. Among the movements to be examined are: the Pan-African movement 1919-1939 which will, to some extent, take us outside this country; the U.S. Civil Rights Movement 1955 to 1969 which covers the rise of the Black Power movement; and the U.S. Labor Movement 1900 to 1955 in terms of non-white influence on its programmatic goals. Normally offered alternate years. Cultural Diversity B

Type:

Cultural Diversity Opt B, Social Science, BSJ SOCIAL SCIENCE, BSBA SOCIAL CHANGE, Diverse Perspectives

- **HST-100 Introduction to Asian Studies: Culture, People, Ideas**

Credits:

4.00

Description:

An interdisciplinary introduction to Asian Studies will touch upon the history, politics, economics, philosophy, geography, arts, and cultures of Asia. Sample topics include political economy, religious and cultural exchanges, international relations, the Asian experience in America, and the role of Asia in the twenty-first century. Students will develop conceptual frameworks for exploring the subjects covered by the Asian Studies curriculum.

Offered Fall Term

Type:

Cultural Diversity Opt A, Humanities & History, Humanities Literature Requirement, Diverse Perspectives

- **P.AD-201 Social Change**

Credits:

3.00

Description:

This course will examine social change in the U.S. and abroad. The course will also examine the role of business, nonprofits, and the public sector in addressing social problems. Topics studied may include the Industrial Revolution, the civil rights movement, the women's movement, environmentalism, and the gay and lesbian movement.

Type:

- **P.AD-H201 Honors Social Change**

Credits:

3.00

Description:

This course will examine social change in the U.S. and abroad. The course will also examine the role of business, nonprofits, and the public sector in addressing social problems. Topics studied may include the Industrial Revolution, the civil rights movement, the women's movement, environmentalism, and the gay and lesbian movement.

Type:

Diverse Perspectives,BSBA SOCIAL CHANGE,Honors

- **PHIL-120 Ethics and Civic Life**

Credits:

4.00

Description:

In this class you will be introduced to the perspectives and methods of politics, philosophy, and economics and see how these three disciplines present distinct but interconnected dimensions of current social and political issues.

Type:

Diverse Perspectives

- **PHIL-229 Eco-Feminism**

Prerequisites:

PHIL 119, or PHIL 123, or PHIL 127

Credits:

4.00

Description:

Examines the political, social, and ecological problems facing us as a global community. Having its roots in feminist theory and deep-ecology, eco-feminism provides a critical framework for ecological responsibility and accountability. Writings from eco-feminist thinkers and environmental activists around the world will be used to highlight the philosophical and political conflicts and challenges, including globalization and loss of biodiversity, global warming, international human rights, the relationship of gender and nature, and modes of redress for eco-justice and sustainable development.

Type:

Diverse Perspectives

- **PHIL-261 Eastern Philosophy**

Credits:

4.00

Description:

The exposition and critical evaluation of Hinduism, Buddhism, Confucianism, Taoism, and Islam. Special attention is given to foundation principles as well as to the similarities and differences of each of these philosophies to basic ideas in Western philosophy. 1 term - 4 credits. Normally offered alternate years. C b

- **PHIL-267 Chinese Philosophy**

Credits:

4.00

Description:

A survey of the main developments in Chinese Philosophy. The course begins with the early dynastic concept of humanism and then turns to Confucius and Mencius. Having developed the central Confucian doctrines, students next examine the Taoist response to Confucianism in the writings of Lao Tzu and Chuang Tzu. The course then considers Zen Buddhism, which is called Ch'an Buddhism in China, where it originated. In particular, students study the concept of sudden enlightenment before turning to the Neo-Confucian scholars.

Term:

Occasional

Type:

Cultural Diversity Opt B,Diverse Perspectives

- **PSYCH-243 Organizational Psychology**

Prerequisites:

Take PSYCH-114;

Credits:

4.00

Description:

Focuses on diversity concerns in various aspects of the psychology of the workforce. This includes job analysis, recruitment, selection, evaluation, training, retention, and termination. Employee morale, well-being, stress, and hardiness are considered.

Type:

Cultural Diversity Opt A,Social Science,Diverse Perspectives

- **RS-111 Introduction to World Religions: Western Traditions**

Credits:

4.00

Description:

This course will explore the comparative history and structure of Western religious traditions, broadly understood, and their impact on other world religions, while attempting to recognize the similarities and the differences among them. Traditions to be studied include Greek and Roman religion, the monotheistic faiths (Judaism, Christianity, and Islam, as well as Zoroastrianism, Sikhism and Bahaism). We will also explore the impact of the Western religions on indigenous traditions, such as African religion, Native American religion, and Pacific Island religion. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. 1 term - 4 credits. Normally offered every year.

Type:

Diverse Perspectives

- **RS-112 Introduction to World Religions: Eastern Traditions**

Credits:

4.00

Description:

This course will examine a variety of Eastern religions, including Hinduism, Buddhism, Jainism, Confucianism, Taoism, and Shintoism. Possible connections to be explored will be the impact of these traditions on others, such as Pacific Islands and African religion, as well as the growing place of Eastern religion in the West. This course will explore the history and structure of each tradition, while attempting to recognize the similarities and the differences among them. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. Normally offered every year. Cultural Diversity B

Type:

Cultural Diversity Opt B,Asian Studies,Diverse Perspectives

- **SIB-550 Global Travel Seminar**

Credits:

3.00

Description:

An in-depth analysis of timely special issues in international business. Specific topics are announced when the course is scheduled.

Type:

- **SF-190 Asia in America Fiction and Fact**

Credits:

4.00

Description:

With a focus on some selected ethnic groups from Asia, Asia in America studies the history and current status of Asian Americans in Boston and other parts of the country. We will examine the major reasons why these immigrants chose to leave their home country as well as their expectations and experiences here in America. We will also discuss the issues Asian immigrants have faced in this adopted home as well as the connections and conflicts among different ethnic groups or even within the same ethnic group due to political and socio-economic reasons. The course will include some level of community engagement, through Chinatown tour and service, which may enable us to have a direct contact with the Asian American population and reflect on what is being discussed in class. Through this course, we hope to gain a better understanding of the racial and cultural history of the country and arrive at a deep appreciation of the dynamics of cultural interactions in the twenty-first century. The course fulfills the SCGP requirement.

Type:

Cultural Diversity Opt A, Global Engagement Experience, Diverse Perspectives, Expanded Classroom Requir

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

Type:

Diverse Perspectives

- **SOC-227 Race in American Society**

Credits:

4.00

Description:

Despite the election of Barack Obama as President of the United States, race remains one of the most divisive forces in U.S. society. While many of us struggle against racism, racial classification continues to affect where we live, where we work, and how we see ourselves. Racial classification affects our access to health care and our encounters with police officers. Distorted images of racial groups fill television and movie screens. Appeals to racism and fear of foreigners are dominant themes in elections to state and national offices. This course examines the formation and re-formation of racial classifications: how particular groups become racially identified, how these classifications change over time, and how conflicts over race have shaped American society. The meanings of race, as seen from a variety of perspectives, will be a consistent theme throughout the course.

Term:

Occasional

Type:

Cultural Diversity Opt A,Diverse Perspectives,Cultural Diversity Opt B

- **SOC-228 Cultural, Global and Social Perspectives**

Credits:

4.00

Description:

Enables students to examine, as well as develop an awareness and appreciation of, diversity within today's society. Providing an overview of the major racial, ethnic, and cultural groups in the U.S., the focus is on the ways in which cultural awareness enhances professional helping relationships and improves the operation of human services systems.

- **SPAN-290 Advanced Composition & Conversation**

Prerequisites:

Prerequisite: Spanish 202, 203 or 250 or Instructor's consent

Credits:

4.00

Description:

Develops written and oral skills in various contexts and registers. Emphasis on strengthening written skills and learning to speak clearly and persuasively in Spanish. Short texts and audio-visual materials provide the basis for classroom activities which include regularly assigned essays, group discussions and debates.

Term:

Offered Fall Term

Type:

BA FOREIGN,Diverse Perspectives

- **SPAN-301 Spanish Culture and Civilization**

Prerequisites:

Spanish 202, 203 or 250. Spanish 290 or 300 are strongly recommended

Credits:

4.00

Description:

Examines the civilization and culture of Spain highlighting its historical development and cultural manifestations from pre-historic times to the nineteenth century. Students improve their four skills through activities that include discussions, oral presentations, and writing assignments based on reading and films.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, BA FOREIGN, Diverse P

- **SPAN-302 Indigenous and Colonial Latin America**

Prerequisites:

Spanish 202, 203 or 250 or Instructor's consent. Span 290 or 300 strongly recommended.

Credits:

4.00

Description:

Introduces students to the complexity Latin America by examining its roots in pre-Columbian America and the impact of Spanish exploration and colonization. Places emphasis on cultural, economic, historical, philosophical, political and religious patterns that define the region. Includes class discussions, oral presentations, and writing assignments based on reading and audio-visual material.

Term:

Alternates Fall & Spring

Type:

- **SPAN-315 Business Spanish**

Prerequisites:

SPAN 290 or SPAN 300 or Instructor's consent.

Credits:

4.00

Description:

Integrates language learning with culture via business context of the Hispanic world. Spanish for banking and finance, marketing and advertising, and international commerce are highlighted. Students increase their cross-cultural understanding and written and oral proficiency in business Spanish through a wide range of assignments.

Type:

Diverse Perspectives

• SPAN-390 Introduction to Latin American and Caribbean Literature

Prerequisites:

SPAN 300; SPAN 302 is strongly recommended

Credits:

4.00

Description:

Examines authors from Latin America and the Caribbean in their historical and cultural contexts. Reading and class discussions consider the relationship between the writer and society by covering such topics as colonialism, the oral tradition, modernism and the emergence of new narratives in the twentieth century. The Inca Garcilaso, Sor Juana, Carlos Fuentes, Rigoberta Menchu, and Pablo Neruda are among some writers studied.

Term:

• THETR-260 Broadway Musicals

Credits:

4.00

Description:

This course is a survey of American musical theatre from its roots in the mid-19th century to the present. It provides the analytical tools and historical insight to more fully appreciate Broadway's greatest musicals and musical theatre artists. Students will explore the ways in which American forms of popular entertainment helped to shape Broadway musicals from their infancy through their adulthood. The course also explores the ways in which musicals provided opportunities for African-Americans, women, immigrants, and the GLBT community.

Term:

Offered Fall Term

Type:

Cultural Diversity Opt A, Humanities Literature Requirement, Diverse Perspectives, Vis. & Perform Thry

- **THETR-267 Introduction to Theatre: Contemporary American**

Credits:

4.00

Description:

This course provides a formal introduction to the theories and practices strategically used by American theatre artists after the Second World War. Special emphasis is placed on theatre artists exploring issues of cultural identity including works by GLBT, African-American, Asian-American, and Latin American playwrights. These playwrights may include Tony Kushner, Paula Vogel, Suzan-Lori Parks, Adrienne Kennedy, August Wilson, David Henry Hwang, Philip Kan Gotanda, Eduardo Machado, and Melinda Lopez. The course will also provide an introduction to trends in post-modern theatre practices related to emerging work of the auteur director, solo performers, and interdisciplinary collectives. Satisfies a core requirement for Theatre majors. Normally offered alternate years.

Term:

Bachelor of Science in Journalism

The Bachelor of Science in Journalism is available to Journalism and Public Relations majors only.

The BSJ degree requires the successful completion of the following courses:

Core Requirements: 13 courses, 50-52 credits

- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Ethical & Philosophical Inquiry](#)
- [Social Science](#)
- [Humanities/History](#)

Science, Technology, & Engineering (STE): 2 courses and corresponding laboratories where applicable, 8 credits

Choose two STE courses (and corresponding laboratory where applicable) from the list below. Courses do not need to be in a sequence. In the case of a course that is a lecture plus a lab, the student must complete both components to earn credit for the STE requirement.

Biology:

- BIO-104 Environmental Biology

Prerequisites:

BIO 101 and BIO L101, can also be taken concurrently BIO L104 must be taken concurrently

Credits:

3.00

Description:

An introduction to basic evolutionary, behavioral and ecological principles. Readings and discussions emphasize the ways that humans are affected by ecological processes and principles as well as how humans and their technology affect ecosystems. May not be taken by Biology majors or minors. This course will not fulfill requirements for a major or a minor in Biology. It is intended for non-biology majors as a follow-up to Biology 101. 3 hours lecture. Days Only. Madrid Campus only.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• BIO-L104 Environmental Bio Lab

Prerequisites:

BIO-104 must be taken concurrently

Credits:

1.00

Description:

Exercises and field trips designed to complement and demonstrate the ecological principles developed in the lecture section. The lab emphasizes the scientific method and employs long term group projects. Madrid Campus only.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• BIO-111 Introduction to the Cell

Prerequisites:

Must take BIO L111 concurrently

Credits:

3.00

Description:

Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L111 Introduction to the Cell Laboratory**

Prerequisites:

Concurrently with BIO 111

Credits:

1.00

Description:

Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-114 Organismal Biology**

Prerequisites:

Must take BIO L114 concurrently.

Credits:

3.00

Description:

Rigorous introduction to organismal biology emphasizing evolution, phylogenetics, form, and function. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L114 Organismal Biology Laboratory**

Prerequisites:

Must take BIO 114 concurrently

Credits:

1.00

Description:

A series of laboratory experiences in evolution, diversity, anatomy and physiology.

Term:

Offered Both Fall and Spring

Type:

- **BIO-201 Biology's Big Questions**

Prerequisites:

Non Science Majors Only.

Credits:

4.00

Description:

This course seeks to answer five current questions from all levels of biology, from the subcellular to the ecosystem level. Topics will be discussed in the context of genetics, evolution, and ecology. We will focus on the process of doing science, including how scientists evaluate ideas and communicate their findings. Emphasis will be placed on topics in biology that impact daily life.

Type:

SCI TECH ENGNR

Chemistry:

- **CHEM-105 Chemical New Product Development**

Prerequisites:

ENT 101

Credits:

4.00

Description:

This course addresses the crucial intersection between chemistry and business, and the impact of these fields on society. It provides an introduction to important chemistry concepts and practices of business management. Primary focus is on understanding the chemistry principles behind some of the consumer products in our everyday lives, and using this knowledge to create and evaluate ideas for new products. The course also introduces the business aspects involved in the development and marketing of new products. An important component of the course is in making effective

presentations; this component concludes the course, culminating in team presentations of a new chemical product to panel of executives and peers. This course satisfies the Sawyer Business School Science requirement.

Type:

SCI TECH ENGR

- **CHEM-106 Biotechnology & Its Applications in Medicine, Agriculture, Law**

Credits:

4.00

Description:

Introduces the latest discoveries and applications of biotechnology. Topics include genetically modified food, stem cells, genetic testing, cloning, and forensics. A combination of lectures, discussions, documentaries, mock congressional hearings, and hands-on activities will provide insight into the numerous medical, social, legal, and ethical issues surrounding this technology.

Type:

SCI TECH ENGR

- **CHEM-111 General Chemistry I**

Prerequisites:

Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:

3.00

Description:

Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **CHEM-L111 General Chemistry I Lab**

Prerequisites:

Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **CHEM-201 Caveman Chemistry**

Credits:

4.00

Description:

Caveman chemistry explores chemical technologies that have led to modern industrial civilization, with an emphasis on the chemistry we encounter in everyday life. Although this is not a laboratory course, it is very much a course about doing things. We will focus on the process of doing science, including how scientists evaluate ideas and communicate their findings, through literature and hands-on activities.

Type:

SCI TECH ENGR

Computer Science:

- **CMPSC-F107 Ants, Rumors and Gridlocks**

Prerequisites:

Math placement level of 2 or above or any MATH course at the level 100 or above

Credits:

4.00

Description:

Do viruses and rumors spread like forest fires? How do ants cooperate? Do spoken languages and biological species evolve in a similar way? Ants, Rumors, and Gridlocks exposes students to introductory aspects of computational science by addressing and answering these and many other questions. Students use and modify virtual experiments preprogrammed in the NetLogo programming language to investigate these topics and others in Social Sciences, Biology, and Environmental Science. No prior knowledge of computer programming or NetLogo is required.

Type:

SCI TECH ENGR,Quantitative Reasoning

Electrical Engineering:

- **ECE-288 Measuring the World**

Credits:

4.00

Description:

The world is addicted to quantifying the essence of everything, from personal IQ, to the speed of a baseball, to our healthiness, or our chances of winning the lottery. Behind most of these numeric values exists a science of measurement. Some of this is referenced to international standards, such as for length, time, weight, or temperature. Others are more arbitrary and subjective, such as ranking Olympic performance in gymnastics, beauty pageants, or popular responses as found in the game show Family Feud. A third category includes controversial areas, such as measuring whether a person is lying when interrogated, or using hype rather than reality to market products. Sometimes statistics are used to predict sports outcomes, such as in the annual March Madness NCAA basketball brackets. Finally, in a world subject to fraud and deception, it can be essential to distinguish legitimate from counterfeit items, such as in money, art, collectibles, and historical documents. Don't get hoodwinked! This course examines all of these, starting with how measurements have been made throughout history, along with a full deck of entertaining terms used during the ages. This may help you sort out your weight, whether given in pounds, kilos, or stones. Often these terms will provide insights into how people lived in different eras. We will also look at some of the technologies currently available to provide these measurements, and unravel the complexities of various sensors that are used. As we consider the meaning of accuracy we may become less naive about how much confidence to ascribe to the results given us. Hovering around all of these measurements should be the question of validity - are they meaningful, useful, or misleading? And the impact they have on society - whether they steer behavior more powerfully than one might originally suspect. Each student will also be given an opportunity to become an expert in an area of measurement of personal interest. By the end o

Type:

SCI TECH ENGNR

Engineering Science:

- **ENS-103 Introduction to Engineering**

Prerequisites:

ENS L103 MUST BE TAKEN CONCURRENTLY.

Credits:

3.00

Description:

This course provides exposure to engineering practice, with particular focus on electrical engineering components such as circuit elements and systems. It seeks to go beyond the mathematics and provide an intuitive appreciation of functional devices. Examples taken from a broad swath of technological history illustrate significant crossroads, decisions, and inventiveness. Emphasis is placed on learning to think as an engineer - assessment of problems, candidate solution tradeoffs, and implementations. Frequent exercises in creative engineering design will be used. Students will be required to design several elementary devices, such as a magnet, a capacitor, a timing device, and a motor, which they will enter in a competition for overall strength, compactness, accuracy, or speed. Sometimes assignments relate to "survival on an island" concerns, such as communication or drinking water. Students also learn about reverse engineering by selecting, building, troubleshooting, and presenting an electronic

kit of their choice. A term paper determining the engineering behind a topic of their choice will also be written and presented. On occasion (see ENS L103) there will be team competitions between various smaller groups in the class.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **ENS-L103 Intro to Engineering Lab**

Prerequisites:

Must be taken Concurrently w/ ENS-103

Credits:

1.00

Description:

The Lab is designed to provide opportunities to gain familiarity with engineering tools. Students will be introduced to parts (e.g. learn the resistor color code), test equipment (multimeters, prototyping trainers, signal generators, and oscilloscopes), and construction techniques (wiring, soldering, troubleshooting). Although it varies from year to year, Class Projects can be built during the Lab sessions. In the past these have included a 25 Watt electric generator, various door lock systems (both mechanical and electronic), and an AM transmitter and receiver (all projects made from scratch). It is likely that 2010-2011 may introduce some robotic creations for a competition. Electronic kits and motors can also be built and serviced in the Lab. There is an adjoining machine shop, which can be utilized (with supervision), for fabricating items. Individual creativity is encouraged, and informal problem solving sessions occasionally occupy lab time. However, the lab is accessible outside of the traditional scheduled time.

Environmental Science:

- **ENVS-111 Majors' Environmental Science**

Prerequisites:

Open to Environmental Science and Environmental Studies majors, or by permission of instructor. Must be taken concurrently with ENVS L111

Credits:

3.00

Description:

Applies the fundamentals of science to environmental issues. Topics include population dynamics and resources, environmental degradation, ecosystems, geologic processes, deforestation, biodiversity, climate change, air, soil, and water resource management, and pollution and risks to health. This course is open to all environmental science and environmental studies majors and minors. Other students will be admitted by permission of the instructor. Must be taken concurrently with ENVS L111. 3 hours lecture. 1 term. 3 credits. Normally offered fall evenings.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **ENVS-L111 Majors' Environmental Science Lab**

Prerequisites:

Open to Environmental Science and Environmental Studies majors, or by permission of instructor. Must be taken concurrently with ENVS 111

Credits:

1.00

Description:

Laboratory exercises are used to illustrate topics covered in ENVS 111. Field testing and analysis of environmental samples. Field trips are required. This course is required for all environmental science and environmental studies majors and minors. Concurrent enrollment in ENVS 111 is required. 3 hour laboratory. Normally offered fall.

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

• PHYS-152 University Physics II

Prerequisites:

PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

Credits:

3.00

Description:

This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

Term:

Offered Both Fall and Spring

Type:

- **PHYS-L152 University Physics Lab II**

Prerequisites:

PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **PHYS-153 University Physics III**

Prerequisites:

Take MATH-121 or MATH-165;

Credits:

3.00

Description:

This calculus-based course is the introduction of the topics of modern physics. It begins with special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom. Then Schrodinger's equation is introduced with use of wave functions,

particle box, barrier penetration, quantum mechanical tunneling, the Pauli Exclusion principle, the development of the periodic table, and the X-ray spectra. Development of solid state physics with bonding in molecules, band theory of solids and semiconductor behavior. The final topics cover nuclear physics, radioactivity, half-life, nuclear fission and fusion, medical uses of radiation, elementary particle physics and introduction to astrophysics.

Term:

Offered Fall Term

Science:

- **SCI-108 Introduction to Cancer Care**

Credits:

4.00

Description:

This course will introduce the students to the top ten U.S. adult cancers, as well as the most common pediatric cancers. Topics to be covered include cancer causes, detection, and prevention. Psychosocial aspects of being diagnosed with cancer and the role nutrition plays for cancer patients will be described. The course will also discuss the major treatment modalities for each cancer including radiation therapy, surgery, chemotherapy, and bone marrow transplants. The goals and objectives of the course will be met through the use of various teaching tools including but not limited to: PowerPoint presentations, videos, guest lectures, and a poster project with a presentation component. Cognitive assessment of the students will be accomplished through homework, quizzes, exams, and a group poster and oral presentation. Students with any type of academic background are welcome.

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGNR,NATURAL SCIENCE FOR BS

- **SCI-113 A Habitable Earth Within the Solar System**

Credits:

4.00

Description:

This course introduces non-science majors to concepts that are central to making our planet habitable. It presents Earth in context of the solar system with a broad view of global climate change and energy resources in a quest to better understand the workings our planet. This course on Earth and Planetary Science is suitable for students who may have taken their last science and math course several years ago, or are just curious about knowing facts on major issues that pertain to the future of our planet. Together with a reading component, this course aims to give students a flavor of how researchers think, investigate and develop conclusions that directly affect our political and economic future. Topics covered in this course range from the solar system to the study of search for other habitable Earth-like planets, search for extraterrestrial life, and evolution of life on Earth. Other

characteristics of this course are heavy use of audio-visual materials often including computer animations and simulations, in-class experiment demonstration, and intensive use of INTERNET-based resources.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGR

- **SCI-165 Inner Workings of Physics Universe**

Credits:

4.00

Description:

About 15 billion years ago, (data indicate) the big bang occurred and the universe was born. With it came physical laws and a spectacular array of consequences that lead to the universe as we know it. This non-lab , 4 credit course explores the inner workings of the physical universe in terms of the scientific inquiry which lead to Newton's laws, an understanding of energy, waves, light, electricity, atomic structure, chemical reactions, nuclear physics, particle physics, relativity, and the big bang theory. During the course, students will learn to make use of modern resources to access scientific and technical literature to research a scientific topic. They will learn to distinguish between science and technology (e.g. quantum mechanics and nanotechnology, the discovery of the Higgs boson and the large hadron collider that made it possible, etc.) and to understand how the science, technology, and engineering disciplines play a crucial role in recognizing and solving problems of society and the world that we share.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **SCI-171 The Built World: How Humans Engineer Environments**

Credits:

4.00

Description:

The most basic needs of humans have not changed - water, food, and shelter - but the means of meeting these needs has. In this course, we will examine how technology-driven societies operate by studying how cities are built and how they function. Topics will include water supply and distribution systems; transportation systems (including road and bridge design and construction); building design, construction, and operation (including skyscraper and sustainable building design), and waste removal systems (municipal and industrial wastewater removal and treatment, solid

waste removal and treatment). This is not a course about little gadgets and widgets; this is a course about big engineering marvels; and it emphasizes applications of science - how things work - rather than scientific theory.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGR

- **SCI-173 Geographic Information Science (GIS) The Power of Digital Maps**

Prerequisites:

SCI L173 Must be taken concurrently Knowledge of Windows type Application

Credits:

3.00

Description:

Geographic Information Science (GIS) link information (number of fire hydrants on a block) to features on a map (e.g., a point representing street address) that has a designated geographic location (as designated by global coordinates). Unlike paper maps, GIS software allows the production of interactive maps that allows the user to layer data, to indicate spatial patterns, to analyze trends, and to combine different features of the mapped area in novel ways. For example, a business person may wish to use GIS to determine the optimum location of retail outlet (based on the mapped demographics of a neighborhood), while an environmental engineer may use GIS to describe the location of outfalls to see how they correlate to areas of stream pollution. In this course, students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **SCI-L173 GIS Lab**

Prerequisites:

Must be taken concurrently with SCI-173

Credits:

1.00

Description:

This laboratory illustrates concepts and methods taught in SCI 173. In this lab students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **SCI-181 Science and Life in the 21st Century**

Credits:

4.00

Description:

This is a four credit, non-lab, science course that examines the central scientific problems confronting the 21st century. The course studies particular topics and teaches the necessary science around these topics to provide a good understanding of the issues. The topics currently are: Energy, Science and Economic Decisions, Sustainability of Life on Earth, Health and Science.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGR

• SCI-184 Contemporary Science and Innovation

Credits:

4.00

Description:

This is a 4 credit, project based science course that examines the central scientific problems confronting the 21st century. The course consists of lectures, class discussions, field trips, and in-class hands-on activities designed to familiarize the student with different concepts of the lectures. The current focus is on sustainable energy production. A final team project related to the course topics will be given. This is the version of SCI 183 without a separate lab component. Students who have taken SCI 183, L183 are not allowed to take this course.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGNR,NATURAL SCIENCE FOR BS

• SCI-201 Physics for Future Presidents

Credits:

4.00

Description:

This course presents a topical introduction to the key principles and concepts of physics in the context of the world events and natural phenomena that confront world leaders and that require informed decisions and responses. Energy, health, counter-terrorism, remote sensing, space programs, nuclear proliferation, and a host of other modern challenges have technological and scientific dimensions, the understanding of which is essential to avoiding disastrous policy decisions. This course considers the application of physics to these societal challenges. The material is covered at a level and pace that a future world leader should be able to handle; the emphasis is on the development of physical reasoning skills, and not on detailed, mathematical problem solving.

- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Ethical & Philosophical Inquiry](#)
- [Social Science](#)
- [Humanities/History](#)

Ethical & Philosophical Inquiry: 1 course, 4 credits

Choose one course from those listed below:

- PHIL-119 Ethics

Credits:

4.00

Description:

A systematic introduction to the major thinkers and their positions on the main issues of ethics, such as: What is morality? What are moral values? How should we live our lives? Are there objective, universal, absolute moral standards? If so, what are they, and what is their basis? 1 term - credits. Normally offered every year.

Term:

Offered Both Fall and Spring

• PHIL-120 Ethics and Civic Life

Credits:

4.00

Description:

In this class you will be introduced to the perspectives and methods of politics, philosophy, and economics and see how these three disciplines present distinct but interconnected dimensions of current social and political issues.

Type:

Diverse Perspectives

• PHIL-123 Social Ethics: The Good Life

Credits:

4.00

Description:

An examination of contemporary Western society, particularly in the United States, in relation to philosophical attempts to define the good life. Current books that exhibit a philosophical approach towards important contemporary social issues will be discussed, as well as classics in philosophy. Topics may include: civic virtue, consumerism, current events, economic justice, popular culture (film, music, television), religion and secularism, etc. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- **PHIL-127 Contemporary Moral Issues**

Credits:

4.00

Description:

A critical examination of a number of contemporary moral issues such as: abortion, affirmative action, animal rights, capital punishment, cloning, drug legalization, environmental ethics, euthanasia, genetic engineering, gun control, pornography, same-sex marriage, suicide, war and terrorism, etc. 1 term - 4 credits. Normally offered every year.

Art & Design:

- ADF-181 Ideas of Western Art I

Credits:

4.00

Description:

This course will survey the major concepts and issues of Western Art, from prehistoric to the Early Renaissance. Architecture, sculpture and paintings will be studied individually for their formal elements and visual importance, and also within their own aesthetic, historic and cultural context. Class discussion and visual analysis of works of art will encourage personal interpretation and critical thinking.

Term:

Offered Fall Term

Type:

Humanities & History, Humanities Literature Requirement

- **ADF-182 Ideas of Western Art II**

Credits:

4.00

Description:

This course will survey the major concepts and issues of Western Art, from Renaissance to contemporary art. Architecture, sculpture and paintings will be studied individually for their formal elements and visual importance, and also within their own aesthetic, historic and cultural context. Class discussion and visual analysis of works of art will encourage personal interpretation and critical thinking.

Term:

Offered Spring Term

Type:

Humanities & History, Humanities Literature Requirement

- **ADFA-306 Art & Culture of Asia, Africa, South America and Oceania**

Credits:

4.00

Description:

The coursework introduces students to the artistic and visual traditions from South and East Asia, Africa, Oceania and the Americas. In addition to the material culture of the particular region under study, the coursework will consider socio-political ideals, religious belief systems, and cultural principles that 'shaped' or informed the work and the ideology of civilizations beyond the Western hemisphere. Comparative analysis among non-western and western traditions will be used to critically analyze the salient points of influence, rejection and modifications of aesthetic affinities. Class lectures will be supplemented with museum seminars specifically the rich non-western collections at the MFA, Boston. Guided field trips to the museum will allow students to formally analyze the works of art discussed in lecture and text material.

Term:

Occasional

Type:

Cultural Diversity Opt B,Cultural Diversity BFA,Asian Studies,Humanities & History,Expanded Classroom

• ADF A-344 Islamic Spain: Art and Architecture

Credits:

4.00

Description:

This course examines the Islamic influence in Spain through its art and architecture from its formative period in the eighth century through the fourteenth century and beyond to see the continuity and change of the Mozarabic style found locally in Madrid, Cordoba, Seville, and Granada. Students will use formal analytical skills to critically explore works of art and architecture and will cultivate a 'lens' through which they will facilitate their understanding of the classic and contemporary material culture and fabric of Spain. Class meetings will be supplemented with field trips. Offered as needed.

Type:

Humanities Literature Requirement,Humanities & History

• ADF A-345 Art of India

Credits:

4.00

Description:

A chronological survey of South Asian art (2300 BCE - 1750 CE) including India, Pakistan, Bangladesh, and Nepal. Examination of art and architecture from their first and still mysterious beginnings in the Indus Valley, through the great masterpieces of Buddhist and Hindu art to the coming of Islam, including the eclectic culture of the Mughal courts and the golden age of miniature paintings. Consideration is given to the multiple aspects of patronage in Indian culture - religious, political, economic - through case studies of individual works of art and architecture. (Formerly HUM 345)

Type:

Humanities & History,Cultural Diversity Opt B,Humanities Literature Requirement,Asian Studies

• ADFA-346 Art of the Silk Road

Credits:

4.00

Description:

This course will examine the arts and architecture of the Silk Road, with particular attention to art of Buddhism, Hinduism, and Islam. Historically, Inner Asia was marked by trade routes (the 'Silk Route' or 'Silk Road') which crisscrossed this vast landscape of deserts and mountains between China, India, the Iranian Plateau and the Mediterranean world. In addition to the art of these cultures, we will also look at the records of early Chinese travelers through Central Asia. (Formerly HUM 346) Offered as needed.

Type:

Humanities & History,Cultural Diversity Opt B,Humanities Literature Requirement,Asian Studies

• ADI-221 History of Furniture & Architecture I

Credits:

4.00

Description:

The goal of this course is the enhancement of the student's critical comprehension of historic styles and the impact they have on contemporary design solutions. The survey begins with the Egyptian period and provides an overview of the history of furniture and architecture through the mid-1700s, including ancient Greece and Rome, the Gothic and Renaissance, Baroque and Rococo periods. Emphasis will be placed on chronological periods, the visual characteristics of each style including regional idiosyncrasies, and the terminology germane to a study of furniture and architecture.

Term:

Offered Both Fall and Spring

Type:

Humanities & History, Humanities Literature Requirement

- **ADI-222 History of Furniture & Architecture II**

Prerequisites:

ADI 221

Credits:

4.00

Description:

A continuation of History of Furniture & Architecture I, this course will extend the investigation of furniture and architecture into the 20th century, while addressing issues concerning preservation, restoration, rehabilitation, and adaptive re-use. Drawing on the vast resources of the city of Boston and its environs, students will become actively involved in stylistic progression, local living history, and the benefits of preserving our past for future generations. Field trips will include visits to restored Federal, Victorian and Contemporary venues.

Term:

Offered Both Fall and Spring

Type:

Humanities & History, Humanities Literature Requirement

- **ADG-224 History of Graphic Design**

Credits:

4.00

Description:

The first part of the course will focus on the history of graphic design from prehistoric times to the Industrial Revolution, including the origins of graphic communications in the ancient world, the development of the alphabet and early printing and typography. The second portion will concentrate on the period from the late 19th century to the present, and will include the Arts and Crafts Movement, the various-isms and their influence on modern art, the Bauhaus and International Style, and contemporary visual systems and image making.

Humanities Literature Requirement

Philosophy:

- **PHIL-113 Critical Thinking and Argumentation**

Credits:

4.00

Description:

An introduction to non-formal methods of analyzing and formulating arguments, including treatment of such concepts/topics as: the nature of argument, induction, deduction, validity, soundness, aspects of language which tend to interfere with logical thought, definition, role of emotion, types of disagreement, and fallacies. The course also emphasizes the practical application of sound reasoning in both evaluating arguments and making arguments of one's own about matters of issues facing society. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

Type:

Humanities & History, Humanities Literature Requirement

- **PHIL-115 Introduction to Philosophy**

Credits:

4.00

Description:

A general introduction to the nature of philosophical analysis. Lectures, readings, and discussions will focus on representative issues and thinkers from the main areas of philosophy (such the nature of truth, reality, morality, politics, and religion). 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

Type:

Humanities & History, Humanities Literature Requirement

- **PHIL-210 History of Ancient & Medieval Philosophy**

Credits:

4.00

Description:

The study of philosophical thought from the period of the ancient Greek philosophers through the Medieval thinkers, including such philosophers as Socrates, Plato, Aristotle, Epicurus, Zeno, Parmenides, Pythagoras, Protagoras, Augustine, Aquinas, Anselm, and Abelard. An introductory course designed to equip the student with a well grounded understanding and appreciation of Philosophy. 1 term - 4 credits. Normally offered every year.

Term:

Offered Fall Term

Type:

Humanities & History, Humanities Literature Requirement

• PHIL-211 History of Modern Philosophy

Credits:

4.00

Description:

A study of the prominent modern thinkers, such as Descartes, Leibniz, Spinoza, Locke, Berkeley, Hume, and Kant. The course is an historical survey of the key concepts, problems and developments in modern philosophy including rationalism, empiricism, and skepticism. The following themes central to Modern philosophy will be addressed: the nature of reality; the limits of human knowledge; self and self-identity; mind and body; freedom in theory and practice; reason vs. sentiment in ethics. 1 term - 4 credits. Normally offered every year.

Term:

Offered Spring Term

Type:

Humanities & History, Humanities Literature Requirement

• PHIL-219 Philosophy of Art

Credits:

4.00

Description:

What counts as art? What is beauty? Are there objective standards of beauty? This course examines the nature of aesthetic experience, art, beauty, and creativity. Through the classic and contemporary readings, the students will be introduced to philosophical issues concerning the meaning of art, artistic representation, perceptions of art, interpretation, and criticism. Students will be encouraged to reflect on their own experience of art and explore the relationships among the artist, the audience, the artwork, and the world. 1 term - 4 credits. Normally offered every third year.

Type:

Humanities & History, Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **PHIL-250 Social & Political Philosophy**

Credits:

4.00

Description:

An examination of persistent debates in political and social philosophy, such as the meaning of property and welfare, the tensions between liberty and equality, censorship and freedom of expression, the relation of church and state, the possibility of political education and civic virtue, legitimacy of the state and revolution, war and problems of end and means, addressing historic injustice, such as racism, genocide, or sexism, among other topics. The class will focus on no more than two such themes. Students will read both classic and contemporary writings to address both the historical roots and the contemporary treatment of these questions. 1 term - 4 credits. Normally offered every year.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **PHIL-255 Science, Myth, and Society**

Credits:

4.00

Description:

Both mythology and science arise from the human need to explain the world, to understand its laws, and give an account of its origin. This course focuses on the controversial relationship between myth and science and explores their historical roots, their social influence and their respective views of reality, human nature, and origin of the universe. Both historical controversies and contemporary debates, such as evolution vs. intelligent design, will be considered. Topics in the philosophy of science, such as the nature and scope of the scientific method, will also be addressed. 1 term - 4 credits. Normally offered alternate years.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

• PHIL-260 Philosophy of Religion

Credits:

4.00

Description:

This course analyzes and interprets fundamental religious concepts and beliefs, examines the rational support for religious faith, and addresses the relation between religion and society. Fundamental questions concerning the nature and existence of God, salvation, and immortality will be explored, and for this the primary focus will be Western religious conceptions but may broaden to include other world religions. Other topics may include: whether all religions can be equally valid and true; the relation of religion and the state; the status of miracles; the history and psychology of religion; the conflict between religion and science. 1 term - 4 credits. Normally offered alternate years.

- [Accelerated Bachelor's/Master's Degree in Communication](#)
- [Honors](#)
- [Communication & Journalism Courses](#)

We offer an accelerated path for undergraduate Communication & Journalism (CJN) majors to obtain a master's degree in Communication.

Who is eligible

- CJN majors who are rising seniors at Suffolk with a GPA of 3.5 or higher in their major and overall.
- Students must meet all of the requirements of one of the undergraduate degree programs (BA, BS, BSJ) offered by the Department of Communication & Journalism. In addition, they must meet all of the requirements of one of the Master's of Communication degree concentrations.
- Applications follow the regular admission procedures; please note that applicants for the accelerated degree will have the GRE requirement waived.

Degree Requirements

1. Students admitted to this dual degree program must meet all the requirements of an undergraduate degree program within the department of Communication & Journalism.
2. Student must also meet all requirements for the Master's degree in Communication.
3. Students will take two CJNI graduate courses during their senior year; one during the fall semester and one during the spring semester. The two graduate courses taken during the senior year will count toward BOTH the undergraduate and graduate degree requirements. Credit hours will be awarded based on the graduate course description.
4. The graduate courses taken during the senior year will be determined by the Communication graduate program director.
5. Students are subject to the usual standards for academic standing, i.e., undergraduate standards for undergraduate courses and graduate standards for graduate courses.

Upon successful completion of all of the degree requirements, a student will receive a dual Bachelor's and Master's degree. The exact degree will be awarded based on the specific undergraduate program the student completes. A student may permanently exit the dual degree program and opt to graduate with a Bachelor's degree if all the requirements for a Bachelor's degree have been met. In this case, the graduate courses taken in the senior year will be counted as 4-credit courses applied toward the undergraduate degree requirements.

4.00

Description:

Building on skills acquired in CJN 2355, students use advanced equipment and production techniques to produce complex video projects, including fiction filmmaking. Projects cover various styles and genres, such as music video and film noir.

Term:

Offered Both Fall and Spring

Type:

- **CJN-3376 Public Relations II: Research**

Prerequisites:

CJN-2277 (Formerly CJN-277)

Credits:

4.00

Description:

Examines how research aids the public relations practice. Students learn research methods that address public relations planning and problem-solving. Assignments provide students with hands-on practice using research for a PR project.

Term:

Offered Both Fall and Spring

- **CJN-3377 Public Relations III: Strategic Writing**

Prerequisites:

CJN-2277(formerly CJN-277);

Credits:

4.00

Description:

Focuses on writing principles for public relations including the formulation of clear PR objectives, determining the knowledge of the target audience, and the development of key messages. Students apply these principles to common PR formats, including news releases, pitch letters, biographies, speeches, emails, digital content, and social media posts.

Term:

Offered Both Fall and Spring

- **CJN-3455 Production II**

Prerequisites:

CJN-2355(formerly CJN-355)

Credits:

4.00

Description:

Building on skills acquired in CJN 252, students will use advanced equipment and production techniques to produce complex video projects in a variety of styles and genres, such as music video and film noir.

Term:

Offered Both Fall and Spring

- **CJN-4455 Production III**

Prerequisites:

CJN-3455(formerly CJN-455)

Credits:

4.00

Description:

Builds on the theories and techniques developed in CJN 3455, focusing on the advanced concepts and skills needed to design and produce professional-level media content for digital distribution. Provides the opportunity to produce high-quality material for student media portfolios in various genres.

Term:

Offered Spring Term

- **CJN-4477 Public Relations IV: Campaigns**

Prerequisites:

CJN-2277(formerly CJN-277) and CJN-3377(formerly CJN-377) and Senior Standing.

Credits:

4.00

Description:

Examines typical public relations problems experienced by profit and not-for-profit organizations. Provides students with an opportunity to demonstrate their mastery of the skills, techniques, and knowledge of public relations by creating a comprehensive campaign plan for a community client.

Term:

2015-2016 Archived Catalog Information

American Studies

The American Studies minor engages students in the study of historical and contemporary U.S. identities, cultures, and societies. This program allows students to create an individualized course of study that draws on insights and methods from the arts, history, literature, and the social sciences. Each student must complete an introductory course, AMST-111 Defining America and Americans, and then may select four elective courses that relate in some coherent way. With his/her American Studies minor advisor, a student will identify a particular focus (e.g., an era, a topic, a theme, a region, a population, or a problem in American culture) that he or she wishes to explore closely.

There is no major available in American Studies.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Minor Requirements](#)
- [American Studies Courses](#)

Minor Requirements: 5 courses, 20 credits

Core Requirement (1 course, 4 credits)

- AMST-111 Defining America and Americans

Credits:

4.00

Term:

Occasional

Government

- **GVT-223 American Politics & Institutions**

Prerequisites:

GVT 110 or GVT 120 or instructor's permission

Credits:

4.00

Description:

This course will provide an examination of the institutions that are involved in the American policy-making process. The student will learn about the presidential, (as opposed to the parliamentary) system that exists in the United States. The course will focus on a relationship between the President and Congress and how that relationship impedes or facilitates the public policy process, including the budgetary process. The course will include a discussion of the president's role as head of the executive branch, and the implementation of congressional policies. Attention will be given to the role of the judiciary in the policy process. Normally offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-224 Introduction to Public Policy**

Prerequisites:

GVT 110 and GVT 120 or instructor's permission

Credits:

4.00

Description:

An introduction to the process by which public policies are made in the United States. The class will focus on agenda-setting and policy formulation at the federal level, and will include a discussion of the various actors in governmental institutions that impact public policy. Several policy issues will be used as examples to illustrate the process. Some comparisons will be made to state and local policymaking. Normally offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-243 American Constitutional Law**

Prerequisites:

not open to freshmen

Credits:

4.00

Description:

The growth of Constitutional law and the role of the Supreme Court is examined by analysis of court decisions dealing with Judicial Review, Federalism, Presidential and Congressional powers. Normally offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-244 Civil Liberties**

Prerequisites:

Not open to Freshmen

Credits:

4.00

Description:

Analysis of Supreme Court decisions in regard to political and civil rights including freedom of speech, press, assembly and religion, obscenity, race and sex discrimination, and criminal procedure. Normally offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-253 State and Local Government**

Prerequisites:

GVT 110/120 OR INSTRUCTOR'S CONSENT

Credits:

4.00

Description:

The development, structure and functions of state governments with emphasis on the government of Massachusetts; the various forms of local government in cities and towns; analysis of the relationships between local, state and federal governments. Normally offered alternate years.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-279 Minority Politics in the United States**

Prerequisites:

Sophomore Status Required

Credits:

4.00

Description:

This course is designed to provide an intensive survey of minority politics in the political development of the United States. We will focus on the historical and contemporary experiences of several groups in American politics. In particular, the course will look at four groups that, for reasons of race, have been subjected to systematic discrimination and political subordination in U.S. history: American Indians, African Americans, Latino Americans, and Asian/Pacific Americans. In this course we will work toward an understanding of American politics from the point of view of politically active and engaged persons of color. This course will also take a close look at the future of race and ethnicity in American politics. It is a fundamental premise of this course that an understanding of race and minority politics is necessary to comprehensively understand American political development and many important issues in contemporary American politics. Cultural Diversity A

Type:

Cultural Diversity Opt A,Social Science,BSJ SOCIAL SCIENCE

- **GVT-335 Law, Politics and Public Health**

Credits:

4.00

Description:

Law is one of the primary tools used to protect public health in the United States. This course will use various case studies (tobacco industry, food industry, health care policy, etc.) to explore innovative uses of the law in diverse areas related to public health. Students will learn about the ways in which attorneys, public officials, politicians, and public health practitioners work together to make public health policy. Normally offered alternate years.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-337 Public Policy & Business**

Prerequisites:

Not open to freshmen

Credits:

4.00

Description:

Public policy-makers' interests in formulating and implementing policy in the areas of environmental protection, consumer protection, equal employment opportunity, health care, taxation and competition with a focus on business responsibility will be critically analyzed. Costs and benefits to the public and business will be evaluated. Prerequisite: Open to non-majors; not open to freshmen. Normally offered alternate years.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-347 Legislative Politics**

Prerequisites:

GVT 110 and GVT 120 or instructor's consent

Credits:

4.00

Description:

The structure and functioning of legislatures. Particular emphasis on the U.S. Congress, how it works and how it compares with other legislatures. The role of legislatures in a democracy. Normally offered alternate years.

Type:

Social Science,BSJ SOCIAL SCIENCE

• GVT-355 American Parties & Politics

Prerequisites:

GVT 110 AND GVT 120, or instructor's consent

Credits:

4.00

Description:

Historical overview of party development in the U.S. and of ideological and political trends as reflected in voting behavior. Recent developments in party structure, electoral strategies and political style. The party crisis vs. the art of political campaigning. Normally offered alternate years.

Type:

Social Science,BSJ SOCIAL SCIENCE

• GVT-360 Elections and Voting

Credits:

4.00

Description:

How are elections administered in the United States? Do Americans have confidence in the electoral process? Should they? Why or why not? This course will examine elections in the United States in detail -- from how they are funded to how they are administered to how voters behave. Students will have a choice of either serving as poll workers during the November election or organizing and conducting research of potential voters. Students will gain hands-on experience in actual research design, election administration, and non-partisan get-out-the-vote activities. In addition, students will gain a deeper understanding of the relationship between attitudes, opinion, and voting behavior in American politics and institutions. ECR

Type:

- **GVT-363 American Foreign Policy**

Prerequisites:

GVT 281 and GVT 261

Credits:

4.00

Description:

A decision-making approach to understanding the domestic and institutional context of U.S. foreign policy. Includes analysis of continuity and change since WWII using case studies of critical decisions, e.g., Korea, Cuba, Vietnam, etc. Not open to freshmen. Prerequisites: GVT 110, GVT 120, GVT 261 or instructor's consent. 1 term - 4 credits. Normally offered every year.

Type:

Social Science, BSJ SOCIAL SCIENCE

- **GVT-434 Immigration Policy and Politics**

Credits:

4.00

Description:

This course examines how American governmental institutions, political actors, and processes have both shaped and responded to one of the most significant and complex issues of public policy facing the nation: immigration to the United States. This class will explore a number of intriguing and difficult policy topics related to the almost unprecedented level of immigration that the U.S. has been experiencing. The focus of the class will include the following: admissions, citizenship, deportation and detention (including that of suspected terrorists), refugee/asylum law, and highly contested issues of today, such as definitions of citizenship, immigrant rights, and border enforcement. A major objective of this course is to provide students with the opportunity to conduct their own original research in American politics by delving into some aspect of immigration as a public policy issue.

Type:

Social Science, BSJ SOCIAL SCIENCE

• GVT-435 Race and Public Policy

Prerequisites:

GVT 110 OR GVT 120 OR GVT 223 OR GVT 224

Credits:

- **HST-319 The History of Black Music in America**

Credits:

4.00

Description:

Black music has been one of the primary cultural factors in the United States. From the African roots to hip hop in the 21st century Black music has served as an expression of African American consciousness, providing commentary on many aspects of black life including social and political. It has also been a major force in shaping the culture of the United States as a whole. Using music as a window this class explores the history of Black America as well as the history of all America. Through a combination of texts, videos, and recordings this class examines the music of Black America in the context and communities in which it was created and performed, and also in relationship to the wider world.

- **HST-469 Research Seminar: African American Life in Slavery and Freedom- Reconstruction and the Freedman's Bureau**

Credits:

4.00

Description:

Using documents related to the work of the Freedman's Bureau this class provides students with a deeper understanding of the reconstruction era. This course is identical to BLKST 469.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **HST-471 Self, Body, & Sexuality- U.S. History**

Credits:

4.00

Description:

This course examines American debates over the natures, capacities, and responsibilities of men and women from settlement of the New World through the present. Emphasis is given to three elements of the self: social and civic personhood, the body, and sexuality. We will focus on representations of womanhood and masculinity - across racial, ethnic, and class lines - and their effects on men and women in society, politics, and at law. Course readings will also examine concepts of human nature and the interplay among mind, body, and sexuality.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **HST-484 History of the Emotions**

Credits:

4.00

Description:

Explores ideas about emotional life from the fields of history, anthropology, sociology, and psychology as well as the evolution of emotion rules and prescriptions, focusing on western Europe and the United States since 1700. In the eighteenth century, emotions were seen as a positive influence on politics and public life, especially during the French Revolution. After the fall of Robespierre, the emotions were banished to the private sphere - so we will read both primary sources and recent scholarship on 19th- and 20th- century ideas about masculinity and femininity, romantic love and marriage, childrearing, and about what parents and children are supposed feel toward each other, how ideas about these subjects have changed over time, and whether our feelings change with them.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement, Cultural Diversity Opt A, Diverse Perspectives

- **HST-494 Politics and Protest**

Credits:

4.00

Description:

Examines the impact of organized reform movements on American history from the 1800s to the twenty first century. In each era presented, students will explore the various dynamics that impact reform.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement, BSBA SOCIAL CHANGE

- **MUH-211 Music of the United States**

Psychology

- **PSYCH-241 Social Psychology**

Prerequisites:

PSYCH 114

Credits:

4.00

Description:

Studies the social determinants of the behavior of individuals in relation to groups and surveys current research findings in such major content areas as attribution, prejudice, conformity, obedience, social cognition, interpersonal attraction, altruism, and aggression. Normally offered every semester.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **PSYCH-333 Adult Development & Aging**

Prerequisites:

PSYCH 114 and Sophomore Standing.

Credits:

4.00

Description:

Surveys theory and research about the physical, mental, and psychological aspects of life-span development. Age-related changes in mental health, personality, self-image, sexual relations, friendships, career development and spirituality are explored. Aging may also be explored as a global, demographic and cross-cultural issue. Research surrounding death and dying, bereavement, and hospice/nursing home care is also presented. Normally offered alternate years.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **PSYCH-334 Adolescent Development**

Prerequisites:

PSYCH-114 and sophomore standing

Credits:

4.00

Description:

Examines the physical, cognitive, emotional and social aspects of adolescence. Attention is given to identity, parent-adolescent relationships, values, sexuality, and career development as well as psychopathology, drug use and abuse, delinquency, and alienation. Normally offered yearly.

Term:

Offered Fall Term

Type:

Social Science

- **PSYCH-346 Community Psychology**

Prerequisites:

PSYCH-114 and Junior standing

Credits:

4.00

Description:

Explores the efforts of psychologists to enhance the well-being of groups and communities. Complementing clinical approaches, community approaches have implications for both theory (e.g., environmental and/or person-environment theories) and practice (e.g., prevention-oriented paradigms targeted to groups and social systems). Students will be expected to attend weekly two-hour lectures to examine key concepts within the field (e.g., competence building, empowerment) as well as to engage in weekly community service activity. Normally offered every semester. This course fulfills the Expanded Classroom Requirement.

Term:

Offered Both Fall and Spring

Type:

Social Science, Expanded Classroom Requirement, Local Engagement Experience

Sociology

- **SOC-223 Families in Contemporary Society**

Credits:

4.00

Description:

An exploration of the diversity of contemporary families. Comparisons are made between the cultural myths of the ideal family and the lived realities. Challenges confronting contemporary families and their implications for social policy are examined in such areas as work/family conflicts, gay and lesbian families, welfare, family violence.

Term:

Occasional

Type:

Social Science

- **SOC-227 Race in American Society**

Credits:

4.00

Description:

Despite the election of Barack Obama as President of the United States, race remains one of the most divisive forces in U.S. society. While many of us struggle against racism, racial classification continues to affect where we live, where we work, and how we see ourselves. Racial classification affects our access to health care and our encounters with police officers. Distorted images of racial groups fill television and movie screens. Appeals to racism and fear of foreigners are dominant themes in elections to state and national offices. This course examines the formation and re-formation of racial classifications: how particular groups become racially identified, how these classifications change over time, and how conflicts over race have shaped American society. The meanings of race, as seen from a variety of perspectives, will be a consistent theme throughout the course.

Term:

Occasional

Type:

Cultural Diversity Opt A,Diverse Perspectives,Cultural Diversity Opt B

• **SOC-228 Cultural, Global and Social Perspectives**

Credits:

4.00

Description:

Enables students to examine, as well as develop an awareness and appreciation of, diversity within today's society. Providing an overview of the major racial, ethnic, and cultural groups in the U.S., the focus is on the ways in which cultural awareness enhances professional helping relationships and improves the operation of human services systems.

Term:

Occasional

Type:

Cultural Diversity Opt A,Diverse Perspectives

• **SOC-238 Cops & Robbers: Crime on Film**

Credits:

4.00

Description:

An examination of images of crime and justice portrayed in the American cinema. Special attention is paid to the social and historical forces that have shaped popular representations of good and evil during the modern era.

Term:

Occasional

- **SOC-275 Women and Crime**

Credits:

4.00

Description:

This course examines the complex relationships between women and crime today. This focus will include women as criminal offenders; women as victims of crime; and women as both offenders and victims. Course materials draw from recent feminist scholarship on these issues in the social sciences. Topics include the causes of women's crime women, drugs, and crime; child abuse and trauma; prostitution and sex trafficking; race, gender and victimization; and feminist social movements against violence. Crimes of violence against women are a central focus in the course.

Term:

Occasional

Type:

Cultural Diversity Opt A

- **SOC-325 Popular Culture in America**

Prerequisites:

Prerequisite: SOC 113 or SOC 116.

Credits:

4.00

Description:

An investigation of the images of life provided by mass communications, the educational system and official culture. Topics include: the growth of the youth culture since the 1950s; images of working people; women, minorities and advertising; changing ideas of success; consciousness-raising and contra-cultures.

Term:

Occasional

- **SOC-347 Immigration Law and Policy**

Prerequisites:

Prerequisite: SOC 113 or SOC 116 OR Instructor's consent

Credits:

4.00

Description:

This course examines U.S. Immigration legislation and policies, focusing on how and why various immigration laws and policies have been established and implemented throughout history. We will address the intersection between immigration policy and race, ethnicity, nationality and socioeconomic status, as well as explore the effects that immigration laws have had on various immigrant groups and society in general.

- **THETR-240 Dance Essentials I**

Credits:

4.00

Description:

This is a course for the student who always wanted to learn the basics of dance as well as the student returning to dance. Class work includes centering, attention to placement, and the development of strength, flexibility,and musicality. Students will learn to think and write critically about the form. Dance attire is required.

Term:

Occasional

- **THETR-347 The Art and Artistry of Calling a Show**

Prerequisites:

THETR-237 or instructor's consent

Credits:

4.00

Description:

In calling a show the stage manager cues all technicians to effect changes in lighting, sound, flying elements and special effects during performances. A well-called show is an artistic achievement no less than a well-acted, directed or designed show. Building on the ability to make a complete and accurate stage manager's book learned in Intro to Stage Management, this course will teach calling skills for theatre, opera, dance and performance art. The course will demonstrate the construction of cues and how they promote the artistic vision of the production. In-class work will utilize the Studio Theatre and give students real-time opportunities for calling cues, and will include play reading and analysis. Outside class work will include attending and writing analyses of professional performances.

2015-2016 Archived Catalog Information

American Studies

The American Studies minor engages students in the study of historical and contemporary U.S. identities, cultures, and societies. This program allows students to create an individualized course of study that draws on insights and methods from the arts, history, literature, and the social sciences. Each student must complete an introductory course, AMST-111 Defining America and Americans, and then may select four elective courses that relate in some coherent way. With his/her American Studies minor advisor, a student will identify a particular focus (e.g., an era, a topic, a theme, a region, a population, or a problem in American culture) that he or she wishes to explore closely.

There is no major available in American Studies.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Minor Requirements](#)
- [American Studies Courses](#)
- AMST-111 Defining America and Americans

Credits:

4.00

Description:

Examines artistic, social, and political imaginings of America and Americans. We will read works by American and foreign observers of the United States to ask how Americans define themselves and how others see them. Course assignments will introduce students to themes, perspectives, and methods in the field of American Studies.

Applied Legal Studies

View the Federally Mandated [Gainful Employment Disclosure for the Certificate in Paralegal Studies](#).

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Associate's Degree](#)
- [Certificate](#)
- [Applied Legal Studies Courses](#)

Major Requirements: 10 courses, 40 credits

Students may pursue either a BA or BS in Applied Legal Studies (ALS). Students must complete 10 courses (40 credits) in their ALS major and the required courses for the chosen degree. Of the 10 major courses, students must take seven required courses and may choose three of the ALS electives offered. As preparation for work in a specific field, students may choose electives that focus on a particular area of the law (e.g., Corporate Law, Family Law, or Litigation).

Students are encouraged to take Introduction to American Democracy in their first year and save Applied Legal Studies major courses for the sophomore year and beyond; many ALS courses require sophomore status.

Transfer students from non-ABA approved programs working toward a bachelor's degree in Applied Legal Studies must take at least six ALS courses while in residence at Suffolk University.

Transfer students from an ABA-approved program must take at least five ALS courses while in residence at Suffolk University.

Please note: both the BA and the BS in Applied Legal Studies include all requirements to complete the Certificate in Paralegal Studies. Thus, ALS majors should not apply to the Certificate program.

Required Courses (7 courses, 28 credits)

- **GVT-110 Introduction to American Democracy**

Credits:

4.00

Description:

An introduction to the American political system and constitutional framework. Focus will be on the interplay of various institutions (the Presidency, Congress and the Judiciary) in creating public policies. Contemporary public issues will be discussed, as will the role of political theory in shaping American democracy. Attention will be given to the role of the news media, public opinion, political ideology, political parties and interest groups in the American system.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **ALS-360 Fundamentals of Paralegal Practice**

Credits:

4.00

Description:

Introduces the student to the responsibilities of paralegals and to the culture of the legal profession. Topics include the development of paralegalism as a profession, the definition of the practice of law, ethical considerations, interviewing techniques, legal research, law office management, and client relationships. Normally offered each semester.

- **ALS-361 Legal Research & Writing I**

Credits:

4.00

Description:

How to use the law library, perform legal research, write legal analysis in memorandum form, and use computers as a research tool. Initial focus is on learning how to find legal materials, including federal and state case law, statutory law, and administrative law. Use of finding tools such as digests, encyclopedias, and CALR will be studied, as will Shepardizing. Focus also on legal writing, from letters through case analysis. Normally offered fall semester. Sophomore Status Required

- **ALS-362 Litigation**

Credits:

4.00

Description:

The Rules of Civil Procedure dictate the steps taken in state and federal lawsuits. This course will acquaint students with rules and the practical requirements of the rules, from filing a complaint to clarifying a judgment and to the duties of paralegals in a litigation office. Normally offered each semester.

Type:

Social Science

- **ALS-363 Law of Contracts**

Credits:

4.00

Description:

The existence and validity of a contract is determined by specific rules. Students will learn about formation through offer and acceptance, contract enforceability, the necessity of consideration, and breach of contract and will draft contract provisions as a paralegal might in a law office. Normally offered each semester. Sophomore status required.

Type:

Social Science

- **ALS-381 Paralegal Internship**

Prerequisites:

Senior standing and at least 15 hours of paralegal courses, or instructor's permission.

Credits:

4.00

Description:

A one-semester internship in either a law office, a governmental agency, insurance company, or a for-profit or non-profit corporation, depending on the positions available during each semester. Once a week seminars will discuss such topics as ethical considerations in a law office, experiences gained as a paralegal interns, and seeking paralegal employment. For specific placements/information, students must contact the Director of Paralegal Studies prior to the start of each semester. Prerequisites: Senior status and at least 15 hours of Paralegal Studies or permission of instructor. 1 term - 4 credits. Normally offered spring and summer. ECR

Type:

Expanded Classroom Requirement

• **ALS-385 Legal Research & Writing II**

Prerequisites:

Take ALS-361;

Credits:

4.00

Description:

Building on the skills in ALS 361 - Legal Research & Writing I, this course continues the focus on learning how to find legal materials and how to summarize research results. Writing skills will be strengthened through various exercises and revisions. Skill development in legal analysis, writing legal memoranda, and using computer assisted legal research with Westlaw and Lexis will be emphasized. Normally offered spring semester.

Elective Courses (3 courses, 12 credits)

Choose three of the following:

- **ALS-265 Law and Ethics**

Credits:

4.00

Description:

Ethical issues are central in law for lawyers, paralegals, judges, jurors and anyone working within or touched by the legal system. This course examines philosophical questions, practical issues, and social theories of law, primarily through the use of legal materials, to analyze legal ethical theory. The course considers how major theories are characterized within the American legal system, including the presumption of innocence, due process guarantees, the right to counsel, and other fundamental legal concepts. Normally offered alternate years.

Type:

Social Science

- **ALS-266 Criminal Law**

Credits:

4.00

Description:

This course examines criminal law in the United States from a broad perspective. It will present the general principles and doctrines that affect the whole criminal law, such as elements of criminal offenses, defenses to crime, and perspectives on crime and criminal law. In addition, students will learn the elements of specific crimes, such as homicide, criminal sexual conduct, terrorism and related crimes, crimes against public morals, and crimes against property. Discussions of the direction of the criminal law and constitutional limitations on government will be presented as preparation for future study.

Type:

Cultural Diversity Opt A

- **ALS-365 Wills and Probate**

Prerequisites:

Take ALS-264 or ALS-360 or Instructor's permission

Credits:

4.00

Description:

State laws affect the disposition of an individual's estate at death, and upon death, the estate must be probated in court. Focus on estate information gathering, drafting of wills, and the probate of estates for those with and without wills. Emphasis on the role of the paralegal in a law office handling wills and probate. Prerequisites: ALS 360 or 363 or permission of instructor. 1 term - 4 credits. Normally offered yearly.

- **ALS-366 Corporate Law**

Prerequisites:

Take ALS-264 or ALS-360 or instructor's permission

Credits:

4.00

Description:

Corporations are unique business entities and specialized citizens of the state. This course will examine the special rules for establishing and maintaining a corporation, including the nature of corporations and their legal relationships with governments, individuals, and other business entities. Students will learn about the role of paralegals in corporate law offices, including document management and production, corporate litigation processes, and maintaining corporate compliance. Normally offered alternate years.

- **ALS-368 Real Estate Law**

Credits:

4.00

Description:

This course will present common law real estate principles and the effect of federal agencies on the buying and selling of real property. Sample forms including leases, purchase and sale agreements, and closing forms are reviewed and drafted. Normally offered alternate years.

- **ALS-369 Family Law**

Prerequisites:

Take ALS-264 or ALS-360;

Credits:

4.00

Description:

Family law includes marriage, divorce, support, custody, property division, and abuse prevention petitions. Essentially an area of state law, it is often the backbone of general practice law firms. The role of paralegals in a family law office will be studied. Normally offered yearly.

- **ALS-370 Administrative Law and Worker's Compensation**

Prerequisites:

Take ALS-360 or ALS-362

Credits:

4.00

Description:

Federal and state administrative agencies such as FTC, NLRB, and EEOC are extensive sources of law. Familiarity with these agencies is useful in many areas where a paralegal might work. Additionally, Worker's Compensation law is uniquely suited to assist the student in acquiring a practical understanding of the administrative law area, and its legal, administrative, economic, and social foundations will be studied. Normally offered alternate years.

- **ALS-373 Education Law**

Credits:

4.00

Description:

This course provides a basic overview of key issues in contemporary education law and policy. Relevant local, state, and federal laws will be reviewed as well as education policy issues, including civil rights, student safety and discipline. This course will also cover the core educational entitlements granted to all students with disabilities in the public education system. It will focus on the substantive legal protections designed to ensure that

students with disabilities receive a Free and Appropriate Public Education, and on the various procedural protections for students and parents. The course will cover major federal legislation such as the IDEA, ADA and Section 504, as well as major Supreme Court and other important cases. The course will cover fundamental legal issues balancing the interests of the public, schools, students, and parents. Additionally, since paralegals have become an important part of education law enforcement and practice, several assignments will focus on practical paralegal work.

- **ALS-374 Torts: Personal Injury Law**

Credits:

4.00

Description:

Many civil suits arise when the negligence of an individual creates injury to another. Elements of negligence law and specific types of cases such as automobile accidents and medical malpractice will be studied, with an emphasis on practical aspects of drafting and research for the prospective paralegal. Normally offered yearly.

- **ALS-375 Technology and the Law**

Prerequisites:

Take ALS-362

Credits:

4.00

Description:

The role of computers and software in the law office as it affects the paralegal Lectures and hands-on applications will focus on the changing technology of computer hardware through fact scenarios that students will use to track changes from introduction to resolution in litigation. Focus on software applications involving word processing, spreadsheets, billing, diary and scheduling, research, and use of the Internet. Normally offered alternate years.

- **ALS-378 Advanced Litigation & Trial Practice**

Prerequisites:

ALS 362, or permission of instructor

Credits:

4.00

Description:

Building on the skills introduced in ALS 362, Civil Litigation, this course will provide a thorough study of the rules of evidence, the process of discovery, and the preparation of a case for a trial, as well as the roles of arbitration, mediation, and negotiation in litigation and other legal disputes. Theory will be combined with practical applications for prospective paralegals, such as deposition abstracting, gathering and preserving evidence, and techniques on how to prepare a case for ADR. Normally offered yearly.

- **ALS-383 Immigration Law**

Prerequisites:

Take ALS-264 or ALS-360;

Credits:

4.00

Description:

Study of the immigration and nationality laws of the United States focusing on the interplay of the administrative agencies which administer those laws: Justice Department, Labor Department, and State Department. Topics include the immigrant selection system; the issuance of non-immigrant visas; grounds for excluding aliens and waiver of excludability; grounds for removal; change of status, and refugee and asylum status. Special emphasis on the paralegal's role in representing and communicating sensitively with aliens. Normally offered yearly.

- **ALS-384 Intellectual Property**

Prerequisites:

Take ALS-264 or ALS-360;

Credits:

4.00

Description:

A survey of the law of the protection of ideas, trade secrets, inventions, artistic creations, and reputation. The course will briefly review the bases for patent, trademark, copyright and trade secret protection, the distinction among the various forms of intellectual property, and the statutory and common law methods of enforcing rights. Normally offered yearly.

- **ALS-390 Employment & Labor Law**

Prerequisites:

Take ALS-264 or ALS-360; or instructor's permission

Credits:

4.00

Description:

The nature of the employment relationship and an overview of constitutional and federal statutory provisions that affect the employment relationship will be studied. Particular emphasis on the Civil Rights Act, the Age Discrimination in Employment Act, and the Americans with Disabilities Act. Statutory provisions regarding benefits and employment-related entitlements will also be studied. Normally offered yearly.

- **ALS-391 Domestic Violence, Abuse & Neglect**

Prerequisites:

Take ALS-264 or ALS-360; or instructor's permission

Credits:

4.00

Description:

An opportunity to learn the history of domestic violence including battering, child abuse and child neglect, and the legal response to it. Focus will be on Massachusetts Law and its response, especially the Abuse Prevention Act, its application and enforcement, and on laws protecting children from abuse and neglect. Filings, law office issues and special issues in dealing with battered women and abused and neglected children will be included with the psychological issues, cultural issues, and advocacy possibilities. Normally offered yearly. Sophomore status required. Cultural Diversity A

Type:

Cultural Diversity Opt A, Diverse Perspectives

• ALS-396 International Law

Prerequisites:

Take ALS-264 or ALS-360 or instructor's permission

Credits:

4.00

Description:

With the globalization of the world economy, legal professional and business people require knowledge of international law more than ever. This course offers students a survey of selected materials in public international law. Covered will be the practical and theoretical issues of international law, from the Law of the Sea to business implications to definitions of war and international concepts of justice. Normally offered yearly.

2015-2016 Archived Catalog Information

Applied Legal Studies

View the Federally Mandated [Gainful Employment Disclosure for the Certificate in Paralegal Studies](#).

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Associate's Degree](#)
- [Certificate](#)
- [Applied Legal Studies Courses](#)

Students desiring to obtain a degree in two years may pursue an Associate of Science in Paralegal Studies (A.S.P.S.). Students must complete eight courses (32 credits) in their major and the required courses for the chosen degree. Of those eight courses, students must take five required courses and may choose three of the advanced ALS electives offered. One of those electives may be an internship working as a paralegal (ALS-381) after the student has completed at least 15 hours of Applied Legal Studies coursework.

In their first year, students are encouraged to take only required courses, and should note that **ALS-265 and ALS-266 are not classes that can count toward an ALS requirement for the associate's degree.**

Transfer students working toward an associate's degree must take five ALS courses at Suffolk and two of the five courses must be required.

For a list of required and elective courses, see the Certificate tab.

- [Applied Legal Studies Courses](#)

The Certificate in Paralegal Studies program consists of six 4-credit courses: five required courses and one elective, for a total of 24 credits. Students are encouraged to take the required courses as early in their studies as possible.

Please note that ALS-361, Legal Research and Writing I, is only guaranteed to be offered in the fall, and ALS-385, Legal Research and Writing II, is only guaranteed to be offered in the spring. Students should also note that ALS-265 and ALS-266 are not classes that can count toward the certificate. Certificate students must achieve a GPA of at least 2.0 in their ALS classes in order to receive a certificate.

Certificate Requirements: 6 courses, 24 credits

Required Courses (5 courses, 20 credits)

- ALS-360 Fundamentals of Paralegal Practice

Credits:

4.00

Description:

Introduces the student to the responsibilities of paralegals and to the culture of the legal profession. Topics include the development of paralegalism as a profession, the definition of the practice of law, ethical considerations, interviewing techniques, legal research, law office management, and client relationships. Normally offered each semester.

- **ALS-361 Legal Research & Writing I**

Credits:

4.00

Description:

How to use the law library, perform legal research, write legal analysis in memorandum form, and use computers as a research tool. Initial focus is on learning how to find legal materials, including federal and state case law, statutory law, and administrative law. Use of finding tools such as digests, encyclopedias, and CALR will be studied, as will Shepardizing. Focus also on legal writing, from letters through case analysis. Normally offered fall semester. Sophomore Status Required

- **ALS-362 Litigation**

Credits:

4.00

Description:

The Rules of Civil Procedure dictate the steps taken in state and federal lawsuits. This course will acquaint students with rules and the practical requirements of the rules, from filing a complaint to clarifying a judgment and to the duties of paralegals in a litigation office. Normally offered each semester.

Type:

Social Science

- **ALS-363 Law of Contracts**

Credits:

4.00

Description:

The existence and validity of a contract is determined by specific rules. Students will learn about formation through offer and acceptance, contract enforceability, the necessity of consideration, and breach of contract and will draft contract provisions as a paralegal might in a law office. Normally offered each semester. Sophomore status required.

Type:

Social Science

• ALS-385 Legal Research & Writing II

Prerequisites:

Take ALS-361;

Credits:

4.00

Description:

Building on the skills in ALS 361 - Legal Research & Writing I, this course continues the focus on learning how to find legal materials and how to summarize research results. Writing skills will be strengthened through various exercises and revisions. Skill development in legal analysis, writing legal memoranda, and using computer assisted legal research with Westlaw and Lexis will be emphasized. Normally offered spring semester.

Elective (1 course, 4 credits)

Choose one of the following:

• ALS-365 Wills and Probate

Prerequisites:

Take ALS-264 or ALS-360 or Instructor's permission

Credits:

4.00

Description:

State laws affect the disposition of an individual's estate at death, and upon death, the estate must be probated in court. Focus on estate information gathering, drafting of wills, and the probate of estates for those with and without wills. Emphasis on the role of the paralegal in a law office handling wills and probate. Prerequisites: ALS 360 or 363 or permission of instructor. 1 term - 4 credits. Normally offered yearly.

- **ALS-366 Corporate Law**

Prerequisites:

Take ALS-264 or ALS-360 or instructor's permission

Credits:

4.00

Description:

Corporations are unique business entities and specialized citizens of the state. This course will examine the special rules for establishing and maintaining a corporation, including the nature of corporations and their legal relationships with governments, individuals, and other business entities. Students will learn about the role of paralegals in corporate law offices, including document management and production, corporate litigation processes, and maintaining corporate compliance. Normally offered alternate years.

- **ALS-368 Real Estate Law**

Credits:

4.00

Description:

This course will present common law real estate principles and the effect of federal agencies on the buying and selling of real property. Sample forms including leases, purchase and sale agreements, and closing forms are reviewed and drafted. Normally offered alternate years.

- **ALS-369 Family Law**

Prerequisites:

Take ALS-264 or ALS-360;

Credits:

4.00

Description:

Family law includes marriage, divorce, support, custody, property division, and abuse prevention petitions. Essentially an area of state law, it is often the backbone of general practice law firms. The role of paralegals in a family law office will be studied. Normally offered yearly.

- **ALS-373 Education Law**

Credits:

4.00

Description:

This course provides a basic overview of key issues in contemporary education law and policy. Relevant local, state, and federal laws will be reviewed as well as education policy issues, including civil rights, student safety and discipline. This course will also cover the core educational entitlements granted to all students with disabilities in the public education system. The course will cover fundamental legal issues balancing the interests of the public, schools, students, and parents. Additionally, since paralegals have become an important part of education law enforcement and practice, several assignments will focus on practical paralegal work.

- **ALS-374 Torts: Personal Injury Law**

Credits:

4.00

Description:

Many civil suits arise when the negligence of an individual creates injury to another. Elements of negligence law and specific types of cases such as automobile accidents and medical malpractice will be studied, with an emphasis on practical aspects of drafting and research for the prospective paralegal. Normally offered yearly.

- **ALS-375 Technology and the Law**

Prerequisites:

Take ALS-362

Credits:

4.00

Description:

The role of computers and software in the law office as it affects the paralegal Lectures and hands-on applications will focus on the changing technology of computer hardware through fact scenarios that students will use to track changes from introduction to resolution in litigation. Focus on software applications involving word processing, spreadsheets, billing, diary and scheduling, research, and use of the Internet. Normally offered alternate years.

• ALS-378 Advanced Litigation & Trial Practice

Prerequisites:

ALS 362, or permission of instructor

Credits:

4.00

Description:

Building on the skills introduced in ALS 362, Civil Litigation, this course will provide a thorough study of the rules of evidence, the process of discovery, and the preparation of a case for a trial, as well as the roles of arbitration, mediation, and negotiation in litigation and other legal disputes. Theory will be combined with practical applications for prospective paralegals, such as deposition abstracting, gathering and preserving evidence, and techniques on how to prepare a case for ADR. Normally offered yearly.

• ALS-381 Paralegal Internship

Prerequisites:

Senior standing and at least 15 hours of paralegal courses, or instructor's permission.

Credits:

4.00

Description:

A one-semester internship in either a law office, a governmental agency, insurance company, or a for-profit or non-profit corporation, depending on the positions available during each semester. Once a week seminars will discuss such topics as ethical considerations in a law office, experiences gained as a paralegal interns, and seeking paralegal employment. For specific placements/information, students must contact the Director of Paralegal Studies prior to the start of each semester. Prerequisites: Senior status and at least 15 hours of Paralegal Studies or permission of instructor. 1 term - 4 credits. Normally offered spring and summer. ECR

Type:

Expanded Classroom Requirement

• ALS-383 Immigration Law

Prerequisites:

Take ALS-264 or ALS-360;

Credits:

4.00

Description:

Study of the immigration and nationality laws of the United States focusing on the interplay of the administrative agencies which administer those laws: Justice Department, Labor Department, and State Department. Topics include the immigrant selection system; the issuance of non-immigrant visas; grounds for excluding aliens and waiver of excludability; grounds for removal; change of status, and refugee and asylum status. Focus on software applications involving word processing, spreadsheets, billing, diary and scheduling, research, and use of the Internet. Normally offered alternate years.

- **ALS-377 Pol of Regulation, Product Liability Litigation & Tort Reform**

Credits:

4.00

Description:

The law dictates that corporations, arguably the most influential institutions of our time, can have only one goal: to maximize profits for their shareholders. Corporations have no general legal or moral obligation to the well-being of society or individual consumers. This means that, if corporations are to be restrained from maximizing profit by harming the public good, they must be regulated. When regulation fails, and dangerous products make it into the marketplace, consumers who are harmed can bring product liability lawsuits. Despite these facts, massive deregulation has occurred in the U.S. and tort reform threatens the ability of consumers to bring product liability lawsuits. Using the food and tobacco industries as case studies, we will examine the history of deregulation and tort reform and answer the following question: How can law and government be used to protect society and consumers by regulating a system programmed to ignore the welfare of everyone except shareholders?

- **ALS-378 Advanced Litigation & Trial Practice**

Prerequisites:

ALS 362, or permission of instructor

Credits:

4.00

Description:

Building on the skills introduced in ALS 362, Civil Litigation, this course will provide a thorough study of the rules of evidence, the process of discovery, and the preparation of a case for a trial, as well as the roles of arbitration, mediation, and negotiation in litigation and other legal disputes. Theory will be combined with practical applications for prospective paralegals, such as deposition abstracting, gathering and preserving evidence, and techniques on how to prepare a case for ADR. Normally offered yearly.

• ALS-381 Paralegal Internship

Prerequisites:

Senior standing and at least 15 hours of paralegal courses, or instructor's permission.

Credits:

4.00

Description:

A one-semester internship in either a law office, a governmental agency, insurance company, or a for-profit or non-profit corporation, depending on the positions available during each semester. Once a week seminars will discuss such topics as ethical considerations in a law office, experiences gained as a paralegal interns, and seeking paralegal employment. - **ALS-391 Domestic Violence, Abuse & Neglect**

Prerequisites:

Take ALS-264 or ALS-360; or instructor's permission

Credits:

4.00

Description:

An opportunity to learn the history of domestic violence including battering, child abuse and child neglect, and the legal response to it. Focus will be on Massachusetts Law and its response, especially the Abuse Prevention Act, its application and enforcement, and on laws protecting children from abuse and neglect. Filings, law office issues and special issues in dealing with battered women and abused and neglected children will be included with the psychological issues, cultural issues, and advocacy possibilities. Normally offered yearly. Sophomore status required. Cultural Diversity A

Type:

Cultural Diversity Opt A, Diverse Perspectives

- **ALS-396 International Law**

Prerequisites:

Take ALS-264 or ALS-360 or instructor's permission

Credits:

4.00

Description:

With the globalization of the world economy, legal professional and business people require knowledge of international law more than ever. This course offers students a survey of selected materials in public international law. Covered will be the practical and theoretical issues of international law, from the Law of the Sea to business implications to definitions of war and international concepts of justice. Normally offered yearly.

Type:

Social Science

• **ALS-510 Independent Study**

Prerequisites:

Instructor's consent required

Credits:

1.00- 4.00

Description:

Individual program of reading and research on an approved topic under the supervision of a member of the department. Only for qualified juniors or seniors. Offered every semester.

Type:

Social Science

Art & Design Foundation Studies

The first step for all Art & Design students, regardless of their choice of major, is the Foundation Studies Program. In your first year at the New England School of Art & Design, you will be introduced to the fundamentals of visual communication through a set of carefully designed and integrated courses. Foundation Studies will teach you to perceive with freshness and insight, to analyze and solve visual problems, and to execute your ideas with confidence and precision. You will be exposed to a broad range of techniques and media, from traditional to the latest digital media approaches. Foundation courses will provide the conceptual and technical orientation that will help you succeed in your major program and as a professional artist or designer.

If you are an open (undeclared) major or a major in another department, and you would like to become a BFA candidate, you must accomplish the following:

- Complete Foundation Drawing I (ADF-S101), 2D/Color (ADF-S166), and Integrated Studio 1 (ADF-S171) or Perspective Principles (ADI-S108) (depending on the student's anticipated major).
- Earn a combined GPA of at least 2.7 in those courses, with no grade lower than a C+.
- Students who meet these conditions will be exempt from the NESAD portfolio requirement and will be invited to join the Bachelor of Fine Arts (BFA) program.
- If the minimum GPA requirement is not met, students may petition to have examples of their studio coursework reviewed. Students also may solicit letters of recommendation from their professor(s) in support of their candidacy.
- At the end of the first semester, students who are not eligible to join the BFA program will be strongly advised to pursue another major at the university. Such students may apply completed studio courses toward a minor in Foundation Studies or use them as electives per the approval of their major program of study.

The Foundation Studies program or its equivalent is generally a prerequisite for major-specific coursework.

Foundation Studies Course Codes and Sequencing

The letter "S" preceding a course number indicates a studio course. A studio fee is assessed for all studio courses.

Please note: Undergraduate students should use the Foundation course numbers listed in the Undergraduate Academic Catalog. For graduate students, foundational course information is located in the [Graduate Academic Catalog](#). Graduate Foundation Studies course numbers will begin with a "5" rather than

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Requirements](#)
- [Foundation Studies Minor Requirements](#)
- [Foundation Courses](#)

Requirements: 7 courses, 23 credits

- ADF-S101 Foundation Drawing I

Credits:

3.00

Description:

This course concentrates on the traditional techniques of observational drawing. Fundamental principles and elements of drawing are introduced in structured lessons and exercises, which are supplemented by additional outside assignments. Foundation Drawing I stresses the development of visual skills as well as the broad use of drawing concepts, vocabulary, techniques and variety of materials.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- ADF-S102 Foundation Drawing II

Prerequisites:

ADF S101

Credits:

3.00

Description:

This course will refine the basic visual skills developed in Foundation Drawing I (ADF S101). The elements of color and mixed media are introduced to expand technical possibilities, while more intensive work with the nude human figure provides exposure to gesture, structure and complex form. As students begin to develop a more sophisticated and personal approach, issues of expression and interpretation will be investigated, focusing on personal style and expression.

Term:

Offered Both Fall and Spring

- **ADF-S152 3-Dimensional Design**

Prerequisites:

ADF S151 or ADF S166

Credits:

3.00

Description:

This course focuses on the fundamental elements of three-dimensional form. Line, plane and volume will be explored as students develop visual analysis and critical thinking skills in the round. The role of scale, proportion, structure, surface, light and display will be addressed, as students create forms that activate space and engage the viewer. The course will proceed from work with simple forms and techniques to more challenging and comprehensive problems addressing both additive and subtractive methods.

Term:

Offered Both Fall and Spring

- **ADF-S166 2D/Color**

Credits:

3.00

Description:

This is an introductory-level course in the basic concepts and practices of two-dimensional design and color theory. The study of color and design is supportive of all studio disciplines and is vital to the understanding of all visual media. This course features an intensive, hands-on approach to color

and design as students create, modify and master the three dimensions of color (hue, value, and strength) plus the principles of design(line, shape, value, composition and image). This in-depth study is essential and underlies all of the visual arts as they are practiced today. An understanding of color and design influences all artists' decisions, affecting the look, meaning and use of visual phenomena.

Type:

Arts Admin Minor Elective

- **ADF-S172 CI: Integrated Studio II**

Prerequisites:

ADF S101

Credits:

3.00

Description:

This course builds on the Integrated Studio 1 experience: synthesizing fundamental visual ideas. IS 2 investigates the construction, documentation, and transformation of volumetric form, environmental space, and time. Projects will explore narrative strategies and the creation of immersive experiences. Students will develop critical and analytical skills while employing a range of traditional and digital media-including video/sound capture and editing-as they explore the creative boundaries of the classroom studio, the city of Boston, and virtual space.

Type:

Creativity and Innovation

- **ARH-101 Art History I**

Credits:

4.00

Description:

Surveys the art of Western civilization from prehistoric caves to medieval cathedrals. Considers works from the Ancient Near East, Ancient Egypt, Ancient Greece and Rome, the Byzantine Era, the Romanesque Period, and the Gothic Period in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **ARH-102 Art History II**

Credits:

4.00

Description:

Surveys the art of Europe and America from the Renaissance to the present. Considers work of painting, sculpture, and architecture from periods such as the Renaissance, the Baroque, the Rococo, Neoclassicism, Romanticism, Impressionism, Abstract Impressionism, and Post-Modernism in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst

Fine Arts majors add:

- **ADF-S123 Painting**

Prerequisites:

ADF S101, ADF S166

Credits:

3.00

Description:

In this introductory course, students will learn to accurately perceive relationships of shape, form, color and value, and to translate that information through the medium of paint. In a series of in-class and outside projects on canvas, prepared paper and panel, students will explore various approaches to the use of acrylic and oil paint. Emphasis will be placed on the development of disciplined technical skills as well as the exploration of painting's potential as a medium of communication and creative visual expression.

Term:

Offered Spring Term

- **ADF-S171 CI: Integrated Studio 1**

Credits:

3.00

Description:

This cross-disciplinary course will integrate the ideas and practices of two-dimensional design, color and drawing emphasis will be placed on understanding the creative process, exploring concepts and developing research skills. Students will undertake individual and collaborative projects in three spaces; the studio classroom, the digital world and the city at large.

Type:

Creativity and Innovation, Arts Admin Minor Elective

Graphic Design majors add:

- **ADF-S156 Imaging**

Prerequisites:

ADF S166

Credits:

3.00

Description:

Digital visual image generation and modification, especially when combined with traditional hand techniques, are essential skills for artists and designers of the 21st century. This course introduces techniques of image capture, manipulation and output. Weekly and longer-length assignments will address creative and innovative idea generation using these approaches.

Term:

Offered Both Fall and Spring

- **ADF-S171 CI: Integrated Studio 1**

Credits:

3.00

Description:

This cross-disciplinary course will integrate the ideas and practices of two-dimensional design, color and drawing emphasis will be placed on understanding the creative process, exploring concepts and developing research skills. Students will undertake individual and collaborative projects in three spaces; the studio classroom, the digital world and the city at large.

Type:

Creativity and Innovation, Arts Admin Minor Elective

Interior Design majors add:

- **ADI-S106 Interior Design Communications**

Prerequisites:

Take ADF-S101 ADI-S108 OR ADI-S205;

Credits:

3.00

Description:

Interior Design Communications teaches students how drawing media, observational drawing, perspective theory, color and design graphics can be integrated into the designer's process. In addition to exploring contrast, accent, reflection, shade and shadow, the course underscores the importance

of freehand sketching as a tool to foster intellectual inquiry and convey design concepts to a wider audience. The course introduces students to manual and digital methods for composing work for conceptual expression, technical drawing presentation, and portfolio purposes.

Term:

Offered Both Fall and Spring

• ADI-S108 Perspective Principles

Prerequisites:

Prior or concurrent drawing experience

Credits:

3.00

Description:

This course introduces students to the systems of perspective developed during the Renaissance as a means of creating the illusion of 3-dimensional space on a 2-dimensional surface. Using 1-, 2-, and 3-point perspective, students will learn to effectively represent space. Basic drafting techniques and architectural scale are introduced. Both free-hand sketching and technical drawing methods will be emphasized. Manipulation of drawing through computerized scanning and digital photography included.

Term:

Offered Both Fall and Spring

• ADI-S110 Digital Orthographics

Prerequisites:

Take ADI-S108 OR ADI-S205;

Credits:

3.00

Description:

This course will enable the student to produce, manipulate and print 2-dimensional drawings using digital software including Computer Aided Drafting (CAD). Students will acquire the skills necessary for producing measured architectural plans, elevations and sections as well as isometric and axonometric drawing types. Fundamentals of illustrating drawings in color, light and shadow through digital programs will be introduced.

Term:

Offered Both Fall and Spring

- **ADF-S143 Color**

Prerequisites:

Intended for majors only

Credits:

3.00

Description:

This course features a hands-on approach to the study of color as students create, modify and compare hues, values and strengths through the direct mixing and application of paint. Also explored will be issues of color harmony, chromatic light, space, color assimilation, and color psychology, as well as past and present views on the use of color in art and design. This intensive focus on the specific issues of color gives students experience with and flexibility in the use of color in their work.

Term:

Offered Both Fall and Spring

• ADF-S151 2-Dimensional Design

Credits:

3.00

Description:

The focus of this course is the fundamental logic and structure of two-dimensional organization. Emphasis will be placed on the essential elements of visual language: line, shape, value and texture. Students will learn to develop dynamic approaches to visual problem solving by combining these elements into a unified whole. Skills will include technical proficiency in a variety of wet and dry media, appropriate presentation of work, and the ability to discuss work critically.

Term:

Offered Both Fall and Spring

• ADF-S152 3-Dimensional Design

Prerequisites:

ADF S151 or ADF S166

Credits:

3.00

Description:

This course focuses on the fundamental elements of three-dimensional form. Line, plane and volume will be explored as students develop visual analysis and critical thinking skills in the round. The role of scale, proportion, structure, surface, light and display will be addressed, as students create

forms that activate space and engage the viewer. The course will proceed from work with simple forms and techniques to more challenging and comprehensive problems addressing both additive and subtractive methods.

Term:

Offered Both Fall and Spring

- **ADF-S154 Design: Issues & Process**

Prerequisites:

ADF S151

Credits:

3.00

Description:

This course involves comprehensive design projects which concern more advanced visual issues, executed in a wide variety of media. Decision-making in the creative process and the development of strong design concepts will be emphasized. Areas of study will include: an investigation of the real world concerns of fine artists and designers, non-Western imagery and culture, and visual social engagement.

Term:

Offered Spring Term

- **ADF-S156 Imaging**

Prerequisites:

ADF S166

Credits:

3.00

Description:

Digital visual image generation and modification, especially when combined with traditional hand techniques, are essential skills for artists and designers of the 21st century. This course introduces techniques of image capture, manipulation and output. Weekly and longer-length assignments

will address creative and innovative idea generation using these approaches.

Term:

- **ARH-404 Seminar in Art History: Caravaggio**

Prerequisites:

Permission of instructor required

Credits:

4.00

Description:

Explores the art of Caravaggio within the historical context of the Early Baroque period in Italy. The course emphasizes research skills and the methodology of art history. Designed as a foundation for students intending to pursue a career in the world of art and/or museums.

- **ARH-406 Seminar in Art History: Bernini**

Prerequisites:

Instructor's consent required.

Credits:

4.00

Description:

Explores the art of Gian Lorenzo Bernini, arguably the most important and influential figure in the world of 17th-century art. Designed for art history majors & minors, the seminar explores Bernini's career within the context of the religious, political, and artistic upheavals of his time; it also helps students develop research skills and provides a foundation that will be valuable for anyone pursuing a career in the world of art and museums.

• ARH-411 Seminar in Art History: Impressionism

Prerequisites:

Permission of instructor required

Credits:

4.00

Description:

Explores the Impressionist movement of the late nineteenth-century, including Monet, Renoir, and Pissaro, within its historical context. The course emphasizes research skills and the methodology of art history. Designed as a foundation for students intending to pursue a career in the world of art and/or museums.

• ARH-502 Honors Thesis

Prerequisites:

Senior standing & permission of the Dept.Chair.

Credits:

4.00

Description:

A major research project completed under the supervision of a regular faculty member.

Term:

Occasional

Type:

- **ARH-510 Independent Study**

Prerequisites:

An independent study form must be submitted to the CAS Dean's Office.

Credits:

1.00- 4.00

Description:

Students meet with a departmental faculty member to pursue advanced studies in areas of particular interest to them.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

Related Options (maximum of 2 courses, 6-8 credits)

Two of the eight upper-level courses may be taken outside of the Department of World Languages & Cultural Studies, through the art history offerings at NESAD, or in related areas of visual culture such as the philosophy of art, photojournalism, advertising, cinema, and select 3-credit studio art and design courses, such as the following:

- **ADF-S101 Foundation Drawing I**

Credits:

3.00

Description:

This course concentrates on the traditional techniques of observational drawing. Fundamental principles and elements of drawing are introduced in structured lessons and exercises, which are supplemented by additional outside assignments. Foundation Drawing I stresses the development of visual skills as well as the broad use of drawing concepts, vocabulary, techniques and variety of materials.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **ADF-S123 Painting**

Prerequisites:

ADF S101, ADF S166

Credits:

3.00

Description:

In this introductory course, students will learn to accurately perceive relationships of shape, form, color and value, and to translate that information through the medium of paint. In a series of in-class and outside projects on canvas, prepared paper and panel, students will explore various approaches to the use of acrylic and oil paint. Emphasis will be placed on the development of disciplined technical skills as well as the exploration of painting's potential as a medium of communication and creative visual expression.

Term:

Offered Spring Term

- **ADF-S143 Color**

Prerequisites:

Intended for majors only

Credits:

3.00

Description:

This course features a hands-on approach to the study of color as students create, modify and compare hues, values and strengths through the direct mixing and application of paint. Also explored will be issues of color harmony, chromatic light, space, color assimilation, and color psychology, as well as past and present views on the use of color in art and design. This intensive focus on the specific issues of color gives students experience with and flexibility in the use of color in their work.

Term:

Offered Both Fall and Spring

• ADF-S151 2-Dimensional Design

Credits:

3.00

Description:

The focus of this course is the fundamental logic and structure of two-dimensional organization. Emphasis will be placed on the essential elements of visual language: line, shape, value and texture. Students will learn to develop dynamic approaches to visual problem solving by combining these elements into a unified whole. Skills will include technical proficiency in a variety of wet and dry media, appropriate presentation of work, and the ability to discuss work critically.

Term:

Offered Both Fall and Spring

• ADF-S152 3-Dimensional Design

Prerequisites:

ADF S151 or ADF S166

Credits:

3.00

Description:

This course focuses on the fundamental elements of three-dimensional form. Line, plane and volume will be explored as students develop visual analysis and critical thinking skills in the round. The role of scale, proportion, structure, surface, light and display will be addressed, as students create

forms that activate space and engage the viewer. The course will proceed from work with simple forms and techniques to more challenging and comprehensive problems addressing both additive and subtractive methods.

Term:

Offered Both Fall and Spring

- **ADFA-304 Art and Architecture of the Italian Renaissance**

Prerequisites:

ADF-182 and the Fine Art Program Director's consent.

Credits:

4.00

Description:

This course introduces the students to Italian Renaissance art, artists and culture from the first evidence in the Italian Gothic (around the 1260's) to the Early and High Renaissance, predominantly in Florence and Venice, up to the 1600's. The course will survey the history of painting, sculpture and architecture as we study the works individually, for their formal elements and visual importance, but also within their aesthetic, historic, political and cultural context. Class discussion and a visual analysis of works of art will encourage personal interpretation and critical thinking. A list of terms related to the Renaissance introduces the language of art. Normally offered during the summer. Offered in Italy only.

Type:

Expanded Classroom Requirement

- **CJN-L218 Photojournalism**

Credits:

4.00

Description:

An introduction to the role of photography in the journalistic process. A discussion of photography as communication and a survey of the history of photography.

Term:

Offered Both Fall and Spring

Type:

Humanities & History

- **CJN-257 Advertising**

Credits:

4.00

Description:

A survey course that introduces students to advertising concepts and practices from the perspective of agencies, clients, the media, and consumers. Students learn to think critically about advertising messages and learn practical techniques for developing effective advertising in various media.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **CJN-288 Film Language: From Silents to Citizen Kane**

Credits:

4.00

Description:

Film history from 1895 - 1940. An introduction to the language and technology of cinema as developed by pioneering filmmakers, and a basic discussion of aesthetics and criticism of film. Key films from the silent era through Orson Welles' Citizen Kane.

Term:

Offered Both Fall and Spring

- **CJN-291 Film Studies: the Modern Era Modern Era**

Credits:

4.00

Description:

Film history mostly from 1940 until 1970. Includes an emphasis on film aesthetics, criticism, and history from World War II through the end of the Hollywood studio system; from film noir to Italian Neo-Realism to the French New Wave.

Term:

Alternates Fall & Spring

Type:

Humanities & History

- **GER-306 German Cinema**

Credits:

4.00

Description:

A survey of films produced in the German speaking countries from the 1920's to the present. Includes the Weimar republic, the Nazi period, postwar production from both East and West Germany, and new trends since reunification. Film esthetics and socio-historical context. All films shown in German with English subtitles.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **SPAN-408 Latin American Cinema**

Prerequisites:

Take ENG-102 or ENG-103 or Instructor's consent. Span 302 is strongly recommended for Spanish and Latin American & Caribbean Studies majors and minors.

Credits:

4.00

Description:

Begins with the Cuban revolution as a point of departure and examines films from Argentina, Chile, Colombia, Mexico, and other Latin American countries. Students explore the relationship between film & society and consider how knowledge of a culture and its history is influenced and shaped by what is seen on the screen. Films in Spanish with English subtitles.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement

• PHIL-219 Philosophy of Art

Credits:

4.00

Description:

What counts as art? What is beauty? Are there objective standards of beauty? This course examines the nature of aesthetic experience, art, beauty, and creativity. Through the classic and contemporary readings, the students will be introduced to philosophical issues concerning the meaning of art, artistic representation, perceptions of art, interpretation, and criticism. Students will be encouraged to reflect on their own experience of art and explore the relationships among the artist, the audience, the artwork, and the world. 1 term - 4 credits. Normally offered every third year.

Type:

Humanities & History, Humanities Literature Requirement, Vis. & Perform Thry & Hst

Notes:

- A relevant Seminar for Freshmen with a strong concentration in art history or visual culture may also count toward one of the related options at the discretion of the major advisor.
- Upper-level Art History courses taken at other institutions or through study abroad must be approved by the student's Art History advisor (preferably prior to being taken), and must not overlap significantly with any other upper-level Art History course(s) counted toward the major.
- Except under special circumstances approved by the student's Art History advisor, at least six of the 10 courses (24 of the 38-40 credit hours) must be fulfilled through coursework offered by the World Languages & Cultural Studies Department.
- AP credit cannot be applied toward the major.

2015-2016 Archived Catalog Information

Art History

The Art History major and minor are offered through the World Languages & Cultural Studies Department. The Art History major requires 38-40 hours of coursework. The Art History minor requires 24 hours of coursework.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

2015-2016 Archived Catalog Information

Arts Administration

As a complement to their undergraduate major, students who take a minor in Arts Administration will have basic knowledge in the following areas:

- Arts administration, including the managerial, financial, and legal needs of arts organizations
- Marketing strategies and outreach programming for the arts
- Resource development for the arts, with an emphasis on grant and proposal writing

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Minor Requirements](#)

Minor Requirements: 5 courses, 17-19 credits

Core Requirements (3 courses, 11 credits)

- **THETR-281 Arts Administration I**

Credits:

4.00

Description:

The expansive world of arts administration provides a wealth of rewarding career opportunities. This course will provide a fundamental overview of the managing, marketing, fundraising, and financial management functions of the performing and visual arts organizations. Using Suffolk's Modern Theatre as a laboratory, as well as site visits to some of Boston's greatest arts and culture institutions, we will investigate real world successes and challenges and discover what special talents each individual student can bring to the management mix. This course is a core requirement for Suffolk's new interdisciplinary Arts Administration minor.

- **MKT-210 Principles of Marketing**

Prerequisites:

WRI-101, WRI-102 or WRI-H103

Credits:

3.00

Description:

As part of the core curriculum for the BSBA, this course provides a comprehensive, innovative, managerial, and practical introduction to marketing. Students will learn and apply basic concepts and practices of modern marketing as used in a wide variety of settings. Technological advances, rapid globalization, economic shifts and cultural and environmental developments are causing profound changes in the marketplace. As the marketplace changes, so must the marketers who serve it. These new developments signify a brand new world of opportunities for forward thinking marketers. In response to these new developments, the focus of this course is on four major themes that go to the heart of modern marketing theory and practice: 1. Building and managing profitable customer relationships; 2. Building and managing strong brands; 3. Harnessing new marketing technologies in this digital age; and 4. Marketing in a socially responsible way around the globe.

- **CJN-488 Grant Writing**

Credits:

4.00

Description:

Hands-on course that explores the process of writing and submitting grants to foundations, associations, the government, and other grantors on behalf of nonprofit organizations. Students learn how to identify grant resources through research, compile an effective submission, and write supporting material such as cover letters and appendices. Also covers how grants are reviewed and tips for successful grant submissions.

Term:

Occasional

Electives (2 courses, 6-8 credits)

Choose two of the following:

- **ACCT-201 Accounting for Decision Making I**

Prerequisites:

MATH-128 or higher and WRI-102 or WRI-H103 or SBS-220

Credits:

3.00

Description:

Introduces students to the accounting cycle, the financial statements, and the theory underlying accounting as information. Provides users of accounting information with a basic understanding of how to appraise and manage a business. Addresses current accounting topics, including relevant ethical and international issues found in the financial press.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **BLE-214 Principles of Business Law**

Credits:

3.00

Description:

Introduces the field of business law. Provides an overview of the organization and operation of the American legal system, court system and legal procedure. Examines selected business law topics such as contracts, torts, criminal law, agency, and business organizations. Attention is given to the ways in which business law manifests important social and ethical precepts.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **ENT-101 Business Foundations**

Credits:

3.00

Description:

This course introduces students to foundational concepts in business, including functional areas, the life cycle, competition, stakeholders and ethical considerations. Students develop critical thinking by learning and using a problem solving process through a business situation analysis model to analyze various situations that confront managers and founders of small, medium, and large organizations. Students will also develop tools for analysis, allowing them to critically view business in a new and thoughtful way. The class culminates with student- teams presenting a detailed analysis and recommendations to a panel of executives and persuading them that the recommended strategy is not only feasible, but also practical for the stakeholders involved.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **ENT-320 Growing and Managing the Firm**

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

How do you manage the day-to-day challenges of starting a new venture or working on a small business? This course is designed around problem-solving techniques that help you research the facts of a given situation, identify the problem, develop alternative solutions and defending the best

solution. This course utilizes case analysis, role-plays, simulations, and other experiential lessons to help provide you with the knowledge and skills necessary to build and lead a new or innovative organization.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **MGT-401 Negotiations**

Prerequisites:

MGT 217 (formerly MGT 317); Junior standing

Credits:

3.00

Description:

This course is premised on the fact that whereas a manager needs analytical skills to discover optimal solutions to business problems, a broad array of negotiation skills is needed to implement these solutions. This experiential course is designed to improve your skills in all phases of negotiation: understanding prescriptive and descriptive negotiation theory as it applies to dyadic and multiparty negotiations, to buyer-seller transactions and the resolution of disputes, to the development of negotiation strategy, and to the management of integrative and distributive aspects of the negotiation process. The course is based on a series of simulated negotiations in a variety of contexts including one-on-one, multi-party, cross-cultural, third-party and team negotiations. Please note that given the experiential nature of the course, attendance is mandatory and will be strictly enforced beginning from the first class session.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **MKT-315 Integrated Marketing Communication**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Integrated Marketing Communications (IMC) is a cross-functional process for managing customer relationships that drive brand value. This course examines the strategic foundations of IMC, the factors and processes necessary for creating, sending, and receiving successful brand messages. Furthermore, the social, ethical and legal issues as well as measurement and evaluation of marketing communication will be examined.

Type:

Arts Admin Minor Elective

- **MKT-444 Social Media Marketing**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Social media has altered the landscape of business, communications, marketing, and society as a whole. While some social media like Wikipedia and Facebook have become part of the fabric of many consumers' lives, new media like Snapchat and Tumblr are emerging. This constantly evolving landscape offers businesses innovative ways for generating awareness, demand and revenue. In this course students will take away a social media vocabulary, a set of social media skills and tools, and analytical frameworks for analyzing effective social media business practices. Naturally, student projects, assignments, and other activities will use social media tools.

Type:

Arts Admin Minor Elective

- **MKT-477 eMarketing**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

This course explores how we can use the principles of web marketing as effective marketing tools. The course will have the following learning components: lectures, guest lectures, web site analyses, and student project presentations.

Type:

Arts Admin Minor Elective

- **P.AD-325 Nonprofit Management**

Prerequisites:

Junior Standing

Credits:

3.00

Description:

The primary focus will be on understanding the operational and strategic leadership aspects of managing mission driven, public service organizations. Specific emphasis will be placed on nonprofit corporations, including coursework that explores the legal, structural, and operational issues that are particular to such organizations.

Type:

Arts Admin Minor Elective

Note:

BSBA students cannot count the following BSBA core requirements (ACCT-201, BLE-214, or ENT-101) as Arts Administration minor electives and should instead choose other courses from the full list of options provided.

- **CJN-103 Presentations Skills**

Credits:

4.00

Description:

The development and delivery of oral presentations. Students acquire skills in oral and physical delivery, organization, persuasion, critical thinking, and use of support media.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **CJN-247 Design Lab**

Credits:

4.00

Description:

Computer applications for advertising and communication design. Using various graphical editing and design programs, students learn the theory and practice of design for layout, logos, and graphic elements in communication.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **CJN-257 Advertising**

Credits:

4.00

Description:

A survey course that introduces students to advertising concepts and practices from the perspective of agencies, clients, the media, and consumers. Students learn to think critically about advertising messages and learn practical techniques for developing effective advertising in various media.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

• **CJN-277 Public Relations I: Principles**

Prerequisites:

This course is now being offered as CJN-2277

Credits:

4.00

Description:

The basic principle techniques and processes of public relations are examined. Issues, trends, opportunities, and problems faced by the practitioner and impacting the organization are analyzed.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

• **CJN-297 New Media New Markets**

Credits:

4.00

Description:

Explores current trends in advertising and public relations. Examines new media choices in cable, direct response and the Internet and their impact on these professions. Includes an analysis of new markets in Generation X, Generation Y, and in the international and ethnic communities.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

• **CJN-378 Event Planning and Promotion**

Prerequisites:

CJN-2277(formerly CJN-277)

Credits:

4.00

Description:

Examines how events are built, promoted, managed, and assessed, with an emphasis on conventions, trade shows, and nonprofit events. Issues analyzed include facilities planning and contracts, legal issues, volunteer management, budgeting, marketing, and planner/staff communication.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

• **CJN-381 Business of Media**

Prerequisites:

CJN-255

Credits:

4.00

Description:

Explores the market environment of the production and distribution of video and film. Topics include ownership and control, market structure and competition, audience measurement, and the impact of new technologies on media markets. Students work on a proposal to launch a media company.

Term:

Alternates Fall & Spring

Type:

Arts Admin Minor Elective

• **CJN-383 Online Advertising**

Prerequisites:

CJN-257;

Credits:

4.00

Description:

All forms of online advertising are explored, including paid search, with a focus on building a brand online.

Term:

Alternates Fall & Spring

Type:

- **CJN-389 Social Media**

Credits:

4.00

Description:

Social media sites such as Facebook, MySpace, and Twitter are examined from a cultural and critical perspective. The use of social media for community formation, social presence, identity building, and social activism are considered. The roles of advertising, public relations, and branding are examined.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **CJN-457 Integrated Marketing Communication**

Prerequisites:

CJN-2277(formerly CJN-277)

Credits:

4.00

Description:

Examines the integration of advertising, promotion, public relations and marketing communication in the strategic communication process. By learning the fundamentals of interpersonal and persuasive communication, students have an opportunity to develop an effective communication plan for a brand that includes creative copy.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

Government

- **GVT-365 IP & Public Domain: Intro to Law & Policy**

Prerequisites:

54 credits earned and GPA of 3.3 or higher

Credits:

4.00

Description:

This introduction to legal study explores law as it is practiced (the law on the books and their application) and as it is experienced in society by everyday people, clients and citizens. The goal of this course will be two-fold: (1) to introduce undergraduate students to the study of law as it is taught in law school, with an emphasis on reading cases, making arguments as lawyers do, and learning about the intersection of legal application and policymaking; and (2) study intellectual property law (e.g., copyright patent, trademark and trade secrets) as they have evolved over the 20th century with an emphasis on the importance of the public domain in the digital age. The course will be team taught by professors from the law school.

Type:

Arts Admin Minor Elective

NESAD/World Languages & Cultural Studies

- **ADF-S101 Foundation Drawing I**

Credits:

3.00

Description:

This course concentrates on the traditional techniques of observational drawing. Fundamental principles and elements of drawing are introduced in structured lessons and exercises, which are supplemented by additional outside assignments. Foundation Drawing I stresses the development of

visual skills as well as the broad use of drawing concepts, vocabulary, techniques and variety of materials.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **ADF-S166 2D/Color**

Credits:

3.00

Description:

This is an introductory-level course in the basic concepts and practices of two-dimensional design and color theory. The study of color and design is supportive of all studio disciplines and is vital to the understanding of all visual media. This course features an intensive, hands-on approach to color and design as students create, modify and master the three dimensions of color (hue, value, and strength) plus the principles of design (line, shape, value, composition and image). This in-depth study is essential and underlies all of the visual arts as they are practiced today. An understanding of color and design influences all artists' decisions, affecting the look, meaning and use of visual phenomena.

Type:

Arts Admin Minor Elective

- **ADF-S171 CI: Integrated Studio 1**

Credits:

3.00

Description:

This cross-disciplinary course will integrate the ideas and practices of two-dimensional design, color and drawing emphasis will be placed on understanding the creative process, exploring concepts and developing research skills. Students will undertake individual and collaborative projects in three spaces; the studio classroom, the digital world and the city at large.

Type:

- **ARH-316 Contemporary Art**

Credits:

4.00

Description:

Explores European and American art since WWII, including Abstract Expressionism, Colorfield Painting, Pop Art, Minimalism, Neo-Dada, Performance Art, Feminism, Neo-Expressionism and Post-Modernism. Artists include Bacon, Giacometti, Pollock, De Kooning, Frankenthaler, Rothko, Stella, Judd, Calder, David Smith, Serra, Johns, Rauschenberg, Warhol, Lichtenstein, Smithson, Christo, Nevelson, Kosuth, Kruger, Sherman, Basquiat, Kiefer, and Haring.

Term:

Occasional

Type:

BFA Humanities Requirement,Humanities & History,Humanities Literature Requirement,Arts Admin Minor E

- **ARH-318 Art and Museums Today**

Credits:

4.00

Description:

Examines the art world of the past few decades with special attention to the roles and exhibition practices of contemporary art museums and galleries. Considers the major artists and trends in today's art world, the history of museums, and the effect of museums on art produced today. Students will visit local museums, including the Institute of Contemporary Art (ICA) individually and in groups. This course fulfills the ECR requirement.

Term:

Theatre

- **THETR-100 Theatre Practicum: Performance**

Prerequisites:

This is a no credit course.

Credits:

0.00

Description:

A non-credit course to satisfy the Theatre practicum requirement for theatre majors and minors. Students should register for this course when participating in Theatre Department performance activities such as acting, directing, playwriting, dramaturgy, choreography, or stage management may. May be taken more than once.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **THETR-102 Theatre Practicum: Production**

Prerequisites:

This is a no credit course.

Credits:

0.00

Description:

A non-credit course to satisfy the Theatre practicum requirement for theatre majors and minors. Students should register for this course when participating in Theatre Department production activities such as design or assistant design, load-in or run crews, board operators, carpenters, electricians, stitchers and painters. May be taken more than once.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **THETR-129 Acting**

Credits:

4.00

Description:

This introduction to acting prepares students for work in production and develops skills in all forms of communication. The first part of the course uses improvisational exercises based on the Stanislavski method to teach fundamental acting techniques. The second half of the course applies those techniques to scene work from major 20th century plays. This course is a core requirement for all Theatre Majors.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **THETR-139 Vocal Technique**

Credits:

4.00

Description:

Vocal Technique provides students with an essential foundation to help ensure the safe and effective use of the speaking and singing voice. Topics will include alignment, relaxation, breath support, placement, resonance, vocal anatomy, and the care and protection of the voice under normal and stressful situations. Students will do oral presentations and have the option of singing in a master class setting. This is a studio course with a written component.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **THETR-187 Intro to Stage Management**

Credits:

4.00

Description:

This course will teach both the methods and principles behind stage management demonstrating how to support a production while facilitating the work of directors, designers, and actors. In addition to teaching the specific technical skills necessary to each part of the production process, this course will also address the more subtle intellectual and managerial skills that make stage management an art. Satisfies a core requirement for Theatre majors.

Term:

Offered Fall Term

Type:

Arts Admin Minor Elective

• THETR-289 Managing the Start-Up Arts Organization

Credits:

4.00

Description:

Managing a start-up arts organization requires not only the financial, programming, development and interpersonal skills of day-to-day arts management, but the additional creative and imaginative abilities to attract and manage stakeholders, brand the organization, and create governance and hierarchical structures. Using Suffolk's new Modern Theatre as a laboratory, we will investigate the process of starting-up, how it differs from organization to organization, and what special talents each individual student can bring to the management mix. Reading and writing are required for the course, as well as specific work projects either at the Modern or at a local start-up.

Term:

Occasional

Type:

Arts Admin Minor Elective

• THETR-375 Directing I

Credits:

4.00

Description:

This conservatory-style course provides students with fundamental directing skills through lectures, readings, and weekly projects that explore composition, staging, text analysis, and directorial communication skills. Students in this course become eligible to propose their own projects to the Theatre Department for production consideration. Directing students are also encouraged to stage manage and assistant direct faculty productions both in and outside of the Department.

Term:

Offered Fall Term

Type:

Arts Admin Minor Elective

• **THETR-461 Play Analysis**

Credits:

4.00

Description:

This seminar course examines Shakespeare's plays and their modern correlatives. (i.e. Hamlet and The Seagull, King Lear and Endgame) Students read the texts out loud in class examining the meaning, action, objective, and philosophical and historical contexts with the professor. The goal is to get closer to the original intentions of the author and determine not only the basic theme and character relationships, but the kind of mind that could create such a play. In analyzing a modern play students also examine the impact of Shakespeare's mind on future playwrights. There will be a midterm paper and a final exam.

2015-2016 Archived Catalog Information

Asian Studies

Asian Studies is an interdisciplinary program that offers courses in the humanities and social sciences with a focus on Asia.

Students majoring in Asian Studies are required to master at least one Asian language on the advanced-intermediate level. In addition, students should have one semester, summer, or short-term study abroad experience in Asia or an alternative Asian-American community experience in the local area, with the permission of the director.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Minor Requirements](#)
- [Asian Studies Courses](#)

Major Requirements: 12 courses, 48 credits

Core Requirements: 8 courses, 32 credits

Students must take courses from at least three departments, with no more than 20 credits from any one department. Some Freshman Seminar courses may qualify with the approval of the Program Director.

Choose eight of the following:

- AS-100 Introduction to Asian Studies: Culture, People, Ideas

Credits:

4.00

Description:

An interdisciplinary introduction to Asian Studies will touch upon the history, politics, economics, philosophy, geography, arts, and cultures of Asia. Sample topics include political economy, religious and cultural exchanges, international relations, Asian experience in America, and the role of Asia in the twenty-first century. Students will develop conceptual frameworks for exploring the subjects covered by the Asian Studies curriculum.

Term:

Offered Both Fall and Spring

Type:

Asian Studies,Cultural Diversity Opt B,Humanities & History,Humanities Literature Requirement,Divers

• AS-210 Traditional Chinese Society From 1800 to 1949

Credits:

4.00

Description:

This course focuses on traditional Chinese society from 1800 to 1949, taking up such areas as family and kinship, social mobility, education, economic and social differentiation, community and social life, and popular belief. Examining the practices and ideologies underlying each area will enhance our understanding of the nature of traditional Chinese society, and help explain how elements of Chinese traditional culture contribute to modern Chinese identity and everyday life.

Term:

Occasional

• AS-220 Chinese Food in America

Credits:

4.00

Description:

There are more Chinese restaurants in the U.S. than MacDonal'd's, Burger Kings and KFC'S combined. This course examines the unique American phenomenon of Chinese food from a historical and anthropological viewpoint. Students will gain a better appreciation and understanding of the

subject through the course and will probably never look at local Chinese takeout the same way afterwards

Term:

Offered Spring Term

Type:

Asian Studies

- **AS-500 Asian Studies Internship**

Credits:

4.00

Description:

Engages in an internship in a business or non-profit organization that deals with Asia or an Asian American community. Students may complete the internship either in Asia or in the U.S. Students will complete appropriate exercises and reports to document their learning.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement, Global Engagement Experience, Diverse Perspectives

- **AS-510 Independent Study**

Credits:

1.00- 4.00

Description:

Works directly with a faculty member on an agreed topic related to Asia or an Asian language. Past topics include: intermediate Chinese and Japanese; Asian popular culture.

Term:

- **CHIN-211 Survey of Chinese Literature and Culture I**

Credits:

3.00

Description:

This is an introductory and interdisciplinary course on Chinese civilization and traditional Chinese literature. It will provide the student with a brief introduction to the cultural legacy and literature of China from the archaeological origins of Chinese civilization to the present time. The diverse origins of China's civilization are stressed as topics in political, social, and economic history are explored, with a focus on developments in language, literature, and art. This course is a good introduction to further study of Chinese history and culture and, in particular, provides a valuable context for themes treated in Modern China.

- **CJN-281 Asian Popular Culture**

Credits:

4.00

Description:

Students critically analyze Asian popular culture since the 1980s using a cultural ethnographic approach. Students apply the lenses of gender, identity, globalization, and business strategies to examine pop phenomena such as Korean Wave, Cool Japan, and Cantonese popular music.

Term:

Occasional

- **CJN-293 Hong Kong Cinema**

Credits:

4.00

Description:

By examining the film texts of Hong Kong auteurs such as John Woo, Wong Kar-wai, Tsui Hark, Andrew Lau, and Alan Mak, the course examines issues such as film genres, colonization/decolonization, transnational political economy, the Greater Chinese media market, and the diaspora.

Term:

Occasional

Type:

Cultural Diversity Opt B, Diverse Perspectives

- **ENG-362 Asian American Literature**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

An introduction to selected Asian-American writers with an emphasis on socio-cultural issues, such as race, gender and ethnicity. Authors include Bulosan, Hwang, Jen, Kingston, Lee, Mukherjee, Odada, and Tan. Cultural Diversity A

Term:

Occasional

Type:

- **GVT-389 Politics of China**

Prerequisites:

Junior status or above

Credits:

4.00

Description:

Emphasis on a particular approach to the problems of economic modernization and political development. Historical background; the revolutionary movement; present political structures and current issues. Cultural Diversity B

Type:

Cultural Diversity Opt B, Social Science, Asian Studies

- **GVT-411 Politics of North and South East Asia**

Credits:

4.00

Description:

This course examines the cultural background and political systems mainly of China, Korea and Japan, also touching upon the small tiger states in South-East Asia. It elucidates the historical origins, evolution and current trajectory of these states with a particular concentration on North Korea. One further concentration is the interplay of domestic and foreign policy in the relations of these states, regional stability and cooperation. Topics include history, social structure, the interplay of culture and ideology, political economy, humanitarian issues, security, and the politics of North Korean domestic and foreign policy. We will spend considerable time analyzing China's and North Korea's relationship with regional and world powers and examining the origins, history, and implications of the North Korean nuclear weapons program. Students will be expected to demonstrate the ability to apply theoretical and historical knowledge toward analyzing the rapidly evolving landscape of contemporary issues related to East Asia.

Type:

Social Science, Asian Studies

- **HST-115 Introduction to Chinese History and Culture**

Credits:

4.00

Description:

Discusses Chinese civilization from its origins to its recent rise as a world power. Spark students' interest in China and enable them to relate Chinese history and society to their lives and careers.

Type:

Humanities & History

- **HST-255 Films and Contemporary China**

Credits:

4.00

Description:

Uses a series of films to demonstrate the changes in people's lives in contemporary China. It focuses on the Reform Era between 1980 and present. The topics include Chinese politics, economic growth, social change, and popular cultures.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities & History, Asian Studies, Humanities Literature Requirement

- **HST-342 Modern Japanese History**

Credits:

4.00

Description:

Examines Japanese history from the beginning of the seventeenth century to the end of the twentieth century. The topics include early modern Japan during the Tokugawa era, Meiji Restoration, Japanese imperialism and World War II, Japan's emergence as the second largest economy in the world.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities & History, Asian Studies, Humanities Literature Requirement

- **HST-344 Passages to the Modern World**

Credits:

4.00

Description:

Discusses the early-modern history of East Asia, specifically China and Japan, in a global context. It examines the difference between East Asia and the West in their transitions to modern society, whether or not there was a great divergence," and if there was one, what was the underpinning dynamic in the process. This comparative approach usually requires the class to read one book (in English) on Chinese or Japanese history and another one on European or global history.

Type:

Humanities & History, Asian Studies

- **HST-345 Chinese Civilization**

Credits:

4.00

Description:

Discusses Confucianism; the making of an imperial bureaucratic system; conflicts and interactions among different ethnic groups; the Mongolian Empire; early modern Chinese society. (Formerly HST 131)

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities & History, Asian Studies, Humanities Literature Requirement

- **HST-346 Modern Chinese History**

Credits:

4.00

Description:

Examines modern Chinese history from the sixteenth century to the present. Studies the conflict between the modern state and traditional society. Discusses China's turbulent transition from an old empire to the Communist regime, the dynamics behind this transition, and the price that ordinary Chinese people have paid. Also studies China's interactions with the outside world from the first Opium War to China's entrance to the World Trade Organization. (Formerly HST 132)

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities & History, Asian Studies, Humanities Literature Requirement

- **HST-348 Samurai: History, Literature & Film**

Credits:

4.00

Description:

Explores the history of samurai and its cultural meaning for Japanese society. It examines not only how the samurai class developed into a major political force, but also how it has been represented by literatures and films in different eras.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, Asian Studies

- **PHIL-261 Eastern Philosophy**

Credits:

4.00

Description:

The exposition and critical evaluation of Hinduism, Buddhism, Confucianism, Taoism, and Islam. Special attention is given to foundation principles as well as to the similarities and differences of each of these philosophies to basic ideas in Western philosophy. 1 term - 4 credits. Normally offered alternate years. C b

Term:

Occasional

Type:

Cultural Diversity Opt B,Cultural Diversity BFA,Humanities & History,Humanities Literature Requireme

• **PHIL-267 Chinese Philosophy**

Credits:

4.00

Description:

A survey of the main developments in Chinese Philosophy. The course begins with the early dynastic concept of humanism and then turns to Confucius and Mencius. Having developed the central Confucian doctrines, students next examine the Taoist response to Confucianism in the writings of Lao Tzu and Chuang Tzu. The course then considers Zen Buddhism, which is called Ch'an Buddhism in China, where it originated. In particular, students study the concept of sudden enlightenment before turning to the Neo-Confucian scholars.

Term:

Occasional

Type:

Cultural Diversity Opt B,Diverse Perspectives

• **PSYCH-247 Asian Perspectives on Health and Work**

Credits:

4.00

Description:

Examines theoretical and empirical approaches that provide insight into Asian viewpoints on socialization practices, family systems, health/well-being, cultural traditions/values, and spiritual philosophy/literature. Explores the diversity among Asian cultures in terms of language, history, religion/spiritual faith, and healthcare practices, all of which play a significant role in shaping the psychological characteristics, interpersonal relationships, and work dynamics of Asians and Asian immigrants. Students critically analyze similarities and differences between Asian and Western psychological perspectives of health and work through didactic and experiential learning components. This course fulfills the Cultural Diversity Requirement and may fulfill the Expanded Classroom Requirement. Normally offered alternate years.

Term:

Offered Spring Term

Type:

Social Science,Asian Studies,Cultural Diversity Opt A,Diverse Perspectives

• **RS-112 Introduction to World Religions: Eastern Traditions**

Credits:

4.00

Description:

This course will examine a variety of Eastern religions, including Hinduism, Buddhism, Jainism, Confucianism, Taoism, and Shintoism. Possible connections to be explored will be the impact of these traditions on others, such as Pacific Islands and African religion, as well as the growing place of Eastern religion in the West. This course will explore the history and structure of each tradition, while attempting to recognize the similarities and the differences among them. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. Normally offered every year. Cultural Diversity B

Type:

Cultural Diversity Opt B,Asian Studies,Diverse Perspectives

• **SF-190 Asia in America Fiction and Fact**

Credits:

4.00

Description:

With a focus on some selected ethnic groups from Asia, Asia in America studies the history and current status of Asian Americans in Boston and other parts of the country. We will examine the major reasons why these immigrants chose to leave their home country as well as their expectations and experiences here in America. We will also discuss the issues Asian immigrants have faced in this adopted home as well as the connections and conflicts among different ethnic groups or even within the same ethnic group due to political and socio-economic reasons. The course will include some level of community engagement, through Chinatown tour and service, which may enable us to have a direct contact with the Asian American population and reflect on what is being discussed in class. Through this course, we hope to gain a better understanding of the racial and cultural history of the country and arrive at a deep appreciation of the dynamics of cultural interactions in the twenty-first century. The course fulfills the SCGP requirement.

Type:

Cultural Diversity Opt A, Global Engagement Experience, Diverse Perspectives, Expanded Classroom Requir

• SF-1145 Emergence of Southeast Asia

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

Type:

Diverse Perspectives

Students who choose the following courses and complete some specific reading and writing assignments may count them toward the Asian Studies major requirements. However, students need to consult the instructor and get the approval of the Asian Studies program director no later than the first week of the class.

• CJN-216 Intercultural Communication

Credits:

4.00

Description:

An examination of communication variations and cultural viewpoints and their impact on cross-cultural communication. A special emphasis is placed on rituals and message patterns in non-Western cultures.

Term:

Offered Both Fall and Spring

Type:

Cultural Diversity Opt B,Diverse Perspectives

- **CJN-385 Globalization of Media and Telecommunications**

Credits:

4.00

Description:

A critique of the circulation of media goods and ideologies from both a cultural and political/economic perspective. Topics include global Hollywood, the images of Muslim women in transnational media, the information society, and global social movements.

Term:

Offered Spring Term

Type:

Cultural Diversity Opt B,BSBA SOCIAL CHANGE,Diverse Perspectives

- **EC-141 Development Economics**

Credits:

4.00

Description:

Why do so many countries remain so poor? Why have some (e.g. the Asian tigers) grown so rapidly? Why have most of the countries of Eastern Europe and the Former Soviet Union been slow to ignite economic growth? These questions are addressed by looking at domestic factors (government policies, resource endowments) as well as the international environment (mobile investors, international financial institutions). Asks what economic choices these countries face now. Normally offered yearly. Cultural Diversity B

Type:

Cultural Diversity Opt B,Social Science,Asian Studies,BSJ SOCIAL SCIENCE,Diverse Perspectives

• EC-151 Economic & Human Geography

Credits:

4.00

Description:

The study of how economic and human activity is distributed across space, the reasons for these spatial distributions, and the processes that change the spatial organization of economic activity over time. Topics include: maps, map projections, and geographic information systems; population geography; the organization and location of cities, towns and villages; transportation and communication policy; industrial location; the geography of world trade; and geographic features of economic development. The course takes a global perspective, and draws on cases and examples from all over the world. Cultural Diversity B

Type:

Cultural Diversity Opt B,Social Science,BSJ SOCIAL SCIENCE,Asian Studies,Diverse Perspectives

• EC-430 International Trade Theory & Policy

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

This course examines theories of international trade. The policy implications of each theory are explored and the effect of trade on the welfare of the nation is examined. Also the development of trade blocs and the the political economy of trade are studied. Normally offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EDUC-315 Strategies for Emerging English Learners**

Credits:

4.00

Description:

This course examines the specific needs and challenges of the various language and cultural groups in schools. Topics include: theories of 1st and 2nd language acquisition, strategies for teaching academic content, modifying instruction in the mainstream classroom, creating classroom cultures that invite all students into learning, the role of advocacy and professional collaboration in ESL, and analysis of policies related to assessment and placement of English Language Learners.

Type:

Diverse Perspectives,Social Science

- **HST-150 Empires & Globalization in World History II**

Credits:

4.00

Description:

This is the second of the two-course series of Empires and Globalization in World History. Course discusses the origins and development of globalization and capitalism from the perspective of economic history. Major issues include state-making, wars, and the rivalry among early modern empires, economic development, the Industrial Revolution and the formation of the global trade system. The specific topics may change every year due to new academic developments and publications. Cultural Diversity B

Term:

Offered Spring Term

Type:

Humanities & History,Cultural Diversity Opt B,Humanities Literature Requirement

- **SOC-228 Cultural, Global and Social Perspectives**

Credits:

4.00

Description:

Enables students to examine, as well as develop an awareness and appreciation of, diversity within today's society. Providing an overview of the major racial, ethnic, and cultural groups in the U.S., the focus is on the ways in which cultural awareness enhances professional helping relationships and improves the operation of human services systems.

Term:

Occasional

Type:

Cultural Diversity Opt A,Diverse Perspectives

- **SOC-329 Sociology of Globalization**

Prerequisites:

Prerequisite: SOC 113 or SOC 116.

Credits:

4.00

Description:

Globalization is shrinking the world. How and why did this happen? This course will explore global change and the global processes which effect key social institutions: culture, the economy and politics. Students will study the processes of globalization and its impact on our lives and people around the globe.

Term:

Occasional

Type:

Cultural Diversity Opt B,Diverse Perspectives

- **SOC-357 Global Health and Healing**

Credits:

4.00

Description:

An examination of how different cultures understand health and illness. Healing approaches from Asia, Africa and the Americas will be explored.

Term:

Occasional

Type:

Cultural Diversity Opt B,Diverse Perspectives

- **WGS-325 Global Women's Fiction**

Credits:

4.00

Description:

Explores of various cultural worldviews in order to reveal and assess the voices of women from around the world as they respond to important global issues such as sexual violence and gendered oppression. Topics include: national citizenship, sexual politics, legal discourse, aesthetic representation, literary movements, genre, constructions of femininity, sexual identities, and representations of gender in relation to race and class and international cultures, and the relationship of self-image to the body politic.

Term:

Occasional

Type:

Humanities Literature Requirement,Cultural Diversity Opt B,Diverse Perspectives

Language Requirement (4 courses, 16 credits)

To qualify for the major, students must demonstrate proficiency in one Asian language at the advanced-intermediate level. This can be fulfilled by successful completion of an Intermediate Level II Asian language course with an average grade of “B” or by passing the same level language test offered by the World Languages & Cultural Studies Department.

- **CHIN-202 Intermediate Chinese II**

Prerequisites:

CHIN 201 or Instructor's consent.

Credits:

4.00

Description:

Continuation of skills developed in CHIN 201.

Term:

Offered Spring Term

Type:

BA FOREIGN

or

Language Course Options

- **CHIN-101 Elementary Chinese I**

Credits:

4.00

Description:

Introduces Modern Standard Chinese (Mandarin) with an emphasis on developing conversational skills by using authentic materials such as video, audio, and various print media that teach fundamental grammatical patterns and vocabulary in functional contexts. Basic reading and writing (in Simplified Characters) are also taught.

Term:

Offered Fall Term

Type:

BA FOREIGN

• **CHIN-102 Elementary Chinese II**

Prerequisites:

CHIN 101 or Instructor's consent.

Credits:

4.00

Description:

Continues to develop proficiency in reading, writing, and speaking Modern Standard Chinese (Mandarin). Helps to develop listening comprehension skills with the use of authentic materials, such as print media, audio, and video materials. Advanced beginning level of reading and writing of Simplified Chinese characters is taught.

Term:

Offered Spring Term

Type:

BA FOREIGN

• **CHIN-201 Intermediate Chinese I**

Prerequisites:

CHIN 102 or Instructor's consent.

Credits:

4.00

Description:

Emphasis on improving Chinese skills in the areas of speaking, listening, reading, and writing. Expansion of vocabulary and further study of grammar. Discussion of assigned readings primarily in Chinese.

Term:

Offered Fall Term

Type:

BA FOREIGN

• CHIN-202 Intermediate Chinese II

Prerequisites:

CHIN 201 or Instructor's consent.

Credits:

4.00

Description:

Continuation of skills developed in CHIN 201.

Term:

Offered Spring Term

Type:

BA FOREIGN

- **JPN-101 Elementary Japanese I**

Credits:

4.00

Description:

For students with no previous knowledge. An introduction to features of spoken and written Japanese. Stresses grammar, oral performance and simple characters.

Term:

Offered Fall Term

Type:

BA FOREIGN

- **JPN-102 Elementary Japanese II**

Prerequisites:

JPN-101 or Instructor's consent

Credits:

4.00

Description:

Continues to develop proficiency in reading, writing, and speaking Japanese. Helps to further develop listening skills with the use of authentic materials, such as print media and audio files.

Term:

Offered Spring Term

Type:

BA FOREIGN

Study Abroad or a Local Asian-American Community Experience

Students must complete either option A or B:

A. A Semester, Summer or Short-Term Study Abroad in Asia (which must bear at least 4 credits)

B. AS-500 Asian American Community Experience (1 course, 4 credits)

- **AS-500 Asian Studies Internship**

Credits:

4.00

Description:

Engages in an internship in a business or non-profit organization that deals with Asia or an Asian American community. Students may complete the internship either in Asia or in the U.S. Students will complete appropriate exercises and reports to document their learning.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement, Global Engagement Experience, Diverse Perspectives

Note:

AS-500 may not double count to fulfill major course requirements if taken as a substitute for study abroad.

2015-2016 Archived Catalog Information

Asian Studies

Asian Studies is an interdisciplinary program that offers courses in the humanities and social sciences with a focus on Asia.

Students majoring in Asian Studies are required to master at least one Asian language on the advanced-intermediate level. In addition, students should have one semester, summer, or short-term study abroad experience in Asia or an alternative Asian-American community experience in the local area, with the permission of the director.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Minor Requirements](#)
- [Asian Studies Courses](#)

Minor Requirements: 5 courses, 17-20 credits

The minor in Asian Studies requires five courses selected from the major core requirements list (see the Major Requirements tab). Students must take courses from at least two departments.

Language Requirement

To qualify for the minor, students must demonstrate proficiency in one Asian language at the advanced-elementary level. This can be fulfilled by successful completion of an elementary Level II Asian language course with an average grade of "B" or by passing the same-level language test offered by the World Languages & Cultural Studies Department.

- CHIN-102 Elementary Chinese II

Prerequisites:

CHIN 101 or Instructor's consent.

Credits:

4.00

Description:

Continues to develop proficiency in reading, writing, and speaking Modern Standard Chinese (Mandarin). Helps to develop listening comprehension skills with the use of authentic materials, such as print media, audio, and video materials. Advanced beginning level of reading and writing of Simplified Chinese characters is taught.

- AS-100 Introduction to Asian Studies: Culture, People, Ideas

Credits:

4.00

Description:

An interdisciplinary introduction to Asian Studies will touch upon the history, politics, economics, philosophy, geography, arts, and cultures of Asia. Sample topics include political economy, religious and cultural exchanges, international relations, Asian experience in America, and the role of Asia in the twenty-first century. Students will develop conceptual frameworks for exploring the subjects covered by the Asian Studies curriculum.

Term:

Offered Both Fall and Spring

Type:

Asian Studies,Cultural Diversity Opt B,Humanities & History,Humanities Literature Requirement,Divers

- **AS-210 Traditional Chinese Society From 1800 to 1949**

Credits:

4.00

Description:

This course focuses on traditional Chinese society from 1800 to 1949, taking up such areas as family and kinship, social mobility, education, economic and social differentiation, community and social life, and popular belief. Examining the practices and ideologies underlying each area will enhance our understanding of the nature of traditional Chinese society, and help explain how elements of Chinese traditional culture contribute to modern Chinese identity and everyday life.

Term:

Occasional

- **AS-220 Chinese Food in America**

Credits:

4.00

Description:

There are more Chinese restaurants in the U.S. than MacDonald's, Burger Kings and KFC'S combined. This course examines the unique American phenomenon of Chinese food from a historical and anthropological viewpoint. Students will gain a better appreciation and understanding of the subject through the course and will probably never look at local Chinese takeout the same way afterwards

Term:

Offered Spring Term

Type:

Asian Studies

- **AS-500 Asian Studies Internship**

Credits:

4.00

Description:

Engages in an internship in a business or non-profit organization that deals with Asia or an Asian American community. Students may complete the internship either in Asia or in the U.S. Students will complete appropriate exercises and reports to document their learning.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement, Global Engagement Experience, Diverse Perspectives

- **AS-510 Independent Study**

Credits:

1.00- 4.00

Description:

Works directly with a faculty member on an agreed topic related to Asia or an Asian language. Past topics include: intermediate Chinese and Japanese; Asian popular culture.

Term:

Offered Both Fall and Spring

- **AS-511 Professional Development for Asian Studies**

Prerequisites:

Instructor consent required

Credits:

1.00

Description:

Students will reflect on their college career and develop a personal strategy for attaining professional goals. They will understand ethical guidelines and professional conventions by examining the differences between American work culture and Asian work culture; by applying this understanding to a transnational/diverse professional world. Students will understand what the job market and graduate school opportunities are like for Asian Studies graduates.

2015-2016 Archived Catalog Information

Biochemistry

The Chemistry & Biochemistry Department offers a Biochemistry major. Through a wide variety of laboratory-based courses and opportunities for independent research with faculty, the department provides students with the tools that will allow them to achieve success in their field while learning in the heart of one of the most scientifically progressive cities in the world.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Honors](#)
- [Biochemistry Courses](#)

Biochemistry Major Requirements: 20 courses, 80 credits

The curricula for the BA and BS in Biochemistry satisfy the requirements for certification by the American Chemical Society if CHEM-375 and CHEM-L375 are elected.

Core Requirements (18 courses and corresponding laboratories where applicable, 72 credits)

- CHEM-111 General Chemistry I

Prerequisites:

Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:

3.00

Description:

Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• CHEM-L111 General Chemistry I Lab**Prerequisites:**

Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• CHEM-112 General Chemistry II

Prerequisites:

CHEM 111/L111; CHEM-L112 must be taken concurrently.

Credits:

3.00

Description:

This course is a continuation of General Chemistry I. Fundamental principles of chemistry are discussed. Introduces thermochemistry, gases, solution chemistry, chemical kinetics, chemical equilibrium, acid-base systems, and thermodynamics.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS

- **CHEM-L112 General Chemistry II Lab**

Prerequisites:

CHEM 112 must be taken concurrently;

Credits:

1.00

Description:

This course is a continuation of General Chemistry I Lab. Apply the basic principles of chemistry through discovery laboratory experiments with an emphasis on quantitative analysis. Execute basic analytical techniques such as gravimetric analysis, the application of Beer's Law, and acid-base titrations. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Spring Term

Type:

- **CHEM-211 Organic Chemistry I**

Prerequisites:

CHEM 112 and CHEM-L112. CHEM-L211 must be taken concurrently.

Credits:

3.00

Description:

Introduces basic theories of structure, bonding, and chemical reactivity as specifically applied to modern organic chemistry. Includes functional groups, acid/base chemistry, nomenclature, resonance, spectroscopy, and stereochemistry.

Term:

Offered Fall Term

- **CHEM-L211 Organic Chemistry Laboratory I**

Prerequisites:

CHEM-112 and CHEM-L112. Must be taken concurrently with CHEM 211.

Credits:

1.00

Description:

Introduces synthetic organic chemistry techniques. Includes melting point determination, distillation, crystallization, extraction, chromatographic separations, and infrared spectroscopy. Discusses experimental design within the context of green organic chemistry.

Term:

Offered Fall Term

- **CHEM-212 Organic Chemistry II**

Prerequisites:

CHEM 211 and CHEM L211. Must take CHEM-L212 concurrently.

Credits:

3.00

Description:

Builds on the core competencies acquired in Organic Chemistry I. Includes detailed mechanistic discussions of substitution, elimination, and addition reactions. Emphasizes organic synthesis, structure determination, and spectroscopy.

Term:

Offered Spring Term

- **CHEM-L212 Organic Chemistry Laboratory II**

Prerequisites:

CHEM-211 and CHEM-L211. Must be take CHEM-212 concurrently.

Credits:

1.00

Description:

Builds on the core competencies acquired in Organic Chemistry Laboratory I. Emphasizes the characterization of organic molecules via nuclear magnetic resonance spectroscopy. Discusses experimental design within the context of green organic chemistry.

Term:

Offered Spring Term

- **CHEM-314 Instrumental Analysis**

Prerequisites:

CHEM 211; CHEM L314 must be taken concurrently.

Credits:

3.00

Description:

Theory and application of analytical instruments: ultraviolet, visible, fluorescence, atomic and emission spectroscopy; chromatographic methods; electrochemical measurements. Prerequisites: CHEM 211; CHEM L314 must be taken concurrently. 3 hour lecture. 1 term - 3 credits. Normally offered Fall/Spring, days.

Term:

Alternates Fall & Spring

• CHEM-L314 Instrumental Analysis Lab

Prerequisites:

CHEM L211; CHEM 314 must be taken concurrently

Credits:

1.00

Description:

Laboratory experiments in chemical analysis using instrumental techniques, including spectroscopy and chromatography. Data collection and evaluation includes computer-based methods. Reports are prepared in professional style. Prerequisites: CHEM L112; CHEM 314 must be taken concurrently. 4-hour Laboratory. 1 term - 1 credit. Normally offered Fall/Spring.

Term:

Alternates Fall & Spring

• CHEM-331 Biochemistry I

Prerequisites:

CHEM 212/L212 or permission of instructor. CHEM L331 must be taken concurrently.

Credits:

3.00

Description:

Explores the foundations of biochemistry, including the structure, organization and behavior of proteins, carbohydrates, lipids, and nucleic acids. Topics include enzyme catalysis, kinetics, and inhibition as well as protein regulation and membrane structure. Introduces the use of biochemical literature and computer-based bioinformatics techniques. Offered every fall.

Term:

Offered Fall Term

- **CHEM-L331 Biochemical Techniques I**

Prerequisites:

Must be taken concurrently with CHEM 331. Take CHEM-212 and CHEM-L212 or permission of instructor.

Credits:

1.00

Description:

Laboratory course introducing biochemical techniques. Includes buffer preparation, PCR, purification of DNA and proteins, agarose and polyacrylamide gel electrophoresis, protein quantitation and detection, and enzyme kinetic assays. Offered every Fall.

Term:

Offered Fall Term

- **CHEM-332 Biochemistry II**

Prerequisites:

CHEM 331

Credits:

4.00

Description:

This course explores the principles of bioenergetics and metabolism of biological compounds. Coverage includes intermediary metabolism of carbohydrates, lipids, amino acids, oxidative phosphorylation, and synthesis of purines and pyrimidines. Additional topics include the regulation and integration of metabolism. Lectures will be supplemented with discussions of the biochemical literature. Prerequisites: CHEM 331. 3 hours of lecture and 1 hour of recitation per week. Offered every Spring, days only.

Term:

Offered Spring Term

- CHEM-411 Physical Chemistry I

Prerequisites:

CHEM 112; MATH 166;

Credits:

3.00

Description:

Principles of thermodynamics and its general applications to physical and chemical change; introduction to the kinetic theory of gases and concepts of statistical mechanics. 3 hours lecture. 3 hour lecture. Normally offered Fall, days.

Term:

Offered Fall Term

- CHEM-L411 Physical Chemistry Laboratory I

Prerequisites:

CHEM 411 must be taken concurrently

Credits:

1.00

Description:

Laboratory exercises covering classical experiments in thermodynamic and instrumental measurements. Significant emphasis will be placed on experimental design and data analysis skills in addition to technical writing skills as demonstrated by laboratory reports prepared in the professional style. 4-hour laboratory. Normally offered Fall, days.

Term:

Offered Fall Term

• **CHEM-412 Physical Chemistry II**

Prerequisites:

CHEM 411

Credits:

3.00

Description:

Applications of thermodynamics to solutions, chemical equilibrium and electrochemistry; chemical kinetics will be covered. Quantum chemistry and the application of spectroscopy to molecular structure. 3 hours lecture. Normally offered Spring, days.

Term:

Offered Spring Term

• **CHEM-L412 Physical Chemistry Lab II**

Prerequisites:

CHEM L411; CHEM 412 must be taken concurrently.

Credits:

1.00

Description:

Laboratory exercises using spectroscopic techniques (optical and electrochemical) to explore kinetic and thermodynamic and quantum mechanical properties of chemical systems. Emphasis will be placed on experimental design and data analysis skills in addition to technical writing skills as demonstrated through reports prepared in the professional style. 4-hour laboratory. Normally offered Spring, days.

Term:

Offered Spring Term

- **CHEM-428 Research & Seminar I**

Prerequisites:

CHEM 212; CHEM L212; Instructor's Consent required

Credits:

1.00- 4.00

Description:

Independent study under the direct supervision of the chemistry faculty. Students are required to attend departmental seminars, write a professional research report, and give an oral presentation on their project for review by the chemistry faculty. Depending on the project undertaken, students may obtain ECR credit. Prerequisites: CHEM 212 and CHEM L212 and by permission of the instructor. 1 terms - 1 to 4 credits. Normally offered every Fall.

Term:

Offered Fall Term

Type:

Expanded Classroom Requirement

- **CHEM-429 Research & Seminar II**

Prerequisites:

CHEM 212 and CHEM L212 and by permission of the instructor.

Credits:

1.00- 4.00

Description:

Independent study under the direct supervision of the chemistry faculty. Students are required to attend departmental seminars, write a professional research report, and give an oral presentation for review by the chemistry faculty. Depending on the project undertaken, students may obtain ECR credit. Prerequisites: CHEM 212 and CHEM L212 and permission of the instructor. 1 term - 1 to 4 credits. Normally offered every Spring.

Term:

Offered Spring Term

Type:

Expanded Classroom Requirement

- **CHEM-L432 Advanced Biochemistry Research Laboratory**

Prerequisites:

CHEM-331; CHEM-L331

Credits:

3.00

Description:

Laboratory course where students apply the use of biochemical techniques acquired in Biochemical Techniques I (CHEM L331) to conduct novel research. Projects vary from year to year, but may include recombinant DNA techniques, purification and characterization of DNA and proteins, and bioinformatics. Emphasis on experimental design, data interpretation, analysis of the scientific literature, and writing. Includes field trip to local research university or biotechnology/pharmaceutical laboratory.

Term:

Alternates Fall & Spring

Type:

Expanded Classroom Requirement

- **BIO-111 Introduction to the Cell**

Prerequisites:

Must take BIO L111 concurrently

Credits:

3.00

Description:

Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L111 Introduction to the Cell Laboratory**

Prerequisites:

Concurrently with BIO 111

Credits:

1.00

Description:

Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.

Term:

Offered Both Fall and Spring

Type:

- **BIO-114 Organismal Biology**

Prerequisites:

Must take BIO L114 concurrently.

Credits:

3.00

Description:

Rigorous introduction to organismal biology emphasizing evolution, phylogenetics, form, and function. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **BIO-L114 Organismal Biology Laboratory**

Prerequisites:

Must take BIO 114 concurrently

Credits:

1.00

Description:

A series of laboratory experiences in evolution, diversity, anatomy and physiology.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **MATH-165 Calculus I**

Prerequisites:

MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

Credits:

4.00

Description:

Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-166 Calculus II**

Prerequisites:

MATH 165 with grade of C or better

Credits:

4.00

Description:

Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation, convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **PHYS-151 University Physics I**

Prerequisites:

Take MATH-121 or MATH 165. PHYS L151 concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **PHYS-L151 University Physics Lab I**

Prerequisites:

PHYS 151 concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **PHYS-152 University Physics II**

Prerequisites:

PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

Credits:

3.00

Description:

This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **PHYS-L152 University Physics Lab II**

Prerequisites:

PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

Elective Requirements (2 courses and corresponding laboratories, 8 credits)

Choose two Biology electives from the following:

- **BIO-203 Anatomy and Physiology I**

Prerequisites:

BIO L203 MUST BE TAKEN CONCURRENTLY BIO 111, BIO L111.

Credits:

3.00

Description:

First part of a systematic survey of the structural and functional interrelations of the organ systems of the human body. This course emphasizes histology and physiology in the understanding of the integumentary, skeletal, muscular, and nervous systems. Medical terminology will be used.

Term:

Offered Fall Term

- **BIO-L203 Anatomy & Physiology Lab I**

Prerequisites:

BIO 111/L111; Must take BIO-203 concurrently

Credits:

1.00

Description:

A study of the human skeletal system and a comparative look at other organ systems involving observation of anatomical models and dissection of mammalian specimens. Also includes microscopy and computer simulations of physiological processes.

Term:

Offered Fall Term

- **BIO-204 Anatomy and Physiology II**

Prerequisites:

BIO 203, BIO L203; BIO L204 must be taken concurrently;

Credits:

3.00

Description:

Conclusion of a systematic survey of the structural and functional interrelations of the organ systems of the human body. This course investigates the endocrine, circulatory, respiratory, digestive, urinary, and reproductive systems as well as the physiology of immune responses, nutrition, and acid-base balance. Medical terminology will be used.

Term:

Offered Spring Term

- **BIO-L204 Anatomy & Physiology Lab II**

Prerequisites:

BIO 203/L203 and BIO 204 must be taken concurrently;

Credits:

1.00

Description:

A study of the human viscera using anatomical models and dissection of mammalian specimens. Also includes microscopy of tissues and physiological experiments.

Term:

Offered Spring Term

- **BIO-274 Genetics**

Prerequisites:

BIO 111/L111 and BIO 114/L114; BIO L274 concurrently;

Credits:

3.00

Description:

An examination of the basic principles of genetics in eukaryotes and prokaryotes at the level of molecules, cells, and multicellular organisms, including humans. Topics include Mendelian and non-Mendelian inheritance, structure and function of chromosomes and genomes, biological variation resulting from recombination, mutation, and selection, and population genetics.

Term:

Offered Fall Term

- **BIO-L274 Genetics Lab**

Prerequisites:

BIO-111, BIO-L111, BIO-114, and BIO-L114. Must be taken concurrently with BIO 274.

Credits:

1.00

Description:

Experiments designed to demonstrate principles presented in lecture, using a range of genetic model organisms that include *E. coli*, *B. subtilis*, *S. cerevisiae*, *D. melanogaster*, *S. fimicola*, and *C. elegans*.

Term:

Offered Fall Term

- **BIO-285 Microbiology**

Prerequisites:

BIO-111 and BIO-L111; BIO-L285 concurrently;

Credits:

3.00

Description:

Viruses and bacteria are surveyed in terms of their ecology, biochemistry, taxonomy, molecular biology and control.

Term:

Offered Spring Term

- **BIO-L285 Microbiology Laboratory**

Prerequisites:

BIO 111/L111; BIO 285 concurrently;

Credits:

1.00

Description:

Introduction to microbiological techniques and their applications to health, research and industry.

Term:

Offered Fall Term

- **BIO-374 Genomics**

Prerequisites:

BIO 111/L111, CHEM 111/L111, BIO 274/L274 Must take BIO L374 concurrently

Credits:

3.00

Description:

What can we learn from genomics? In this course, you will develop an understanding of how cutting edge techniques from biotechnology are changing our views of biology. You will learn how genetic sequencing can be used for everything from tracing evolutionary histories in the tree of life to shedding light on biodiversity patterns of populations. With a focus on human genetics, you will also explore how genes are discovered and linked to phenotypic traits. Finally, you will consider methods of monitoring gene expression and how the resulting genetic networks can help medicine and drug development.

- **BIO-L374 Genomics Laboratory**

Prerequisites:

BIO 111/L111, CHEM 111/L111, BIO 274/L274 Must take BIO 374 concurrently

Credits:

1.00

Description:

In this course, you will develop an understanding of current genomic methods through collection and examination of your own data. In the first part of the lab, you will use sequencing techniques to compare genetic relationships and characterize the microbial biodiversity of a population. In the second part of the lab, you will focus on gene expression and functional genomics. You will determine the actions of a transcription factor through RNA-seq and also determine how a collection of uncharacterized transcription factors affect antibiotic sensitivity. In addition to reading primary literature and keeping a lab notebook, you will also learn how to analyze and present your genomics data.

- **BIO-377 Immunology**

Prerequisites:

BIO-114/L114; CHEM-211/L211; BIO-L377 concurrently;

Credits:

3.00

Description:

The concept of immunity, response to infection, structure of the immune system, biochemistry of immunoglobins, antigen-antibody interactions, allergy, immunological injury, lymphocyte subpopulations and cellular immunity, tolerance suppression and enhancement. Taught alternate/even years.

Term:

Offered Spring Term

- **BIO-L377 Immunology Laboratory**

Prerequisites:

BIO-114 and BIO-L114 and CHEM-211 and CHEM-L211. Must take BIO-377 concurrently.

Credits:

1.00

Description:

Anatomy of the immune system , immunoglobulin purification, hemagglutination, enzyme immunoassay. Immuno-chemistry, immunoelectrophoresis, gel precipitation assay.

Term:

Occasional

- **BIO-403 Cell Biology**

Prerequisites:

BIO 111/L111; CHEM-211/L211; BIO-L403 concurrently;

Credits:

3.00

Description:

The study of cells, approached through examinations of biochemical mechanisms, the relation between the structure and function of biological molecules and organelles, and the regulation of normal and diseased cells.

Term:

Offered Fall Term

- **BIO-L403 Cell Biology Lab**

Prerequisites:

BIO-111 and BIO-L11 and CHEM-211 and CHEM-L211. Must take BIO-403 concurrently.

Credits:

1.00

Description:

Examination of biological molecules and their role in cell function. Techniques used in these examinations will include enzymatic analyses, gel electrophoresis, immunologic identification, chromatography, and spectroscopy. Students are expected to develop their proficiency in the laboratory techniques used, to analyze their results in a quantitative manner, and to present their findings.

Term:

Offered Fall Term

- **BIO-474 Molecular Genetics**

Prerequisites:

CHEM-311 or BIO-274 and BIO-L274 and BIO-L474 concurrently

Credits:

3.00

Description:

An examination of concepts and techniques of modern molecular biology. Topics include the structure and function of DNA, RNA, and proteins, the regulation of gene expression in prokaryotes and eukaryotes at transcriptional and post-transcriptional levels, genetic modification of organisms, and genome analysis. This course will incorporate readings and discussions of primary scientific literature. Spring semester.

Term:

Occasional

- **BIO-L474 Molecular Genetics Lab**

Prerequisites:

Take CHEM-331 or BIO-274 and BIO-L274. BIO-474 must be taken concurrently.

Credits:

1.00

Description:

This upper level laboratory course will consist of a semester-long project in the form of a series of consecutive experiments involving the generation of a genetically modified organism and its subsequent molecular analysis. Techniques employed will include genetic screens, DNA isolation, restriction endonuclease analysis, transformation of bacteria, gel electrophoresis, gene reported assays, RNA isolation, reverse transcription, and quantitative PCR.

Term:

Occasional

Note: BIO-274, BIO-403, and BIO-474 are recommended for those planning to take the Biochemistry GRE examination for application to graduate school.

2015-2016 Archived Catalog Information

Biochemistry

The Chemistry & Biochemistry Department offers a Biochemistry major. Through a wide variety of laboratory-based courses and opportunities for independent research with faculty, the department provides students with the tools that will allow them to achieve success in their field while learning in the heart of one of the most scientifically progressive cities in the world.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Honors](#)
- [Biochemistry Courses](#)

To be eligible for departmental honors, students must minimally have an overall GPA of 3.5 or higher and a major GPA of 3.5 or higher upon enrollment in the appropriate capstone course. In addition, students seeking departmental honors must submit an application to the departmental honors subcommittee for pre-approval early in the academic year in which students plan to complete the capstone research project; approved honors thesis work is then coupled to the capstone course requirements. Upon completion of the capstone course requirements, the departmental honors subcommittee, along with the faculty of the department, will determine whether the application and the final research project qualify for departmental honors.

For departmental honors, thesis work must be of outstanding quality and must involve original independent laboratory or field research and/or in-depth analysis. For example, students may complete a project in the lab or one that requires data analysis. Job shadowing, data collection/organization (without analysis), or research summaries will generally not be sufficient for consideration. It is recommended that students eligible and interested in the departmental honors pathway begin looking for and meeting with their capstone project advisor as early as possible and request the departmental honors application from the department chair.

- CHEM-101 Chemical Concepts Contemporary Issues I

Credits:

3.00

Description:

Principles of chemistry with illustrations from everyday life. Basic chemical concepts are used to decode consumer product labels and form a basis for understanding contemporary issues. Specifically designed to satisfy the Science requirement when taken with CHEM 102, L101, L102. May not be used by science majors for science credit. Concurrent enrollment in CHEM L101 required. 3 hours lecture. 1 term - 3 credits. Normally offered Fall/Summer I.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS

• CHEM-L101 Chemical Concepts Contemporary Issues Lab I

Prerequisites:

Must be taken concurrently with CHEM 101

Credits:

1.00

Description:

Principles of chemistry and its applications demonstrated through experimentation. Experiments may include field testing and analysis of ocean and river water, testing of household products and sunscreens, determination of calorie content of foods, and molecular modeling with computers. May not be used by science majors for science credit. 2-hour laboratory. Normally offered Fall/Summer I.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

• CHEM-102 Chemical Concepts Contemporary Issues II

Prerequisites:

It is strongly recommended that students enrolling in this course have some acquaintance of basic chemical principles either on the college or the pre-college level. Must be taken concurrently with CHEM L102

Credits:

3.00

Description:

A continuation of CHEM 101, including topics in organic chemistry, biochemistry, polymer chemistry, ecology, air and water pollution, food and food additives, pharmaceuticals, and forensic science. Basic Chemical concepts are used to decode consumer product labels and form a basis for understanding contemporary issues. Specifically designed to satisfy the science requirement. May not be used by science majors for science credit. Prerequisite: CHEM 101, CHEM 111 or pre-college chemistry. 3 hours lecture. Normally offered Spring/Summer II.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

• CHEM-L102 Chemical Concepts Contemporary Issues Lab II

Prerequisites:

It is strongly recommended that students enrolling in this course have some acquaintance of basic chemical principles either on the college or the pre-college level. Must be taken concurrently with CHEM 102

Credits:

1.00

Description:

A continuation of CHEM L101. Experiments may include making plastics and drug products, analyzing food products, making a model of DNA, crime lab analysis procedures, making aspirin, and the study of flavors and fragrances using molecular models. Concurrent enrollment in CHEM 102 required. May not be used by science majors for science credit. Prerequisites: CHEM 101 and CHEM L101. 2-hour Laboratory. 1 term - 1 credit. Normally offered Spring/Summer II.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

• CHEM-103 Chemical Concepts Contemporary Issues IIA

Prerequisites:

It is strongly recommended that students enrolling in this course have some acquaintance of basic chemical principles either on the college or the pre-college level.

Credits:

4.00

Description:

Topics include organic chemistry, biochemistry, polymer chemistry, ecology, air and water pollution, food and food additives, pharmaceuticals, and forensic science, with an emphasis on their application to current issues. Specifically designed to satisfy the non-laboratory science requirement for the B.A. degree. Science related information searches and writing assignments will be based on current topics from the semester's work. 3 hours lecture. It is strongly recommended that students enrolling in this course have some acquaintance of basic chemical principles either on the college or the pre-college level.

Type:

- **CHEM-105 Chemical New Product Development**

Prerequisites:

ENT 101

Credits:

4.00

Description:

This course addresses the crucial intersection between chemistry and business, and the impact of these fields on society. It provides an introduction to important chemistry concepts and practices of business management. Primary focus is on understanding the chemistry principles behind some of the consumer products in our everyday lives, and using this knowledge to create and evaluate ideas for new products. The course also introduces the business aspects involved in the development and marketing of new products. An important component of the course is in making effective presentations; this component concludes the course, culminating in team presentations of a new chemical product to panel of executives and peers. This course satisfies the Sawyer Business School Science requirement.

Type:

SCI TECH ENGR

- **CHEM-106 Biotechnology & Its Applications in Medicine, Agriculture, Law**

Credits:

4.00

Description:

Introduces the latest discoveries and applications of biotechnology. Topics include genetically modified food, stem cells, genetic testing, cloning, and forensics. A combination of lectures, discussions, documentaries, mock congressional hearings, and hands-on activities will provide insight into the numerous medical, social, legal, and ethical issues surrounding this technology.

Type:

SCI TECH ENGR

• CHEM-111 General Chemistry I

Prerequisites:

Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:

3.00

Description:

Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

• CHEM-L111 General Chemistry I Lab

Prerequisites:

Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **CHEM-112 General Chemistry II**

Prerequisites:

CHEM 111/L111; CHEM-L112 must be taken concurrently.

Credits:

3.00

Description:

This course is a continuation of General Chemistry I. Fundamental principles of chemistry are discussed. Introduces thermochemistry, gases, solution chemistry, chemical kinetics, chemical equilibrium, acid-base systems, and thermodynamics.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **CHEM-L112 General Chemistry II Lab**

Prerequisites:

CHEM 112 must be taken concurrently;

Credits:

1.00

Description:

This course is a continuation of General Chemistry I Lab. Apply the basic principles of chemistry through discovery laboratory experiments with an emphasis on quantitative analysis. Execute basic analytical techniques such as gravimetric analysis, the application of Beer's Law, and acid-base titrations. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS

• CHEM-201 Caveman Chemistry

Credits:

4.00

Description:

Caveman chemistry explores chemical technologies that have led to modern industrial civilization, with an emphasis on the chemistry we encounter in everyday life. Although this is not a laboratory course, it is very much a course about doing things. We will focus on the process of doing science, including how scientists evaluate ideas and communicate their findings, through literature and hands-on activities.

Type:

SCI TECH ENGR

• CHEM-211 Organic Chemistry I

Prerequisites:

CHEM 112 and CHEM-L112. CHEM-L211 must be taken concurrently.

Credits:

3.00

Description:

Introduces basic theories of structure, bonding, and chemical reactivity as specifically applied to modern organic chemistry. Includes functional groups, acid/base chemistry, nomenclature, resonance, spectroscopy, and stereochemistry.

Term:

Offered Fall Term

• CHEM-L211 Organic Chemistry Laboratory I

Prerequisites:

CHEM-112 and CHEM-L112. Must be taken concurrently with CHEM 211.

Credits:

1.00

Description:

Introduces synthetic organic chemistry techniques. Includes melting point determination, distillation, crystallization, extraction, chromatographic separations, and infrared spectroscopy. Discusses experimental design within the context of green organic chemistry.

Term:

Offered Fall Term

• CHEM-212 Organic Chemistry II

Prerequisites:

CHEM 211 and CHEM L211. Must take CHEM-L212 concurrently.

Credits:

3.00

Description:

Builds on the core competencies acquired in Organic Chemistry I. Includes detailed mechanistic discussions of substitution, elimination, and addition reactions. Emphasizes organic synthesis, structure determination, and spectroscopy.

Term:

Offered Spring Term

- **CHEM-L212 Organic Chemistry Laboratory II**

Prerequisites:

CHEM-211 and CHEM-L211. Must be take CHEM-212 concurrently.

Credits:

1.00

Description:

Builds on the core competencies acquired in Organic Chemistry Laboratory I. Emphasizes the characterization of organic molecules via nuclear magnetic resonance spectroscopy. Discusses experimental design within the context of green organic chemistry.

Term:

Offered Spring Term

- **CHEM-314 Instrumental Analysis**

Prerequisites:

CHEM 211; CHEM L314 must be taken concurrently.

Credits:

3.00

Description:

Theory and application of analytical instruments: ultraviolet, visible, fluorescence, atomic and emission spectroscopy; chromatographic methods; electrochemical measurements. Prerequisites: CHEM 211; CHEM L314 must be taken concurrently. 3 hour lecture. 1 term - 3 credits. Normally offered Fall/Spring, days.

Term:

Alternates Fall & Spring

- **CHEM-L314 Instrumental Analysis Lab**

Prerequisites:

CHEM L211; CHEM 314 must be taken concurrently

Credits:

1.00

Description:

Laboratory experiments in chemical analysis using instrumental techniques, including spectroscopy and chromatography. Data collection and evaluation includes computer-based methods. Reports are prepared in professional style. Prerequisites: CHEM L112; CHEM 314 must be taken concurrently. 4-hour Laboratory. 1 term - 1 credit. Normally offered Fall/Spring.

Term:

Alternates Fall & Spring

- **CHEM-331 Biochemistry I**

Prerequisites:

CHEM 212/L212 or permission of instructor. CHEM L331 must be taken concurrently.

Credits:

3.00

Description:

Explores the foundations of biochemistry, including the structure, organization and behavior of proteins, carbohydrates, lipids, and nucleic acids. Topics include enzyme catalysis, kinetics, and inhibition as well as protein regulation and membrane structure. Introduces the use of biochemical literature and computer-based bioinformatics techniques. Offered every fall.

Term:

Offered Fall Term

• CHEM-L331 Biochemical Techniques I

Prerequisites:

Must be taken concurrently with CHEM 331. Take CHEM-212 and CHEM-L212 or permission of instructor.

Credits:

1.00

Description:

Laboratory course introducing biochemical techniques. Includes buffer preparation, PCR, purification of DNA and proteins, agarose and polyacrylamide gel electrophoresis, protein quantitation and detection, and enzyme kinetic assays. Offered every Fall.

Term:

Offered Fall Term

• CHEM-332 Biochemistry II

Prerequisites:

CHEM 331

Credits:

4.00

Description:

This course explores the principles of bioenergetics and metabolism of biological compounds. Coverage includes intermediary metabolism of carbohydrates, lipids, amino acids, oxidative phosphorylation, and synthesis of purines and pyrimidines. Additional topics include the regulation and integration of metabolism. Lectures will be supplemented with discussions of the biochemical literature. Prerequisites: CHEM 331. 3 hours of lecture and 1 hour of recitation per week. Offered every Spring, days only.

Term:

Offered Spring Term

- **CHEM-L332 Biochemical Techniques II**

Prerequisites:

CHEM 331, and CHEM L331. CHEM 332 concurrently made inactive per catalog changes. 03 Feb 2009 03:38pm Crystal White

Credits:

2.00

Description:

Biochemical techniques emphasizing instrumentation and methods of biochemical experimentation. Biochemical techniques emphasizing instrumentation and methods of biochemical experimentation. The major focus will be on methods used in DNA analysis and characterization. Techniques may include electrophoresis, spectrophotometry, polymerase chain reaction, DNA isolation and purification. Prerequisites: CHEM 331 and CHEM L331; CHEM 332 must be taken concurrently.

- **CHEM-375 Advanced Inorganic Chemistry**

Prerequisites:

CHEM 212

Credits:

3.00

Description:

Topics in inorganic chemistry including bonding theories, chemical structures, symmetry and group theory, kinetics and mechanisms of reactions, and spectroscopy. Advanced topics may include bioinorganic chemistry, organometallics, or materials chemistry. 3 hours lecture. Normally offered spring, even numbered years.

Term:

Alternates Fall & Spring

- **CHEM-L375 Advanced Inorganic Laboratory**

Prerequisites:

CHEM 375 must be taken concurrently

Credits:

1.00

Description:

Laboratory exercises designed to illustrate principles covered by topics in CHEM 375. Prior or concurrent enrollment in CHEM 375 required. 4-hour laboratory. Normally offered spring, even numbered years.

Term:

Alternates Fall & Spring

- **CHEM-390 Advanced Organic Chemistry**

Prerequisites:

Prerequisite: CHEM 212.

Credits:

3.00

Description:

Expands on topics introduced in Organic Chemistry I and II; depending on student interest, may include in-depth discussions of carbonyl chemistry, industrial organic chemistry, organometallic chemistry and biomolecules. Prerequisite: CHEM 212, concurrent enrollment in CHEM L390 required. 3 hours of lecture per week. Normally offered alternate years.

Term:

Alternates Fall & Spring

- **CHEM-411 Physical Chemistry I**

Prerequisites:

CHEM 112; MATH 166;

Credits:

3.00

Description:

Principles of thermodynamics and its general applications to physical and chemical change; introduction to the kinetic theory of gases and concepts of statistical mechanics. 3 hours lecture. 3 hour lecture. Normally offered Fall, days.

Term:

Offered Fall Term

• **CHEM-L411 Physical Chemistry Laboratory I**

Prerequisites:

CHEM 411 must be taken concurrently

Credits:

1.00

Description:

Laboratory exercises covering classical experiments in thermodynamic and instrumental measurements. Significant emphasis will be placed on experimental design and data analysis skills in addition to technical writing skills as demonstrated by laboratory reports prepared in the professional style. 4-hour laboratory. Normally offered Fall, days.

Term:

Offered Fall Term

• **CHEM-412 Physical Chemistry II**

Prerequisites:

CHEM 411

Credits:

3.00

Description:

Applications of thermodynamics to solutions, chemical equilibrium and electrochemistry; chemical kinetics will be covered. Quantum chemistry and the application of spectroscopy to molecular structure. 3 hours lecture. Normally offered Spring, days.

Term:

Offered Spring Term

- **CHEM-L412 Physical Chemistry Lab II**

Prerequisites:

CHEM L411; CHEM 412 must be taken concurrently.

Credits:

1.00

Description:

Laboratory exercises using spectroscopic techniques (optical and electrochemical) to explore kinetic and thermodynamic and quantum mechanical properties of chemical systems. Emphasis will be placed on experimental design and data analysis skills in addition to technical writing skills as demonstrated through reports prepared in the professional style. 4-hour laboratory. Normally offered Spring, days.

Term:

Offered Spring Term

- **CHEM-428 Research & Seminar I**

Prerequisites:

CHEM 212; CHEM L212; Instructor's Consent required

Credits:

1.00- 4.00

Description:

Independent study under the direct supervision of the chemistry faculty. Students are required to attend departmental seminars, write a professional research report, and give an oral presentation on their project for review by the chemistry faculty. Depending on the project undertaken, students may obtain ECR credit. Prerequisites: CHEM 212 and CHEM L212 and by permission of the instructor. 1 terms - 1 to 4 credits. Normally offered every Fall.

Term:

Offered Fall Term

Type:

Expanded Classroom Requirement

- **CHEM-429 Research & Seminar II**

Prerequisites:

CHEM 212 and CHEM L212 and by permission of the instructor.

Credits:

1.00- 4.00

Description:

Independent study under the direct supervision of the chemistry faculty. Students are required to attend departmental seminars, write a professional research report, and give an oral presentation for review by the chemistry faculty. Depending on the project undertaken, students may obtain ECR credit. Prerequisites: CHEM 212 and CHEM L212 and permission of the instructor. 1 term - 1 to 4 credits. Normally offered every Spring.

Term:

Offered Spring Term

Type:

Expanded Classroom Requirement

- **CHEM-L432 Advanced Biochemistry Research Laboratory**

Prerequisites:

CHEM-331; CHEM-L331

Credits:

3.00

Description:

Laboratory course where students apply the use of biochemical techniques acquired in Biochemical Techniques I (CHEM L331) to conduct novel research. Projects vary from year to year, but may include recombinant DNA techniques, purification and characterization of DNA and proteins, and bioinformatics. Emphasis on experimental design, data interpretation, analysis of the scientific literature, and writing. Includes field trip to local research university or biotechnology/pharmaceutical laboratory.

Term:

Alternates Fall & Spring

Type:

Expanded Classroom Requirement

• CHEM-453 Introduction to Toxicology

Prerequisites:

Prerequisites: CHEM 212 and BIO 111

Credits:

4.00

Description:

The study of toxic actions of chemicals on biological systems, with discussion of general principles, methodology, and selected topics. Topics may include pesticides, neurotoxicants, toxicity of metals, and carcinogenesis/ mutagenesis. Examples will be drawn from forensic toxicology, as well as environmental and occupational toxicology. CHEM 332 and BIO 403 strongly recommended. Normally offered every other year.

Term:

Occasional

• CHEM-510 Independent Study

Prerequisites:

An independent study form must be submitted to the CAS Dean's Office.

Credits:

1.00- 4.00

Description:

Advanced study of a special topic in chemistry, by arrangement with the chemistry faculty.

2015-2016 Archived Catalog Information

Biology

The Biology major introduces the breadth of contemporary biology while allowing students to pursue their individual interests. A minor in Biology is also available.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Concentrations](#)
- [Minor Requirements](#)
- [Honors](#)
- [Biology Courses](#)

Major Requirements: 17 courses and their corresponding laboratories, 68 credits

Biology majors may obtain a Bachelor of Science or Bachelor of Arts in Biology. Concentrations in biotechnology and marine science are also available. A Biology major must take 10 courses in biology plus designated related science and math courses, in addition to the all-college requirements.

Transfer students wishing to major in Biology must complete a minimum of four Biology courses (with lab if appropriate) plus senior seminar in Biology at Suffolk University with a minimum grade point average of 2.0.

Core Requirements (9 courses and corresponding laboratories where applicable, 36 credits)

- BIO-111 Introduction to the Cell

Prerequisites:

Must take BIO L111 concurrently

Credits:

3.00

Description:

Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **BIO-L111 Introduction to the Cell Laboratory**

Prerequisites:

Concurrently with BIO 111

Credits:

1.00

Description:

Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **BIO-114 Organismal Biology**

Prerequisites:

Must take BIO L114 concurrently.

Credits:

3.00

Description:

Rigorous introduction to organismal biology emphasizing evolution, phylogenetics, form, and function. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **BIO-L114 Organismal Biology Laboratory**

Prerequisites:

Must take BIO 114 concurrently

Credits:

1.00

Description:

A series of laboratory experiences in evolution, diversity, anatomy and physiology.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **BIO-274 Genetics**

Prerequisites:

BIO 111/L111 and BIO 114/L114; BIO L274 concurrently;

Credits:

3.00

Description:

An examination of the basic principles of genetics in eukaryotes and prokaryotes at the level of molecules, cells, and multicellular organisms, including humans. Topics include Mendelian and non-Mendelian inheritance, structure and function of chromosomes and genomes, biological variation resulting from recombination, mutation, and selection, and population genetics.

Term:

Offered Fall Term

- **BIO-L274 Genetics Lab**

Prerequisites:

BIO-111, BIO-L111, BIO-114, and BIO-L114. Must be taken concurrently with BIO 274.

Credits:

1.00

Description:

Experiments designed to demonstrate principles presented in lecture, using a range of genetic model organisms that include *E. coli*, *B. subtilis*, *S. cerevisiae*, *D. melanogaster*, *S. fimicola*, and *C. elegans*.

Term:

Offered Fall Term

• BIO-302 Writing for Research

Prerequisites:

BIO 111/L111 and WRI 101, WRI 102, or WRI-103. BIO and Radiation Therapy majors with junior standing only.

Credits:

4.00

Description:

Development of skills for writing clearly, concisely, and creatively in the style of scientific journals. This course emphasizes the formulation of a research project of the student's choice and leads to a formal manuscript on the topic. Instruction includes literature search methods and software for the graphical presentation of data. Professional development, including the preparation of job application materials and in-person interview skills, is also an integral part of this course. Required of all biology and radiation science majors. Junior standing required.

Term:

Offered Both Fall and Spring

• CHEM-111 General Chemistry I

Prerequisites:

Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:

3.00

Description:

Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

Term:

Offered Fall Term

Type:

- **CHEM-L111 General Chemistry I Lab**

Prerequisites:

Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **CHEM-112 General Chemistry II**

Prerequisites:

CHEM 111/L111; CHEM-L112 must be taken concurrently.

Credits:

3.00

Description:

This course is a continuation of General Chemistry I. Fundamental principles of chemistry are discussed. Introduces thermochemistry, gases, solution chemistry, chemical kinetics, chemical equilibrium, acid-base systems, and thermodynamics.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **CHEM-L112 General Chemistry II Lab**

Prerequisites:

CHEM 112 must be taken concurrently;

Credits:

1.00

Description:

This course is a continuation of General Chemistry I Lab. Apply the basic principles of chemistry through discovery laboratory experiments with an emphasis on quantitative analysis. Execute basic analytical techniques such as gravimetric analysis, the application of Beer's Law, and acid-base titrations. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **CHEM-211 Organic Chemistry I**

Prerequisites:

CHEM 112 and CHEM-L112. CHEM-L211 must be taken concurrently.

Credits:

3.00

Description:

Introduces basic theories of structure, bonding, and chemical reactivity as specifically applied to modern organic chemistry. Includes functional groups, acid/base chemistry, nomenclature, resonance, spectroscopy, and stereochemistry.

Term:

Offered Fall Term

• **CHEM-L211 Organic Chemistry Laboratory I**

Prerequisites:

CHEM-112 and CHEM-L112. Must be taken concurrently with CHEM 211.

Credits:

1.00

Description:

Introduces synthetic organic chemistry techniques. Includes melting point determination, distillation, crystallization, extraction, chromatographic separations, and infrared spectroscopy. Discusses experimental design within the context of green organic chemistry.

Term:

Offered Fall Term

• **CHEM-212 Organic Chemistry II**

Prerequisites:

CHEM 211 and CHEM L211. Must take CHEM-L212 concurrently.

Credits:

3.00

Description:

Builds on the core competencies acquired in Organic Chemistry I. Includes detailed mechanistic discussions of substitution, elimination, and addition reactions. Emphasizes organic synthesis, structure determination, and spectroscopy.

Term:

Offered Spring Term

- **CHEM-L212 Organic Chemistry Laboratory II**

Prerequisites:

CHEM-211 and CHEM-L211. Must be take CHEM-212 concurrently.

Credits:

1.00

Description:

Builds on the core competencies acquired in Organic Chemistry Laboratory I. Emphasizes the characterization of organic molecules via nuclear magnetic resonance spectroscopy. Discusses experimental design within the context of green organic chemistry.

Term:

Offered Spring Term

Choose one of the following Mathematics courses:

- **MATH-134 Calculus for Management & Social Sciences**

Prerequisites:

MATH-104, MATH-121 or MATH level 4

Credits:

4.00

Description:

A one-semester introduction to differential and integral calculus. Theory is presented informally and topics and techniques are limited to polynomials, rational functions, logarithmic and exponential functions. Topics include a review of precalculus, linear regression, limits and continuity, derivatives, differentiation rules, implicit differentiation, related rates, applications of derivatives to graphing, minima/maxima, applications of the derivative, marginal analysis, differential equations of growth and decay, anti-derivatives, the definite integral, the Fundamental Theorem of Calculus, area measurements. This course cannot be used to satisfy core or complementary requirements by students majoring in chemistry, computer science, engineering, mathematics, or physics. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

or a higher level Mathematics course

Physics Requirement (2 courses and corresponding laboratories, 8 credits)

Choose one of the following sequences:

- **PHYS-111 College Physics I**

Prerequisites:

Take MATH-121 or MATH-134 or permission of Physics department chair;PHYS L111 taken concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **PHYS-L111 College Physics Lab I**

Prerequisites:

PHYS 111 concurrently

Credits:

1.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course. Error propagation, use of Excel, laboratory notebooks and formal reports required.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• PHYS-112 College Physics II

Prerequisites:

PHYS-111 and PHYS-L11. Must be taken concurrently with PHYS-L112.

Credits:

3.00

Description:

Continuation of the fundamental principles of physics. Study of electric forces and fields, electric potential, DC circuits, electromagnetic induction, magnetic fields, AC circuits, introduction to optics, introduction to atomic, nuclear and particle physics.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **PHYS-L112 College Physics Lab II**

Prerequisites:

PHYS 111 and PHYS L111; PHYS 112 must be taken concurrently

Credits:

1.00

Description:

Continuation of the fundamental principles of physics. Study of electric forces and fields, electric potential, DC circuits, electromagnetic induction, magnetic fields, AC circuits, introduction to optics, introduction to atomic, nuclear and particle physics. The laboratory consists of experiments to illustrate the basic concepts studied in the course. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS

or

- **PHYS-151 University Physics I**

Prerequisites:

Take MATH-121 or MATH 165. PHYS L151 concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **PHYS-L151 University Physics Lab I**

Prerequisites:

PHYS 151 concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **PHYS-152 University Physics II**

Prerequisites:

PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

Credits:

3.00

Description:

This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

• PHYS-L152 University Physics Lab II

Prerequisites:

PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

Molecular/Cellular Biology Requirement (1 course, 4 credits)

Choose one of the following and its corresponding laboratory where applicable from the Molecular/Cellular division:

- **BIO-262 Principles of Cell Culture**

Prerequisites:

BIO 111, L111 and BIO 114, L114 and CHEM 111, L111

Credits:

4.00

Description:

The course is designed as an application base educational experience that will allow students to learn the standard techniques associated with successful cell culture. As such, students are responsible for the maintenance, propagation, isolation, and preservation of their cells. A number of cell types and experimental manipulations of the cultures are investigated throughout the semester.

Term:

Offered Spring Term

- **BIO-285 Microbiology**

Prerequisites:

BIO-111 and BIO-L111; BIO-L285 concurrently;

Credits:

3.00

Description:

Viruses and bacteria are surveyed in terms of their ecology, biochemistry, taxonomy, molecular biology and control.

Term:

Offered Spring Term

- **BIO-L285 Microbiology Laboratory**

Prerequisites:

BIO 111/L111; BIO 285 concurrently;

Credits:

1.00

Description:

Introduction to microbiological techniques and their applications to health, research and industry.

Term:

Offered Fall Term

- **BIO-374 Genomics**

Prerequisites:

BIO 111/L111, CHEM 111/L111, BIO 274/L274 Must take BIO L374 concurrently

Credits:

3.00

Description:

What can we learn from genomics? In this course, you will develop an understanding of how cutting edge techniques from biotechnology are changing our views of biology. You will learn how genetic sequencing can be used for everything from tracing evolutionary histories in the tree of life to shedding light on biodiversity patterns of populations. With a focus on human genetics, you will also explore how genes are discovered and linked to phenotypic traits. Finally, you will consider methods of monitoring gene expression and how the resulting genetic networks can help medicine and drug development.

- **BIO-L374 Genomics Laboratory**

Prerequisites:

BIO 111/L111, CHEM 111/L111, BIO 274/L274 Must take BIO 374 concurrently

Credits:

1.00

Description:

In this course, you will develop an understanding of current genomic methods through collection and examination of your own data. In the first part of the lab, you will use sequencing techniques to compare genetic relationships and characterize the microbial biodiversity of a population. In the second part of the lab, you will focus on gene expression and functional genomics. You will determine the actions of a transcription factor through RNA-seq and also determine how a collection of uncharacterized transcription factors affect antibiotic sensitivity. In addition to reading primary literature and keeping a lab notebook, you will also learn how to analyze and present your genomics data.

• BIO-377 Immunology

Prerequisites:

BIO-114/L114; CHEM-211/L211; BIO-L377 concurrently;

Credits:

3.00

Description:

The concept of immunity, response to infection, structure of the immune system, biochemistry of immunoglobins, antigen-antibody interactions, allergy, immunological injury, lymphocyte subpopulations and cellular immunity, tolerance suppression and enhancement. Taught alternate/even years.

Term:

Offered Spring Term

• BIO-L377 Immunology Laboratory

Prerequisites:

BIO-114 and BIO-L114 and CHEM-211 and CHEM-L211. Must take BIO-377 concurrently.

Credits:

1.00

Description:

Anatomy of the immune system , immunoglobulin purification, hemagglutination, enzyme immunoassay. Immuno-chemistry, immunoelectrophoresis, gel precipitation assay.

Term:

Occasional

- **BIO-385 Advanced Microbiology**

Prerequisites:

BIO-285 and BIO-L285 BIO L385 must be taken concurrently

Credits:

3.00

Description:

Pathogenesis and host-parasite relationships; epidemiology and public health aspects of pathogenic microorganisms are stressed; molecular biology, applied and industrial microbiology. Current literature reviews. Taught alternate/odd years.

Term:

Offered Spring Term

- **BIO-L385 Advanced Microbiology Lab**

Prerequisites:

BIO 285/L285; BIO 385 must be taken concurrently

Credits:

1.00

Description:

Isolation, quantization and cultivation of microorganisms, advanced general and applied microbiology and molecular biology. Experience in media, chemical and culture preparations.

Term:

Offered Spring Term

- **BIO-403 Cell Biology**

Prerequisites:

BIO 111/L111; CHEM-211/L211; BIO-L403 concurrently;

Credits:

3.00

Description:

The study of cells, approached through examinations of biochemical mechanisms, the relation between the structure and function of biological molecules and organelles, and the regulation of normal and diseased cells.

Term:

Offered Fall Term

- **BIO-L403 Cell Biology Lab**

Prerequisites:

BIO-111 and BIO-L11 and CHEM-211 and CHEM-L211. Must take BIO-403 concurrently.

Credits:

1.00

Description:

Examination of biological molecules and their role in cell function. Techniques used in these examinations will include enzymatic analyses, gel electrophoresis, immunologic identification, chromatography, and spectroscopy. Students are expected to develop their proficiency in the laboratory techniques used, to analyze their results in a quantitative manner, and to present their findings.

Term:

Offered Fall Term

- **BIO-474 Molecular Genetics**

Prerequisites:

CHEM-311 or BIO-274 and BIO-L274 and BIO-L474 concurrently

Credits:

3.00

Description:

An examination of concepts and techniques of modern molecular biology. Topics include the structure and function of DNA, RNA, and proteins, the regulation of gene expression in prokaryotes and eukaryotes at transcriptional and post-transcriptional levels, genetic modification of organisms, and genome analysis. This course will incorporate readings and discussions of primary scientific literature. Spring semester.

Term:

Occasional

- **BIO-L474 Molecular Genetics Lab**

Prerequisites:

Take CHEM-331 or BIO-274 and BIO-L274. BIO-474 must be taken concurrently.

Credits:

1.00

Description:

This upper level laboratory course will consist of a semester-long project in the form of a series of consecutive experiments involving the generation of a genetically modified organism and its subsequent molecular analysis. Techniques employed will include genetic screens, DNA isolation, restriction endonuclease analysis, transformation of bacteria, gel electrophoresis, gene reported assays, RNA isolation, reverse transcription, and quantitative PCR.

Term:

Occasional

- **BIO-475 Developmental Biology**

Prerequisites:

BIO-114, L114 and CHEM-211, L211, and BIO-L475 concurrently

Credits:

3.00

Description:

This course focuses on embryonic development in vertebrates. The conceptual focus on evolutionary developmental biology includes comparative developmental mechanisms and Epigenetic processes.

Term:

Offered Fall Term

- **BIO-L475 Developmental Biology Lab**

Prerequisites:

BIO 114/L114, CHEM 211/L211 BIO 475 must be taken concurrently

Credits:

1.00

Description:

This laboratory course complements the lecture course. Exercises include internet exercises, examination of embryos, biochemical tests, use of developmental models, and student presentations. A number of model organisms are examined.

Term:

Offered Fall Term

Organismic Structure & Function Requirement (1 course, 4 credits)

Choose one of the following and its corresponding laboratory where applicable from the Organismic Structure and Function division:

- **BIO-203 Anatomy and Physiology I**

Prerequisites:

BIO L203 MUST BE TAKEN CONCURRENTLY BIO 111, BIO L111.

Credits:

3.00

Description:

First part of a systematic survey of the structural and functional interrelations of the organ systems of the human body. This course emphasizes histology and physiology in the understanding of the integumentary, skeletal, muscular, and nervous systems. Medical terminology will be used.

Term:

Offered Fall Term

- **BIO-L203 Anatomy & Physiology Lab I**

Prerequisites:

BIO 111/L111; Must take BIO-203 concurrently

Credits:

1.00

Description:

A study of the human skeletal system and a comparative look at other organ systems involving observation of anatomical models and dissection of mammalian specimens. Also includes microscopy and computer simulations of physiological processes.

Term:

Offered Fall Term

- **BIO-204 Anatomy and Physiology II**

Prerequisites:

BIO 203, BIO L203; BIO L204 must be taken concurrently;

Credits:

3.00

Description:

Conclusion of a systematic survey of the structural and functional interrelations of the organ systems of the human body. This course investigates the endocrine, circulatory, respiratory, digestive, urinary, and reproductive systems as well as the physiology of immune responses, nutrition, and acid-base balance. Medical terminology will be used.

Term:

Offered Spring Term

- **BIO-L204 Anatomy & Physiology Lab II**

Prerequisites:

BIO 203/L203 and BIO 204 must be taken concurrently;

Credits:

1.00

Description:

A study of the human viscera using anatomical models and dissection of mammalian specimens. Also includes microscopy of tissues and physiological experiments.

Term:

Offered Spring Term

- **BIO-225 Plant Biology**

Prerequisites:

Bio 111, L111 and Bio 114, L114; Must be taken concurrently with L225.

Credits:

3.00

Description:

Course introduces students to the anatomy, physiology, systematics, ecology, and economic uses of all major groups of plants. Aspects of the biology of nonvascular, non-seed, gymnosperm, and angiosperm plants are explored. An overview of Kingdom Fungi is also covered. Each student is required to do a 10-15 minute presentation to the class highlighting the economic use of a group of plants assigned by the instructor. Normally offered Spring semester.

Term:

Offered Spring Term

- **BIO-L225 Plant Biology Laboratory**

Prerequisites:

BIO 111/L111 and BIO 114/L114; BIO 225 concurrently;

Credits:

1.00

Description:

Lab exercises focus on plant anatomy, physiology, and systematics. Instruction in the identification of major plant families and fungal types is covered. Trips to a Boston area herbarium and botanical garden are required.

Term:

Offered Spring Term

- **BIO-233 Human Nutrition**

Prerequisites:

BIO 111/L111 and BIO 114/L114;

Credits:

4.00

Description:

This interactive introduction to nutrition explores the science of human nutrition and further reviews concepts of how nutrition can promote health and well being. The course will review specific nutrient needs and functions, nutrient digestion, and the role of diet in well being and in the presence of chronic disease. Weekly course work encourages scientific literacy and fosters critical evaluation of nutrition in the news and in social media.

- **BIO-304 Comparative Animal Physiology**

Prerequisites:

BIO-114 and BIO-L114. Must take BIO-L304 concurrently

Credits:

3.00

Description:

Mechanisms of physiological adaptations to environmental challenges are studied. Examples of gas exchange, osmoregulation, fluid transport, temperature regulation, nervous control, and movement are examined in various animal forms through class lecture and discussion, required readings, and external lectures. Spring semester.

Term:

Offered Spring Term

- **BIO-L304 Comp Animal Physiology Lab**

Prerequisites:

BIO-114 and BIO-L114. Must take BIO-304 concurrently.

Credits:

1.00

Description:

Selected physiological processes and mechanisms or adaptation in invertebrate and vertebrate animals are examined by observation and controlled experiments.

- **BIO-350 Vertebrate Biology**

Prerequisites:

BIO-111/L111; BIO-114/L114; BIO-L350 concurrently;

Credits:

3.00

Description:

This class will focus on the form and function of vertebrate animals from an evolutionary standpoint. The adaptations of major groups will be discussed in light of their phylogenetic history and ecology. A discussion of major adaptive radiations and abiotic factors that influenced these trends will also be highlighted.

Term:

Occasional

- **BIO-L350 Vertebrate Biology Lab**

Prerequisites:

BIO-111/L111; BIO-114/L114; BIO-350 concurrently;

Credits:

1.00

Description:

This lab will focus on the comparative anatomy of vertebrate animals. In-depth dissections will be the focus of the laboratory exercises. A Squalus shark, a Necturus salamander, a pigeon, and a mink will be examined in detail.

Term:

Occasional

• BIO-360 Cancer Biology

Prerequisites:

BIO-111, BIO-L111, BIO-114, BIO-L114, BIO-274, and BIO-L274

Credits:

4.00

Description:

An examination of molecular and cellular mechanisms that lead to the development of cancer. Factors contributing to tumorigenesis, angiogenesis, and metastasis will be discussed; these factors, oncogenes, tumor suppressor genes, and signal transduction networks. In addition, an investigation of current strategies for cancer prevention and treatment will be considered.

Diversity, the Environment, and Conservation Requirement (1 course, 4 credits)

Choose one of the following and its corresponding laboratory where applicable from the Diversity, the Environment, and Conservation division:

• BIO-222 Field Botany

Prerequisites:

BIO 111 and BIO-L111. This course will fulfill the Expanded Classroom Requirement.

Credits:

4.00

Description:

A three-week camping excursion, during which common tracheotypes, bryophytes, algae, and other photosynthetic organisms characteristic of various habitats in Maine will be identified. Emphasis will be on plant ecology including species interactions and habitat requirements. Vertical zonation in mountains, lakes and intertidal areas will be a point of focus. Participants will camp for one week at each of three sites: Baxter State Park, Central Maine (near Augusta), and on Cobscook Bay. Travel will be by van(s) and hiking (up to ten miles a day) over difficult terrain. Sleeping bags and pads required (tents provided). Additional fees: Camping and food est. \$525.00. ECR. The three-week camping excursion typically runs from late May (after tradition Spring course finals are over) into June. Taught yearly.

Term:

Offered Spring Term

Type:

Expanded Classroom Requirement

- **BIO-254 Marine Biology**

Prerequisites:

BIO-111/L111 or BIO-114/L114 or Instructor's consent; BIO-L254 concurrently;

Credits:

3.00

Description:

Introduction to the marine environment, its organisms and their specific adaptations. Emphasis on marine and estuarine ecology, intertidal habits, trophic relations, and physiology. Human impacts on the sea: fisheries, mariculture, pollution, introduced species, climate change and seawater acidification, and law of the sea. Includes a one week camping excursion into eastern Maine for lab/field exercises and some lectures. ECR. This course typically meets for one week in the third week of August (before typical fall courses begin) and includes a camping fee of ca \$250. Taught yearly each fall.

Term:

Offered Fall Term

Type:

Expanded Classroom Requirement

- **BIO-L254 Marine Biology Lab**

Prerequisites:

BIO-111/L111 or BIO-114/L114 or Instructor's consent; BIO-254 concurrently;

Credits:

1.00

Description:

Field trips to local marine environments; field and laboratory observations of marine organisms. Independent student projects. Taught largely in the field during one week camping excursion to eastern Maine with several lab sessions on campus in Boston during fall semester. ECR.

Term:

Offered Fall Term

Type:

Expanded Classroom Requirement

• **BIO-315 Animal Behavior**

Prerequisites:

BIO-114/L114

Credits:

4.00

Description:

Surveys animal behavior in a range of species (invertebrates, birds, fish, mammals including humans) to assess similarities and differences in the evolution of behaviors and their physiological mechanisms by which individual organisms and species adapt to their environments. Topics include: predator evasion; mating systems; parental care; social behavior; and learning.

Term:

Offered Spring Term

• **BIO-333 Ecology**

Prerequisites:

BIO-114/L114; BIO-L333 concurrently;

Credits:

3.00

Description:

Areas of study include but are not limited to basic principles of population biology, community ecology, trophic dynamics, ecosystem structure and function and evolutionary theory.

Term:

Offered Fall Term

- **BIO-L333 Ecology Lab**

Prerequisites:

BIO-114, BIO-L114, and BIO-333 concurrently

Credits:

1.00

Description:

Field and laboratory experiences in techniques and concepts relevant to ecological theory, data collection, statistical analysis, visual representation and report preparation.

Term:

Offered Fall Term

- **BIO-337 Evolution**

Prerequisites:

Take BIO-111 BIO-L111 BIO-114 BIO-L114. BIO 274 recommended.

Credits:

4.00

Description:

A survey of evolutionary theory, exploring processes such as the genetic sources of variation, natural and sexual selection, and evolutionary developmental biology. Using phylogenetic systematics and other tools, we will demonstrate how these mechanisms result in the visible patterns of evolution. This is a reading-and-writing intensive course centered on close reading of *Origin of the Species* and discussion of recent peer-reviewed literature about evolution.

Term:

Summer

- **BIO-345 The Biology of Vector Borne Diseases**

Prerequisites:

BIO-114/L114;

Credits:

4.00

Description:

A survey of the occurrence, life history and pathogenicity of the most important arthropod-borne, human diseases both internationally (malaria, dengue, plague, trypanosomiasis, yellow fever, etc.) and within the United States (Lyme disease, EEE, West Nile Virus, and others). Demographic and environmental factors leading to the re-emergence and spread of these diseases will be considered.

- **BIO-357 Biology of Fishes**

Prerequisites:

BIO 114/L114, and Junior standing. Requires permission from Marine Sciences Coordinator.

Credits:

3.00

Description:

The evolution, systematics, anatomy, physiology and behavior of freshwater, marine and anadromous fishes from temperate to tropical environments. The interactions of fish in their environments, including predator-prey relationships, host-symbiont interactions, and fish as herbivores. Taken with

permission from the Marine Science Consortium Coordinator. [This is a Marine Science Consortium Course and enrollment is limited] Evenings only:
off campus

Term:

Offered Spring Term

Electives (3 courses, 12 credits)

Choose three Biology course electives and their corresponding laboratories where applicable. Any of the courses listed above may be taken as an elective if another course is taken to fulfill the division requirement. If a student chooses one of the concentrations, the concentration requirements will fulfill these elective courses.

Additional elective options are:

- **BIO-273 Biostatistics**

Prerequisites:

BIO 111/L111

Credits:

4.00

Description:

Introduction to the statistical methods used to evaluate biological problems. Sampling, probability, confidence intervals, hypothesis tests, experimental design, analysis of variance, regression, and correlation are some of the topics offered. Software for data handling, graphics, and analysis will be used.

Term:

Offered Fall Term

Type:

Quantitative Reasoning

- **BIO-510 Independent Study**

Prerequisites:

An independent study form must be submitted to the CAS Dean's Office.

Credits:

1.00- 5.00

Description:

Student projects may be initiated by a student or faculty member with the approval of the Chairperson. A paper and oral report are required. Only ONE independent study may be used toward biology electives.

Term:

Offered Both Fall and Spring

• CHEM-331 Biochemistry I

Prerequisites:

CHEM 212/L212 or permission of instructor. CHEM L331 must be taken concurrently.

Credits:

3.00

Description:

Explores the foundations of biochemistry, including the structure, organization and behavior of proteins, carbohydrates, lipids, and nucleic acids. Topics include enzyme catalysis, kinetics, and inhibition as well as protein regulation and membrane structure. Introduces the use of biochemical literature and computer-based bioinformatics techniques. Offered every fall.

Term:

Offered Fall Term

• CHEM-L331 Biochemical Techniques I

Prerequisites:

Must be taken concurrently with CHEM 331. Take CHEM-212 and CHEM-L212 or permission of instructor.

Credits:

1.00

Description:

Laboratory course introducing biochemical techniques. Includes buffer preparation, PCR, purification of DNA and proteins, agarose and polyacrylamide gel electrophoresis, protein quantitation and detection, and enzyme kinetic assays. Offered every Fall.

Term:

Offered Fall Term

- **SCI-251 Intro to Coastal Geology**

Prerequisites:

Intro Math and must take SCI-L251 concurrently

Credits:

3.00

Description:

Coastal environments will be analyzed with an emphasis on the important environmental characteristics of these areas. Management and environmental problems within the coastal and offshore areas such as beach erosion, beach access, and oil spills will be considered. One required field trip.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS

- **SCI-L251 Intro Coastal Geology I Lab**

Prerequisites:

SCI 251 must be taken concurrently

Credits:

1.00

Description:

An introduction to laboratory and field techniques used in the geological study of coastal environments. Field trips will be taken to local coastal areas.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

2015-2016 Archived Catalog Information

Biology

The Biology major introduces the breadth of contemporary biology while allowing students to pursue their individual interests. A minor in Biology is also available.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Concentrations](#)
- [Minor Requirements](#)
- [Honors](#)
- [Biology Courses](#)

Biotechnology Concentration Requirements: 17 courses and corresponding laboratories where applicable, 68 credits

The concentration in Biotechnology focuses on molecular and cellular principles in biology. Students are encouraged to seek relevant industry experience during the summer between the sophomore and junior year and to use the Biology Seminar as the reporting forum. Students should consult with the concentration coordinator early in their academic career to determine available placements and to obtain counseling regarding appropriate courses for the concentration.

Upon satisfactory completion of the prescribed curriculum, students are eligible to receive the degree of Bachelor of Science or Bachelor of Arts with a major in Biology.

The concentration requires the completion of all Biology core requirements, as well as the following:

Two courses from the Molecular/Cellular Division:

- **BIO-403 Cell Biology**

Prerequisites:

BIO 111/L111; CHEM-211/L211; BIO-L403 concurrently;

Credits:

3.00

Description:

The study of cells, approached through examinations of biochemical mechanisms, the relation between the structure and function of biological molecules and organelles, and the regulation of normal and diseased cells.

Term:

Offered Fall Term

- **BIO-L403 Cell Biology Lab**

Prerequisites:

BIO-111 and BIO-L11 and CHEM-211 and CHEM-L211. Must take BIO-403 concurrently.

Credits:

1.00

Description:

Examination of biological molecules and their role in cell function. Techniques used in these examinations will include enzymatic analyses, gel electrophoresis, immunologic identification, chromatography, and spectroscopy. Students are expected to develop their proficiency in the laboratory techniques used, to analyze their results in a quantitative manner, and to present their findings.

Term:

Offered Fall Term

- **BIO-474 Molecular Genetics**

Prerequisites:

CHEM-311 or BIO-274 and BIO-L274 and BIO-L474 concurrently

Credits:

3.00

Description:

An examination of concepts and techniques of modern molecular biology. Topics include the structure and function of DNA, RNA, and proteins, the regulation of gene expression in prokaryotes and eukaryotes at transcriptional and post-transcriptional levels, genetic modification of organisms, and genome analysis. This course will incorporate readings and discussions of primary scientific literature. Spring semester.

Term:

Occasional

- **BIO-L474 Molecular Genetics Lab**

Prerequisites:

Take CHEM-331 or BIO-274 and BIO-L274. BIO-474 must be taken concurrently.

Credits:

1.00

Description:

This upper level laboratory course will consist of a semester-long project in the form of a series of consecutive experiments involving the generation of a genetically modified organism and its subsequent molecular analysis. Techniques employed will include genetic screens, DNA isolation, restriction endonuclease analysis, transformation of bacteria, gel electrophoresis, gene reported assays, RNA isolation, reverse transcription, and quantitative PCR.

Term:

Occasional

Choose any Organismic Structure and Function Division course (options listed in the Major Requirements tab)

Choose any Diversity, Environment, and Conservation Division course (options listed in the Major Requirements tab)

Choose two of the following Biology electives:

- **BIO-262 Principles of Cell Culture**

Prerequisites:

BIO 111, L111 and BIO 114, L114 and CHEM 111, L111

Credits:

4.00

Description:

The course is designed as an application base educational experience that will allow students to learn the standard techniques associated with successful cell culture. As such, students are responsible for the maintenance, propagation, isolation, and preservation of their cells. A number of cell types and experimental manipulations of the cultures are investigated throughout the semester.

Term:

Offered Spring Term

- **BIO-285 Microbiology**

Prerequisites:

BIO-111 and BIO-L111; BIO-L285 concurrently;

Credits:

3.00

Description:

Viruses and bacteria are surveyed in terms of their ecology, biochemistry, taxonomy, molecular biology and control.

Term:

Offered Spring Term

- **BIO-L285 Microbiology Laboratory**

Prerequisites:

BIO 111/L111; BIO 285 concurrently;

Credits:

1.00

Description:

Introduction to microbiological techniques and their applications to health, research and industry.

Term:

Offered Fall Term

- **BIO-374 Genomics**

Prerequisites:

BIO 111/L111, CHEM 111/L111, BIO 274/L274 Must take BIO L374 concurrently

Credits:

3.00

Description:

What can we learn from genomics? In this course, you will develop an understanding of how cutting edge techniques from biotechnology are changing our views of biology. You will learn how genetic sequencing can be used for everything from tracing evolutionary histories in the tree of life to shedding light on biodiversity patterns of populations. With a focus on human genetics, you will also explore how genes are discovered and linked to phenotypic traits. Finally, you will consider methods of monitoring gene expression and how the resulting genetic networks can help medicine and drug development.

- **BIO-L374 Genomics Laboratory**

Prerequisites:

BIO 111/L111, CHEM 111/L111, BIO 274/L274 Must take BIO 374 concurrently

Credits:

1.00

Description:

In this course, you will develop an understanding of current genomic methods through collection and examination of your own data. In the first part of the lab, you will use sequencing techniques to compare genetic relationships and characterize the microbial biodiversity of a population. In the second part of the lab, you will focus on gene expression and functional genomics. You will determine the actions of a transcription factor through RNA-seq and also determine how a collection of uncharacterized transcription factors affect antibiotic sensitivity. In addition to reading primary literature and keeping a lab notebook, you will also learn how to analyze and present your genomics data.

- **BIO-377 Immunology**

Prerequisites:

BIO-114/L114; CHEM-211/L211; BIO-L377 concurrently;

Credits:

3.00

Description:

The concept of immunity, response to infection, structure of the immune system, biochemistry of immunoglobins, antigen-antibody interactions, allergy, immunological injury, lymphocyte subpopulations and cellular immunity, tolerance suppression and enhancement. Taught alternate/even years.

Term:

Offered Spring Term

- **BIO-L377 Immunology Laboratory**

Prerequisites:

BIO-114 and BIO-L114 and CHEM-211 and CHEM-L211. Must take BIO-377 concurrently.

Credits:

1.00

Description:

Anatomy of the immune system , immunoglobulin purification, hemagglutination, enzyme immunoassay. Immuno-chemistry, immunoelectrophoresis, gel precipitation assay.

Term:

Occasional

- **BIO-475 Developmental Biology**

Prerequisites:

BIO-114, L114 and CHEM-211, L211, and BIO-L475 concurrently

Credits:

3.00

Description:

This course focuses on embryonic development in vertebrates. The conceptual focus on evolutionary developmental biology includes comparative developmental mechanisms and Epigenetic processes.

Term:

Offered Fall Term

- **BIO-510 Independent Study**

Prerequisites:

An independent study form must be submitted to the CAS Dean's Office.

Credits:

1.00- 5.00

Description:

Student projects may be initiated by a student or faculty member with the approval of the Chairperson. A paper and oral report are required. Only ONE independent study may be used toward biology electives.

Term:

Offered Both Fall and Spring

• CHEM-331 Biochemistry I

Prerequisites:

CHEM 212/L212 or permission of instructor. CHEM L331 must be taken concurrently.

Credits:

3.00

Description:

Explores the foundations of biochemistry, including the structure, organization and behavior of proteins, carbohydrates, lipids, and nucleic acids. Topics include enzyme catalysis, kinetics, and inhibition as well as protein regulation and membrane structure. Introduces the use of biochemical literature and computer-based bioinformatics techniques. Offered every fall.

Term:

Offered Fall Term

• CHEM-L331 Biochemical Techniques I

Prerequisites:

Must be taken concurrently with CHEM 331. Take CHEM-212 and CHEM-L212 or permission of instructor.

Credits:

1.00

Description:

Laboratory course introducing biochemical techniques. Includes buffer preparation, PCR, purification of DNA and proteins, agarose and polyacrylamide gel electrophoresis, protein quantitation and detection, and enzyme kinetic assays. Offered every Fall.

Term:

Offered Fall Term

- **CHEM-332 Biochemistry II**

Prerequisites:

CHEM 331

Credits:

4.00

Description:

This course explores the principles of bioenergetics and metabolism of biological compounds. Coverage includes intermediary metabolism of carbohydrates, lipids, amino acids, oxidative phosphorylation, and synthesis of purines and pyrimidines. Additional topics include the regulation and integration of metabolism. Lectures will be supplemented with discussions of the biochemical literature. Prerequisites: CHEM 331. 3 hours of lecture and 1 hour of recitation per week. Offered every Spring, days only.

Term:

Offered Spring Term

Please note that all courses must be taken with the corresponding laboratory class where applicable

Marine Science Concentration Requirements: 17 courses and corresponding laboratories where applicable, 68 credits

The Marine Science concentration introduces students to marine studies while maintaining the rigor and career flexibility of a traditional Biology major. Our aim is to prepare students to make career decisions based on real familiarity with marine studies. The distinguishing feature of the concentration is the completion of three courses and associated labs (two biology and one non-biology) in the field of marine science. The three courses may be used in partial fulfillment of the 10-course requirement of the Biology major.

Students in the Marine Science concentration are strongly urged to take any field-oriented courses offered at the Robert S. Friedman Field Station on Cobscook Bay in Edmunds, Maine, as well as work study and field research opportunities offered each summer, or to undertake an approved internship at an affiliated institution.

- **BIO-254 Marine Biology**

Prerequisites:

BIO-111/L111 or BIO-114/L114 or Instructor's consent; BIO-L254 concurrently;

Credits:

3.00

Description:

Introduction to the marine environment, its organisms and their specific adaptations. Emphasis on marine and estuarine ecology, intertidal habits, trophic relations, and physiology. Human impacts on the sea: fisheries, mariculture, pollution, introduced species, climate change and seawater acidification, and law of the sea. Includes a one week camping excursion into eastern Maine for lab/field exercises and some lectures. ECR. This course typically meets for one week in the third week of August (before typical fall courses begin) and includes a camping fee of ca \$250. Taught yearly each fall.

Term:

Offered Fall Term

Type:

Expanded Classroom Requirement

- **BIO-L254 Marine Biology Lab**

Prerequisites:

BIO-111/L111 or BIO-114/L114 or Instructor's consent; BIO-254 concurrently;

Credits:

1.00

Description:

Field trips to local marine environments; field and laboratory observations of marine organisms. Independent student projects. Taught largely in the field during one week camping excursion to eastern Maine with several lab sessions on campus in Boston during fall semester. ECR.

Term:

Offered Fall Term

Type:

Expanded Classroom Requirement

- **SCI-251 Intro to Coastal Geology**

Prerequisites:

Intro Math and must take SCI-L251 concurrently

Credits:

3.00

Description:

Coastal environments will be analyzed with an emphasis on the important environmental characteristics of these areas. Management and environmental problems within the coastal and offshore areas such as beach erosion, beach access, and oil spills will be considered. One required field trip.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **SCI-L251 Intro Coastal Geology I Lab**

Prerequisites:

SCI 251 must be taken concurrently

Credits:

1.00

Description:

An introduction to laboratory and field techniques used in the geological study of coastal environments. Field trips will be taken to local coastal areas.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

Other marine-related courses (e.g., Biology of Fishes, Cetacean Biology and Conservation, Invertebrate Zoology, Coastal Zone Management) may apply as well.

2015-2016 Archived Catalog Information

Biology

The Biology major introduces the breadth of contemporary biology while allowing students to pursue their individual interests. A minor in Biology is also available.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Concentrations](#)
- [Minor Requirements](#)
- [Honors](#)
- [Biology Courses](#)

Minor Requirements: 6 courses, 24 credits

Core Requirements (2 courses with corresponding laboratories, 8 credits)

- BIO-111 Introduction to the Cell

Prerequisites:

Must take BIO L111 concurrently

Credits:

3.00

Description:

Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L111 Introduction to the Cell Laboratory**

Prerequisites:

Concurrently with BIO 111

Credits:

1.00

Description:

Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-114 Organismal Biology**

Prerequisites:

Must take BIO L114 concurrently.

Credits:

3.00

Description:

Rigorous introduction to organismal biology emphasizing evolution, phylogenetics, form, and function. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L114 Organismal Biology Laboratory**

Prerequisites:

Must take BIO 114 concurrently

Credits:

1.00

Description:

A series of laboratory experiences in evolution, diversity, anatomy and physiology.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

Electives (4 courses with corresponding laboratories where applicable, 16 credits)

The following courses will NOT count toward a minor in Biology because they are non-major's courses. Choose any Biology course except:

- **BIO-101 Principles of Biology I**

Prerequisites:

Must take BIO L101 concurrently

Credits:

3.00

Description:

An introductory course in basic concepts in cell biology, and genetics. May not be taken by Biology majors or minors. This course will not fulfill requirements for a major or a minor in Biology. Not recommended for those interested in health careers.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **BIO-L101 Principles of Biology I Lab**

Prerequisites:

Must take BIO 101 concurrently

Credits:

1.00

Description:

A series of experiments and explanations to study the principles of diffusion, enzyme function, cell division, genetics and evolution. May not be taken by Biology majors or minors. This course will not fulfill requirements for a major or a minor in Biology.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **BIO-102 Principles of Biology II**

Prerequisites:

BIO L102 must be taken concurrently

Credits:

3.00

Description:

Investigations of relationships among organisms in time and space. Evolution, diversity, and human biology in the context of contemporary society. May not be taken by Biology majors or minors. This course will not fulfill requirements for a major or a minor in Biology.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **BIO-L102 Principles of Biology II Lab**

Prerequisites:

BIO 102 must be taken concurrently

Credits:

1.00

Description:

Exercises and field trips designed to complement and demonstrate the principles developed in the lecture section. May not be taken by Biology majors or minors. This course will not fulfill requirements for a major or a minor in Biology.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **BIO-104 Environmental Biology**

Prerequisites:

BIO 101 and BIO L101, can also be taken concurrently BIO L104 must be taken concurrently

Credits:

3.00

Description:

An introduction to basic evolutionary, behavioral and ecological principles. Readings and discussions emphasize the ways that humans are affected by ecological processes and principles as well as how humans and their technology affect ecosystems. May not be taken by Biology majors or minors. This course will not fulfill requirements for a major or a minor in Biology. It is intended for non-biology majors as a follow-up to Biology 101. 3 hours lecture. Days Only. Madrid Campus only.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **BIO-L104 Environmental Bio Lab**

Prerequisites:

BIO-104 must be taken concurrently

Credits:

1.00

Description:

Exercises and field trips designed to complement and demonstrate the ecological principles developed in the lecture section. The lab emphasizes the scientific method and employs long term group projects. Madrid Campus only.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **BIO-105 Humans and the Evolutionary Perspective**

Prerequisites:

Non Science Majors Only

Credits:

4.00

Description:

Major topics include the scientific basis of evolution, the fossil history of vertebrates, evidence of evolution in the human body, and applying an evolutionary perspective to the social interactions and possible futures of humanity. Meets one of the non laboratory science requirements for the non-science major. This reading and writing intensive course is a non-laboratory science option for non-science majors. This course will not fulfill requirement for a major or a minor in Biology.

Term:

Occasional

Type:

NATURAL SCIENCE FOR BA BFA & BSJ

- **BIO-201 Biology's Big Questions**

Prerequisites:

Non Science Majors Only.

Credits:

4.00

Description:

This course seeks to answer five current questions from all levels of biology, from the subcellular to the ecosystem level. Topics will be discussed in the context of genetics, evolution, and ecology. We will focus on the process of doing science, including how scientists evaluate ideas and communicate their findings. Emphasis will be placed on topics in biology that impact daily life.

Type:

SCI TECH ENGNR

The Biology Department supports two student organizations, the Health Careers Club and the Chi Kappa Chapter of the Beta Beta Beta National Biological Honor Society. These two organizations give biology students opportunities to work closely with faculty while engaging in research that benefits the department and the greater Suffolk community.

Beta Beta Beta Biological Honor Society

The Chi Kappa Chapter at Suffolk University was chartered on October 10, 1978. Beta Beta Beta is an honor and professional society primarily for students of the biological sciences. Its goals include promoting student research, publication, and exposure to current biological scholarship and career possibilities. Regular membership is offered to majors in the biological sciences who have completed at least one term of the sophomore year (including three Biology courses) with a 3.0 average in Biology and an overall average of 2.7. Associate membership is open to any interested undergraduate.

• BIO-109 Plants and People

Prerequisites:

Non Science Majors Only.

Credits:

4.00

Description:

This course focuses on the ancient, intimate, and mutually beneficial relationship between humans and plants. We will discuss the basic anatomy, physiology, and genetic characteristics of flowering plants and how these characteristics have facilitated their use by humans. We will explore the impacts of a wide range of plants and their products on human society while considering the evolutionary changes that these plants have undergone through artificial selection. We will also touch on the synergistic role of fungus and plants in alcohol fermentation. This course fulfills the non-lab natural sciences requirement for BFA, BSJ, and BA degrees. Non-biology majors only.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ

• BIO-111 Introduction to the Cell

Prerequisites:

Must take BIO L111 concurrently

Credits:

3.00

Description:

Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

- **BIO-114 Organismal Biology**

Prerequisites:

Must take BIO L114 concurrently.

Credits:

3.00

Description:

Rigorous introduction to organismal biology emphasizing evolution, phylogenetics, form, and function. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L114 Organismal Biology Laboratory**

Prerequisites:

Must take BIO 114 concurrently

Credits:

1.00

Description:

A series of laboratory experiences in evolution, diversity, anatomy and physiology.

Term:

Offered Both Fall and Spring

Type:

- **BIO-201 Biology's Big Questions**

Prerequisites:

Non Science Majors Only.

Credits:

4.00

Description:

This course seeks to answer five current questions from all levels of biology, from the subcellular to the ecosystem level. Topics will be discussed in the context of genetics, evolution, and ecology. We will focus on the process of doing science, including how scientists evaluate ideas and communicate their findings. Emphasis will be placed on topics in biology that impact daily life.

Type:

SCI TECH ENGNR

- **BIO-H201 Biology's Big Questions**

Prerequisites:

Non Science Majors Only and at least a 3.3 GPA

Credits:

4.00

Description:

This course seeks to answer five current questions from all levels of biology, from the subcellular to the ecosystem level. Topics will be discussed in the context of genetics, evolution, and ecology. We will focus on the process of doing science, including how scientists evaluate ideas and communicate their findings. Emphasis will be placed on topics in biology that impact daily life.

Type:

SCI TECH ENGNR,Honors

- **BIO-203 Anatomy and Physiology I**

Prerequisites:

BIO L203 MUST BE TAKEN CONCURRENTLY BIO 111, BIO L111.

Credits:

3.00

Description:

First part of a systematic survey of the structural and functional interrelations of the organ systems of the human body. This course emphasizes histology and physiology in the understanding of the integumentary, skeletal, muscular, and nervous systems. Medical terminology will be used.

Term:

Offered Fall Term

- **BIO-L203 Anatomy & Physiology Lab I**

Prerequisites:

BIO 111/L111; Must take BIO-203 concurrently

Credits:

1.00

Description:

A study of the human skeletal system and a comparative look at other organ systems involving observation of anatomical models and dissection of mammalian specimens. Also includes microscopy and computer simulations of physiological processes.

Term:

Offered Fall Term

- **BIO-204 Anatomy and Physiology II**

Prerequisites:

BIO 203, BIO L203; BIO L204 must be taken concurrently;

Credits:

3.00

Description:

Conclusion of a systematic survey of the structural and functional interrelations of the organ systems of the human body. This course investigates the endocrine, circulatory, respiratory, digestive, urinary, and reproductive systems as well as the physiology of immune responses, nutrition, and acid-base balance. Medical terminology will be used.

Term:

Offered Spring Term

- **BIO-L204 Anatomy & Physiology Lab II**

Prerequisites:

BIO 203/L203 and BIO 204 must be taken concurrently;

Credits:

1.00

Description:

A study of the human viscera using anatomical models and dissection of mammalian specimens. Also includes microscopy of tissues and physiological experiments.

Term:

Offered Spring Term

- **BIO-222 Field Botany**

Prerequisites:

BIO 111 and BIO-L111. This course will fulfill the Expanded Classroom Requirement.

Credits:

4.00

Description:

A three-week camping excursion, during which common tracheotypes, bryophytes, algae, and other photosynthetic organisms characteristic of various habits in Maine will be identified. Emphasis will be on plant ecology including species interactions and habitat requirements. Vertical zonation in mountains, lakes and intertidal areas will be a point of focus. Participants will camp for one week at each of three sites: Baxter State Park, Central Maine (near Augusta), and on Cobscook Bay. Travel will be by van(s) and hiking (up to ten miles a day) over difficult terrain. Sleeping bags and pads required (tents provided). Additional fees: Camping and food est. \$525.00. ECR. The three-week camping excursion typically runs from late May (after tradition Spring course finals are over) into June. Taught yearly.

Term:

Offered Spring Term

Type:

Expanded Classroom Requirement

• BIO-225 Plant Biology

Prerequisites:

Bio 111, L111 and Bio 114, L114; Must be taken concurrently with L225.

Credits:

3.00

Description:

Course introduces students to the anatomy, physiology, systematics, ecology, and economic uses of all major groups of plants. Aspects of the biology of nonvascular, non-seed, gymnosperm, and angiosperm plants are explored. An overview of Kingdom Fungi is also covered. Each student is required to do a 10-15 minute presentation to the class highlighting the economic use of a group of plants assigned by the instructor. Normally offered Spring semester.

Term:

Offered Spring Term

- **BIO-L225 Plant Biology Laboratory**

Prerequisites:

BIO 111/L111 and BIO 114/L114; BIO 225 concurrently;

Credits:

1.00

Description:

Lab exercises focus on plant anatomy, physiology, and systematics. Instruction in the identification of major plant families and fungal types is covered. Trips to a Boston area herbarium and botanical garden are required.

Term:

Offered Spring Term

- **BIO-233 Human Nutrition**

Prerequisites:

BIO 111/L111 and BIO 114/L114;

Credits:

4.00

Description:

This interactive introduction to nutrition explores the science of human nutrition and further reviews concepts of how nutrition can promote health and well being. The course will review specific nutrient needs and functions, nutrient digestion, and the role of diet in well being and in the presence of chronic disease. Weekly course work encourages scientific literacy and fosters critical evaluation of nutrition in the news and in social media.

- **BIO-240 Introduction to Marine Mammals**

Prerequisites:

BIO-111, BIO-L111, BIO-114, and BIO-L114

Credits:

4.00

Description:

This course explores the biology and natural history of marine mammals, including cetaceans, pinnipeds, and sirenians, with a particular focus on species endemic to the North Atlantic. Topics include evolution, anatomy, physiology, behavior, ecology, field identification, the history of whaling and sealing, and contemporary management and conservation issues. Hands-on activities may include the dissection of a small marine mammal and a whale watch in Massachusetts Bay.

• BIO-254 Marine Biology

Prerequisites:

BIO-111/L111 or BIO-114/L114 or Instructor's consent; BIO-L254 concurrently;

Credits:

3.00

Description:

Introduction to the marine environment, its organisms and their specific adaptations. Emphasis on marine and estuarine ecology, intertidal habits, trophic relations, and physiology. Human impacts on the sea: fisheries, mariculture, pollution, introduced species, climate change and seawater acidification, and law of the sea. Includes a one week camping excursion into eastern Maine for lab/field exercises and some lectures. ECR. This course typically meets for one week in the third week of August (before typical fall courses begin) and includes a camping fee of ca \$250. Taught yearly each fall.

Term:

Offered Fall Term

Type:

Expanded Classroom Requirement

- **BIO-L254 Marine Biology Lab**

Prerequisites:

BIO-111/L111 or BIO-114/L114 or Instructor's consent; BIO-254 concurrently;

Credits:

1.00

Description:

Field trips to local marine environments; field and laboratory observations of marine organisms. Independent student projects. Taught largely in the field during one week camping excursion to eastern Maine with several lab sessions on campus in Boston during fall semester. ECR.

Term:

Offered Fall Term

Type:

Expanded Classroom Requirement

- **BIO-262 Principles of Cell Culture**

Prerequisites:

BIO 111, L111 and BIO 114, L114 and CHEM 111, L111

Credits:

4.00

Description:

The course is designed as an application base educational experience that will allow students to learn the standard techniques associated with successful cell culture. As such, students are responsible for the maintenance, propagation, isolation, and preservation of their cells. A number of cell types and experimental manipulations of the cultures are investigated throughout the semester.

Term:

Offered Spring Term

- **BIO-273 Biostatistics**

Prerequisites:

BIO 111/L111

Credits:

4.00

Description:

Introduction to the statistical methods used to evaluate biological problems. Sampling, probability, confidence intervals, hypothesis tests, experimental design, analysis of variance, regression, and correlation are some of the topics offered. Software for data handling, graphics, and analysis will be used.

Term:

Offered Fall Term

Type:

Quantitative Reasoning

- **BIO-274 Genetics**

Prerequisites:

BIO 111/L111 and BIO 114/L114; BIO L274 concurrently;

Credits:

3.00

Description:

An examination of the basic principles of genetics in eukaryotes and prokaryotes at the level of molecules, cells, and multicellular organisms, including humans. Topics include Mendelian and non-Mendelian inheritance, structure and function of chromosomes and genomes, biological variation resulting from recombination, mutation, and selection, and population genetics.

Term:

Offered Fall Term

- **BIO-L274 Genetics Lab**

Prerequisites:

BIO-111, BIO-L111, BIO-114, and BIO-L114. Must be taken concurrently with BIO 274.

Credits:

1.00

Description:

Experiments designed to demonstrate principles presented in lecture, using a range of genetic model organisms that include *E. coli*, *B. subtilis*, *S. cerevisiae*, *D. melanogaster*, *S. fimicola*, and *C. elegans*.

Term:

Offered Fall Term

- **BIO-285 Microbiology**

Prerequisites:

BIO-111 and BIO-L111; BIO-L285 concurrently;

Credits:

3.00

Description:

Viruses and bacteria are surveyed in terms of their ecology, biochemistry, taxonomy, molecular biology and control.

Term:

Offered Spring Term

- **BIO-L285 Microbiology Laboratory**

Prerequisites:

BIO 111/L111; BIO 285 concurrently;

Credits:

1.00

Description:

Introduction to microbiological techniques and their applications to health, research and industry.

Term:

Offered Fall Term

- **BIO-302 Writing for Research**

Prerequisites:

BIO 111/L111 and WRI 101, WRI 102, or WRI-103. BIO and Radiation Therapy majors with junior standing only.

Credits:

4.00

Description:

Development of skills for writing clearly, concisely, and creatively in the style of scientific journals. This course emphasizes the formulation of a research project of the student's choice and leads to a formal manuscript on the topic. Instruction includes literature search methods and software for the graphical presentation of data. Professional development, including the preparation of job application materials and in-person interview skills, is also an integral part of this course. Required of all biology and radiation science majors. Junior standing required.

Term:

Offered Both Fall and Spring

- **BIO-304 Comparative Animal Physiology**

Prerequisites:

BIO-114 and BIO-L114. Must take BIO-L304 concurrently

Credits:

3.00

Description:

Mechanisms of physiological adaptations to environmental challenges are studied. Examples of gas exchange, osmoregulation, fluid transport, temperature regulation, nervous control, and movement are examined in various animal forms through class lecture and discussion, required readings, and external lectures. Spring semester.

Term:

Offered Spring Term

• **BIO-L304 Comp Animal Physiology Lab**

Prerequisites:

BIO-114 and BIO-L114. Must take BIO-304 concurrently.

Credits:

1.00

Description:

Selected physiological processes and mechanisms or adaptation in invertebrate and vertebrate animals are examined by observation and controlled experiments.

• **BIO-315 Animal Behavior**

Prerequisites:

BIO-114/L114

Credits:

4.00

Description:

Surveys animal behavior in a range of species (invertebrates, birds, fish, mammals including humans) to assess similarities and differences in the evolution of behaviors and their physiological mechanisms by which individual organisms and species adapt to their environments. Topics include: predator evasion; mating systems; parental care; social behavior; and learning.

Term:

Offered Spring Term

- **BIO-333 Ecology**

Prerequisites:

BIO-114/L114; BIO-L333 concurrently;

Credits:

3.00

Description:

Areas of study include but are not limited to basic principles of population biology, community ecology, trophic dynamics, ecosystem structure and function and evolutionary theory.

Term:

Offered Fall Term

- **BIO-L333 Ecology Lab**

Prerequisites:

BIO-114, BIO-L114, and BIO-333 concurrently

Credits:

1.00

Description:

Field and laboratory experiences in techniques and concepts relevant to ecological theory, data collection, statistical analysis, visual representation and report preparation.

Term:

Offered Fall Term

- **BIO-337 Evolution**

Prerequisites:

Take BIO-111 BIO-L111 BIO-114 BIO-L114. BIO 274 recommended.

Credits:

4.00

Description:

A survey of evolutionary theory, exploring processes such as the genetic sources of variation, natural and sexual selection, and evolutionary developmental biology. Using phylogenetic systematics and other tools, we will demonstrate how these mechanisms result in the visible patterns of evolution. This is a reading-and-writing intensive course centered on close reading of Origin of the Species and discussion of recent peer-reviewed literature about evolution.

Term:

Summer

- **BIO-343 Biodiversity & Conservation Biology**

Prerequisites:

BIO-114 and BIO-L114

Credits:

4.00

Description:

This course covers a broad spectrum of aspects of biodiversity and conservation by examining key elements ranging from global patterns in the distribution of life on our planet to the effects our human population is causing on those patterns. Examples from marine and terrestrial animals and plants are used to convey current ideas with a focus on the importance of global biodiversity, and the design of management programs for the conservation of species and ecosystems. 4-credit

- **BIO-345 The Biology of Vector Borne Diseases**

Prerequisites:

BIO-114/L114;

Credits:

4.00

Description:

A survey of the occurrence, life history and pathogenicity of the most important arthropod-borne, human diseases both internationally (malaria, dengue, plague, trypanosomiasis, yellow fever, etc.) and within the United States (Lyme disease, EEE, West Nile Virus, and others). Demographic and environmental factors leading to the re-emergence and spread of these diseases will be considered.

- **BIO-350 Vertebrate Biology**

Prerequisites:

BIO-111/L111; BIO-114/L114; BIO-L350 concurrently;

Credits:

3.00

Description:

This class will focus on the form and function of vertebrate animals from an evolutionary standpoint. The adaptations of major groups will be discussed in light of their phylogenetic history and ecology. A discussion of major adaptive radiations and abiotic factors that influenced these trends will also be highlighted.

Term:

Occasional

- **BIO-L350 Vertebrate Biology Lab**

Prerequisites:

BIO-111/L111; BIO-114/L114; BIO-350 concurrently;

Credits:

1.00

Description:

This lab will focus on the comparative anatomy of vertebrate animals. In-depth dissections will be the focus of the laboratory exercises. A Squalus shark, a Necturus salamander, a pigeon, and a mink will be examined in detail.

Term:

Occasional

- **BIO-357 Biology of Fishes**

Prerequisites:

BIO 114/L114, and Junior standing. Requires permission from Marine Sciences Coordinator.

Credits:

3.00

Description:

The evolution, systematics, anatomy, physiology and behavior of freshwater, marine and anadromous fishes from temperate to tropical environments. The interactions of fish in their environments, including predator-prey relationships, host-symbiont interactions, and fish as herbivores. Taken with permission from the Marine Science Consortium Coordinator. [This is a Marine Science Consortium Course and enrollment is limited] Evenings only: off campus

Term:

Offered Spring Term

• BIO-359 Biology of Whales

Prerequisites:

BIO-111, BIO-L111, BIO-114, BIO-L114, and 2 BIO courses at the 200 level or above

Credits:

3.00

Description:

This course provides a comprehensive review of the biology, ecology, and management of cetaceans. A thorough grounding in cetacean mammalogy and population biology will prepare students to understand conservation problems presented as case histories. Students will also complete an independent research paper on a topic related to cetacean biology. Hands-on activities may include the dissection of a small cetacean and a shore-based whale watch in Cape Cod Bay. This course is part of the Marine Studies Consortium and will be held at the New England Aquarium.

• BIO-360 Cancer Biology

Prerequisites:

BIO-111, BIO-L111, BIO-114, BIO-L114, BIO-274, and BIO-L274

Credits:

4.00

Description:

An examination of molecular and cellular mechanisms that lead to the development of cancer. Factors contributing to tumorigenesis, angiogenesis, and metastasis will be discussed; these factors, oncogenes, tumor suppressor genes, and signal transduction networks. In addition, an investigation of current strategies for cancer prevention and treatment will be considered.

• BIO-374 Genomics

Prerequisites:

BIO 111/L111, CHEM 111/L111, BIO 274/L274 Must take BIO L374 concurrently

Credits:

3.00

Description:

What can we learn from genomics? In this course, you will develop an understanding of how cutting edge techniques from biotechnology are changing our views of biology. You will learn how genetic sequencing can be used for everything from tracing evolutionary histories in the tree of life to shedding light on biodiversity patterns of populations. With a focus on human genetics, you will also explore how genes are discovered and linked to phenotypic traits. Finally, you will consider methods of monitoring gene expression and how the resulting genetic networks can help medicine and drug development.

- **BIO-L374 Genomics Laboratory**

Prerequisites:

BIO 111/L111, CHEM 111/L111, BIO 274/L274 Must take BIO 374 concurrently

Credits:

1.00

Description:

In this course, you will develop an understanding of current genomic methods through collection and examination of your own data. In the first part of the lab, you will use sequencing techniques to compare genetic relationships and characterize the microbial biodiversity of a population. In the second part of the lab, you will focus on gene expression and functional genomics. You will determine the actions of a transcription factor through RNA-seq and also determine how a collection of uncharacterized transcription factors affect antibiotic sensitivity. In addition to reading primary literature and keeping a lab notebook, you will also learn how to analyze and present your genomics data.

- **BIO-377 Immunology**

Prerequisites:

BIO-114/L114; CHEM-211/L211; BIO-L377 concurrently;

Credits:

3.00

Description:

The concept of immunity, response to infection, structure of the immune system, biochemistry of immunoglobins, antigen-antibody interactions, allergy, immunological injury, lymphocyte subpopulations and cellular immunity, tolerance suppression and enhancement. Taught alternate/even years.

Term:

Offered Spring Term

• BIO-L377 Immunology Laboratory

Prerequisites:

BIO-114 and BIO-L114 and CHEM-211 and CHEM-L211. Must take BIO-377 concurrently.

Credits:

1.00

Description:

Anatomy of the immune system , immunoglobulin purification, hemagglutination, enzyme immunoassay. Immuno-chemistry, immunoelectrophoresis, gel precipitation assay.

Term:

Occasional

• BIO-385 Advanced Microbiology

Prerequisites:

BIO-285 and BIO-L285 BIO L385 must be taken concurrently

Credits:

3.00

Description:

Pathogenesis and host-parasite relationships; epidemiology and public health aspects of pathogenic microorganisms are stressed; molecular biology, applied and industrial microbiology. Current literature reviews. Taught alternate/odd years.

Term:

Offered Spring Term

- **BIO-L385 Advanced Microbiology Lab**

Prerequisites:

BIO 285/L285; BIO 385 must be taken concurrently

Credits:

1.00

Description:

Isolation, quantization and cultivation of microorganisms, advanced general and applied microbiology and molecular biology. Experience in media, chemical and culture preparations.

Term:

Offered Spring Term

- **BIO-403 Cell Biology**

Prerequisites:

BIO 111/L111; CHEM-211/L211; BIO-L403 concurrently;

Credits:

3.00

Description:

The study of cells, approached through examinations of biochemical mechanisms, the relation between the structure and function of biological molecules and organelles, and the regulation of normal and diseased cells.

Term:

Offered Fall Term

- **BIO-L403 Cell Biology Lab**

Prerequisites:

BIO-111 and BIO-L11 and CHEM-211 and CHEM-L211. Must take BIO-403 concurrently.

Credits:

1.00

Description:

Examination of biological molecules and their role in cell function. Techniques used in these examinations will include enzymatic analyses, gel electrophoresis, immunologic identification, chromatography, and spectroscopy. Students are expected to develop their proficiency in the laboratory techniques used, to analyze their results in a quantitative manner, and to present their findings.

Term:

Offered Fall Term

- **BIO-409 Biology Seminar**

Prerequisites:

BIO 202, Senior standing

Credits:

1.00

Description:

The purpose of this class is to familiarize all senior biology majors with the process of investigating and implementing novel research in the biological sciences. The centerpiece of the course is a semester long project in which each student selects, researches, and designs an original experiment on the topic of their choice. Two in - class presentations and a full length research proposal are required. Weekly reading assignments and discussions of the primary literature are vital to the investigation piece of the course. Prerequisites: BIO 202 and senior standing. May not be used for credit towards or an elective for the Biology Minor.

Term:

Offered Both Fall and Spring

- **BIO-474 Molecular Genetics**

Prerequisites:

CHEM-311 or BIO-274 and BIO-L274 and BIO-L474 concurrently

Credits:

3.00

Description:

An examination of concepts and techniques of modern molecular biology. Topics include the structure and function of DNA, RNA, and proteins, the regulation of gene expression in prokaryotes and eukaryotes at transcriptional and post-transcriptional levels, genetic modification of organisms, and genome analysis. This course will incorporate readings and discussions of primary scientific literature. Spring semester.

Term:

Occasional

- **BIO-L474 Molecular Genetics Lab**

Prerequisites:

Take CHEM-331 or BIO-274 and BIO-L274. BIO-474 must be taken concurrently.

Credits:

1.00

Description:

This upper level laboratory course will consist of a semester-long project in the form of a series of consecutive experiments involving the generation of a genetically modified organism and its subsequent molecular analysis. Techniques employed will include genetic screens, DNA isolation, restriction endonuclease analysis, transformation of bacteria, gel electrophoresis, gene reported assays, RNA isolation, reverse transcription, and quantitative PCR.

Term:

Occasional

- **BIO-475 Developmental Biology**

Prerequisites:

BIO-114, L114 and CHEM-211, L211, and BIO-L475 concurrently

Credits:

3.00

Description:

This course focuses on embryonic development in vertebrates. The conceptual focus on evolutionary developmental biology includes comparative developmental mechanisms and Epigenetic processes.

Term:

Offered Fall Term

- **BIO-L475 Developmental Biology Lab**

Prerequisites:

BIO 114/L114, CHEM 211/L211 BIO 475 must be taken concurrently

Credits:

1.00

Description:

This laboratory course complements the lecture course. Exercises include internet exercises, examination of embryos, biochemical tests, use of developmental models, and student presentations. A number of model organisms are examined.

Term:

Offered Fall Term

- **BIO-503 Biology Internship**

Prerequisites:

BIO111/BIOL111, BIO114/BIOL114. BIO274/BIOL274 may be taken as a corequisite

Credits:

4.00

Description:

Biology Internship: This course provides students with credit for an unpaid internship completed during the semester when credit is earned. Students must secure an approved internship and provide documentation from the internship's overseer to a full time faculty member sponsor in order to register for the course. The internship must involve participation in research and / or patient care. Students or their overseers will be required to submit monthly records of internship hours and provide the faculty sponsor with a written summary of internship experiences and accomplishments by the last week of classes. Only one internship may be used as a biology elective. This course is available for variable credit. Prerequisites: An Internship for Credit form must be submitted to the department chair Credits: 1-4

- **BIO-510 Independent Study**

Prerequisites:

An independent study form must be submitted to the CAS Dean's Office.

Credits:

1.00- 5.00

Description:

Student projects may be initiated by a student or faculty member with the approval of the Chairperson. A paper and oral report are required. Only ONE independent study may be used toward biology electives.

Term:

Offered Both Fall and Spring

- **SCI-103 Environmental Science**

Prerequisites:

SCI-L103 must be taken concurrently

Credits:

3.00

Description:

Case study approach to the fundamentals of science applied to environmental degradation, ecosystems, geological processes, population dynamics, deforestation and biodiversity, climate change, ozone depletion, air soil, and water resource management, pollution and risks to health, economics and the environment, politics and the environment, and ethics and the environment.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

• **SCI-L103 Environmental Science Lab**

Prerequisites:

Must take SCI-103 concurrently

Credits:

1.00

Description:

Laboratory exercises to illustrate the topics covered in Science 103. Field-testing and analysis of environmental samples. Field trip required.

Term:

Offered Fall Term

Type:

- **SCI-251 Intro to Coastal Geology**

Prerequisites:

Intro Math and must take SCI-L251 concurrently

Credits:

3.00

Description:

Coastal environments will be analyzed with an emphasis on the important environmental characteristics of these areas. Management and environmental problems within the coastal and offshore areas such as beach erosion, beach access, and oil spills will be considered. One required field trip.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **SCI-L251 Intro Coastal Geology I Lab**

Prerequisites:

SCI 251 must be taken concurrently

Credits:

1.00

Description:

An introduction to laboratory and field techniques used in the geological study of coastal environments. Field trips will be taken to local coastal areas.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

2015-2016 Archived Catalog Information

Black Studies

Black Studies is an interdisciplinary program that provides students with the opportunity to critically examine the black experience in relationship to both historical and contemporary issues that have shaped and continue to shape the various communities they are a part of: neighborhoods, cities, states, nations, and the world.

There is no major available in Black Studies.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Minor Requirements](#)
- [Black Studies Courses](#)

Minor Requirements: 5 courses, 20 credits

Core Requirements (2 courses, 8 credits)

- BLKST-100 Introduction to Black Studies I: Survey of the Discipline

Credits:

4.00

Description:

Introduces students to the basic concepts, literature and interdisciplinary nature of Black Studies. Provides a conceptual framework for the investigation and analysis of black history and culture as well.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **BLKST-101 Introduction to Black Studies II Research and Writing**

Credits:

4.00

Description:

Introduces students to basic research techniques and methods in Black Studies including library use, identifying resources, project development, documenting sources, and writing research papers.

Term:

Occasional

Type:

Social Science

Electives (3 courses, 12 credits)

Choose three of the following; no more than two may be taken from any one department outside of Black Studies.

- **BLKST-263 Sabar: Music and Dance**

Credits:

4.00

Description:

Introduces participants to the sabar music and dance tradition of Senegal through a study of music, dance, language and history. Taught by professional practitioners of the sabar tradition, students will develop a sense of how music and dance are used in both traditional and popular contexts. This course will be directed by Prof. Robert A. Bellinger.

Type:

Cultural Diversity Opt B, Social Science

- **BLKST-469 Research Seminar: African American Life in Slavery and Freedom- Reconstruction and the Freedman's Bureau**

Credits:

4.00

Description:

Using documents related to the work of the Freedman's Bureau this class provides students with a deeper understanding of the reconstruction era. This course is identical to HST 469.

Term:

Occasional

Type:

Social Science

- **ENG-357 African-American Literature I**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

African-American writing from the beginning through the present. Normally offered alternate years. Cultural Diversity A

Term:

Occasional

Type:

Cultural Diversity Opt A

- **ENG-359 Selected African-American Writers**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course focuses upon the literary contributions of a selected number of major African-American authors. Normally offered every other year.

Type:

Cultural Diversity Opt A,Diverse Perspectives

- **GVT-383 African Politics**

Prerequisites:

GVT 110 and GVT 120

Credits:

4.00

Description:

The political development of Africa in colonial and post-colonial periods. Analysis of the evolution of governmental institutions includes economic, social and personal factors; political forces at work in present day Africa. Not open to freshmen. Normally offered alternate years. Cultural Diversity B

Type:

Cultural Diversity Opt B,Social Science

- **HST-261 African History to 1800**

Credits:

4.00

Description:

Explores the history of Africa from prehistoric times to the nineteenth century to give students an introduction to African Studies and a sense of Africa's place in world history. Topics include: the Nile Valley civilizations, West African empires, the trans-Saharan trade, the slave trade, the spread and impact of Islam.

Term:

Offered Fall Term

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement

- **HST-262 Modern African History Since 1800**

Credits:

4.00

Description:

Examines the history of Africa from 1800 to the present and enable students to develop an understanding of issues that affect the relationship between modern Africa and the world. Topics include: the African tradition; the impact of Islam and Christianity, abolition of the slave trade, European imperialism and colonialism, African independence movements, African nationalism, Pan Africanism.

Term:

Offered Spring Term

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement

- **HST-263 Comparative Race Relations**

Credits:

4.00

Description:

Compares and analyzes the history of race and politics in South Africa and the United States from the 17th century to the present. Examines how race as a social and ideological construct influenced and informed political conflicts over land, labor, and social relations in the two countries including slavery, segregation, apartheid, and the struggle to create racial democracies.

Term:

Offered Fall Term

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, BSBA SOCIAL CHANGE, D

• **HST-271 African-American History 1619-1860**

Credits:

4.00

Description:

Examines the history of Africans in the United States from their arrival in the colonies to the Civil War and the end of legal slavery. Topics examined include: the development of the slave system, African-Americans, and the Declaration of Independence, and the abolition movement.

Term:

Occasional

Type:

Cultural Diversity Opt A, Humanities & History, Humanities Literature Requirement

• **HST-272 African-American History From 1860**

Credits:

4.00

Description:

Examines African American history from the end of slavery to the twenty first century. Topics examined include: Emancipation and Reconstruction, Reconstruction and the Constitution, the Harlem Renaissance, the Civil Rights and Black Power Movements, and African-Americans at the start of the twenty-first century.

Term:

Occasional

Type:

Cultural Diversity Opt A, Humanities & History, Humanities Literature Requirement

- **HST-319 The History of Black Music in America**

Credits:

4.00

Description:

Black music has been one of the primary cultural factors in the United States. From the African roots to hip hop in the 21st century Black music has served as an expression of African American consciousness, providing commentary on many aspects of black life including social and political. It has also been a major force in shaping the culture of the United States as a whole. Using music as a window this class explores the history of Black America as well as the history of all America. Through a combination of texts, videos, and recordings this class examines the music of Black America in the context and communities in which it was created and performed, and also in relationship to the wider world.

Term:

Occasional

Type:

Humanities & History, Cultural Diversity Opt A, Humanities Literature Requirement

- **HST-330 History & Culture of Senegal**

Prerequisites:

Requires instructor's consent to register

Credits:

4.00

Description:

Introduces students to the richness of Senegalese culture and history, from the eleventh century to the twenty first century. Through lectures, readings, music, and film students will examine Senegal's culture and customs. In some years there will be a travel component connected with the class.

Term:

Offered Spring Term

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement

- **HST-396 The African Diaspora**

Credits:

4.00

Description:

Examines the global dispersion of African people outside of the African continent. The history and culture of African descendant people and their communities in the Americas, Europe, and Asia will be included.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities & History, Cultural Diversity Opt A

Black Studies

Black Studies is an interdisciplinary program that provides students with the opportunity to critically examine the black experience in relationship to both historical and contemporary issues that have shaped and continue to shape the various communities they are a part of: neighborhoods, cities, states, nations, and the world.

There is no major available in Black Studies.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Black Studies Courses](#)
- BLKST-100 Introduction to Black Studies I: Survey of the Discipline

Credits:

4.00

Description:

Introduces students to the basic concepts, literature and interdisciplinary nature of Black Studies. Provides a conceptual framework for the investigation and analysis of black history and culture as well.

Term:

Occasional

Type:

- **BLKST-101 Introduction to Black Studies II Research and Writing**

Credits:

4.00

Description:

Introduces students to basic research techniques and methods in Black Studies including library use, identifying resources, project development, documenting sources, and writing research papers.

Term:

Occasional

Type:

Social Science

- **BLKST-250 Haiti, Guadelupe and Martinique**

Credits:

4.00

Description:

This course explores the rich intellectual tradition of Haiti, Guadeloupe, and Martinique by considering historical moments linked to colonialism, the abolition of slavery, the representation of gender, departmentalization, and decolonization through essays, films, poems, novels, and short stories by critics and writers from the 19th-21st centuries.

Type:

Diverse Perspectives

- **BLKST-263 Sabar: Music and Dance**

Credits:

4.00

Description:

Introduces participants to the sabar music and dance tradition of Senegal through a study of music, dance, language and history. Taught by professional practitioners of the sabar tradition, students will develop a sense of how music and dance are used in both traditional and popular contexts. This course will be directed by Prof. Robert A. Bellinger.

Type:

Cultural Diversity Opt B, Social Science

- **BLKST-469 Research Seminar: African American Life in Slavery and Freedom- Reconstruction and the Freedman's Bureau**

Credits:

4.00

Description:

Using documents related to the work of the Freedman's Bureau this class provides students with a deeper understanding of the reconstruction era. This course is identical to HST 469.

Term:

Occasional

Type:

Social Science

Chemistry

The Chemistry & Biochemistry Department offers a Chemistry major and minor. Through a wide variety of laboratory-based courses and opportunities for independent research with faculty, the department provides students with the tools that will allow them to achieve success in their field while learning in the heart of one of the most scientifically progressive cities in the world.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Minor Requirements](#)
- [Honors](#)
- [Chemistry Courses](#)

Major Requirements: 17 courses, 64-71 credits

The curricula for the BA and BS degrees in Chemistry may satisfy the requirements for certification by the American Chemical Society. Students in the College of Arts & Sciences must fulfill all general requirements for their chosen degree in addition to specific major requirements.

Core Requirements (16 courses and corresponding laboratories where applicable, 60 credits)

- CHEM-111 General Chemistry I

Prerequisites:

Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:

3.00

Description:

Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

• **CHEM-L111 General Chemistry I Lab**

Prerequisites:

Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **CHEM-112 General Chemistry II**

Prerequisites:

CHEM 111/L111; CHEM-L112 must be taken concurrently.

Credits:

3.00

Description:

This course is a continuation of General Chemistry I. Fundamental principles of chemistry are discussed. Introduces thermochemistry, gases, solution chemistry, chemical kinetics, chemical equilibrium, acid-base systems, and thermodynamics.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS

- **CHEM-L112 General Chemistry II Lab**

Prerequisites:

CHEM 112 must be taken concurrently;

Credits:

1.00

Description:

This course is a continuation of General Chemistry I Lab. Apply the basic principles of chemistry through discovery laboratory experiments with an emphasis on quantitative analysis. Execute basic analytical techniques such as gravimetric analysis, the application of Beer's Law, and acid-base titrations. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **CHEM-211 Organic Chemistry I**

Prerequisites:

CHEM 112 and CHEM-L112. CHEM-L211 must be taken concurrently.

Credits:

3.00

Description:

Introduces basic theories of structure, bonding, and chemical reactivity as specifically applied to modern organic chemistry. Includes functional groups, acid/base chemistry, nomenclature, resonance, spectroscopy, and stereochemistry.

Term:

Offered Fall Term

- **CHEM-L211 Organic Chemistry Laboratory I**

Prerequisites:

CHEM-112 and CHEM-L112. Must be taken concurrently with CHEM 211.

Credits:

1.00

Description:

Introduces synthetic organic chemistry techniques. Includes melting point determination, distillation, crystallization, extraction, chromatographic separations, and infrared spectroscopy. Discusses experimental design within the context of green organic chemistry.

Term:

Offered Fall Term

- **CHEM-212 Organic Chemistry II**

Prerequisites:

CHEM 211 and CHEM L211. Must take CHEM-L212 concurrently.

Credits:

3.00

Description:

Builds on the core competencies acquired in Organic Chemistry I. Includes detailed mechanistic discussions of substitution, elimination, and addition reactions. Emphasizes organic synthesis, structure determination, and spectroscopy.

Term:

Offered Spring Term

- **CHEM-L212 Organic Chemistry Laboratory II**

Prerequisites:

CHEM-211 and CHEM-L211. Must be take CHEM-212 concurrently.

Credits:

1.00

Description:

Builds on the core competencies acquired in Organic Chemistry Laboratory I. Emphasizes the characterization of organic molecules via nuclear magnetic resonance spectroscopy. Discusses experimental design within the context of green organic chemistry.

Term:

Offered Spring Term

- **CHEM-314 Instrumental Analysis**

Prerequisites:

CHEM 211; CHEM L314 must be taken concurrently.

Credits:

3.00

Description:

Theory and application of analytical instruments: ultraviolet, visible, fluorescence, atomic and emission spectroscopy; chromatographic methods; electrochemical measurements. Prerequisites: CHEM 211; CHEM L314 must be taken concurrently. 3 hour lecture. 1 term - 3 credits. Normally offered Fall/Spring, days.

Term:

Alternates Fall & Spring

• **CHEM-L314 Instrumental Analysis Lab**

Prerequisites:

CHEM L211; CHEM 314 must be taken concurrently

Credits:

1.00

Description:

Laboratory experiments in chemical analysis using instrumental techniques, including spectroscopy and chromatography. Data collection and evaluation includes computer-based methods. Reports are prepared in professional style. Prerequisites: CHEM L112; CHEM 314 must be taken concurrently. 4-hour Laboratory. 1 term - 1 credit. Normally offered Fall/Spring.

Term:

Alternates Fall & Spring

• **CHEM-331 Biochemistry I**

Prerequisites:

CHEM 212/L212 or permission of instructor. CHEM L331 must be taken concurrently.

Credits:

3.00

Description:

Explores the foundations of biochemistry, including the structure, organization and behavior of proteins, carbohydrates, lipids, and nucleic acids. Topics include enzyme catalysis, kinetics, and inhibition as well as protein regulation and membrane structure. Introduces the use of biochemical literature and computer-based bioinformatics techniques. Offered every fall.

Term:

Offered Fall Term

- **CHEM-L331 Biochemical Techniques I**

Prerequisites:

Must be taken concurrently with CHEM 331. Take CHEM-212 and CHEM-L212 or permission of instructor.

Credits:

1.00

Description:

Laboratory course introducing biochemical techniques. Includes buffer preparation, PCR, purification of DNA and proteins, agarose and polyacrylamide gel electrophoresis, protein quantitation and detection, and enzyme kinetic assays. Offered every Fall.

Term:

Offered Fall Term

- **CHEM-375 Advanced Inorganic Chemistry**

Prerequisites:

CHEM 212

Credits:

3.00

Description:

Topics in inorganic chemistry including bonding theories, chemical structures, symmetry and group theory, kinetics and mechanisms of reactions, and spectroscopy. Advanced topics may include bioinorganic chemistry, organometallics, or materials chemistry. 3 hours lecture. Normally offered spring, even numbered years.

Term:

Alternates Fall & Spring

- **CHEM-L375 Advanced Inorganic Laboratory**

Prerequisites:

CHEM 375 must be taken concurrently

Credits:

1.00

Description:

Laboratory exercises designed to illustrate principles covered by topics in CHEM 375. Prior or concurrent enrollment in CHEM 375 required. 4-hour laboratory. Normally offered spring, even numbered years.

Term:

Alternates Fall & Spring

- **CHEM-411 Physical Chemistry I**

Prerequisites:

CHEM 112; MATH 166;

Credits:

3.00

Description:

Principles of thermodynamics and its general applications to physical and chemical change; introduction to the kinetic theory of gases and concepts of statistical mechanics. 3 hours lecture. 3 hour lecture. Normally offered Fall, days.

Term:

Offered Fall Term

- CHEM-L411 Physical Chemistry Laboratory I

Prerequisites:

CHEM 411 must be taken concurrently

Credits:

1.00

Description:

Laboratory exercises covering classical experiments in thermodynamic and instrumental measurements. Significant emphasis will be placed on experimental design and data analysis skills in addition to technical writing skills as demonstrated by laboratory reports prepared in the professional style. 4-hour laboratory. Normally offered Fall, days.

Term:

Offered Fall Term

- CHEM-412 Physical Chemistry II

Prerequisites:

CHEM 411

Credits:

3.00

Description:

Applications of thermodynamics to solutions, chemical equilibrium and electrochemistry; chemical kinetics will be covered. Quantum chemistry and the application of spectroscopy to molecular structure. 3 hours lecture. Normally offered Spring, days.

Term:

Offered Spring Term

• **CHEM-L412 Physical Chemistry Lab II**

Prerequisites:

CHEM L411; CHEM 412 must be taken concurrently.

Credits:

1.00

Description:

Laboratory exercises using spectroscopic techniques (optical and electrochemical) to explore kinetic and thermodynamic and quantum mechanical properties of chemical systems. Emphasis will be placed on experimental design and data analysis skills in addition to technical writing skills as demonstrated through reports prepared in the professional style. 4-hour laboratory. Normally offered Spring, days.

Term:

Offered Spring Term

• **CHEM-428 Research & Seminar I**

Prerequisites:

CHEM 212; CHEM L212; Instructor's Consent required

Credits:

1.00- 4.00

Description:

Independent study under the direct supervision of the chemistry faculty. Students are required to attend departmental seminars, write a professional research report, and give an oral presentation on their project for review by the chemistry faculty. Depending on the project undertaken, students may obtain ECR credit. Prerequisites: CHEM 212 and CHEM L212 and by permission of the instructor. 1 terms - 1 to 4 credits. Normally offered every Fall.

Term:

Offered Fall Term

Type:

Expanded Classroom Requirement

- **CHEM-429 Research & Seminar II**

Prerequisites:

CHEM 212 and CHEM L212 and by permission of the instructor.

Credits:

1.00- 4.00

Description:

Independent study under the direct supervision of the chemistry faculty. Students are required to attend departmental seminars, write a professional research report, and give an oral presentation for review by the chemistry faculty. Depending on the project undertaken, students may obtain ECR credit. Prerequisites: CHEM 212 and CHEM L212 and permission of the instructor. 1 term - 1 to 4 credits. Normally offered every Spring.

Term:

Offered Spring Term

Type:

Expanded Classroom Requirement

- **MATH-165 Calculus I**

Prerequisites:

MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

Credits:

4.00

Description:

Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

• MATH-166 Calculus II

Prerequisites:

MATH 165 with grade of C or better

Credits:

4.00

Description:

Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation, convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

• MATH-265 Calculus III

Prerequisites:

MATH 166 with grade of C or better

Credits:

4.00

Description:

Parametric equations and polar coordinates (curves, areas, conic sections); vectors and the geometry of space (the dot product, vector arithmetic, lines and planes in 3-space, the cross product, cylinders and quadratic surfaces); vector functions (limits, derivatives and integrals, motion in space); partial derivatives (functions of several variables, limits and continuity, tangent planes and differentials, chain rule, directional derivatives, gradient, extrema, Lagrange multipliers); multiple integrals (double integrals, applications); vector calculus (vector fields, line integrals, fundamental theorem for line integrals, Green's Theorem, curl and divergence, parametric surfaces, surface integrals). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **PHYS-151 University Physics I**

Prerequisites:

Take MATH-121 or MATH 165. PHYS L151 concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **PHYS-L151 University Physics Lab I**

Prerequisites:

PHYS 151 concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• **PHYS-152 University Physics II**

Prerequisites:

PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

Credits:

3.00

Description:

This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• **PHYS-L152 University Physics Lab II**

Prerequisites:

PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

Elective Requirements (1 lecture course and 1 lab, 4-7 credits)

Students are required to take one course of in-depth study, with an additional credit of laboratory. These courses are not offered every year, and careful consultation with an academic advisor is recommended.

Choose one of the following applicable lecture courses:

- **CHEM-332 Biochemistry II**

Prerequisites:

CHEM 331

Credits:

4.00

Description:

This course explores the principles of bioenergetics and metabolism of biological compounds. Coverage includes intermediary metabolism of carbohydrates, lipids, amino acids, oxidative phosphorylation, and synthesis of purines and pyrimidines. Additional topics include the regulation and integration of metabolism. Lectures will be supplemented with discussions of the biochemical literature. Prerequisites: CHEM 331. 3 hours of lecture and 1 hour of recitation per week. Offered every Spring, days only.

Term:

Offered Spring Term

- **CHEM-390 Advanced Organic Chemistry**

Prerequisites:

Prerequisite: CHEM 212.

Credits:

3.00

Description:

Expands on topics introduced in Organic Chemistry I and II; depending on student interest, may include in-depth discussions of carbonyl chemistry, industrial organic chemistry, organometallic chemistry and biomolecules. Prerequisite: CHEM 212, concurrent enrollment in CHEM L390 required. 3 hours of lecture per week. Normally offered alternate years.

Term:

Alternates Fall & Spring

- **CHEM-453 Introduction to Toxicology**

Prerequisites:

Prerequisites: CHEM 212 and BIO 111

Credits:

4.00

Description:

The study of toxic actions of chemicals on biological systems, with discussion of general principles, methodology, and selected topics. Topics may include pesticides, neurotoxicants, toxicity of metals, and carcinogenesis/ mutagenesis. Examples will be drawn from forensic toxicology, as well as environmental and occupational toxicology. CHEM 332 and BIO 403 strongly recommended. Normally offered every other year.

Term:

Occasional

To satisfy the requirement for the one credit laboratory, students may either take the laboratory associated with the lecture course, when offered, or use one credit of independent study or senior research, which are variable credit courses. They may also elect the 3-credit laboratory course.

Choose one of the following applicable laboratory courses:

- **CHEM-L432 Advanced Biochemistry Research Laboratory**

Prerequisites:

CHEM-331; CHEM-L331

Credits:

3.00

Description:

Laboratory course where students apply the use of biochemical techniques acquired in Biochemical Techniques I (CHEM L331) to conduct novel research. Projects vary from year to year, but may include recombinant DNA techniques, purification and characterization of DNA and proteins, and bioinformatics. Emphasis on experimental design, data interpretation, analysis of the scientific literature, and writing. Includes field trip to local research university or biotechnology/pharmaceutical laboratory.

Term:

Alternates Fall & Spring

Type:

Expanded Classroom Requirement

- **CHEM-428 Research & Seminar I**

Prerequisites:

CHEM 212; CHEM L212; Instructor's Consent required

Credits:

1.00- 4.00

Description:

Independent study under the direct supervision of the chemistry faculty. Students are required to attend departmental seminars, write a professional research report, and give an oral presentation on their project for review by the chemistry faculty. Depending on the project undertaken, students may obtain ECR credit. Prerequisites: CHEM 212 and CHEM L212 and by permission of the instructor. 1 terms - 1 to 4 credits. Normally offered every Fall.

Term:

Offered Fall Term

Type:

Expanded Classroom Requirement

- **CHEM-429 Research & Seminar II**

Prerequisites:

CHEM 212 and CHEM L212 and by permission of the instructor.

Credits:

1.00- 4.00

Description:

Independent study under the direct supervision of the chemistry faculty. Students are required to attend departmental seminars, write a professional research report, and give an oral presentation for review by the chemistry faculty. Depending on the project undertaken, students may obtain ECR credit. Prerequisites: CHEM 212 and CHEM L212 and permission of the instructor. 1 term - 1 to 4 credits. Normally offered every Spring.

Term:

Offered Spring Term

Type:

Expanded Classroom Requirement

- **CHEM-510 Independent Study**

Prerequisites:

An independent study form must be submitted to the CAS Dean's Office.

Credits:

1.00- 4.00

Description:

Advanced study of a special topic in chemistry, by arrangement with the chemistry faculty.

CHEM-428 and CHEM-429 are variable credit courses (1-4 credits are awarded based on coursework). If a student elects to take more than 1 credit of each course the additional credit may be applied to the elective laboratory requirement. Please discuss this possibility with your advisor before registering for these courses. Students using CHEM-428 or CHEM-429 to satisfy the Chemistry elective laboratory requirement must take a total of four credits of CHEM-428 and CHEM-429 in order to satisfy the American Chemical Society Certification Requirements.

Note: CHEM-L432 is a 3-credit laboratory.

Minor Requirements: 6 courses and corresponding laboratories where applicable, 24 credits

Core Requirements (4 courses and corresponding laboratories, 16 credits)

- CHEM-111 General Chemistry I

Prerequisites:

Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:

3.00

Description:

Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

• **CHEM-L111 General Chemistry I Lab**

Prerequisites:

Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

• **CHEM-112 General Chemistry II**

Prerequisites:

CHEM 111/L111; CHEM-L112 must be taken concurrently.

Credits:

3.00

Description:

This course is a continuation of General Chemistry I. Fundamental principles of chemistry are discussed. Introduces thermochemistry, gases, solution chemistry, chemical kinetics, chemical equilibrium, acid-base systems, and thermodynamics.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

• CHEM-L112 General Chemistry II Lab

Prerequisites:

CHEM 112 must be taken concurrently;

Credits:

1.00

Description:

This course is a continuation of General Chemistry I Lab. Apply the basic principles of chemistry through discovery laboratory experiments with an emphasis on quantitative analysis. Execute basic analytical techniques such as gravimetric analysis, the application of Beer's Law, and acid-base titrations. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **CHEM-211 Organic Chemistry I**

Prerequisites:

CHEM 112 and CHEM-L112. CHEM-L211 must be taken concurrently.

Credits:

3.00

Description:

Introduces basic theories of structure, bonding, and chemical reactivity as specifically applied to modern organic chemistry. Includes functional groups, acid/base chemistry, nomenclature, resonance, spectroscopy, and stereochemistry.

Term:

Offered Fall Term

- **CHEM-L211 Organic Chemistry Laboratory I**

Prerequisites:

CHEM-112 and CHEM-L112. Must be taken concurrently with CHEM 211.

Credits:

1.00

Description:

Introduces synthetic organic chemistry techniques. Includes melting point determination, distillation, crystallization, extraction, chromatographic separations, and infrared spectroscopy. Discusses experimental design within the context of green organic chemistry.

Term:

Offered Fall Term

- **CHEM-212 Organic Chemistry II**

Prerequisites:

CHEM 211 and CHEM L211. Must take CHEM-L212 concurrently.

Credits:

3.00

Description:

Builds on the core competencies acquired in Organic Chemistry I. Includes detailed mechanistic discussions of substitution, elimination, and addition reactions. Emphasizes organic synthesis, structure determination, and spectroscopy.

Term:

Offered Spring Term

• **CHEM-L212 Organic Chemistry Laboratory II**

Prerequisites:

CHEM-211 and CHEM-L211. Must be take CHEM-212 concurrently.

Credits:

1.00

Description:

Builds on the core competencies acquired in Organic Chemistry Laboratory I. Emphasizes the characterization of organic molecules via nuclear magnetic resonance spectroscopy. Discusses experimental design within the context of green organic chemistry.

Term:

Offered Spring Term

Electives (2 courses, 8 credits)

Choose two CHEM electives at the 200-level or higher, of which at least one credit is a laboratory

- [Honors](#)
- [Chemistry Courses](#)

To be eligible for departmental honors, students must minimally have an overall GPA of 3.5 or higher and a major GPA of 3.5 or higher upon enrollment in the appropriate capstone course. In addition, students seeking departmental honors must submit an application to the departmental honors subcommittee for pre-approval early in the academic year in which students plan to complete the capstone research project; approved honors thesis work is then coupled to the capstone course requirements. Upon completion of the capstone course requirements, the departmental honors subcommittee, along with the faculty of the department, will determine whether the application and the final research project qualify for departmental honors.

For departmental honors, thesis work must be of outstanding quality and must involve original independent laboratory or field research and/or in-depth analysis. For example, students may complete a project in the lab or one that requires data analysis. Job shadowing, data collection/organization (without analysis), or research summaries will generally not be sufficient for consideration. It is recommended that students eligible and interested in the departmental honors pathway begin looking for and meeting with their capstone project advisor as early as possible and request the departmental honors application from the department chair.

Chemistry

The Chemistry & Biochemistry Department offers a Chemistry major and minor. Through a wide variety of laboratory-based courses and opportunities for independent research with faculty, the department provides students with the tools that will allow them to achieve success in their field while learning in the heart of one of the most scientifically progressive cities in the world.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Minor Requirements](#)
- [Honors](#)
- [Chemistry Courses](#)

• CHEM-101 Chemical Concepts Contemporary Issues I

Credits:

3.00

Description:

Principles of chemistry with illustrations from everyday life. Basic chemical concepts are used to decode consumer product labels and form a basis for understanding contemporary issues. Specifically designed to satisfy the Science requirement when taken with CHEM 102, L101, L102. May not be used by science majors for science credit. Concurrent enrollment in CHEM L101 required. 3 hours lecture. 1 term - 3 credits. Normally offered Fall/Summer I.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS

- CHEM-L101 Chemical Concepts Contemporary Issues Lab I

Prerequisites:

Must be taken concurrently with CHEM 101

Credits:

1.00

Description:

Principles of chemistry and its applications demonstrated through experimentation. Experiments may include field testing and analysis of ocean and river water, testing of household products and sunscreens, determination of calorie content of foods, and molecular modeling with computers. May not be used by science majors for science credit. 2-hour laboratory. Normally offered Fall/Summer I.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- CHEM-102 Chemical Concepts Contemporary Issues II

Prerequisites:

It is strongly recommended that students enrolling in this course have some acquaintance of basic chemical principles either on the college or the pre-college level. Must be taken concurrently with CHEM L102

Credits:

3.00

Description:

A continuation of CHEM 101, including topics in organic chemistry, biochemistry, polymer chemistry, ecology, air and water pollution, food and food additives, pharmaceuticals, and forensic science. Basic Chemical concepts are used to decode consumer product labels and form a basis for understanding contemporary issues. Specifically designed to satisfy the science requirement. May not be used by science majors for science credit. Prerequisite: CHEM 101, CHEM 111 or pre-college chemistry. 3 hours lecture. Normally offered Spring/Summer II.

Type:

- **CHEM-L102 Chemical Concepts Contemporary Issues Lab II**

Prerequisites:

It is strongly recommended that students enrolling in this course have some acquaintance of basic chemical principles either on the college or the pre-college level. Must be taken concurrently with CHEM 102

Credits:

1.00

Description:

A continuation of CHEM L101. Experiments may include making plastics and drug products, analyzing food products, making a model of DNA, crime lab analysis procedures, making aspirin, and the study of flavors and fragrances using molecular models. Concurrent enrollment in CHEM 102 required. May not be used by science majors for science credit. Prerequisites: CHEM 101 and CHEM L101. 2-hour Laboratory. 1 term - 1 credit. Normally offered Spring/Summer II.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **CHEM-103 Chemical Concepts Contemporary Issues IIA**

Prerequisites:

It is strongly recommended that students enrolling in this course have some acquaintance of basic chemical principles either on the college or the pre-college level.

Credits:

4.00

Description:

Topics include organic chemistry, biochemistry, polymer chemistry, ecology, air and water pollution, food and food additives, pharmaceuticals, and forensic science, with an emphasis on their application to current issues. Specifically designed to satisfy the non-laboratory science requirement for the B.A. degree. Science related information searches and writing assignments will be based on current topics from the semester's work. 3 hours

lecture. It is strongly recommended that students enrolling in this course have some acquaintance of basic chemical principles either on the college or the pre-college level.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ

• CHEM-105 Chemical New Product Development

Prerequisites:

ENT 101

Credits:

4.00

Description:

This course addresses the crucial intersection between chemistry and business, and the impact of these fields on society. It provides an introduction to important chemistry concepts and practices of business management. Primary focus is on understanding the chemistry principles behind some of the consumer products in our everyday lives, and using this knowledge to create and evaluate ideas for new products. The course also introduces the business aspects involved in the development and marketing of new products. An important component of the course is in making effective presentations; this component concludes the course, culminating in team presentations of a new chemical product to panel of executives and peers. This course satisfies the Sawyer Business School Science requirement.

Type:

SCI TECH ENGNR

• CHEM-106 Biotechnology & Its Applications in Medicine, Agriculture, Law

Credits:

4.00

Description:

Introduces the latest discoveries and applications of biotechnology. Topics include genetically modified food, stem cells, genetic testing, cloning, and forensics. A combination of lectures, discussions, documentaries, mock congressional hearings, and hands-on activities will provide insight into the

numerous medical, social, legal, and ethical issues surrounding this technology.

Type:

SCI TECH ENGR

- **CHEM-111 General Chemistry I**

Prerequisites:

Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:

3.00

Description:

Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **CHEM-L111 General Chemistry I Lab**

Prerequisites:

Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **CHEM-112 General Chemistry II**

Prerequisites:

CHEM 111/L111; CHEM-L112 must be taken concurrently.

Credits:

3.00

Description:

This course is a continuation of General Chemistry I. Fundamental principles of chemistry are discussed. Introduces thermochemistry, gases, solution chemistry, chemical kinetics, chemical equilibrium, acid-base systems, and thermodynamics.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **CHEM-L112 General Chemistry II Lab**

Prerequisites:

CHEM 112 must be taken concurrently;

Credits:

1.00

Description:

This course is a continuation of General Chemistry I Lab. Apply the basic principles of chemistry through discovery laboratory experiments with an emphasis on quantitative analysis. Execute basic analytical techniques such as gravimetric analysis, the application of Beer's Law, and acid-base titrations. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS

- **CHEM-201 Caveman Chemistry**

Credits:

4.00

Description:

Caveman chemistry explores chemical technologies that have led to modern industrial civilization, with an emphasis on the chemistry we encounter in everyday life. Although this is not a laboratory course, it is very much a course about doing things. We will focus on the process of doing science, including how scientists evaluate ideas and communicate their findings, through literature and hands-on activities.

Type:

SCI TECH ENGR

- **CHEM-211 Organic Chemistry I**

Prerequisites:

CHEM 112 and CHEM-L112. CHEM-L211 must be taken concurrently.

Credits:

3.00

Description:

Introduces basic theories of structure, bonding, and chemical reactivity as specifically applied to modern organic chemistry. Includes functional groups, acid/base chemistry, nomenclature, resonance, spectroscopy, and stereochemistry.

Term:

Offered Fall Term

- **CHEM-L211 Organic Chemistry Laboratory I**

Prerequisites:

CHEM-112 and CHEM-L112. Must be taken concurrently with CHEM 211.

Credits:

1.00

Description:

Introduces synthetic organic chemistry techniques. Includes melting point determination, distillation, crystallization, extraction, chromatographic separations, and infrared spectroscopy. Discusses experimental design within the context of green organic chemistry.

Term:

Offered Fall Term

- **CHEM-212 Organic Chemistry II**

Prerequisites:

CHEM 211 and CHEM L211. Must take CHEM-L212 concurrently.

Credits:

3.00

Description:

Builds on the core competencies acquired in Organic Chemistry I. Includes detailed mechanistic discussions of substitution, elimination, and addition reactions. Emphasizes organic synthesis, structure determination, and spectroscopy.

Term:

Offered Spring Term

- **CHEM-L212 Organic Chemistry Laboratory II**

Prerequisites:

CHEM-211 and CHEM-L211. Must be take CHEM-212 concurrently.

Credits:

1.00

Description:

Builds on the core competencies acquired in Organic Chemistry Laboratory I. Emphasizes the characterization of organic molecules via nuclear magnetic resonance spectroscopy. Discusses experimental design within the context of green organic chemistry.

Term:

Offered Spring Term

- **CHEM-314 Instrumental Analysis**

Prerequisites:

CHEM 211; CHEM L314 must be taken concurrently.

Credits:

3.00

Description:

Theory and application of analytical instruments: ultraviolet, visible, fluorescence, atomic and emission spectroscopy; chromatographic methods; electrochemical measurements. Prerequisites: CHEM 211; CHEM L314 must be taken concurrently. 3 hour lecture. 1 term - 3 credits. Normally offered Fall/Spring, days.

Term:

Alternates Fall & Spring

• CHEM-L314 Instrumental Analysis Lab

Prerequisites:

CHEM L211; CHEM 314 must be taken concurrently

Credits:

1.00

Description:

Laboratory experiments in chemical analysis using instrumental techniques, including spectroscopy and chromatography. Data collection and evaluation includes computer-based methods. Reports are prepared in professional style. Prerequisites: CHEM L112; CHEM 314 must be taken concurrently. 4-hour Laboratory. 1 term - 1 credit. Normally offered Fall/Spring.

Term:

Alternates Fall & Spring

• CHEM-331 Biochemistry I

Prerequisites:

CHEM 212/L212 or permission of instructor. CHEM L331 must be taken concurrently.

Credits:

3.00

Description:

Explores the foundations of biochemistry, including the structure, organization and behavior of proteins, carbohydrates, lipids, and nucleic acids. Topics include enzyme catalysis, kinetics, and inhibition as well as protein regulation and membrane structure. Introduces the use of biochemical literature and computer-based bioinformatics techniques. Offered every fall.

Term:

Offered Fall Term

• CHEM-L331 Biochemical Techniques I

Prerequisites:

Must be taken concurrently with CHEM 331. Take CHEM-212 and CHEM-L212 or permission of instructor.

Credits:

1.00

Description:

Laboratory course introducing biochemical techniques. Includes buffer preparation, PCR, purification of DNA and proteins, agarose and polyacrylamide gel electrophoresis, protein quantitation and detection, and enzyme kinetic assays. Offered every Fall.

Term:

Offered Fall Term

• CHEM-332 Biochemistry II

Prerequisites:

CHEM 331

Credits:

4.00

Description:

This course explores the principles of bioenergetics and metabolism of biological compounds. Coverage includes intermediary metabolism of carbohydrates, lipids, amino acids, oxidative phosphorylation, and synthesis of purines and pyrimidines. Additional topics include the regulation and

integration of metabolism. Lectures will be supplemented with discussions of the biochemical literature. Prerequisites: CHEM 331. 3 hours of lecture and 1 hour of recitation per week. Offered every Spring, days only.

Term:

Offered Spring Term

• CHEM-L332 Biochemical Techniques II

Prerequisites:

CHEM 331, and CHEM L331. CHEM 332 concurrently made inactive per catalog changes. 03 Feb 2009 03:38pm Crystal White

Credits:

2.00

Description:

Biochemical techniques emphasizing instrumentation and methods of biochemical experimentation. Biochemical techniques emphasizing instrumentation and methods of biochemical experimentation. The major focus will be on methods used in DNA analysis and characterization. Techniques may include electrophoresis, spectrophotometry, polymerase chain reaction, DNA isolation and purification. Prerequisites: CHEM 331 and CHEM L331; CHEM 332 must be taken concurrently.

• CHEM-375 Advanced Inorganic Chemistry

Prerequisites:

CHEM 212

Credits:

3.00

Description:

Topics in inorganic chemistry including bonding theories, chemical structures, symmetry and group theory, kinetics and mechanisms of reactions, and spectroscopy. Advanced topics may include bioinorganic chemistry, organometallics, or materials chemistry. 3 hours lecture. Normally offered spring, even numbered years.

Term:

Alternates Fall & Spring

- **CHEM-L375 Advanced Inorganic Laboratory**

Prerequisites:

CHEM 375 must be taken concurrently

Credits:

1.00

Description:

Laboratory exercises designed to illustrate principles covered by topics in CHEM 375. Prior or concurrent enrollment in CHEM 375 required. 4-hour laboratory. Normally offered spring, even numbered years.

Term:

Alternates Fall & Spring

- **CHEM-390 Advanced Organic Chemistry**

Prerequisites:

Prerequisite: CHEM 212.

Credits:

3.00

Description:

Expands on topics introduced in Organic Chemistry I and II; depending on student interest, may include in-depth discussions of carbonyl chemistry, industrial organic chemistry, organometallic chemistry and biomolecules. Prerequisite: CHEM 212, concurrent enrollment in CHEM L390 required. 3 hours of lecture per week. Normally offered alternate years.

Term:

Alternates Fall & Spring

- CHEM-411 Physical Chemistry I

Prerequisites:

CHEM 112; MATH 166;

Credits:

3.00

Description:

Principles of thermodynamics and its general applications to physical and chemical change; introduction to the kinetic theory of gases and concepts of statistical mechanics. 3 hours lecture. 3 hour lecture. Normally offered Fall, days.

Term:

Offered Fall Term

- CHEM-L411 Physical Chemistry Laboratory I

Prerequisites:

CHEM 411 must be taken concurrently

Credits:

1.00

Description:

Laboratory exercises covering classical experiments in thermodynamic and instrumental measurements. Significant emphasis will be placed on experimental design and data analysis skills in addition to technical writing skills as demonstrated by laboratory reports prepared in the professional style. 4-hour laboratory. Normally offered Fall, days.

Term:

Offered Fall Term

- CHEM-412 Physical Chemistry II

Prerequisites:

CHEM 411

Credits:

3.00

Description:

Applications of thermodynamics to solutions, chemical equilibrium and electrochemistry; chemical kinetics will be covered. Quantum chemistry and the application of spectroscopy to molecular structure. 3 hours lecture. Normally offered Spring, days.

Term:

Offered Spring Term

- **CHEM-L412 Physical Chemistry Lab II**

Prerequisites:

CHEM L411; CHEM 412 must be taken concurrently.

Credits:

1.00

Description:

Laboratory exercises using spectroscopic techniques (optical and electrochemical) to explore kinetic and thermodynamic and quantum mechanical properties of chemical systems. Emphasis will be placed on experimental design and data analysis skills in addition to technical writing skills as demonstrated through reports prepared in the professional style. 4-hour laboratory. Normally offered Spring, days.

Term:

Offered Spring Term

- **CHEM-428 Research & Seminar I**

Prerequisites:

CHEM 212; CHEM L212; Instructor's Consent required

Credits:

1.00- 4.00

Description:

Independent study under the direct supervision of the chemistry faculty. Students are required to attend departmental seminars, write a professional research report, and give an oral presentation on their project for review by the chemistry faculty. Depending on the project undertaken, students may obtain ECR credit. Prerequisites: CHEM 212 and CHEM L212 and by permission of the instructor. 1 terms - 1 to 4 credits. Normally offered every Fall.

Term:

Offered Fall Term

Type:

Expanded Classroom Requirement

• CHEM-429 Research & Seminar II

Prerequisites:

CHEM 212 and CHEM L212 and by permission of the instructor.

Credits:

1.00- 4.00

Description:

Independent study under the direct supervision of the chemistry faculty. Students are required to attend departmental seminars, write a professional research report, and give an oral presentation for review by the chemistry faculty. Depending on the project undertaken, students may obtain ECR credit. Prerequisites: CHEM 212 and CHEM L212 and permission of the instructor. 1 term - 1 to 4 credits. Normally offered every Spring.

Term:

Offered Spring Term

Type:

Expanded Classroom Requirement

- **CHEM-L432 Advanced Biochemistry Research Laboratory**

Prerequisites:

CHEM-331; CHEM-L331

Credits:

3.00

Description:

Laboratory course where students apply the use of biochemical techniques acquired in Biochemical Techniques I (CHEM L331) to conduct novel research. Projects vary from year to year, but may include recombinant DNA techniques, purification and characterization of DNA and proteins, and bioinformatics. Emphasis on experimental design, data interpretation, analysis of the scientific literature, and writing. Includes field trip to local research university or biotechnology/pharmaceutical laboratory.

Term:

Alternates Fall & Spring

Type:

Expanded Classroom Requirement

- **CHEM-453 Introduction to Toxicology**

Prerequisites:

Prerequisites: CHEM 212 and BIO 111

Credits:

4.00

Description:

The study of toxic actions of chemicals on biological systems, with discussion of general principles, methodology, and selected topics. Topics may include pesticides, neurotoxicants, toxicity of metals, and carcinogenesis/ mutagenesis. Examples will be drawn from forensic toxicology, as well as

environmental and occupational toxicology. CHEM 332 and BIO 403 strongly recommended. Normally offered every other year.

Term:

Occasional

- **CHEM-510 Independent Study**

Prerequisites:

An independent study form must be submitted to the CAS Dean's Office.

Credits:

1.00- 4.00

Description:

Advanced study of a special topic in chemistry, by arrangement with the chemistry faculty.

2015-2016 Archived Catalog Information

Classics

Students will focus on the foundational texts and artistic expressions of the Greco-Roman and Judeo-Christian traditions in order to discover the qualities that make these works enduring in relevance.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Minor Requirements](#)

Minor Requirements: 5 courses, 20 credits

Courses will be selected from the electives below. Students must take courses from at least two of the participating departments. Cross-listed courses can only be counted for credit in one department. No more than 8 credits may double-count for credit in the student's major or toward another minor.

Choose five of the following:

- ARH-305 Art of Greece and Rome

Credits:

4.00

Description:

Examines the civic, religious, and domestic art and architecture of the Ancient Mediterranean cultures of Greece and Rome. Considers temples, forums, basilicas, city planning, sculpture, pottery, wall painting, mosaics, and engineering achievements in their cultural contexts.

Term:

Occasional

Type:

BFA Humanities Requirement, Humanities & History, Humanities Literature Requirement

- **ENG-123 Great Books of World Literature I Great Books of World Lit. I**

Credits:

4.00

Description:

Literary masterpieces from ancient times to the Renaissance, including: Homer's Odyssey, Sophocles' Oedipus, Virgil's Aeneid, selections from the Hebrew Bible and the Gospels, and Dante's Divine Comedy. List may vary at the discretion of the instructor.

Term:

Offered Fall Term

Type:

Humanities & History, Humanities Literature Requirement

- **ENG-316 Fifth Century Athens**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

An introduction to Periclean Athens, the golden age of classical Greek literature and thought. Close readings of selections from the historians Herodotus and Thucydides, the dramatists Aeschylus and Euripides, the poetry of Pindar, and Plato's great work on politics, The Republic. Cross-listed with History 336.

Term:

Occasional

- **ENG-317 Classical Mythology**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

Ancient Greek and Roman myths, their motifs, themes and interpretations. Normally offered every third year.

- **ENG-408 Modern Greek Literature in English Translation**

Prerequisites:

WRI-102 or WRI-H103 with a minimum grade of B+

Credits:

4.00

Description:

A survey of writings in Modern Greek from 1821 to the present exploring Hellenism and the Greek cultural identity. Authors studied will include Kostis Palamas, Georgios Vizyinos, Alexandros Papadiamantis, Stratis Myrivilis, Photis Kontoglou, Dido Sotiriou, George Seferis, Constantine Cavafy, and Odysseas Elytis. A section of the syllabus will be reserved for the Greek-American/diaspora writers Helen Papanikolas, Elia Kazan, Jeffrey Eugenides, Olga Broumas, and Tryfon Tolides. Films and music traditions will be sampled as well.

- **ENG-410 From Pagan Reason to Christian Revelation**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

A survey of major works of literature and thought crucial to the transformation of pagan models of reason to Christian systems of belief, including works by Plato and Plotinus, St. Augustine and Dante. Of central concern is the changing conception of love, from Eros to Agape. Cross-listed with History 336.

Term:

Occasional

- **ENG-490 Imperial Rome**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course offers an introduction to the Golden Age of Roman culture and power. Close readings of selections from major historians, poets, political thinkers, and philosophers will be examined in the context of Augustan Rome. Topics such as pietas, virtus, and gravitas, as well as the competing claims of public duty and private devotion, stoic maxim and erotic love lyric, will be discussed from the perspectives of writers such as Virgil, Livy, Tacitus, Horace, Catullus, and Lucretius. Note: This course is identical to HUM 304. Normally offered in alternate years.

Type:

Humanities & History

- **GR-101 Elementary Ancient Greek**

Credits:

4.00

Description:

An introduction to the basic syntax and vocabulary of Ancient Greek with an emphasis on reading some modified passages from genuine Ancient Greek texts as soon as possible. No background in grammar or Greek is assumed.

Term:

Offered Fall Term

Type:

BA FOREIGN

• **GR-102 Ancient Greek II**

Prerequisites:

GR-101

Credits:

4.00

Description:

A continuation of GR 101. During the semester we will complete our introduction to Ancient Greek and begin to read continuously a classic work of poetry, history, or philosophy in the original.

Term:

Offered Spring Term

Type:

BA FOREIGN

• **HST-101 History of Western Civilization I**

Credits:

4.00

Description:

Surveys European culture, politics, and society from antiquity to the seventeenth century. Topics include: the Greek, Judaic, and Roman heritage; the rise of Christianity; feudal society in the Middle Ages; Renaissance and Reformation; the Scientific Revolution; and the development of absolutist and constitutional governments.

Term:

Offered Fall Term

Type:

Humanities & History, Humanities Literature Requirement

- **PHIL-210 History of Ancient & Medieval Philosophy**

Credits:

4.00

Description:

The study of philosophical thought from the period of the ancient Greek philosophers through the Medieval thinkers, including such philosophers as Socrates, Plato, Aristotle, Epicurus, Zeno, Parmenides, Pythagoras, Protagoras, Augustine, Aquinas, Anselm, and Abelard. An introductory course designed to equip the student with a well grounded understanding and appreciation of Philosophy. 1 term - 4 credits. Normally offered every year.

Term:

Offered Fall Term

Type:

Humanities & History, Humanities Literature Requirement

- **PHIL-401 History of Ethics and Political Philosophy 1: Ancient and Medieval**

Prerequisites:

PHIL-210 , PHIL-211, 4 credits of a 400-level PHIL course, and Instructor consent

Credits:

4.00

Description:

A survey of major works and themes of moral and political philosophy from ancient Greece to the late medieval period. Topics covered will include the nature of moral duties, the connection between happiness and morality, citizenship and virtue, the meaning of a good life, the attractions and limitations of moral relativism, the foundations of legitimate government, arguments for and against democracy, realism and idealism in statecraft, and the relationship between law and ethics. Authors may include the Pre-Socratic thinkers, Plato, Aristotle, Cicero, Augustine, and Aquinas, among others. Prerequisite: Consent of instructor. 1 term -4 credits. Normally offered every year in the fall.

Term:

Offered Fall Term

- **PHIL-416 Plato: Profiles in Philosophy**

Prerequisites:

Prerequisite: PHIL 210 or consent of instructor.

Credits:

4.00

Description:

A detailed study of Platonic texts and issues. Works studied will vary but will often include dialogues such as the Apology, Euthyphro, Phaedo, Republic, and Symposium. Themes may include, among others: the nature of philosophy and its relation to society; the dialogue form and the character of Socrates; the difference between truth and opinion; the meaning of virtue; justice and the ideal regime; the theory of forms and the nature of reality; love, death, and transcendence. Prerequisite: PHIL 210 or consent of instructor. 1 term ? 4 credits. Normally offered every third year.

- **SF-174 Tragedy and Literature**

Credits:

4.00

Description:

This course will focus on classic works of ancient and modern literature that examine the human condition from a tragic perspective. We will concentrate on close readings from the following texts: Homer's *Iliad*, Sophocles' *Antigone*, The *Bhagavad-Gita*, Shakespeare's *Othello*, Chekhov's short stories, and Joyce's *Dubliners*.

2015-2016 Archived Catalog Information

Communication & Journalism

The Communication & Journalism (CJN) Department offers course work leading to a Bachelor of Arts or Bachelor of Science with a major in [Advertising](#), [Global & Cultural Communication](#), [Journalism](#), [Media & Film](#), or [Public Relations](#). A Bachelor of Science in Journalism is also offered to Journalism and Public Relations majors. The department also offers a minor in Communication & Journalism.

All Communication & Journalism majors study under a faculty who have extensive academic and professional experience. CJN students begin their program by taking two foundation courses that focus on effective speaking, concise writing, and critical thinking. Then, each student selects required and elective courses in their major to develop theoretical and practical knowledge of their field.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Minor Requirements](#)
- [Communication & Journalism Courses](#)

Minor Requirements: 5 courses, 20 credits

Choose four courses from one of the CJN majors, at least two of which are at the 300-level or above.

Choose one CJN elective.

- CJN-101 Introduction to Communication

Credits:

4.00

Description:

An introduction to the discipline addressing social science, humanities and practical art approaches to the study of communication. Students investigate the broad themes and foundational concepts which unify the discipline in order to understand the diverse fields, functions and purposes of communication.

Term:

Offered Both Fall and Spring

- **CJN-103 Presentations Skills**

Credits:

4.00

Description:

The development and delivery of oral presentations. Students acquire skills in oral and physical delivery, organization, persuasion, critical thinking, and use of support media.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **CJN-112 Journalism I**

Credits:

4.00

Description:

An introductory news writing course designed to teach both the writing style used by journalists and basic techniques used for gathering and presenting information for general publication. The course emphasizes fundamental writing and reporting skills such as interviews, finding sources, and choosing essential facts. Students also introduced to feature news writing and are assigned to develop and write basic stories drawn from real-life situations.

Term:

Offered Both Fall and Spring

- **CJN-114 Great Works of Journalism**

Credits:

4.00

Description:

An examination of important contributions to the literature of journalism through an analysis of major writers and news coverage of significant events from a journalistic perspective.

Term:

Occasional

Type:

Humanities & History

- **CJN-152 Visual Aesthetics**

Credits:

4.00

Description:

This course provides an introduction to a humanities approach to a range of media, including but not limited to film and television. The course helps students develop visual literacies, enriching their understanding of multiple forms of media. The class also explores how media texts are constructed for specific cultural, entertainment, informative and propaganda purposes.

Term:

Offered Both Fall and Spring

Type:

Vis. & Perform Thry & Hst

- **CJN-177 Professional Communication**

Credits:

4.00

Description:

An introduction to the processes of professional communication, with emphasis on oral presentations, report writing, effective listening, and interpersonal communication in the business environment.

Term:

Occasional

- **CJN-H177 Honors Professional Communication**

Prerequisites:

3.2GPA

Credits:

4.00

Description:

An honors-level introduction to the processes of professional communication, with emphasis on oral presentations, report writing, effective listening and interpersonal communication in the business environment.

Term:

Occasional

Type:

Honors

- **CJN-210 Communication Research Statistics**

Credits:

4.00

Description:

The course develops an understanding of how statistics are used in the presentation of information and arguments in Communication and Journalism. Emphasizing a conceptual approach to learning statistics, the course focuses on data collection and summarization, correlation, regression, sampling, estimation, and tests of significance. Students perform basic statistical calculations using SPSS software.

Term:

Offered Both Fall and Spring

Type:

Quantitative Reasoning

• **CJN-212 Journalism II**

Prerequisites:

CJN 112

Credits:

4.00

Description:

Modern reporting techniques are examined and applied to writing full-length news and feature news stories, with an emphasis on investigative journalism. The course includes an introduction to and an analysis of alternative or new journalism," combined with the survey of journalistic styles and standards as they evolved in the U.S. and international press over the last century.

Term:

Offered Both Fall and Spring

• **CJN-214 Professional Writing**

Credits:

4.00

Description:

4.00

Description:

Hands-on course that explores the process of writing and submitting grants to foundations, associations, the government, and other grantors on behalf of nonprofit organizations. Students learn how to identify grant resources through research, compile an effective submission, and write supporting material such as cover letters and appendices. Also covers how grants are reviewed and tips for successful grant submissions.

Term:

Occasional

- **CJN-489 Political Communication**

Credits:

4.00

Description:

Examination of special circumstances created by politics and their impact on attempts at persuasion. Case studies of famous politicians' political campaigns are combined with discussions of current trends in media and politics.

Term:

Occasional

- **CJN-490 Temple Street Project**

Prerequisites:

CJN-253 and CJN-2355(formerly CJN-355)

Credits:

4.00

Description:

Students write, direct, crew, edit, and serve as talent in producing the CJN Department's magazine- format television program aired on Boston Cable Access.

Term:

Offered Fall Term

- **CJN-491 Special Topics in Communications and Journalism**

Credits:

4.00

Description:

Explores current issues in the field of communication.

Term:

Offered Both Fall and Spring

- **CJN-492 Special Topics in Public Relations**

Credits:

4.00

Description:

Explores current issues in public relations.

Term:

Occasional

- **CJN-493 Special Topics in Film**

Credits:

4.00

Description:

Explores film theory, history, criticism, and genre.

Term:

Occasional

- **CJN-494 Special Topics in Advertising**

Credits:

4.00

Description:

Current issues in the field of advertising. Normally offered every semester.

Term:

Occasional

- **CJN-503 Experiential Learning in Communication**

Prerequisites:

16 Hrs of CJN coursework or CJN advisor consent

Credits:

1.00-12.00

Description:

Internships and practicum in Communication and Journalism are available prior to the start of each semester.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement

- **CJN-505 Communication and Journalism Practicum**

Prerequisites:

12 hours of CJN coursework and CJN advisor consent

Credits:

1.00-12.00

Description:

Practicum and internship projects are available prior to the start of each semester. Prerequisites: Journalism majors with a minimum of 12 credits of coursework or permission of the Department Chairperson. 1-3 terms : 1-12 credits.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement

- **CJN-506 Honors Seminar**

Prerequisites:

Senior CJN majors with an overall cumulative grade point average of 3.0, and a major GPA of 3.4

Credits:

4.00

Description:

Senior CJN majors meeting requirements for Departmental Honors are invited to participate in this seminar, which entails research and presentation of an approved topic.

Term:

Offered Spring Term

- **CJN-510 Independent Study**

Prerequisites:

An independent study form must be submitted to the CAS Dean's Office.

Credits:

1.00-12.00

Description:

An independent study experience in Communication and Journalism is available prior to the start of each semester.

Term:

Offered Both Fall and Spring

- **CJN-2277 Public Relations I: Principles**

Credits:

4.00

Description:

Effective public relations involve an understanding of the history, theory, and practice of public relations including public relations concepts, the role of the practitioner, and the foundations of public relations. This course seeks to provide that foundation as an introduction to the field of public relations. Issues surrounding the history, legality, process, and principles of public relations are explored.

Term:

Offered Both Fall and Spring

- **CJN-2355 Production I**

Prerequisites:

CJN-152

Credits:

4.00

Description:

Building on skills acquired in CJN 2355, students use advanced equipment and production techniques to produce complex video projects, including fiction filmmaking. Projects cover various styles and genres, such as music video and film noir.

Term:

Offered Both Fall and Spring

Type:

- **CJN-3376 Public Relations II: Research**

Prerequisites:

CJN-2277 (Formerly CJN-277)

Credits:

4.00

Description:

Examines how research aids the public relations practice. Students learn research methods that address public relations planning and problem-solving. Assignments provide students with hands-on practice using research for a PR project.

Term:

Offered Both Fall and Spring

- **CJN-3377 Public Relations III: Strategic Writing**

Prerequisites:

CJN-2277(formerly CJN-277);

Credits:

4.00

Description:

Focuses on writing principles for public relations including the formulation of clear PR objectives, determining the knowledge of the target audience, and the development of key messages. Students apply these principles to common PR formats, including news releases, pitch letters, biographies, speeches, emails, digital content, and social media posts.

Term:

Offered Both Fall and Spring

- **CJN-3455 Production II**

Prerequisites:

CJN-2355(formerly CJN-355)

Credits:

4.00

Description:

Building on skills acquired in CJN 252, students will use advanced equipment and production techniques to produce complex video projects in a variety of styles and genres, such as music video and film noir.

Term:

Offered Both Fall and Spring

- **CJN-4455 Production III**

Prerequisites:

CJN-3455(formerly CJN-455)

Credits:

4.00

Description:

Builds on the theories and techniques developed in CJN 3455, focusing on the advanced concepts and skills needed to design and produce professional-level media content for digital distribution. Provides the opportunity to produce high-quality material for student media portfolios in various genres.

Term:

Offered Spring Term

- **CJN-4477 Public Relations IV: Campaigns**

Prerequisites:

CJN-2277(formerly CJN-277) and CJN-3377(formerly CJN-377) and Senior Standing.

Credits:

4.00

Description:

Examines typical public relations problems experienced by profit and not-for-profit organizations. Provides students with an opportunity to demonstrate their mastery of the skills, techniques, and knowledge of public relations by creating a comprehensive campaign plan for a community client.

Term:

Offered Both Fall and Spring

• **CJN-H4477 Public Relations IV Honors: Campaigns**

Prerequisites:

CJN-2277(formerly CJN-277) and CJN-377(formerly CJN-377) and CJN-3376 and by invitation only.

Credits:

4.00

Description:

Examines typical public relations problems experienced by profit and not-for-profit organizations. Provides honors students with an opportunity to demonstrate their mastery of the skills, techniques, and knowledge of public relations by creating a comprehensive campaign plan for a community client.

Term:

Offered Spring Term

Type:

Expanded Classroom Requirement,Honors

2015-2016 Archived Catalog Information

Computer Science

The Department of Mathematics and Computer Science offers major and minor programs in Computer Science. The major in Computer Science can prepare students for a wide variety of careers in science and industry, and serves as a firm foundation for graduate study in computer science. The minor program is intended to provide expanded career options for those who prefer to major in another discipline.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Minor Requirements](#)
- [Honors](#)
- [Computer Science Courses](#)

A student majoring in computer science must successfully complete 36 credits of coursework in computer science plus 20 credits of coursework in mathematics and science distributed as follows:

Major Requirements: 14 courses and corresponding laboratories where applicable, 56 credits

Computer Science Requirements (9 courses, 36 credits)

- **CMPSC-F131 Computer Science I**

Credits:

4.00

Description:

This is a rigorous introduction to computer science in Java with an emphasis on problem solving, structured programming, object-oriented programming, and graphical user interfaces. Topics include expressions, input/output, control structures, intrinsic data types, classes and methods, iteration, top-down programming, arrays, graphical user interfaces, and elements of UML. Normally offered each semester.

Type:

Quantitative Reasoning

- **CMPSC-F132 Computer Science II**

Prerequisites:

CMPSC F131

Credits:

4.00

Description:

Computer Science II (CSII) is the continuation of Computer Science I. The purpose of CSII is to expand students' understanding of Computer Science and computer programming, assuming that they have the basic knowledge of the Java language. The course introduce another programming language - C - and also focuses on the pure Object-Oriented features of Java, such as inheritance, polymorphism, and exceptions, as well as on simple data structures (lists, stacks, and queues) and algorithms (searching and sorting). By the end of the semester students will be able to develop sizable (several pages long) computer programs in the C and Java languages. Efficient C and Java program development requires an Integrated Development Environment (IDE) - a collection of tools that make it possible to edit, compile, and debug C and Java programs. Our IDE of choice is Eclipse. Eclipse is free and available for many operating systems, including Microsoft Windows (all flavors), Linux, Unix, and Mac OS X.

Type:

Quantitative Reasoning

- **CMPSC-F265 Data Structures & Algorithms**

Prerequisites:

CMPSC F132

Credits:

4.00

Description:

Includes topics such as strings, stacks, queues, lists, trees, graphs, sorting, searching, hashing, dynamic storage allocation, and analysis of algorithms. Most programming will be done in the C language. Normally offered each semester.

Type:

Quantitative Reasoning

• CMPSC-F331 Object Oriented Programming

Prerequisites:

CMPSC-F265

Credits:

4.00

Description:

Object-Oriented Programming in C++ is taught using Trolltech's multi-platform Qt library and other open-source libraries and tools. Emphasis is placed on program design and code re-use. Topics include: encapsulation, inheritance and polymorphism, UML, refactoring, parent-child relationships, properties, event-driven programming, test cases, regular expressions, constraints, XML, design patterns, and graphical user interfaces. We deal with some operating system and programming environment issues and also with code packaging. C++ is a very large language, so we do not attempt to cover it all. Instead we work with a carefully selected subset of language elements that permits students to exploit the powerful Qt libraries and write robust, idiomatic, and interesting code. By the end of the course, the student should have a good command of C++, facility using and building libraries, an understanding and appreciation of the design patterns that we covered, and a well-established discipline of refactoring and code reuse.

Prerequisite: CMPSC F265 (which may be taken concurrently). Normally offered each semester.

Type:

Quantitative Reasoning

• CMPSC-F353 Architecture of Computer Systems

Prerequisites:

CMPSC F265.

Credits:

4.00

Description:

This course deals with the structure and operation of the major hardware components of a computer. Topics include basic logic design, basic datapath construction, basic pipelining, I/O system design, issues in memory hierarchy and network interface design. Normally offered each fall semester.

Type:

Quantitative Reasoning

- **CMPSC-F355 Operating Systems**

Prerequisites:

CMPSC F353 & CMPSC F265 and Working knowledge of C++.

Credits:

4.00

Description:

This course presents an overview of modern operating systems, from the points of view of an application developer and of a system developer. It covers process management, scheduling, concurrency management, multi-threading, memory management, and file system organization. Intensive programming assignments in the C language and in an assembly language help students to learn the POSIX application programming interface (API) and the low-level organization of a general-purpose operating system. Normally offered each spring.

Type:

Quantitative Reasoning

- **CMPSC-F363 Intro to Database Systems**

Prerequisites:

CMPSC 265 and MATH 285

Credits:

4.00

Description:

This is an introduction to the design and use of database systems --- systems that manage very large amounts of data. Topics covered include Entity-Relationship (E/R) data model, Relational data model, object-oriented model, and the conversion of E/R and relational models. We shall also learn some database languages, both concrete and abstract, including Structured Query Language (SQL), Object Query Language (OQL), relational algebra, etc. We will introduce the semistructured data, such as the popular Extensible Markup Language (XML), and their usage in database systems as well. The course is intended for computer science students who need to have an in-depth understanding of modern database systems. Normally offered each fall semester.

Type:

Quantitative Reasoning

• CMPSC-F375 Introduction to Computer Networks

Prerequisites:

CMPSC F331 and CMPSC F353

Credits:

4.00

Description:

This course explores the fundamentals of computer networks, protocols and layering, applications and their implications to everyday networking life. Normally offered in spring.

Choose one 4-credit Computer Science course at the 200-, 300-, or 400-level

Mathematics Requirements (3 courses, 12 credits)

• MATH-165 Calculus I

Prerequisites:

MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

Credits:

4.00

Description:

Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-255 Probability and Statistics**

Prerequisites:

MATH-165 with a grade of C or better

Credits:

4.00

Description:

Topics include: random variable and distribution; expectation and variance; special discrete/continuous distributions (uniform, binomial, negative binomial, geometric, hypergeometric, Poisson, normal, and exponential distributions); joint distribution, marginal distribution and conditional distribution; covariance; limit theorems (law of large numbers and central limit theorem); introduction to confidence interval and hypothesis testing; regression analysis. Offered as needed.

- **MATH-285 Discrete Mathematics**

Prerequisites:

MATH-165 with a grade of C or better

Credits:

4.00

Description:

Topics mostly selected from the following list: Logic and set theory, elementary number theory, relations and functions and their properties (equivalence relations, partial order relations, recurrence relations and their solutions); computational complexity of algorithms (big O notation); graphs and their properties (isomorphisms of graphs, Euler and Hamilton paths, shortest path problem, graph coloring) trees (tree traversal, minimum spanning trees); finite state machines; methods of proof (proof by induction, proof by contradiction). Prerequisite: MATH 220 or permission of instructor. 1 term - 4 credits (4 lecture hours per week). Normally offered at least once each year.

Physics Requirements (2 courses and corresponding laboratories, 8 credits)

- **PHYS-151 University Physics I**

Prerequisites:

Take MATH-121 or MATH 165. PHYS L151 concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **PHYS-L151 University Physics Lab I**

Prerequisites:

PHYS 151 concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• PHYS-152 University Physics II

Prerequisites:

PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

Credits:

3.00

Description:

This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• PHYS-L152 University Physics Lab II

Prerequisites:

PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• CMPSC-H107 Ants, Rumors and Gridlocks

Prerequisites:

Math placement level of 2 or above or any MATH course at the level 100 or above and GPA of at least 3.3 or Honors student

Credits:

4.00

Description:

Do viruses and rumors spread like forest fires? How do ants cooperate? Do spoken languages and biological species evolve in a similar way? Ants, Rumors, and Gridlocks exposes students to introductory aspects of computational science by addressing and answering these and many other questions. Students use and modify virtual experiments preprogrammed in the NetLogo programming language to investigate these topics and others in Social Sciences, Biology, and Environmental Science. No prior knowledge of computer programming or NetLogo is required.

Type:

SCI TECH ENGNR,Quantitative Reasoning,Honors

- **CMPSC-200 Introduction to Computer Science World**

Prerequisites:

Freshman or Sophomore Standing

Credits:

1.00

Description:

Computer Science is a dynamic discipline and students are not typically exposed to its many facets during their first years in college while important foundation work is done. This module aims to change that by presenting several areas of recent interest. In this way, students can form an idea of the scope of the vast and rapidly growing subject and career options, and begin to map out steps toward a potential career path. In this team-taught seminar-style course, two or three different professors will introduce students to their research areas and related topics. Some of the areas represented among the faculty include data science, machine learning, social networks, and parallel computing and others. The course is intended to be taken freshman or sophomore year.

- **CMPSC-310 Introduction to Data Science**

Prerequisites:

CMPSC-F132 and 1 of the following: STATS-240, STATS-250, MATH-134, MATH-165, or MATH-255.

Credits:

4.00

Description:

The field of data science is emerging at the intersection of the fields of social science and statistics, information and computer science and design. Data science involves using automated methods to analyze massive amounts of data and to extract knowledge from them. This course serves as a project-based introduction to data science in Python language, covering data organization and retrieval, statistical data processing and data visualization.

- **CMPSC-400 Senior Project in Computer Science**

Prerequisites:

Instructor permission required;

Credits:

4.00

Description:

Students specify, design and implement a software system.

- **CMPSC-401 Erlang Programming With Applications**

Prerequisites:

CMPSC-F132 & Permission of the Instructor

Credits:

1.00

Description:

Erlang is a general-purpose, concurrent, functional programming language. It is designed to support distributed, fault-tolerant, soft-real-time, non-stop applications in the areas of telecommunications, online video games, social networking, high-performance Web development and databases. This course covers the language foundations, as well as intermediate topics such as distributed communications, client-server systems, and working with ETS tables and Mnesia database. Special attention will be paid to recursive and asynchronous programming, which are the two core principles of the language.

- **CMPSC-501 Software Development Internship**

Prerequisites:

CMPSC-F131, CMPSC-F132, and 1 CMPSC course at 200, 300 or 400 level. Prior to registration, student must submit credit approval form and gain faculty approval.

Credits:

2.00- 4.00

Description:

Student works in a qualified software development setting to gain practical experience in modern industrial software development. Student will apply lessons learned in the classroom within a supervised, professional development while developing a greater understanding of the job expectations and organizational culture. Internship may be taken for 2-4 academic credit hours, at 4 hours of company work per week per each credit. Additional academic reports will be required. Students may take more than one internship, but the total number of credits applied toward graduation cannot exceed 12.

Type:

Expanded Classroom Requirement

- **CMPSC-510 Computer Science Independent Study**

Credits:

1.00- 4.00

Description:

Guided study on a topic at an advanced level.

Type:

Quantitative Reasoning

- **CMPSC-511 Launching a Career in Computer Science**

Prerequisites:

Junior or Senior standing

Credits:

1.00

Description:

This team-taught course is designed to explore career opportunities in Computer Science in depth. This course focuses on career search, the application process, entry, transition and networking for career success. Alternative options such as graduate school will also be explored. Students articulate and reflect on academic work, and co-curricular experiences from the perspective of professionals entering or advancing their careers. The goal of this course is to help students reach their fullest professional potential following graduation.

- **CMPSC-F107 Ants, Rumors and Gridlocks**

Prerequisites:

Math placement level of 2 or above or any MATH course at the level 100 or above

Credits:

4.00

Description:

Do viruses and rumors spread like forest fires? How do ants cooperate? Do spoken languages and biological species evolve in a similar way? Ants, Rumors, and Gridlocks exposes students to introductory aspects of computational science by addressing and answering these and many other questions. Students use and modify virtual experiments preprogrammed in the NetLogo programming language to investigate these topics and others in Social Sciences, Biology, and Environmental Science. No prior knowledge of computer programming or NetLogo is required.

Type:

SCI TECH ENGNR, Quantitative Reasoning

- **CMPSC-F118 Computing With Words**

Credits:

4.00

Description:

This course introduces students to aspects of Natural Language Processing involving computer-based analysis and comparison of texts written in natural languages (English and others). In addition to introductory computer programming in Python, the course also covers some basic statistics concepts. Intended for students at all levels.

Type:

- **CMPSC-F120 Programming for the World Wide Web**

Credits:

4.00

Description:

This is a hands-on course aimed at non-CS students who want to learn how to build interesting and interactive web pages. We do not use any drag-and-drop software for this purpose. Instead we cover the basics of HTML and PHP and, if time permits, we look at some ways of building web pages that interact with databases. Each student will have, for the duration of the course, an account on a server that permits individuals to have web pages that are visible on the World Wide Web.

Type:

Quantitative Reasoning

- **CMPSC-F124 Game Programming**

Credits:

4.00

Description:

This course introduces students to computer game development, including, but not limited to, game programming. We use Game Maker, a framework for personal computers that runs equally well on XP, Vista, and Linux. We learn about the foundational concepts of two-dimensional (flat) games: graphics, sound, objects, actions, rooms, scores, levels, multiplayer support, artificial intelligence, and more. Game Maker has an intuitive interface that makes game development approachable for everyone, including those who have never written a single game or a single computer program. All games created by Game Maker can be saved as standalone applications and can be shared freely with classmates, friends, and family. This is not a course in graphics design, audio editing, or scriptwriting. Students are encouraged to use their creativity and imagination to design games and the correctness of game implementation is stressed throughout the course.

Type:

Quantitative Reasoning

- **CMPSC-F131 Computer Science I**

Credits:

4.00

Description:

This is a rigorous introduction to computer science in Java with an emphasis on problem solving, structured programming, object-oriented programming, and graphical user interfaces. Topics include expressions, input/output, control structures, intrinsic data types, classes and methods, iteration, top-down programming, arrays, graphical user interfaces, and elements of UML. Normally offered each semester.

Type:

CMPSC-F265

Credits:

4.00

Description:

Object-Oriented Programming in C++ is taught using Trolltech's multi-platform Qt library and other open-source libraries and tools. Emphasis is placed on program design and code re-use. Topics include: encapsulation, inheritance and polymorphism, UML, refactoring, parent-child relationships, properties, event-driven programming, test cases, regular expressions, constraints, XML, design patterns, and graphical user interfaces. We deal with some operating system and programming environment issues and also with code packaging. C++ is a very large language, so we do not attempt to cover it all. Instead we work with a carefully selected subset of language elements that permits students to exploit the powerful Qt libraries and write robust, idiomatic, and interesting code. By the end of the course, the student should have a good command of C++, facility using and building libraries, an understanding and appreciation of the design patterns that we covered, and a well-established discipline of refactoring and code reuse.

Prerequisite: CMPSC F265 (which may be taken concurrently). Normally offered each semester.

Type:

- **CMPSC-F333 Organization of Programming Languages**

Prerequisites:

CMPSC F253, F265

Credits:

4.00

Description:

An introduction to functional programming and to the meaning and implementation of various programming language features. The course begins with a brief introduction to the Scheme language, which is then used to write interpreters for small languages that contain features typical of larger, more realistic languages. Normally offered each spring semester.

Type:

Quantitative Reasoning

- **CMPSC-F345 Software Engineering**

Credits:

4.00

Description:

This course introduces the fundamental principles of software engineering. Requirement specification and life cycles are emphasized. Topics include requirements analysis and specification, analysis and design, architecture, implementation, testing and quality, configuration management. Professional ethics considerations will be explored and emphasized throughout the course. Prerequisite: CMPSC F265. 1 term - 4 credits. Normally offered each year.

Type:

Quantitative Reasoning

- **CMPSC-F353 Architecture of Computer Systems**

Prerequisites:

CMPSC F265.

Credits:

4.00

Description:

This course deals with the structure and operation of the major hardware components of a computer. Topics include basic logic design, basic datapath construction, basic pipelining, I/O system design, issues in memory hierarchy and network interface design. Normally offered each fall semester.

Type:

Quantitative Reasoning

- **CMPSC-F355 Operating Systems**

Prerequisites:

CMPSC F353 & CMPSC F265 and Working knowledge of C++.

Credits:

4.00

Description:

This course presents an overview of modern operating systems, from the points of view of an application developer and of a system developer. It covers process management, scheduling, concurrency management, multi-threading, memory management, and file system organization. Intensive programming assignments in the C language and in an assembly language help students to learn the POSIX application programming interface (API) and the low-level organization of a general-purpose operating system. Normally offered each spring.

Type:

Quantitative Reasoning

- **CMPSC-F363 Intro to Database Systems**

Prerequisites:

CMPSC 265 and MATH 285

Credits:

4.00

Description:

This is an introduction to the design and use of database systems --- systems that manage very large amounts of data. Topics covered include Entity-Relationship (E/R) data model, Relational data model, object-oriented model, and the conversion of E/R and relational models. We shall also learn some database languages, both concrete and abstract, including Structured Query Language (SQL), Object Query Language (OQL), relational algebra, etc. We will introduce the semistructured data, such as the popular Extensible Markup Language (XML), and their usage in database systems as well. The course is intended for computer science students who need to have an in-depth understanding of modern database systems. Normally offered each fall semester.

Type:

Quantitative Reasoning

- **CMPSC-F375 Introduction to Computer Networks**

Prerequisites:

CMPSC F331 and CMPSC F353

Credits:

4.00

Description:

This course explores the fundamentals of computer networks, protocols and layering, applications and their implications to everyday networking life. Normally offered in spring.

- **CMPSC-R120 Programming for WWW Recitation**

Credits:

0.00

Description:

Taken simultaneously with CMPSC 120. Students work with lab instructors to do work that enhances the course understanding. Such work can include practice problems, supervised programming time, as well as question-answer time and group project work. The hybrid version of the recitation: Once every two weeks students meet with an instructor to do work that enhances understanding of the course material. On alternate weeks students do individual programming and reading.

• CMPSC-R131 Recitation from Computer Science I

Prerequisites:

Must be taken concurrently with CMPSC F131

Credits:

0.00

Description:

Taken simultaneously with CMPSC 131. The recitation is a hybrid course. Once every two weeks students meet with an instructor to do work that enhances understanding of the course material. Such work can include practice problems and programming, homework problems and sometimes quizzes on a laptop as well as question-answer time and group project work. On alternate weeks students do on line work such as lecture demonstration of additional examples or homework projects.

• CMPSC-R132 Recitation for Computer Science II

Prerequisites:

Must be taken concurrently with CMPSC 132

Credits:

0.00

Description:

Taken simultaneously with CMPSC 132. The recitation is a hybrid course. Once every two weeks students meet with an instructor to do work that enhances understanding of the course material. Such work can include practice problems and programming, homework problems and sometimes quizzes on a laptop as well as question-answer time and group project work. On alternate weeks students do on line work such as lecture demonstration of additional examples or homework projects.

Creative Writing

The Creative Writing minor is intended for students who are not English majors. English majors interested in Creative Writing can pursue the [Creative Writing Concentration](#) within their major.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Creative Writing Minor Requirements](#)
- [English Courses](#)

Minor Requirements: 5 courses, 20 credits

Students who are majoring in disciplines other than English may elect to minor in creative writing. Students must choose the following:

- ENG-212 Introduction to Creative Writing

Credits:

4.00

Description:

A study of the major genres in creative writing (poetry, fiction, and creative nonfiction) in which students will read as writers. Students will write a combination of analytical and original works, and learn the format and processes of writing workshops of writing workshops. Offered every semester.

- ENG-370 Fiction Writing Workshop I

Prerequisites:

ENG-212

Credits:

4.00

Description:

An intensive workshop in which the student will be required to write original fiction. The focus of the course will be on the student's own work, submitted on a weekly basis. The course will also provide the student writer with practical experience in matters of plot, character, dialogue, structure, etc. Normally offered annually.

Term:

Alternates Fall & Spring

- **ENG-371 Creative Non-Fiction Workshop**

Prerequisites:

ENG-212

Credits:

4.00

Description:

For students interested in writing autobiography and/or other forms of the personal essay. Topics can include childhood, place, sexuality, religion, work, the nature of memory. The focus will be on the writing process, with students presenting work-in-progress to the class for discussion and revision. The student should plan to read models of creative non-fiction. Normally offered annually.

Term:

Occasional

- **ENG-375 Poetry Writing Workshop I**

Prerequisites:

ENG-212

Credits:

4.00

Description:

An intensive workshop course in which the student will be required to write original poetry for each class meeting. The focus of the course will be on the student's own work. We will examine the highly individual processes of composition and revision, and the methods writers use to keep their own practice of poetry alive and well. We will also examine as many of the constituent elements of poetry as possible, from image and rhythm to line and structure. Normally offered annually.

Term:

Offered Both Fall and Spring

- ENG-095 Developmental English Skills I

Credits:

4.00

Description:

This course is appropriate for native English speakers as well as non-native English speakers with a high level of oral fluency, but a need to improve English reading and writing skills for an academic setting. The course provides students with opportunities for and guidance in the development of Academic English writing. Class activities focus on aiding students in improving their academic English reading and writing skills to the proficiency levels required by the University. Particular emphasis is placed on the importance of planning, organizing and revising essays, as well as learning how to analyze, summarize, and cite an author's ideas and words. Offered in the Fall, Spring, and Summer Session I semesters. Course is enrolled by placement or instructor consent only.

- ENG-096 Developmental English Skills II

Credits:

4.00

Description:

A continuation of ENG 095, this course provides opportunities to both native and non-native English speakers for further development of Academic English proficiency. Class activities focus on aiding students in improving their academic English reading and writing skills to the proficiency levels required by the University. Particular emphasis is placed on the importance of planning, organizing and revising essays, as well as learning how to analyze, summarize, and cite an author's ideas and words. Offered on the Madrid Campus only.

- **ENG-098 ESL Reading/Writing I**

Credits:

4.00

Description:

Utilizing a freshman-level English textbook and materials from the content courses, this course furnishes students with active reading strategies and the conventions of academic writing that will be applicable to their collegiate course work. Students will develop the analytical skills necessary for academic success by producing in-class and take-home essays, participating in debates, and giving oral presentations. Students will be required to work with a course management program and to utilize technology effectively in their writing. The skills obtained in these courses will allow students to participate comfortably in their mainstream college classes.

- **ENG-099 ESL Reading/Writing II**

Credits:

4.00

Description:

A continuation of ENG 098, this course further furnishes students with active reading strategies and the conventions of academic writing that will be applicable to their collegiate course work. Students will develop the analytical skills necessary for academic success by producing in-class and take-home essays, participating in debates, and giving oral presentations. Students will be required to work with a course management program and to utilize technology effectively in their writing. The skills obtained in these courses will allow students to participate comfortably in their mainstream college classes.

- **ENG-101 Freshman English I**

Credits:

4.00

Description:

This course studies persuasive and expository writing in the essay form through frequent writing assignments based on critical readings of class texts and discussions. Students will also compose a research paper and study the process of writing and revising for an academic audience. Offered every semester.

Term:

Offered Both Fall and Spring

- **ENG-102 Freshman English II**

Prerequisites:

ENG 100 or ENG101 or ENG 103

Credits:

4.00

Description:

Further study of persuasive and expository writing through the study of literary form with emphasis placed on critical reading and the revision of academic writing.

Term:

Offered Both Fall and Spring

- **ENG-103 Advanced Freshman English**

Prerequisites:

Invitation only.

Credits:

4.00

Description:

This course is by invitation only and reserved for incoming Suffolk students with high admission scores. Frequent writing assignments based on close reading of literary texts are assigned as well as a research paper. Offered fall semester.

Term:

Offered Fall Term

- **ENG-113 World Drama I**

Credits:

4.00

Description:

Survey of drama and theatre as part of world culture from classical Greece through 18th-century China. Normally offered yearly.

Term:

Offered Fall Term

Type:

Humanities & History, Humanities Literature Requirement, Cultural Diversity Opt B

- **ENG-114 World Drama II**

Credits:

4.00

Description:

Survey of drama and theatre as part of world culture from the 19th century to the present.

Term:

- **ENG-218 American Literature II**

Credits:

4.00

Description:

Study of major American writing from 1865 through the present. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement

- **ENG-H218 American Literature II**

Prerequisites:

WRI-102 or WRI-103

Credits:

4.00

Description:

Study of major American writing from 1865 through the present. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Type:

Humanities Literature Requirement, Honors

- **ENG-301 Seminar for English Majors**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course seeks to answer the following questions. What is literature? Why do we study literature? What methods aid the study of literature? What are English Studies all about? This course extends reading and writing skills, and provides more specialized terms, knowledge, and approaches to prepare students for study at the junior and senior level. Topics vary from term to term. Student must have completed 80 credits or less Normally offered Fall and Spring semesters.

Term:

Offered Both Fall and Spring

- **ENG-311 Medieval Literature Survey**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

An introduction to medieval literature, this course will focus on short readings from various genres, such as the lyric, chronicle, fable, with emphasis on the romance. The culmination of the course is a drama segment in which students can participate in a performance.

Term:

Occasional

- **ENG-312 English Grammar and Usage**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course provides a thorough review and analysis of the rules of standard English grammar and usage, including the debate between prescriptive and descriptive grammar, the origin and authority of the rules taught in school and in handbooks of English, and the insights of modern linguistics. Normally offered alternate years

Term:

Occasional

- **ENG-316 Fifth Century Athens**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

An introduction to Periclean Athens, the golden age of classical Greek literature and thought. Close readings of selections from the historians Herodotus and Thucydides, the dramatists Aeschylus and Euripides, the poetry of Pindar, and Plato's great work on politics, *The Republic*. Cross-listed with History 336.

Term:

Occasional

- **ENG-317 Classical Mythology**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

Ancient Greek and Roman myths, their motifs, themes and interpretations. Normally offered every third year.

- **ENG-320 Writing and Tutoring: Theory and Practice I**

Prerequisites:

WRI-102 or WRI-H103

Credits:

1.00

Description:

This course serves as the vehicle for training students who have been hired as writing tutors at CLAS. Students will be trained a one-on-one basis and will discuss a tutoring experience they have had in CLAS the previous week each class.

Type:

Expanded Classroom Requirement

- **ENG-321 Writing and Tutoring: Theory and Practice II**

Prerequisites:

WRI-102 or WRI-H103

Credits:

1.00

Description:

This course is a continuation of ENG 320. This course serves as the vehicle for training students who have been hired as writing tutors at CLAS. Students will be trained a one-on-one basis and will discuss a tutoring experience they have had in CLAS the previous week each class.

Type:

Expanded Classroom Requirement

- **ENG-323 Chaucer**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

Close reading and discussion of the Canterbury Tales and Troilus and Criseyde against the background of the late Middle Ages. Normally offered alternate years.

Term:

Occasional

- **ENG-324 Shakespeare's Comedies**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

Shakespeare's background and development as a dramatist through an examination of selected comedies. Collateral reading of the minor plays and Shakespeare criticism. Normally offered every third semester.

Term:

Occasional

- **ENG-325 Shakespeare's Histories**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

Shakespeare's English and Roman history plays. Emphasis on Shakespeare's use of his sources and the plays in performance. Normally offered every third semester.

Term:

Occasional

- **ENG-E325 Service Learning Component**

Credits:

0.00

Description:

Service Learning Component

Type:

Expanded Classroom Requirement

- **ENG-326 Shakespeare's Tragedies**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

Shakespeare's major tragedies reflecting the range, resourcefulness, and power of his dramaturgy. Collateral reading in Shakespeare criticism. Normally offered every third semester.

Term:

Occasional

- **ENG-333 English Renaissance Drama**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

The comedies and tragedies of major dramatists (excluding Shakespeare) of the Elizabethan and Jacobean eras. Marlowe, Jonson, Middleton, Webster. Normally offered alternate years.

Term:

Occasional

- **ENG-334 17th Century Literature**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

Representative selections of seventeenth-century poetry and prose, including Behn, Burton, Donne, Drayton, Dryden, Jonson, Milton, Pepys, Wroth, and others. Normally offered alternate years.

Term:

Occasional

- **ENG-335 Milton**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

Poetry and prose of England's greatest Renaissance poet. The centerpiece of the course is close reading of Paradise Lost. Normally offered alternate years.

Term:

Occasional

- **ENG-336 Restoration and Eighteenth Century Literature**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

The great age of satire, essay, criticism, biography, and nature. Dryden, Pope, Swift, Addison, Steele, Boswell, Johnson, Gray, Thompson, and Gibbon. Normally offered alternate years.

Term:

Occasional

- **ENG-337 18th Century English Novel**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

The beginnings of the realistic novel including the works of Defoe, Richardson, Fielding, Smollet, and Burney and considering the sentimental novel (Sterne) and the gothic novel (Walpole and Radcliffe). Normally offered alternate years.

• **ENG-343 19th Century English Novel**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

Development of the Romantic and Victorian novel. Readings in major works of the Brontes, Dickens, Thackeray, Austen, Eliot and Hardy. Normally offered alternate years.

Term:

Occasional

• **ENG-344 English Romantic Literature**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

The mind and spirit, poetics and poetry of Wordsworth, Coleridge, Byron, Shelley and Keats, along with selected prose. Normally offered alternate years.

Term:

Occasional

- **ENG-345 Victorian Literature**

Prerequisites:

WRI-102 or WRI-H103

Credits:

3.00

Description:

The study of selected poets and prose writers. Some Victorian fiction. Normally offered alternate years

- **ENG-347 20th Century Female Gothic**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course focuses on Gothic literature by women writers, from its origins in the 18th century to the present, focusing primarily on 20th century writers. The novels, short stories, and films we will discuss involve haunted houses, secret chambers, madness, and other Gothic tropes. Term:

Occasional

- **ENG-365 Contemporary American Poetry**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

An in-depth examination of American poetry since 1950, to include writers such as Robert Lowell, Theodore Roethke, John Berryman, Sylvia Plath, Anne Sexton, William Stafford, Elizabeth Bishop, Lucille Clifton, Adrienne Rich, Philip Levine, Galway Kinnell, James Wright, Robert Bly, Charles Olson, Allen Ginsberg, Rita Dove, Robert Hass, and Yusef Komunyakaa, among others. Normally offered alternate years.

Term:

Occasional

- **ENG-368 Modern British Drama**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

Important playwrights and their productions: Wilde, Shaw, Galsworthy, Maugham, Synge, O'Casey, Coward, Osborne, Pinter, Beckett, Stoppard, Keatley, and others. Topics: "The New Woman," "Bright Young Things," "Angry Young Men," and more. Normally offered every third year.

Term:

Occasional

- **ENG-369 Modern American Drama**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

Study of plays and productions from the late 19th century to the present. Playwrights included: Moody, Herne, Sheldon, O'Neill, Glaspell, Crothers, Treadwell, Sherwood, Kaufman and Hart, Saroyan, Odets. Williams, Miller, Albee, Mamet, among others. Significant performers, directors, theatre critics, Broadway culture, and popular theatre provide context.

Term:

Occasional

- **ENG-370 Fiction Writing Workshop I**

Prerequisites:

ENG-212

Credits:

4.00

Description:

An intensive workshop in which the student will be required to write original fiction. The focus of the course will be on the student's own work, submitted on a weekly basis. The course will also provide the student writer with practical experience in matters of plot, character, dialogue, structure, etc. Normally offered annually.

Term:

Alternates Fall & Spring

- **ENG-371 Creative Non-Fiction Workshop**

Prerequisites:

ENG-212

Credits:

4.00

Description:

For students interested in writing autobiography and/or other forms of the personal essay. Topics can include childhood, place, sexuality, religion, work, the nature of memory. The focus will be on the writing process, with students presenting work-in-progress to the class for discussion and revision. The student should plan to read models of creative non-fiction. Normally offered annually.

Term:

Occasional

- **ENG-372 The Literary Journal**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

An exploration of selected literary journals and their role in American letters. Through our study of the Pushcart prize anthology and past and current issues of journals such as Agni, Antaeus, Callaloo, Georgia Review, Paris Review, Poetry, and Zoetrope, we will examine the ways in which journals both respond to and shape literary culture. Students will write a research paper on an essayist, poet, or story writer that they discover during this course. Taught by the editor of a Boston-area literary journal.

Term:

Occasional

- **ENG-373 English Writers of the 1930S**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

The social, political and cultural revolution in pre-World War II England as it is reflected in the poetry of Auden and Spender and the fiction of Huxley, Waugh, Isherwood, Bowen, Orwell, and Greene. Normally offered every third year.

Term:

Occasional

- **ENG-374 Drama Seminar**

Prerequisites:

WRI-102 or WRI-H103 with a minimum grade of B+

Credits:

4.00

Description:

Discussion and presentations on a pre-announced subject: a major playwright, a dramatic movement or genre, or the relation between script and performance. Normally offered every third year.

Term:

Occasional

- **ENG-375 Poetry Writing Workshop I**

Prerequisites:

ENG-212

Credits:

4.00

Description:

An intensive workshop course in which the student will be required to write original poetry for each class meeting. The focus of the course will be on the student's own work. We will examine the highly individual processes of composition and revision, and the methods writers use to keep their own

practice of poetry alive and well. We will also examine as many of the constituent elements of poetry as possible, from image and rhythm to line and structure. Normally offered annually.

Term:

Offered Both Fall and Spring

- **ENG-377 The World of Literature on Film**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

Examination of film as an art form in the expression of literature. Several films to be viewed in class together with the relevant literary works. Normally offered every third year.

Term:

Occasional

- **ENG-386 Classics of Mystery**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

Classic stories of suspense and detection, including short stories and novels by Poe, Doyle, Chandler, Hammett, Christie, and others. Current examples also to be included. Normally offered alternate years.

Term:

Occasional

- **ENG-387 Writing Women**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course studies 19th and 20th century women writers and questions the type of women who write, what they write about, and why they write. Themes we examine include domesticity, assimilation, and madness. Authors studied in the past have included Edith Wharton, Willa Cather, Anzia Yezierska, Nella Larsen, and Sylvia Plath. Normally offered alternate years. Cultural Diversity A

Term:

Occasional

Type:

Cultural Diversity Opt A

- **ENG-390 Writing Process and Revision**

Prerequisites:

Any ENG course except for WRI-101

Credits:

4.00

Description:

This course studies the expressive and cognitive approaches to the writing process through personal journal writing, metaphor use and a review of grammar and stylistics. Written assignments emphasize discovery and invention as well as the revising of academic prose. Normally offered every other year.

Term:

Occasional

- **ENG-392 Readings in Post-Colonial Literature**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

An Exploration of Post-colonial literature and how the empire writes back following the collapse of European colonialism. Special emphasis will be placed on the legacy of British Colonial rule and the contemporary use of literature and the English Language to both resist and problematize Eurocentric cultural assumptions. Authors studied will include E.M. Foster, Salman Rushdie, J.M. Coetzee, Anita Desai, Hanif Kureishi, and Zadie Smith, among others. Students will be introduced to Post-colonial critical theory and view film adaptations of literary texts.

Term:

Occasional

Type:

Cultural Diversity Opt B

- **ENG-394 Critical Prose**

Prerequisites:

WRI-102 or WRI-H103 with a minimum grade of B+

Credits:

4.00

Description:

This course studies both the literary and rhetorical modes of expository essay writing. Readings will focus on the craft of writing, the art of revision and reflections on the reader-writer relationship. Students will be asked to analyze prose passages, compose critical essays and work in peer groups. Normally offered alternate years.

Term:

Occasional

- **ENG-395 Rhetoric and Memoir**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course examines the rhetoric of memoirs written primarily by international figures who seek to use personal stories to shape readers' perspectives on political issues. After a brief introduction to rhetorical theory and to the genre of memoir, this course will examine contemporary memoirs that address such issues as racism, sexism, religious extremism, war, and genocide.

Term:

Occasional

Type:

Cultural Diversity Opt B

- **ENG-396 Varieties of Workplace Writing**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course studies a variety of workplace writing including summaries, memos, letters, directions, descriptions, reports and other technical and professional documents. Students may be required to complete certain assignments in collaborative teams. Document design and layout will also be emphasized. Normally offered alternate years

Term:

Occasional

- **ENG-398 Boston: a City in Fiction**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

Boston in novels from its beginning to the present: plan of the city, architecture, population, social classes, politics and human problems. Hawthorne, James, Howells, Jean Stafford, Edwin O'Connor, Dorothy West, and others.

Term:

Occasional

- **ENG-399 Irish Literature**

Prerequisites:

WRI-H103 (WRI-H103 requires a minimum grade of B+) or WRI-102

Credits:

4.00

Description:

Writers of the Irish Literary Revival, from the 1890s to the 1930s. Readings from Yeats, Joyce, Synge, O'Casey, and O'Flaherty. The influence of Anglo-Irish history on Irish writers. Normally offered every third year.

Term:

Occasional

- **ENG-407 Literary Theory**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

A seminar on current approaches to the interpretation of literature, including psychoanalysis, deconstruction and feminist criticism. Students will experiment with making use of theory in analyzing selected literary texts.

Term:

Occasional

- **ENG-408 Modern Greek Literature in English Translation**

Prerequisites:

WRI-102 or WRI-H103 with a minimum grade of B+

Credits:

4.00

Description:

A survey of writings in Modern Greek from 1821 to the present exploring Hellenism and the Greek cultural identity. Authors studied will include Kostis Palamas, Georgios Vizyinos, Alexandros Papadiamantis, Stratis Myrivilis, Photis Kontoglou, Dido Sotiriou, George Seferis, Constantine Cavafy, and Odysseas Elytis. A section of the syllabus will be reserved for the Greek-American/diaspora writers Helen Papanikolas, Elia Kazan, Jeffrey Eugenides, Olga Broumas, and Tryfon Tolides. Films and music traditions will be sampled as well.

- **ENG-409 Literary Bloomsbury: Woolf and Forster**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This class will engage with the major novels and selected literary writings of two of the twentieth century's most important modernist voices, Virginia Woolf and E.M. Forster. We will approach their writings within the intellectual framework of British modernism and the cultural context of the Bloomsbury Group out of which they emerged. Special attention will be paid to their theoretical writings on fiction as well as their respective contributions to feminism and queer theory. The class will also view cinematic adaptations of certain novels and discuss how these films have contributed to the enduring appeal and status of these texts as classics of twentieth-century fiction.

Term:

Occasional

- **ENG-410 From Pagan Reason to Christian Revelation**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

A survey of major works of literature and thought crucial to the transformation of pagan models of reason to Christian systems of belief, including works by Plato and Plotinus, St. Augustine and Dante. Of central concern is the changing conception of love, from Eros to Agape. Cross-listed with History 336.

Term:

Occasional

- **ENG-421 Special Topics in Group 1: Approaches To English Studies**

Prerequisites:

ENG 213, ENG 214, ENG 215, ENG 216, ENG 217, or ENG 218

Credits:

4.00

Description:

A course that fits Group 1 of the English major requirements with varying subject matter.

Term:

Occasional

- **ENG-422 Special Topics in Group 2: Genre and Backgrounds**

Prerequisites:

Any 200-level English course

Credits:

4.00

Description:

A course that fits Group 2 of the English major requirements with varying subject matter.

Term:

Occasional

- **ENG-424 Special Topics in Group 4: Literary History II : 1700-1900, American or British**

Prerequisites:

Any 200-level English course

Credits:

4.00

Description:

A course that fits Group 4 of the English major requirements with varying subject matter. A interdisciplinary offering that features the writing of three of the late 19th century's greatest minds: Henry, the novelist who wrote *The Portrait of a Lady*, *Daisy Miller*, and *The Turn of the Screw*; William, the philosopher and psychologist who wrote *Principles of Psychology* (1890) and *Varieties of Religious Experience* (1902); and Alice, their sister, who became a feminist icon through her remarkable diary. A selection of these works will be explored alongside a James family biography.

Term:

Occasional

- **ENG-425 Special Topics in Group 5: Literary History III: 1900- Present American, British, Or World**

Prerequisites:

Any 200-level English course

Credits:

4.00

Description:

A course that fits Group 5 of the English major requirements with varying subject matter.

Term:

Occasional

- **ENG-427 The Georgics of Virgil**

Prerequisites:

Any 200-level English course

Credits:

1.00

Description:

A study of these poems by the Roman poet with a focus on the issues of translation.

- **ENG-428 Virgil's Aeneid: First Three Books**

Prerequisites:

Any 200-level English course

Credits:

1.00

Description:

A week by week reading of the Mesopotamian Epic that predates the Iliad by one thousand years, and is a masterpiece of heroic endurance and tragic insight. Discussions will be led by David Ferry, whose beautiful translation the class will use as text.

- **ENG-429 Classic Literature of the Underworld**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course will conduct close reading and discussion of selections from classical Greek and Roman texts, as well as from ancient Mesopotamian texts, highlighting passages that trace the descent to the underworld. Some of these readings include: the realm of the shades in Gilgamesh, the myth of Orpheus and Eurydice in Virgil, Homer's Odysseus and Achilles in Hades, the source of the River Styx in Pausanias.

- **ENG-430 Literature of the Vietnam War and the Post 9/11 Wars**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course will examine some of the fiction, non-fiction, and poetry produced in response to the Vietnam War and the most recent war in Iraq. In addition to comparing the literature that has emerged from these two very different wars, these texts will also be examined in relation to peace studies, a field in which there is an emerging consensus that literature and the arts must play a central role in examining questions of war and peace.

Term:

Occasional

- **ENG-431 Studies in Postmodern Fiction**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course introduces students to the innovations that have re-defined fiction following the modern period. Novelists will include significant writers (3 Nobel Laureates among them) of the 20th/21st century, including Borges, Kundera, Calvino, Saramago, Garcia Marquez, Vargas Llosa.

- **ENG-432 Classical Greek and Roman Poetry**

Prerequisites:

Any 200 level ENG course.

Credits:

1.00

Description:

Readings from major poems by the Greek and Roman poets of the ancient and classical periods. Works include: Sappho's lyric poems, Pindar's Odes, Horace's Odes, Virgil's Eclogues and Georgics, selections from the Aeneid and the Iliad.

- **ENG-440 The Odes of Horace**

Prerequisites:

Any 200-level English course

Credits:

1.00

Description:

This course represents a journey through the poetry of Horace, contemporary of Virgil and celebrated poet of the Pax Romana. Discussions will be led by David Ferry, whose beautiful translation of Horace's poetry the class will use as text.

- **ENG-470 Fiction Workshop II**

Prerequisites:

Any 200-level English course

Credits:

4.00

Description:

An intensive practical examination of plot, narrative, characterization, and style in the writing of fiction and/or creative non-fiction. Particular attention will be devoted to group discussion of weekly student writing assignments. Normally offered alternate years.

Term:

Alternates Fall & Spring

- **ENG-471 Advanced Nonfiction Workshop**

Prerequisites:

Any 200-level English course

Credits:

4.00

Description:

An advanced course in non-fiction writing that focuses intensively on developing non-fiction through weekly group discussions of student writing. Particular attention will be devoted toward deepening and expanding the range of possibilities available to non-fiction writers. Topics can include childhood, place, sexuality, religion, work, the nature of memory. The focus will be on the writing process, with students presenting work-in-progress to the class for discussion and revision. Normally offered annually.

- **ENG-475 Poetry Workshop II**

Prerequisites:

Any 200-level English course

Credits:

4.00

Description:

An intensive workshop course in which the student will be required to write original poetry for each class meeting. The focus of the course will be on both the quantity and quality of the student's own work. There will also be specific assignments in the many formal elements of the art. Written self-evaluations will also be required. Normally offered in alternate years.

Term:

- **ENG-480 Fiction Writing Workshop III**

Prerequisites:

Any 200-level English course

Credits:

4.00

Description:

An advanced course in fiction writing that focuses intensively on developing fiction through weekly group discussions of student writing. Particular attention will be devoted toward deepening and expanding the range of possibilities available to fiction writers.

- **ENG-490 Imperial Rome**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course offers an introduction to the Golden Age of Roman culture and power. Close readings of selections from major historians, poets, political thinkers, and philosophers will be examined in the context of Augustan Rome. Topics such as pietas, virtus, and gravitas, as well as the competing claims of public duty and private devotion, stoic maxim and erotic love lyric, will be discussed from the perspectives of writers such as Virgil, Livy, Tacitus, Horace, Catullus, and Lucretius. Note: This course is identical to HUM 304. Normally offered in alternate years.

Type:

Humanities & History

- **ENG-510 Independent Study**

Prerequisites:

WRI-102 or WRI-H103

Credits:

1.00- 4.00

Description:

By special arrangement, a junior or senior may pursue an independent research project under the supervision of a faculty member. Consent of instructor and chairperson required. Offered every semester.

Term:

Offered Both Fall and Spring

- **ENG-514 Internship in English**

Prerequisites:

WRI-102 or WRI-H103

Credits:

2.00

Description:

Individualized guidance in a career-related activity. Upper-class English majors may gain academic credit for work preparing them for an English-related career, provided that the work is monitored by a member of the English faculty. Department approval is required.

Term:

Occasional

Type:

Expanded Classroom Requirement

- **ENG-515 Salamander Internship**

Prerequisites:

WRI-102 or WRI-H103

Credits:

1.00

Description:

A semester-long internship working with the Editor and Managing Editor of Salamander Literary Magazine. Students will gain experience in editing, layout, and production of one of two annual editions of Salamander.

Type:

Expanded Classroom Requirement

- **ENG-H523 Honors Seminar in Group 3: Literary History I: Medieval to Renaissance**

Prerequisites:

ENG 213, 214, 215, 216, 217 OR 218 Admission By Invitation Only

- [Developmental Math](#)

The FSL Program enrolls non-native English speakers who are graduates of high schools accredited in the United States, as well as international students who have achieved a TOEFL score of at least 500 (PBT), 173 (CBT) or 61 (IBT). Other standardized tests that demonstrate academic English proficiency, such as the IELTS, SATs, or ACTs will also be considered for admission.

The program typically leads to a baccalaureate degree. The first year of intensive, developmental English courses is complemented by a series of content courses within the College of Arts and Sciences (CAS) and the Sawyer Business School, for which students earn academic credit.

This program of study is meant to enable students to acquire the academic skills necessary to successfully obtain a college degree. Upon successful completion of the FSL program, students may go on to pursue a BS or BA in CAS, a BFA degree in the New England School of Art and Design (NESAD), or a BSBA degree in the Sawyer Business School. The length of time needed to obtain a full degree will depend on how quickly students progress in their academic and language skills, and on what major they wish to pursue. The majority of students complete their degrees within three years of exiting the program.

Students must maintain a grade of a C- or higher in order to pass the program and advance to their sophomore year. The content courses are graded using the university letter grade system.

All students in the FSL Program take the following courses their first year:*

FSL Program Courses

Fall Semester

- **ENG-098 ESL Reading/Writing I**

Credits:

4.00

Description:

Utilizing a freshman-level English textbook and materials from the content courses, this course furnishes students with active reading strategies and the conventions of academic writing that will be applicable to their collegiate course work. Students will develop the analytical skills necessary for academic success by producing in-class and take-home essays, participating in debates, and giving oral presentations. Students will be required to work with a course management program and to utilize technology effectively in their writing. The skills obtained in these courses will allow students to participate comfortably in their mainstream college classes.

- **HST-150 Empires & Globalization in World History II**

Credits:

4.00

Description:

This is the second of the two-course series of Empires and Globalization in World History. Course discusses the origins and development of globalization and capitalism from the perspective of economic history. Major issues include state-making, wars, and the rivalry among early modern empires, economic development, the Industrial Revolution and the formation of the global trade system. The specific topics may change every year due to new academic developments and publications. Cultural Diversity B

• CI-113 Revising Reality

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Reality and perception have been debated and discussed for millennia. Humans see and experience their world in different ways. How do humans determine what is true and good and what advancements are necessary? In this course, students will creatively explore these big questions and revisit knowledge using new and sometimes divergent perspectives. Students will participate in dirty and courageous learning by crafting products, creating visual projects, and coming into original thought via trial and error. Students will also develop their analytical and critical thinking skills, while learning to communicate effectively and honestly.

• ENG-099 ESL Reading/Writing II

Credits:

4.00

Description:

A continuation of ENG 098, this course further furnishes students with active reading strategies and the conventions of academic writing that will be applicable to their collegiate course work. Students will develop the analytical skills necessary for academic success by producing in-class and take-home essays, participating in debates, and giving oral presentations. Students will be required to work with a course management program and to utilize technology effectively in their writing. The skills obtained in these courses will allow students to participate comfortably in their mainstream college classes.

- **SF-1138 Malevolent Or Misunderstood?: Monsters of Mythology**

Credits:

4.00

Description:

This course will critically engage with folk and pop-cultural representations of monsters. Students will read from diverse areas relating to the topic, including psychology, anthropology, history, and cultural studies. This course will explore the changes in monster figures from early history to the internet age. The main purpose of this course is to teach students to write academically and to think critically. This course aims to give students the tools to engage in academic inquiry, to think beyond what they believe they already know and to question. This course will give students the freedom to develop their own ideas about the subjects discussed.

- **P.AD-201 Social Change**

Credits:

3.00

Description:

This course will examine social change in the U.S. and abroad. The course will also examine the role of business, nonprofits, and the public sector in addressing social problems. Topics studied may include the Industrial Revolution, the civil rights movement, the women's movement, environmentalism, and the gay and lesbian movement.

Program Electives (8-9 Credits)

*NESAD students' program may deviate slightly. ^[1]_{SEP}All FSL courses award academic credit. The amount of credit awarded toward degree requirements varies with the school and major the student matriculates into.

FSL Program Policies

Due to the developmental nature of its courses, the FSL Program is a two-semester commitment. FSL students participate in summer orientation and begin their program in the fall. Once a student has begun the FSL Program, he or she may not place out of it with an advanced standardized test score. To exit the FSL Program, students must pass all FSL courses; if they do not, they may be asked to leave the University. ^[1]_{SEP}

Advising

The Coordinator of the FSL Program, Elaine Pascale, officially advises FSL students during the program and offers assistance throughout their time at Suffolk. To schedule an appointment, please call (617) 973-5392.^{[[SEP]]} Tutoring Individual and small group tutoring is available free of charge to all second language students through the CLAS Office. Writing and grammar tutoring is offered by ESL professionals, and workshops are also conducted in a variety of areas, including Academic Writing, TOEFL Preparation, Graduate Writing, and Classroom Conversational Skills and Pronunciation.^{[[SEP]]}

Developmental English & Math Programs

The mission of Developmental English and Math (DEMP) is to provide academic support to those students enrolled in our Math Shop/Developmental Math Courses, Developmental English Courses, Freshman Second Language Program (FSL), English Language for Internationals Program (ELI), and EF/SU Transitional Program.

Support is offered through rigorous English and core content courses, math workshop courses, intensive advising, and faculty outreach. We also provide CLEP and institutional TOEFL examinations.

- [Developmental English](#)
- [Freshman Second Language Program \(FSL\)](#)
- [English Language for Internationals Program \(ELI\)](#)
- [Developmental Math](#)

The ELI Program is an intensive, non-degree English as a Foreign Language program, designed for international students planning to attend Suffolk University or other American universities. The ELI classes help students develop English proficiency and prepare them to matriculate into a college setting. Because this is a language immersion program the classes are non-credit. The program is appropriate for students who need language instruction at the intermediate to advanced level; it is not designed for individuals with little or no knowledge of English.

The ELI Program offers seven levels of instruction. Each level may be completed within a semester of study. Four semesters of study are offered a year. The fall and spring sessions are 14-week programs, while the summer sessions meet for seven weeks. Placement into and progression through each level is determined using a variety of assessment tools, including coursework and the institutional TOEFL.

All levels require 20 hours of class instruction per week, including:

- 12 hours a week of skills instruction (grammar, reading, writing, speaking, listening, note taking, and research)
- 3 hours a week in the computer and/or language lab (TOEFL preparation, pronunciation and accent reduction, and academic computing skills)
- 5 hours a week of cultural and academic activities (including research and guest lectures)

Conditional Acceptance

Students may apply directly to the ELI Program or be referred by an Admissions Counselor. Students applying to a degree program who are academically admissible, but whose language proficiency is not acceptable, may be offered a conditional admittance, contingent upon successful completion of the ELI Program. Suffolk University reserves the right to make the final determination as to when program requirements have been successfully completed and when a student may qualify for admission to a degree program.

Attendance Policy

For students enrolled in the ELI Program, attendance and completion of assignments is vitally important to their progress. In addition, it is important for students to understand that regular attendance is a requirement of the Department of Homeland Security (DHS) for students with an F-1 visa. In order to meet immigration regulations and make progress in your program, the current attendance policy allows for students to miss a total of 10% of their classes without penalty. Missing more than 10% of the classes will have a negative effect on the student's average and evaluation. Missing more than 35% of the classes without justification or permission from the ELI coordinator could result in a grade of F for that class. Grades of L or I will not be given in cases where a student's work is incomplete due to frequent unexcused absences. It is important to note that for students who have been conditionally admitted to a program at Suffolk, a negative evaluation or failing grades could result in a denial of the application.

Advising

Carrie Oliva, the ELI Coordinator, officially advises ELI students during the program and offers assistance throughout their time at Suffolk, should they matriculate into a Suffolk degree program. To make an appointment, please call 617.994.4215.

Field Trips and Guest Speakers

ELI students may participate in field trips as part of their coursework throughout the semester. Past trips have included the Computer Museum, the State House, the Boston Stock Exchange, and the Suffolk County Courthouse. Guest speakers are often invited to the American Culture Lab.

Tutoring

Individual and small group tutoring is available free of charge to all second language students through the CLAS Office. Tutoring is offered by ESL professionals in a variety of areas including: Language Skills, Academic Writing, TOEFL Preparation and Classroom Conversation Skills and Pronunciation.

English for Internationals Courses

- **ELI-004 Academic Presentation Skills Pronunciation Skills**

Prerequisites:

ELI Students only

Credits:

0.00

Description:

An introduction to the processes of professional communication, with an emphasis on oral presentations, effective listening, and interpersonal communication. Students acquire skills in oral and physical delivery, organization, persuasion, critical thinking, and the use of support media. Through lectures, text, and practical applications; students will learn how to select a topic, tailor a presentation to a specific audience, research, design, and structure an oral presentation, collaborate with a team of colleagues, utilize visual aids, and critique professional / rhetorical situations.

- **ELI-005 Academic Presentation Skills Pronunciation Skills**

Prerequisites:

ELI Students only

Credits:

0.00

- **ELI-041 High Intermediate Listening/Speaking/ Pronunciation Skills**

Prerequisites:

ELI Students only

Credits:

0.00

Description:

For non-native speakers assessed to be at the high intermediate level (450-475/110-133 CBT TOEFL/2.8-3.3 TWE) who need to acquire aural fluency in American English. The focus is on intensive practice in listening comprehension, speaking and pronunciation. The course meets for six hours a week. College credit is not awarded. Co-Requisite courses: ELI 042, ELI 043, ELI 044

- **ELI-042 High Intermediate Reading/Writing/ Grammar Skills**

Credits:

0.00

Description:

For non-native English speakers assessed to be at high intermediate level intermediate level (450-475/110-133 CBT TOEFL/2.8-3.3 TWE) who need to acquire written fluency in American English for an academic setting. The focus is on intensive practice in reading, writing, and English grammar. The course meets for six hours a week. College credit is not awarded.

- **ELI-043 High Intermediate Eli American Culture**

Credits:

0.00

Description:

For non-native English speakers assessed to be at a high intermediate level (450-475/133-153) CBT TOEFL / 2.8-3.3 TWE) who need to acquire academic fluency in American English. The focus is on American culture, values, and institutions, giving students a content driven opportunity to practice the English language skills introduced in the other ELI courses. The course meets for five hours a week.

- **ELI-044 High Intermediate English - Academic Skills Lab**

Credits:

0.00

Description:

For non-native English speakers assessed to be at a high intermediate level (450-475/133-153 CBT TOEFL / 2.8-3.3 TWE) who need to acquire academic writing skills. The focus is on research skills needed to be a successful student at an American college. The course meets for five hours a week. College credit is not awarded.

- **ELI-051 Low Advanced Listening/Speaking/ Pronunciation Skills**

Credits:

0.00

Description:

For non-native English speakers assessed to be at low advanced level (475-500/3.0-3.5 TWE) who need to acquire aural fluency in American English. The focus is on intensive practice in listening, comprehension, speaking and pronunciation. The course meets or six hours a week. College credit is not awarded.

- **ELI-052 Low Advanced Reading/Writing/Grammar Skills**

Prerequisites:

ELI students only

Credits:

0.00

Description:

For non-native English speakers assessed to be at a low advanced level (475-500/153-173 CBT TOEFL /3.0-3.5 TWE) who need to acquire written fluency in American English for an academic setting. The focus is on intensive practice in reading, writing, and English grammar. The course meets for six hours a week. College credit is not awarded.

- **ELI-053 Low Advanced American Culture Skills**

Prerequisites:

ELI students only

Credits:

0.00

Description:

For non-native English speakers assessed to be at a low advanced level (475-500/153-173 CBT TOEFL /3.0-3.5 TWE) who need to acquire communicative fluency in American English. The focus is on American culture, values, and institutions, giving students a content driven opportunity to practice the English skills introduced in the other ELI courses. The course meets for five hours a week. College credit is not awarded.

- **ELI-054 Low Advanced Research Skills**

Prerequisites:

ELI students only

Credits:

0.00

Description:

A NON-CREDIT, full semester workshop designed for students who need substantial review before starting MATH 104, MATH 106, OR MATH 121. Similar to a course, MATHSHOP meets three hours per week throughout the semester. Topics covered are tailored to the needs of students and include basic math material, basic algebra, graphing use of calculators, ways of dealing with math fears and study methods. Several sections normally offered each semester.

2015-2016 Archived Catalog Information

Economics

The Economics Department offers a major and minor in Economics, as well as a program in [International Economics](#) that is offered jointly with the World Languages & Cultural Studies Department.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Minor Requirements](#)
- [Societies](#)
- [Economics Courses](#)

The department offers a BA and BS in Economics.

Major Requirements: 10 courses, 38 credits

Required Courses (7 courses, 26 credits)

- EC-101 Applied Microeconomics

Prerequisites:

Non CAS majors need to have completed at least 15 credits.

Credits:

3.00

Description:

This course introduces students to foundational principles of microeconomic theory, with an emphasis on applications of concepts to management decision-making in specific industry and market settings. It describes and analyzes the interaction of supply and demand and the behavior of the prices of goods, services. It explains the determinations of costs, output, strategic pricing, and governance by firms under conditions of perfect and imperfect competition in a global economy. In addition, it describes the supply demand for factors of production and the impact of taxes and government regulation and intervention on firms and consumers.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-102 Global Macroeconomics**

Prerequisites:

Non-CAS majors need to have completed at least 15 credits

Credits:

3.00

Description:

This course examines the workings of the national and the global economy. It will describe the determination of Gross Domestic Product, the problems of unemployment, inflation, and the determination of economic growth. It will also describe and analyze the determination of the country's exchange rate, the balance of payments, and international borrowing and lending. A particular focus will be on understanding economic fluctuations (booms, busts, and recessions) in the domestic economy and its effects on other economies. It will analyze the role of the government and the effects of government spending and taxation on the economy. Furthermore, it will describe and analyze the determination of the quantity of money and interest rates in the economy and the role of the country's central bank. It examines the basis and pattern of international trade and the effects of a country's trade policy on the economy.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **STATS-250 Applied Statistics**

Prerequisites:

MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

Credits:

4.00

Description:

Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

Type:

Quantitative Reasoning

- **EC-311 Intermediate Micro Theory**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

Theory of consumer behavior and demand. Theory of production and costs of production. Theory of the firm, and price and output decisions in different market structures, i.e., under perfect competition, monopoly, monopolistic competition and oligopoly. Decisions relating to pricing and employment of various inputs (labor and capital) under perfectly competitive, and less than perfectly competitive, resource markets. Required of all majors in Economics. Normally offered every semester.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-312 Intermediate Macro Theory**

Prerequisites:

EC-101 and EC-102

Credits:

4.00

Description:

This course covers the neoclassical and Keynesian models of aggregate economic activity. Coverage of the measurement of economic variables, such as aggregate income, the inflation rate, and the unemployment rate. Examines the behavior of the economy under conditions of price flexibility in the long run and price rigidity in the short run under rational and adaptive expectations. Analysis of the effect of changes in taxes and government expenditures, monetary policy and deficits on the economy. Coverage of the sources of economic growth. Required of all majors in Economics. Normally offered every semester.

Type:

Social Science,BSJ SOCIAL SCIENCE

• EC-450 Applied Econometrics

Prerequisites:

STATS-250 or permission of instructor

Credits:

4.00

Description:

This course begins with a brief review of statistical methods, including probability theory, estimation, and hypothesis testing. This background is used in the construction, estimation, and testing of econometric models. The consequences of a misspecified model, where the assumptions of a classical regression model are violated, are studied and the appropriate remedial measures are suggested. Other topics include dummy variables, binary choice models, and autoregressive models. Emphasis is on applied aspects of econometric modeling. There is extensive use of statistical software for data analyses. Normally offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

• EC-490 Senior Seminar in Economics

Prerequisites:

EC-450 or STATS-350 and Senior Standing; Or permission of Undergraduate Director.

Credits:

4.00

Description:

This is a required course for all students majoring in economics, to be taken in the spring semester of their senior year. Students are required to develop an economic thesis project in consultation with the professor for the course and to present it to the class.

Type:

BSJ SOCIAL SCIENCE, Social Science
