Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

Type:

Quantitative Reasoning

Choose one of the following:

- **EC-311 Intermediate Micro Theory**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

Theory of consumer behavior and demand. Theory of production and costs of production. Theory of the firm, and price and output decisions in different market structures, i.e., under perfect competition, monopoly, monopolistic competition and oligopoly. Decisions relating to pricing and employment of various inputs (labor and capital) under perfectly competitive, and less than perfectly competitive, resource markets. Required of all majors in Economics. Normally offered every semester.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-312 Intermediate Macro Theory**

Prerequisites:

EC-101 and EC-102

Credits:

4.00

Description:

This course covers the neoclassical and Keynesian models of aggregate economic activity. Coverage of the measurement of economic variables, such as aggregate income, the inflation rate, and the unemployment rate. Examines the behavior of the economy under conditions of price flexibility in the long run and price rigidity in the short run under rational and adaptive expectations. Analysis of the effect of changes in taxes and government expenditures, monetary policy and deficits on the economy. Coverage of the sources of economic growth. Required of all majors in Economics. Normally offered every semester.

Type:

Social Science,BSJ SOCIAL SCIENCE

Choose two Economics courses, of which at least one is at the 400-level

2015-2016 Archived Catalog Information

Economics

The Economics Department offers a major and minor in Economics, as well as a program in [International Economics](#) that is offered jointly with the World Languages & Cultural Studies Department.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- EC-101 Applied Microeconomics

Prerequisites:

Non CAS majors need to have completed at least 15 credits.

Credits:

3.00

Description:

This course introduces students to foundational principles of microeconomic theory, with an emphasis on applications of concepts to management decision-making in specific industry and market settings. It describes and analyzes the interaction of supply and demand and the behavior of the prices of goods, services. It explains the determinations of costs, output, strategic pricing, and governance by firms under conditions of perfect and imperfect competition in a global economy. In addition, it describes the supply demand for factors of production and the impact of taxes and government regulation and intervention on firms and consumers.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-H101 Honors Principles of Microeconomics**

Prerequisites:

Honors Section Only : GPA of 3.3 or higher required.

Credits:

3.00

Description:

Introduction to the organization and operation of a market economy with a focus on how it allocates scarce resources; the analysis of consumer demand and profit maximizing behavior of business; examination of pricing and output decisions under conditions of competition, monopoly and imperfect competition. Analysis of markets for labor and capital. Policy issues include price ceilings and floors, competition and monopoly. Normally offered every semester.

Type:

Social Science,BSJ SOCIAL SCIENCE,Honors

- **EC-102 Global Macroeconomics**

Prerequisites:

Non-CAS majors need to have completed at least 15 credits

Credits:

3.00

Description:

This course examines the workings of the national and the global economy. It will describe the determination of Gross Domestic Product, the problems of unemployment, inflation, and the determination of economic growth. It will also describe and analyze the determination of the country's exchange rate, the balance of payments, and international borrowing and lending. A particular focus will be on understanding economic fluctuations (booms, busts, and recessions) in the domestic economy and its effects on other economies. It will analyze the role of the government and the effects of

government spending and taxation on the economy. Furthermore, it will describe and analyze the determination of the quantity of money and interest rates in the economy and the role of the country's central bank. It examines the basis and pattern of international trade and the effects of a country's trade policy on the economy.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-H102 Honors Global Macroeconomics**

Credits:

3.00

Description:

The measurement of economic growth; introduction to the theory of determination of national income and the price level; unemployment and inflation; theories on economic growth and the role of labor and capital in economic growth; functioning and impact of the monetary system; analysis of monetary and fiscal policies for economic stabilization; international transactions and their influence on the domestic economy. Prerequisites: GPA of 3.2 or higher. Normally offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE,Honors

- **EC-131 Environmental Economics**

Credits:

4.00

Description:

Identifies the environmental effects of economic activity, including polluted water and air, noise, and radiation, and values their costs and benefits. Analyzes mechanisms, including taxes and permits, for achieving a socially preferable level of pollution. Traces role played by institutions, including common ownership, in affecting environmental decay. Resource depletion (of oil, forests, and fisheries) and appropriate policy responses.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-141 Development Economics**

Credits:

4.00

Description:

Why do so many countries remain so poor? Why have some (e.g. the Asian tigers) grown so rapidly? Why have most of the countries of Eastern Europe and the Former Soviet Union been slow to ignite economic growth? These questions are addressed by looking at domestic factors (government policies, resource endowments) as well as the international environment (mobile investors, international financial institutions). Asks what economic choices these countries face now. Normally offered yearly. Cultural Diversity B

Type:

Cultural Diversity Opt B,Social Science,Asian Studies,BSJ SOCIAL SCIENCE,Diverse Perspectives

- **EC-151 Economic & Human Geography**

Credits:

4.00

Description:

The study of how economic and human activity is distributed across space, the reasons for these spatial distributions, and the processes that change the spatial organization of economic activity over time. Topics include: maps, map projections, and geographic information systems; population geography; the organization and location of cities, towns and villages; transportation and communication policy; industrial location; the geography of world trade; and geographic features of economic development. The course takes a global perspective, and draws on cases and examples from all over the world. Cultural Diversity B

Type:

Cultural Diversity Opt B,Social Science,BSJ SOCIAL SCIENCE,Asian Studies,Diverse Perspectives

- **EC-300 Professional Development in Economics**

Prerequisites:

EC-101 and EC-102 and at least 54 credits

Credits:

1.00

Description:

This one-credit course is designed to explore career opportunities in economics in depth. Classroom discussions, writing assignments, and site visits will help prepare students to identify and secure internship and post-graduate employment opportunities. Additional career paths, such as pursuing graduate studies in economics or related fields, and the application process, will also be addressed. The goal of this course is to help students reach their fullest professional potential following graduation. Ordinarily taken during junior year. Offered during the fall semester.

- **EC-311 Intermediate Micro Theory**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

Theory of consumer behavior and demand. Theory of production and costs of production. Theory of the firm, and price and output decisions in different market structures, i.e., under perfect competition, monopoly, monopolistic competition and oligopoly. Decisions relating to pricing and employment of various inputs (labor and capital) under perfectly competitive, and less than perfectly competitive, resource markets. Required of all majors in Economics. Normally offered every semester.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-312 Intermediate Macro Theory**

Prerequisites:

EC-101 and EC-102

Credits:

4.00

Description:

This course covers the neoclassical and Keynesian models of aggregate economic activity. Coverage of the measurement of economic variables, such as aggregate income, the inflation rate, and the unemployment rate. Examines the behavior of the economy under conditions of price flexibility in the long run and price rigidity in the short run under rational and adaptive expectations. Analysis of the effect of changes in taxes and government expenditures, monetary policy and deficits on the economy. Coverage of the sources of economic growth. Required of all majors in Economics. Normally offered every semester.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-402 Mathematical Economics**

Prerequisites:

EC-101 and MATH-134 or MATH-165

Credits:

4.00

Description:

This course introduces the mathematical basis of economic theory. Emphasis is placed on the mathematical tools that have been developed for various applications, with a focus on applied microeconomic analysis. The techniques of comparative-statics analysis are developed. Univariate and multivariate calculus are then presented in the context of unconstrained and constrained optimization. The course concludes by introducing the foundations of discrete-time and continuous-time dynamic optimization.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-420 Special Topics in Economics**

Credits:

4.00

Description:

Special Topics course. Topic varies semester to semester.

Type:

Social Science

- **EC-421 Public Economics: Tax and Budget**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

The theory of tax policy and tax structure. The effects on economic behavior (including labor supply, saving, risk-taking and investment, charitable giving, and growth) of different taxes (income, sales, value-added, inheritance, wealth, property). Tax equity, efficiency and incidence, in the United States and in comparative perspective. Additional topics include modeling state taxes; social security and pensions; and tax compensation. Normally offered yearly.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-423 Economics of Regulation**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

This course examines regulation and analyzes the structure, conduct, and performance of American industry. Monopoly and strategic behavior in oligopoly and monopolistic competition are considered. U.S. antitrust law and the effect of regulatory laws on industrial performance are explored. Regulatory practices, rate setting, deregulation, public-enterprise pricing, and issues in privatization are examined, with an emphasis on case studies and policy analysis. Normally offered every other year.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-430 International Trade Theory & Policy**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

This course examines theories of international trade. The policy implications of each theory are explored and the effect of trade on the welfare of the nation is examined. Also the development of trade blocs and the the political economy of trade are studied. Normally offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-431 History of Economic Thought**

Prerequisites:

EC-101 and EC-102

Credits:

4.00

Description:

Presents the leading contemporary schools of economic thought as the outcome of theoretical and philosophical controversies that began with the ancient Greeks and that continue today. The course covers the major contributors to economic thought, including Aristotle, Aquinas, the mercantilists, and the contributors to the 18th-century enlightenment, notably Adam Smith and David Hume. Going forward, it considers Marx, the neoclassical school of Jevons, Menger and Walras and the Keynesian school, along with some of the more modern schools such as behaviorism, institutionalism and cognitive economics. The contributions of the economists and philosophers studied in the course are considered in context of the times in which they wrote and lived. Students will acquire a grasp of the principal tenets of contemporary economic theory as well as an understanding of the historical origins of the disputes that still divide economists on major theoretical and philosophic issues.

Type:

BSJ SOCIAL SCIENCE

- **EC-432 Managerial Economics**

Prerequisites:

EC-101 and EC-102

Credits:

4.00

Description:

This is an applied course in microeconomics. The focus is on the application of economic theory and methods to examine how an organization can achieve its objectives most efficiently. Various economic tools that are frequently used in solving managerial problems will be presented. Topics include optimization techniques applied to demand and production functions, linear programming, risk analysis and portfolio theory. Normally offered every year.

Type:

Quantitative Reasoning

- **EC-433 Public Choice**

Prerequisites:

EC-101 and EC-102

Credits:

4.00

Description:

This course considers the degree to which it is possible to explain, predict, and guide political decision through the application of economic analysis. The course is organized around two competing visions of public choice: (1) a traditional organic approach that sees the core problem for public choice as requiring the maximization of social welfare and (2) a newer contractual approach that sees that problem as requiring attention to the institutional framework within which political decisions are made. Topics to be considered include the Arrow paradox and other problems in aggregating individual choices, rent-seeking, the Leviathan hypothesis, and non-market demand-revealing methods.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-435 Economics of Energy and Natural Resources**

Prerequisites:

Take EC-101;

Credits:

4.00

Description:

This course applies economic analysis to identify the origins, consequences, and policy implications of problems related to renewable and non-renewable natural resources, with particular attention to energy. Resources considered include forests, fisheries, water, minerals, and land. Energy resources covered include oil, gas, coal, nuclear, and alternatives (wind, solar, biomass, hydrogen, etc.), as well as electricity. Concepts examined include externalities, learning-by-doing, peak-load pricing, regulation, sustainability, cost-benefit analysis, and the commons problem.

Type:

BSJ SOCIAL SCIENCE,Social Science

- **EC-440 International Financial Economics**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

This course is a combination of International Finance and Corporate Finance and designed to give students a strong foundation in the theory and practice of multinational financial management. Course materials include (a) basics of corporate finance and capital asset pricing, (b) foreign currency futures, (c) derivative securities in foreign exchange markets such as currency futures, options, swaps, (d) exchange risk management for multinational corporations, (e) global capital markets and financial crisis.

Type:

Social Science

- **EC-442 International Monetary Economics**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

The balance of payments and foreign exchange markets and instruments, and the determination of exchange rates. Balance-of-payments adjustments under alternative exchange-rate systems, international liquidity, international economics policy and open economy macroeconomics.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-445 The Economics of the European Union**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

An economic analysis of the European Union, the history of European monetary and economic integration. and the creation of the Euro. A survey of the development and evolution of key European policies, such competition, industry, agriculture, environment, regional, etc. A discussion of economic implications of the enlargement of the European Union, as well as its trade relations with the U.S. and other countries within the context of the World Trade Organization.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-450 Applied Econometrics**

Prerequisites:

STATS-250 or permission of instructor

Credits:

4.00

Description:

This course begins with a brief review of statistical methods, including probability theory, estimation, and hypothesis testing. This background is used in the construction, estimation, and testing of econometric models. The consequences of a misspecified model, where the assumptions of a classical regression model are violated, are studied and the appropriate remedial measures are suggested. Other topics include dummy variables, binary choice models, and autoregressive models. Emphasis is on applied aspects of econometric modeling. There is extensive use of statistical software for data analyses. Normally offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-460 Game Theory**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

This course introduces students to the foundations of game theory using applications from economics and everyday decision-making. The course examines the common strategic elements of interactions between consumers and producers, governments and citizens, politicians and their constituencies, countries and their trading partners, and various other participants in social relationships. The course provides a theoretical framework for modeling strategic interaction, beginning with the development of the concept of a Nash equilibrium, reputation, signaling, collective-action problems, and voting procedures and strategies. Normally offered every other year.

Type:

Quantitative Reasoning

- **EC-483 Money, Banking & Financial Markets**

Prerequisites:

EC 101, EC 102

Credits:

4.00

Description:

This course examines the role of depository institutions and the Federal Reserve system in determining the supply of money. The course also explains the financial environment and the role of monetary policy decisions on changes in price, interest rates, money, and economic activity. The course provides the student with both theoretical and applied analysis. Prerequisites: EC 101, EC 102.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-490 Senior Seminar in Economics**

Prerequisites:

EC-450 or STATS-350 and Senior Standing; Or permission of Undergraduate Director.

Credits:

4.00

Description:

This is a required course for all students majoring in economics, to be taken in the spring semester of their senior year. Students are required to develop an economic thesis project in consultation with the professor for the course and to present it to the class.

Type:

BSJ SOCIAL SCIENCE, Social Science

- **EC-503 Internship in Economics**

Prerequisites:

Instructor's consent required

Credits:

4.00

Description:

Approximately 12 hours per week working in a position designed to give the student responsibility and a learning opportunity in economics. Interested students should consult the instructor in advance.

Type:

Social Science, BSJ SOCIAL SCIENCE

- **EC-504 Economic Competitiveness: Theory and Practice**

Prerequisites:

Instructor's consent required

Credits:

4.00

Description:

This course examines the concept of economic competitiveness among nations and states and its usefulness to policymakers seeking to improve economic conditions. The emphasis will be on state-based economic competitiveness. We will read the current literature on economic growth and competitiveness and explore the current controversy surrounding the shortcomings of business climate indices. Special attention will be given to Beacon Hill Institute's index which attempts to identify the states with the sets of policies that sustain long-term economic growth and sustainable high incomes for citizens. The student will apply a stress test to the BHI index identifying its strengths and weaknesses. To learn how the index is used by professionals, the student will also compare the index against similar measures and interview at least two practitioners on how their states apply the index. The student will meet regularly with her advisor and submit a research paper and a professional memorandum advising BHI on how best to improve the index.

Type:

Expanded Classroom Requirement, Social Science

• EC-510 EC Independent Study

Prerequisites:

An independent study form must be submitted to the CAS Dean's Office.

Credits:

1.00- 5.00

Description:

Independent study in economics

Type:

Social Science, BSJ SOCIAL SCIENCE

• EC-511 Professional Development in Economics

Prerequisites:

CAS-201 and at least 54 credits

Credits:

1.00

Description:

This one-credit course is designed to explore career opportunities in economics in depth. Classroom discussions, writing assignments, and site visits will help prepare students to identify and secure internship and post-graduate employment opportunities. Additional career paths, such as pursuing graduate studies in economics or related fields, and the application process, will also be addressed. The goal of this course is to help students reach their fullest professional potential following graduation.

• STATS-250 Applied Statistics

Prerequisites:

MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

Credits:

4.00

Description:

Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

Type:

Quantitative Reasoning

• STATS-H250 Honors Applied Statistics

Prerequisites:

MATH-128, MATH 130, 134, 146, or 165 and Honors Course; GPA of 3.3

Credits:

4.00

Description:

Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analyses. The use of computers is emphasized throughout the course. Prerequisite: MATH 130, MATH 134, MATH 146, or MATH 165 Honors Course GPA of 3.2 or higher required. 1 term - 4 credits Normally offered every year.

Type:

Quantitative Reasoning,Honors

• STATS-350 Applied Statistical Methods

Prerequisites:

STATS 250

Credits:

4.00

Description:

This application-oriented course is designed to go beyond the topics covered in STATS 250. It includes topics like Analysis of Variance (ANOVA), special topics in regression analysis and index numbers. Further, time series data, which consist of values corresponding to different time intervals, are analyzed. The objective is to examine past time series values to forecast, or predict future values. Seasonal variations are also incorporated in the forecasts. The course will provide useful computer skills involving various statistical packages and is an excellent preparation for graduate work in business and social sciences.

Type:

Social Science

2015-2016 Archived Catalog Information

Education Studies

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Minor Requirements](#)
- [Education Studies Courses](#)

Minor Requirements: 5 courses, 20 credits

Core Requirements (2 courses, 8 credits)

- EDUC-110 Introduction to Education

Credits:

4.00

Description:

Working with children and adolescents is a facet of many professions. This course will introduce students to the study of education occurring in formal and informal settings. This course focuses on the relationships among, and between, teachers, discourse, and community. Students will glean insight into the relationship of school and society as well as power and control in American Education. Required of all education minors. Five hours of field work required.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **EDUC-202 Educational Psychology**

Credits:

4.00

Description:

Examines the nature and development of human abilities and the teaching-learning process. Considers the facts and generalizations of child and adolescent growth and development, working with diverse cultures, and special needs children in school settings. Ten hours of field work.

Term:

Offered Both Fall and Spring

Type:

Social Science

Elective Courses (3 courses, 12 credits)

Choose three of the following, at least one of which must be a 300-level course:

- **EDUC-203 Service Learning: Pre-K Outreach and Tutoring**

Credits:

4.00

Description:

Students complete a minimum of 35 hours of tutoring in an educational setting, or community organization, in conjunction with a weekly seminar on campus. Open to all majors. No previous experience required.

Term:

Offered Both Fall and Spring

Type:

- **EDUC-205 Service Learning: Community Tutoring Project**

Prerequisites:

This class fulfills the Expanded Classroom Requirement

Credits:

4.00- 8.00

Description:

Students complete 35 hours per semester of educational tutoring in a local school (K-5), in conjunction with a weekly seminar on campus. Open to all majors. No previous experience required.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement, Social Science, Local Engagement Experience

- **EDUC-208 Service Learning: College Access**

Credits:

4.00

Description:

Students complete a minimum of 35 hours of tutoring and coaching in an educational setting, or a community organization in conjunction with a weekly seminar on campus. Programs include COACH, Connections to College, and others. Open to all majors. No previous experience required.

Term:

Offered Both Fall and Spring

Type:

- **EDUC-210 Service Learning: Alternative Spring Break**

Prerequisites:

Open to all majors, Instructor's signature required

Credits:

4.00

Description:

Students complete all research, travel, and reporting requirements in conjunction with Suffolk University's Alternative Spring Break. Open to all majors. No previous experience required.

Term:

Offered Spring Term

Type:

Social Science

- **EDUC-214 Introduction to Teaching**

Credits:

4.00

Description:

This course introduces students to the basic competencies of school teaching. Topics include: lesson planning, classroom management, grouping for instruction, effective pedagogical practices, assessment methods, requirements for licensure in Massachusetts, and discipline specific curriculum development using the curriculum frameworks/common core state standards. Field observations (25 hours) required.

- **EDUC-215 Service Learning Jumpstart Community Literacies**

Credits:

4.00

Description:

This course is designed for Jumpstart Corps members to develop competencies in teaching strategies for reading and writing. The course introduces theoretical and instructional issues in the development of literacy skills. Students will be engaged in reflective, critical consideration of students' diverse needs in the acquisition of literacy.

- **EDUC-310 Culturally Responsive Education**

Credits:

4.00

Description:

The relationship between cultural diversity and schooling is explored by examining impediments to academic achievement and advancement by minority students, non-native English speaking students, and other under-represented groups. Topics include: standardized testing, identification of inequities, legal and ethical responsibilities of teachers, and promoting equity. Ten pre-practicum observation hours required for teacher candidates.

Term:

Offered Fall Term

Type:

Cultural Diversity Opt A, Social Science, Diverse Perspectives

- **EDUC-313 Classroom Communication**

Credits:

4.00

Description:

Examines communication between and among teachers and students in the classroom setting. Topics include: communication apprehension, building oral fluency, use of media technology to enhance student learning, cooperative learning, and related professional and legal responsibilities of teachers. Ten pre-practicum observation hours required for Teacher Candidates.

Term:

Offered Spring Term

Type:

Social Science

- **EDUC-315 Strategies for Emerging English Learners**

Credits:

4.00

Description:

This course examines the specific needs and challenges of the various language and cultural groups in schools. Topics include: theories of 1st and 2nd language acquisition, strategies for teaching academic content, modifying instruction in the mainstream classroom, creating classroom cultures that invite all students into learning, the role of advocacy and professional collaboration in ESL, and analysis of policies related to assessment and placement of English Language Learners.

Type:

Diverse Perspectives, Social Science

- **EDUC-402 History & Philosophy of American Education**

Credits:

4.00

Description:

Explores the evolution of schooling in the United States from The English High School to present. Theorists include: Mann, Franklin, Dewey,Sizer, and others.

Term:

Offered Spring Term

Type:

Social Science

- **EDUC-408 Youth Programming**

Credits:

4.00

Description:

This course focuses on the exploration and understanding of issues, strategies and frameworks related to developing and implementing youth programs. Students will be exposed to developmental theories, and various components of effective youth programmatic planning. Topics include: conducting needs assessments, developing goals and objectives, logistics planning, recruitment and training, and program evaluation.

Type:

Social Science

- **EDUC-424 Global Issues and Trends in American Education**

Credits:

4.00

Description:

Examines major current issues of educational policy against the background of demographic trends, technological innovations, standardized testing, and curricular shifts.

Term:

Occasional

Type:

Social Science

- **EDUC-510 Independent Study**

Prerequisites:

An independent study form must be submitted to the CAS Dean's Office.

Credits:

1.00- 4.00

Description:

Members of the Department will meet with students to direct their research in areas of special interest to them. Projects of this sort will be authorized only in unusual circumstances upon the recommendations of the Department Chairperson and with the approval of the Dean. Offered by arrangement only.

Type:

Social Science

• **SOC-113 Introduction to Sociology**

Credits:

4.00

Description:

An introduction to the sociological understanding of human interaction, group process and social structures. Students are introduced to basic concepts, theories and methods of sociological investigation. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

• **SOC-116 Social Justice**

Credits:

4.00

Description:

An examination of traditional and contemporary problems associated with major social institutions such as the family, economics, government and education. Social forces related to ethnicity, social class, health and welfare, and urbanization are also included. Alternative remedial measures based on behavioral science theories are discussed. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **SOC-209 Youth in American Society**

Credits:

4.00

Description:

The goal of the course is to provide a broad overview of children and youth and their place in American society. Particular attention is paid to (1) the impact of geographical location, social class, gender, race, sexuality, popular culture, mass media, and technology; (2) the intersection of youth cultures and mainstream society; and (3) the contention that some youth cultures are deviant.

- **SOC-232 Street Gangs**

Credits:

4.00

Description:

This course provides an overview of youth gangs and their sociological underpinnings, which are rooted in poverty and racism. Topical areas are discussed in relation to these key factors. Study topics include the history of gangs, theories about gang formation and individual membership, gangs and criminal behavior, socio-cultural importance of gangs, and strategies to control gang behavior. The course will utilize current gang issues in the US generally and in Massachusetts in particular as a basis to better understand the nuances of youth gangs.

Type:

Cultural Diversity Opt A

- **SOC-276 Sex and Society**

Credits:

4.00

Description:

An examination of human sexuality as experience and institution. Sexuality is considered in relationship to power, love, religion, family, race, gender, sexual orientation, violence and courtship.

Term:

Occasional

- **SOC-308 Sociology of Education**

Credits:

4.00

Description:

Education is key in a democracy in which students need to develop themselves into knowledgeable people, with a strong sense of self, able to think critically with a developed ability to question others and to feel and act as empowered, active citizens. This is a tall order given the varieties of pressures on schools these days. But it is extremely important for these skills to be developed. With the shift in the economy, schools are going to be the critical factor in enabling students to compete in a globalized workplace and world.

- **SOC-322 Tough Guise**

Credits:

4.00

Description:

Representations of masculinity in contemporary societies are examined in terms of their social sources and consequences. Images and scripts for doing masculinity are explored through case studies of film, television, sports, advertising, comic books, video games, music and other media that define what it means to be a man.

Term:

Occasional

Type:

Cultural Diversity Opt A

- **SOC-337 Juvenile Justice and the Law**

Credits:

4.00

Description:

Considers the problems surrounding the legal definition and handling of juveniles who confront the law as offenders, clients and victims. Attention is devoted to the study of the special legal categories and procedures established for juveniles, the problems facing professionals providing juvenile services and the most significant directions of legal and social change affecting youth in our society. Normally offered every year. Fulfills the Sociology Department's Social Policy requirement.

- **SOC-343 Child Welfare Services**

Credits:

4.00

Description:

A survey of the historical development and current composition of services for children, including income maintenance, daycare, foster and institutional care and the adoption process.

Term:

Occasional

- **SOC-344 Community Organization**

Credits:

4.00

Description:

A study of the different types and functions of communities. Through identifying community needs, resources, and structure, students learn effective ways to organize for change.

Please note that students majoring in Sociology may only double count one sociology course within the Education Studies minor.

2015-2016 Archived Catalog Information

Education Studies

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Minor Requirements](#)
- [Education Studies Courses](#)

- EDUC-110 Introduction to Education

Credits:

4.00

Description:

Working with children and adolescents is a facet of many professions. This course will introduce students to the study of education occurring in formal and informal settings. This course focuses on the relationships among, and between, teachers, discourse, and community. Students will glean insight into the relationship of school and society as well as power and control in American Education. Required of all education minors. Five hours of field work required.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **EDUC-202 Educational Psychology**

Credits:

4.00

Description:

Examines the nature and development of human abilities and the teaching-learning process. Considers the facts and generalizations of child and adolescent growth and development, working with diverse cultures, and special needs children in school settings. Ten hours of field work.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **EDUC-203 Service Learning: Pre-K Outreach and Tutoring**

Credits:

4.00

Description:

Students complete a minimum of 35 hours of tutoring in an educational setting, or community organization, in conjunction with a weekly seminar on campus. Open to all majors. No previous experience required.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement, Social Science

- **EDUC-205 Service Learning: Community Tutoring Project**

Prerequisites:

This class fulfills the Expanded Classroom Requirement

Credits:

4.00- 8.00

Description:

Students complete 35 hours per semester of educational tutoring in a local school (K-5), in conjunction with a weekly seminar on campus. Open to all majors. No previous experience required.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement, Social Science, Local Engagement Experience

- **EDUC-208 Service Learning: College Access**

Credits:

4.00

Description:

Students complete a minimum of 35 hours of tutoring and coaching in an educational setting, or a community organization in conjunction with a weekly seminar on campus. Programs include COACH, Connections to College, and others. Open to all majors. No previous experience required.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement, Social Science

- **EDUC-209 Reading and Writing in the Classroom**

Credits:

4.00

Description:

Students will become knowledgeable about the various approaches to teaching reading and writing in the content areas. This course is designed for teaching the necessary literacy skills in both Middle School and High School. Topics include: formal and informal assessment techniques, differentiation of instruction, diagnosing problems and integrating reading and writing into curriculum and instruction.

Type:

Social Science

- **EDUC-210 Service Learning: Alternative Spring Break**

Prerequisites:

Open to all majors, Instructor's signature required

Credits:

4.00

Description:

Students complete all research, travel, and reporting requirements in conjunction with Suffolk University's Alternative Spring Break. Open to all majors. No previous experience required.

Term:

Offered Spring Term

Type:

Social Science

- **EDUC-214 Introduction to Teaching**

Credits:

4.00

Description:

This course introduces students to the basic competencies of school teaching. Topics include: lesson planning, classroom management, grouping for instruction, effective pedagogical practices, assessment methods, requirements for licensure in Massachusetts, and discipline specific curriculum development using the curriculum frameworks/common core state standards. Field observations (25 hours) required.

- **EDUC-215 Service Learning Jumpstart Community Literacies**

Credits:

4.00

Description:

This course is designed for Jumpstart Corps members to develop competencies in teaching strategies for reading and writing. The course introduces theoretical and instructional issues in the development of literacy skills. Students will be engaged in reflective, critical consideration of students' diverse needs in the acquisition of literacy.

- **EDUC-310 Culturally Responsive Education**

Credits:

4.00

Description:

The relationship between cultural diversity and schooling is explored by examining impediments to academic achievement and advancement by minority students, non-native English speaking students, and other under-represented groups. Topics include: standardized testing, identification of inequities, legal and ethical responsibilities of teachers, and promoting equity. Ten pre-practicum observation hours required for teacher candidates.

Term:

Offered Fall Term

Type:

Cultural Diversity Opt A, Social Science, Diverse Perspectives

- **EDUC-312 Curriculum and Pedagogy: Middle and Secondary School**

Prerequisites:

This course fulfills the Expanded Classroom Requirement

Credits:

4.00

Description:

Introduces students to the basic competencies of Middle and Secondary school teaching. Topics include: behavioral problems, classroom management, grouping for instruction, motivation and reward systems, individualized instruction, IEP's, requirements for licensure in Massachusetts, and discipline specific curriculum development using the curriculum frameworks developed by the Massachusetts Department of Education. Field observations and experiences are grounded in theoretical discussion as students begin to develop their personal philosophies of education. Field observations (40 hours) required. Required prior to student teaching.

Term:

Offered Fall Term

Type:

Expanded Classroom Requirement, Social Science

• EDUC-313 Classroom Communication

Credits:

4.00

Description:

Examines communication between and among teachers and students in the classroom setting. Topics include: communication apprehension, building oral fluency, use of media technology to enhance student learning, cooperative learning, and related professional and legal responsibilities of teachers. Ten pre-practicum observation hours required for Teacher Candidates.

Term:

Offered Spring Term

Type:

- **EDUC-315 Strategies for Emerging English Learners**

Credits:

4.00

Description:

This course examines the specific needs and challenges of the various language and cultural groups in schools. Topics include: theories of 1st and 2nd language acquisition, strategies for teaching academic content, modifying instruction in the mainstream classroom, creating classroom cultures that invite all students into learning, the role of advocacy and professional collaboration in ESL, and analysis of policies related to assessment and placement of English Language Learners.

Type:

Diverse Perspectives, Social Science

- **EDUC-402 History & Philosophy of American Education**

Credits:

4.00

Description:

Explores the evolution of schooling in the United States from The English High School to present. Theorists include: Mann, Franklin, Dewey, Sizer, and others.

Term:

Offered Spring Term

Type:

Social Science

- **EDUC-408 Youth Programming**

Credits:

4.00

Description:

This course focuses on the exploration and understanding of issues, strategies and frameworks related to developing and implementing youth programs. Students will be exposed to developmental theories, and various components of effective youth programmatic planning. Topics include: conducting needs assessments, developing goals and objectives, logistics planning, recruitment and training, and program evaluation.

Type:

Social Science

- **EDUC-414 Urban Schooling**

Credits:

4.00

Description:

This course is an in-depth investigation of policies effecting urban schools; topics include: demographic influence on education, influences of national and state regulations on urban schools, sociological factors unique to urban schools, and in-depth analysis of equity and achievement.

Term:

Occasional

Type:

Social Science

- **EDUC-415 Practicum: Middle School Teaching**

Prerequisites:

Coordinator of Student Teaching or Program Director's Consent

Credits:

8.00

Description:

A 12-week practicum experience as a student teacher in a middle school. See regulations regarding student teaching.

Term:

Offered Spring Term

Type:

Social Science

- **EDUC-416 Practicum: Secondary School Teaching**

Prerequisites:

Instructor's or Program Director's Consent

Credits:

8.00

Description:

A 12-week practicum experience as a student teacher in a secondary school. See regulations regarding student teaching.

Term:

Offered Spring Term

Type:

Social Science

- **EDUC-417 Assessment Theory and Practice**

Credits:

4.00

Description:

This course examines the development of formative, summative, authentic, and alternative assessment in education. Seminal works by Archbald, Baron, Bloom, Kleinsasser, Schwab, and others comprise the theoretical component. The second half of the course is dedicated to the selection, application, and integration of formal and informal assessment strategies and tools. A final project requires students to design an assessment tool appropriate for their academic area and age level. Instructional strategies include case studies, class discussions, student presentations, and research reviews.

Term:

Offered Fall Term

Type:

Social Science

- **EDUC-424 Global Issues and Trends in American Education**

Credits:

4.00

Description:

Examines major current issues of educational policy against the background of demographic trends, technological innovations, standardized testing, and curricular shifts.

Term:

Occasional

Type:

Social Science

- **EDUC-510 Independent Study**

Prerequisites:

An independent study form must be submitted to the CAS Dean's Office.

Credits:

1.00- 4.00

Description:

Members of the Department will meet with students to direct their research in areas of special interest to them. Projects of this sort will be authorized only in unusual circumstances upon the recommendations of the Department Chairperson and with the approval of the Dean. Offered by arrangement only.

Type:

Social Science

2015-2016 Archived Catalog Information

Electrical Engineering

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Electrical Engineering Courses](#)

Major Requirements: 25 courses and corresponding laboratories, 97 credits

Most Electrical Engineering courses are accompanied by a laboratory. The analysis and design features of the laboratory exercises help to bridge the theoretical with the practical aspects of electrical engineering. A competent engineer should have proficiency in both areas.

There are two major course groups within the Engineering curriculum. The "ECE" courses (Electrical and Computer Engineering) focus on the electrical engineering field. The "ENS" courses (Engineering in Science) involve general topics.

Upper-level courses in engineering depend heavily on foundation courses; therefore, a minimum grade of "C" is required in all prerequisite courses prior to enrolling in more advanced courses to help maximize a student's chances of success in mastering the material.

Students are expected to take at least two elective courses in the EE field (either of ECE or ENS format). These typically cover the student's selected area of focus in greater depth.

Engineering Requirements (13 courses and corresponding laboratories where applicable, 52 credits)

- ECE-101 Digital Electronics

Prerequisites:

ECE L101 MUST BE TAKEN CONCURRENTLY

Credits:

3.00

Description:

This course introduces the elements and tools of digital design. The course covers Boolean algebra, Karnaugh maps, Logic gates and digital circuits, analysis and design of combinational and sequential circuits, and timing issues. Adders, decoders, multiplexers, flip-flops, counters, and registers are implemented using TTL or CMOS ICs as well as VHDL-programmed FPGAs. Formerly ECE 203

Term:

Offered Fall Term

- **ECE-L101 Digital Electronics-Lab**

Prerequisites:

ECE 101 MUST BE TAKEN CONCURRENTLY.

Credits:

1.00

Description:

Illustrates the concepts of ECE-101. Exercises in various forms of Combinational and Sequential Logic design. Use of test equipment. Design projects will include a digital security system, use of PSPICE to verify feasibility of some designs. FPGA board citing Xilinx, software development tools from Xilinx and other third parties are introduced. Offered yearly. Formerly ECE L203

Term:

Offered Fall Term

- **ENS-103 Introduction to Engineering**

Prerequisites:

ENS L103 MUST BE TAKEN CONCURRENTLY.

Credits:

3.00

Description:

This course provides exposure to engineering practice, with particular focus on electrical engineering components such as circuit elements and systems. It seeks to go beyond the mathematics and provide an intuitive appreciation of functional devices. Examples taken from a broad swath of technological history illustrate significant crossroads, decisions, and inventiveness. Emphasis is placed on learning to think as an engineer - assessment of problems, candidate solution tradeoffs, and implementations. Frequent exercises in creative engineering design will be used. Students will be required to design several elementary devices, such as a magnet, a capacitor, a timing device, and a motor, which they will enter in a competition for overall strength, compactness, accuracy, or speed. Sometimes assignments relate to "survival on an island" concerns, such as communication or drinking water. Students also learn about reverse engineering by selecting, building, troubleshooting, and presenting an electronic kit of their choice. A term paper determining the engineering behind a topic of their choice will also be written and presented. On occasion (see ENS L103) there will be team competitions between various smaller groups in the class.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

• ENS-L103 Intro to Engineering Lab

Prerequisites:

Must be taken Concurrently w/ ENS-103

Credits:

1.00

Description:

The Lab is designed to provide opportunities to gain familiarity with engineering tools. Students will be introduced to parts (e.g. learn the resistor color code), test equipment (multimeters, prototyping trainers, signal generators, and oscilloscopes), and construction techniques (wiring, soldering, troubleshooting). Although it varies from year to year, Class Projects can be built during the Lab sessions. In the past these have included a 25 Watt electric generator, various door lock systems (both mechanical and electronic), and an AM transmitter and receiver (all projects made from scratch). It is likely that 2010-2011 may introduce some robotic creations for a competition. Electronic kits and motors can also be built and serviced in the Lab. There is an adjoining machine shop, which can be utilized (with supervision), for fabricating items. Individual creativity is encouraged, and informal problem solving sessions occasionally occupy lab time. However, the lab is accessible outside of the traditional scheduled time.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **ECE-105 Circuit Theory I**

Prerequisites:

ECE L105 must be taken concurrently; MATH 165 may be taken concurrently

Credits:

3.00

Description:

Basic elements and analysis techniques of DC circuits. Coverage includes resistors, capacitors, inductors, and sensors ; independent and dependent sources. Ohm's law, power, energy, and power transfer. Kirchoff's voltage and current laws; Nodal and Loop analyses; Thevenin and Norton equivalents; step and transient responses of first-order systems; time constants. Emphasis on functional circuits. Prerequisite: Must be taken concurrently with ECE L105. Must take MATH 121(must have a minimum grade of C in preqs.) 1 term - 3 credits.

Term:

Offered Spring Term

- **ECE-L105 Circuit Theory Lab I**

Prerequisites:

ECE 105 must be taken concurrently

Credits:

1.00

Description:

The Circuit Theory Lab I is designed to supplement the Circuit Theory I course.

Term:

Offered Spring Term

- **ENS-L202 Technical Communication**

Prerequisites:

WRI-102, PHYS 152 AND L152;

Credits:

4.00

Description:

Emphasis on clarity, precision, accuracy, and conciseness in scientific writing. Assignments include a team-based design-contest proposal, an oral presentation on current scientific topics, a team-based design of an experiment with a write-up and an oral presentation, a paper on engineering ethics concerning the Challenger and an instruction manual. Memo writing, summary writing, and resumes are also included.

Term:

Offered Fall Term

- **ECE-205 Circuit Theory II**

Prerequisites:

ECE 105 with C or better; MATH 166 & PHYS 152 concurrently

Credits:

3.00

Description:

Analysis and design of lumped networks. Resistive elements, superposition, nodal analysis, dependent sources, equivalence theorems. Energy storage in elements, dynamics of first and second order networks, transient responses, phasors, sinusoidal steady state analysis, steady state power analysis, three phase power circuits. Offered yearly.

Term:

Offered Fall Term

- **ECE-L205 Circuit Theory II Lab**

Prerequisites:

ECE 205 MUST BE TAKEN CONCURRENTLY

Credits:

1.00

Description:

Illustrates the concepts of ECE 205. Simulations with PSPICE, LABVIEW, NXT Robotics, INCSYS Power Simulator, Mathematica; construction and design. First order, second order transients, ideal and non-ideal transformer circuits, sinusoidal steady state circuits, power grid simulation. Offered yearly.

Term:

Offered Fall Term

- **ECE-206 Solid State Devices and Circuits**

Prerequisites:

ECE L206 must be taken concurrently; ECE 205(must have a minimum grade of C in preqs.)

Credits:

3.00

Description:

Review of Thevenin and Norton Equivalent circuits. Frequency Domain analysis and Bode Plots. Representation of an active device by its Gain, Input and Output Resistance. Thorough coverage of op amps - circuits, applications, and inherent limitations. Introduction to semiconductor physics and the PN junction. Diode circuits, applications, and models. Zener diodes and power supplies. Ripple estimations. The Bipolar Junction Transistor - large and small signal analyses. Active, cutoff, and saturation region characterization. Hybrid Pi and T models. Basic transistor configurations - common collector, common base, and common emitter - along with their characteristics, applications, and tradeoffs. Estimation of bandwidth using open circuit time constants. Prerequisite: ECE 205. Must have at least a C in this. Co-requisite: ECE L206

Term:

Offered Spring Term

- **ECE-L206 Solid State Devices & Circuits Lab**

Prerequisites:

ECE 206 must be taken concurrently

Credits:

1.00

Description:

The Solid State Devices & Circuits Lab is designed to supplement the Solid State Devices & Circuits course.

Term:

Offered Spring Term

- **ECE-306 Solid State Devices, Power and Circuits**

Prerequisites:

ECE-206 with a minimum grade of C. ECE L306 concurrently

Credits:

3.00

Description:

Continuation of Solid State Dev & Circuits I, with emphasis on MOSFET field effect transistors; Physical structure, I-V characteristics, modeling, use as a switch and CMOS inverter, biasing circuits, and basic amplifier configurations - common drain, common gate, and common source. Differential Amplifiers - BJT and MOSFET implementations, along with small and large signal analysis. Multistage circuits, active loads. Design of current source and current mirrors. Internal capacitance and high frequency limitations. Low midband, and high frequency analyses of transistor amplifiers. Miller effect. Open and Short Circuit Time Constants. Cascade and Cascode configurations. Frequency response of amplifiers. Significant circuit design activities. Course tightly coupled to ECE-L306.

Term:

Offered Fall Term

- **ECE-L306 Solid State Devices, Power and Circuits Lab**

Prerequisites:

ECE 306 must be taken concurrently

Credits:

1.00

Description:

Illustrates the concepts of ECE 306. Exercises that help meld the practical aspects with the theoretical concepts taught in ECE 306. Biasing and design of MOSFET amplifiers. Construction of differential and multistage amplifiers. Investigation of different current source implementations. Simulation of bandwidth improvement using Cascode structures. Course concludes with a multistage design challenge using MOSFETs to reach a specified gain, output impedance and bandwidth objective provided by the instructor.

Term:

Offered Spring Term

- **ECE-307 Electric Power Systems - Analysis and Design**

Prerequisites:

MA166; ECE 205; ECE 206 and ECE 403 helpful, but not required

Credits:

4.00

Description:

This course is a first course in understanding the components that compose the high power grid. Generation of power; transmission line characteristics, load impacts. Real and reactive power along with compensation techniques. Transformers. Synchronous generators and motors. Power flow. Power quality. Transient and dynamic stability issues. Handling faults, overvoltage and surge protection. Electronic control by high power

devices such as thyristors, relays, and circuit breakers. HVDC examined. Recent developments and opportunities in the Power field. A strong emphasis placed on problems solving and representative exercises.

- **ECE-311 Embedded Systems**

Prerequisites:

ECE-203 and ECE-206 with a minimum grade of C and ENS-333 OR CMPSC-F131 with a minimum grade of C and ECE-L311 concurrently

Credits:

3.00

Description:

This course will introduce the fundamentals of embedded micro controllers for system level applications: fundamental elements - sensors or transducers, microcontrollers, and the interfacing to external components. Procedural methods for design of the complete embedded system are developed. Programming using assembly, and C languages is utilized. Must take ECE L311 concurrently. Prerequisites: ECE 203 AND ECE 206, AND ENS-333 or CMPSC F131 (minimum grade of C in prereqs.) 1 term - 3 credits.

Term:

Offered Spring Term

- **ECE-L311 Embedded Systems Lab**

Prerequisites:

Must take ECE 311 concurrently

Credits:

1.00

Description:

The Embedded Systems Lab is designed to supplement the Embedded Systems course.

Term:

Offered Spring Term

- **ECE-325 Statistics for Engineering and Science**

Prerequisites:

MATH 166 with a minimum grade of C; Must take ECE L325 concurrently

Credits:

3.00

Description:

Understanding the fundamentals of probability and statistics of experimental data. Measures of central tendency, variation, probability, events, Bayes Rule, discrete and continuous random variables, discrete and continuous distributions including the binomial distribution, normal distribution, chi-square distribution and student distribution, covariance, central limit theorem, hypothesis testing, linear regression, signal processing statistics (EE students), categorical data analysis (non-EE students). Use of Mathematica's statistical packages central to this course. Final project is a project with Biology measuring rat whisker resonance.

Term:

Offered Spring Term

- **ECE-L325 Statistics for Engineering and Science Lab**

Prerequisites:

ECE L325 MUST BE TAKEN WITH ECE 325

Credits:

1.00

Description:

The Engineering Statistics and Probability lab is designed to supplement the Engineering Statistics and Probability course.

Term:

Offered Spring Term

- **ECE-335 Control Systems**

Prerequisites:

ECE 225; Min Grade of C in Prereq. ECE L335 Concurrently.

Credits:

3.00

Description:

Introduction to feedback control systems; control system characteristics (stability, sensitivity, disturbance rejection, steady-state accuracy, transient response); stability analysis; root-locus analysis and design; frequency-response analysis and design; analysis and design of digital control systems. Normally offered bi-yearly.

- **ECE-L335 Control Systems Lab**

Prerequisites:

ECE 335 MUST BE TAKEN CONCURRENTLY.

Credits:

1.00

Description:

The Control Systems lab is designed to supplement the Control Systems course.

- **ECE-403 Applied Electromagnetics**

Prerequisites:

ECE 205 and MATH 265 with a minimum grade of C; ECE L403 must be taken concurrently

Credits:

3.00

Description:

Electrostatics and magnetostatics, including Coulomb's law, Gauss's law, Biot-Savart law and Ampere's law, vector operations in rectangular, cylindrical, and spherical coordinates, divergence theorem and Stokes theorem, electric fields in materials, Lorentz force, magnetic torque, Faraday's law, Maxwell's equation, wave propagation, transmission lines with Smith charts, rectangular waveguides, Hertzian dipole antenna; examples related to power when applicable.

Term:

Offered Spring Term

- **ECE-L403 Applied Electromagnetics Lab**

Prerequisites:

Must be taken concurrently with ECE 403

Credits:

1.00

Description:

The Applied Electromagnetics Lab is designed to supplement the Applied Electromagnetics course.

Term:

Offered Spring Term

- **ECE-410 Communication Systems**

Prerequisites:

ECE 206, ECE 225 and MATH 265 with a minimum grade of C; L410 concurrently

Credits:

3.00

Description:

Coverage of a variety of basic communication systems, their theory of operation, and the analysis of their performance. Review of linear systems, Fourier and Laplace Transforms, and Frequency Domain analysis as needed. Graphical convolution of analog signals. Digital Baseband modulation

techniques. Receiver design with an introduction to Stochastics. Digital Bandpass modulation and demodulation techniques. Analog communication systems including AM, FM, and PM approaches. Consideration of Noise and the resultant system performance. Multiplexing and information compression. ECE 410 and ECE L410 must be taken concurrently.

- **ECE-L410 Communications Systems Lab**

Prerequisites:

ECE 410 must be taken concurrently

Credits:

1.00

Description:

Illustrates the concepts of ECE 410. Exercises will focus both on communication system components and in the construction of a complete communication system. Introduction to FSK, DTMF, Phase lock loops, AM and FM modulation, oscillators, A/D and D/A conversion and the Nyquist rate. Wireless transmissions. Troubleshooting of non-working systems. Students have flexibility in the design and construction a full communication system which includes digitization, rearrangement in parallel and serial formats, transmission over a distance, and reconstruction back to its original analog form.

Engineering Electives (2 courses and corresponding laboratories, 8 credits)

Choose two of the following:

- **ECE-308 Electric Power Systems II**

Prerequisites:

ECE-307

Credits:

3.00

Description:

Course will further pursue issues started in ECE 307. This will include motors and generators, entire system modeling, symmetrical and non-symmetrical fault analysis and correction, design of power converter divides, and recent developments in the power industry. Simulation tools will be

used to model different aspects of a complete electric power system. Essentially this course will cover the second half of the Grainger and Stevenson text introduced in ECE 307.

- **ECE-309 Labview and Electric Circuits and Machines**

Prerequisites:

ECE-206 and ECE-L309 must be taken concurrently

Credits:

3.00

Description:

The purpose of this course is twofold: to give students facility in programming and data acquisition in Labview, and to use Labview to learn about power concepts such as three-phase, power corrections, per units, Star (Wye) and Delta connections, magnetic circuits, power electronic circuits, electric machines. Lab component reinforces concept taught in course.

- **ECE-L309 Labview and Electric Circuits and Machines Lab**

Prerequisites:

ECE-206 and ECE-309 must be taken concurrently.

Credits:

1.00

Description:

The purpose of this course is twofold: to give students facility in programming and data acquisition in Labview, and to use Labview to learn about power concepts such as three-phase, power connections, per units, Star (Wye) and Delta connections, magnetic circuits, power electronic circuits, electric machines. Lab component reinforces concept taught in course.

- **ECE-390 Data & Computer Communications Lab**

Prerequisites:

ECE 225 with a minimum grade of C;

Credits:

3.00

Description:

Basic principles and topics in data communication, local area networks, wide area networks, communication architectures and protocols. Data transmission, encoding, multiplexing, circuit switching, packet switching, frame relays, and asynchronous transfer mode are also discussed. The TCP/IP protocol suite is studied and a project involving configuring, implementing, and installing a network is carried out during the semester.

Prerequisite: ECE 225 or instructor's approval. 1 term - 3 credits. Must be taken concurrently with ECE L390.

Term:

Offered Fall Term

• ECE-L390 Data & Computer Communications Lab

Prerequisites:

Must be taken concurrently with ECE 390

Credits:

1.00

Description:

The Data and Computer Communications lab is designed to supplement the Data and Computer Communications course.

Term:

Offered Fall Term

• ECE-406 Solid State Devices & Circuits III

Prerequisites:

ECE-205 and ECE-206 with a minimum grade of C and ECE-L406 concurrently and at least a 3.0 GPA

Credits:

3.00

Description:

This course is an extension of ECE 206 and ECE 306. Advantages of feedback. Reduction of four fundamental feedback configurations to simplified equivalence. Loop gain and stability issues. Gain and Phase Margins. Frequency compensating techniques. Miller effect. Class A, AB, and B amplifier output stages. Power BJT applications and thermal issues. Voltage mode op amp design - small signal gain and frequency analysis. Current mode op amp design. A/D and D/A converters. Design of Active, BiQuad and Switched Capacitor filters, and LCR resonator circuits. Oscillator design - Wien Bridge and Phase shift types, along with amplitude limiting. Multivibrators.

- **ECE-L406 Solid State Devices & Circuit III Lab**

Prerequisites:

Must be taken concurrently with ECE-406

Credits:

1.00

Description:

Utilizes the concepts of ECE 406. Simulating Dependent sources. PSPICE confirmation of feedback circuit simplification and linearization. Output gain stages and cross-over distortion. Vbe multipliers. Oscillator design. Final project includes design, simulation, and implementation (using discrete parts) of either a voltage or current mode op amp with unity gain stability and determination of band width. Normally offered biyearly.

- **ECE-430 Digital Signal Processing**

Prerequisites:

ECE 225, ECE 203 with minimum grade of C; ECE L430 concurrently

Credits:

3.00

Description:

Discrete signals and systems, digital simulation of analog systems, Z transforms, recursion equations, finite-order systems, Fourier transforms, line spectra and Fourier series, discrete Fourier series and Fast Fourier Transforms (FTT), sampling and interpolation, mean-square approximations, non-recursive and recursive filters, selected topics on algorithms, design and applications of digital signal processing. There will be an end-of-semester design project that will involve students' creativity, design of open ended projects, formulation of alternative solutions, detailed system description, realistic constraints (economic factors, safety, reliability, aesthetics ethics, and social impact).

Term:

Offered Fall Term

• ECE-L430 Digital Signal Processing Lab

Prerequisites:

ECE 430 must be taken concurrently

Credits:

1.00

Description:

Illustrates the concepts of ECE 430. This laboratory course uses MATLAB, Simulink, and the Texas Instruments 6713 DPS board to design, test and implement various projects. The students will also learn how to use FPGA boards to design and implement various DSP systems. There will be a design project at the end of the course designed to synthesize what the students have learned.

Term:

Offered Fall Term

Mathematics and Basic Science Requirements (8 courses and corresponding laboratories where applicable, 32 credits)

• MATH-165 Calculus I

Prerequisites:

MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

Credits:

4.00

Description:

Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-166 Calculus II**

Prerequisites:

MATH 165 with grade of C or better

Credits:

4.00

Description:

Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation, convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-265 Calculus III**

Prerequisites:

MATH 166 with grade of C or better

Credits:

4.00

Description:

Parametric equations and polar coordinates (curves, areas, conic sections); vectors and the geometry of space (the dot product, vector arithmetic, lines and planes in 3-space, the cross product, cylinders and quadratic surfaces); vector functions (limits, derivatives and integrals, motion in space); partial derivatives (functions of several variables, limits and continuity, tangent planes and differentials, chain rule, directional derivatives, gradient,

extrema, Lagrange multipliers); multiple integrals (double integrals, applications); vector calculus (vector fields, line integrals, fundamental theorem for line integrals, Green's Theorem, curl and divergence, parametric surfaces, surface integrals). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **PHYS-151 University Physics I**

Prerequisites:

Take MATH-121 or MATH 165. PHYS L151 concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **PHYS-L151 University Physics Lab I**

Prerequisites:

PHYS 151 concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and

integration required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **PHYS-152 University Physics II**

Prerequisites:

PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

Credits:

3.00

Description:

This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **PHYS-L152 University Physics Lab II**

Prerequisites:

PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **ENS-333 Programming for Engineers**

Prerequisites:

ENS L333 concurrently

Credits:

3.00

Description:

This course will introduce programming concepts in the context of solving engineering problems. Emphasis will be placed on applying the high-level programming skills learned to particular platforms such as embedded systems. Students will implement various microcontroller programming exercises as well as an end of the semester project.

Term:

Offered Spring Term

- **ENS-L333 Programming for Engineers Lab**

Prerequisites:

ENS 333 concurrently

Credits:

1.00

Description:

The Programming for Engineers lab is designed to supplement the Programming for Engineers Course.

- **ECE-225 Linear Systems**

Prerequisites:

MATH 166 and ECE 205 with a minimum grade of C; ECE L225 Concurrently.

Credits:

3.00

Description:

Classification of systems, differential equations, linear algebra, discrete mathematics, derivation of the system model, state variable description, impulse response, convolution, frequency response of discrete and continuous systems. Fourier Series, Fourier transforms, Fourier methods of discrete signals, Laplace transforms, Z transform, analysis of control systems.

Term:

Offered Spring Term

- **ECE-L225 Linear Systems Lab**

Prerequisites:

MUST BE TAKEN CONCURRENTLY WITH ECE 225

Credits:

1.00

Description:

The Linear Systems lab is designed to supplement the Linear Systems course. Matlab simulation of linear systems, Hardware Implementation of Analog Filters, measurement of the transfer function.

Term:

Offered Spring Term

Choose one of the following and its corresponding laboratory:

- **CHEM-111 General Chemistry I**

Prerequisites:

Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:

3.00

Description:

Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **CHEM-L111 General Chemistry I Lab**

Prerequisites:

Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

• **BIO-111 Introduction to the Cell**

Prerequisites:

Must take BIO L111 concurrently

Credits:

3.00

Description:

Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L111 Introduction to the Cell Laboratory**

Prerequisites:

Concurrently with BIO 111

Credits:

1.00

Description:

Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

Senior Project (2 courses, 5 credits)

The Senior Project serves as the capstone experience in the major. Two courses are involved: a one-credit proposal course (ECE-414) and a four-credit implementation, presentation, and documentation course (ECE-415). The Senior Project provides experience on how to narrowly define a project, map it out, implement and troubleshoot it, and then formally present and document the work. Projects selected typically correlate with the student's interests and ability and are carefully monitored to ensure both growth and achievement.

With permission, they may be taken concurrently, but ONLY if the proposal is completed within the first three weeks of the course. Failure to submit a proposal in that time frame will lead to automatic withdrawal from ECE-415.

- **ECE-414 Senior Project Proposal**

Prerequisites:

Take ECE-101, ECE-206, MATH-165;

Credits:

1.00

Description:

The aim of this course is for students to generate a thoughtful and well-written senior project proposal. This course will provide guidelines and critiquing for that purpose. By the end of the course, students will have narrowly identified their project, performed a review of current available related technology, and selected the approach they will pursue. They will also establish a parts list, timetable, set of milestones, and basis or procedure for determining an answer to the question how good is it? At the end of the course they will formally present their project and write a comprehensive project proposal document. Once accepted, they are permitted to take ENS 415 Senior Project. Note that this course is focused on the process of creating a viable proposal. Enough flexibility exists that students may either implement the project they documented in this course when they take ENS 415, or may pursue an alternative project if desired. Also note that this course replaces ECE 411 for the graduating class of 2016.

• ECE-415 Senior Project

Prerequisites:

Take ECE-414;

Credits:

4.00

Description:

For the senior project the student implements, documents, and presents their completed project of the proposal generated in ENS 414. Having defined their project, students gather the resources necessary and proceed to execute their designs. This period will include the construction, testing, troubleshooting, refinement, and evaluation of their project. A formal presentation of the project is made. A professional caliber documentation of the project is also required, and may go through numerous iterations of review. The final project report must consider most of the following: environmental impact, sustainability, manufacturability, ethics, health and safety issues, and political concerns. Time management, prioritization of process, formal communication, overcoming obstacles and meeting deadlines are monitored by the project advisor. Weekly reports and meetings are expected. The advisor also serves as a resource for the student. However, full responsibility for the success of the project rests on the student. Cross-disciplinary projects are encouraged. Note: Replaces ECE 412 for the graduating class of 2016.

Type:

2015-2016 Archived Catalog Information

Electrical Engineering

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Electrical Engineering Courses](#)

- ECE-101 Digital Electronics

Prerequisites:

ECE L101 MUST BE TAKEN CONCURRENTLY

Credits:

3.00

Description:

This course introduces the elements and tools of digital design. The course covers Boolean algebra, Karnaugh maps, Logic gates and digital circuits, analysis and design of combinational and sequential circuits, and timing issues. Adders, decoders, multiplexers, flip-flops, counters, and registers are implemented using TTL or CMOS ICs as well as VHDL-programmed FPGAs. Formerly ECE 203

Term:

Offered Fall Term

- ECE-L101 Digital Electronics-Lab

Prerequisites:

ECE 101 MUST BE TAKEN CONCURRENTLY.

Credits:

1.00

Description:

Illustrates the concepts of ECE-101. Exercises in various forms of Combinational and Sequential Logic design. Use of test equipment. Design projects will include a digital security system, use of PSPICE to verify feasibility of some designs. FPGA board citing Xilinx, software development tools from Xilinx and other third parties are introduced. Offered yearly. Formerly ECE L203

Term:

Offered Fall Term

• **ECE-105 Circuit Theory I**

Prerequisites:

ECE L105 must be taken concurrently; MATH 165 may be taken concurrently

Credits:

3.00

Description:

Basic elements and analysis techniques of DC circuits. Coverage includes resistors, capacitors, inductors, and sensors ; independent and dependent sources. Ohm's law, power, energy, and power transfer. Kirchoff's voltage and current laws; Nodal and Loop analyses; Thevenin and Norton equivalents; step and transient responses of first-order systems; time constants. Emphasis on functional circuits. Prerequisite: Must be taken concurrently with ECE L105. Must take MATH 121(must have a minimum grade of C in preqs.) 1 term - 3 credits.

Term:

Offered Spring Term

• **ECE-L105 Circuit Theory Lab I**

Prerequisites:

ECE 105 must be taken concurrently

Credits:

1.00

Description:

The Circuit Theory Lab I is designed to supplement the Circuit Theory I course.

Term:

Offered Spring Term

- **ECE-205 Circuit Theory II**

Prerequisites:

ECE 105 with C or better; MATH 166 & PHYS 152 concurrently

Credits:

3.00

Description:

Analysis and design of lumped networks. Resistive elements, superposition, nodal analysis, dependent sources, equivalence theorems. Energy storage in elements, dynamics of first and second order networks, transient responses, phasors, sinusoidal steady state analysis, steady state power analysis, three phase power circuits. Offered yearly.

Term:

Offered Fall Term

- **ECE-L205 Circuit Theory II Lab**

Prerequisites:

ECE 205 MUST BE TAKEN CONCURRENTLY

Credits:

1.00

Description:

Illustrates the concepts of ECE 205. Simulations with PSPICE, LABVIEW, NXT Robotics, INCSYS Power Simulator, Mathematica; construction and design. First order, second order transients, ideal and non-ideal transformer circuits, sinusoidal steady state circuits, power grid simulation. Offered yearly.

Term:

Offered Fall Term

- **ECE-206 Solid State Devices and Circuits**

Prerequisites:

ECE L206 must be taken concurrently; ECE 205(must have a minimum grade of C in preqs.)

Credits:

3.00

Description:

Review of Thevenin and Norton Equivalent circuits. Frequency Domain analysis and Bode Plots. Representation of an active device by its Gain, Input and Output Resistance. Thorough coverage of op amps - circuits, applications, and inherent limitations. Introduction to semiconductor physics and the PN junction. Diode circuits, applications, and models. Zener diodes and power supplies. Ripple estimations. The Bipolar Junction Transistor - large and small signal analyses. Active, cutoff, and saturation region characterization. Hybrid Pi and T models. Basic transistor configurations - common collector, common base, and common emitter - along with their characteristics, applications, and tradeoffs. Estimation of bandwidth using open circuit time constants. Prerequisite: ECE 205. Must have at least a C in this. Co-requisite: ECE L206

Term:

Offered Spring Term

- **ECE-L206 Solid State Devices & Circuits Lab**

Prerequisites:

ECE 206 must be taken concurrently

Credits:

1.00

Description:

The Solid State Devices & Circuits Lab is designed to supplement the Solid State Devices & Circuits course.

Term:

Offered Spring Term

- **ECE-225 Linear Systems**

Prerequisites:

MATH 166 and ECE 205 with a minimum grade of C; ECE L225 Concurrently.

Credits:

3.00

Description:

Classification of systems, differential equations, linear algebra, discrete mathematics, derivation of the system model, state variable description, impulse response, convolution, frequency response of discrete and continuous systems. Fourier Series, Fourier transforms, Fourier methods of discrete signals, Laplace transforms, Z transform, analysis of control systems.

Term:

Offered Spring Term

- **ECE-L225 Linear Systems Lab**

Prerequisites:

MUST BE TAKEN CONCURRENTLY WITH ECE 225

Credits:

1.00

Description:

The Linear Systems lab is designed to supplement the Linear Systems course. Matlab simulation of linear systems, Hardware Implementation of Analog Filters, measurement of the transfer function.

Term:

Offered Spring Term

- **ECE-288 Measuring the World**

Credits:

4.00

Description:

The world is addicted to quantifying the essence of everything, from personal IQ, to the speed of a baseball, to our healthiness, or our chances of winning the lottery. Behind most of these numeric values exists a science of measurement. Some of this is referenced to international standards, such as for length, time, weight, or temperature. Others are more arbitrary and subjective, such as ranking Olympic performance in gymnastics, beauty pageants, or popular responses as found in the game show Family Feud. A third category includes controversial areas, such as measuring whether a person is lying when interrogated, or using hype rather than reality to market products. Sometimes statistics are used to predict sports outcomes, such as in the annual March Madness NCAA basketball brackets. Finally, in a world subject to fraud and deception, it can be essential to distinguish legitimate from counterfeit items, such as in money, art, collectibles, and historical documents. Don't get hoodwinked! This course examines all of these, starting with how measurements have been made throughout history, along with a full deck of entertaining terms used during the ages. This may help you sort out your weight, whether given in pounds, kilos, or stones. Often these terms will provide insights into how people lived in different eras. We will also look at some of the technologies currently available to provide these measurements, and unravel the complexities of various sensors that are used. As we consider the meaning of accuracy we may become less naive about how much confidence to ascribe to the results given us. Hovering around all of these measurements should be the question of validity - are they meaningful, useful, or misleading? And the impact they have on society - whether they steer behavior more powerfully than one might originally suspect. Each student will also be given an opportunity to become an expert in an area of measurement of personal interest. By the end o

Type:

SCI TECH ENGNR

- **ECE-306 Solid State Devices, Power and Circuits**

Prerequisites:

ECE-206 with a minimum grade of C. ECE L306 concurrently

Credits:

3.00

Description:

Continuation of Solid State Dev & Circuits I, with emphasis on MOSFET field effect transistors; Physical structure, I-V characteristics, modeling, use as a switch and CMOS inverter, biasing circuits, and basic amplifier configurations - common drain, common gate, and common source. Differential Amplifiers - BJT and MOSFET implementations, along with small and large signal analysis. Multistage circuits, active loads. Design of current source and current mirrors. Internal capacitance and high frequency limitations. Low midband, and high frequency analyses of transistor amplifiers. Miller effect. Open and Short Circuit Time Constants. Cascade and Cascode configurations. Frequency response of amplifiers. Significant circuit design activities. Course tightly coupled to ECE-L306.

Term:

Offered Fall Term

• ECE-L306 Solid State Devices, Power and Circuits Lab

Prerequisites:

ECE 306 must be taken concurrently

Credits:

1.00

Description:

Illustrates the concepts of ECE 306. Exercises that help meld the practical aspects with the theoretical concepts taught in ECE 306. Biasing and design of MOSFET amplifiers. Construction of differential and multistage amplifiers. Investigation of different current source implementations. Simulation of bandwidth improvement using Cascode structures. Course concludes with a multistage design challenge using MOSFETs to reach a specified gain, output impedance and bandwidth objective provided by the instructor.

Term:

Offered Spring Term

- **ECE-307 Electric Power Systems - Analysis and Design**

Prerequisites:

MA166; ECE 205; ECE 206 and ECE 403 helpful, but not required

Credits:

4.00

Description:

This course is a first course in understanding the components that compose the high power grid. Generation of power; transmission line characteristics, load impacts. Real and reactive power along with compensation techniques. Transformers. Synchronous generators and motors. Power flow. Power quality. Transient and dynamic stability issues. Handling faults, overvoltage and surge protection. Electronic control by high power devices such as thyristors, relays, and circuit breakers. HVDC examined. Recent developments and opportunities in the Power field. A strong emphasis placed on problems solving and representative exercises.

- **ECE-308 Electric Power Systems II**

Prerequisites:

ECE-307

Credits:

3.00

Description:

Course will further pursue issues started in ECE 307. This will include motors and generators, entire system modeling, symmetrical and non-symmetrical fault analysis and correction, design of power converter divides, and recent developments in the power industry. Simulation tools will be used to model different aspects of a complete electric power system. Essentially this course will cover the second half of the Grainger and Stevenson text introduced in ECE 307.

- **ECE-309 Labview and Electric Circuits and Machines**

Prerequisites:

ECE-206 and ECE-L309 must be taken concurrently

Credits:

3.00

Description:

The purpose of this course is twofold: to give students facility in programming and data acquisition in Labview, and to use Labview to learn about power concepts such as three-phase, power corrections, per units, Star (Wye) and Delta connections, magnetic circuits, power electronic circuits, electric machines. Lab component reinforces concept taught in course.

- **ECE-L309 Labview and Electric Circuits and Machines Lab**

Prerequisites:

ECE-206 and ECE-309 must be taken concurrently.

Credits:

1.00

Description:

The purpose of this course is twofold: to give students facility in programming and data acquisition in Labview, and to use Labview to learn about power concepts such as three-phase, power connections, per units, Star (Wye) and Delta connections, magnetic circuits, power electronic circuits, electric machines. Lab component reinforces concept taught in course.

- **ECE-310 Special Topics in Engineering**

Prerequisites:

ECE 206 and MATH 166 with a minimum grade of C

Credits:

4.00

Description:

Selected topics in Computer Engineering or Electrical Engineering. Offered to upper level students by permission of instructor. Prerequisite: ECE 206 and MATH 166, or instructors' approval. 1 term - 4 credits. Minimum grade of C in prerequisites.

- **ECE-311 Embedded Systems**

Prerequisites:

ECE-203 and ECE-206 with a minimum grade of C and ENS-333 OR CMPSC-F131 with a minimum grade of C and ECE-L311 concurrently

Credits:

3.00

Description:

This course will introduce the fundamentals of embedded micro controllers for system level applications: fundamental elements - sensors or transducers, microcontrollers, and the interfacing to external components. Procedural methods for design of the complete embedded system are developed. Programming using assembly, and C languages is utilized. Must take ECE L311 concurrently. Prerequisites: ECE 203 AND ECE 206, AND ENS-333 or CMPSC F131 (minimum grade of C in prereqs.) 1 term - 3 credits.

Term:

Offered Spring Term

- **ECE-L311 Embedded Systems Lab**

Prerequisites:

Must take ECE 311 concurrently

Credits:

1.00

Description:

The Embedded Systems Lab is designed to supplement the Embedded Systems course.

Term:

Offered Spring Term

- **ECE-325 Statistics for Engineering and Science**

Prerequisites:

MATH 166 with a minimum grade of C; Must take ECE L325 concurrently

Credits:

3.00

Description:

Understanding the fundamentals of probability and statistics of experimental data. Measures of central tendency, variation, probability, events, Bayes Rule, discrete and continuous random variables, discrete and continuous distributions including the binomial distribution, normal distribution, chi-square distribution and student distribution, covariance, central limit theorem, hypothesis testing, linear regression, signal processing statistics (EE students), categorical data analysis (non-EE students). Use of Mathematica's statistical packages central to this course. Final project is a project with Biology measuring rat whisker resonance.

Term:

Offered Spring Term

- **ECE-L325 Statistics for Engineering and Science Lab**

Prerequisites:

ECE L325 MUST BE TAKEN WITH ECE 325

Credits:

1.00

Description:

The Engineering Statistics and Probability lab is designed to supplement the Engineering Statistics and Probability course.

Term:

Offered Spring Term

- **ECE-335 Control Systems**

Prerequisites:

ECE 225; Min Grade of C in Prereq. ECE L335 Concurrently.

Credits:

3.00

Description:

Introduction to feedback control systems; control system characteristics (stability, sensitivity, disturbance rejection, steady-state accuracy, transient response); stability analysis; root-locus analysis and design; frequency-response analysis and design; analysis and design of digital control systems. Normally offered bi-yearly.

- **ECE-L335 Control Systems Lab**

Prerequisites:

ECE 335 MUST BE TAKEN CONCURRENTLY.

Credits:

1.00

Description:

The Control Systems lab is designed to supplement the Control Systems course.

- **ECE-390 Data & Computer Communications Lab**

Prerequisites:

ECE 225 with a minimum grade of C;

Credits:

3.00

Description:

Basic principles and topics in data communication, local area networks, wide area networks, communication architectures and protocols. Data transmission, encoding, multiplexing, circuit switching, packet switching, frame relays, and asynchronous transfer mode are also discussed. The

TCP/IP protocol suite is studied and a project involving configuring, implementing, and installing a network is carried out during the semester.
Prerequisite: ECE 225 or instructor's approval. 1 term - 3 credits. Must be taken concurrently with ECE L390.

Term:

Offered Fall Term

• ECE-L390 Data & Computer Communications Lab

Prerequisites:

Must be taken concurrently with ECE 390

Credits:

1.00

Description:

The Data and Computer Communications lab is designed to supplement the Data and Computer Communications course.

Term:

Offered Fall Term

• ECE-403 Applied Electromagnetics

Prerequisites:

ECE 205 and MATH 265 with a minimum grade of C; ECE L403 must be taken concurrently

Credits:

3.00

Description:

Electrostatics and magnetostatics, including Coulomb's law, Gauss's law, Biot-Savart law and Ampere's law, vector operations in rectangular, cylindrical, and spherical coordinates, divergence theorem and Stokes theorem, electric fields in materials, Lorentz force, magnetic torque, Faraday's law, Maxwell's equation, wave propagation, transmission lines with Smith charts, rectangular waveguides, Hertzian dipole antenna; examples related to power when applicable.

Term:

Offered Spring Term

- **ECE-L403 Applied Electromagnetics Lab**

Prerequisites:

Must be taken concurrently with ECE 403

Credits:

1.00

Description:

The Applied Electromagnetics Lab is designed to supplement the Applied Electromagnetics course.

Term:

Offered Spring Term

- **ECE-406 Solid State Devices & Circuits III**

Prerequisites:

ECE-205 and ECE-206 with a minimum grade of C and ECE-L406 concurrently and at least a 3.0 GPA

Credits:

3.00

Description:

This course is an extension of ECE 206 and ECE 306. Advantages of feedback. Reduction of four fundamental feedback configurations to simplified equivalence. Loop gain and stability issues. Gain and Phase Margins. Frequency compensating techniques. Miller effect. Class A, AB, and B amplifier output stages. Power BJT applications and thermal issues. Voltage mode op amp design - small signal gain and frequency analysis. Current mode op amp design. A/D and D/A converters. Design of Active, BiQuad and Switched Capacitor filters, and LCR resonator circuits. Oscillator design - Wien Bridge and Phase shift types, along with amplitude limiting. Multivibrators.

- **ECE-L406 Solid State Devices & Circuit III Lab**

Prerequisites:

Must be taken concurrently with ECE-406

Credits:

1.00

Description:

Utilizes the concepts of ECE 406. Simulating Dependent sources. PSPICE confirmation of feedback circuit simplification and linearization. Output gain stages and cross-over distortion. Vbe multipliers. Oscillator design. Final project includes design, simulation, and implementation (using discrete parts) of either a voltage or current mode op amp with unity gain stability and determination of band width. Normally offered biyearly.

- **ECE-410 Communication Systems**

Prerequisites:

ECE 206, ECE 225 and MATH 265 with a minimum grade of C; L410 concurrently

Credits:

3.00

Description:

Coverage of a variety of basic communication systems, their theory of operation, and the analysis of their performance. Review of linear systems, Fourier and Laplace Transforms, and Frequency Domain analysis as needed. Graphical convolution of analog signals. Digital Baseband modulation techniques. Receiver design with an introduction to Stochastics. Digital Bandpass modulation and demodulation techniques. Analog communication systems including AM, FM, and PM approaches. Consideration of Noise and the resultant system performance. Multiplexing and information compression. ECE 410 and ECE L410 must be taken concurrently.

- **ECE-L410 Communications Systems Lab**

Prerequisites:

ECE 410 must be taken concurrently

Credits:

1.00

Description:

Illustrates the concepts of ECE 410. Exercises will focus both on communication system components and in the construction of a complete communication system. Introduction to FSK, DTMF, Phase lock loops, AM and FM modulation, oscillators, A/D and D/A conversion and the Nyquist rate. Wireless transmissions. Troubleshooting of non-working systems. Students have flexibility in the design and construction a full communication system which includes digitization, rearrangement in parallel and serial formats, transmission over a distance, and reconstruction back to its original analog form.

• ECE-411 Senior Project I

Prerequisites:

ECE 205, ECE 306, ECE 225, MATH 265; permission of the instructor may be required.

Credits:

4.00

Description:

The Senior Project provides a significant opportunity for students to direct all of their previous training and learning towards one major endeavor. It has been modified from previous years to extend over two semesters (instead of one) to facilitate a more comprehensive effort in both the planning and execution of the project. Although resources and guidance are provided for each student, this course still requires them to take full responsibility to plan their time, manage, and implement their project. In Part I the student creates their project proposal. Over a fourteen-week period the student is subjected to the practical stress of completing and delivering in professional fashion a project of their own choosing (with endorsement from an appropriate faculty advisor or industrial mentor). This period includes the following objectives: selection and careful definition of a project; a review of background information; a selection of the desired approach with justification; identification of resources needed; an outline of the project implementation timetable with desired milestones; a delineation of how the completed project performance might be evaluated. Weekly progress reports and meeting with their advisor are required. A formal proposal document is reviewed by department members (and possibly Industrial constituents) and may go through numerous iterations to be deemed 'acceptable'. Along the way informal oral presentations of both the 'general' and 'technical' aspects of their project will be presented to the rest of their peer group. A formal presentation of the project proposal is made to an audience of peers, faculty, and outside advisors. Prerequisites: ECE 205, ECE 306, ECE 225, MA265; permission of the instructor may be required. ECR

They will also establish a parts list, timetable, set of milestones, and basis or procedure for determining an answer to the question how good is it? At the end of the course they will formally present their project and write a comprehensive

project proposal document. Once accepted, they are permitted to take ENS 415 Senior Project. Note that this course is focused on the process of creating a viable proposal. Enough flexibility exists that students may either implement the project they documented in this course when they take ENS 415, or may pursue an alternative project if desired. Also note that this course replaces ECE 411 for the graduating class of 2016.

- **ECE-415 Senior Project**

Prerequisites:

Take ECE-414;

Credits:

4.00

Description:

For the senior project the student implements, documents, and presents their completed project of the proposal generated in ENS 414. Having defined their project, students gather the resources necessary and proceed to execute their designs. This period will include the construction, testing, troubleshooting, refinement, and evaluation of their project. A formal presentation of the project is made. A professional caliber documentation of the project is also required, and may go through numerous iterations of review. The final project report must consider most of the following: environmental impact, sustainability, manufacturability, ethics, health and safety issues, and political concerns. Time management, prioritization of process, formal communication, overcoming obstacles and meeting deadlines are monitored by the project advisor. Weekly reports and meetings are expected. The advisor also serves as a resource for the student. However, full responsibility for the success of the project rests on the student. Cross-disciplinary projects are encouraged. Note: Replaces ECE 412 for the graduating class of 2016.

Type:

Expanded Classroom Requirement

- **ECE-430 Digital Signal Processing**

Prerequisites:

ECE 225, ECE 203 with minimum grade of C; ECE L430 concurrently

Credits:

3.00

Description:

Discrete signals and systems, digital simulation of analog systems, Z transforms, recursion equations, finite-order systems, Fourier transforms, line spectra and Fourier series, discrete Fourier series and Fast Fourier Transforms (FTT), sampling and interpolation, mean-square approximations, non-recursive and recursive filters, selected topics on algorithms, design and applications of digital signal processing. There will be an end-of-semester design project that will involve students' creativity, design of open ended projects, formulation of alternative solutions, detailed system description, realistic constraints (economic factors, safety, reliability, aesthetics ethics, and social impact).

Term:

Offered Fall Term

• ECE-L430 Digital Signal Processing Lab

Prerequisites:

ECE 430 must be taken concurrently

Credits:

1.00

Description:

Illustrates the concepts of ECE 430. This laboratory course uses MATLAB, Simulink, and the Texas Instruments 6713 DPS board to design, test and implement various projects. The students will also learn how to use FPGA boards to design and implement various DSP systems. There will be a design project at the end of the course designed to synthesize what the students have learned.

Term:

Offered Fall Term

• ECE-510 Independent Study

Prerequisites:

An independent study form must be submitted to the CAS Dean's Office.

Credits:

1.00- 6.00

Description:

This is an independent study in electrical and computer engineering. Topics will vary.

- **ENS-103 Introduction to Engineering**

Prerequisites:

ENS L103 MUST BE TAKEN CONCURRENTLY.

Credits:

3.00

Description:

This course provides exposure to engineering practice, with particular focus on electrical engineering components such as circuit elements and systems. It seeks to go beyond the mathematics and provide an intuitive appreciation of functional devices. Examples taken from a broad swath of technological history illustrate significant crossroads, decisions, and inventiveness. Emphasis is placed on learning to think as an engineer - assessment of problems, candidate solution tradeoffs, and implementations. Frequent exercises in creative engineering design will be used. Students will be required to design several elementary devices, such as a magnet, a capacitor, a timing device, and a motor, which they will enter in a competition for overall strength, compactness, accuracy, or speed. Sometimes assignments relate to "survival on an island" concerns, such as communication or drinking water. Students also learn about reverse engineering by selecting, building, troubleshooting, and presenting an electronic kit of their choice. A term paper determining the engineering behind a topic of their choice will also be written and presented. On occasion (see ENS L103) there will be team competitions between various smaller groups in the class.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **ENS-L103 Intro to Engineering Lab**

Prerequisites:

Must be taken Concurrently w/ ENS-103

Credits:

1.00

Description:

The Lab is designed to provide opportunities to gain familiarity with engineering tools. Students will be introduced to parts (e.g. learn the resistor color code), test equipment (multimeters, prototyping trainers, signal generators, and oscilloscopes), and construction techniques (wiring, soldering, troubleshooting). Although it varies from year to year, Class Projects can be built during the Lab sessions. In the past these have included a 25 Watt electric generator, various door lock systems (both mechanical and electronic), and an AM transmitter and receiver (all projects made from scratch). It is likely that 2010-2011 may introduce some robotic creations for a competition. Electronic kits and motors can also be built and serviced in the Lab. There is an adjoining machine shop, which can be utilized (with supervision), for fabricating items. Individual creativity is encouraged, and informal problem solving sessions occasionally occupy lab time. However, the lab is accessible outside of the traditional scheduled time.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **ENS-201 Engineering Mechanics**

Prerequisites:

PHYS 151

Credits:

4.00

Description:

Forces, statics, and dynamics of rigid bodies, stress and strain analysis, kinematics, computer aided analysis. Focus on professional standards in practice for design of structures.

- **ENS-L202 Technical Communication**

Prerequisites:

WRI-102, PHYS 152 AND L152;

Credits:

4.00

Description:

Emphasis on clarity, precision, accuracy, and conciseness in scientific writing. Assignments include a team-based design-contest proposal, an oral presentation on current scientific topics, a team-based design of an experiment with a write-up and an oral presentation, a paper on engineering ethics concerning the Challenger and an instruction manual. Memo writing, summary writing, and resumes are also included.

Term:

Offered Fall Term

- **ENS-333 Programming for Engineers**

Prerequisites:

ENS L333 concurrently

Credits:

3.00

Description:

This course will introduce programming concepts in the context of solving engineering problems. Emphasis will be placed on applying the high-level programming skills learned to particular platforms such as embedded systems. Students will implement various microcontroller programming exercises as well as an end of the semester project.

Term:

Offered Spring Term

- **ENS-L333 Programming for Engineers Lab**

Prerequisites:

ENS 333 concurrently

Credits:

1.00

Description:

The Programming for Engineers lab is designed to supplement the Programming for Engineers Course.

- **ENVE-220 Design and Design Tools**

Prerequisites:

ENVE-104; PHYS-151

Credits:

4.00

Description:

This course applies design tools (AutoCAD primarily and others as necessary for specified design problems) to design problems specified by the instructor.

- **ENVE-271 Air Quality and Air Pollution Control**

Prerequisites:

ENVE 104, MATH 166 AND PHYS 152

Credits:

4.00

Description:

The focus of this course is on relative source contribution, regulatory standards, known health effects, and measurement techniques for criteria pollutants and specific air toxics. An emphasis on regulatory control strategies and the design of engineering controls is provided. Engineering Elective.

- **ENVE-325 Geographical Information Science**

Prerequisites:

Approved computer programming course or permission of instructor.

Credits:

3.00

Description:

This course provides the fundamentals of geographic information science (GIS) including the history of automated mapping. A review of the necessary hardware and software elements used in GIS is presented. Hands-on exercises with computerized mapping software are required.

- **ENVE-L325 Geographic Information Science Lab**

Prerequisites:

concurrently with ENVE 325

Credits:

1.00

Description:

Required companion computer laboratory to be taken concurrently with ENVE 325. Prerequisite: Approved computer programming course or permission of instructor.

- **ENVE-361 Fluid Mechanics**

Prerequisites:

ENVE-104 AND MATH-265 AND PHYS-152

Credits:

4.00

Description:

The basic equations of fluid statics and dynamics are covered in this course. Course topics include Archimedes' principle, Bernoulli's equation, and their applications; fluid kinematics, Eulerian and Lagrangian flow descriptions, and Three-dimensional flows; Reynolds transport theorem, finite control volumes, and differential analysis and modeling; and viscous flow in pipes, flow over immersed bodies, and open channel flow.

- **ENVE-365 Hydrology**

Prerequisites:

ENVE 104 AND MATH 166 and ENVE 361.

Credits:

4.00

Description:

The following topics are considered in this course: the hydrologic cycle, precipitation processes, soil moisture, infiltration, groundwater, rainfall-runoff processes, utilization of water resources, and frequency analysis. Engineering Elective.

- **ENVE-375 Heat and Thermodynamics**

Prerequisites:

MATH-265 and PHYS-152

Credits:

4.00

Description:

This course covers the elements of thermodynamic systems, the laws of thermodynamics, the parameters and concepts of thermodynamic analyses (heat, work, internal energy, enthalpy, entropy, reversibility, more), and their application to ideal gases and heat engines. Topics include statistical mechanics, phase transitions, chemical equilibrium, Gibb's equation, the Nernst equation, and heterogeneous systems.

- **ENVE-410 Water and Wastewater Systems**

Prerequisites:

Take CHEM-112; Take ENVE-226, CHEM-355, OR Chem-211; Take ENVE-361; or permission of the instructor.

Credits:

4.00

Description:

This course considers the design of water and wastewater unit operations in treatment systems. Topics include water supply, water transmission and distribution systems, drinking water treatment, wastewater collection, and wastewater treatment.

- **ENVE-415 Green Engineering**

Prerequisites:

Take ENVE-361 and ENVE-375, CHEM 211 or ENVE 226

Credits:

4.00

Description:

This course presents the principles of green engineering and their application to process engineering, building design. Sustainable and renewable energy systems are a particular emphasis of the course. Topics include risk concepts, evaluating exposures, green chemistry, life cycle analysis, industrial ecology, and environmental sensors. Prerequisites: Organic Chemistry Option, ENVE 361, ENVE 375. CHEM 211 or ENVE 226 Engineering Electives. 1 term - 4 credits.

- **ENVE-510 Environmental Engineering Independent Study**

Credits:

1.00- 6.00

Description:

This is an independent study in environmental engineering. Topics will vary.

- **SCI-171 The Built World: How Humans Engineer Environments**

Credits:

4.00

Description:

The most basic needs of humans have not changed - water, food, and shelter - but the means of meeting these needs has. In this course, we will examine how technology-driven societies operate by studying how cities are built and how they function. Topics will include water supply and distribution systems; transportation systems (including road and bridge design and construction); building design, construction, and operation (including skyscraper and sustainable building design), and waste removal systems (municipal and industrial wastewater removal and treatment, solid waste removal and treatment). This is not a course about little gadgets and widgets; this is a course about big engineering marvels; and it emphasizes applications of science - how things work - rather than scientific theory.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGR

• SCI-184 Contemporary Science and Innovation

Credits:

4.00

Description:

This is a 4 credit, project based science course that examines the central scientific problems confronting the 21st century. The course consists of lectures, class discussions, field trips, and in-class hands-on activities designed to familiarize the student with different concepts of the lectures. The current focus is on sustainable energy production. A final team project related to the course topics will be given. This is the version of SCI 183 without a separate lab component. Students who have taken SCI 183, L183 are not allowed to take this course.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGR,NATURAL SCIENCE FOR BS

2015-2016 Archived Catalog Information

English

English majors and minors benefit from a wide range of course offerings ranging from in-depth studies of specific literary periods and movements to creative writing workshops to traditional British and American surveys and genre-based courses. With plenty of chances to improve their reading and writing skills and sharpen their critical thinking, English majors and minors are prepared to enter almost any profession and typically learn and excel due to their ability to interpret, compose, connect, and make meaning with written texts and an advanced ability to understand and craft language.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Creative Writing Concentration](#)
- [Minor Requirements](#)
- [Honors](#)
- [Societies](#)
- [English Courses](#)

Major Requirements: 10 courses, 40 credits

Requirements for the English major are satisfied by 36 credits of coursework in English in addition to ENG-213, which English majors should use to satisfy the Core Literature Requirement.

- ENG-213 English Literature I

Prerequisites:

WRI-102 or WRI-103

Credits:

4.00

Description:

Study of major writers of England from the beginning to the mid-18th century. Regularly assigned essays on the reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement

Choose one of the following:

- **ENG-214 English Literature II**

Credits:

4.00

Description:

Study of major English writers from the mid-18th century to the present. Regularly assigned essays on the reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement

- **ENG-217 American Literature I**

Credits:

4.00

Description:

Study of major American writing from its origins through 1865. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement

• **ENG-218 American Literature II**

Credits:

4.00

Description:

Study of major American writing from 1865 through the present. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement

Choose one course from each of the five groups of English courses listed below.

Group 1: Approaches to English Studies

Choose one of the following:

- **ENG-301 Seminar for English Majors**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course seeks to answer the following questions. What is literature? Why do we study literature? What methods aid the study of literature? What are English Studies all about? This course extends reading and writing skills, and provides more specialized terms, knowledge, and approaches to prepare students for study at the junior and senior level. Topics vary from term to term. Student must have completed 80 credits or less Normally offered Fall and Spring semesters.

Term:

Offered Both Fall and Spring

- **ENG-312 English Grammar and Usage**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course provides a thorough review and analysis of the rules of standard English grammar and usage, including the debate between prescriptive and descriptive grammar, the origin and authority of the rules taught in school and in handbooks of English, and the insights of modern linguistics. Normally offered alternate years

Term:

Occasional

- **ENG-394 Critical Prose**

Prerequisites:

WRI-102 or WRI-H103 with a minimum grade of B+

Credits:

4.00

Description:

This course studies both the literary and rhetorical modes of expository essay writing. Readings will focus on the craft of writing, the art of revision and reflections on the reader-writer relationship. Students will be asked to analyze prose passages, compose critical essays and work in peer groups. Normally offered alternate years.

Term:

Occasional

- **ENG-396 Varieties of Workplace Writing**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course studies a variety of workplace writing including summaries, memos, letters, directions, descriptions, reports and other technical and professional documents. Students may be required to complete certain assignments in collaborative teams. Document design and layout will also be emphasized. Normally offered alternate years

Term:

Occasional

- **ENG-407 Literary Theory**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

A seminar on current approaches to the interpretation of literature, including psychoanalysis, deconstruction and feminist criticism. Students will experiment with making use of theory in analyzing selected literary texts.

Term:

Occasional

- **ENG-421 Special Topics in Group 1: Approaches To English Studies**

Prerequisites:

ENG 213, ENG 214, ENG 215, ENG 216, ENG 217, or ENG 218

Credits:

4.00

Description:

A course that fits Group 1 of the English major requirements with varying subject matter.

Term:

Occasional

- **ENG-430 Literature of the Vietnam War and the Post 9/11 Wars**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course will examine some of the fiction, non-fiction, and poetry produced in response to the Vietnam War and the most recent war in Iraq. In addition to comparing the literature that has emerged from these two very different wars, these texts will also be examined in relation to peace studies, a field in which there is an emerging consensus that literature and the arts must play a central role in examining questions of war and peace.

Term:

Occasional

It is recommended that majors choosing ENG-301 take the course in the second semester of sophomore year or the first semester of junior year.

Group 2: Genre and Backgrounds

Choose one of the following:

- **ENG-316 Fifth Century Athens**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

An introduction to Periclean Athens, the golden age of classical Greek literature and thought. Close readings of selections from the historians Herodotus and Thucydides, the dramatists Aeschylus and Euripides, the poetry of Pindar, and Plato's great work on politics, *The Republic*. Cross-listed with History 336.

Term:

Occasional

- **ENG-317 Classical Mythology**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

Ancient Greek and Roman myths, their motifs, themes and interpretations. Normally offered every third year.

- **ENG-370 Fiction Writing Workshop I**

Prerequisites:

ENG-212

Credits:

4.00

Description:

An intensive workshop in which the student will be required to write original fiction. The focus of the course will be on the student's own work, submitted on a weekly basis. The course will also provide the student writer with practical experience in matters of plot, character, dialogue, structure, etc. Normally offered annually.

Term:

Alternates Fall & Spring

- **ENG-371 Creative Non-Fiction Workshop**

Prerequisites:

ENG-212

Credits:

4.00

Description:

For students interested in writing autobiography and/or other forms of the personal essay. Topics can include childhood, place, sexuality, religion, work, the nature of memory. The focus will be on the writing process, with students presenting work-in-progress to the class for discussion and revision. The student should plan to read models of creative non-fiction. Normally offered annually.

Term:

Occasional

- **ENG-372 The Literary Journal**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

An exploration of selected literary journals and their role in American letters. Through our study of the Pushcart prize anthology and past and current issues of journals such as Agni, Antaeus, Callaloo, Georgia Review, Paris Review, Poetry, and Zoetrope, we will examine the ways in which journals both respond to and shape literary culture. Students will write a research paper on an essayist, poet, or story writer that they discover during this course. Taught by the editor of a Boston-area literary journal.

Term:

Occasional

- **ENG-374 Drama Seminar**

Prerequisites:

WRI-102 or WRI-H103 with a minimum grade of B+

Credits:

4.00

Description:

Discussion and presentations on a pre-announced subject: a major playwright, a dramatic movement or genre, or the relation between script and performance. Normally offered every third year.

Term:

Occasional

- **ENG-375 Poetry Writing Workshop I**

Prerequisites:

ENG-212

Credits:

4.00

Description:

An intensive workshop course in which the student will be required to write original poetry for each class meeting. The focus of the course will be on the student's own work. We will examine the highly individual processes of composition and revision, and the methods writers use to keep their own practice of poetry alive and well. We will also examine as many of the constituent elements of poetry as possible, from image and rhythm to line and structure. Normally offered annually.

Term:

Offered Both Fall and Spring

- **ENG-395 Rhetoric and Memoir**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course examines the rhetoric of memoirs written primarily by international figures who seek to use personal stories to shape readers' perspectives on political issues. After a brief introduction to rhetorical theory and to the genre of memoir, this course will examine contemporary memoirs that address such issues as racism, sexism, religious extremism, war, and genocide.

Term:

Occasional

Type:

Cultural Diversity Opt B

- **ENG-422 Special Topics in Group 2: Genre and Backgrounds**

Prerequisites:

Any 200-level English course

Credits:

4.00

Description:

A course that fits Group 2 of the English major requirements with varying subject matter.

Term:

Occasional

- **ENG-470 Fiction Workshop II**

Prerequisites:

Any 200-level English course

Credits:

4.00

Description:

An intensive practical examination of plot, narrative, characterization, and style in the writing of fiction and/or creative non-fiction. Particular attention will be devoted to group discussion of weekly student writing assignments. Normally offered alternate years.

Term:

Alternates Fall & Spring

- **ENG-475 Poetry Workshop II**

Prerequisites:

Any 200-level English course

Credits:

4.00

Description:

An intensive workshop course in which the student will be required to write original poetry for each class meeting. The focus of the course will be on both the quantity and quality of the student's own work. There will also be specific assignments in the many formal elements of the art. Written self-evaluations will also be required. Normally offered in alternate years.

Term:

Offered Spring Term

Group 3: Literary History I, Medieval to the Renaissance

Choose one of the following:

- **ENG-311 Medieval Literature Survey**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

An introduction to medieval literature, this course will focus on short readings from various genres, such as the lyric, chronicle, fable, with emphasis on the romance. The culmination of the course is a drama segment in which students can participate in a performance.

Term:

Occasional

- **ENG-324 Shakespeare's Comedies**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

Shakespeare's background and development as a dramatist through an examination of selected comedies. Collateral reading of the minor plays and Shakespeare criticism. Normally offered every third semester.

Term:

Occasional

- **ENG-325 Shakespeare's Histories**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

Shakespeare's English and Roman history plays. Emphasis on Shakespeare's use of his sources and the plays in performance. Normally offered every third semester.

Term:

Occasional

- **ENG-326 Shakespeare's Tragedies**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

Shakespeare's major tragedies reflecting the range, resourcefulness, and power of his dramaturgy. Collateral reading in Shakespeare criticism. Normally offered every third semester.

Term:

Occasional

- **ENG-333 English Renaissance Drama**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

The comedies and tragedies of major dramatists (excluding Shakespeare) of the Elizabethan and Jacobean eras. Marlowe, Jonson, Middleton, Webster. Normally offered alternate years.

Term:

Occasional

- **ENG-334 17th Century Literature**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

Representative selections of seventeenth-century poetry and prose, including Behn, Burton, Donne, Drayton, Dryden, Jonson, Milton, Pepys, Wroth, and others. Normally offered alternate years.

Term:

Occasional

- **ENG-335 Milton**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

Poetry and prose of England's greatest Renaissance poet. The centerpiece of the course is close reading of Paradise Lost. Normally offered alternate years.

Term:

Occasional

- **ENG-H523 Honors Seminar in Group 3: Literary History I: Medieval to Renaissance**

Prerequisites:

ENG 213, 214, 215, 216, 217 OR 218 Admission By Invitation Only

Credits:

4.00

Description:

Honors seminar that fulfills Group 3 of the English major.

Type:

Honors

Group 4: Literary History II, American or British Literature from 1700-1900

Choose one of the following:

- **ENG-336 Restoration and Eighteenth Century Literature**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

The great age of satire, essay, criticism, biography, and nature. Dryden, Pope, Swift, Addison, Steele, Boswell, Johnson, Gray, Thompson, and Gibbon. Normally offered alternate years.

Term:

Occasional

- **ENG-337 18th Century English Novel**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

The beginnings of the realistic novel including the works of Defoe, Richardson, Fielding, Smollet, and Burney and considering the sentimental novel (Sterne) and the gothic novel (Walpole and Radcliffe). Normally offered alternate years.

- **ENG-343 19th Century English Novel**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

Development of the Romantic and Victorian novel. Readings in major works of the Brontes, Dickens, Thackeray, Austen, Eliot and Hardy. Normally offered alternate years.

Term:

Occasional

- **ENG-344 English Romantic Literature**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

The mind and spirit, poetics and poetry of Wordsworth, Coleridge, Byron, Shelley and Keats, along with selected prose. Normally offered alternate years.

Term:

Occasional

- **ENG-345 Victorian Literature**

Prerequisites:

WRI-102 or WRI-H103

Credits:

3.00

Description:

The study of selected poets and prose writers. Some Victorian fiction. Normally offered alternate years

- **ENG-353 Dwelling in American Realism**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

In-depth exploration of American Realism from the post-Civil War era to the pre-WWI era (roughly 1875 to 1915). Particular emphasis is given to the role of houses and material and consumer culture in the forging of American identity. Authors may include Howells, Twain, James and Wharton among others. Normally offered alternate years. Students will also visit authors' houses in the Boston area. This course requires prior approval in order to count towards the Women's and Gender Studies Minor. Students should consult with the instructor and the director of the WGS Minor no later than the first week of classes.

Term:

Occasional

• ENG-355 American Prose 1870 - 1920

Prerequisites:

WRI-H103 (WRI-H103 requires a minimum grade of B+) or WRI-102

Credits:

4.00

Description:

The revolution in American literary consciousness between the Civil War and the First World War, and the transition from the traditional to the modern, in the work of Mark Twain, Henry James, Stephen Crane, Theodore Dreiser, and others. Normally offered alternate years.

Term:

Occasional

• ENG-356 Whitman and Dickinson

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

An investigation of the lives and works of two of nineteenth-century America's greatest and most original poets. Topics will include types of poetic language and formal structure, the work of the poetic imagination in transforming observations of the world into art, and the ways in which poets process the idea of death and the reality of war. Finally, this course examines Whitman and Dickinson's impact on American popular culture as well as on the writings of modern poets and literary critics.

Term:

Occasional

• ENG-424 Special Topics in Group 4: Literary History II : 1700-1900, American or British

Prerequisites:

Any 200-level English course

Credits:

4.00

Description:

A course that fits Group 4 of the English major requirements with varying subject matter. A interdisciplinary offering that features the writing of three of the late 19th century's greatest minds: Henry, the novelist who wrote *The Portrait of a Lady*, *Daisy Miller*, and *The Turn of the Screw*; William, the philosopher and psychologist who wrote *Principles of Psychology* (1890) and *Varieties of Religious Experience* (1902); and Alice, their sister, who became a feminist icon through her remarkable diary. A selection of these works will be explored alongside a James family biography.

Term:

Occasional

• ENG-H524 Honors Seminar in Group 4: Literary History II: 1700 - 1900, American Or British

Prerequisites:

ENG-213, 214, 215, 216, 217 OR ENG 218 Admission by invitation only

Credits:

4.00

Description:

Honors seminar that fulfills Group I of the English major.

Type:

Honors

Group 5: Literary History III, American, British, or World Literature, 1900-Present

Choose one of the following:

- **ENG-357 African-American Literature I**

Prerequisites:

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This class will engage with the major novels and selected literary writings of two of the twentieth century's most important modernist voices, Virginia Woolf and E.M. Forster. We will approach their writings within the intellectual framework of British modernism and the cultural context of the Bloomsbury Group out of which they emerged. Special attention will be paid to their theoretical writings on fiction as well as their respective contributions to feminism and queer theory. The class will also view cinematic adaptations of certain novels and discuss how these films have contributed to the enduring appeal and status of these texts as classics of twentieth-century fiction.

Term:

Occasional

- **ENG-425 Special Topics in Group 5: Literary History III: 1900- Present American, British, Or World**

Prerequisites:

Any 200-level English course

Credits:

4.00

Description:

A course that fits Group 5 of the English major requirements with varying subject matter.

Term:

Occasional

- **ENG-H525 Honors Seminar in Group 5 Literary History III: 1900 - Present American, British, Or World.**

Prerequisites:

ENG 213, 214, 215, 216, 217, or ENG 218; Invitation only

Credits:

4.00

Description:

Honors seminar that fulfills Group I of the English major.

Type:

Honors

Choose one elective at the 300-level or above.

Choose two electives from any English course numbered above 104.

Note: The Seminar for Freshmen may satisfy one of the electives at the discretion of the department.

Transfer students with an English major must complete at least 12 credits of English courses at Suffolk beyond the sophomore literature requirement (ENG-213, ENG-214, ENG-217, ENG-218).

Sophomore Survey Requirement

All English majors must take two sophomore surveys, including ENG-213. Each course offers an introduction to a significant body of literature in English with continued instruction in reading and writing skills.

- **ENG-213 English Literature I**

Prerequisites:

WRI-102 or WRI-103

Credits:

4.00

Credits:

4.00

Description:

Study of major American writing from 1865 through the present. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement

2015-2016 Archived Catalog Information

English

English majors and minors benefit from a wide range of course offerings ranging from in-depth studies of specific literary periods and movements to creative writing workshops to traditional British and American surveys and genre-based courses. With plenty of chances to improve their reading and writing skills and sharpen their critical thinking, English majors and minors are prepared to enter almost any profession and typically learn and excel due to their ability to interpret, compose, connect, and make meaning with written texts and an advanced ability to understand and craft language.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Creative Writing Concentration](#)
- [Minor Requirements](#)
- [Honors](#)
- [Societies](#)
- [English Courses](#)

Students who are majoring in English may elect to take a Creative Writing Concentration within the English major. The Creative Writing Concentration requires students to take ENG-212 (Introduction to Creative Writing).

Students should also take at least three creative writing workshops in two different genres, in addition to fulfilling the requirements of the English major. One of those creative writing workshops may simultaneously satisfy the major requirement in the “Genres” group. Other creative writing workshops may satisfy English major elective requirements.

- **ENG-212 Introduction to Creative Writing**

Credits:

4.00

Description:

A study of the major genres in creative writing (poetry, fiction, and creative nonfiction) in which students will read as writers. Students will write a combination of analytical and original works, and learn the format and processes of writing workshops of writing workshops. Offered every semester.

- **ENG-370 Fiction Writing Workshop I**

Prerequisites:

ENG-212

Credits:

4.00

Description:

An intensive workshop in which the student will be required to write original fiction. The focus of the course will be on the student's own work, submitted on a weekly basis. The course will also provide the student writer with practical experience in matters of plot, character, dialogue, structure, etc. Normally offered annually.

Term:

Alternates Fall & Spring

- **ENG-371 Creative Non-Fiction Workshop**

Prerequisites:

ENG-212

Credits:

4.00

Description:

For students interested in writing autobiography and/or other forms of the personal essay. Topics can include childhood, place, sexuality, religion, work, the nature of memory. The focus will be on the writing process, with students presenting work-in-progress to the class for discussion and revision. The student should plan to read models of creative non-fiction. Normally offered annually.

Term:

Occasional

- **ENG-375 Poetry Writing Workshop I**

Prerequisites:

ENG-212

Credits:

4.00

Description:

An intensive workshop course in which the student will be required to write original poetry for each class meeting. The focus of the course will be on the student's own work. We will examine the highly individual processes of composition and revision, and the methods writers use to keep their own practice of poetry alive and well. We will also examine as many of the constituent elements of poetry as possible, from image and rhythm to line and structure. Normally offered annually.

Term:

Offered Both Fall and Spring

- [English Courses](#)

To be considered for honors in English, a student must satisfy the following criteria:

1. Students interested in honors should consult with the English department honors coordinator in the sophomore or junior year. Qualifying students must have a GPA of 3.5 or higher in English.
2. Honors students must complete the Gateway Seminar for Majors (ENG-301) and eight Honors credits in English, four credits of which are in addition to the major requirement of 36 credits. These eight credits would normally include one Honors Seminar and one Independent Study (ENG-510), wherein a student produces a major project under the direction of an advisor of his or her choice.
3. Honors students should register for one credit of ENG-510 (normally in the fall semester of the senior year), and for three credits of ENG-510 (normally in the spring semester of the senior year). Any student who completes ENG-510 will receive credit for the course; for achievement of honors in English, projects completed in ENG-510 must also be approved by the English department.
4. Honors students must complete their coursework in English with a GPA of 3.5 or higher.

5. In special circumstances (for example in the case of transfer students), exceptions to the requirements above will be considered.

- **ENG-301 Seminar for English Majors**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course seeks to answer the following questions. What is literature? Why do we study literature? What methods aid the study of literature? What are English Studies all about? This course extends reading and writing skills, and provides more specialized terms, knowledge, and approaches to prepare students for study at the junior and senior level. Topics vary from term to term. Student must have completed 80 credits or less Normally offered Fall and Spring semesters.

Term:

Offered Both Fall and Spring

- **ENG-510 Independent Study**

Prerequisites:

WRI-102 or WRI-H103

Credits:

1.00- 4.00

Description:

By special arrangement, a junior or senior may pursue an independent research project under the supervision of a faculty member. Consent of instructor and chairperson required. Offered every semester.

Term:

Offered Both Fall and Spring

Sigma Tau Delta International Honor Society

Sigma Tau Delta, a member of the Association of College Honor Societies (ACHS), established its Eta Upsilon Chapter at Suffolk University in January 1986. Active membership is open to both English majors and English minors who have completed a minimum of two college courses in English language or literature (beyond the First Year Writing requirement and sophomore English requirement) with an average of 3.5, plus a general cumulative average of 3.0. Associate membership is open to students who have the requisite academic background (as stipulated above for active membership) but who are not majoring or minoring in English. In addition to conferring distinction for high achievement in English language and literature and exhibiting high standards of academic excellence through its chapters, Sigma Tau Delta promotes and emphasizes the discipline of English in all its aspects, including creative and critical writing, by inviting both active and associate members to contribute to its national publication, *The Rectangle*. All inducted members remain permanently on the roster of the Eta Upsilon Chapter.

- **ENG-344 English Romantic Literature**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

The mind and spirit, poetics and poetry of Wordsworth, Coleridge, Byron, Shelley and Keats, along with selected prose. Normally offered alternate years.

Term:

Occasional

- **ENG-345 Victorian Literature**

Prerequisites:

WRI-102 or WRI-H103

Credits:

3.00

Description:

The study of selected poets and prose writers. Some Victorian fiction. Normally offered alternate years

- **ENG-347 20th Century Female Gothic**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course focuses on Gothic literature by women writers, from its origins in the 18th century to the present, focusing primarily on 20th century writers. The novels, short stories, and films we will discuss involve haunted houses, secret chambers, madness, and other Gothic tropes. Writers to be studied will include Charlotte Bronte, Daphne du Maurier, Shirley Jackson, Jean Rhys, Angela Carter, and others.

- **ENG-353 Dwelling in American Realism**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

In-depth exploration of American Realism from the post-Civil War era to the pre-WWI era (roughly 1875 to 1915). Particular emphasis is given to the role of houses and material and consumer culture in the forging of American identity. Authors may include Howells, Twain, James and Wharton among others. Normally offered alternate years. Students will also visit authors' houses in the Boston area. This course requires prior approval in order to count towards the Women's and Gender Studies Minor. Students should consult with the instructor and the director of the WGS Minor no later than the first week of classes.

Term:

Occasional

- **ENG-355 American Prose 1870 - 1920**

Prerequisites:

WRI-H103 (WRI-H103 requires a minimum grade of B+) or WRI-102

Credits:

4.00

Description:

The revolution in American literary consciousness between the Civil War and the First World War, and the transition from the traditional to the modern, in the work of Mark Twain, Henry James, Stephen Crane, Theodore Dreiser, and others. Normally offered alternate years.

Term:

Occasional

- **ENG-356 Whitman and Dickinson**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

An investigation of the lives and works of two of nineteenth-century America's greatest and most original poets. Topics will include types of poetic language and formal structure, the work of the poetic imagination in transforming observations of the world into art, and the ways in which poets process the idea of death and the reality of war. Finally, this course examines Whitman and Dickinson's impact on American popular culture as well as on the writings of modern poets and literary critics.

Term:

Occasional

• **ENG-357 African-American Literature I**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

African-American writing from the beginning through the present. Normally offered alternate years. Cultural Diversity A

Term:

Occasional

Type:

Cultural Diversity Opt A

- **ENG-359 Selected African-American Writers**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course focuses upon the literary contributions of a selected number of major African-American authors. Normally offered every other year.

Type:

Cultural Diversity Opt A, Diverse Perspectives

- **ENG-360 Mid-20th Century American Fiction 1950-1975**

Prerequisites:

WRI-102 or WRI-H103

Credits:

Study of plays and productions from the late 19th century to the present. Playwrights included: Moody, Herne, Sheldon, O'Neill, Glaspell, Crothers, Treadwell, Sherwood, Kaufman and Hart, Saroyan, Odets. Williams, Miller, Albee, Mamet, among others. Significant performers, directors, theatre critics, Broadway culture, and popular theatre provide context.

Term:

Occasional

- **ENG-370 Fiction Writing Workshop I**

Prerequisites:

ENG-212

Credits:

4.00

Description:

An intensive workshop in which the student will be required to write original fiction. The focus of the course will be on the student's own work, submitted on a weekly basis. The course will also provide the student writer with practical experience in matters of plot, character, dialogue, structure, etc. Normally offered annually.

Term:

Alternates Fall & Spring

- **ENG-371 Creative Non-Fiction Workshop**

Prerequisites:

ENG-212

Credits:

4.00

Description:

For students interested in writing autobiography and/or other forms of the personal essay. Topics can include childhood, place, sexuality, religion, work, the nature of memory. The focus will be on the writing process, with students presenting work-in-progress to the class for discussion and revision. The student should plan to read models of creative non-fiction. Normally offered annually.

Term:

Occasional

- **ENG-372 The Literary Journal**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

An exploration of selected literary journals and their role in American letters. Through our study of the Pushcart prize anthology and past and current issues of journals such as Agni, Antaeus, Callaloo, Georgia Review, Paris Review, Poetry, and Zoetrope, we will examine the ways in which journals both respond to and shape literary culture. Students will write a research paper on an essayist, poet, or story writer that they discover during this course. Taught by the editor of a Boston-area literary journal.

Term:

Occasional

- **ENG-373 English Writers of the 1930S**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

The social, political and cultural revolution in pre-World War II England as it is reflected in the poetry of Auden and Spender and the fiction of Huxley, Waugh, Isherwood, Bowen, Orwell, and Greene. Normally offered every third year.

Term:

Occasional

- **ENG-374 Drama Seminar**

Prerequisites:

WRI-102 or WRI-H103 with a minimum grade of B+

Credits:

4.00

Description:

Discussion and presentations on a pre-announced subject: a major playwright, a dramatic movement or genre, or the relation between script and performance. Normally offered every third year.

Term:

Occasional

- **ENG-375 Poetry Writing Workshop I**

Prerequisites:

ENG-212

Credits:

4.00

Description:

An intensive workshop course in which the student will be required to write original poetry for each class meeting. The focus of the course will be on the student's own work. We will examine the highly individual processes of composition and revision, and the methods writers use to keep their own practice of poetry alive and well. We will also examine as many of the constituent elements of poetry as possible, from image and rhythm to line and structure. Normally offered annually.

Term:

Offered Both Fall and Spring

- **ENG-377 The World of Literature on Film**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

Examination of film as an art form in the expression of literature. Several films to be viewed in class together with the relevant literary works. Normally offered every third year.

Term:

Occasional

- **ENG-386 Classics of Mystery**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

Classic stories of suspense and detection, including short stories and novels by Poe, Doyle, Chandler, Hammett, Christie, and others. Current examples also to be included. Normally offered alternate years.

Term:

Occasional

- **ENG-387 Writing Women**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course studies 19th and 20th century women writers and questions the type of women who write, what they write about, and why they write. Themes we examine include domesticity, assimilation, and madness. Authors studied in the past have included Edith Wharton, Willa Cather, Anzia Yezierska, Nella Larsen, and Sylvia Plath. Normally offered alternate years. Cultural Diversity A

Term:

Occasional

Type:

Cultural Diversity Opt A

- **ENG-390 Writing Process and Revision**

Prerequisites:

Any ENG course except for WRI-101

Credits:

4.00

Description:

This course studies the expressive and cognitive approaches to the writing process through personal journal writing, metaphor use and a review of grammar and stylistics. Written assignments emphasize discovery and invention as well as the revising of academic prose. Normally offered every other year.

Term:

Occasional

- **ENG-392 Readings in Post-Colonial Literature**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

An Exploration of Post-colonial literature and how the empire writes back following the collapse of European colonialism. Special emphasis will be placed on the legacy of British Colonial rule and the contemporary use of literature and the English Language to both resist and problematize Eurocentric cultural assumptions. Authors studied will include E.M. Foster, Salman Rushdie, J.M. Coetzee, Anita Desai, Hanif Kureishi, and Zadie Smith, among others. Students will be introduced to Post-colonial critical theory and view film adaptations of literary texts.

Term:

Occasional

Type:

Cultural Diversity Opt B

- **ENG-394 Critical Prose**

Prerequisites:

WRI-102 or WRI-H103 with a minimum grade of B+

Credits:

4.00

Description:

This course studies both the literary and rhetorical modes of expository essay writing. Readings will focus on the craft of writing, the art of revision and reflections on the reader-writer relationship. Students will be asked to analyze prose passages, compose critical essays and work in peer groups. Normally offered alternate years.

Term:

Occasional

- **ENG-395 Rhetoric and Memoir**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course examines the rhetoric of memoirs written primarily by international figures who seek to use personal stories to shape readers' perspectives on political issues. After a brief introduction to rhetorical theory and to the genre of memoir, this course will examine contemporary memoirs that address such issues as racism, sexism, religious extremism, war, and genocide.

Term:

Occasional

Type:

Cultural Diversity Opt B

- **ENG-396 Varieties of Workplace Writing**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course studies a variety of workplace writing including summaries, memos, letters, directions, descriptions, reports and other technical and professional documents. Students may be required to complete certain assignments in collaborative teams. Document design and layout will also be emphasized. Normally offered alternate years

Term:

Occasional

- **ENG-398 Boston: a City in Fiction**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

Boston in novels from its beginning to the present: plan of the city, architecture, population, social classes, politics and human problems. Hawthorne, James, Howells, Jean Stafford, Edwin O'Connor, Dorothy West, and others.

Term:

Occasional

- **ENG-399 Irish Literature**

Prerequisites:

WRI-H103 (WRI-H103 requires a minimum grade of B+) or WRI-102

Credits:

4.00

Description:

Writers of the Irish Literary Revival, from the 1890s to the 1930s. Readings from Yeats, Joyce, Synge, O'Casey, and O'Flaherty. The influence of Anglo-Irish history on Irish writers. Normally offered every third year.

Term:

Occasional

- **ENG-407 Literary Theory**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

A seminar on current approaches to the interpretation of literature, including psychoanalysis, deconstruction and feminist criticism. Students will experiment with making use of theory in analyzing selected literary texts.

Term:

Occasional

- **ENG-408 Modern Greek Literature in English Translation**

Prerequisites:

WRI-102 or WRI-H103 with a minimum grade of B+

Credits:

4.00

Description:

A survey of writings in Modern Greek from 1821 to the present exploring Hellenism and the Greek cultural identity. Authors studied will include Kostis Palamas, Georgios Vizyinos, Alexandros Papadiamantis, Stratis Myrivilis, Photis Kontoglou, Dido Sotiriou, George Seferis, Constantine Cavafy, and Odysseas Elytis. A section of the syllabus will be reserved for the Greek-American/diaspora writers Helen Papanikolas, Elia Kazan, Jeffrey Eugenides, Olga Broumas, and Tryfon Tolides. Films and music traditions will be sampled as well.

• ENG-409 Literary Bloomsbury: Woolf and Forster

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This class will engage with the major novels and selected literary writings of two of the twentieth century's most important modernist voices, Virginia Woolf and E.M. Forster. We will approach their writings within the intellectual framework of British modernism and the cultural context of the Bloomsbury Group out of which they emerged. Special attention will be paid to their theoretical writings on fiction as well as their respective contributions to feminism and queer theory. The class will also view cinematic adaptations of certain novels and discuss how these films have contributed to the enduring appeal and status of these texts as classics of twentieth-century fiction.

Term:

Occasional

• ENG-410 From Pagan Reason to Christian Revelation

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

A survey of major works of literature and thought crucial to the transformation of pagan models of reason to Christian systems of belief, including works by Plato and Plotinus, St. Augustine and Dante. Of central concern is the changing conception of love, from Eros to Agape. Cross-listed with History 336.

Term:

Occasional

- **ENG-421 Special Topics in Group 1: Approaches To English Studies**

Prerequisites:

ENG 213, ENG 214, ENG 215, ENG 216, ENG 217, or ENG 218

Credits:

4.00

Description:

A course that fits Group 1 of the English major requirements with varying subject matter.

Term:

Occasional

- **ENG-422 Special Topics in Group 2: Genre and Backgrounds**

Prerequisites:

Any 200-level English course

Credits:

4.00

Description:

A course that fits Group 2 of the English major requirements with varying subject matter.

Term:

Occasional

- **ENG-424 Special Topics in Group 4: Literary History II : 1700-1900, American or British**

Prerequisites:

Any 200-level English course

Credits:

4.00

Description:

A course that fits Group 4 of the English major requirements with varying subject matter. A interdisciplinary offering that features the writing of three of the late 19th century's greatest minds: Henry, the novelist who wrote *The Portrait of a Lady*, *Daisy Miller*, and *The Turn of the Screw*; William, the philosopher and psychologist who wrote *Principles of Psychology* (1890) and *Varieties of Religious Experience* (1902); and Alice, their sister, who became a feminist icon through her remarkable diary. A selection of these works will be explored alongside a James family biography.

Term:

Occasional

- **ENG-425 Special Topics in Group 5: Literary History III: 1900- Present American, British, Or World**

Prerequisites:

Any 200-level English course

Credits:

4.00

Description:

A course that fits Group 5 of the English major requirements with varying subject matter.

Term:

Occasional

- **ENG-427 The Georgics of Virgil**

Prerequisites:

Any 200-level English course

Credits:

1.00

Description:

A study of these poems by the Roman poet with a focus on the issues of translation.

- **ENG-428 Virgil's Aeneid: First Three Books**

Prerequisites:

Any 200-level English course

Credits:

1.00

Description:

A week by week reading of the Mesopotamian Epic that predates the Iliad by one thousand years, and is a masterpiece of heroic endurance and tragic insight. Discussions will be led by David Ferry, whose beautiful translation the class will use as text.

- **ENG-429 Classic Literature of the Underworld**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course will conduct close reading and discussion of selections from classical Greek and Roman texts, as well as from ancient Mesopotamian texts, highlighting passages that trace the descent to the underworld. Some of these readings include: the realm of the shades in Gilgamesh, the myth of Orpheus and Eurydice in Virgil, Homer's Odysseus and Achilles in Hades, the source of the River Styx in Pausanias.

- **ENG-430 Literature of the Vietnam War and the Post 9/11 Wars**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course will examine some of the fiction, non-fiction, and poetry produced in response to the Vietnam War and the most recent war in Iraq. In addition to comparing the literature that has emerged from these two very different wars, these texts will also be examined in relation to peace studies, a field in which there is an emerging consensus that literature and the arts must play a central role in examining questions of war and peace.

Term:

Occasional

- **ENG-431 Studies in Postmodern Fiction**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course introduces students to the innovations that have re-defined fiction following the modern period. Novelists will include significant writers (3 Nobel Laureates among them) of the 20th/21st century, including Borges, Kundera, Calvino, Saramago, Garcia Marquez, Vargas Llosa.

- **ENG-432 Classical Greek and Roman Poetry**

Prerequisites:

Any 200 level ENG course.

Credits:

1.00

Description:

Readings from major poems by the Greek and Roman poets of the ancient and classical periods. Works include: Sappho's lyric poems, Pindar's Odes, Horace's Odes, Virgil's Eclogues and Georgics, selections from the Aeneid and the Iliad.

- **ENG-440 The Odes of Horace**

Prerequisites:

Any 200-level English course

Credits:

1.00

Description:

This course represents a journey through the poetry of Horace, contemporary of Virgil and celebrated poet of the Pax Romana. Discussions will be led by David Ferry, whose beautiful translation of Horace's poetry the class will use as text.

- **ENG-470 Fiction Workshop II**

Prerequisites:

Any 200-level English course

Credits:

4.00

Description:

An intensive practical examination of plot, narrative, characterization, and style in the writing of fiction and/or creative non-fiction. Particular attention will be devoted to group discussion of weekly student writing assignments. Normally offered alternate years.

Term:

Alternates Fall & Spring

- **ENG-471 Advanced Nonfiction Workshop**

Prerequisites:

Any 200-level English course

Credits:

4.00

Description:

An advanced course in non-fiction writing that focuses intensively on developing non-fiction through weekly group discussions of student writing. Particular attention will be devoted toward deepening and expanding the range of possibilities available to non-fiction writers. Topics can include childhood, place, sexuality, religion, work, the nature of memory. The focus will be on the writing process, with students presenting work-in-progress to the class for discussion and revision. Normally offered annually.

- **ENG-475 Poetry Workshop II**

Prerequisites:

Any 200-level English course

Credits:

4.00

Description:

An intensive workshop course in which the student will be required to write original poetry for each class meeting. The focus of the course will be on both the quantity and quality of the student's own work. There will also be specific assignments in the many formal elements of the art. Written self-evaluations will also be required. Normally offered in alternate years.

Term:

- **ENG-480 Fiction Writing Workshop III**

Prerequisites:

Any 200-level English course

Credits:

4.00

Description:

An advanced course in fiction writing that focuses intensively on developing fiction through weekly group discussions of student writing. Particular attention will be devoted toward deepening and expanding the range of possibilities available to fiction writers.

- **ENG-490 Imperial Rome**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course offers an introduction to the Golden Age of Roman culture and power. Close readings of selections from major historians, poets, political thinkers, and philosophers will be examined in the context of Augustan Rome. Topics such as pietas, virtus, and gravitas, as well as the competing claims of public duty and private devotion, stoic maxim and erotic love lyric, will be discussed from the perspectives of writers such as Virgil, Livy, Tacitus, Horace, Catullus, and Lucretius. Note: This course is identical to HUM 304. Normally offered in alternate years.

Type:

Humanities & History

- **ENG-510 Independent Study**

Prerequisites:

WRI-102 or WRI-H103

Credits:

1.00- 4.00

Description:

By special arrangement, a junior or senior may pursue an independent research project under the supervision of a faculty member. Consent of instructor and chairperson required. Offered every semester.

Term:

Offered Both Fall and Spring

- **ENG-514 Internship in English**

Prerequisites:

WRI-102 or WRI-H103

Credits:

2.00

Description:

Individualized guidance in a career-related activity. Upper-class English majors may gain academic credit for work preparing them for an English-related career, provided that the work is monitored by a member of the English faculty. Department approval is required.

Term:

Occasional

Type:

Expanded Classroom Requirement

- **ENG-515 Salamander Internship**

Prerequisites:

WRI-102 or WRI-H103

Credits:

1.00

Description:

A semester-long internship working with the Editor and Managing Editor of Salamander Literary Magazine. Students will gain experience in editing, layout, and production of one of two annual editions of Salamander.

Type:

Expanded Classroom Requirement

- **ENG-H523 Honors Seminar in Group 3: Literary History I: Medieval to Renaissance**

Prerequisites:

ENG 213, 214, 215, 216, 217 OR 218 Admission By Invitation Only

Credits:

4.00

Description:

Honors seminar that fulfills Group 3 of the English major.

Type:

Honors

- **ENG-H524 Honors Seminar in Group 4: Literary History II: 1700 - 1900, American Or British**

Prerequisites:

ENG-213, 214, 215, 216, 217 OR ENG 218 Admission by invitation only

Credits:

4.00

Description:

Honors seminar that fulfills Group I of the English major.

Type:

Honors

- **ENG-H525 Honors Seminar in Group 5 Literary History III: 1900 - Present American, British, Or World.**

Prerequisites:

ENG 213, 214, 215, 216, 217, or ENG 218; Invitation only

Credits:

4.00

Description:

Honors seminar that fulfills Group I of the English major.

Type:

Honors

- **WRI-101 First Year Writing I**

Credits:

4.00

Description:

Study and practice of the writing process and revision in terms of expository writing modes for an academic audience.

- **WRI-L101 Developmental Writing 101 Lab**

Credits:

0.00

Description:

A non credit course for students enrolled in Freshman Composition who need to improve their control of the writing process, English mechanics, and fluency of expression. WRI L101 is a hybrid course that combines online grammar and writing practice with face-to-face support from English instructors.

- **WRI-102 First Year Writing II**

Prerequisites:

WRI 101.

Credits:

4.00

Description:

Study and practice of argumentative and research writing through further work with writing process and revision and the critical reading of a variety of texts.

- **WRI-H103 Advanced First Year Writing**

Prerequisites:

By Invitation Only.

Credits:

4.00

Description:

This course is by invitation only and reserved for incoming Suffolk students with high admission scores. Advanced study and practice of writing process, revision, and research, based on close readings of a variety of texts. Fall semester only.

Type:

Honors

2015-2016 Archived Catalog Information

Environmental Science

Environmental Science students develop a broad background in biology, chemistry, and physics with complementary emphasis on the science of environment and environmental ethics, policy, and regulation.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Minor Requirements](#)
- [Honors](#)
- [Environmental Science Courses](#)

Major Requirements: 21 courses and corresponding laboratories, 84 credits

Core Requirements (11 courses, 44 credits)

- ENVS-111 Majors' Environmental Science

Prerequisites:

Open to Environmental Science and Environmental Studies majors, or by permission of instructor. Must be taken concurrently with ENVS L111

Credits:

3.00

Description:

Applies the fundamentals of science to environmental issues. Topics include population dynamics and resources, environmental degradation, ecosystems, geologic processes, deforestation, biodiversity, climate change, air, soil, and water resource management, and pollution and risks to health. This course is open to all environmental science and environmental studies majors and minors. Other students will be admitted by permission of the instructor. Must be taken concurrently with ENVS L111. 3 hours lecture. 1 term. 3 credits. Normally offered fall evenings.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **ENVS-L111 Majors' Environmental Science Lab**

Prerequisites:

Open to Environmental Science and Environmental Studies majors, or by permission of instructor. Must be taken concurrently with ENVS 111

Credits:

1.00

Description:

Laboratory exercises are used to illustrate topics covered in ENVS 111. Field testing and analysis of environmental samples. Field trips are required. This course is required for all environmental science and environmental studies majors and minors. Concurrent enrollment in ENVS 111 is required. 3 hour laboratory. Normally offered fall.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **ENVS-112 Majors' Environmental Science II**

Credits:

3.00

Description:

Topics introduced in ENVS 111 are further developed to focus on how environmental conditions affect human, animal and ecological health. Areas may include control of environmental contaminants; public health and infectious disease control; antibiotic resistance; health issues associated with food production; contained animal feeding operations; the effects of industrialization on the environment; and the impact of disasters on environmental health. This course is open to environmental science and studies majors and minors or by permission from the instructor. 3 credits. Normally offered spring evenings. Must be taken concurrently with ENVS L112

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

• **ENVS-L112 Majors' Environmental Science II Lab**

Credits:

1.00

Description:

Laboratory exercises are used to illustrate topics covered ENVS 112. Exercises may include analysis of environmental samples for heavy metal contamination and evidence of sewage contamination or air samples for criteria pollutants. Field trips are required. This course is required for Environmental studies majors and minors. 1 credit Normally offered in spring semester evenings. prerequisite: enrollment in ENVS 112

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

• **ENVS-436 Environmental Science Practicum**

Prerequisites:

This class fulfills the Expanded Classroom Requirement

Credits:

4.00

Description:

Application of the principles and techniques of environmental science to a specific environmental problem through a practicum placement of at least 10 hours per week for 12 weeks. Typically, this experience will include literature research, classroom meetings, and field work in an off-campus environmental agency. ECR 1 term- 4 credits. Normally offered fall and spring. Prerequisite: junior standing; limited to Environmental Science majors and minors.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement

- **BIO-111 Introduction to the Cell**

Prerequisites:

Must take BIO L111 concurrently

Credits:

3.00

Description:

Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

- **BIO-L111 Introduction to the Cell Laboratory**

Prerequisites:

Concurrently with BIO 111

Credits:

1.00

Description:

Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **BIO-114 Organismal Biology**

Prerequisites:

Must take BIO L114 concurrently.

Credits:

3.00

Description:

Rigorous introduction to organismal biology emphasizing evolution, phylogenetics, form, and function. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **BIO-L114 Organismal Biology Laboratory**

Prerequisites:

Must take BIO 114 concurrently

Credits:

1.00

Description:

A series of laboratory experiences in evolution, diversity, anatomy and physiology.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **CHEM-111 General Chemistry I**

Prerequisites:

Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:

3.00

Description:

Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **CHEM-L111 General Chemistry I Lab**

Prerequisites:

Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **CHEM-112 General Chemistry II**

Prerequisites:

CHEM 111/L111; CHEM-L112 must be taken concurrently.

Credits:

3.00

Description:

This course is a continuation of General Chemistry I. Fundamental principles of chemistry are discussed. Introduces thermochemistry, gases, solution chemistry, chemical kinetics, chemical equilibrium, acid-base systems, and thermodynamics.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

• CHEM-L112 General Chemistry II Lab

Prerequisites:

CHEM 112 must be taken concurrently;

Credits:

1.00

Description:

This course is a continuation of General Chemistry I Lab. Apply the basic principles of chemistry through discovery laboratory experiments with an emphasis on quantitative analysis. Execute basic analytical techniques such as gravimetric analysis, the application of Beer's Law, and acid-base titrations. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- CHEM-211 Organic Chemistry I

Prerequisites:

CHEM 112 and CHEM-L112. CHEM-L211 must be taken concurrently.

Credits:

3.00

Description:

Introduces basic theories of structure, bonding, and chemical reactivity as specifically applied to modern organic chemistry. Includes functional groups, acid/base chemistry, nomenclature, resonance, spectroscopy, and stereochemistry.

Term:

Offered Fall Term

- CHEM-L211 Organic Chemistry Laboratory I

Prerequisites:

CHEM-112 and CHEM-L112. Must be taken concurrently with CHEM 211.

Credits:

1.00

Description:

Introduces synthetic organic chemistry techniques. Includes melting point determination, distillation, crystallization, extraction, chromatographic separations, and infrared spectroscopy. Discusses experimental design within the context of green organic chemistry.

Term:

Offered Fall Term

- CHEM-314 Instrumental Analysis

Prerequisites:

CHEM 211; CHEM L314 must be taken concurrently.

Credits:

3.00

Description:

Theory and application of analytical instruments: ultraviolet, visible, fluorescence, atomic and emission spectroscopy; chromatographic methods; electrochemical measurements. Prerequisites: CHEM 211; CHEM L314 must be taken concurrently. 3 hour lecture. 1 term - 3 credits. Normally offered Fall/Spring, days.

Term:

Alternates Fall & Spring

• **CHEM-L314 Instrumental Analysis Lab**

Prerequisites:

CHEM L211; CHEM 314 must be taken concurrently

Credits:

1.00

Description:

Laboratory experiments in chemical analysis using instrumental techniques, including spectroscopy and chromatography. Data collection and evaluation includes computer-based methods. Reports are prepared in professional style. Prerequisites: CHEM L112; CHEM 314 must be taken concurrently. 4-hour Laboratory. 1 term - 1 credit. Normally offered Fall/Spring.

Term:

Alternates Fall & Spring

• **PHIL-362 Environmental Ethics**

Prerequisites:

PHIL-119, PHIL-123, PHIL-127 or PHIL-120

Credits:

4.00

Description:

An examination of the moral issues involved in the interaction of humans with their natural environment. Topics include: the environmental crisis, human-centered vs. nature-centered ethics, intrinsic value in nature, obligations to future generations, the importance of preserving endangered species and wilderness, radical ecology, eco-feminism, and the role of social justice in environmental issues. Prerequisite: PHIL 119, or 123, or 127. 1 term -4 credits. Normally offered every year.

Term:

Occasional

Choose one of the following and its corresponding laboratory:

- **CHEM-375 Advanced Inorganic Chemistry**

Prerequisites:

CHEM 212

Credits:

3.00

Description:

Topics in inorganic chemistry including bonding theories, chemical structures, symmetry and group theory, kinetics and mechanisms of reactions, and spectroscopy. Advanced topics may include bioinorganic chemistry, organometallics, or materials chemistry. 3 hours lecture. Normally offered spring, even numbered years.

Term:

Alternates Fall & Spring

- **CHEM-L375 Advanced Inorganic Laboratory**

Prerequisites:

CHEM 375 must be taken concurrently

Credits:

1.00

Description:

Laboratory exercises designed to illustrate principles covered by topics in CHEM 375. Prior or concurrent enrollment in CHEM 375 required. 4-hour laboratory. Normally offered spring, even numbered years.

Term:

Alternates Fall & Spring

Environmental Science Requirements (2 courses and corresponding laboratories where applicable, 8 credits)

Choose two of the following:

- **SCI-173 Geographic Information Science (GIS) The Power of Digital Maps**

Prerequisites:

SCI L173 Must be taken concurrently Knowledge of Windows type Application

Credits:

3.00

Description:

Geographic Information Science (GIS) link information (number of fire hydrants on a block) to features on a map (e.g., a point representing street address) that has a designated geographic location (as designated by global coordinates). Unlike paper maps, GIS software allows the production of interactive maps that allows the user to layer data, to indicate spatial patterns, to analyze trends, and to combine different features of the mapped area in novel ways. For example, a business person may wish to use GIS to determine the optimum location of retail outlet (based on the mapped demographics of a neighborhood), while an environmental engineer may use GIS to describe the location of outfalls to see how they correlate to areas of stream pollution. In this course, students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **SCI-L173 GIS Lab**

Prerequisites:

Must be taken concurrently with SCI-173

Credits:

1.00

Description:

This laboratory illustrates concepts and methods taught in SCI 173. In this lab students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **ENVE-325 Geographical Information Science**

Prerequisites:

Approved computer programming course or permission of instructor.

Credits:

3.00

Description:

This course provides the fundamentals of geographic information science (GIS) including the history of automated mapping. A review of the necessary hardware and software elements used in GIS is presented. Hands-on exercises with computerized mapping software are required.

- **ENVE-L325 Geographic Information Science Lab**

Prerequisites:

concurrently with ENVE 325

Credits:

1.00

Description:

Required companion computer laboratory to be taken concurrently with ENVE 325. Prerequisite: Approved computer programming course or permission of instructor.

- **CHEM-453 Introduction to Toxicology**

Prerequisites:

Prerequisites: CHEM 212 and BIO 111

Credits:

4.00

Description:

The study of toxic actions of chemicals on biological systems, with discussion of general principles, methodology, and selected topics. Topics may include pesticides, neurotoxicants, toxicity of metals, and carcinogenesis/ mutagenesis. Examples will be drawn from forensic toxicology, as well as environmental and occupational toxicology. CHEM 332 and BIO 403 strongly recommended. Normally offered every other year.

Term:

Occasional

Biology Requirements (3 courses and corresponding laboratories where applicable, 12 credits)

Choose three of the following:

- **BIO-222 Field Botany**

Prerequisites:

BIO 111 and BIO-L111. This course will fulfill the Expanded Classroom Requirement.

Credits:

4.00

Description:

A three-week camping excursion, during which common tracheotypes, bryophytes, algae, and other photosynthetic organisms characteristic of various habits in Maine will be identified. Emphasis will be on plant ecology including species interactions and habitat requirements. Vertical zonation in mountains, lakes and intertidal areas will be a point of focus. Participants will camp for one week at each of three sites: Baxter State Park, Central Maine (near Augusta), and on Cobscook Bay. Travel will be by van(s) and hiking (up to ten miles a day) over difficult terrain. Sleeping bags and pads required (tents provided). Additional fees: Camping and food est. \$525.00. ECR. The three-week camping excursion typically runs from late May (after tradition Spring course finals are over) into June. Taught yearly.

Term:

Offered Spring Term

Type:

Expanded Classroom Requirement

- **BIO-254 Marine Biology**

Prerequisites:

BIO-111/L111 or BIO-114/L114 or Instructor's consent; BIO-L254 concurrently;

Credits:

3.00

Description:

Introduction to the marine environment, its organisms and their specific adaptations. Emphasis on marine and estuarine ecology, intertidal habits, trophic relations, and physiology. Human impacts on the sea: fisheries, mariculture, pollution, introduced species, climate change and seawater acidification, and law of the sea. Includes a one week camping excursion into eastern Maine for lab/field exercises and some lectures. ECR. This course typically meets for one week in the third week of August (before typical fall courses begin) and includes a camping fee of ca \$250. Taught yearly each fall.

Term:

Offered Fall Term

Type:

Expanded Classroom Requirement

- **BIO-L254 Marine Biology Lab**

Prerequisites:

BIO-111/L111 or BIO-114/L114 or Instructor's consent; BIO-254 concurrently;

Credits:

1.00

Description:

Field trips to local marine environments; field and laboratory observations of marine organisms. Independent student projects. Taught largely in the field during one week camping excursion to eastern Maine with several lab sessions on campus in Boston during fall semester. ECR.

Term:

Offered Fall Term

Type:

Expanded Classroom Requirement

- **BIO-285 Microbiology**

Prerequisites:

BIO-111 and BIO-L111; BIO-L285 concurrently;

Credits:

3.00

Description:

Viruses and bacteria are surveyed in terms of their ecology, biochemistry, taxonomy, molecular biology and control.

Term:

Offered Spring Term

- **BIO-L285 Microbiology Laboratory**

Prerequisites:

BIO 111/L111; BIO 285 concurrently;

Credits:

1.00

Description:

Introduction to microbiological techniques and their applications to health, research and industry.

Term:

Offered Fall Term

- **BIO-333 Ecology**

Prerequisites:

BIO-114/L114; BIO-L333 concurrently;

Credits:

3.00

Description:

Areas of study include but are not limited to basic principles of population biology, community ecology, trophic dynamics, ecosystem structure and function and evolutionary theory.

Term:

Offered Fall Term

- **BIO-L333 Ecology Lab**

Prerequisites:

BIO-114, BIO-L114, and BIO-333 concurrently

Credits:

1.00

Description:

Field and laboratory experiences in techniques and concepts relevant to ecological theory, data collection, statistical analysis, visual representation and report preparation.

Term:

Offered Fall Term

- **BIO-343 Biodiversity & Conservation Biology**

Prerequisites:

BIO-114 and BIO-L114

Credits:

4.00

Description:

This course covers a broad spectrum of aspects of biodiversity and conservation by examining key elements ranging from global patterns in the distribution of life on our planet to the effects our human population is causing on those patterns. Examples from marine and terrestrial animals and plants are used to convey current ideas with a focus on the importance of global biodiversity, and the design of management programs for the conservation of species and ecosystems. 4-credit

- **BIO-357 Biology of Fishes**

Prerequisites:

BIO 114/L114, and Junior standing. Requires permission from Marine Sciences Coordinator.

Credits:

3.00

Description:

The evolution, systematics, anatomy, physiology and behavior of freshwater, marine and anadromous fishes from temperate to tropical environments. The interactions of fish in their environments, including predator-prey relationships, host-symbiont interactions, and fish as herbivores. Taken with permission from the Marine Science Consortium Coordinator. [This is a Marine Science Consortium Course and enrollment is limited] Evenings only: off campus

Term:

Offered Spring Term

Physics Requirements (2 courses and corresponding laboratories, 8 credits)

Choose one of the following and its corresponding laboratory:

- **PHYS-111 College Physics I**

Prerequisites:

Take MATH-121 or MATH-134 or permission of Physics department chair;PHYS L111 taken concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

• **PHYS-L111 College Physics Lab I**

Prerequisites:

PHYS 111 concurrently

Credits:

1.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course. Error propagation, use of Excel, laboratory notebooks and formal reports required.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

• **PHYS-151 University Physics I**

Prerequisites:

Take MATH-121 or MATH 165. PHYS L151 concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• PHYS-L151 University Physics Lab I

Prerequisites:

PHYS 151 concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

Choose one of the following and its corresponding laboratory:

- **PHYS-112 College Physics II**

Prerequisites:

PHYS-111 and PHYS-L11. Must be taken concurrently with PHYS-L112.

Credits:

3.00

Description:

Continuation of the fundamental principles of physics. Study of electric forces and fields, electric potential, DC circuits, electromagnetic induction, magnetic fields, AC circuits, introduction to optics, introduction to atomic, nuclear and particle physics.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS

- **PHYS-L112 College Physics Lab II**

Prerequisites:

PHYS 111 and PHYS L111; PHYS 112 must be taken concurrently

Credits:

1.00

Description:

Continuation of the fundamental principles of physics. Study of electric forces and fields, electric potential, DC circuits, electromagnetic induction, magnetic fields, AC circuits, introduction to optics, introduction to atomic, nuclear and particle physics. The laboratory consists of experiments to illustrate the basic concepts studied in the course. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **PHYS-152 University Physics II**

Prerequisites:

PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

Credits:

3.00

Description:

This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **PHYS-L152 University Physics Lab II**

Prerequisites:

PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGR

Math Requirement (1 course, 4 credits)

Choose one of the following:

- **MATH-134 Calculus for Management & Social Sciences**

Prerequisites:

MATH-104, MATH-121 or MATH level 4

Credits:

4.00

Description:

A one-semester introduction to differential and integral calculus. Theory is presented informally and topics and techniques are limited to polynomials, rational functions, logarithmic and exponential functions. Topics include a review of precalculus, linear regression, limits and continuity, derivatives, differentiation rules, implicit differentiation, related rates, applications of derivatives to graphing, minima/maxima, applications of the derivative, marginal analysis, differential equations of growth and decay, anti-derivatives, the definite integral, the Fundamental Theorem of Calculus, area measurements. This course cannot be used to satisfy core or complementary requirements by students majoring in chemistry, computer science, engineering, mathematics, or physics. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

- **MATH-165 Calculus I**

Prerequisites:

MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

Credits:

4.00

Description:

Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

Any math course above MATH-165 may also be chosen.

Students who have taken MATH-165 are encouraged to take PHYS-151/L151 and PHYS-152/L152. Students considering graduate school are encouraged to take MATH-165 and MATH-166.

Statistics Requirement (1 course, 4 credits)

Choose one of the following:

- **BIO-273 Biostatistics**

Prerequisites:

BIO 111/L111

Credits:

4.00

Description:

Introduction to the statistical methods used to evaluate biological problems. Sampling, probability, confidence intervals, hypothesis tests, experimental design, analysis of variance, regression, and correlation are some of the topics offered. Software for data handling, graphics, and analysis will be used.

Term:

Offered Fall Term

Type:

Quantitative Reasoning

- **STATS-250 Applied Statistics**

Prerequisites:

MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

Credits:

4.00

Description:

Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

Type:

Quantitative Reasoning

Elective (1 course, 4 credits)

Choose one of the following:

- **GVT-438 Environmental Policy & Politic**

Prerequisites:

This course will have a service learning component Sophomore Status required

Credits:

4.00

Description:

From Rio to the Boston Harbor Project, this course examines the policies and politics of the environment. It examines the origins of the environmental movement in the United States focusing on the development and present function of government and non-government organizations responsible for the development and implementation of global, national, state and local environmental policies.

Type:

Social Science,BSJ SOCIAL SCIENCE

• **EC-151 Economic & Human Geography**

Credits:

4.00

Description:

The study of how economic and human activity is distributed across space, the reasons for these spatial distributions, and the processes that change the spatial organization of economic activity over time. Topics include: maps, map projections, and geographic information systems; population geography; the organization and location of cities, towns and villages; transportation and communication policy; industrial location; the geography of world trade; and geographic features of economic development. The course takes a global perspective, and draws on cases and examples from all over the world. Cultural Diversity B

Type:

Cultural Diversity Opt B,Social Science,BSJ SOCIAL SCIENCE,Asian Studies,Diverse Perspectives

Core Requirements (3 courses and corresponding laboratories where applicable, 12 credits)

- ENVS-111 Majors' Environmental Science

Prerequisites:

Open to Environmental Science and Environmental Studies majors, or by permission of instructor. Must be taken concurrently with ENVS L111

Credits:

3.00

Description:

Applies the fundamentals of science to environmental issues. Topics include population dynamics and resources, environmental degradation, ecosystems, geologic processes, deforestation, biodiversity, climate change, air, soil, and water resource management, and pollution and risks to health. This course is open to all environmental science and environmental studies majors and minors. Other students will be admitted by permission of the instructor. Must be taken concurrently with ENV5 L111. 3 hours lecture. 1 term. 3 credits. Normally offered fall evenings.

Term:

Offered Fall Term

Type:

- **ENV5-L111 Majors' Environmental Science Lab**

Prerequisites:

Open to Environmental Science and Environmental Studies majors, or by permission of instructor. Must be taken concurrently with ENV5 111

Credits:

1.00

Description:

Laboratory exercises are used to illustrate topics covered in ENV5 111. Field testing and analysis of environmental samples. Field trips are required. This course is required for all environmental science and environmental studies majors and minors. Concurrent enrollment in ENV5 111 is required. 3 hour laboratory. Normally offered fall.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **ENV5-112 Majors' Environmental Science II**

Credits:

3.00

Description:

Topics introduced in ENVS 111 are further developed to focus on how environmental conditions affect human, animal and ecological health. Areas may include control of environmental contaminants; public health and infectious disease control; antibiotic resistance; health issues associated with food production; contained animal feeding operations; the effects of industrialization on the environment; and the impact of disasters on environmental health. This course is open to environmental science and studies majors and minors or by permission from the instructor. 3 credits. Normally offered spring evenings. Must be taken concurrently with ENVS L112

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

• **ENVS-L112 Majors' Environmental Science II Lab**

Credits:

1.00

Description:

Laboratory exercises are used to illustrate topics covered ENVS 112. Exercises may include analysis of environmental samples for heavy metal contamination and evidence of sewage contamination or air samples for criteria pollutants. Field trips are required. This course is required for Environmental studies majors and minors. 1 credit Normally offered in spring semester evenings. prerequisite: enrollment in ENVS 112

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

• **PHIL-362 Environmental Ethics**

Prerequisites:

PHIL-119, PHIL-123, PHIL-127 or PHIL-120

Credits:

4.00

Description:

An examination of the moral issues involved in the interaction of humans with their natural environment. Topics include: the environmental crisis, human-centered vs. nature-centered ethics, intrinsic value in nature, obligations to future generations, the importance of preserving endangered species and wilderness, radical ecology, eco-feminism, and the role of social justice in environmental issues. Prerequisite: PHIL 119, or 123, or 127. 1 term -4 credits. Normally offered every year.

Term:

Occasional

Electives (2 courses and corresponding laboratories where applicable, 8 credits)

Choose two of the following and corresponding laboratories where applicable:

- **SCI-173 Geographic Information Science (GIS) The Power of Digital Maps**

Prerequisites:

SCI L173 Must be taken concurrently Knowledge of Windows type Application

Credits:

3.00

Description:

Geographic Information Science (GIS) link information (number of fire hydrants on a block) to features on a map (e.g., a point representing street address) that has a designated geographic location (as designated by global coordinates). Unlike paper maps, GIS software allows the production of interactive maps that allows the user to layer data, to indicate spatial patterns, to analyze trends, and to combine different features of the mapped area in novel ways. For example, a business person may wish to use GIS to determine the optimum location of retail outlet (based on the mapped demographics of a neighborhood), while an environmental engineer may use GIS to describe the location of outfalls to see how they correlate to areas of stream pollution. In this course, students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **SCI-L173 GIS Lab**

Prerequisites:

Must be taken concurrently with SCI-173

Credits:

1.00

Description:

This laboratory illustrates concepts and methods taught in SCI 173. In this lab students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **ENVE-325 Geographical Information Science**

Prerequisites:

Approved computer programming course or permission of instructor.

Credits:

3.00

Description:

This course provides the fundamentals of geographic information science (GIS) including the history of automated mapping. A review of the necessary hardware and software elements used in GIS is presented. Hands-on exercises with computerized mapping software are required.

- **ENVE-L325 Geographic Information Science Lab**

Prerequisites:

concurrently with ENVE 325

Credits:

1.00

Description:

Required companion computer laboratory to be taken concurrently with ENVE 325. Prerequisite: Approved computer programming course or permission of instructor.

- **CHEM-453 Introduction to Toxicology**

Prerequisites:

Prerequisites: CHEM 212 and BIO 111

Credits:

4.00

Description:

The study of toxic actions of chemicals on biological systems, with discussion of general principles, methodology, and selected topics. Topics may include pesticides, neurotoxicants, toxicity of metals, and carcinogenesis/ mutagenesis. Examples will be drawn from forensic toxicology, as well as environmental and occupational toxicology. CHEM 332 and BIO 403 strongly recommended. Normally offered every other year.

Term:

Occasional

- **BIO-222 Field Botany**

Prerequisites:

BIO 111 and BIO-L111. This course will fulfill the Expanded Classroom Requirement.

Credits:

4.00

Description:

A three-week camping excursion, during which common tracheotypes, bryophytes, algae, and other photosynthetic organisms characteristic of various habits in Maine will be identified. Emphasis will be on plant ecology including species interactions and habitat requirements. Vertical zonation in mountains, lakes and intertidal areas will be a point of focus. Participants will camp for one week at each of three sites: Baxter State Park, Central Maine (near Augusta), and on Cobscook Bay. Travel will be by van(s) and hiking (up to ten miles a day) over difficult terrain. Sleeping bags and pads required (tents provided). Additional fees: Camping and food est. \$525.00. ECR. The three-week camping excursion typically runs from late May (after tradition Spring course finals are over) into June. Taught yearly.

Term:

Offered Spring Term

Type:

Expanded Classroom Requirement

• BIO-254 Marine Biology

Prerequisites:

BIO-111/L111 or BIO-114/L114 or Instructor's consent; BIO-L254 concurrently;

Credits:

3.00

Description:

Introduction to the marine environment, its organisms and their specific adaptations. Emphasis on marine and estuarine ecology, intertidal habits, trophic relations, and physiology. Human impacts on the sea: fisheries, mariculture, pollution, introduced species, climate change and seawater acidification, and law of the sea. Includes a one week camping excursion into eastern Maine for lab/field exercises and some lectures. ECR. This course typically meets for one week in the third week of August (before typical fall courses begin) and includes a camping fee of ca \$250. Taught yearly each fall.

Term:

Offered Fall Term

Type:

Expanded Classroom Requirement

- **BIO-L254 Marine Biology Lab**

Prerequisites:

BIO-111/L111 or BIO-114/L114 or Instructor's consent; BIO-254 concurrently;

Credits:

1.00

Description:

Field trips to local marine environments; field and laboratory observations of marine organisms. Independent student projects. Taught largely in the field during one week camping excursion to eastern Maine with several lab sessions on campus in Boston during fall semester. ECR.

Term:

Offered Fall Term

Type:

Expanded Classroom Requirement

- **BIO-285 Microbiology**

Prerequisites:

BIO-111 and BIO-L111; BIO-L285 concurrently;

Credits:

3.00

Description:

Viruses and bacteria are surveyed in terms of their ecology, biochemistry, taxonomy, molecular biology and control.

Term:

Offered Spring Term

- **BIO-L285 Microbiology Laboratory**

Prerequisites:

BIO 111/L111; BIO 285 concurrently;

Credits:

1.00

Description:

Introduction to microbiological techniques and their applications to health, research and industry.

Term:

Offered Fall Term

- **BIO-333 Ecology**

Prerequisites:

BIO-114/L114; BIO-L333 concurrently;

Credits:

3.00

Description:

Areas of study include but are not limited to basic principles of population biology, community ecology, trophic dynamics, ecosystem structure and function and evolutionary theory.

Term:

Offered Fall Term

- **BIO-L333 Ecology Lab**

Prerequisites:

BIO-114, BIO-L114, and BIO-333 concurrently

Credits:

1.00

Description:

Field and laboratory experiences in techniques and concepts relevant to ecological theory, data collection, statistical analysis, visual representation and report preparation.

Term:

Offered Fall Term

- **BIO-343 Biodiversity & Conservation Biology**

Prerequisites:

BIO-114 and BIO-L114

Credits:

4.00

Description:

This course covers a broad spectrum of aspects of biodiversity and conservation by examining key elements ranging from global patterns in the distribution of life on our planet to the effects our human population is causing on those patterns. Examples from marine and terrestrial animals and plants are used to convey current ideas with a focus on the importance of global biodiversity, and the design of management programs for the conservation of species and ecosystems. 4-credit

• BIO-357 Biology of Fishes

Prerequisites:

BIO 114/L114, and Junior standing. Requires permission from Marine Sciences Coordinator.

Credits:

3.00

Description:

The evolution, systematics, anatomy, physiology and behavior of freshwater, marine and anadromous fishes from temperate to tropical environments. The interactions of fish in their environments, including predator-prey relationships, host-symbiont interactions, and fish as herbivores. Taken with permission from the Marine Science Consortium Coordinator. [This is a Marine Science Consortium Course and enrollment is limited] Evenings only: off campus

Term:

Offered Spring Term

2015-2016 Archived Catalog Information

Environmental Science

Environmental Science students develop a broad background in biology, chemistry, and physics with complementary emphasis on the science of environment and environmental ethics, policy, and regulation.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Minor Requirements](#)
- [Honors](#)
- [Environmental Science Courses](#)

Environmental Science offers an honors program. Students participating in the program must meet the following criteria:

1. Students must have an overall GPA of 3.5 or higher and a GPA in the major program of 3.5 or higher.
2. Honors candidates must be invited by the Environmental Science Advisory Committee, and should register for at least four credits of ENV5-510.
3. Participants will develop and complete an independent study project under the supervision of a member of the Environmental Science Advisory Committee. Depending on the nature of the project, the study may be conducted on or off campus, or involve a combination of both.
4. To successfully complete the project, a student will be required to develop and defend a thesis to the Environmental Science Advisory Committee and to present findings in a colloquium.

- **ENV5-510 Independent Study**

Prerequisites:

An independent study form must be submitted to the CAS Dean's Office.

Credits:

1.00- 4.00

Description:

This is an independent study in environmental studies. Topics will vary.

Term:

Offered Both Fall and Spring

- ENVS-111 Majors' Environmental Science

Prerequisites:

Open to Environmental Science and Environmental Studies majors, or by permission of instructor. Must be taken concurrently with ENVS L111

Credits:

3.00

Description:

Applies the fundamentals of science to environmental issues. Topics include population dynamics and resources, environmental degradation, ecosystems, geologic processes, deforestation, biodiversity, climate change, air, soil, and water resource management, and pollution and risks to health. This course is open to all environmental science and environmental studies majors and minors. Other students will be admitted by permission of the instructor. Must be taken concurrently with ENVS L111. 3 hours lecture. 1 term. 3 credits. Normally offered fall evenings.

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **ENVS-436 Environmental Science Practicum**

Prerequisites:

This class fulfills the Expanded Classroom Requirement

Credits:

4.00

Description:

Application of the principles and techniques of environmental science to a specific environmental problem through a practicum placement of at least 10 hours per week for 12 weeks. Typically, this experience will include literature research, classroom meetings, and field work in an off-campus environmental agency. ECR 1 term- 4 credits. Normally offered fall and spring. Prerequisite: junior standing; limited to Environmental Science majors and minors.

Term:

Offered Both Fall and Spring

2015-2016 Archived Catalog Information

Environmental Studies

The Environmental Studies program is an interdisciplinary program drawing from the sciences, humanities, and social sciences. The program is structured to provide students with a foundation in science, social science, ethics, and humanities so that they may develop a comprehensive understanding of the complexity of environmental issues.

Because the program is flexible, the specific four-year paradigm will vary for individual students, and it is not possible to assign most courses to specific years. If possible, majors should take ENST-101 in the fall of their first year and complete the Environmental Science sequence during their first or second year. The capstone course sequence, ENST-401 and ENST-402, should be taken during the senior year.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Minor Requirements](#)
- [Honors](#)
- [Environmental Studies Courses](#)

Major Requirements: 12 courses and corresponding laboratories where applicable, 44-76 credits

The following are requirements for completion of the major, along with one course each from groups A, B, and C listed below.

Core Requirements (9 courses and corresponding laboratories where applicable, 36 credits)

- ENST-101 Environmental Studies

Credits:

4.00

Description:

An interdisciplinary course that focuses on the social science and humanities disciplines as they are related to the natural environment. Students will study texts from those disciplines to acquire a deeper understanding of the values and beliefs that underlie environmental issues. The course will also investigate the policy-making processes and institutions through which those issues are decided, and the social inequalities in the distribution of environmental problems. Texts to be studied will range from literature, philosophy and film to policy statements, impact reports, community advocacy materials, and investigative journalism.

• ENVS-111 Majors' Environmental Science

Prerequisites:

Open to Environmental Science and Environmental Studies majors, or by permission of instructor. Must be taken concurrently with ENVS L111

Credits:

3.00

Description:

Applies the fundamentals of science to environmental issues. Topics include population dynamics and resources, environmental degradation, ecosystems, geologic processes, deforestation, biodiversity, climate change, air, soil, and water resource management, and pollution and risks to health. This course is open to all environmental science and environmental studies majors and minors. Other students will be admitted by permission of the instructor. Must be taken concurrently with ENVS L111. 3 hours lecture. 1 term. 3 credits. Normally offered fall evenings.

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **PHIL-362 Environmental Ethics**

Prerequisites:

PHIL-119, PHIL-123, PHIL-127 or PHIL-120

Credits:

4.00

Description:

An examination of the moral issues involved in the interaction of humans with their natural environment. Topics include: the environmental crisis, human-centered vs. nature-centered ethics, intrinsic value in nature, obligations to future generations, the importance of preserving endangered species and wilderness, radical ecology, eco-feminism, and the role of social justice in environmental issues. Prerequisite: PHIL 119, or 123, or 127. 1 term -4 credits. Normally offered every year.

Term:

Occasional

- **ENST-401 Environmental Studies Capstone Course**

Credits:

4.00

Description:

A course examining a contemporary environmental issue from various disciplinary perspectives. Using a case-study approach, students will develop a proposal to address the identified issue from the perspectives of policy, ethics, justice, science and culture. As appropriate, the proposal will be field tested, demonstrated, or presented to the local community. Possible topics include sustainable development, urban air pollution, sustainable farming, or water conservation.

- **ENST-402 Environmental Studies Capstone II**

Credits:

4.00

Description:

A continuation of ENST 401

- **ENST-403 Environmental Studies Practicum**

Prerequisites:

This class fulfills the Expanded Classroom Requirement. Junior standing or above required or consent of the instructor.

Credits:

4.00

Description:

This course combines a practicum placement of at least 10 hours a week for 12 weeks in a position that offered the student significant opportunity to learn about environmental problems as the basis for reflection, analysis, and skill development through appropriate reading, writing, and oral presentation assignments. Specific learning objectives will be tailored to the student's placement. Interested students should consult instructor in advance. ECR. 4 credits. Prerequisite: junior standing, limited to Environmental Studies majors and minors.

Type:

Expanded Classroom Requirement

Choose one of the following:

- **EC-131 Environmental Economics**

Credits:

4.00

Description:

Identifies the environmental effects of economic activity, including polluted water and air, noise, and radiation, and values their costs and benefits. Analyzes mechanisms, including taxes and permits, for achieving a socially preferable level of pollution. Traces role played by institutions, including common ownership, in affecting environmental decay. Resource depletion (of oil, forests, and fisheries) and appropriate policy responses.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-438 Environmental Policy & Politic**

Prerequisites:

This course will have a service learning component Sophomore Status required

Credits:

4.00

Description:

From Rio to the Boston Harbor Project, this course examines the policies and politics of the environment. It examines the origins of the environmental movement in the United States focusing on the development and present function of government and non-government organizations responsible for the development and implementation of global, national, state and local environmental policies.

Type:

Social Science,BSJ SOCIAL SCIENCE

Choose one of the following:

• STATS-250 Applied Statistics

Prerequisites:

MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

Credits:

4.00

Description:

Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

Type:

Quantitative Reasoning

• BIO-273 Biostatistics

Prerequisites:

BIO 111/L111

Credits:

4.00

Description:

Introduction to the statistical methods used to evaluate biological problems. Sampling, probability, confidence intervals, hypothesis tests, experimental design, analysis of variance, regression, and correlation are some of the topics offered. Software for data handling, graphics, and analysis will be used.

Term:

Offered Fall Term

Type:

A. Choose one natural science course and its corresponding laboratory (where applicable) from the following:

Biology

- **BIO-254 Marine Biology**

Prerequisites:

BIO-111/L111 or BIO-114/L114 or Instructor's consent; BIO-L254 concurrently;

Credits:

3.00

Description:

Introduction to the marine environment, its organisms and their specific adaptations. Emphasis on marine and estuarine ecology, intertidal habits, trophic relations, and physiology. Human impacts on the sea: fisheries, mariculture, pollution, introduced species, climate change and seawater acidification, and law of the sea. Includes a one week camping excursion into eastern Maine for lab/field exercises and some lectures. ECR. This course typically meets for one week in the third week of August (before typical fall courses begin) and includes a camping fee of ca \$250. Taught yearly each fall.

Term:

Offered Fall Term

Type:

Expanded Classroom Requirement

- **BIO-L254 Marine Biology Lab**

Prerequisites:

BIO-111/L111 or BIO-114/L114 or Instructor's consent; BIO-254 concurrently;

Credits:

1.00

Description:

Field trips to local marine environments; field and laboratory observations of marine organisms. Independent student projects. Taught largely in the field during one week camping excursion to eastern Maine with several lab sessions on campus in Boston during fall semester. ECR.

Term:

Offered Fall Term

Type:

Expanded Classroom Requirement

- **BIO-285 Microbiology**

Prerequisites:

BIO-111 and BIO-L111; BIO-L285 concurrently;

Credits:

3.00

Description:

Viruses and bacteria are surveyed in terms of their ecology, biochemistry, taxonomy, molecular biology and control.

Term:

Offered Spring Term

- **BIO-L285 Microbiology Laboratory**

Prerequisites:

BIO 111/L111; BIO 285 concurrently;

Credits:

1.00

Description:

Introduction to microbiological techniques and their applications to health, research and industry.

Term:

Offered Fall Term

- **BIO-304 Comparative Animal Physiology**

Prerequisites:

BIO-114 and BIO-L114. Must take BIO-L304 concurrently

Credits:

3.00

Description:

Mechanisms of physiological adaptations to environmental challenges are studied. Examples of gas exchange, osmoregulation, fluid transport, temperature regulation, nervous control, and movement are examined in various animal forms through class lecture and discussion, required readings, and external lectures. Spring semester.

Term:

Offered Spring Term

- **BIO-L304 Comp Animal Physiology Lab**

Prerequisites:

BIO-114 and BIO-L114. Must take BIO-304 concurrently.

Credits:

1.00

Description:

Selected physiological processes and mechanisms or adaptation in invertebrate and vertebrate animals are examined by observation and controlled experiments.

- **BIO-333 Ecology**

Prerequisites:

BIO-114/L114; BIO-L333 concurrently;

Credits:

3.00

Description:

Areas of study include but are not limited to basic principles of population biology, community ecology, trophic dynamics, ecosystem structure and function and evolutionary theory.

Term:

Offered Fall Term

- **BIO-L333 Ecology Lab**

Prerequisites:

BIO-114, BIO-L114, and BIO-333 concurrently

Credits:

1.00

Description:

Field and laboratory experiences in techniques and concepts relevant to ecological theory, data collection, statistical analysis, visual representation and report preparation.

Term:

Offered Fall Term

- **BIO-343 Biodiversity & Conservation Biology**

Prerequisites:

BIO-114 and BIO-L114

Credits:

4.00

Description:

This course covers a broad spectrum of aspects of biodiversity and conservation by examining key elements ranging from global patterns in the distribution of life on our planet to the effects our human population is causing on those patterns. Examples from marine and terrestrial animals and plants are used to convey current ideas with a focus on the importance of global biodiversity, and the design of management programs for the conservation of species and ecosystems. 4-credit

Chemistry & Biochemistry

- **CHEM-211 Organic Chemistry I**

Prerequisites:

CHEM 112 and CHEM-L112. CHEM-L211 must be taken concurrently.

Credits:

3.00

Description:

Introduces basic theories of structure, bonding, and chemical reactivity as specifically applied to modern organic chemistry. Includes functional groups, acid/base chemistry, nomenclature, resonance, spectroscopy, and stereochemistry.

Term:

Offered Fall Term

- **CHEM-L211 Organic Chemistry Laboratory I**

Prerequisites:

CHEM-112 and CHEM-L112. Must be taken concurrently with CHEM 211.

Credits:

1.00

Description:

Introduces synthetic organic chemistry techniques. Includes melting point determination, distillation, crystallization, extraction, chromatographic separations, and infrared spectroscopy. Discusses experimental design within the context of green organic chemistry.

Term:

Offered Fall Term

- **CHEM-212 Organic Chemistry II**

Prerequisites:

CHEM 211 and CHEM L211. Must take CHEM-L212 concurrently.

Credits:

3.00

Description:

Builds on the core competencies acquired in Organic Chemistry I. Includes detailed mechanistic discussions of substitution, elimination, and addition reactions. Emphasizes organic synthesis, structure determination, and spectroscopy.

Term:

Offered Spring Term

- **CHEM-L212 Organic Chemistry Laboratory II**

Prerequisites:

CHEM-211 and CHEM-L211. Must be take CHEM-212 concurrently.

Credits:

1.00

Description:

Builds on the core competencies acquired in Organic Chemistry Laboratory I. Emphasizes the characterization of organic molecules via nuclear magnetic resonance spectroscopy. Discusses experimental design within the context of green organic chemistry.

Term:

Offered Spring Term

• **CHEM-314 Instrumental Analysis**

Prerequisites:

CHEM 211; CHEM L314 must be taken concurrently.

Credits:

3.00

Description:

Theory and application of analytical instruments: ultraviolet, visible, fluorescence, atomic and emission spectroscopy; chromatographic methods; electrochemical measurements. Prerequisites: CHEM 211; CHEM L314 must be taken concurrently. 3 hour lecture. 1 term - 3 credits. Normally offered Fall/Spring, days.

Term:

Alternates Fall & Spring

• **CHEM-L314 Instrumental Analysis Lab**

Prerequisites:

CHEM L211; CHEM 314 must be taken concurrently

Credits:

1.00

Description:

Laboratory experiments in chemical analysis using instrumental techniques, including spectroscopy and chromatography. Data collection and evaluation includes computer-based methods. Reports are prepared in professional style. Prerequisites: CHEM L112; CHEM 314 must be taken concurrently. 4-hour Laboratory. 1 term - 1 credit. Normally offered Fall/Spring.

Term:

Alternates Fall & Spring

• **CHEM-331 Biochemistry I**

Prerequisites:

CHEM 212/L212 or permission of instructor. CHEM L331 must be taken concurrently.

Credits:

3.00

Description:

Explores the foundations of biochemistry, including the structure, organization and behavior of proteins, carbohydrates, lipids, and nucleic acids. Topics include enzyme catalysis, kinetics, and inhibition as well as protein regulation and membrane structure. Introduces the use of biochemical literature and computer-based bioinformatics techniques. Offered every fall.

Term:

Offered Fall Term

• **CHEM-L331 Biochemical Techniques I**

Prerequisites:

Must be taken concurrently with CHEM 331. Take CHEM-212 and CHEM-L212 or permission of instructor.

Credits:

1.00

Description:

Laboratory course introducing biochemical techniques. Includes buffer preparation, PCR, purification of DNA and proteins, agarose and polyacrylamide gel electrophoresis, protein quantitation and detection, and enzyme kinetic assays. Offered every Fall.

Term:

Offered Fall Term

- **CHEM-453 Introduction to Toxicology**

Prerequisites:

Prerequisites: CHEM 212 and BIO 111

Credits:

4.00

Description:

The study of toxic actions of chemicals on biological systems, with discussion of general principles, methodology, and selected topics. Topics may include pesticides, neurotoxicants, toxicity of metals, and carcinogenesis/ mutagenesis. Examples will be drawn from forensic toxicology, as well as environmental and occupational toxicology. CHEM 332 and BIO 403 strongly recommended. Normally offered every other year.

Term:

Occasional

Environmental Engineering

- **ENVE-325 Geographical Information Science**

Prerequisites:

Approved computer programming course or permission of instructor.

Credits:

3.00

Description:

This course provides the fundamentals of geographic information science (GIS) including the history of automated mapping. A review of the necessary hardware and software elements used in GIS is presented. Hands-on exercises with computerized mapping software are required.

- **ENVE-L325 Geographic Information Science Lab**

Prerequisites:

concurrently with ENVE 325

Credits:

1.00

Description:

Required companion computer laboratory to be taken concurrently with ENVE 325. Prerequisite: Approved computer programming course or permission of instructor.

Science

- **SCI-173 Geographic Information Science (GIS) The Power of Digital Maps**

Prerequisites:

SCI L173 Must be taken concurrently Knowledge of Windows type Application

Credits:

3.00

Description:

Geographic Information Science (GIS) link information (number of fire hydrants on a block) to features on a map (e.g., a point representing street address) that has a designated geographic location (as designated by global coordinates). Unlike paper maps, GIS software allows the production of interactive maps that allows the user to layer data, to indicate spatial patterns, to analyze trends, and to combine different features of the mapped area in novel ways. For example, a business person may wish to use GIS to determine the optimum location of retail outlet (based on the mapped demographics of a neighborhood), while an environmental engineer may use GIS to describe the location of outfalls to see how they correlate to areas

of stream pollution. In this course, students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **SCI-L173 GIS Lab**

Prerequisites:

Must be taken concurrently with SCI-173

Credits:

1.00

Description:

This laboratory illustrates concepts and methods taught in SCI 173. In this lab students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **SCI-251 Intro to Coastal Geology**

Prerequisites:

Intro Math and must take SCI-L251 concurrently

Credits:

3.00

Description:

Coastal environments will be analyzed with an emphasis on the important environmental characteristics of these areas. Management and environmental problems within the coastal and offshore areas such as beach erosion, beach access, and oil spills will be considered. One required field trip.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

• **SCI-L251 Intro Coastal Geology I Lab**

Prerequisites:

SCI 251 must be taken concurrently

Credits:

1.00

Description:

An introduction to laboratory and field techniques used in the geological study of coastal environments. Field trips will be taken to local coastal areas.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

Note that some of these courses have prerequisites. Prerequisite requirements range from 0 to 24 credit hours.

B. Choose one of the following social science courses:

- **CJN-479 Environmental Public Relations**

Credits:

4.00

Description:

Examines public issues involving the environment. Focuses on public relations strategies for government agencies, corporations, and other organizations concerned with the environment.

Term:

Occasional

Environmental Studies

- **ENST-315 Foundations of Environmental Education**

Credits:

4.00

Description:

This course will provide an overview of Environmental Education (EE) by looking at how EE has been defined, how the field has changed over time, and how our own connections with the environment can inform our understanding and practice of this work. Students will consider the goals of EE and the variety of approaches utilized in the field to reach those goals. Age appropriate environmental education, place-based education, and urban environmental education will also be studied.

- **ENST-321 Introduction to Permaculture**

Credits:

4.00

Description:

Permaculture is the design of food systems and social structures to provide for human needs while restoring ecosystem health. Examining the interconnections between environmental, social and economic components, Permaculture is informed by the disciplines of systems ecology, ecological design and ethno-ecology.

- **ENST-420 German Greens and Environmentalism**

Credits:

4.00

Description:

The rise of the Green Party, from its grass-roots beginnings to participation in the federal government. Background on the development of green consciousness in Germany and Europe since the early 20th century. Present governmental policies and programs (e.g., alternative energy sources, organic farming, recycling, dismantling of nuclear power). Cross-listed GER 420 and GVT 420

Government

- **GVT-372 Coastal Zone Management**

Prerequisites:

Instructor's Consent

Credits:

4.00

Description:

This course presents a survey of a coastal environment, its physical characteristics, natural systems, economic uses, and development pressures. Lectures examine strategies formulated in the U.S. for land and water resource management in the coastal zone. The roles of federal, state and local government, environmental groups and resource users are also explored. Finally, by comparing coastal zone management problems in the U.S. to those elsewhere in the world, students gain a global perspective. Normally offered every years. The course available through the Marine Studies Consortium and will be taught on the campus of one of the Consortium's member institutions.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-420 German Greens and Environmentalism**

Credits:

4.00

Description:

The rise of the Green Party, from its grass-roots beginnings to participation in the federal government. Background on the development of green consciousness in Germany and Europe since the early 20th century. Present governmental policies and programs (e.g., alternative energy sources, organic farming, recycling, dismantling of nuclear power). Cross-listed GER 420 and ENST 420

Type:

Social Science,BSBA SOCIAL CHANGE

- **GVT-439 Global Environmental Threat**

Credits:

4.00

Description:

In the 20th century the general public became aware of the need for following a sustainable lifestyle. Non-governmental organizations, governmental institutions and individuals began to study environmental problems and issues to enhance the concept of conservation of nature and the protection of the planet's biodiversity among other important concepts. However, as we enter the 21st century, we are finding ourselves involved in new environmental threats such as increasingly disturbing natural disasters, eco-terrorism and endless extreme poverty. This course is aimed at learning the basic environmental aspects that affect society and nature as a whole, along with the new issues that are arising and leading scientists to continue new lines of research in the field of environmental conservation and awareness, knowing also that the key to hope lies in the field of environmental education. Offered on the Madrid Campus only.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-450 Lobbying, the Media and Public Policy Opinion, and Politics**

Prerequisites:

Junior status or above

Credits:

4.00

Description:

This class will examine the role of lobbyist and the media in influencing state and national decision makers and public policy. Focusing primarily on current issues relating to energy and environmental policy, we will discuss and critically examine all sides of today's hot topics- renewable power, climate change, sustainability and others. The goal is not to determine who is right and who is wrong, but rather to get behind the headlines and separate fact from hype and discuss how and why certain policy decisions are made and how policy makers are influenced. You'll gain an appreciation as to how public opinion, lobbyists and the media (even celebrities!) can actually change government priorities- and not always for the better, as rising public opinion and political pressure often collides with well established scientific evidence.

Type:

Social Science,BSJ SOCIAL SCIENCE

Sociology

- **SOC-217 Sociology of Urban Life**

Prerequisites:

Fulfills ECR requirement

Credits:

4.00

Description:

An examination of the effects of the city on human life in its broadest as well as its most specific aspects. Greater Boston and similar communities across the nation will be studied as ecological settings, as producers and shapers of change, and as special contexts for understanding sociological ideas. Comparisons will be made among urban places in the U.S. and in other countries.

Term:

Occasional

Type:

Note that some of these courses have prerequisites. Prerequisite requirements range from zero to eight credit hours.

C. Choose one of the following humanities courses:

World Languages & Cultural Studies

- **GER-420 The Greens and Environmentalism**

Credits:

4.00

Description:

The rise of the Green Party, from it's grass-roots beginnings to participation in the federal government. Background on the development of green consciousness in Germany and Europe since the early 20th century. Present governmental policies and programs (e.g. alternative energy sources, organic farming, recycling, dismantling of nuclear power).

Term:

Offered Spring Term

Type:

Humanities & History,Humanities Literature Requirement

Philosophy

- **PHIL-363 Bio and Medical Ethics**

Prerequisites:

Prerequisite: Phil 119, or 123, or 127.

Credits:

4.00

Description:

An examination of the moral problems facing health-care practitioners, their patients, and others involved with the practice of medicine in today's society. Issues include euthanasia, the ethics of medical experimentation, the use of reproductive technologies, genetic counseling and genetic engineering, truth-telling and confidentiality in doctor-patient relationships, the cost and availability of medical care. Normally offered every third year.

Term:

Occasional

Environmental Studies

- **ENST-301 Issues in Environmental Justice**

Credits:

4.00

Description:

Environmental justice is the fair treatment and meaningful involvement of all people regardless of race or income regarding the development, implementation, and enforcement of environmental laws, regulations, and policies. In this course, students will learn about the background of environmental justice, its basis in law, leaders in the movement, and key topics pertaining to environmental and health disparities, such as air quality, public transportation, access to healthy food, facility siting and clean-up, land use, and climate. Material will draw heavily upon local examples and readings from a wide range of fields. Students will learn about community organizing and advocacy, and how these skills can be applied to shape decision-making. We will also discuss sustainable practices that can be integrated into daily life to create healthy communities and equity. One term, 4 semester hours, normally offered once a year, no prerequisites.

- **ENST-310 The Civilian Conservation Corps and the American Landscape**

Prerequisites:

Class will meet for 75 minutes a week and then travel over spring break. Instructor's consent is required

Credits:

4.00

Description:

This course will focus on the history and lasting affect of the Civilian Conservation Corps (CCC) on the physical and political landscape of the United States. From 1933 to 1942 more than 3 million men served in the CCC, and this course will track the progression of their work from the planting of

billions of trees to the development of recreational opportunities on federal and state lands. Over time, CCC work progressed from the conservation of natural resources to the conservation of human resources and promotion of recreation on public lands. As the CCC changed over time, so too did public opinion concerning the CCC's work and mission. This class will explore opposition to CCC projects by significant figures in America's environmental movement such as Aldo Leopold and Bob Marshall, and the resulting influence on the environmental movement in America. We will also look at the role the CCC played in redefining conservation and creating a mainstream environmental movement. In addition, this class will consider the affect that the CCC had on New Deal politics. Finally, this class will study the lasting legacy that the CCC left on the American landscape through the development of other conservation corps programs. Students will also read first hand accounts, view films, and possibly hear directly from a CCC veteran. As a class connected with an Alternative Spring Break trip, this experiential education offering will allow students to experience and complete similar work to that completed by CCC members. During Alternative Spring Break, students will visit important CCC history sites such as the first CCC camp in the country and a major national park development project. During the course, assignments will challenge students to identify CCC sites in Massachusetts or their home states. Local site visits are a possibility for this class. Other assignments will challenge students to identify modern environmental organizations who can trace their origins to the

Type:

Expanded Classroom Requirement,Local Engagement Experience

- **ENST-325 Environmental History of US**

Credits:

4.00

Description:

This course will utilize history to explore the American environment. Through the works classical environmental texts it will explore how Americans have understood their environment.It will also look at how historians understand environmental history, how the environment has changed from precolonial to the present, and how we understand that change. By using both primary and secondary materials we will try to integrate the environmental understanding of historians with the process of historical understanding. The course will provide the opportunity to develop critical thinking skills of identifying differing understandings of an historical problem and presenting arguments from different intellectual traditions. It will also work on understanding different sources and the validity of different sources both primary and secondary. It will engage the student in identifying a research question and the appropriate primary and secondary courses of significance to that topic. It will also require the students to communicate their analysis in two extended persuasive essays and one long primary-based research paper.

The total required credit hours for the Environmental Studies major ranges from 44 to 76, depending on course selection.

Note that certain courses required of the major will also meet core curriculum requirements, and can be double-counted toward graduation requirements.

Some courses are part of the Marine Science Consortium. Enrollment is with permission of coordinator.

ENST-420 or GVT-420 can fill a Social Science elective.

2015-2016 Archived Catalog Information

Environmental Studies

The Environmental Studies program is an interdisciplinary program drawing from the sciences, humanities, and social sciences. The program is structured to provide students with a foundation in science, social science, ethics, and humanities so that they may develop a comprehensive understanding of the complexity of environmental issues.

Because the program is flexible, the specific four-year paradigm will vary for individual students, and it is not possible to assign most courses to specific years. If possible, majors should take ENST-101 in the fall of their first year and complete the Environmental Science sequence during their first or second year. The capstone course sequence, ENST-401 and ENST-402, should be taken during the senior year.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- **ENST-450 Lobbying, Media, and Public Policy**

Credits:

4.00

Description:

As a result of new environmental and energy concerns championed by the media, politicians and the public government regulators in the US and around the world are being forced to rethink their priorities and react to these outside influences rather than rely on the process they have used for decades. But as we shift to notions such as the precautionary principle and embrace renewable power as a solution to climate change, is this

reactionary approach relying too much on what the media and others say and too little on the facts? Are government agencies equipped to analyze these issues and disagree with rising public opinion? Is this a good way to develop public policy? Through discussion and analysis, we will critically examine all sides of these and other current issues and get behind the headlines using real world examples to try to separate fact from hype. We'll also probe the roles that politicians, lobbyists, and the media have in framing the debate.

Major Requirements: 26 courses, 80 credits

Courses in the Fine Arts program have as a prerequisite the completion of the Foundation Studies program or its equivalent. Exceptions may only be made with permission of the instructor and the Fine Arts program director.

The letter "S" preceding a course number indicates a studio course. A studio fee is assessed for all studio courses.

For specific sequence of courses, contact your advisor or the department.

Required Courses (24 courses, 74 credits)

- ADF-S101 Foundation Drawing I

Credits:

3.00

Description:

This course concentrates on the traditional techniques of observational drawing. Fundamental principles and elements of drawing are introduced in structured lessons and exercises, which are supplemented by additional outside assignments. Foundation Drawing I stresses the development of visual skills as well as the broad use of drawing concepts, vocabulary, techniques and variety of materials.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

• ADF-S102 Foundation Drawing II

Prerequisites:

ADF S101

Credits:

3.00

Description:

This course will refine the basic visual skills developed in Foundation Drawing I (ADF S101). The elements of color and mixed media are introduced to expand technical possibilities, while more intensive work with the nude human figure provides exposure to gesture, structure and complex form. As students begin to develop a more sophisticated and personal approach, issues of expression and interpretation will be investigated, focusing on personal style and expression.

Term:

Offered Both Fall and Spring

• ADF-S123 Painting

Prerequisites:

ADF S101, ADF S166

Credits:

3.00

Description:

In this introductory course, students will learn to accurately perceive relationships of shape, form, color and value, and to translate that information through the medium of paint. In a series of in-class and outside projects on canvas, prepared paper and panel, students will explore various approaches to the use of acrylic and oil paint. Emphasis will be placed on the development of disciplined technical skills as well as the exploration of painting's potential as a medium of communication and creative visual expression.

Term:

Offered Spring Term

• **ADF-S152 3-Dimensional Design**

Prerequisites:

ADF S151 or ADF S166

Credits:

3.00

Description:

This course focuses on the fundamental elements of three-dimensional form. Line, plane and volume will be explored as students develop visual analysis and critical thinking skills in the round. The role of scale, proportion, structure, surface, light and display will be addressed, as students create forms that activate space and engage the viewer. The course will proceed from work with simple forms and techniques to more challenging and comprehensive problems addressing both additive and subtractive methods.

Term:

Offered Both Fall and Spring

• **ADF-S166 2D/Color**

Credits:

3.00

Description:

This is an introductory-level course in the basic concepts and practices of two-dimensional design and color theory. The study of color and design is supportive of all studio disciplines and is vital to the understanding of all visual media. This course features an intensive, hands-on approach to color and design as students create, modify and master the three dimensions of color (hue, value, and strength) plus the principles of design (line, shape, value, composition and image). This in-depth study is essential and underlies all of the visual arts as they are practiced today. An understanding of color and design influences all artists' decisions, affecting the look, meaning and use of visual phenomena.

Type:

Arts Admin Minor Elective

• ADF-S171 CI: Integrated Studio 1

Credits:

3.00

Description:

This cross-disciplinary course will integrate the ideas and practices of two-dimensional design, color and drawing emphasis will be placed on understanding the creative process, exploring concepts and developing research skills. Students will undertake individual and collaborative projects in three spaces; the studio classroom, the digital world and the city at large.

Type:

Creativity and Innovation, Arts Admin Minor Elective

• ADF-S172 CI: Integrated Studio II

Prerequisites:

ADF S101

Credits:

3.00

Description:

This course builds on the Integrated Studio 1 experience: synthesizing fundamental visual ideas. IS 2 investigates the construction, documentation, and transformation of volumetric form, environmental space, and time. Projects will explore narrative strategies and the creation of immersive experiences. Students will develop critical and analytical skills while employing a range of traditional and digital media-including video/sound capture and editing-as they explore the creative boundaries of the classroom studio, the city of Boston, and virtual space.

Type:

Creativity and Innovation

- **ADFA-S201 Drawing: Language of Light**

Prerequisites:

ADF S102

Credits:

3.00

Description:

This course is an extensive exploration of the human form and how it is represented in drawing. Refining their drawing skills, students use a variety of dry media (graphite, charcoal, pastel, collage) to articulate figure/plane

Term:

Offered Fall Term

- **ADFA-S204 Sculptural Thinking**

Prerequisites:

Take ADF-S152

Credits:

3.00

Description:

Art is not just visual. Artists also think with their hands", understanding that engagement with the physical world is vital to the creative process, and often gives rise to unexpected and fruitful ideas. In this course, students will explore traditional and experimental sculptural processes in a spirit of directed play", focusing on both intuitive and critical responses to materials.

- **ADFA-S220 Drawing: Shifting Scales**

Prerequisites:

ADF-S102 or ADF-S502; ADF-S151 or ADF-S551;

Credits:

3.00

Description:

We live in a world of great contrasts in scale, where hand held screens can download Google earth and nanotechnologies can change the lives on entire continents. How do these shifts in scale alter our perceptions of space, and therefore change the way we understand and make drawings? This figure-based course uses descriptive observation as the starting point for addressing visual invention. Students will work from a model, using traditional figurative techniques to combine and contrast with digital imaging techniques, graphic novels, and various contemporary drawing approaches. A variety of wet and dry drawing media will be used with more experimental materials.

Term:

Offered Spring Term

- **ADFA-S241 Advanced Painting**

Prerequisites:

ADF S123.

Credits:

3.00

Description:

This course will involve the concepts and techniques of 20th and 21st century painting. Students develop an individual approach to non-objective and objective painted space. Open-ended assignments, lectures, critiques and discussions will clarify the work students produce. Substantial independent

studio time allows students to focus on work that responds to contemporary issues in painting.

Term:

Offered Spring Term

• ADF A-S242 Sculpture Studio

Prerequisites:

ADF S152

Credits:

3.00

Description:

A focused study on the language of dimensionality in sculpture, students will explore traditional and non-traditional materials. Issues of craft, concept and context will aid students in developing work that responds to currents in contemporary sculpture. This class will also provide students with a substantial grounding in 20th and 21st century sculptural theory and practice.

Term:

Offered Spring Term

• ADF A-S251 Printmaking Studio

Credits:

3.00

Description:

This course is designed to familiarize students with the printmaking studio and various techniques. Students will gain exposure to a number of techniques including non-toxic processes. Over the course of the semester, students will be expected to develop a portfolio of prints while working in class and independently.

Term:

Offered Fall Term

- **ADFA-S271 Fine Arts Seminar I**

Prerequisites:

ADF S102 ADF S123, and ADF S152

Credits:

3.00

Description:

Fine Arts Seminar is designed as a vehicle for students to develop a personal relationship to contemporary art theory and practice. Questions are posed as a point of departure for the students to generate work. Visiting artists and weekly gallery and museum visits aid in examining aspects of current art making in order to assist students in creating a strong vision for their work. Restricted to Fine Arts Majors only.

Term:

Offered Fall Term

- **ADFA-S272 Fine Arts Seminar I**

Prerequisites:

ADFA S271

Credits:

3.00

Description:

A continuation of the first semester, this course aids students in recognizing the patterns and questions posed in their own studio practices. A large number of technical approaches to content will be explored.

Term:

Offered Spring Term

- **ADFA-S311 Contemporary Trends & Practices**

Prerequisites:

Intended for Majors only

Credits:

3.00

Description:

Contemporary Trends & Practices moves art theory into the studio and the studio out into the world. Students will look at the most significant artists and movements of the past 50 years while examining their social, cultural and political context. Canonized contemporary art categories (postmodernism, appropriation, anti-art and performance art are some examples) are assigned as group projects. Movements, strategy or style of art making is discussed as an expressive problem solving experience, blurring the lines between media. This course conflates contemporary art history with contemporary art practices.

Term:

Offered Fall Term

- **ADFA-S344 Advanced Drawing Issues**

Prerequisites:

Take ADFA-S272;

Credits:

3.00

Description:

This course has students assess their work of the past several years in order to determine current and future goals. Students use the tools they find in the relationship between 2D and 3D in order to define contemporary drawing for themselves.

Term:

Offered Fall Term

- **ADFA-S361 Figure Studio: 2D**

Prerequisites:

ADF S123 AND ADFA S241

Credits:

3.00

Description:

This painting course is designed to provide an in-depth study and practice of two-dimensional contemporary figuration. Basing all students on the Masters and movements of the past, this course focuses on the methodology and effects of four major figurative painters from late-twentieth century through the present.

Term:

Offered Fall Term

- **ADFA-S362 Figure Studio: 3D**

Prerequisites:

Take ADF-S152 ADFA-S361;

Credits:

3.00

Description:

This sculpture course considers the figure in its importance both as a historical element and as a reflection and definition of self. Established an understanding of the figurative form in the space by relating gesture and structure through manipulated form. Weight, mass, plane and volume are considered while working directly from the model.

Term:

Offered Spring Term

- **ADFA-S371 Fine Arts Seminar II**

Prerequisites:

ADFA S271 and ADFA S272

Credits:

3.00

Description:

In this third semester of the Seminar sequence, students are responsible for integrating their visual culture influences and references within an expanded body of work.

Term:

Offered Fall Term

- **ADFA-S372 Fine Arts Seminar II**

Prerequisites:

ADFA S271 and ADFA S272 and ADFA S371

Credits:

3.00

Description:

During this final Seminar semester, the focused studio practices of students are channeled into the development of their final thesis exhibition. The four-semester Fine Arts Seminar sequence.

Term:

Offered Spring Term

- **ADFA-S410 Senior Thesis**

Prerequisites:

Fine Arts Senior status required.

Credits:

3.00

Description:

This senior-level course readies the student for the furtherance of his or her career as a creative artist. Though the development of a written artist's statement, slide and electronic documentation and the charting of their individual artistic lineage, students will begin to place themselves within the context of the contemporary art world. Normally offered Spring semester.

Term:

Offered Spring Term

- **ARH-101 Art History I**

Credits:

4.00

Description:

Surveys the art of Western civilization from prehistoric caves to medieval cathedrals. Considers works from the Ancient Near East, Ancient Egypt, Ancient Greece and Rome, the Byzantine Era, the Romanesque Period, and the Gothic Period in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **ARH-102 Art History II**

Credits:

4.00

Description:

Surveys the art of Europe and America from the Renaissance to the present. Considers work of painting, sculpture, and architecture from periods such as the Renaissance, the Baroque, the Rococo, Neoclassicism, Romanticism, Impressionism, Abstract Impressionism, and Post-Modernism in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst

Electives (2 courses, 6 credits)

Choose two studio courses.

Note: Studio electives are subject to approval of the Fine Arts program director.

2015-2016 Archived Catalog Information

Fine Arts

The New England School of Art & Design offers a Bachelor of Fine Arts in Fine Arts, as well as a Fine Arts minor.

The Fine Arts program offers a broad investigation of the possibilities open to the developing artist and trains students to become active participants in the contemporary arts community.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Fine Arts Minor Requirements](#)
- [Fine Arts Courses](#)

Minor Requirements: 6 courses, 18 credits

BFA candidates may not double count major requirements towards the minor.

Art & Design BFA Candidates

Choose six Fine Arts studio courses

or

Choose five Fine Arts studio courses and the following course:

- ADF-S123 Painting

Prerequisites:

ADF S101, ADF S166

Credits:

3.00

Description:

In this introductory course, students will learn to accurately perceive relationships of shape, form, color and value, and to translate that information through the medium of paint. In a series of in-class and outside projects on canvas, prepared paper and panel, students will explore various approaches to the use of acrylic and oil paint. Emphasis will be placed on the development of disciplined technical skills as well as the exploration of painting's potential as a medium of communication and creative visual expression.

Term:

Offered Spring Term

Note:

Students may not double count ADF-S123. Students should choose this course if they want to take the Fine Arts studio courses that have ADF-S123 as a prerequisite.

Non-Art & Design Majors

- **ADF-S101 Foundation Drawing I**

Credits:

3.00

Description:

This course concentrates on the traditional techniques of observational drawing. Fundamental principles and elements of drawing are introduced in structured lessons and exercises, which are supplemented by additional outside assignments. Foundation Drawing I stresses the development of visual skills as well as the broad use of drawing concepts, vocabulary, techniques and variety of materials.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **ADF-S102 Foundation Drawing II**

Prerequisites:

ADF S101

Credits:

3.00

Description:

This course will refine the basic visual skills developed in Foundation Drawing I (ADF S101). The elements of color and mixed media are introduced to expand technical possibilities, while more intensive work with the nude human figure provides exposure to gesture, structure and complex form. As students begin to develop a more sophisticated and personal approach, issues of expression and interpretation will be investigated, focusing on personal style and expression.

Term:

Offered Both Fall and Spring

Choose one of the following:

- **ADFA-S201 Drawing: Language of Light**

Prerequisites:

ADF S102

Credits:

3.00

Description:

This course is an extensive exploration of the human form and how it is represented in drawing. Refining their drawing skills, students use a variety of dry media (graphite, charcoal, pastel, collage) to articulate figure/plane

Term:

• ADF-304 Art and Architecture of the Italian Renaissance

Prerequisites:

ADF-182 and the Fine Art Program Director's consent.

Credits:

4.00

Description:

This course introduces the students to Italian Renaissance art, artists and culture from the first evidence in the Italian Gothic (around the 1260's) to the Early and High Renaissance, predominantly in Florence and Venice, up to the 1600's. The course will survey the history of painting, sculpture and architecture as we study the works individually, for their formal elements and visual importance, but also within their aesthetic, historic, political and

cultural context. Class discussion and a visual analysis of works of art will encourage personal interpretation and critical thinking. A list of terms related to the Renaissance introduces the language of art. Normally offered during the summer. Offered in Italy only.

Type:

Expanded Classroom Requirement

- **ADFA-306 Art & Culture of Asia, Africa, South America and Oceania**

Credits:

4.00

Description:

The coursework introduces students to the artistic and visual traditions from South and East Asia, Africa, Oceania and the Americas. In addition to the material culture of the particular region under study, the coursework will consider socio-political ideals, religious belief systems, and cultural principles that 'shaped' or informed the work and the ideology of civilizations beyond the Western hemisphere. Comparative analysis among non-western and western traditions will be used to critically analyze the salient points of influence, rejection and modifications of aesthetic affinities. Class lectures will be supplemented with museum seminars specifically the rich non-western collections at the MFA, Boston. Guided field trips to the museum will allow students to formally analyze the works of art discussed in lecture and text material.

Term:

Occasional

Type:

Cultural Diversity Opt B,Cultural Diversity BFA,Asian Studies,Humanities & History,Expanded Classroo

- **ADFA-344 Islamic Spain: Art and Architecture**

Credits:

4.00

Description:

This course examines the Islamic influence in Spain through its art and architecture from its formative period in the eighth century through the fourteenth century and beyond to see the continuity and change of the Mozarabic style found locally in Madrid, Cordoba, Seville, and Granada.

Students will use formal analytical skills to critically explore works of art and architecture and will cultivate a 'lens' through which they will facilitate their understanding of the classic and contemporary material culture and fabric of Spain. Class meetings will be supplemented with field trips. Offered as needed.

Type:

Humanities Literature Requirement, Humanities & History

- **ADFA-345 Art of India**

Credits:

4.00

Description:

A chronological survey of South Asian art (2300 BCE - 1750 CE) including India, Pakistan, Bangladesh, and Nepal. Examination of art and architecture from their first and still mysterious beginnings in the Indus Valley, through the great masterpieces of Buddhist and Hindu art to the coming of Islam, including the eclectic culture of the Mughal courts and the golden age of miniature paintings. Consideration is given to the multiple aspects of patronage in Indian culture - religious, political, economic - through case studies of individual works of art and architecture. (Formerly HUM 345)

Type:

Humanities & History, Cultural Diversity Opt B, Humanities Literature Requirement, Asian Studies

- **ADFA-346 Art of the Silk Road**

Credits:

4.00

Description:

This course will examine the arts and architecture of the Silk Road, with particular attention to art of Buddhism, Hinduism, and Islam. Historically, Inner Asia was marked by trade routes (the 'Silk Route' or 'Silk Road') which crisscrossed this vast landscape of deserts and mountains between China, India, the Iranian Plateau and the Mediterranean world. In addition to the art of these cultures, we will also look at the records of early Chinese travelers through Central Asia. (Formerly HUM 346) Offered as needed.

Type:

- **ADFA-400 Fine Arts Internship**

Prerequisites:

Restricted to Juniors and Seniors

Credits:

3.00- 6.00

Description:

Fine Arts majors are required to complete an internship where they will apply their studio and academic skills in a professional setting. Internships enable students to enrich their perspective of the field by sampling the career paths available to them in the art and culture economy. Student interns work directly with established professional artists or with arts and cultural organizations such as museums, galleries, and arts councils. This experiential learning is critical for career preparation and is intended to foster personal growth, hone professional skills, and provide networking opportunities. The internship experience is paired with a faculty-led seminar that will reinforce new skills and provide a venue for inquiry, sharing, and reflection.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement

- **ADFA-S201 Drawing: Language of Light**

Prerequisites:

ADF S102

Credits:

3.00

Description:

This course is an extensive exploration of the human form and how it is represented in drawing. Refining their drawing skills, students use a variety of dry media (graphite, charcoal, pastel, collage) to articulate figure/plane

Term:

In this course, students will explore traditional and experimental sculptural processes in a spirit of directed play", focusing on both intuitive and critical responses to materials.

- **ADFA-S212 Figure Painting: Issues in Contemporary Realism**

Prerequisites:

Fine Art Program Director Approval needed

Credits:

3.00

Description:

This course functions as a lab for students to improve their painting skills. Working directly from the models, beginning and more advanced students will explore technique at their own level. Tri-weekly poses will allow in-depth investigation and complex images to develop. Students can work with the painting medium of their choice. Historical and contemporary painters will be used to further the students progress. Open to majors and non-majors.

Term:

Occasional

- **ADFA-S220 Drawing: Shifting Scales**

Prerequisites:

ADF-S102 or ADF-S502; ADF-S151 or ADF-S551;

Credits:

3.00

Description:

We live in a world of great contrasts in scale, where hand held screens can download Google earth and nanotechnologies can change the lives on entire continents. How do these shifts in scale alter our perceptions of space, and therefore change the way we understand and make drawings? This figure-based course uses descriptive observation as the starting point for addressing visual invention. Students will work from a model, using traditional figurative techniques to combine and contrast with digital imaging techniques, graphic novels, and various contemporary drawing approaches. A variety of wet and dry drawing media will be used with more experimental materials.

Term:

Offered Fall Term

- **ADFA-S342 Advanced Sculpture**

Prerequisites:

ADFA S242

Credits:

3.00

Description:

In this course, students will explore contemporary sculptural issues, using a variety of found and generated materials. The process of installation, wall, floor, self-supported pieces and environmental works will be investigated.

Term:

Offered Spring Term

- **ADFA-S344 Advanced Drawing Issues**

Prerequisites:

Take ADFA-S272;

Credits:

3.00

Description:

This course has students assess their work of the past several years in order to determine current and future goals. Students use the tools they find in the relationship between 2D and 3D in order to define contemporary drawing for themselves.

Term:

Offered Fall Term

- **ADFA-S345 Advanced Printmaking**

Prerequisites:

ADFA S251 or instructor permission

Credits:

3.00

Description:

In Advanced Printmaking students will explore issues of technique, scale and multiple press runs that are not feasible within the context of the beginning Printmaking course. In this advanced course students will focus on a chosen area of traditional or contemporary print media, ranging from etching, digital imaging, lithography, paper molding, and photocopying, to relief and screen printing. Through the use of theory and developed skill, the course will allow students to create print-based works of an increasingly professional standard in both two and three dimensions. Students will undertake projects both as separate entities and as combined installed pieces, aimed at encouraging an individual, creative and professional approach to printmaking in the context of contemporary art practice.

Term:

Occasional

- **ADFA-S361 Figure Studio: 2D**

Prerequisites:

ADF S123 AND ADFA S241

Credits:

3.00

Description:

This painting course is designed to provide an in-depth study and practice of two-dimensional contemporary figuration. Basing all students on the Masters and movements of the past, this course focuses on the methodology and effects of four major figurative painters from late-twentieth century through the present.

Term:

Offered Fall Term

- **ADFA-S362 Figure Studio: 3D**

Prerequisites:

Take ADF-S152 ADFA-S361;

Credits:

3.00

Description:

This sculpture course considers the figure in its importance both as a historical element and as a reflection and definition of self. Established an understanding of the figurative form in the space by relating gesture and structure through manipulated form. Weight, mass, plane and volume are considered while working directly from the model.

Term:

Offered Spring Term

- **ADFA-S365 Advanced Figure Studio**

Credits:

3.00

Description:

This course is an extension of the Figure Studio 2D & 3D course. The focus will be on advanced figuration in relation to contemporary and historical works. Students will work in any media that pertains to their exploration of depiction and content. Students are expected to work in consultation with the professor in class and in their individual studios.

• ADFA-S371 Fine Arts Seminar II

Prerequisites:

ADFA S271 and ADFA S272

Credits:

3.00

Description:

In this third semester of the Seminar sequence, students are responsible for integrating their visual culture influences and references within an expanded body of work.

Term:

Offered Fall Term

• ADFA-S372 Fine Arts Seminar II

Prerequisites:

ADFA S271 and ADFA S272 and ADFA S371

Credits:

3.00

Description:

During this final Seminar semester, the focused studio practices of students are channeled into the development of their final thesis exhibition. The four-semester Fine Arts Seminar sequence.

Term:

- **ADFA-S380 Advanced Seminar Projects**

Prerequisites:

Take ADFA-S272;

Credits:

3.00- 6.00

Description:

This course functions as a bridge between the undergraduate processes of Fine Arts Seminar and the postgraduate environment of the visual arts. Particular attention will be paid to the contexts used by students to define their work in relation to feedback of professional outside reviewers. Individual contracts between faculty and student will be developed at the beginning of each semester. Contracts will assess the priorities for the work and adapt studio practices for the creation of new work. A research component will be attached when awarding 4-6 credits.

Term:

Occasional

- **ADFA-S410 Senior Thesis**

Prerequisites:

Fine Arts Senior status required.

Credits:

3.00

Description:

This senior-level course readies the student for the furtherance of his or her career as a creative artist. Through the development of a written artist's statement, slide and electronic documentation and the charting of their individual artistic lineage, students will begin to place themselves within the context of the contemporary art world. Normally offered Spring semester.

Term:

Fine Art Program Director Approval needed

Credits:

1.00- 6.00

Description:

The student completes a directed study project, either studio (ADFA S500) or non-studio (ADFA 500) under the supervision of a full time fine arts faculty member. Please see Directed Study elsewhere in this catalog for details. Independent study forms are available from the Office of the Academic Dean and Registrar. All independent study projects must be approved by the individual faculty member, the Fine Arts Program Director, and the NESADSU Chairman. Normally available every semester.

- **ADFA-S510 Fine Arts Independent Study**

Prerequisites:

2015-2016 Archived Catalog Information

Forensic Science

Forensic Science is broadly defined as the application of science to the criminal and civil laws that are enforced by police agencies in a criminal justice system. The Forensic Science minor is constructed to give students a broad foundation in the sciences underpinning forensic science, which will complement any major. However, the Forensic Science minor when taken with a science major will prepare the student for work in a testing or crime laboratory, as well as provide the required courses for entrance into master's or doctoral programs in forensic science.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Minor Requirements](#)
- [Forensic Science Courses](#)

Minor Requirements: 5 courses and corresponding laboratories where applicable, 20 credits

Core Requirements (2 courses and corresponding laboratories, 8 credits)

- FS-303 Introduction to Forensic Science

Credits:

3.00

Description:

Application of the principles of forensic science in evaluating physical evidence, with emphasis on its role in criminal investigation. Class experiences may include guest lectures and field trips. 3-hour lecture. Normally offered Fall/Spring Does not satisfy University Natural Science requirement.

Term:

Offered Both Fall and Spring

- **FS-L303 Introduction to Forensic Science Lab**

Prerequisites:

FS 303 concurrently and instructor's permission

Credits:

1.00

Description:

Laboratory experiences related to the collection and analysis of physical evidence as performed by forensic science professionals. Experiments may include forensic microscopy, drug analysis, forensic serology, physical patterns, fingerprint and firearm evidence analysis techniques. 3-hour laboratory. Normally offered Fall/Spring.

Term:

Offered Both Fall and Spring

- **CHEM-314 Instrumental Analysis**

Prerequisites:

CHEM 211; CHEM L314 must be taken concurrently.

Credits:

3.00

Description:

Theory and application of analytical instruments: ultraviolet, visible, fluorescence, atomic and emission spectroscopy; chromatographic methods; electrochemical measurements. Prerequisites: CHEM 211; CHEM L314 must be taken concurrently. 3 hour lecture. 1 term - 3 credits. Normally offered Fall/Spring, days.

Term:

Alternates Fall & Spring

- **CHEM-L314 Instrumental Analysis Lab**

Prerequisites:

CHEM L211; CHEM 314 must be taken concurrently

Credits:

1.00

Description:

Laboratory experiments in chemical analysis using instrumental techniques, including spectroscopy and chromatography. Data collection and evaluation includes computer-based methods. Reports are prepared in professional style. Prerequisites: CHEM L112; CHEM 314 must be taken concurrently. 4-hour Laboratory. 1 term - 1 credit. Normally offered Fall/Spring.

Term:

Alternates Fall & Spring

Please note that CHEM-314 has the following prerequisites:

- **CHEM-111 General Chemistry I**

Prerequisites:

Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:

3.00

Description:

Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **CHEM-L111 General Chemistry I Lab**

Prerequisites:

Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **CHEM-112 General Chemistry II**

Prerequisites:

CHEM 111/L111; CHEM-L112 must be taken concurrently.

Credits:

3.00

Description:

This course is a continuation of General Chemistry I. Fundamental principles of chemistry are discussed. Introduces thermochemistry, gases, solution chemistry, chemical kinetics, chemical equilibrium, acid-base systems, and thermodynamics.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **CHEM-L112 General Chemistry II Lab**

Prerequisites:

CHEM 112 must be taken concurrently;

Credits:

1.00

Description:

This course is a continuation of General Chemistry I Lab. Apply the basic principles of chemistry through discovery laboratory experiments with an emphasis on quantitative analysis. Execute basic analytical techniques such as gravimetric analysis, the application of Beer's Law, and acid-base titrations. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **CHEM-211 Organic Chemistry I**

Prerequisites:

CHEM 112 and CHEM-L112. CHEM-L211 must be taken concurrently.

Credits:

3.00

Description:

Introduces basic theories of structure, bonding, and chemical reactivity as specifically applied to modern organic chemistry. Includes functional groups, acid/base chemistry, nomenclature, resonance, spectroscopy, and stereochemistry.

Term:

Offered Fall Term

- **CHEM-L211 Organic Chemistry Laboratory I**

Prerequisites:

CHEM-112 and CHEM-L112. Must be taken concurrently with CHEM 211.

Credits:

1.00

Description:

Introduces synthetic organic chemistry techniques. Includes melting point determination, distillation, crystallization, extraction, chromatographic separations, and infrared spectroscopy. Discusses experimental design within the context of green organic chemistry.

Term:

Offered Fall Term

Electives (3 courses and corresponding laboratories where applicable, 12 credits)

Choose three of the following:

- **BIO-111 Introduction to the Cell**

Prerequisites:

Must take BIO L111 concurrently

Credits:

3.00

Description:

Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L111 Introduction to the Cell Laboratory**

Prerequisites:

Concurrently with BIO 111

Credits:

1.00

Description:

Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-274 Genetics**

Prerequisites:

BIO 111/L111 and BIO 114/L114; BIO L274 concurrently;

Credits:

3.00

Description:

An examination of the basic principles of genetics in eukaryotes and prokaryotes at the level of molecules, cells, and multicellular organisms, including humans. Topics include Mendelian and non-Mendelian inheritance, structure and function of chromosomes and genomes, biological variation resulting from recombination, mutation, and selection, and population genetics.

Term:

Offered Fall Term

- **BIO-L274 Genetics Lab**

Prerequisites:

BIO-111, BIO-L111, BIO-114, and BIO-L114. Must be taken concurrently with BIO 274.

Credits:

1.00

Description:

Experiments designed to demonstrate principles presented in lecture, using a range of genetic model organisms that include *E. coli*, *B. subtilis*, *S. cerevisiae*, *D. melanogaster*, *S. fimicola*, and *C. elegans*.

Term:

Offered Fall Term

- **CHEM-453 Introduction to Toxicology**

Prerequisites:

Prerequisites: CHEM 212 and BIO 111

Credits:

4.00

Description:

The study of toxic actions of chemicals on biological systems, with discussion of general principles, methodology, and selected topics. Topics may include pesticides, neurotoxicants, toxicity of metals, and carcinogenesis/ mutagenesis. Examples will be drawn from forensic toxicology, as well as environmental and occupational toxicology. CHEM 332 and BIO 403 strongly recommended. Normally offered every other year.

Term:

Occasional

- **PHIL-363 Bio and Medical Ethics**

Prerequisites:

Prerequisite: Phil 119, or 123, or 127.

Credits:

4.00

Description:

An examination of the moral problems facing health-care practitioners, their patients, and others involved with the practice of medicine in today's society. Issues include euthanasia, the ethics of medical experimentation, the use of reproductive technologies, genetic counseling and genetic engineering, truth-telling and confidentiality in doctor-patient relationships, the cost and availability of medical care. Normally offered every third year.

Term:

Occasional

- **PSYCH-348 Introduction to Forensic Psychology**

Prerequisites:

PSYCH 114. 54 credits or more only.

Credits:

4.00

Description:

The interface of psychology and the law will be examined in the context of forensic psychological evaluations performed for courts, attorneys and related agencies or facilities. Topics ranging from the role of psychologists in the courtroom, standards of practice, the detection of deception, civil commitment, and ethical issues in forensic psychology will be discussed. Legal standards and the assessment of competence to stand trial, insanity defenses, child abuse and neglect, and child custody/visitation will be explored. This course will review the theoretical and conceptual aspects of the psycho-legal issues in question as well as the practical applications of the skills and knowledge domains needed to perform forensic psychological evaluations. The study of relevant laws and regulations as applied to the interface of psychology and the law will be considered. Discussion will include specialized forensic topics such as expert testimony, the evaluation of sexual offenders, violence risk assessment, and forensic psychological testing.

Type:

Social Science

- **SOC-232 Street Gangs**

Credits:

4.00

Description:

This course provides an overview of youth gangs and their sociological underpinnings, which are rooted in poverty and racism. Topical areas are discussed in relation to these key factors. Study topics include the history of gangs, theories about gang formation and individual membership, gangs and criminal behavior, socio-cultural importance of gangs, and strategies to control gang behavior. The course will utilize current gang issues in the US generally and in Massachusetts in particular as a basis to better understand the nuances of youth gangs.

Type:

Cultural Diversity Opt A

- **SOC-234 Crime and Justice in American Society**

Credits:

4.00

Description:

An overview of issues and social variables involved in the pre-arrest and arrest stages followed by a more in-depth analysis of pre-trial, trial, sentencing, and correctional phases. Sociological and criminal justice models are examined and compared with the actual processes and purported functions of criminal justice agencies. Required for all majors in the Crime and Justice Concentration.

Term:

Offered Both Fall and Spring

- **SOC-236 Deviance and Social Control**

Credits:

4.00

Description:

Who and what is deviant? How shall the society respond? The course examines a range of deviance theories and associated social policies. A number of case studies will be used to evaluate these theories, such as body piercing, witchcraft, gay and lesbian sexuality, corporate crime, disability, prostitution, violence against women, racism, anti-Semitism, and gangs.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **SOC-242 Law, Health & Human Rights**

Credits:

4.00

Description:

This course will look at the special opportunities and obligations of those in the health and legal professions to protect human rights. There will be an overview of human rights doctrine and key documents. Students will learn to apply human rights principles to particular occupations in the health and legal professions.

Term:

Occasional

Note:

Students may use no more than two courses from a major to fulfill requirements for the minor. No more than one course from this minor may count toward the fulfillment of a second minor.

Prerequisites:

FS 303 concurrently and instructor's permission

Credits:

1.00

Description:

Laboratory experiences related to the collection and analysis of physical evidence as performed by forensic science professionals. Experiments may include forensic microscopy, drug analysis, forensic serology, physical patterns, fingerprint and firearm evidence analysis techniques. 3-hour laboratory. Normally offered Fall/Spring.

Term:

Offered Both Fall and Spring

- **FS-428 Criminalistics Practicum**

Prerequisites:

Instructor's permission is required for registration

Credits:

1.00- 4.00

Description:

The practicum involves participation in government crime laboratories, private forensic laboratories, private analytical chemical laboratories (including biomedical laboratories), a forensic science project at Suffolk University or other laboratories where the student can demonstrate that he or she can acquire skills applicable to forensic analysis. Students are encouraged to seek a practicum sponsor that suits his/her skills and interests; assistance may be provided by the Forensic Science Program faculty. However, the Forensic Science faculty member teaching FS 436 must approve any outside practicum sponsor for this course, and if a suitable outside sponsor is not found, the student will fulfill this requirement through a forensic science project at Suffolk University. Participation at the laboratories is subject to requirements of the particular laboratory and will be open only to those

students approved by the Forensic Science Committee. Ten contact hours per week, or 140 hours total, a project plan, regular project reports, and a final written and oral report are required. This course replaces CHEM-428. Normally offered Fall/Spring/Summer. ECR approved.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement

• **FS-429 Criminalistics Practicum II**

Prerequisites:

Instructor's permission is required for registration

Credits:

1.00- 4.00

Description:

French Studies

Students can pursue a traditional [French major](#) in the study of language, literature and civilization; they can also major in French Studies, which provides a broader English-speaking base and more interdisciplinary choices.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [French Studies Major Requirements](#)
- [French Studies Minor Requirements](#)
- [French Studies Courses](#)

Major Requirements: 8 courses, 32 credits

Core Requirements (2 courses, 8 credits)

- **FR-202 Intermediate French II**

Prerequisites:

Take FR-201 or Instructor's consent

Credits:

4.00

Description:

Continues to review grammar, practice speaking, and explore authentic cultural and literary texts in this writing-intensive course. Examines short readings, films, and print media.

Term:

Offered Spring Term

Type:

BA FOREIGN,Diverse Perspectives

- **FR-205 The Francophone World**

Prerequisites:

FR 202 or Instructor's consent

Credits:

4.00

Description:

Explores the francophone world through the study of short stories, print media, and film, by engaging with the rich textured and diverse francophone literary canon. Teaches advance notions of French grammar, write compositions, and the art of conversation related to cultural themes.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt B,BA FOREIGN,Diverse Perspectives

Students who choose to study for two months in CAVILAM, our intensive summer language partner program in Vichy, France will earn eight credits for FR-201 and FR-202. To qualify for admittance to either major, a student must complete the requirement with an average of “B” or higher.

Advanced Literature Courses (2 courses, 8 credits)

Choose two of the following:

- **FR-309 Survey of French Literature I**

Prerequisites:

FR 202 or Instructors permission

Credits:

4.00

Description:

Analyzes and discusses canonical works of French literature from medieval times to the eighteenth century.

Term:

Offered Fall Term

Type:

Humanities Literature Requirement,BA FOREIGN

• FR-310 Survey of French Literature II

Prerequisites:

FR-202 or instructor's permission

Credits:

4.00

Description:

Study, analyze and discuss canonical works of French-language literature from the nineteenth through the twenty-first centuries, as they relate to important events in the art, culture, and history of the Francophone world.

Term:

Offered Spring Term

Type:

Humanities Literature Requirement,BA FOREIGN

- **FR-315 Mots Doux: Love, Lust and Literature**

Prerequisites:

Take FR-205 or Instructor's consent

Credits:

4.00

Description:

Explores the theme of love and its manifestation in representative works while being aware of the evolution of French Literature. Addresses various thematics that accompany a traditional survey of literature course such as critical discourse, aesthetic representation, literary movements, genre, construction of sexual identities, sexual politics as well as representations of ethnicity, class, and culture.

Term:

Occasional

Type:

BA FOREIGN

- **FR-318 Face in the Mirror: Writing & Reflecting the Self in French**

Prerequisites:

FR-205 and FR-305 or Instructor's consent

Credits:

4.00

Description:

Examines literature in the French language focusing on memoir, essay, and autobiography. Read authors such as, Montaigne, Rousseau, Lamartine, Colette, Duras, Beauvoir, Le, Chamoiseau, Djebbar, Conde, Ernaux, Genet, and Satrapi. Develops an appreciation of the differences between autobiography and autofiction. Explores the question of truth and the fallibility of memory.

Type:

Advanced Courses (4 courses, 16 credits)

Choose four of the following courses above FR-205:

- **FR-214 Marie Antoinette, Fashion Revolutionary**

Credits:

4.00

Description:

Explores the French Enlightenment and its culture leading up to the French revolution through a focus on one significant figure: Marie-Antoinette. Examines the relationship of female image and the body politic of eighteenth-century France. Considers the legacy of Marie-Antoinette as martyr and fetish object in the nineteenth and twentieth centuries, and focuses on her continuing relevance today. Topics include: women and power; fashion and self-representation; motherhood and domesticity; and revolution and gender iconography. All work in French.

Term:

Occasional

- **FR-216 Masterpieces of French and Francophone Literature in English Translation**

Credits:

4.00

Description:

Masterpieces of French and Francophone Literature in English Translation. Studies works translated into English by major authors from the Middle Ages to the present. Explores drama, fiction, and poetry from many regions of the world: Africa, Western Europe, North America, the Caribbean, and Vietnam.

Term:

Alternates Fall & Spring

Type:

- **FR-220 French & Francophone Cinema**

Credits:

4.00

Description:

Discusses and deepens understanding of French and Francophone cinema from its origins in the late nineteenth century to the early twenty-first century. Explores early works from France, by the Lumiere Brothers and Georges Melies as well as contemporary films from France, Algeria, Burkina Faso, Canada, Haiti, and Senegal.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, Vis. & Perform Thry

- **FR-306 Composition, Conversation and Advanced Grammar**

Prerequisites:

FR-202;

Credits:

4.00

Description:

This course enhances students' conversational and writing skills in French. Authentic language and formal writing skills are detailed. The development of oral proficiency is stressed with a focus on listening comprehension, reading and writing. Advanced French grammar is stressed with a focus on written grammatical exercises. This class is open to heritage speakers as well as those who have participated or are planning on participating in the CAVILAM, CCFS-Sorbonne Programs.

Term:

Alternates Fall & Spring

Type:

BA FOREIGN

- **FR-313 Island Fictions Identity**

Credits:

4.00

Description:

This class will explore the rich literary tradition of three Caribbean island-nations: Guadeloupe, Haiti, and Martinique. Class discussion will focus on a wide range of topics including: the different uses of Creole and French; the Negritude, Spiralisme, Antillanite and Creolite movements; the relationship between Africa and the African diaspora; gender and sexuality in the Caribbean; and postcolonial memory and post-colonial history as reflected in the work of prize-winning Caribbean women writers from the twentieth and twenty-first centuries. Normally offered alternate years. The class is taught in English, and is cross-listed with the Black Studies Program as well as the Women's and Gender Studies Program.

- **FR-316 Masterpieces of Theatre**

Prerequisites:

Take FR-205 and FR-305 or instructor's consent

Credits:

4.00

Description:

Studies the major plays written in French from the seventeenth through the twenty-first centuries, with a focus on the socio-historical contexts in which the plays emerged. Analyzes and produces scenes from the plays, and reads and performs select scenes at the end of the semester. Explores authors such as Anouilh, Beckett, Césaire, Genet, Ionesco, Marivaux, Molière, Py, Racine, Reza, Sartre, and Schwarz-Bart.

Type:

BA FOREIGN

Work for Advanced French Courses may be completed in English, with the exception of FR-306.

Note:

A maximum of four courses taken at other institutions, courses taken in our intensive summer language partner program with CAVILAM, or courses taken in a study abroad program in a French-speaking country can count toward the major.

Any Seminar for Freshmen with a topic related to the French-speaking countries (e.g. culture, politics, society) may count toward the major with the approval of the major advisor.

AP Credit:

Incoming students who receive a score of "4" on the AP French language examination have earned 4 credits (Fr-201). Incoming students who receive a score of "5" on the AP French language examination have earned 8 credits (French 202 and a free elective).

This class will explore the rich literary tradition of three Caribbean island-nations: Guadeloupe, Haiti, and Martinique. Class discussion will focus on a wide range of topics including: the different uses of Creole and French; the Negritude, Spiralisme, Antillanite and Creolite movements; the relationship between Africa and the African diaspora; gender and sexuality in the Caribbean; and postcolonial memory and post-colonial history as reflected in the work of prize-winning Caribbean women writers from the twentieth and twenty-first centuries. Normally offered alternate years. The class is taught in English, and is cross-listed with the Black Studies Program as well as the Women's and Gender Studies Program.

- **FR-316 Masterpieces of Theatre**

Prerequisites:

Take FR-205 and FR-305 or instructor's consent

Credits:

4.00

Description:

Studies the major plays written in French from the seventeenth through the twenty-first centuries, with a focus on the socio-historical contexts in which the plays emerged. Analyzes and produces scenes from the plays, and reads and performs select scenes at the end of the semester. Explores authors such as Anouilh, Beckett, Césaire, Genet, Ionesco, Marivaux, Molière, Py, Racine, Reza, Sartre, and Schwarz-Bart.

Type:

BA FOREIGN

Work for Advanced French Courses may be completed in English, with the exception of FR-306.

AP Credit:

Incoming students who receive a score of "4" on the AP French language examination have earned 4 credits (Fr-201). Incoming students who receive a score of "5" on the AP French language examination have earned 8 credits (French 202 and a free elective).

Note:

A maximum of two courses taken at other institutions or as part of our intensive summer language partner program with CAVILAM can count toward the minor in French Studies.

French

Students can pursue a traditional French major in the study of language, literature and civilization; they can also major in [French Studies](#), which provides a broader English-speaking base and more interdisciplinary choices.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [French Major Requirements](#)
- [French Minor Requirements](#)
- [Honors](#)
- [French Courses](#)

In order to be considered for honors in French, a student must satisfy the following criteria:

1. Students interested in honors should consult with the department chair during the spring semester of the junior year. Qualifying students must have a 3.2 overall GPA as well as a 3.5 GPA in French courses.
2. Honors candidates should register for FR-502 in the fall semester of the senior year. Under the guidance of a faculty member, they will use this course to complete a research paper. This paper will be evaluated by all professors in the student's field of study. If the evaluation is positive, the student will make an oral presentation of the paper in the spring.

- **FR-502 Honors Senior Thesis in French**

Prerequisites:

Senior Standing and permission of Dept. Chair.

Credits:

4.00

Description:

Undertakes a major research project completed under the supervision of a regular faculty member offered every fall semester.

Term:

Offered Fall Term

2015-2016 Archived Catalog Information

German Studies

The cultural, scientific, and technological achievements of the German-speaking peoples are known and valued throughout the world. German is the official language of Germany and Austria, one of the official languages of Switzerland, and is also widely spoken in Eastern Europe.

A minor in German Studies is available. There is no major in German Studies.

- [Minor Requirements](#)
- [German Courses](#)

Minor Requirements: 6 courses, 24 credits

Core Requirements (2 courses, 8 credits)

- GER-201 Intermediate German I

Prerequisites:

GER 102 or instructor's consent

Credits:

4.00

Description:

Four-skills approach (speaking, listening, reading, writing) utilizing authentic texts, recordings, and visual media. Grammar review, vocabulary expansion, and intensive practice. One language laboratory session per week.

Term:

Offered Fall Term

Type:

BA FOREIGN

- **GER-202 Intermediate German II**

Prerequisites:

GER 201 or Instructor's consent

Credits:

4.00

Description:

Continuation of skills development from 201. One language laboratory session per week.

Term:

Offered Spring Term

Type:

BA FOREIGN

Advanced Courses (4 courses, 16 credits)

Choose four of the following:

- **GER-216 Masters of German Literature in English Translation Masterpieces**

Credits:

4.00

Description:

Discussion of works by major authors from the 18th century to the present. Drama, fiction, and poetry. The specifically German contributions as related to the European context. Lessing, Goethe, Schiller, Heine, Buchner, Schnitzler, Kafka, T. Mann, Hesse, Brecht, Seghers, Grass, Boll, Wolf and/or others.

Term:

Occasional

Type:

Humanities Literature Requirement

• GER-301 German Civilization I

Prerequisites:

GER 202 or instructor consent

Credits:

4.00

Description:

A survey of civilization in the German-speaking countries from the Reformation to German unification (1871). Major figures, movements, and periods. Art, literature, music, and philosophy in the context of political and economic developments. Normally offered alternate years.

Type:

Humanities & History, Humanities Literature Requirement, BA FOREIGN

• GER-303 Advanced Conversation

Prerequisites:

GER 202, or Instructors consent

Credits:

4.00

Description:

Further development of speaking ability in various contexts (e.g., informal conversation, debate, discussion of current events in the German-speaking countries). Short texts and audio-visual materials as a basis for classroom activities.

Term:

Occasional

Type:

BA FOREIGN

- **GER-304 Advanced Composition**

Prerequisites:

GER 202 or consent of the instructor

Credits:

4.00

Description:

Additional training in writing German. Practice in various modes (e.g., essay, poetry, dramas, short fiction). Some translation into English. Special attention paid to grammatical points where needed.

Term:

Occasional

Type:

BA FOREIGN

- **GER-306 German Cinema**

Credits:

4.00

Description:

A survey of films produced in the German speaking countries from the 1920's to the present. Includes the Weimar republic, the Nazi period, postwar production from both East and West Germany, and new trends since reunification. Film esthetics and socio-historical context. All films shown in German with English subtitles.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **GER-412 Contemporary Germany**

Credits:

4.00

Description:

A survey of German culture, politics, and society from the end of World War II to the present day. Discussion of such topics as the post-fascist mentality, economic efficiency, re-education, Americanization, division and it's legacy, high culture, entertainment for the masses, environmental movements, pacifism, and multiculturalism. Taught in English.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **GER-419 East Germany and the Cold War**

Credits:

4.00

Description:

When the German Democratic Republic was founded in 1949, observers in the West viewed it as an artificial construct created to serve the needs of the Soviet empire. The self-image of the GDR as created by its leadership revolved around the idea of an anti-fascist German state designed as a bulwark against any revival of National Socialism. Over a generation after the fall of the Berlin Wall, it is possible to undertake a dispassionate analysis of the forty-year history of the 'other' German state as manifested in its cultural identity and political role during the Cold War.

Term:

Occasional

Type:

Social Science

- **GER-420 The Greens and Environmentalism**

Credits:

4.00

Description:

The rise of the Green Party, from its grass-roots beginnings to participation in the federal government. Background on the development of green consciousness in Germany and Europe since the early 20th century. Present governmental policies and programs (e.g. alternative energy sources, organic farming, recycling, dismantling of nuclear power).

Term:

Offered Spring Term

Type:

Humanities & History, Humanities Literature Requirement

Related Disciplines:

A maximum of two courses from other departments can be counted toward the minor with the approval of the chair. Other courses may be permitted at the discretion of the advisor. The courses include the following:

- **ARH-312 Art of the Northern Renaissance**

Credits:

4.00

Description:

Examines painting, sculpture, and architecture of the 14th, 15th and 16th centuries in Northern Europe, within their historical context. Topics include the rise of oil painting, the development of woodcut and engraving, the effect of the Reformation on art. Artists include van Eyck, Bosch, Durer, Holbein and Brueghel.

Term:

Occasional

Type:

BFA Humanities Requirement, Humanities Literature Requirement, Vis. & Perform Thry & Hst

• **HST-407 German History 1517 - 1871**

Credits:

4.00

Description:

Explores the social, political and cultural development of the German-speaking population of central Europe from the beginning of the Reformation to the proclamation of the Second Reich, with major attention to the Wars of Religion, the emergence of Prussia and its competition with Austria, and the development of German nationalism.

Term:

Offered Spring Term

Type:

Humanities & History, Humanities Literature Requirement

• **HST-412 Europe in the 20th Century**

Credits:

4.00

Description:

Examines the political, economic, social and cultural developments of the principal European states since 1900. Topics include: World War I; the social and economic dislocations of the 1920s and 1930s; the rise of Fascism and National Socialism; World War II; the remains of colonialism; modernization and Americanization since the 1960s; the European Union; Europe after the Cold War; and throughout the twentieth century, the importance of class and class conflict, nationalism, and war in shaping the European experience.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **HST-414 Nazi Germany**

Credits:

4.00

Description:

Examines German and European preconditions; the Versailles Treaty and the failure of the Weimar Republic; Hitler's ideas, collaborators and institutions; Nazi foreign and domestic policy; World War II and the concentration camps.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement, BSBA SOCIAL CHANGE

- **HST-426 Politics and Culture in Europe 1919-1939**

Credits:

4.00

Description:

Explores the social and political development of European society between the two world wars, primarily through the literature, art, and films of the period. Topics include: the dissolution of pre-1914 middle class society; deviance and sexuality in the 1920s; the role of decadence in art and the Fascist response to deviance in life and art; women, workers, and the new technology; the rise of Fascism; political engagement and polarization throughout European society in the face of economic and social crisis.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

• PHIL-211 History of Modern Philosophy

Credits:

4.00

Description:

A study of the prominent modern thinkers, such as Descartes, Leibniz, Spinoza, Locke, Berkeley, Hume, and Kant. The course is an historical survey of the key concepts, problems and developments in modern philosophy including rationalism, empiricism, and skepticism. The following themes central to Modern philosophy will be addressed: the nature of reality; the limits of human knowledge; self and self-identity; mind and body; freedom in theory and practice; reason vs. sentiment in ethics. 1 term - 4 credits. Normally offered every year.

Term:

Offered Spring Term

Type:

Humanities & History, Humanities Literature Requirement

• PHIL-414 Topics in Philosophy

Credits:

4.00

Description:

A detailed exposition and evaluation of a specific topic or of the views of one major philosophical thinker or group of thinkers. Readings from both primary and secondary sources. Prerequisite: PHIL 210 or 211 or consent of instructor. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

• PHIL-418 Kant: Profiles in Philosophy

Prerequisites:

PHIL 211

Credits:

4.00

Description:

An examination of Kant's ethics and theory of knowledge, including the following topics: structures of our knowledge of nature and the empirical world; the limits of rationality; the possibility of any knowledge of God, the soul and other metaphysical entities; the antinomies (paradoxes) of pure reason; Kant's theory of unconditional morality based on duty; the idea of the categorical imperative; autonomy and universal moral law; the problem of evil. Selections from Kant's political writings will also be introduced. Prerequisite: PHIL 211 or consent of instructor. 1 term - 4 credits. Normally offered every third year.

Term:

Occasional

AP and Other Credit:

- Incoming students who receive a score of "4" or "5" on the AP German examination have fulfilled the core requirements for the minor.
- A maximum of two courses taken at other institutions or as part of a study abroad program in a German-speaking country may apply toward the minor.

Global & Cultural Communication

The Communication & Journalism (CJN) Department offers course work leading to a Bachelor of Arts or Bachelor of Science with a major in [Advertising](#), [Global & Cultural Communication](#), [Journalism](#), [Media & Film](#), or [Public Relations](#). A Bachelor of Science in Journalism is also offered to Journalism and Public Relations majors. The department also offers a [minor in Communication & Journalism](#).

All Communication & Journalism majors study under a faculty who have extensive academic and professional experience. CJN students begin their program by taking two foundation courses that focus on effective speaking, concise writing, and critical thinking. Then, each student selects required and elective courses in their major to develop theoretical and practical knowledge of their field.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Global & Cultural Communication Major Requirements](#)
- [Accelerated Bachelor's/Master's Degree in Communication](#)
- [Honors](#)
- [Communication & Journalism Courses](#)

Major Requirements: 12 courses, 48 credits

Core Requirements (9 courses, 36 credits)

Note: All students should take CJN-101 and CJN-103 during their first year.

- CJN-101 Introduction to Communication

Credits:

4.00

Description:

An introduction to the discipline addressing social science, humanities and practical art approaches to the study of communication. Students investigate the broad themes and foundational concepts which unify the discipline in order to understand the diverse fields, functions and purposes of communication.

Term:

Offered Both Fall and Spring

Building on skills acquired in CJN 2355, students use advanced equipment and production techniques to produce complex video projects, including fiction filmmaking. Projects cover various styles and genres, such as music video and film noir.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement

2015-2016 Archived Catalog Information

Global & Cultural Communication

The Communication & Journalism (CJN) Department offers course work leading to a Bachelor of Arts or Bachelor of Science with a major in [Advertising](#), [Global & Cultural Communication](#), [Journalism](#), [Media & Film](#), or [Public Relations](#). A Bachelor of Science in Journalism is also offered to Journalism and Public Relations majors. The department also offers a [minor in Communication & Journalism](#).

All Communication & Journalism majors study under a faculty who have extensive academic and professional experience. CJN students begin their program by taking two foundation courses that focus on effective speaking, concise writing, and critical thinking. Then, each student selects required and elective courses in their major to develop theoretical and practical knowledge of their field.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Global & Cultural Communication Major Requirements](#)
- [Accelerated Bachelor's/Master's Degree in Communication](#)
- [Honors](#)
- [Communication & Journalism Courses](#)

We offer an accelerated path for undergraduate Communication & Journalism (CJN) majors to obtain a master's degree in Communication.

Who is eligible

- CJN majors who are rising seniors at Suffolk with a GPA of 3.5 or higher in their major and overall.
- Students must meet all of the requirements of one of the undergraduate degree programs (BA, BS, BSJ) offered by the Department of Communication & Journalism. In addition, they must meet all of the requirements of one of the Master's of Communication degree concentrations.
- Applications follow the regular admission procedures; please note that applicants for the accelerated degree will have the GRE requirement waived.

Degree Requirements

1. Students admitted to this dual degree program must meet all the requirements of an undergraduate degree program within the department of Communication & Journalism.
2. Student must also meet all requirements for the Master's degree in Communication.
3. Students will take two CJN graduate courses during their senior year; one during the fall semester and one during the spring semester. The two graduate courses taken during the senior year will count toward BOTH the undergraduate and graduate degree requirements. Credit hours will be awarded based on the graduate course description.
4. The graduate courses taken during the senior year will be determined by the Communication graduate program director.
5. Students are subject to the usual standards for academic standing, i.e., undergraduate standards for undergraduate courses and graduate standards for graduate courses.

Upon successful completion of all of the degree requirements, a student will receive a dual Bachelor's and Master's degree. The exact degree will be awarded based on the specific undergraduate program the student completes. A student may permanently exit the dual degree program and opt to graduate with a Bachelor's degree if all the requirements for a Bachelor's degree have been met. In this case, the graduate courses taken in the senior year will be counted as 4-credit courses applied toward the undergraduate degree requirements.

2015-2016 Archived Catalog Information

Government

The Government major offers a liberal arts education with a focus on the institutions, ideas, and processes of community, national, and international decision-making. Government undergraduate degrees are organized around four field concentrations: American Politics, International Relations, Law and Public Policy, and Political Theory. Concentrations provide an opportunity for focused study in several specialized fields offered by the department. Students must choose at least one area of concentration; students may also combine up to two concentrations.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [American Politics Concentration](#)
- [International Relations Concentration](#)
- [Law & Public Policy Concentration](#)
- [Political Theory Concentration](#)
- [Combined Concentrations](#)
- [Minor Requirements](#)
- [Accelerated Bachelor's/Master's Degree in Political Science](#)
- [Honors](#)
- [Societies](#)
- [Government Courses](#)

Major Requirements: 11 courses, 41 credits

The major in Government consists of 11 courses (41 credits). Students will select one of four concentrations:

1. American Politics

2. Law and Public Policy
3. International Relations
4. Political Theory

All Government majors in all concentrations must complete the following five core courses (17 credits).

Core Requirements (5 courses, 17 credits)

- **GVT-110 Introduction to American Democracy**

Credits:

4.00

Description:

An introduction to the American political system and constitutional framework. Focus will be on the interplay of various institutions (the Presidency, Congress and the Judiciary) in creating public policies. Contemporary public issues will be discussed, as will the role of political theory in shaping American democracy. Attention will be given to the role of the news media, public opinion, political ideology, political parties and interest groups in the American system.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-115 Evolution of the Global System**

Credits:

4.00

Description:

The goal of this course is to introduce the student to the main actors, social facts and processes that shaped the international system in the nineteenth and twentieth centuries. By analyzing the spread of industrialization, the race for colonies, the thrust of imperialism, and the rapid growth of nationalism, among other factors, this course explains the contradictory and simultaneous trends of unprecedented levels of prosperity and violence in Europe and beyond. While the course examines the role of the United States in the international system, particularly in light of its dominant role since the early twentieth century, it also emphasizes the developments taking place in other regions such as Asia, Africa and Latin America. This will allow students to understand the global arena as a space of complex interconnections involving varieties of forms of production, national political cultures and idiosyncratic traditions. This course sets the foundations for other courses in International Relations and Regional Studies

Type:

Social Science

- **GVT-120 Research Methods**

Credits:

4.00

Description:

Students will learn how to read and analyze political science research. Focus will be on the use of the scientific method for research on politics and government. Students will learn how to effectively access information for research in political science and learn the steps in writing a research paper, including developing the research question, writing a literature review, selecting a research design, and how to properly cite sources. Students will develop an understanding of approaches to researching and measuring political phenomena.

Type:

Social Science

- **GVT-201 Statistics for Political Science**

Prerequisites:

Sophomore Standing GVT 110 and 120 and Math 128 or higher.

Credits:

4.00

Description:

This course is an introduction to statistics and empirical research methods generally used in political science. The course will emphasize the use of statistics and its value in substantive political science research. Statistics is a tool for drawing conclusions and making inferences from observable evidence. As well, the specification of conditions under which evidence is observed affects the conclusions and arguments that political scientists draw about how social and political processes work. The purpose of this course is to equip students with tools to interpret and conduct original data analysis, critique and make an argument based on data, and provide a view into the process of political science research and how political scientists use statistical methods and research design to answer substantive questions about politics. Since most applied data analysis utilizes data

management software, students will learn how to use SPSS as a tool for conducting data analysis. Prerequisites: Sophomore Standing, GVT 110 and 120 and Math 130 or instructor's consent. 1 term - 4 credits.

Type:

Quantitative Reasoning

- **GVT-515 Senior Seminar**

Credits:

1.00

Description:

This course is designed to provide all Government degree-seeking students with a team-taught capstone experience. In this course, we will collectively discuss and consider career, professional and academic experience for the Government major, including learning more about the fields of public policy, public service, law, nonprofit management, international development, and nongovernmental organization management. This course focuses on career entry and transition, networking for career success, impression management concept and skills, and related life-long learning skills. Students articulate and reflect on academic, work, and co-curricular experiences from the perspective of professionals entering or advancing their careers. Pre-requisite: Senior standing.

Type:

Social Science

American Politics Concentration: 6 courses, 24 credits

This concentration provides a broad overview of the American political process. The concentration offers a strong undergraduate preparation for entry into advanced degree programs, professional careers in public policy, public service, private institutions, and political organizations in the United States. This concentration is offered as a BA or BS.

Concentration Requirements (3 courses, 12 credits)

- **GVT-224 Introduction to Public Policy**

Prerequisites:

GVT 110 and GVT 120 or instructor's permission

Credits:

4.00

Description:

An introduction to the process by which public policies are made in the United States. The class will focus on agenda-setting and policy formulation at the federal level, and will include a discussion of the various actors in governmental institutions that impact public policy. Several policy issues will be used as examples to illustrate the process. Some comparisons will be made to state and local policymaking. Normally offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-223 American Politics & Institutions**

Prerequisites:

GVT 110 or GVT 120 or instructor's permission

Credits:

4.00

Description:

This course will provide an examination of the institutions that are involved in the American policy-making process. The student will learn about the presidential, (as opposed to the parliamentary) system that exists in the United States. The course will focus on a relationship between the President and Congress and how that relationship impedes or facilitates the public policy process, including the budgetary process. The course will include a discussion of the president's role as head of the executive branch, and the implementation of congressional policies. Attention will be given to the role of the judiciary in the policy process. Normally offered every year.

Type:

- **GVT-345 Public Policy Writing**

Credits:

4.00

Description:

This course provides an introduction to the importance of written communication in the public discourse and in public decision-making. The course will examine some of the tools for producing relevant, useful material in the professional public policy analysis arena. The course will also study the various kinds of written communication the policy makers and advocates regularly utilize. The course also provides an introduction to the constraints that surround effective communication in public policymaking. Students will engage in drafting several different kinds of public policy analyses.

Electives (3 courses, 12 credits)

Choose three GVT electives. Students are strongly encouraged, in consultation with their advisors, to select courses that provide a broad and balanced knowledge of the discipline of American Politics.

2015-2016 Archived Catalog Information

Government

The Government major offers a liberal arts education with a focus on the institutions, ideas, and processes of community, national, and international decision-making. Government undergraduate degrees are organized around four field concentrations: American Politics, International Relations, Law and Public Policy, and Political Theory. Concentrations provide an opportunity for focused study in several specialized fields offered by the department. Students must choose at least one area of concentration; students may also combine up to two concentrations.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

International Relations Concentration: 7 courses, 27-28 credits

The purpose of this concentration is to give students the preparation and tools necessary to pursue careers in international affairs, including the public sector, private companies, and independent sector organizations that operate in the international environment. It is also suitable for students planning graduate study in political science, law, or diplomacy. Students with a concentration in International Relations must earn the BA.

- **GVT-261 Theory & Practice of International Relations**

Prerequisites:

GVT 110, and GVT 120 or consent of instructor.

Credits:

4.00

Description:

Review of major approaches to the study of international relations. Definition of concepts such as power, nationalism, imperialism, and dependency. Special attention to the use of force and conflict resolution. Special class project. Normally offered every year.

Type:

Social Science

- **GVT-281 Intro to Comparative Politics**

Prerequisites:

GVT 110 and GVT 120 or consent of instructor.

Credits:

4.00

Description:

This course examines various methods of comparing political systems. Institutions such as executive departments, legislatures, court systems and local governmental systems are examined comparatively. It includes analysis of the impact of different economic systems on political/governmental institutions, and on economic circumstances that impact government. It also looks at political socialization both in terms of process and comparative content. An effort is made to include countries from all regions of the world. Normally offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-310 Global Political Economy**

Prerequisites:

GVT 281 and GVT 261 or instructors consent

Credits:

4.00

Description:

This course explores the main premises and approaches to study Global Political Economy. After analyzing the history and development of the international system, it studies how states and markets are interconnected in the creation and reform of economic and political international institutions in the globalization process. It also focuses on the most acute problems of the current international system in the area of IPE, namely, environmental degradation, external debt, poverty, increasing gap between rich and poor countries, and trade conflicts. Offered every year.

Type:

Social Science

Electives (3 courses, 12 credits)

Choose one course from Elective Group 1:

- **GVT-308 International Security**

Prerequisites:

GVT 281 and GVT 261

Credits:

4.00

Description:

This course examines the dynamic evolution of the debates on International Security as well as the transformations in the main global and regional security institutions such as UN and NATO. Based upon International Relations perspectives, it analyzes the traditional definitions of security at the national, regional and international levels of analysis since 1945. Likewise, it studies how states and international institutions have revisited the

concepts, policies and strategies of security since the end of the Cold War and after the September 11 events, from realist perspectives to the Copenhagen School of security studies. Offered every year.

Type:

Social Science

• GVT-363 American Foreign Policy

Prerequisites:

GVT 281 and GVT 261

Credits:

4.00

Description:

A decision-making approach to understanding the domestic and institutional context of U.S. foreign policy. Includes analysis of continuity and change since WWII using case studies of critical decisions, e.g., Korea, Cuba, Vietnam, etc. Not open to freshmen. Prerequisites: GVT 110, GVT 120, GVT 261 or instructor's consent. 1 term - 4 credits. Normally offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

• GVT-463 International Legal Systems

Prerequisites:

Junior status or above

Credits:

4.00

Description:

This course explains the main components of the international legal system. It begins by exploring the rules, principles and norms that govern the relationship among states, the different cultural and philosophical legal perspectives and the history of the international legal system. The second part

of the course covers the study of the sources and subjects of the international law, the jurisdiction of states, the peaceful settlement of disputes, the use of force and the legal personality of international actors. The third part of the course addresses a number of significant topics derived from the process of globalization legal norms: human rights, humanitarian intervention, law of the sea, environmental law, and economic relations.

Type:

Social Science

- **GVT-465 International and Transnational Organizations**

Prerequisites:

GVT-261

Credits:

4.00

Description:

This course explores the institutional structures, political processes, and impact of international governmental and nongovernmental organizations. It analyzes their increasingly prominent role in efforts to resolve a wide range of global problems and contribution to strengthen the current system of global governance. While the course covers the problems of international security, global distribution of wealth, deterioration of the environmental system, and threats to social welfare, it focuses on the interaction between the United Nations System and regional organizations, on the one hand, and the role of non-governmental organizations in cooperating or competing to solve specific problems in the area of international relations.

Type:

Social Science,BSJ SOCIAL SCIENCE,BSBA SOCIAL CHANGE

Choose one course from Elective Group 2:

- **GVT-382 Crisis and Integration in Europe**

Prerequisites:

Junior status or above

Credits:

4.00

Description:

Why did 17 European countries surrender the sovereign control of their currency and create the Euro? Will Turkey become a member of the European Union? Will Europeans continue free riding the security protection of the United States? Is the integration process another layer of bureaucracy or an institutional instrument to deal with the permanent crises in Europe? There are some of the questions guiding the discussions in the class.

Type:

Social Science

- **GVT-383 African Politics**

Prerequisites:

GVT 110 and GVT 120

Credits:

4.00

Description:

The political development of Africa in colonial and post-colonial periods. Analysis of the evolution of governmental institutions includes economic, social and personal factors; political forces at work in present day Africa. Not open to freshmen. Normally offered alternate years. Cultural Diversity B

Type:

Cultural Diversity Opt B, Social Science

- **GVT-385 South Asian Politics**

Prerequisites:

Not open to freshmen.

Credits:

4.00

Description:

The main goal of the course is to provide an overview of the main political, economic, and social processes taking place in this region. This course explains the strategies that the eight South Asian countries are implementing in order to deal with the globalization process. The primary focus of the course will be to provide students with the understanding of the main regional trends, but it also has case studies of some of the political systems in the region. Students will analyze and evaluate the concepts learned in basic courses in international relations, political science, and other disciplines in social sciences as they apply to South Asia. Normally offered alternate years.

Type:

Social Science

• GVT-393 Latin American Politics Today

Prerequisites:

GVT 281 or instructor consent

Credits:

4.00

Description:

This course examines the evolution of Latin America in the context of globalization. The first part analyzes the main political and economic trends of Latin America as a region, while the second presents the main challenges Mexico is facing today in the area of security. The third part moves forward into the detailed explanation of the transformations of the largest South American countries such as Colombia, Argentina, Chile and Venezuela, among others. The final section looks at the relationship between Latin America and the United States.

Type:

Cultural Diversity Opt B, Social Science

• GVT-411 Politics of North and South East Asia

Credits:

4.00

Description:

This course examines the cultural background and political systems mainly of China, Korea and Japan, also touching upon the small tiger states in South-East Asia. It elucidates the historical origins, evolution and current trajectory of these states with a particular concentration on North Korea. One further concentration is the interplay of domestic and foreign policy in the relations of these states, regional stability and cooperation. Topics include history, social structure, the interplay of culture and ideology, political economy, humanitarian issues, security, and the politics of North Korean domestic and foreign policy. We will spend considerable time analyzing China's and North Korea's relationship with regional and world powers and examining the origins, history, and implications of the North Korean nuclear weapons program. Students will be expected to demonstrate the ability to apply theoretical and historical knowledge toward analyzing the rapidly evolving landscape of contemporary issues related to East Asia.

Type:

Social Science,Asian Studies

- **GVT-485 Politics of the Middle East**

Prerequisites:

TAKE GVT-281 OR INSTRUCTOR'S CONSENT

Credits:

4.00

Description:

Interlocking themes making the contemporary Middle East an area of chronic conflict: Big Power rivalries; social and political change within individual countries; unity and Arab rivalry involved in Arab nationalism; the Palestinian-Israeli-Arab dispute. Normally offered alternate years. Cultural Diversity B

Type:

Cultural Diversity Opt B,Social Science

Choose one course from Elective Group 3:

- **GVT-283 Challenges to Development in the Global South**

Credits:

4.00

Description:

Theories dealing with the process of political change in countries of the Third World: the impact of the military, traditional culture and institutions, economic problems, strong personalities and other factors on political life and institutions. Prerequisite: Not open to freshmen. 1 term - 4 credits. Normally offered alternate years. Cultural Diversity B

Type:

Cultural Diversity Opt B, Social Science

• GVT-307 Globalization of Gender Politics

Prerequisites:

Not open to freshmen

Credits:

4.00

Description:

This course examines the interaction between gender and globalization. It discusses the centrality of gender in international development by focusing on gender as one of the most critical factors that affect the success or the failure of globalization. Critically reviewing general theories of globalization, the course presents a historical overview of gender and development. It then explores selected topics: global restructuring and feminization of the labor force, gender in multinational corporations, gender and international migration, sex-tourism, AIDS, and the impact of the state, religion, and culture in creating social dislocations and inequalities. Finally, we will consider strategies of change and diverse forms of resistance by women. Offered as needed. Cultural Diversity B

Type:

Social Science, Cultural Diversity Opt B, BSJ SOCIAL SCIENCE

• GVT-311 Politics of the Arab-Israeli Conflict

Prerequisites:

Open to Juniors and Seniors

Credits:

4.00

Description:

An analysis of the origins and the local, regional, and international dimensions of the Palestinian-Israeli-Arab conflict, this course will examine the conflict through the eyes of the major protagonists and the roles played by them from the early twentieth century to the present: Zionists/Israelis, Palestinians and other Arabs, British, Americans, Soviets. We will also explore the questions of why this conflict has captured the world's attention and why it has gone unresolved since World War II. Finally, we will examine the possibilities and attempts for resolution of what appears to be an intractable human tragedy.

Type:

Social Science

- **GVT-384 The U.S. and the International Relations of the Middle East**

Credits:

4.00

Description:

This course will explore the role played by the United States in the Middle East in the twentieth century, with emphasis on the period since World War II. Our study will begin with a decision-making approach to understanding the domestic and institutional context of America's policy toward the region, followed by an examination of that policy as it confronted radical nationalist, socialist, and Islamic movements, Soviet influence, and specific contemporary problems - the Arab-Israeli conflict, the Lebanese civil war, the Iranian revolution, the Iran-Iraq War, and the Gulf War. Open to non-majors, not open to freshmen. Normally offered alternate years.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-387 Conflict & Development in Asia Service Abroad**

Prerequisites:

GVT 281 or instructor's consent. Junior status or above

Credits:

4.00

Description:

current political trends in the Caribbean and in selected Central American nations. Emphasis will be placed on comparative analysis of public policies in the region, as well as on external factors which impact on politics in the Caribbean and Central America. Students will use academic sources in their analysis, as well as novels and other literary sources for the background of their analysis. Not open to freshmen. Normally offered every third year. Cultural Diversity B

Type:

Cultural Diversity Opt B,Social Science,Expanded Classroom Requirement,Global Engagement Experience

- **GVT-389 Politics of China**

Prerequisites:

Junior status or above

Credits:

4.00

Description:

Emphasis on a particular approach to the problems of economic modernization and political development. Historical background; the revolutionary movement; present political structures and current issues. Cultural Diversity B

Type:

Cultural Diversity Opt B,Social Science,Asian Studies

- **GVT-399 Ethnic Conflict, National Bldg. & International Intervention**

Prerequisites:

SOPH STANDING REQUIRED

Credits:

4.00

Description:

The course focuses on the role of ethnic conflict and international intervention in nation building in the post-Cold War period. To understand fully these forces, theories such as colonialism, neo- and post-colonialism, and humanitarian intervention, along with social/economic conditions will be examined. Different case studies will be selected each time the course is offered. Open to non-majors.

Type:

Social Science,BSJ SOCIAL SCIENCE

• **GVT-439 Global Environmental Threat**

Credits:

4.00

Description:

In the 20th century the general public became aware of the need for following a sustainable lifestyle. Non-governmental organizations, governmental institutions and individuals began to study environmental problems and issues to enhance the concept of conservation of nature and the protection of the planet's biodiversity among other important concepts. However, as we enter the 21st century, we are finding ourselves involved in new environmental threats such as increasingly disturbing natural disasters, eco-terrorism and endless extreme poverty. This course is aimed at learning the basic environmental aspects that affect society and nature as a whole, along with the new issues that are arising and leading scientists to continue new lines of research in the field of environmental conservation and awareness, knowing also that the key to hope lies in the field of environmental education. Offered on the Madrid Campus only.

Type:

Social Science,BSJ SOCIAL SCIENCE

• **GVT-462 Debates on Conflicting Ideas in U.S. Foreign Policy**

Prerequisites:

GVT 261. Junior status or above

Credits:

4.00

Description:

In order to understand the change and continuity in U.S. foreign policy, it is crucial to examine the debate among those who inform the ideas put forward by U.S. foreign policy experts, policymakers, and the group-whether political parties or NGOs-with which they are allies. This course will explore the importance of ideas in U.S. foreign policy from the early days of the republic with an emphasis on the post-World War II period.

Prerequisite: GVT 281 or instructor's consent. Open only to Juniors and Seniors. 1 term - 4 credits.

Type:

Social Science

• GVT-466 Governance & Regional Political Economy

Prerequisites:

GVT 261

Credits:

4.00

Description:

This course examines the intertwined nature of the globalization and regionalization processes from the perspective of global political economy. The first part of the course provides the basic elements and indicators to understand the main challenges the international economy is facing such as crisis, protectionism, and underdevelopment, inter alia. The second part presents the evolution of globalization and regionalism in the past decades. The third and final section compares how the distinct regions in the world are dealing with local and global problems; particularly attention is paid to the European Union, NAFTA, Mercosur and APEC.

Type:

Social Science

• GVT-469 International Human Rights

Prerequisites:

GVT 261 Junior status or above

Credits:

4.00

Description:

An examination of human rights at the end of the 20th century. Attention will be given to the origin and expansion of the concept of human rights in different political systems, the links between culture and human rights and the means and mechanisms for safeguarding human rights with particular reference to the United Nations system.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-507 GVT Study Trip**

Prerequisites:

INSTRUCTOR'S PERMISSION This course fulfills the Expanded Classroom Requirement

Credits:

4.00

Description:

APPROVAL OF DEPT. CHAIRPERSON. Specially arranged study trip to a foreign country for the purpose of obtaining knowledge through direct experience and observation. Includes prearranged site visits, meetings, required reading and written assignments. ECR

Type:

Social Science,Expanded Classroom Requirement

- **GVT-509 United Nations Seminar**

Prerequisites:

Instructor's consent

Credits:

4.00

Description:

This course provides an introduction to the study of the role of the United Nations System in the globalization era. The course is divided in two main sections. The first is based on a series of readings, lectures and discussion on the rules, principles and norms which govern the relationship among states and the UN system; it also covers traditional topics such as the sources and subjects of international law, the jurisdiction of states, the peaceful settlement of disputes, the use of force and the legal personality of international actors, human rights, humanitarian intervention, global environment, used of armed forces, as well as economic relations. The second part of the course is based on a required study trip to the UN headquarters in order to experience a direct contact with policy-makers within the UN system in a diversity of areas such as security, aid and peacekeeping areas.

Type:

Social Science,Expanded Classroom Requirement,Global Engagement Experience

• GVT-521 Internship in Government

Prerequisites:

Junior standing

Credits:

4.00

Description:

This course uses an internship placement of at least 10 hours a week for 12 weeks in a position that offers the student significant opportunity to learn about politics and/or government as the basis for reflection, analysis, and skill development. Specific learning objectives will be tailored to the student's placement. Interested students should consult instructor in advance. ECR

Type:

Social Science,Expanded Classroom Requirement

It is also advised that students take advantage of the many internship opportunities that exist for law related placements. Placements are for 4-16 credits and are available at the local level, in Washington, D.C., or at international sites such as London.

Economics Requirement (1 course, 3-4 credits)

Choose one Economics course, preferably Macroeconomics. These courses can be found on the [Economics page](#) in this catalog.

Law & Public Policy Concentration: 6 courses, 24 credits

The Law & Public Policy concentration offers students a framework for understanding the legal underpinnings of public policy and the opportunity to study and critically analyze state, federal, and international legal issues and the institutions in which legal decisions are made. The concentration offers a strong undergraduate preparation for entry into advanced degree programs in the law, public policy, and professional careers in public policy, public service, private

institutions, and political organizations. Prelaw advising is regularly available for government majors in any concentration who plan to apply to law school. This concentration is offered as a BA or BS.

Concentration Requirements (4 courses, 16 credits)

- **GVT-224 Introduction to Public Policy**

Prerequisites:

GVT 110 and GVT 120 or instructor's permission

Credits:

4.00

Description:

An introduction to the process by which public policies are made in the United States. The class will focus on agenda-setting and policy formulation at the federal level, and will include a discussion of the various actors in governmental institutions that impact public policy. Several policy issues will be used as examples to illustrate the process. Some comparisons will be made to state and local policymaking. Normally offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-225 U.S. Constitutional Law & Civil Liberties**

Credits:

4.00

Description:

This course examines a range of contemporary issues introducing students to the U.S. Constitution and the fundamental concepts of constitutional law. Students discuss and analyze topics including separation of powers, federalism, freedom of speech, the death penalty, gun control, and civil rights. We will explore current constitutional challenges and their relationship to law and society.

Type:

BSJ SOCIAL SCIENCE,Social Science

- **GVT-245 Courts, Public Policy, and Legal Research**

Credits:

4.00

Description:

This course examines the public policy-making role of the court system and examines questions such as whether and how courts can spur political and social reform. The direct and secondary effects of key court decisions will be examined. Case studies may focus on issues like civil rights and pro-choice court cases and political activism. The course will also examine the basics of policy-related legal research.

Type:

Social Science

- **GVT-345 Public Policy Writing**

Credits:

4.00

Description:

This course provides an introduction to the importance of written communication in the public discourse and in public decision-making. The course will examine some of the tools for producing relevant, useful material in the professional public policy analysis arena. The course will also study the various kinds of written communication the policy makers and advocates regularly utilize. The course also provides an introduction to the constraints that surround effective communication in public policymaking. Students will engage in drafting several different kinds of public policy analyses.

Political Theory Concentration: 6 courses, 24 credits

The Political Theory concentration offers students an understanding of the principles, concepts, norms, and assumptions that inform public policy. The concentration asks students to consider the meaning of justice and the nature and source of legitimate authority. The concentration offers a strong undergraduate preparation for entry into advanced degree programs, public service, private institutions, and political organizations. This concentration is offered as a BA or BS.

Concentration Requirements (3 courses, 12 credits)

- **GVT-275 Ancient & Medieval Political Theory**

Credits:

4.00

Description:

This course examines the political ideas of major thinkers of Western civilization, beginning with the ancient Greek philosophers and continuing through the 14th Century. Theorists studied (in English translation) include, among others, Plato, Aristotle, Thucydides, Cicero, Augustine, Thomas Aquinas, and Christine de Pizan. One term, 4 semester hours.

Type:

Social Science

- **GVT-276 Modern Political Theory**

Prerequisites:

Sophomore standing

Credits:

4.00

Description:

This course examines the political ideas of the major thinkers of Western civilization from the time of Machiavelli to the present. Theorists studied (in English translation) include, among others, Machiavelli, Bodin, Hobbes, Locke, Rousseau, Kant, Mill, Marx, Wollstonecraft, Beauvoir, and Dewey. One term, 4 semester hours. No Prerequisites.

Type:

Social Science,BSJ SOCIAL SCIENCE

Choose one of the following:

- **GVT-208 Politics / Religion**

Credits:

4.00

Description:

This course explores what major religions say about the status and responsibilities of the state and how, in turn, selective states have, in theory and practice, structured the place of religions in political life. Particular attention is given to issues of politics and religion in the United States. Cultural Diversity A

Type:

Cultural Diversity Opt A, Social Science, BSJ SOCIAL SCIENCE, Diverse Perspectives

- **GVT-471 Topics in Democracy**

Prerequisites:

take gvt-110, gvt-120, or instructor's consent for non majors. Junior status or above

Credits:

4.00

Description:

In this course, students will have an opportunity to examine the basic foundations of the democratic theory and practice. Specifically, this course will focus on building blocks of a democratic relationship between people and government, including transparency, accountability, accessibility, and opportunities for effective advocacy and participation. Both classical and modern authors who have weighed in on these issues will be discussed. Normally offered alternate years.

Type:

Social Science, BSJ SOCIAL SCIENCE

- **GVT-473 American Political Thought**

Prerequisites:

open to juniors and seniors only

Credits:

4.00

Description:

Reading and discussion of original works by significant American political thinkers. Readings vary, but might include The Federalist and works by Paine, Jefferson, Calhoun, Thoreau, Sumner, Reed, Dewey, Lippman, Goodman, King, Malcolm X, Carmichael, Hamilton, Friedan and Dillinger. Offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-475 Radical & Revolutionary Political Thought**

Prerequisites:

Open to Juniors and Seniors only.

Credits:

4.00

Description:

This course focuses on those political thinkers, such as socialists, feminists, anarchists, pacifists, and ecologists, who have opposed established order and sought to change it. Topics covered include utopian visions (e.g., Owen, Morris, Bellamy, Gilman), criticism of existing institutions (Wollstonecraft, Marx, Fanon, de Beauvoir) and strategies for change (Goldman, Malcolm, Lenin, Cabral). The emphasis is on reading original theoretical works, with several writings assignments. Normally offered every third year.

Type:

Social Science

- **PHIL-414 Topics in Philosophy**

Credits:

4.00

Description:

A detailed exposition and evaluation of a specific topic or of the views of one major philosophical thinker or group of thinkers. Readings from both primary and secondary sources. Prerequisite: PHIL 210 or 211 or consent of instructor. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

Electives (3 courses, 12 credits)

Choose three GVT electives. Students are strongly encouraged, in consultation with their advisors, to select courses that provide a broad and balanced knowledge of the discipline of Political Theory.

Please choose two of the concentrations listed below.

Concentration Requirements (4 courses, 16 credits)

American Politics Concentration (2 courses, 8 credits)

- **GVT-223 American Politics & Institutions**

Prerequisites:

GVT 110 or GVT 120 or instructor's permission

Credits:

4.00

Description:

This course will provide an examination of the institutions that are involved in the American policy-making process. The student will learn about the presidential, (as opposed to the parliamentary) system that exists in the United States. The course will focus on a relationship between the President and Congress and how that relationship impedes or facilitates the public policy process, including the budgetary process. The course will include a discussion of the president's role as head of the executive branch, and the implementation of congressional policies. Attention will be given to the role of the judiciary in the policy process. Normally offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-224 Introduction to Public Policy**

Prerequisites:

GVT 110 and GVT 120 or instructor's permission

Credits:

4.00

Description:

An introduction to the process by which public policies are made in the United States. The class will focus on agenda-setting and policy formulation at the federal level, and will include a discussion of the various actors in governmental institutions that impact public policy. Several policy issues will be used as examples to illustrate the process. Some comparisons will be made to state and local policymaking. Normally offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

International Relations Concentration (2 courses, 8 credits)

- **GVT-261 Theory & Practice of International Relations**

Prerequisites:

GVT 110, and GVT 120 or consent of instructor.

Credits:

4.00

Description:

Review of major approaches to the study of international relations. Definition of concepts such as power, nationalism, imperialism, and dependency. Special attention to the use of force and conflict resolution. Special class project. Normally offered every year.

Type:

Social Science

- **GVT-281 Intro to Comparative Politics**

Prerequisites:

GVT 110 and GVT 120 or consent of instructor.

Credits:

4.00

Description:

This course examines various methods of comparing political systems. Institutions such as executive departments, legislatures, court systems and local governmental systems are examined comparatively. It includes analysis of the impact of different economic systems on political/governmental

institutions, and on economic circumstances that impact government. It also looks at political socialization both in terms of process and comparative content. An effort is made to include countries from all regions of the world. Normally offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

Law & Public Policy Concentration (2 courses, 8 credits)

- **GVT-224 Introduction to Public Policy**

Prerequisites:

GVT 110 and GVT 120 or instructor's permission

Credits:

4.00

Description:

An introduction to the process by which public policies are made in the United States. The class will focus on agenda-setting and policy formulation at the federal level, and will include a discussion of the various actors in governmental institutions that impact public policy. Several policy issues will be used as examples to illustrate the process. Some comparisons will be made to state and local policymaking. Normally offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-225 U.S. Constitutional Law & Civil Liberties**

Credits:

4.00

Description:

This course examines a range of contemporary issues introducing students to the U.S. Constitution and the fundamental concepts of constitutional law. Students discuss and analyze topics including separation of powers, federalism, freedom of speech, the death penalty, gun control, and civil rights. We will explore current constitutional challenges and their relationship to law and society.

Type:

BSJ SOCIAL SCIENCE, Social Science

Political Theory Concentration (2 courses, 8 credits)

- **GVT-275 Ancient & Medieval Political Theory**

Credits:

4.00

Description:

This course examines the political ideas of major thinkers of Western civilization, beginning with the ancient Greek philosophers and continuing through the 14th Century. Theorists studied (in English translation) include, among others, Plato, Aristotle, Thucydides, Cicero, Augustine, Thomas Aquinas, and Christine de Pizan. One term, 4 semester hours.

Type:

Social Science

- **GVT-276 Modern Political Theory**

Prerequisites:

Sophomore standing

Credits:

4.00

Description:

This course examines the political ideas of the major thinkers of Western civilization from the time of Machiavelli to the present. Theorist studied (in English translation) include, among others, Machiavelli, Bodin, Hobbes, Locke, Rousseau, Kant, Mill, Marx, Wollstonecraft, Beauvoir, and Dewey. One term, 4 semester hours. No Prerequisites.

Type:

Note:

Students who combine American Politics and Law & Public Policy will complete GVT-224 once and MUST complete an additional elective.

Advanced Course (1 course, 4 credits)

Choose one of the following:

- **GVT-245 Courts, Public Policy, and Legal Research**

Credits:

4.00

Description:

This course examines the public policy-making role of the court system and examines questions such as whether and how courts can spur political and social reform. The direct and secondary effects of key court decisions will be examined. Case studies may focus on issues like civil rights and pro-choice court cases and political activism. The course will also examine the basics of policy-related legal research.

Type:

Social Science

- **GVT-310 Global Political Economy**

Prerequisites:

GVT 281 and GVT 261 or instructors consent

Credits:

4.00

Description:

This course explores the main premises and approaches to study Global Political Economy. After analyzing the history and development of the international system, it studies how states and markets are interconnected in the creation and reform of economic and political international institutions

in the globalization process. It also focuses on the most acute problems of the current international system in the area of IPE, namely, environmental degradation, external debt, poverty, increasing gap between rich and poor countries, and trade conflicts. Offered every year.

Type:

Social Science

• GVT-345 Public Policy Writing

Credits:

4.00

Description:

This course provides an introduction to the importance of written communication in the public discourse and in public decision-making. The course will examine some of the tools for producing relevant, useful material in the professional public policy analysis arena. The course will also study the various kinds of written communication the policy makers and advocates regularly utilize. The course also provides an introduction to the constraints that surround effective communication in public policymaking. Students will engage in drafting several different kinds of public policy analyses.

Type:

BSJ SOCIAL SCIENCE, Social Science

Elective (1 course, 4 credits)

Choose any 300, 400, or 500 level Government course

Note:

Students enrolled in the IR combined concentration MUST take GVT-310 as their advanced course.

2015-2016 Archived Catalog Information

Government

The Government major offers a liberal arts education with a focus on the institutions, ideas, and processes of community, national, and international decision-making. Government undergraduate degrees are organized around four field concentrations: American Politics, International Relations, Law and Public Policy, and Political Theory. Concentrations provide an opportunity for focused study in several specialized fields offered by the department. Students must choose at least one area of concentration; students may also combine up to two concentrations.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- GVT-110 Introduction to American Democracy

Credits:

4.00

Description:

An introduction to the American political system and constitutional framework. Focus will be on the interplay of various institutions (the Presidency, Congress and the Judiciary) in creating public policies. Contemporary public issues will be discussed, as will the role of political theory in shaping American democracy. Attention will be given to the role of the news media, public opinion, political ideology, political parties and interest groups in the American system.

Type:

Social Science,BSJ SOCIAL SCIENCE

• **GVT-120 Research Methods**

Credits:

4.00

Description:

Students will learn how to read and analyze political science research. Focus will be on the use of the scientific method for research on politics and government. Students will learn how to effectively access information for research in political science and learn the steps in writing a research paper, including developing the research question, writing a literature review, selecting a research design, and how to properly cite sources. Students will develop an understanding of approaches to researching and measuring political phenomena.

- [Government Courses](#)

This program provides an accelerated path for undergraduate Government majors to obtain a Master's degree in Political Science. Students can take two graduate level classes during their senior year, one at a time or both at once. Once two graduate classes have been taken, students can take no more until they have otherwise fulfilled the requirements for their undergraduate degree.

1. Students admitted to this dual degree program must meet all the requirements of one of the undergraduate degree programs (BA or BS in Government).
2. Student must also meet all requirements for the Master's degree in Political Science (MSPS).
3. The two graduate courses taken during the senior year will count toward BOTH the undergraduate and graduate degree requirements. Credit hours will be awarded based on the graduate course description.
4. Students are subject to the usual standards for academic standing, i.e., undergraduate standards for undergraduate courses and graduate standards for graduate courses.

Upon successful completion of all of the degree requirements, a student will receive a dual Bachelor's and Master's degree. The exact degree will be awarded based on the specific undergraduate program the student completes. A student may permanently exit the dual degree program and opt to graduate with a Bachelor's degree if all the requirements for a Bachelor's degree have been met. In this case, the graduate courses taken in the senior year will be counted as 4-credit courses applied toward the undergraduate degree requirements.

Government majors in all concentrations who have an overall GPA of 3.0 and a GPA of 3.4 or better in the major will be eligible for honors. All students wishing to receive honors in Government must enroll in at least two "honors certified" 300- or 400-level Government courses offered by a full-time Government department faculty member.

To receive honors in the Government Department, students must:

1. Complete the written assignment (research paper or policy analysis) for at least two courses
2. Receive a grade of an A- or better on the papers for the courses for which they are writing
3. Present one paper orally to the Honors Committee (student's choice regarding which paper)
4. Present one paper at the spring Student Research Conference (student's choice regarding which paper)

- GVT-005 Summer Campaign Lab

Prerequisites:

Instructor consent required

Credits:

0.00

Description:

This non-credit, two-week intensive certificate will combine in-depth training on building and running a successful campaign, with site visits to leading political strategy and non-profit agencies. Students will broaden their network meeting leaders in government, public policy, and non-profits by participating in evening speaker series and networking events. Evening teamwork will culminate in a final campaign plan to be presented on the final day of the program.

- **GVT-110 Introduction to American Democracy**

Credits:

4.00

Description:

An introduction to the American political system and constitutional framework. Focus will be on the interplay of various institutions (the Presidency, Congress and the Judiciary) in creating public policies. Contemporary public issues will be discussed, as will the role of political theory in shaping American democracy. Attention will be given to the role of the news media, public opinion, political ideology, political parties and interest groups in the American system.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-H110 Honors Intro to American Democracy**

4.00

Description:

Special honors section of GVT 110. Offered every fall.

Type:

Social Science,BSJ SOCIAL SCIENCE,Honors

- **GVT-115 Evolution of the Global System**

Credits:

4.00

Description:

The goal of this course is to introduce the student to the main actors, social facts and processes that shaped the international system in the nineteenth and twentieth centuries. By analyzing the spread of industrialization, the race for colonies, the thrust of imperialism, and the rapid growth of nationalism, among other factors, this course explains the contradictory and simultaneous trends of unprecedented levels of prosperity and violence in Europe and beyond. While the course examines the role of the United States in the international system, particularly in light of its dominant role since the early twentieth century, it also emphasizes the developments taking place in other regions such as Asia, Africa and Latin America. This will allow students to understand the global arena as a space of complex interconnections involving varieties of forms of production, national political cultures and idiosyncratic traditions. This course sets the foundations for other courses in International Relations and Regional Studies

Type:

Social Science

- **GVT-120 Research Methods**

Credits:

4.00

Description:

Students will learn how to read and analyze political science research. Focus will be on the use of the scientific method for research on politics and government. Students will learn how to effectively access information for research in political science and learn the steps in writing a research paper, including developing the research question, writing a literature review, selecting a research design, and how to properly cite sources. Students will develop an understanding of approaches to researching and measuring political phenomena.

Type:

Social Science

- **GVT-H120 Honors Research Methods**

Credits:

4.00

Description:

A special honors section of Research Methods. Students will be introduced to the subfields of political science and learn to analyze political writings. Focus will be on the use of the scientific method for research on politics and government. Students will learn the steps in writing a research paper, including developing the research question and selecting a research design. Attention will be given to the use of statistical analysis and public opinion polling in political research.

Type:

Social Science,Honors

• **GVT-201 Statistics for Political Science**

Prerequisites:

Sophomore Standing GVT 110 and 120 and Math 128 or higher.

Credits:

4.00

Description:

This course is an introduction to statistics and empirical research methods generally used in political science. The course will emphasize the use of statistics and its value in substantive political science research. Statistics is a tool for drawing conclusions and making inferences from observable evidence. As well, the specification of conditions under which evidence is observed affects the conclusions and arguments that political scientists draw about how social and political processes work. The purpose of this course is to equip students with tools to interpret and conduct original data analysis, critique and make an argument based on data, and provide a view into the process of political science research and how political scientists use statistical methods and research design to answer substantive questions about politics. Since most applied data analysis utilizes data management software, students will learn how to use SPSS as a tool for conducting data analysis. Prerequisites: Sophomore Standing, GVT 110 and 120 and Math 130 or instructor's consent. 1 term - 4 credits.

Type:

Quantitative Reasoning

- **GVT-204 Women in American Politics**

Credits:

4.00

Description:

An examination of women's place in the Constitution; policy concerns; and political participation. Attention will be given to women's societal roles and attitudes towards women of different classes and races and the ways in which these roles and attitudes influence women's political participation. Attention will also be given to the theories and perspectives of the current women's movement as they influence policy considerations. Cultural Diversity A

Type:

Cultural Diversity Opt A,Social Science,BSJ SOCIAL SCIENCE,BSBA SOCIAL CHANGE

- **GVT-208 Politics / Religion**

Credits:

4.00

Description:

This course explores what major religions say about the status and responsibilities of the state and how, in turn, selective states have, in theory and practice, structured the place of religions in political life. Particular attention is given to issues of politics and religion in the United States. Cultural Diversity A

- **GVT-223 American Politics & Institutions**

Prerequisites:

GVT 110 or GVT 120 or instructor's permission

Credits:

4.00

Description:

This course will provide an examination of the institutions that are involved in the American policy-making process. The student will learn about the presidential, (as opposed to the parliamentary) system that exists in the United States. The course will focus on a relationship between the President and Congress and how that relationship impedes or facilitates the public policy process, including the budgetary process. The course will include a discussion of the president's role as head of the executive branch, and the implementation of congressional policies. Attention will be given to the role of the judiciary in the policy process. Normally offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-224 Introduction to Public Policy**

Prerequisites:

GVT 110 and GVT 120 or instructor's permission

Credits:

4.00

Description:

An introduction to the process by which public policies are made in the United States. The class will focus on agenda-setting and policy formulation at the federal level, and will include a discussion of the various actors in governmental institutions that impact public policy. Several policy issues will be used as examples to illustrate the process. Some comparisons will be made to state and local policymaking. Normally offered every year.

Type:

- **GVT-225 U.S. Constitutional Law & Civil Liberties**

Credits:

4.00

Description:

This course examines a range of contemporary issues introducing students to the U.S. Constitution and the fundamental concepts of constitutional law. Students discuss and analyze topics including separation of powers, federalism, freedom of speech, the death penalty, gun control, and civil rights. We will explore current constitutional challenges and their relationship to law and society.

Type:

BSJ SOCIAL SCIENCE, Social Science

- **GVT-243 American Constitutional Law**

Prerequisites:

not open to freshmen

Credits:

4.00

Description:

The growth of Constitutional law and the role of the Supreme Court is examined by analysis of court decisions dealing with Judicial Review, Federalism, Presidential and Congressional powers. Normally offered every year.

Type:

Social Science, BSJ SOCIAL SCIENCE

- **GVT-244 Civil Liberties**

Prerequisites:

Not open to Freshmen

Credits:

4.00

Description:

Analysis of Supreme Court decisions in regard to political and civil rights including freedom of speech, press, assembly and religion, obscenity, race and sex discrimination, and criminal procedure. Normally offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-245 Courts, Public Policy, and Legal Research**

Credits:

4.00

Description:

This course examines the public policy-making role of the court system and examines questions such as whether and how courts can spur political and social reform. The direct and secondary effects of key court decisions will be examined. Case studies may focus on issues like civil rights and pro-choice court cases and political activism. The course will also examine the basics of policy-related legal research.

Type:

Social Science

- **GVT-247 Intellectual Property- Authors, Investors, & Brands**

Prerequisites:

GPA at least 3.3

Credits:

4.00

Description:

Are Neanderthal genes patentable? May a fan write Harry Potter 8? Could Amazon.com shut down Amazon Books, a women's bookstore? Is there copyright in a student's class paper? Why does so much copyrighted stuff stay up on YouTube? Can a video game company own its employees' ideas? This friendly, interactive introduction to intellectual property gives the lay of the land, covering the fundamental pillars of copyrights, patents, trademarks, and trade secret, and more far-reaching topics like international and internet intellectual property, and indigenous people and IP. The course is open to all majors, because it is relevant to anyone who deals with creative works, inventions, discoveries, or business. This undergraduate course will be taught at the Suffolk Law School by a member of its faculty. To register students must have a GPA of 3.3 or permission of the instructor. There will be several quizzes and a final exam.

Type:

Arts Admin Minor Elective

- **GVT-253 State and Local Government**

Prerequisites:

GVT 110/120 OR INSTRUCTOR'S CONSENT

Credits:

4.00

- **GVT-278 Literature & Politics**

Credits:

4.00

Description:

This course will examine novels with an expressed political theme introduced by the author. The theme may be either a central part of the plot, or secondary to the main plot. The class will focus on American as well as foreign works. The class is open to non-majors. Normally offered alternate years.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-279 Minority Politics in the United States**

Prerequisites:

Sophomore Status Required

Credits:

4.00

Description:

This course is designed to provide an intensive survey of minority politics in the political development of the United States. We will focus on the historical and contemporary experiences of several groups in American politics. In particular, the course will look at four groups that, for reasons of race, have been subjected to systematic discrimination and political subordination in U.S. history: American Indians, African Americans, Latino Americans, and Asian/Pacific Americans. In this course we will work toward an understanding of American politics from the point of view of politically active and engaged persons of color. This course will also take a close look at the future of race and ethnicity in American politics. It is a fundamental premise of this course that an understanding of race and minority politics is necessary to comprehensively understand American political development and many important issues in contemporary American politics. Cultural Diversity A

- **GVT-284 Intro to Peace & Conflict: Horn of Africa & International Security**

Credits:

4.00

Description:

This course analyzes both ongoing and potential conflicts as well as conflict fault-lines in the Horn of Africa region and their implication to International Security. It inquires into the nature of regional conflicts and security complexes and explores ways of resolving them in a peaceful manner. In so doing,

it examines such international security threats as state failure, Islamic terrorism, and piracy in the light of the dynamics and evolution of the debates on International Security as well as the transformations in the main global, continental, and regional security institutions such as UN, AU, and IGAD. Based upon International Relations perspectives, it analyzes the traditional definitions of security at the national, regional and international levels of analysis since 1945. Likewise, it studies how states and international institutions have revisited the concepts, policies and strategies of security in the post Cold War and post 9/ 11 world, from realist perspectives to the Copenhagen School of security studies.

Type:

Social Science

- **GVT-306 Women & Public Policy**

Credits:

4.00

Description:

This hybrid course will examine the political leadership and influence of women within political institutions and on public policy. The course is divided into two parts: Part 1 will examine women in politics, with particular attention given to the intersectional realities of race, class, gender identity, and ideological orientation. Specific policy areas, including reproductive choice, housing, pay equity, and domestic relations, will be discussed in Part 2. Prerequisite: Open to non-majors; not open to freshmen. Normally offered alternate years. Cultural Diversity A

Type:

Social Science,Cultural Diversity Opt A,BSJ SOCIAL SCIENCE

- **GVT-307 Globalization of Gender Politics**

Prerequisites:

Not open to freshmen

Credits:

4.00

Description:

This course examines the interaction between gender and globalization. It discusses the centrality of gender in international development by focusing on gender as one of the most critical factors that affect the success or the failure of globalization. Critically reviewing general theories of globalization, the course presents a historical overview of gender and development. It then explores selected topics: global restructuring and feminization of the labor force, gender in multinational corporations, gender and international migration, sex-tourism, AIDS, and the impact of the state, religion, and culture in creating social dislocations and inequalities. Finally, we will consider strategies of change and diverse forms of resistance by women. Offered as needed. Cultural Diversity B

Type:

Social Science,Cultural Diversity Opt B,BSJ SOCIAL SCIENCE

• GVT-308 International Security

Prerequisites:

GVT 281 and GVT 261

Credits:

4.00

Description:

This course examines the dynamic evolution of the debates on International Security as well as the transformations in the main global and regional security institutions such as UN and NATO. Based upon International Relations perspectives, it analyzes the traditional definitions of security at the national, regional and international levels of analysis since 1945. Likewise, it studies how states and international institutions have revisited the concepts, policies and strategies of security since the end of the Cold War and after the September 11 events, from realist perspectives to the Copenhagen School of security studies. Offered every year.

Type:

Social Science

• GVT-310 Global Political Economy

Prerequisites:

GVT 281 and GVT 261 or instructors consent

Credits:

4.00

Description:

This course explores the main premises and approaches to study Global Political Economy. After analyzing the history and development of the international system, it studies how states and markets are interconnected in the creation and reform of economic and political international institutions in the globalization process. It also focuses on the most acute problems of the current international system in the area of IPE, namely, environmental degradation, external debt, poverty, increasing gap between rich and poor countries, and trade conflicts. Offered every year.

Type:

Social Science

- **GVT-311 Politics of the Arab-Israeli Conflict**

Prerequisites:

Open to Juniors and Seniors

Credits:

4.00

Description:

An analysis of the origins and the local, regional, and international dimensions of the Palestinian-Israeli-Arab conflict, this course will examine the conflict through the eyes of the major protagonists and the roles played by them from the early twentieth century to the present: Zionists/Israelis, Palestinians and other Arabs, British, Americans, Soviets. We will also explore the questions of why this conflict has captured the world's attention and why it has gone unresolved since World War II. Finally, we will examine the possibilities and attempts for resolution of what appears to be an intractable human tragedy.

Type:

Social Science

- **GVT-314 Media, Chaos, and Culture That Changed America**

Credits:

4.00

Description:

The overall goal of this course is to understand why 1968 is considered one of the most tumultuous years in the 20th century as regards the news media; music and theater; television and film censorship; and in the shift in culture and mores of an entire subset of the population. The course will focus on specific touchstones that elucidate the communication to both the mainstream public, known broadly as the Silent Majority, and the new emerging 'boomers', whose values and attitudes still drive the media ten years into the 21st century. Students will learn how a single year of media can change forever how one part of a culture views itself, while at the same time discovering how another part of that same culture continues to resist those changes 40 years later. Students will learn how many of the seeds of ideas they take for granted in 2011, including educational and sports equality (Title IX) for women; environmental sensitivity, and gay rights were planted in the print, films and music of 1968, but didn't bloom until the years which followed. Guest speakers, films and lectures will be used to reinforce material from the texts.

Type:

BSJ SOCIAL SCIENCE, Social Science

• GVT-323 Political Survey Research

Prerequisites:

OPEN TO JUNIORS & SENIORS

Credits:

4.00

Description:

Everything needed to design, carry out, and interpret a political survey. Topics covered will include questionnaire design, sampling, interviewing, coding data, and univariate and bivariate analysis of the results. Multivariate analysis will be discussed but not studied in-depth. An actual survey will be conducted as a class project. Normally offered every year.

Type:

Social Science, BSJ SOCIAL SCIENCE

• GVT-334 Law, Food, Tobacco, Politics & Corporations

Credits:

4.00

Description:

Corporations, which are one of the dominant institutions of the early 21st century, are driven not by the public good, but by the profit motive. Decisions made by two industries dominated by corporations, the food industry and the tobacco industry, have a tremendous negative impact on America's public health. What, if anything, can be done to counteract the harm caused by Fast Food & Big Tobacco?

- **GVT-335 Law, Politics and Public Health**

Credits:

4.00

Description:

Law is one of the primary tools used to protect public health in the United States. This course will use various case studies (tobacco industry, food industry, health care policy, etc.) to explore innovative uses of the law in diverse areas related to public health. Students will learn about the ways in which attorneys, public officials, politicians, and public health practitioners work together to make public health policy. Normally offered alternate years.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-337 Public Policy & Business**

Prerequisites:

Not open to freshmen

Credits:

4.00

Description:

Public policy-makers' interests in formulating and implementing policy in the areas of environmental protection, consumer protection, equal employment opportunity, health care, taxation and competition with a focus on business responsibility will be critically analyzed. Costs and benefits to the public and business will be evaluated. Prerequisite: Open to non-majors; not open to freshmen. Normally offered alternate years.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-339 Community Advocacy**

Prerequisites:

GVT 110 OR GVT 120

Credits:

4.00

Description:

This course represents a unique opportunity for students to develop a general understanding of the relationship between politics and the community; a systematic and holistic way of viewing and analyzing the impact of community- based, community-wide organizations and efforts. Normally offered alternate years.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-340 Moot Court**

Credits:

4.00

Description:

Moot Court consists of simulated arguments in front of the Supreme Court of the United States. Students brief approximately 20 Supreme Court cases and apply them to a hypothetical case before the Court. Students form written and oral arguments based on two constitutional questions in the hypothetical. Two person teams will develop legal oral arguments in favor of their clients. Students learn how to compose written briefs, develop a knowledge of case law, learn how to effectively respond to questioning, and develop forensic skills, and courtroom demeanor. Moot Court is a great preparation course for undergraduate students planning to attend law school.

Type:

Social Science

- **GVT-343 State Court Process & Policy**

Prerequisites:

Junior status or above

Credits:

4.00

Description:

Contemporary state court processes, progress and problems including trial and appellate court practice, procedure and participants; plea bargaining, alternative dispute resolution; policy making. Normally offered alternate years.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-345 Public Policy Writing**

Credits:

4.00

Description:

This course provides an introduction to the importance of written communication in the public discourse and in public decision-making. The course will examine some of the tools for producing relevant, useful material in the professional public policy analysis arena. The course will also study the various kinds of written communication the policy makers and advocates regularly utilize. The course also provides an introduction to the constraints that surround effective communication in public policymaking. Students will engage in drafting several different kinds of public policy analyses.

Type:

BSJ SOCIAL SCIENCE,Social Science

- **GVT-347 Legislative Politics**

Prerequisites:

GVT 110 and GVT 120 or instructor's consent

Credits:

4.00

Description:

The structure and functioning of legislatures. Particular emphasis on the U.S. Congress, how it works and how it compares with other legislatures. The role of legislatures in a democracy. Normally offered alternate years.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-355 American Parties & Politics**

Prerequisites:

GVT 110 AND GVT 120, or instructor's consent

Credits:

4.00

Description:

Historical overview of party development in the U.S. and of ideological and political trends as reflected in voting behavior. Recent developments in party structure, electoral strategies and political style. The party crisis vs. the art of political campaigning. Normally offered alternate years.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-357 Power & Politics in America's Cities**

Prerequisites:

GVT 110/120 OR INSTRUCTOR'S PERMISSION Junior status or above

Credits:

4.00

Description:

This online course is uniquely designed to examine the power dynamics and struggles that characterize the urban political landscape. Mayor leadership and corruption, community engagement and apathy, and resource and public service expansion and retraction will be critically examined as key elements that can help some cities grow and hasten the decline of others. Within an online environment we will study the dynamic cities of New York City, Chicago, Atlanta, Boston, Cleveland, Detroit, and New Orleans. Additionally, we will examine broader trends that emerge from and examination of cities by size and region.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-359 Hockey, International Development & Politics**

Credits:

4.00

Description:

This class examines the way in which national identity, global and regional economics and international development intersect. It uses the professionalization of the sport of hockey and its subsequent spread around the globe as its case. It will look at the rise of the pro game, the way in which it shapes national identity in the Canadian case, the way in which the pro business model has changed in response to broad socio-economic changes in North America and geo-political shifts around the globe, especially in Eastern Europe and the Former Soviet Union.

Type:

Social Science,Diverse Perspectives

- **GVT-360 Elections and Voting**

Credits:

4.00

Description:

How are elections administered in the United States? Do Americans have confidence in the electoral process? Should they? Why or why not? This course will examine elections in the United States in detail -- from how they are funded to how they are administered to how voters behave. Students will have a choice of either serving as poll workers during the November election or organizing and conducting research of potential voters. Students will gain hands-on experience in actual research design, election administration, and non-partisan get-out-the-vote activities. In addition, students will gain a deeper understanding of the relationship between attitudes, opinion, and voting behavior in American politics and institutions. ECR

Type:

Humanities & History,Social Science,BSJ SOCIAL SCIENCE,Diverse Perspectives

- **GVT-361 Voting Rights and Election Law**

Credits:

4.00

Description:

How do laws governing the political process affect and impact political power relationships? This course investigates topics including redistricting, the right to vote, voter turnout and mobilization, election administration, the Voting Rights Act, and political parties. Students will have a choice of either serving as poll workers during the November election or organizing and conducting research of potential voters. Students will gain hands-on experience in actual research design, election administration, and non-partisan get-out-the-vote activities. In addition, students will gain a deeper understanding of the relationship between attitudes, opinion, and voting behavior in American politics and institutions.

- **GVT-363 American Foreign Policy**

Prerequisites:

GVT 281 and GVT 261

Credits:

4.00

Description:

A decision-making approach to understanding the domestic and institutional context of U.S. foreign policy. Includes analysis of continuity and change since WWII using case studies of critical decisions, e.g., Korea, Cuba, Vietnam, etc. Not open to freshmen. Prerequisites: GVT 110, GVT 120, GVT 261 or instructor's consent. 1 term - 4 credits. Normally offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-365 IP & Public Domain: Intro to Law & Policy**

Prerequisites:

54 credits earned and GPA of 3.3 or higher

Credits:

4.00

Description:

This introduction to legal study explores law as it is practiced (the law on the books and their application) and as it is experienced in society by everyday people, clients and citizens. The goal of this course will be two-fold: (1) to introduce undergraduate students to the study of law as it is taught in law school, with an emphasis on reading cases, making arguments as lawyers do, and learning about the intersection of legal application and policymaking; and (2) study intellectual property law (e.g., copyright patent, trademark and trade secrets) as they have evolved over the 20th century with an emphasis on the importance of the public domain in the digital age. The course will be team taught by professors from the law school.

Type:

Arts Admin Minor Elective

- **GVT-367 Politics of Spain**

Credits:

4.00

Description:

This course is designed to provide students with a basic grounding in political institutions and processes in contemporary Spain. Political developments are presented in their socio-economic context, with special emphasis on the Spanish transition from a dictatorship to a democracy. Attention is also given to the issue of the Basque and Catalan nationalism, as well as the process of European integration. Prerequisite: GVT 281 or instructor's consent. 1 term - 4 credits. Normally offered alternate years at the Madrid Campus.

Type:

- **GVT-372 Coastal Zone Management**

Prerequisites:

Instructor's Consent

Credits:

4.00

Description:

This course presents a survey of a coastal environment, its physical characteristics, natural systems, economic uses, and development pressures. Lectures examine strategies formulated in the U.S. for land and water resource management in the coastal zone. The roles of federal, state and local government, environmental groups and resource users are also explored. Finally, by comparing coastal zone management problems in the U.S. to those elsewhere in the world, students gain a global perspective. Normally offered every years. The course available through the Marine Studies Consortium and will be taught on the campus of one of the Consortium's member institutions.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-381 The Politics of the Republic of Ireland And the United Kingdom**

Credits:

4.00

Description:

This class will examine the political systems of the Republic of Ireland and the United Kingdom. It will look at the development of the Republic of Ireland from 1916 until the present paying particular attention to the role that the Irish Government has played in fostering economic development and social stability. It will further look at the country's relationships with the European Union and United States of America. The class will present Northern Ireland and the efforts to resolve the troubles there in as the nexus between these foreign relations, domestic politics in both countries and the relationship between the two of them. A key part of the class will be examining the way in which the British political system functions and is organized, paying particular attention to the multicultural and devolutionary policies that the UK government has enacted in the recent past. The impact that these changes in policy have had in resolving the conflict in Northern Ireland will be examined in depth.

- **GVT-382 Crisis and Integration in Europe**

Prerequisites:

Junior status or above

Credits:

4.00

Description:

Why did 17 European countries surrender the sovereign control of their currency and create the Euro? Will Turkey become a member of the European Union? Will Europeans continue free riding the security protection of the United States? Is the integration process another layer of bureaucracy or an institutional instrument to deal with the permanent crises in Europe? There are some of the questions guiding the discussions in the class.

Type:

Social Science

- **GVT-383 African Politics**

Prerequisites:

GVT 110 and GVT 120

Credits:

4.00

Description:

The political development of Africa in colonial and post-colonial periods. Analysis of the evolution of governmental institutions includes economic, social and personal factors; political forces at work in present day Africa. Not open to freshmen. Normally offered alternate years. Cultural Diversity B

Type:

Cultural Diversity Opt B, Social Science

- **GVT-384 The U.S. and the International Relations of the Middle East**

Credits:

4.00

Description:

This course will explore the role played by the United States in the Middle East in the twentieth century, with emphasis on the period since World War II. Our study will begin with a decision-making approach to understanding the domestic and institutional context of America's policy toward the region, followed by an examination of that policy as it confronted radical nationalist, socialist, and Islamic movements, Soviet influence, and specific contemporary problems - the Arab-Israeli conflict, the Lebanese civil war, the Iranian revolution, the Iran-Iraq War, and the Gulf War. Open to non-majors, not open to freshmen. Normally offered alternate years.

Type:

Social Science, BSJ SOCIAL SCIENCE

- **GVT-385 South Asian Politics**

Prerequisites:

Not open to freshmen.

Credits:

4.00

Description:

The main goal of the course is to provide an overview of the main political, economic, and social processes taking place in this region. This course explains the strategies that the eight South Asian countries are implementing in order to deal with the globalization process. The primary focus of the course will be to provide students with the understanding of the main regional trends, but it also has case studies of some of the political systems in the region. Students will analyze and evaluate the concepts learned in basic courses in international relations, political science, and other disciplines in social sciences as they apply to South Asia. Normally offered alternate years.

Type:

Social Science

- **GVT-387 Conflict & Development in Asia Service Abroad**

Prerequisites:

GVT 281 or instructor's consent. Junior status or above

Credits:

4.00

Description:

current political trends in the Caribbean and in selected Central American nations. Emphasis will be placed on comparative analysis of public policies in the region, as well as on external factors which impact on politics in the Caribbean and Central America. Students will use academic sources in their analysis, as well as novels and other literary sources for the background of their analysis. Not open to freshmen. Normally offered every third year.
Cultural Diversity B

Type:

Cultural Diversity Opt B, Social Science, Expanded Classroom Requirement, Global Engagement Experience

- **GVT-389 Politics of China**

Prerequisites:

Junior status or above

Credits:

4.00

Description:

Emphasis on a particular approach to the problems of economic modernization and political development. Historical background; the revolutionary movement; present political structures and current issues. Cultural Diversity B

Type:

Cultural Diversity Opt B, Social Science, Asian Studies

• **GVT-390 Global Politics of Resistance**

Credits:

4.00

Description:

Utilizing the theoretical frameworks of Comparative Politics and International Relations, this course will focus on a critical analysis of contemporary forms of resistance politics, such as those culminating in popular struggles for peace, democracy, human rights, economic justice, gender equality, environment, and the rights of indigenous peoples.

Type:

Social Science

• **GVT-391 Canada: Multicultural Politics**

Prerequisites:

GVT 110/120 or Instructor's permission

Credits:

4.00

Description:

This course examines the Canadian model of incorporating diverse communities into its constitutional and political framework, including the founding British North American Act of 1867, the 1982 Constitution Act, and two later attempts at constitutional reform. Canada's role in balancing two official languages, English and French, is discussed, as is its recognition of a First Nations native-governed territory in the Arctic. This course introduces students to the Canadian polity and compares its parliamentary system with the U.S. separation of powers system. Prerequisites: GVT 110, GVT 120 or instructor's consent. Normally offered alternate years. Cultural Diversity B

Type:

Cultural Diversity Opt B, Social Science, BSJ SOCIAL SCIENCE, Diverse Perspectives

• GVT-393 Latin American Politics Today

Prerequisites:

GVT 281 or instructor consent

Credits:

4.00

Description:

This course examines the evolution of Latin America in the context of globalization. The first part analyzes the main political and economic trends of Latin America as a region, while the second presents the main challenges Mexico is facing today in the area of security. The third part moves forward into the detailed explanation of the transformations of the largest South American countries such as Colombia, Argentina, Chile and Venezuela, among others. The final section looks at the relationship between Latin America and the United States.

Type:

Cultural Diversity Opt B, Social Science

• GVT-398 Terrorism and Extremism in South and Central Asia

Prerequisites:

Junior status or above

Credits:

4.00

Description:

This course discusses terrorism and extremism in South and Central Asia as forms of political violence and its effects on the security of the region and the world. Students will develop a working definition of terrorism and extremism and analyze tenets of states security policies. They will study the history of origin, political, economic and social causes of terrorism, the nature of Islamist terrorist organizations, their strategic goals, motivations, and the threats they pose to peace and development from the point of view of international relations and comparative politics. On the base of case studies and class discussions, students examine theories and instances of ideological, religious, and political extremism as a foundation for terrorism. Through thorough investigation of different cases students will acquire unique knowledge of the Al-Qaeda threat in Pakistan, Afghanistan and Central Asia, as well as activities of groups as the Islamic Movement of Uzbekistan, Lashkar-e-Taiba and others.

Type:

Social Science

• GVT-399 Ethnic Conflict, National Bldg. & International Intervention

Prerequisites:

SOPH STANDING REQUIRED

Credits:

4.00

Description:

The course focuses on the role of ethnic conflict and international intervention in nation building in the post-Cold War period. To understand fully these forces, theories such as colonialism, neo- and post-colonialism, and humanitarian intervention, along with social/economic conditions will be examined. Different case studies will be selected each time the course is offered. Open to non-majors.

Type:

Social Science,BSJ SOCIAL SCIENCE

• GVT-401 Political Marketing

Prerequisites:

Junior status or above

Credits:

4.00

Description:

This class will examine the techniques used to market political candidates, parties, issues, interest groups and think tanks in the modern American polity, as well as in Canada and the EU. The class will examine the causes and impact of the change that many observers have seen in the American polity from a civil to a consumptive political culture and question the extent to which this is a U.S. based versus more global phenomenon. At the same time, the class will aim to provide the student will a hands-on understanding of the way in which various marketing techniques are employed to sell politics. The techniques will include message development, branding, micro-targeting, and political marketing campaign strategy by looking at a series of cases from around the world. Cases examined will include the Barack Obama , Hillary Clinton and John McCain campaigns from 2008, the effort to brand the Conservative Party and New Labour in the United Kingdom.

Type:

Social Science,BSJ SOCIAL SCIENCE

• GVT-404 International Political Marketing

Prerequisites:

At least 84 credits required.

Credits:

4.00

Description:

This class will examine the ways in which political marketing is conducted across the globe. It will look at a variety of political systems and cultures in an effort to discern which techniques work best with which political systems and political cultures. The cases will be drawn from all 7 continents and a wide diversity of socio-political cultures. Cases are likely to include Canada, New Zealand, India, Japan, Ireland, the United Kingdom, Argentina, Russia and many others. By the end of the class, students should have a strong sense of how political marketing is done globally and which techniques work best with which systems.

• GVT-410 Politics of Korea

Credits:

4.00

Description:

Study of the government and politics of North and South Korea, including the political systems of the two countries and relationship between them, including issues of reunification, nuclear weapons, and democratization. Offered alternate years.

Type:

Social Science,Asian Studies

- **GVT-411 Politics of North and South East Asia**

Credits:

4.00

Description:

This course examines the cultural background and political systems mainly of China, Korea and Japan, also touching upon the small tiger states in South-East Asia. It elucidates the historical origins, evolution and current trajectory of these states with a particular concentration on North Korea. One further concentration is the interplay of domestic and foreign policy in the relations of these states, regional stability and cooperation. Topics include history, social structure, the interplay of culture and ideology, political economy, humanitarian issues, security, and the politics of North Korean domestic and foreign policy. We will spend considerable time analyzing China's and North Korea's relationship with regional and world powers and examining the origins, history, and implications of the North Korean nuclear weapons program. Students will be expected to demonstrate the ability to apply theoretical and historical knowledge toward analyzing the rapidly evolving landscape of contemporary issues related to East Asia.

Type:

Social Science,Asian Studies

- **GVT-420 German Greens and Environmentalism**

Credits:

4.00

Description:

The rise of the Green Party, from its grass-roots beginnings to participation in the federal government. Background on the development of green consciousness in Germany and Europe since the early 20th century. Present governmental policies and programs (e.g., alternative energy sources, organic farming, recycling, dismantling of nuclear power). Cross-listed GER 420 and ENST 420

Type:

Social Science,BSBA SOCIAL CHANGE

- **GVT-428 Congressional Parties, Leadership, & Public Policy**

Prerequisites:

Junior status or above

Credits:

4.00

Description:

This course focuses on the Congressional leadership, parties in Congress and their impact on political interactions, and public policy. The course will examine the relationship between the leadership in the Congress and the powerful elements in the House and Senate such as committee chairmen and the party caucuses as well as the media and lobbyists. Emphasis is on the decades long trend toward greater political polarization and its impact on the ability of the institution to respond effectively current national problems.

Type:

Social Science

- **GVT-434 Immigration Policy and Politics**

Credits:

4.00

Description:

This course examines how American governmental institutions, political actors, and processes have both shaped and responded to one of the most significant and complex issues of public policy facing the nation: immigration to the United States. This class will explore a number of intriguing and difficult policy topics related to the almost unprecedented level of immigration that the U.S. has been experiencing. The focus of the class will include

the following: admissions, citizenship, deportation and detention (including that of suspected terrorists), refugee/asylum law, and highly contested issues of today, such as definitions of citizenship, immigrant rights, and border enforcement. A major objective of this course is to provide students with the opportunity to conduct their own original research in American politics by delving into some aspect of immigration as a public policy issue.

Type:

Credits:

4.00

Description:

Public policy's impact on Blacks Chicano's, Native Americans Puerto Ricans, and other minority groups; how public policy has contributed to racial oppression; policies for attaining racial equality; political strategies of minority groups. Cultural Diversity A

Type:

Cultural Diversity Opt A,Social Science,BSJ SOCIAL SCIENCE,BSBA SOCIAL CHANGE

- **GVT-438 Environmental Policy & Politic**

Prerequisites:

This course will have a service learning component Sophomore Status required

Credits:

4.00

Description:

From Rio to the Boston Harbor Project, this course examines the policies and politics of the environment. It examines the origins of the environmental movement in the United States focusing on the development and present function of government and non-government organizations responsible for

the development and implementation of global, national, state and local environmental policies.

Type:

Social Science,BSJ SOCIAL SCIENCE

• GVT-439 Global Environmental Threat

Credits:

4.00

Description:

In the 20th century the general public became aware of the need for following a sustainable lifestyle. Non-governmental organizations, governmental institutions and individuals began to study environmental problems and issues to enhance the concept of conservation of nature and the protection of the planet's biodiversity among other important concepts. However, as we enter the 21st century, we are finding ourselves involved in new environmental threats such as increasingly disturbing natural disasters, eco-terrorism and endless extreme poverty. This course is aimed at learning the basic environmental aspects that affect society and nature as a whole, along with the new issues that are arising and leading scientists to continue new lines of research in the field of environmental conservation and awareness, knowing also that the key to hope lies in the field of environmental education. Offered on the Madrid Campus only.

Type:

Social Science,BSJ SOCIAL SCIENCE

• GVT-H439 Honors Global Environmental Threat

- **GVT-441 Ready, Set, Run!**

Credits:

2.00

Description:

Designed to introduce students to the nuts and bolts of preparing to run for office or guiding a candidate through the process. Students learn how to file nomination papers, develop a field team, and create a general branding strategy.

Type:

Social Science

- **GVT-442 Candidate Definition**

Credits:

1.00

Description:

Students learn the basics of how candidates successfully introduce their candidacy to the public. From announcing the campaign to conducting meet and greets to producing candidate photos, this course guides to through the process of effectively defining the candidate.

Type:

Social Science

- **GVT-443 Candidate Media Strategy 101**

Prerequisites:

Over 54 credits required.

Credits:

1.00

Description:

Students learn the fundamentals of how to maximize positive media coverage with attention paid to generating endorsements, developing non-paid media, and persuading voters.

Type:

Social Science

- **GVT-444 Campaign Issues: Taking a Stand**

Prerequisites:

Over 54 credits required.

Credits:

1.00

Description:

In this highly interactive course, students learn how to develop position papers, conduct opposition research, and ultimately use their knowledge to convey information effectively in political speeches and debates. Attention paid to message development.

Type:

Social Science

- **GVT-446 Getting Out the Vote**

Credits:

1.00

Description:

Learn the cutting edge techniques to help register new voters, identify voters, and effectively manage election-day operations to increase turnout for your candidacy. Learn how to successfully recruit and retain volunteers.

Type:

Social Science

- **GVT-447 Race, Gender, and Sexual Orientation on Campaigns**

Prerequisites:

Need to have completed at least 54 credits

Credits:

1.00

Description:

This course will examine the role that race, gender and sexual orientation fill on political campaigns. We will explore the challenges and opportunities that women, people of color, and LGBT individuals face as candidates, the consequences diversity(or lack thereof) on campaign team, and how race, gender, and sexual orientation are mobilized by campaigns to reinforce messages, target voters and raise money.

Type:

Social Science

- **GVT-450 Lobbying, the Media and Public Policy Opinion, and Politics**

Prerequisites:

Junior status or above

Credits:

4.00

Description:

This class will examine the role of lobbyist and the media in influencing state and national decision makers and public policy. Focusing primarily on current issues relating to energy and environmental policy, we will discuss and critically examine all sides of today's hot topics- renewable power, climate change, sustainability and others. The goal is not to determine who is right and who is wrong, but rather to get behind the headlines and separate fact from hype and discuss how and why certain policy decisions are made and how policy makers are influenced. You'll gain an appreciation as to how public opinion, lobbyists and the media (even celebrities!) can actually change government priorities- and not always for the better, as rising public opinion and political pressure often collides with well established scientific evidence.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-452 Boston's Future: Local Politics in a Global Context**

Credits:

4.00

Description:

This year, Boston's longest-serving mayor of 20 years, Thomas Menino, announced he would not seek re-election. Twelve candidates are now vying to be mayor of Boston. Boston is among the most educated cities and is an epicenter for research and development, building an innovation economy of engagement, community networks, and collaboration. Yet it faces a variety of challenges. Boston also counts itself as third most unequal cities in the United States in terms of income inequality. Can Boston sustain its success while also lifting more of its population out of poverty? This course examines these questions by focusing attention on the 2013 mayoral election. What prescriptions for success and visions for the future of Boston do the various candidates offer? What constituencies vote? How will the successful candidate craft a winning coalition? Guest speakers, including candidates, local media analysts, and policy makers will highlight key aspects of the urban issues we will examine. Neighborhood visits and a variety of readings will round out the course. For any student interested in the interplay between politics, local government and the global economy, this course is for you.

Type:

Social Science

- **GVT-462 Debates on Conflicting Ideas in U.S. Foreign Policy**

Prerequisites:

GVT 261. Junior status or above

Credits:

4.00

Description:

In order to understand the change and continuity in U.S. foreign policy, it is crucial to examine the debate among those who inform the ideas put forward by U.S. foreign policy experts, policymakers, and the group-whether political parties or NGOs-with which they are allies. This course will explore the importance of ideas in U.S. foreign policy from the early days of the republic with an emphasis on the post-World War II period.

Prerequisite: GVT 281 or instructor's consent. Open only to Juniors and Seniors. 1 term - 4 credits.

Type:

Junior status or above

Credits:

4.00

Description:

This course explains the main components of the international legal system. It begins by exploring the rules, principles and norms that govern the relationship among states, the different cultural and philosophical legal perspectives and the history of the international legal system. The second part of the course covers the study of the sources and subjects of the international law, the jurisdiction of states, the peaceful settlement of disputes, the use of force and the legal personality of international actors. The third part of the course addresses a number of significant topics derived from the process of globalization legal norms: human rights, humanitarian intervention, law of the sea, environmental law, and economic relations.

Type:

Social Science

- **GVT-465 International and Transnational Organizations**

Prerequisites:

GVT-261

Credits:

4.00

Description:

This course explores the institutional structures, political processes, and impact of international governmental and nongovernmental organizations. It analyzes their increasingly prominent role in efforts to resolve a wide range of global problems and contribution to strengthen the current system of global governance. While the course covers the problems of international security, global distribution of wealth, deterioration of the environmental system, and threats to social welfare, it focuses on the interaction between the United Nations System and regional organizations, on the one hand, and the role of non-governmental organizations in cooperating or competing to solve specific problems in the area of international relations.

Type:

Social Science,BSJ SOCIAL SCIENCE,BSBA SOCIAL CHANGE

- **GVT-466 Governance & Regional Political Economy**

Prerequisites:

GVT 261

Credits:

4.00

Description:

This course examines the intertwined nature of the globalization and regionalization processes from the perspective of global political economy. The first part of the course provides the basic elements and indicators to understand the main challenges the international economy is facing such as crisis, protectionism, and underdevelopment, inter alia. The second part presents the evolution of globalization and regionalism in the past decades. The third and final section compares how the distinct regions in the world are dealing with local and global problems; particularly attention is paid to the European Union, NAFTA, Mercosur and APEC.

Type:

Social Science

- **GVT-467 Comparative Social Movements**

Prerequisites:

Junior status

Credits:

4.00

Description:

This class examines the political ramifications of social movements primarily but not exclusively within the United States. It looks at ideology, beliefs and mechanisms of mobilization. Another important focus is an analysis of non-white social movements in this country and their impact on domestic politics. Among the movements to be examined are: the Pan-African movement 1919-1939 which will, to some extent, take us outside this country; the U.S. Civil Rights Movement 1955 to 1969 which covers the rise of the Black Power movement; and the U.S. Labor Movement 1900 to 1955 in terms of non-white influence on its programmatic goals. Normally offered alternate years. Cultural Diversity B

Type:

Cultural Diversity Opt B, Social Science, BSJ SOCIAL SCIENCE, BSBA SOCIAL CHANGE, Diverse Perspectives

- **GVT-469 International Human Rights**

Prerequisites:

GVT 261 Junior status or above

Credits:

4.00

Description:

An examination of human rights at the end of the 20th century. Attention will be given to the origin and expansion of the concept of human rights in different political systems, the links between culture and human rights and the means and mechanisms for safeguarding human rights with particular reference to the United Nations system.

Type:

Social Science, BSJ SOCIAL SCIENCE

- **GVT-471 Topics in Democracy**

Prerequisites:

take gvt-110, gvt-120, or instructor's consent for non majors. Junior status or above

Credits:

4.00

Description:

In this course, students will have an opportunity to examine the basic foundations of the democratic theory and practice. Specifically, this course will focus on building blocks of a democratic relationship between people and government, including transparency, accountability, accessibility, and opportunities for effective advocacy and participation. Both classical and modern authors who have weighed in on these issues will be discussed. Normally offered alternate years.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-472 East Germany and the Cold War**

Credits:

4.00

Description:

When the German Democratic Republic was founded in 1949, observers in the West viewed it as an artificial construct created to serve the needs of the Soviet empire. The self-image of the GDR as created by its leadership revolved around the idea of an anti-fascist German state designed as a bulwark against any revival of National Socialism. Over a generation after the fall of the Berlin Wall, it is possible to undertake a dispassionate analysis of the forty-year history of the "other" German state as manifested in its cultural identity and political role during the Cold War.

Type:

Social Science

- **GVT-473 American Political Thought**

Prerequisites:

open to juniors and seniors only

Credits:

4.00

Description:

Reading and discussion of original works by significant American political thinkers. Readings vary, but might include The Federalist and works by Paine, Jefferson, Calhoun, Thoreau, Sumner, Reed, Dewey, Lippman, Goodman, King, Malcolm X, Carmichael, Hamilton, Friedan and Dillinger. Offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-475 Radical & Revolutionary Political Thought**

Prerequisites:

Open to Juniors and Seniors only.

Credits:

4.00

Description:

This course focuses on those political thinkers, such as socialists, feminists, anarchists, pacifists, and ecologists, who have opposed established order and sought to change it. Topics covered include utopian visions (e.g., Owen, Morris, Bellamy, Gilman), criticism of existing institutions (Wollstonecraft, Marx, Fanon, de Beauvoir) and strategies for change (Goldman, Malcolm, Lenin, Cabral). The emphasis is on reading original theoretical works, with several writings assignments. Normally offered every third year.

Type:

Social Science

- **GVT-485 Politics of the Middle East**

Prerequisites:

TAKE GVT-281 OR INSTRUCTOR'S CONSENT

Credits:

4.00

Description:

Interlocking themes making the contemporary Middle East an area of chronic conflict: Big Power rivalries; social and political change within individual countries; unity and Arab rivalry involved in Arab nationalism; the Palestinian-Israeli-Arab dispute. Normally offered alternate years. Cultural Diversity B

Type:

Cultural Diversity Opt B, Social Science

- **GVT-H485 Honors Politics and International Relations of the Middle East**

Description:

Interlocking themes making the contemporary Middle East an area of chronic conflict: Big Power rivalries; social and political change within individual countries; unity and Arab rivalry involved in Arab nationalism; the Palestinian-Israeli-Arab dispute. Normally offered alternate years. Cultural Diversity B

Type:

Cultural Diversity Opt B, Social Science, Honors

- **GVT-501 Senior Seminar**

Prerequisites:

Senior status

Credits:

1.00

Description:

This course is designed to provide all Government degree-seeking students with a team-taught capstone experience. In this course, we will collectively discuss and consider career, professional and academic experience for the Government major, including learning more about the fields of public policy, public service, law, nonprofit management, international development, and nongovernmental organization management. This course focuses on career entry and transition, networking for career success, impression management concept and skills, and related life-long learning skills. Students articulate and reflect on academic, work, and co-curricular experiences from the perspective of professionals entering or advancing their careers. Pre-requisite: Senior standing.

Type:

Social Science

• GVT-503 Washington Academic Seminar I

Prerequisites:

This course fulfills the Expanded Classroom Requirement. Instructor's consent is required.

Credits:

4.00

Description:

An intensive off-campus experience, normally of two-weeks duration, arranged through a qualified agency in Washington, D.C. Topics vary. Students will be graded by both an on-site evaluator and an assigned Government Department faculty member. Students are normally required to keep a journal of the off-campus experience and to write a significant research paper based on the topic of the academic seminar upon their return.

Type:

Social Science, Expanded Classroom Requirement

• GVT-505 Washington Seminar on National Security

Prerequisites:

Instructor's consent required

Credits:

4.00

Description:

A two-week intensive seminar in Washington DC; the first week will focus on a look inside the defense and intelligence community in the US government; the second week will examine issues, threats, and challenges in global society. The seminar, carried out in partnership with The Washington Center for Internships and Academic Seminars, will include briefing sessions with security officials, site visits, small group meetings, keeping a journal, and academic papers. There will also be some further academic work after you return to Suffolk. Prerequisites: Registration in this course requires advance application. The seminar is offered in May, and applications are due by March 1. Interested students should consult the instructor for further details.

Type:

Social Science

• **GVT-506 Political Convention Program**

Credits:

6.00

Description:

An opportunity to do an internship through the Washington Center at either the Republican National Convention or the Democratic National Convention. College students will learn what goes on behind the scenes and interact with important public figures that are influential in setting public policy at various levels of government. They spend a week prior to the convention studying the electoral process, familiarizing themselves with conventions operations and preparing for their convention fieldwork assignments. In addition, they hear from a wide variety of speakers, including members of the media, party officials, and other political personalities. Students are then assigned as volunteers to assist with the work of the convention during the second week.

Type:

Social Science

• **GVT-507 GVT Study Trip**

Prerequisites:

INSTRUCTOR'S PERMISSION This course fulfills the Expanded Classroom Requirement

Credits:

4.00

Description:

APPROVAL OF DEPT. CHAIRPERSON. Specially arranged study trip to a foreign country for the purpose of obtaining knowledge through direct experience and observation. Includes prearranged site visits, meetings, required reading and written assignments. ECR

Type:

Social Science,Expanded Classroom Requirement

- **GVT-509 United Nations Seminar**

Prerequisites:

Instructor's consent

Credits:

4.00

Description:

This course provides an introduction to the study of the role of the United Nations System in the globalization era. The course is divided in two main sections. The first is based on a series of readings, lectures and discussion on the rules, principles and norms which govern the relationship among states and the UN system; it also covers traditional topics such as the sources and subjects of international law, the jurisdiction of states, the peaceful settlement of disputes, the use of force and the legal personality of international actors, human rights, humanitarian intervention, global environment, used of armed forces, as well as economic relations. The second part of the course is based on a required study trip to the UN headquarters in order to experience a direct contact with policy-makers within the UN system in a diversity of areas such as security, aid and peacekeeping areas.

Type:

Social Science,Expanded Classroom Requirement,Global Engagement Experience

- **GVT-510 Independent Study**

Prerequisites:

Instructor's consent required

Credits:

1.00- 4.00

Description:

Individual program of reading and research on an approved topic under the supervision of a member of the department. Only for qualified juniors or seniors. Offered every semester.

Type:

Social Science

- **GVT-513 The Presidency, Congress & Media**

Prerequisites:

Junior status or above

Credits:

4.00

Description:

This course is fast-paced, highly interactive, multi-media and thought provoking. We apply the traditional academic requirements at The Washington Center, while adding the unique elements that allow you to connect with students at other universities. This course offers interesting guests, lively discussions, thoughtful debates, historic video from C-SPAN and the National Archives. As we examine and analyze the political, legislative and social issues facing our country, we will take an in-depth look at the issues and events shaping the agenda for next Congress & the next round of elections. Our focus will also include the historical process of public policy making, as well as an intense examination on the changing role of media, especially social media, in shaping public opinion.

Type:

Social Science

- **GVT-515 Senior Seminar**

Credits:

1.00

Description:

This course is designed to provide all Government degree-seeking students with a team-taught capstone experience. In this course, we will collectively discuss and consider career, professional and academic experience for the Government major, including learning more about the fields of public policy, public service, law, nonprofit management, international development, and nongovernmental organization management. This course focuses on career entry and transition, networking for career success, impression management concept and skills, and related life-long learning skills. Students articulate and reflect on academic, work, and co-curricular experiences from the perspective of professionals entering or advancing their careers. Pre-requisite: Senior standing.

Type:

Social Science

- **GVT-521 Internship in Government**

Prerequisites:

Junior standing

Credits:

4.00

Description:

This course uses an internship placement of at least 10 hours a week for 12 weeks in a position that offers the student significant opportunity to learn about politics and/or government as the basis for reflection, analysis, and skill development. Specific learning objectives will be tailored to the student's placement. Interested students should consult instructor in advance. ECR

Type:

Social Science, Expanded Classroom Requirement

- **GVT-523 Washington Internship**

Prerequisites:

Sophomore standing and instructor's permission required

Credits:

12.00

Description:

A full-time, one-semester internship in Washington, D.C. Consult the Department office for more details. ECR

Type:

Social Science,Expanded Classroom Requirement

- **GVT-524 Washington Internship**

Prerequisites:

This course fulfills the Expanded Classroom Requirement

Credits:

8.00

Description:

A full-time summer internship in Washington D.C. Consult the Department for more details. ECR

A full-time, one-semester International Internship in London.

Type:

Social Science,Expanded Classroom Requirement

- **GVT-527 International Internship-Brussels**

Prerequisites:

Juniors standing; GVT 528 & GVT 529 Concurrent

Credits:

8.00

Description:

A full-time, one-semester International Internship in London.

Type:

Social Science,Expanded Classroom Requirement

- **GVT-528 International Seminar I**

Prerequisites:

Concurrently with GVT 526 or GVT 530 and GVT 529

Credits:

4.00- 8.00

Description:

One of two required seminars to be taken by International interns and service learning participation. ECR

Type:

Social Science,Expanded Classroom Requirement

- **GVT-529 International Seminar II**

Prerequisites:

Concurrently with GVT 526 or GVT 530 and GVT 528

Credits:

4.00- 8.00

Description:

One of two required seminars to be taken by International interns and service learning participation ECR

Type:

Social Science,Expanded Classroom Requirement

- **GVT-533 International Internship-Edinburgh**

Prerequisites:

Juniors standing; GVT 528 & GVT 529 Concurrent

Credits:

8.00

Description:

A full-time, one-semester International Internship in London.

Type:

Social Science, Expanded Classroom Requirement

- **GVT-538 Summer Campaign Lab**

Prerequisites:

At least 54 credits

Credits:

3.00

Description:

This two-week, intensive class will combine in-depth training on building and running a successful campaign, with site visits to leading political strategy and non-profit agencies. Students will broaden their network meeting leaders in government, public policy, and non-profits by participating in evening speaker series and networking events. Evening teamwork will culminate in a final campaign plan to be presented on the final day of the program.

- **GVT-555 Senior Thesis**

Prerequisites:

Instructor's consent required

Credits:

4.00

Description:

Individual program of reading, research, writing on an approved topic under the supervision of a member of the department, for students in all tracks who meet the criteria for departmental honors and who wish to prepare a thesis for submission to the honors committee. Must be taken in the first semester of the senior year. Prerequisites: Grade point average 3.0 overall, 3.4 in major; completion of a minimum of 6 credits in Government at Suffolk University; advisor's signed consent; application approved by honors committee in spring of applicant's junior year. 1 term - 4 credits. Normally offered every fall.

Major Requirements: 28 courses, 87 credits

Courses numbered 200 and above have as a prerequisite the completion of the Foundation Studies program or its equivalent. Exceptions may be made only with the permission of the instructor and the Graphic Design program director.

The letter "S" preceding the course number indicates a studio course. A studio fee is assessed for all studio courses.

For specific sequence of courses, contact your advisor or the department.

Core Requirements (25 courses, 78 credits)

- ADF-S101 Foundation Drawing I

Credits:

3.00

Description:

This course concentrates on the traditional techniques of observational drawing. Fundamental principles and elements of drawing are introduced in structured lessons and exercises, which are supplemented by additional outside assignments. Foundation Drawing I stresses the development of visual skills as well as the broad use of drawing concepts, vocabulary, techniques and variety of materials.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

• ADF-S102 Foundation Drawing II

Prerequisites:

ADF S101

Credits:

3.00

Description:

This course will refine the basic visual skills developed in Foundation Drawing I (ADF S101). The elements of color and mixed media are introduced to expand technical possibilities, while more intensive work with the nude human figure provides exposure to gesture, structure and complex form. As students begin to develop a more sophisticated and personal approach, issues of expression and interpretation will be investigated, focusing on personal style and expression.

Term:

Offered Both Fall and Spring

• ADF-S152 3-Dimensional Design

Prerequisites:

ADF S151 or ADF S166

Credits:

3.00

Description:

This course focuses on the fundamental elements of three-dimensional form. Line, plane and volume will be explored as students develop visual analysis and critical thinking skills in the round. The role of scale, proportion, structure, surface, light and display will be addressed, as students create forms that activate space and engage the viewer. The course will proceed from work with simple forms and techniques to more challenging and comprehensive problems addressing both additive and subtractive methods.

Term:

Offered Both Fall and Spring

- **ADF-S156 Imaging**

Prerequisites:

ADF S166

Credits:

3.00

Description:

Digital visual image generation and modification, especially when combined with traditional hand techniques, are essential skills for artists and designers of the 21st century. This course introduces techniques of image capture, manipulation and output. Weekly and longer-length assignments will address creative and innovative idea generation using these approaches.

Term:

Offered Both Fall and Spring

- **ADF-S166 2D/Color**

Credits:

3.00

Description:

This is an introductory-level course in the basic concepts and practices of two-dimensional design and color theory. The study of color and design is supportive of all studio disciplines and is vital to the understanding of all visual media. This course features an intensive, hands-on approach to color and design as students create, modify and master the three dimensions of color (hue, value, and strength) plus the principles of design (line, shape, value, composition and image). This in-depth study is essential and underlies all of the visual arts as they are practiced today. An understanding of color and design influences all artists' decisions, affecting the look, meaning and use of visual phenomena.

Type:

Arts Admin Minor Elective

• ADF-S171 CI: Integrated Studio 1

Credits:

3.00

Description:

This cross-disciplinary course will integrate the ideas and practices of two-dimensional design, color and drawing emphasis will be placed on understanding the creative process, exploring concepts and developing research skills. Students will undertake individual and collaborative projects in three spaces; the studio classroom, the digital world and the city at large.

Type:

Creativity and Innovation, Arts Admin Minor Elective

• ADF-S172 CI: Integrated Studio II

Prerequisites:

ADF S101

Credits:

3.00

Description:

This course builds on the Integrated Studio 1 experience: synthesizing fundamental visual ideas. IS 2 investigates the construction, documentation, and transformation of volumetric form, environmental space, and time. Projects will explore narrative strategies and the creation of immersive experiences. Students will develop critical and analytical skills while employing a range of traditional and digital media-including video/sound capture and editing-as they explore the creative boundaries of the classroom studio, the city of Boston, and virtual space.

Type:

Creativity and Innovation

- **ADG-S201 Basic Typography**

Prerequisites:

ADF S151 OR ADF S166

Credits:

3.00

Description:

This course will introduce students to the creative use of typography in the design process and will provide them with the skills and knowledge necessary to design with type.

Term:

Offered Fall Term

- **ADG-S202 Computer Typography**

Prerequisites:

ADG S201 and ADG S219

Credits:

3.00

Description:

This advanced course focuses on the translation of the historical knowledge and hand skills learned in Basic Typography into a digital format. Students will learn how to produce quality typography, as well as experiment with and explore letterform design and manipulation.

Term:

Offered Spring Term

- **ADG-S204 Design Beyond Design**

Credits:

3.00

Description:

This course focuses on the multi-disciplinary nature of the graphic design profession and the designer as a visual communicator, critical thinker and problem solver. Students will be exposed to a series of outside topics to which they will apply design solutions, mirroring the range of fields in which designers today are employed.

- **ADG-S206 Graphic Design I**

Prerequisites:

ADF S151 OR ADF S166

Credits:

3.00

Description:

Emphasizing the creative process from thumbnail to comprehensive, the course will also introduce the student to the language, tools, and techniques of the professional graphic designer. Attention will be paid to conceptualization, production and presentation in solving design problems. This course will expose students to a series of assignments designed to show step-by-step problem solving from observation and research, to the incorporation of these findings into the design of communication vehicles.

Term:

Offered Fall Term

- **ADG-S207 Graphic Design II**

Prerequisites:

ADG S206 and ADG S219

Credits:

3.00

Description:

A continuation of the skills learned in Graphic Design I, involving projects that are broader in scope, more in-depth, and address societal issues.

Term:

Offered Spring Term

- **ADG-S213 Web Design I**

Prerequisites:

ADG S219

Credits:

3.00

Description:

This course will introduce basic web site design and creation skills to students in order to prepare them for more advanced study in Web Design II. The class will use a variety of industry standard software to design and create basic working websites. Students will learn HTML, XHTML and CSS. Javascript, Flash and Action Scripting will be discussed and presented as supplemental tools. Information architecture, wire frames, interface design, user experience and web page layouts will be explored. The history, societal context and future of new media will be discussed throughout the semester.

- **ADIL-S214 Illustration for Designers**

Prerequisites:

ADF S102

Credits:

3.00

Description:

This course introduces the skills necessary for meeting clients' illustration needs in a variety of media appropriate to their context. Emphasis will be placed on developing the ability to draw real objects and real people while advancing a personal style. Development of visual research and photo reference, thumbnailing and rendering skills for ones presentation of ideas and concepts while designing the proper environment for their illustration will be required.

- **ADG-S219 Computer Applications in Design**

Credits:

3.00

Description:

In this course students will learn the major software applications used by graphic designers, such as Adobe Creative Suite: InDesign, Illustrator, and Photoshop. Through a series of problems, students will learn how and when to use specific software to produce their solutions and prepare portfolio-quality design.

Term:

Offered Fall Term

- **ADG-224 History of Graphic Design**

Credits:

4.00

Description:

The first part of the course will focus on the history of graphic design from prehistoric times to the Industrial Revolution, including the origins of graphic communications in the ancient world, the development of the alphabet and early printing and typography. The second portion will concentrate on the

period from the late 19th century to the present, and will include the Arts and Crafts Movement, the various-isms and their influence on modern art, the Bauhaus and International Style, and contemporary visual systems and image making.

Term:

Offered Fall Term

Type:

Humanities & History, Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **ADG-337 Professional Practice**

Prerequisites:

Senior BFA status

Credits:

3.00

Description:

This senior-year course is designed to provide final preparation for employment in the field of graphic design. In addition to helping each student develop a professional portfolio, the course will provide students with practical knowledge of the business aspects of graphic design, interviewing skills, resume preparation, personal branding and help students target internship opportunities for the following semester.

Term:

Offered Fall Term

- **ADG-S340 Web Design II**

Prerequisites:

ADG S213 or Instructors permission

Credits:

3.00

Description:

This course is intended as a continuation of the experience gained in Web Design I. The objective of the course is the development of advanced conceptual skills such as prototyping, usability testing, interactive philosophy, accessibility, project and content management. Students will further develop their professional multimedia skills by working with HTML, XHTML, CSS and other industry-standard tools. JavaScript will be discussed and we will use Flash for animation and video. Current techniques for distributions on mobile devices will be explored. Software that will be used during the class will include Dreamweaver, Flash, and other professional level software tools.

• ADG-S344 Graphic Design III

Prerequisites:

ADG S202, ADG S207, and ADG S219

Credits:

3.00

Description:

This continuation of Graphic Design I and II (ADG S206, 207) will concentrate on increasing sophistication in creative problem-solving abilities. Students will also develop an understanding of prepress terms and operations and the impact of technology on those operations. It will also provide the knowledge and skills necessary to enable students to make appropriate prepress decisions regarding more complex projects. Senior status preferred.

Term:

Offered Fall Term

• ADG-S345 Graphic Design IV

Prerequisites:

ADG S344

Credits:

3.00

Description:

A continuation of the concepts and skills developed in Graphic Design III and their application to more complex, multi-pieced, in-depth projects.

Term:

Offered Spring Term

- **ADG-S354 Advanced Computer Applications**

Prerequisites:

ADG S201, ADG S206, and ADG S219

Credits:

3.00

Description:

This course is designed to further explore software applications for specific and experimental effects. It aims to provide students with the knowledge and skills necessary to choose the appropriate software application and to execute the desired design, focusing on the design itself rather than on the limitations of computer programs. The course also focuses on solving the technical and production problems when preparing artwork electronically for printing. Software applications include Adobe Creative Suite: InDesign, Illustrator, and Photoshop.

Term:

Offered Spring Term

- **ARH-101 Art History I**

Credits:

4.00

Description:

Surveys the art of Western civilization from prehistoric caves to medieval cathedrals. Considers works from the Ancient Near East, Ancient Egypt, Ancient Greece and Rome, the Byzantine Era, the Romanesque Period, and the Gothic Period in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **ARH-102 Art History II**

Credits:

4.00

Description:

Surveys the art of Europe and America from the Renaissance to the present. Considers work of painting, sculpture, and architecture from periods such as the Renaissance, the Baroque, the Rococo, Neoclassicism, Romanticism, Impressionism, Abstract Impressionism, and Post-Modernism in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst

Choose one of the following:

- **ADG-400 Graphic Design Internship**

Prerequisites:

Senior BFA status.

Credits:

3.00- 4.00

Description:

Seniors are required to pursue an internship with a local graphic design firm, whose work is directly related to that students intended area of professional concentration. Interns will observe and participate in all office procedures permitted by their place of internship and will be required to maintain a notebook of their observations. Required classroom seminars will reinforce new skills, share learning experiences and answer questions or concerns.

Term:

Offered Spring Term

Type:

Expanded Classroom Requirement

- **ADG-S410 Thesis Studio**

Prerequisites:

Senior BFA standing required.

Credits:

3.00

Description:

The Thesis Studio involves the application of previously learned studio skills in a detailed investigation of a design project relating to the student's intended professional area of specialization. Normally offered spring semester.

Choose an Art History course

Studio Electives (3 courses, 9 credits)

These electives are subject to change and must be approved by the Graphic Design program director. Choose three of the following:

- **ADG-S302 Italian Journal: Painting and Drawing On Paper**

Prerequisites:

Instructors Consent

Credits:

3.00

Description:

This faculty-led study abroad course introduces the skills necessary for meeting clients' illustration needs in a variety of media appropriate to context. Florence, Italy and its environs will serve as the subject matter and catalyst in developing the ability to draw objects, i.e. Architecture, people and landscape while advancing a personal style. Study will begin with a pre-departure journal/book binding workshop at Suffolk University and then to the outdoors in and around Florence, Italy, Tuscan hill towns and the Veneto, where students will explore basic illustration styles, methods and techniques.

Term:

Summer

Type:

Expanded Classroom Requirement, Global Engagement Experience

- **ADG-S305 Conceptual Typography**

Prerequisites:

Take ADG-S202

Credits:

3.00

Description:

This course is designed to build on core typography knowledge and further students' understanding of the conceptual possibilities of using type in design. Advanced typographic problems requiring the implementation of both traditional and alternative methods will facilitate a deeper exploration of modern communication issues including layered hierarchies, type in motion, typographic voice and illustration.

- **ADG-S311 Integrated Advertising**

Prerequisites:

ADG S206 and ADG S219

Credits:

3.00

Description:

This course will provide instruction towards creatively translating marketing needs into innovative and effective advertising solutions through a series of challenging projects. Students will learn skills applicable to the advertising industry by focusing on creative executions across multiple-media applications including print, direct mail, collateral, outdoor, online, and other media. There will be emphases on idea generation and campaign development with the goal of message communication through the balance of various elements including page design, copywriting, typography, illustration, photography, and visual effects. The history of advertising from the early 20th century to the ever-changing complexity of today's digital landscape will be studied.

Term:

Occasional

• ADG-S312 Packaging Design

Prerequisites:

ADG S201 or ADG S601 AND ADG S206 or ADG S606 AND ADG S219 or ADG S619 OR Instructor Permission.

Credits:

3.00

Description:

In this course, students will study the evolution and history of packaging design, discuss philosophies, learn industry terminology and examine contemporary designs. Using case studies, students will analyze the package design process from concept to production and over the course of the semester, develop a line of packaging and supporting marketing materials for one brand. Guest lectures and field trips will supplement readings and in-class discussions, which will address brand extension and consistency, packaging templates, professional procedures, product photography and printing.

Term:

Occasional

• ADG-S330 Motion Graphics

Prerequisites:

ADG S219 OR instructor approval

Credits:

3.00

Description:

Enter the world of motion design and learn how to make movies that incorporate image, type and video. This class will focus on learning to create moving graphics that are geared toward being broadcast on television, web or film. Students will create time-based works such as title sequences, ads, and videos that they art direct. In the very near future, motion design will be a necessary skill for designers to compete in the marketplace. Motion design can be applied to many areas of graphic design from on-screen presentation to environmental design. During the class, students will build their motion design portfolio that will give them an edge above conventional print and web designers.

Term:

Offered Spring Term

• ADG-S334 Publication Design

Prerequisites:

ADG S202 and ADG S207 and ADG S219 or Instructor's Consent.

Credits:

3.00

Description:

This course will focus on the skills necessary to create publications such as books, magazines, annual reports and catalogs. The goals of this course are three-fold: to further enhance the understanding of typography in regard to publications, to provide the skills and knowledge necessary to design publications for either a print or digital environment, and to integrate the students' own art and/or photography in their work.

Term:

Offered Fall Term

• ADG-S343 Advanced Topics in Interactive Design

Prerequisites:

ADG-S340;

Credits:

3.00

Description:

This course is designed to follow Web II (ADG S340/ADG S740) and will prepare students for the real-world experiences designers often encounter in the field of interactive media. Students will continue their exploration of interactive design and choose a final project direction that furthers their understanding of interactive media. These topics include designing for and implementing Content Management Systems, designing and production for mobile computing platform uses, cross platform compatibility and concepts of information architecture, and designing with an emphasis on market needs for multimedia.

Term:

Occasional

- **ADG-S360 Corporate Design**

Prerequisites:

ADG S202 and ADG S207

Credits:

3.00

Description:

This course explores the issues of contemporary branding used to identify, establish and promote the business community. Specific emphasis will be placed on the analysis and development of corporate identity systems including the development of logotypes, stationery, signage systems, marketing collateral/advertising/direct mail campaign development, environmental graphics and websites.

Term:

Occasional

- **ADG-S365 Digital Photography**

Credits:

3.00

Description:

This course offers students the experience of creating digital and film photographs while studying concepts of art direction and techniques that can enhance their compositions. The primary objective is to generate professional still and motion images for digital media, including the Web. Students will manipulate their photographic images using Photoshop rather than the traditional darkroom. Students will also learn how to photograph their own artwork and use a digital camera. Advanced students will be encouraged to explore independent tracks of study.

Term:

Occasional

• ADG-S366 Environmental Graphic Design

Prerequisites:

ADG S202, ADG S207 and ADG S219

Credits:

3.00

Description:

A cross disciplinary course bringing together interior design students and graphic design students to collaborate on problem solving in the visual and built environments. In the studio, students will be exposed to design issues and problems, both experiential and graphic. Students will be working in teams bringing new insight to solutions for a variety of client/project types. Field trips to fabricators, professional firms and EGD sites will be included. This is a survey class designed to introduce students to ways of producing three dimensional graphic design projects within the built environment.

Term:

Occasional

• ADG-S370 Artists' Books

Prerequisites:

Take ADG-S201 ADG-S206 or Instructor's permission.

Credits:

3.00

Description:

This course will cover traditional book design and construction techniques, as well as contemporary, non-traditional methods. Students will learn to blend design, craftsmanship and content to create books that are themselves works of art. This is a hands-on studio course.

Term:

Occasional

- **ADFA-S251 Printmaking Studio**

Credits:

3.00

Description:

This course is designed to familiarize students with the printmaking studio and various techniques. Students will gain exposure to a number of techniques including non-toxic processes. Over the course of the semester, students will be expected to develop a portfolio of prints while working in class and independently.

Term:

Offered Fall Term

- **ADIL-S202 Illustration II: Process & Practice**

Prerequisites:

ADIL-S201;

Credits:

3.00

Description:

This course expands on concepts introduced in Illustration I, with emphasis on visual problem solving, generation of original ideas, and the process of picture making. Sequenced assignment each address a different set of parameters related to a different target audience, a different illustration genre (editorial, entertainment, institutional, educational, advertising, etc.) Emphasis is placed on the need to preserve spontaneity and authentic vitality in task-based creative work with multiple requirements, time restraints and periodic art direction. Students use traditional or digital media of their choice and are introduced to pre-production, formatting and presentation requirements for effective print and digital reproduction.

Term:

Offered Spring Term

• ADIL-S223 Traditional Techniques

Prerequisites:

ADF-S166 and ADF-S101

Credits:

3.00

Description:

Students explore a variety of wet and dry medias, surfaces, tools and approaches traditionally used for illustration. Assignments involve observational subject matter, including still life, wildlife, urban and natural landscape, portrait and clothed figure. Media are handled expressively or with precision, and preliminary exercises provide opportunities for experimentation and practice. Final results are evaluated in terms of technical process and proficiency, readability and reproducibility, and successful application of fundamental principles of design and color theory.

Term:

Offered Fall Term

2015-2016 Archived Catalog Information

Graphic Design

The New England School of Art & Design offers a Bachelor of Fine Arts (BFA) in Graphic Design, a Graphic Design Certificate, and a Graphic Design minor.

View the Federally Mandated [Gainful Employment Disclosure for the Certificate in Graphic Design](#).

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Graphic Design Minor Requirements](#)
- [Certificate Program](#)
- [Graphic Design Courses](#)

Minor Requirements: 6 courses, 18 credits

BFA candidates may not double count major requirements towards the minor.

Course substitutions are permissible per minor advisor consent.

- ADG-S201 Basic Typography

Prerequisites:

ADF S151 OR ADF S166

Credits:

3.00

Description:

This course will introduce students to the creative use of typography in the design process and will provide them with the skills and knowledge necessary to design with type.

Term:

Offered Fall Term

- **ADG-S202 Computer Typography**

Prerequisites:

ADG S201 and ADG S219

Credits:

3.00

Description:

This advanced course focuses on the translation of the historical knowledge and hand skills learned in Basic Typography into a digital format. Students will learn how to produce quality typography, as well as experiment with and explore letterform design and manipulation.

Term:

Offered Spring Term

- **ADG-S206 Graphic Design I**

Prerequisites:

ADF S151 OR ADF S166

Credits:

3.00

Description:

Emphasizing the creative process from thumbnail to comprehensive, the course will also introduce the student to the language, tools, and techniques of the professional graphic designer. Attention will be paid to conceptualization, production and presentation in solving design problems. This course will expose students to a series of assignments designed to show step-by-step problem solving from observation and research, to the incorporation of these findings into the design of communication vehicles.

Term:

Offered Fall Term

- **ADG-S207 Graphic Design II**

Prerequisites:

ADG S206 and ADG S219

Credits:

3.00

Description:

A continuation of the skills learned in Graphic Design I, involving projects that are broader in scope, more in-depth, and address societal issues.

Term:

Offered Spring Term

- **ADG-S219 Computer Applications in Design**

Credits:

3.00

Description:

In this course students will learn the major software applications used by graphic designers, such as Adobe Creative Suite: InDesign, Illustrator, and Photoshop. Through a series of problems, students will learn how and when to use specific software to produce their solutions and prepare portfolio-quality design.

Term:

Non-Art & Design majors should choose the following:

- **ADF-S166 2D/Color**

Credits:

3.00

Description:

This is an introductory-level course in the basic concepts and practices of two-dimensional design and color theory. The study of color and design is supportive of all studio disciplines and is vital to the understanding of all visual media. This course features an intensive, hands-on approach to color and design as students create, modify and master the three dimensions of color (hue, value, and strength) plus the principles of design (line, shape, value, composition and image). This in-depth study is essential and underlies all of the visual arts as they are practiced today. An understanding of color and design influences all artists' decisions, affecting the look, meaning and use of visual phenomena.

Type:

Arts Admin Minor Elective

Art & Design BFA students should choose one Graphic Design studio course.

Note:

Communication & Journalism majors may substitute CJN-247 for ADG-S219.

- [Major Requirements](#)
- [Graphic Design Minor Requirements](#)
- [Certificate Program](#)
- [Graphic Design Courses](#)

A short-term, part-time program, the Graphic Design Certificate is appropriate for those who have some prior college-level background and/or significant employment experience in a related field. Please review the curricular requirements as outlined and admission requirements in order to determine whether this program is appropriate for you.

Graphic Design Certificate Program: 12 courses, 36 credits

The Graphic Design Certificate is designed for those who do not want the extensive training of the BFA, but who require more focused design training to complement existing educational or work credentials.

Within the framework of a 12 course (36 credit) sequence, the program provides real-world preparation built on a foundation of design and typography skills, coupled with a thorough grounding in the use of the computer as a design tool. The primary emphasis of all courses, however, remains the conceptual, creative process. The goal of the program is to provide students with the practical and technical design skills necessary to secure entry-level employment in the graphic design field.

The Certificate is designed as a part-time program and can be completed in two or more years (four semesters minimum). Students may choose from day and evening course offerings and may take as many courses per semester as scheduling, prerequisite requirements, and outside commitments allow.

Requirements for Completion of the Graphic Design Certificate Program

- All students must earn a minimum of 36 credits, with a minimum cumulative grade point average of 2.0, in order to be awarded a Certificate in Graphic Design.
- All students must earn a minimum of 27 of the required 36 credits while enrolled as Certificate candidates and must satisfy all course requirements of the Certificate program. A maximum of nine transfer or advanced-standing credits may be applied toward requirements for graduation.
- Please note: credits earned as a NESAD continuing education student are considered transfer credits.

It is recommended that students take no more than five years to complete the program.

Core Requirements: 10 courses, 30 credits

- **ADF-S166 2D/Color**

Credits:

3.00

Description:

This is an introductory-level course in the basic concepts and practices of two-dimensional design and color theory. The study of color and design is supportive of all studio disciplines and is vital to the understanding of all visual media. This course features an intensive, hands-on approach to color and design as students create, modify and master the three dimensions of color (hue, value, and strength) plus the principles of design (line, shape, value, composition and image). An understanding of color and design influences all artists' decisions, affecting the look, meaning and use of visual phenomena.

Type:

Arts Admin Minor Elective

- **ADG-S201 Basic Typography**

Prerequisites:

ADF S151 OR ADF S166

Credits:

3.00

Description:

This course will introduce students to the creative use of typography in the design process and will provide them with the skills and knowledge necessary to design with type.

Term:

Offered Fall Term

- **ADG-S202 Computer Typography**

Prerequisites:

ADG S201 and ADG S219

Credits:

3.00

Description:

This advanced course focuses on the translation of the historical knowledge and hand skills learned in Basic Typography into a digital format. Students will learn how to produce quality typography, as well as experiment with and explore letterform design and manipulation.

Term:

Offered Spring Term

- **ADG-S206 Graphic Design I**

Prerequisites:

ADF S151 OR ADF S166

Credits:

3.00

Description:

Emphasizing the creative process from thumbnail to comprehensive, the course will also introduce the student to the language, tools, and techniques of the professional graphic designer. Attention will be paid to conceptualization, production and presentation in solving design problems. This course

will expose students to a series of assignments designed to show step-by-step problem solving from observation and research, to the incorporation of these findings into the design of communication vehicles.

Term:

Offered Fall Term

- **ADG-S207 Graphic Design II**

Prerequisites:

ADG S206 and ADG S219

Credits:

3.00

Description:

A continuation of the skills learned in Graphic Design I, involving projects that are broader in scope, more in-depth, and address societal issues.

Term:

Offered Spring Term

- **ADG-S219 Computer Applications in Design**

Credits:

3.00

Description:

In this course students will learn the major software applications used by graphic designers, such as Adobe Creative Suite: InDesign, Illustrator, and Photoshop. Through a series of problems, students will learn how and when to use specific software to produce their solutions and prepare portfolio-quality design.

Term:

Offered Fall Term

- **ADG-337 Professional Practice**

Prerequisites:

Senior BFA status

Credits:

3.00

Description:

This senior-year course is designed to provide final preparation for employment in the field of graphic design. In addition to helping each student develop a professional portfolio, the course will provide students with practical knowledge of the business aspects of graphic design, interviewing skills, resume preparation, personal branding and help students target internship opportunities for the following semester.

Term:

Offered Fall Term

- **ADG-S344 Graphic Design III**

Prerequisites:

ADG S202, ADG S207, and ADG S219

Credits:

3.00

Description:

This continuation of Graphic Design I and II (ADG S206, 207) will concentrate on increasing sophistication in creative problem-solving abilities. Students will also develop an understanding of prepress terms and operations and the impact of technology on those operations. It will also provide the knowledge and skills necessary to enable students to make appropriate prepress decisions regarding more complex projects. Senior status preferred.

Term:

Offered Fall Term

- **ADG-S345 Graphic Design IV**

Prerequisites:

ADG S344

Credits:

3.00

Description:

A continuation of the concepts and skills developed in Graphic Design III and their application to more complex, multi-pieced, in-depth projects.

Term:

Offered Spring Term

- **ADG-S354 Advanced Computer Applications**

Prerequisites:

ADG S201, ADG S206, and ADG S219

Credits:

3.00

Description:

This course is designed to further explore software applications for specific and experimental effects. It aims to provide students with the knowledge and skills necessary to choose the appropriate software application and to execute the desired design, focusing on the design itself rather than on the limitations of computer programs. The course also focuses on solving the technical and production problems when preparing artwork electronically for printing. Software applications include Adobe Creative Suite:InDesign, Illustrator, and Photoshop.

Term:

Offered Spring Term

Studio Electives (2 courses, 6 credits)

These electives are subject to change and must be approved by the Graphic Design program director. Choose two of the following:

- **ADG-S213 Web Design I**

Prerequisites:

ADG S219

Credits:

3.00

Description:

This course will introduce basic web site design and creation skills to students in order to prepare them for more advanced study in Web Design II. The class will use a variety of industry standard software to design and create basic working websites. Students will learn HTML, XHTML and CSS. Javascript, Flash and Action Scripting will be discussed and presented as supplemental tools. Information architecture, wire frames, interface design, user experience and web page layouts will be explored. The history, societal context and future of new media will be discussed throughout the semester.

- **ADIL-S214 Illustration for Designers**

Prerequisites:

ADF S102

Credits:

3.00

Description:

This course introduces the skills necessary for meeting clients' illustration needs in a variety of media appropriate to their context. Emphasis will be placed on developing the ability to draw real objects and real people while advancing a personal style. Development of visual research and photo reference, thumbnailing and rendering skills for ones presentation of ideas and concepts while designing the proper environment for their illustration will be required.

- **ADFA-S251 Printmaking Studio**

Credits:

3.00

Description:

This course is designed to familiarize students with the printmaking studio and various techniques. Students will gain exposure to a number of techniques including non-toxic processes. Over the course of the semester, students will be expected to develop a portfolio of prints while working in class and independently.

Term:

Offered Fall Term

• **ADG-S302 Italian Journal: Painting and Drawing On Paper**

Prerequisites:

Instructors Consent

Credits:

3.00

Description:

This faculty-led study abroad course introduces the skills necessary for meeting clients' illustration needs in a variety of media appropriate to context. Florence, Italy and its environs will serve as the subject matter and catalyst in developing the ability to draw objects, i.e. Architecture, people and landscape while advancing a personal style. Study will begin with a pre-departure journal/book binding workshop at Suffolk University and then to the outdoors in and around Florence, Italy, Tuscan hill towns and the Veneto, where students will explore basic illustration styles, methods and techniques.

Term:

Summer

Type:

Expanded Classroom Requirement, Global Engagement Experience

• **ADG-S305 Conceptual Typography**

Prerequisites:

Take ADG-S202

Credits:

3.00

Description:

This course is designed to build on core typography knowledge and further students' understanding of the conceptual possibilities of using type in design. Advanced typographic problems requiring the implementation of both traditional and alternative methods will facilitate a deeper exploration of modern communication issues including layered hierarchies, type in motion, typographic voice and illustration.

- **ADG-S311 Integrated Advertising**

Prerequisites:

ADG S206 and ADG S219

Credits:

3.00

Description:

This course will provide instruction towards creatively translating marketing needs into innovative and effective advertising solutions through a series of challenging projects. Students will learn skills applicable to the advertising industry by focusing on creative executions across multiple-media applications including print, direct mail, collateral, outdoor, online, and other media. There will be emphases on idea generation and campaign development with the goal of message communication through the balance of various elements including page design, copywriting, typography, illustration, photography, and visual effects. The history of advertising from the early 20th century to the ever-changing complexity of today's digital landscape will be studied.

Term:

Occasional

- **ADG-S312 Packaging Design**

Prerequisites:

ADG S201 or ADG S601 AND ADG S206 or ADG S606 AND ADG S219 or ADG S619 OR Instructor Permission.

Credits:

3.00

Description:

In this course, students will study the evolution and history of packaging design, discuss philosophies, learn industry terminology and examine contemporary designs. Using case studies, students will analyze the package design process from concept to production and over the course of the semester, develop a line of packaging and supporting marketing materials for one brand. Guest lectures and field trips will supplement readings and in-class discussions, which will address brand extension and consistency, packaging templates, professional procedures, product photography and printing.

Term:

Occasional

• **ADG-S330 Motion Graphics**

Prerequisites:

ADG S219 OR instructor approval

Credits:

3.00

Description:

Enter the world of motion design and learn how to make movies that incorporate image, type and video. This class will focus on learning to create moving graphics that are geared toward being broadcast on television, web or film. Students will create time-based works such as title sequences, ads, and videos that they art direct. In the very near future, motion design will be a necessary skill for designers to compete in the marketplace. Motion design can be applied to many areas of graphic design from on-screen presentation to environmental design. During the class, students will build their motion design portfolio that will give them an edge above conventional print and web designers.

Term:

Offered Spring Term

• **ADG-S334 Publication Design**

Prerequisites:

ADG S202 and ADG S207 and ADG S219 or Instructor's Consent.

Credits:

3.00

Description:

This course will focus on the skills necessary to create publications such as books, magazines, annual reports and catalogs. The goals of this course are three-fold: to further enhance the understanding of typography in regard to publications, to provide the skills and knowledge necessary to design publications for either a print or digital environment, and to integrate the students' own art and/or photography in their work.

Term:

Offered Fall Term

• ADG-S340 Web Design II

Prerequisites:

ADG S213 or Instructors permission

Credits:

3.00

Description:

This course is intended as a continuation of the experience gained in Web Design I. The objective of the course is the development of advanced conceptual skills such as prototyping, usability testing, interactive philosophy, accessibility, project and content management. Students will further develop their professional multimedia skills by working with HMTL, XHMTL, CSS and other industry-standard tools. JavaScript will be discussed and we will use Flash for animation and video. Current techniques for distributions on mobile devices will be explored. Software that will be used during the class will include Dreamweaver, Flash, and other professional level software tools.

• ADG-S360 Corporate Design

Prerequisites:

ADG S202 and ADG S207

Credits:

3.00

Description:

This course explores the issues of contemporary branding used to identify, establish and promote the business community. Specific emphasis will be placed on the analysis and development of corporate identity systems including the development of logotypes, stationery, signage systems, marketing collateral/advertising/direct mail campaign development, environmental graphics and websites.

Term:

Occasional

- **ADG-S365 Digital Photography**

Credits:

3.00

Description:

This course offers students the experience of creating digital and film photographs while studying concepts of art direction and techniques that can enhance their compositions. The primary objective is to generate professional still and motion images for digital media, including the Web. Students will manipulate their photographic images using Photoshop rather than the traditional darkroom. Students will also learn how to photograph their own artwork and use a digital camera. Advanced students will be encouraged to explore independent tracks of study.

Term:

Occasional

- **ADG-S366 Environmental Graphic Design**

Prerequisites:

ADG S202, ADG S207 and ADG S219

Credits:

3.00

Description:

A cross disciplinary course bringing together interior design students and graphic design students to collaborate on problem solving in the visual and built environments. In the studio, students will be exposed to design issues and problems, both experiential and graphic. Students will be working in teams bringing new insight to solutions for a variety of client/project types. Field trips to fabricators, professional firms and EGD sites will be included. This is a survey class designed to introduce students to ways of producing three dimensional graphic design projects within the built environment.

- **ADG-500 Graphic Design Directed Study**

Prerequisites:

Consent of Program Director required

Credits:

3.00

Description:

The student completes a directed study project, under the supervision of a graphic design faculty member. All Directed Study request forms must be accompanied by a written proposal and schedule and must be approved by the faculty member, the Graphic Design Program Director, and the department Chair.

- **ADG-510 Graphic Design Undergraduate Independent Study**

Prerequisites:

An independent study form must be submitted to the CAS Dean's Office.

Credits:

1.00- 6.00

Description:

An Independent Study provides the student with the opportunity to examine an issue of interest that falls outside the parameters of the existing curricula. The student will work on a one-on-one basis with a full-time faculty member to realize a particular and well-defined goal. All proposals for Independent Study must be approved by the Deans Office in advance of the semester during which the work will be completed.

- **ADG-S201 Basic Typography**

Prerequisites:

ADF S151 OR ADF S166

Credits:

3.00

Description:

This course will introduce students to the creative use of typography in the design process and will provide them with the skills and knowledge necessary to design with type.

Term:

Offered Fall Term

- **ADG-S202 Computer Typography**

Prerequisites:

ADG S201 and ADG S219

Credits:

3.00

Description:

This advanced course focuses on the translation of the historical knowledge and hand skills learned in Basic Typography into a digital format. Students will learn how to produce quality typography, as well as experiment with and explore letterform design and manipulation.

Term:

Offered Spring Term

- **ADG-S204 Design Beyond Design**

Credits:

3.00

Description:

This course focuses on the multi-disciplinary nature of the graphic design profession and the designer as a visual communicator, critical thinker and problem solver. Students will be exposed to a series of outside topics to which they will apply design solutions, mirroring the range of fields in which designers today are employed.

- **ADG-S206 Graphic Design I**

Prerequisites:

ADF S151 OR ADF S166

Credits:

3.00

Description:

Emphasizing the creative process from thumbnail to comprehensive, the course will also introduce the student to the language, tools, and techniques of the professional graphic designer. Attention will be paid to conceptualization, production and presentation in solving design problems. This course will expose students to a series of assignments designed to show step-by-step problem solving from observation and research, to the incorporation of these findings into the design of communication vehicles.

ADG S206 and ADG S219

Credits:

3.00

Description:

A continuation of the skills learned in Graphic Design I, involving projects that are broader in scope, more in-depth, and address societal issues.

Term:

Offered Spring Term

- **ADG-S213 Web Design I**

Prerequisites:

ADG S219

Credits:

3.00

Description:

This course will introduce basic web site design and creation skills to students in order to prepare them for more advanced study in Web Design II. The class will use a variety of industry standard software to design and create basic working websites. Students will learn HTML, XHTML and CSS. Javascript, Flash and Action Scripting will be discussed and presented as supplemental tools. Information architecture, wire frames, interface design, user experience and web page layouts will be explored. The history, societal context and future of new media will be discussed throughout the semester.

- **ADG-S214 Illustration for Designers**

Prerequisites:

ADF S102

Credits:

3.00

Description:

This course introduces the skills necessary for meeting clients illustration needs in a variety of media appropriate to their context. Emphasis will be placed on developing the ability to draw real objects and real people while advancing a personal style. Students' development of visual research and photo reference, thumbnailing and rendering skills for a presentation of ideas and concepts while designing the proper environment for their illustration will be required.

Term:

Offered Spring Term

- **ADG-S219 Computer Applications in Design**

Credits:

3.00

Description:

In this course students will learn the major software applications used by graphic designers, such as Adobe Creative Suite: InDesign, Illustrator, and Photoshop. Through a series of problems, students will learn how and when to use specific software to produce their solutions and prepare portfolio-quality design.

Term:

Offered Fall Term

- **ADG-S250 Graphic Design I-II**

Prerequisites:

Open to MAGD Accelerated Program Students only.

Credits:

3.00

Description:

Emphasizing the creative process from thumbnail to comprehensive, this course will also introduce students to language, tools and techniques of the professional graphic designer. Attention will be paid to the conception, production, and presentation in solving design problems. This course will expose students to a series of exercises designed to show how to get from observation and research, to the incorporation of these findings into the design of communication vehicles (logos, brochures, posters, ads, etc.) on a variety of scales. As a survey of graphic design, the goal of this course is to deal with typical problems faced by graphic designers in their profession.

Term:

Summer

- **ADG-S302 Italian Journal: Painting and Drawing On Paper**

Prerequisites:

Instructors Consent

Credits:

3.00

Description:

This faculty-led study abroad course introduces the skills necessary for meeting clients' illustration needs in a variety of media appropriate to context. Florence, Italy and its environs will serve as the subject matter and catalyst in developing the ability to draw objects, i.e. Architecture, people and landscape while advancing a personal style. Study will begin with a pre-departure journal/book binding workshop at Suffolk University and then to the outdoors in and around Florence, Italy, Tuscan hill towns and the Veneto, where students will explore basic illustration styles, methods and techniques.

Term:

Summer

Type:

Expanded Classroom Requirement, Global Engagement Experience

- **ADG-S305 Conceptual Typography**

Prerequisites:

Take ADG-S202

Credits:

3.00

Description:

This course is designed to build on core typography knowledge and further students' understanding of the conceptual possibilities of using type in design. Advanced typographic problems requiring the implementation of both traditional and alternative methods will facilitate a deeper exploration of

modern communication issues including layered hierarchies, type in motion, typographic voice and illustration.

- **ADG-S311 Integrated Advertising**

Prerequisites:

ADG S206 and ADG S219

Credits:

3.00

Description:

This course will provide instruction towards creatively translating marketing needs into innovative and effective advertising solutions through a series of challenging projects. Students will learn skills applicable to the advertising industry by focusing on creative executions across multiple-media applications including print, direct mail, collateral, outdoor, online, and other media. There will be emphases on idea generation and campaign development with the goal of message communication through the balance of various elements including page design, copywriting, typography, illustration, photography, and visual effects. The history of advertising from the early 20th century to the ever-changing complexity of today's digital landscape will be studied.

Term:

Occasional

- **ADG-S312 Packaging Design**

Prerequisites:

ADG S201 or ADG S601 AND ADG S206 or ADG S606 AND ADG S219 or ADG S619 OR Instructor Permission.

Credits:

3.00

Description:

In this course, students will study the evolution and history of packaging design, discuss philosophies, learn industry terminology and examine contemporary designs. Using case studies, students will analyze the package design process from concept to production and over the course of the semester, develop a line of packaging and supporting marketing materials for one brand. Guest lectures and field trips will supplement readings and

in-class discussions, which will address brand extension and consistency, packaging templates, professional procedures, product photography and printing.

Term:

Occasional

- **ADG-S316 Interactive Project Development**

Prerequisites:

ADG S340 or Instructor's consent.

Credits:

3.00

Description:

This course will allow students to take the skills learned in Web I, Web II and Advanced Topics, and apply them to the kinds of projects they'll see in a professional setting. The class will focus on challenging students to develop a holistic understanding of how the code they write affects their designs, and vice versa, and to think about how all aspects of building a website affect the final user experience. There will also be a strong emphasis on expanding student digital portfolios, with numerous projects based on actual client requests, fully mobile-friendly responsive sites, group projects and more. Students will learn related skills like server management, search engine optimization and how to work as part of a team. This class is intended to prepare students who plan to enter the web and interactive fields upon graduation.

Term:

Occasional

- **ADG-S326 Informing Design**

Credits:

3.00

Description:

Do you have it in you to try flying a horse? If so, this course is for you. Have you wondered how to create graphics with enough impact to cut through all the visual rubble we experience daily? This course on visualization will teach you to see with your eyes and not with your mind. You will break the

boundaries of preconceived notions and employ graphic design as the driver of a new way to think. You will learn to differentiate among subtleties. You will be in the center of communication problems as an enabler of collaborating and experimenting. You will learn to spread collaboration outside the educational environment and into professional practice by thinking design.

- **ADG-S330 Motion Graphics**

Prerequisites:

ADG S219 OR instructor approval

Credits:

3.00

Description:

Enter the world of motion design and learn how to make movies that incorporate image, type and video. This class will focus on learning to create moving graphics that are geared toward being broadcast on television, web or film. Students will create time-based works such as title sequences, ads, and videos that they art direct. In the very near future, motion design will be a necessary skill for designers to compete in the marketplace. Motion design can be applied to many areas of graphic design from on-screen presentation to environmental design. During the class, students will build their motion design portfolio that will give them an edge above conventional print and web designers.

Term:

Offered Spring Term

- **ADG-S334 Publication Design**

Prerequisites:

ADG S202 and ADG S207 and ADG S219 or Instructor's Consent.

Credits:

3.00

Description:

This course will focus on the skills necessary to create publications such as books, magazines, annual reports and catalogs. The goals of this course are three-fold: to further enhance the understanding of typography in regard to publications, to provide the skills and knowledge necessary to design

publications for either a print or digital environment, and to integrate the students' own art and/or photography in their work.

Term:

Offered Fall Term

- **ADG-S340 Web Design II**

Prerequisites:

ADG S213 or Instructors permission

Credits:

3.00

Description:

This course is intended as a continuation of the experience gained in Web Design I. The objective of the course is the development of advanced conceptual skills such as prototyping, usability testing, interactive philosophy, accessibility, project and content management. Students will further develop their professional multimedia skills by working with HTML, XHTML, CSS and other industry-standard tools. JavaScript will be discussed and we will use Flash for animation and video. Current techniques for distributions on mobile devices will be explored. Software that will be used during the class will include Dreamweaver, Flash, and other professional level software tools.

- **ADG-S343 Advanced Topics in Interactive Design**

Prerequisites:

ADG-S340;

Credits:

3.00

Description:

This course is designed to follow Web II (ADG S340/ADG S740) and will prepare students for the real-world experiences designers often encounter in the field of interactive media. Students will continue their exploration of interactive design and choose a final project direction that furthers their understanding of interactive media. These topics include designing for and implementing Content Management Systems, designing and production for

mobile computing platform uses, cross platform compatibility and concepts of information architecture, and designing with an emphasis on market needs for multimedia.

Term:

Occasional

- **ADG-S344 Graphic Design III**

Prerequisites:

ADG S202, ADG S207, and ADG S219

Credits:

3.00

Description:

This continuation of Graphic Design I and II (ADG S206, 207) will concentrate on increasing sophistication in creative problem-solving abilities. Students will also develop an understanding of prepress terms and operations and the impact of technology on those operations. It will also provide the knowledge and skills necessary to enable students to make appropriate prepress decisions regarding more complex projects. Senior status preferred.

Term:

Offered Fall Term

- **ADG-S345 Graphic Design IV**

Prerequisites:

ADG S344

Credits:

3.00

Description:

A continuation of the concepts and skills developed in Graphic Design III and their application to more complex, multi-pieced, in-depth projects.

Term:

Offered Spring Term

- **ADG-S354 Advanced Computer Applications**

Prerequisites:

ADG S201, ADG S206, and ADG S219

Credits:

3.00

Description:

This course is designed to further explore software applications for specific and experimental effects. It aims to provide students with the knowledge and skills necessary to choose the appropriate software application and to execute the desired design, focusing on the design itself rather than on the limitations of computer programs. The course also focuses on solving the technical and production problems when preparing artwork electronically for printing. Software applications include Adobe Creative Suite:InDesign, Illustrator, and Photoshop.

Term:

Offered Spring Term

- **ADG-S360 Corporate Design**

Prerequisites:

ADG S202 and ADG S207

Credits:

3.00

Description:

This course explores the issues of contemporary branding used to identify, establish and promote the business community. Specific emphasis will be placed on the analysis and development of corporate identity systems including the development of logotypes, stationery, signage systems, marketing collateral/advertising/direct mail campaign development, environmental graphics and websites.

Term:

Occasional

- **ADG-S365 Digital Photography**

Credits:

3.00

Description:

This course offers students the experience of creating digital and film photographs while studying concepts of art direction and techniques that can enhance their compositions. The primary objective is to generate professional still and motion images for digital media, including the Web. Students will manipulate their photographic images using Photoshop rather than the traditional darkroom. Students will also learn how to photograph their own artwork and use a digital camera. Advanced students will be encouraged to explore independent tracks of study.

Term:

Occasional

- **ADG-S366 Environmental Graphic Design**

Prerequisites:

ADG S202, ADG S207 and ADG S219

Credits:

3.00

Description:

A cross disciplinary course bringing together interior design students and graphic design students to collaborate on problem solving in the visual and built environments. In the studio, students will be exposed to design issues and problems, both experiential and graphic. Students will be working in teams bringing new insight to solutions for a variety of client/project types. Field trips to fabricators, professional firms and EGD sites will be included. This is a survey class designed to introduce students to ways of producing three dimensional graphic design projects within the built environment.

Term:

Occasional

- **ADG-S370 Artists' Books**

Prerequisites:

Take ADG-S201 ADG-S206 or Instructor's permission.

Credits:

3.00

Description:

This course will cover traditional book design and construction techniques, as well as contemporary, non-traditional methods. Students will learn to blend design, craftsmanship and content to create books that are themselves works of art. This is a hands-on studio course.

Term:

Occasional

- **ADG-S410 Thesis Studio**

Prerequisites:

Senior BFA standing required.

Credits:

3.00

Description:

The Thesis Studio involves the application of previously learned studio skills in a detailed investigation of a design project relating to the student's intended professional area of specialization. Normally offered spring semester.

- **ADG-S500 Graphic Design Directed Studio**

Prerequisites:

Consent of Program Director required.

Credits:

1.00- 6.00

Description:

The student completes a directed studio project under the supervision of a graphic design faculty member. All Directed Studio request forms must be accompanied by a written proposal and schedule and must be approved by the faculty member, the Graphic Design Program Director, and the department Chair.

Term:

Offered Both Fall and Spring

• **ADG-S510 Graphic Design Independent Study**

Prerequisites:

Consent of Program Director required.

Credits:

1.00- 6.00

Description:

In an Independent Studio/Study, the student works in an independent fashion, pursuing an area of study that is outside the scope of existing curricula. Independent Studio/Study courses require CAS Dean's approval in addition to departmental approval.

2015-2016 Archived Catalog Information

History & Literature Honors

This interdisciplinary honors program provides interested and qualified students an opportunity to explore the relations between history and literature. The History and Literature Honors student must complete a major in either History (40 credits) or English (36 credits) and a minor in the other field (20 credits in English; 20 credits in History). A student may also double major in History and English.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)

Major Requirements: 14-15 courses, 56-60 credits

To be considered for honors in History and Literature, a student must satisfy the following criteria:

1. Prospective majors must seek the approval of the coordinators of the program to undertake this major. Qualifying students must have a 3.5 GPA in the major subject.
2. Students must complete two classes on methodology. These courses also fulfill major and minor requirements in each department:

- **HST-200 Gateway to the Past: The Historian's Craft**

Credits:

4.00

Description:

Explores history as an evolving academic discipline, a method of inquiry into the past, and a profession. Students learn historical thinking and research skills that enable them to frame a research question, identify and retrieve required sources, and make an argument about the ideas and actions of past peoples and societies. Required for history majors. Offered annually during Fall term.

Term:

Offered Fall Term

Type:

Humanities & History, Humanities Literature Requirement

• **ENG-301 Seminar for English Majors**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course seeks to answer the following questions. What is literature? Why do we study literature? What methods aid the study of literature? What are English Studies all about? This course extends reading and writing skills, and provides more specialized terms, knowledge, and approaches to prepare students for study at the junior and senior level. Topics vary from term to term. Student must have completed 80 credits or less Normally offered Fall and Spring semesters.

Term:

Offered Both Fall and Spring

3. The student must complete one honors seminar in English or History. The honors seminar may also fulfill a major or minor requirement.
4. The student must complete an interdisciplinary honors thesis under the joint direction of one professor in History and one professor in English. To write a thesis, the student should register for Independent Study in the major department (ENG-510 or HST-510). Normally, the student should undertake one credit of 510 in the fall semester of the senior year and three credits of 510 in the spring semester of the senior year. Independent Study (510) may fulfill an elective in the major. Any student who completes 510 will receive credit for the course; however, projects completed in 510 must also be approved by the History and English departments to satisfy the requirement for honors.
5. The student must provide an oral defense of the honors thesis, to be evaluated and approved by faculty from both departments.
6. Honors students must finish their coursework in the major and minor with a GPA of 3.5.

7. In special circumstances (such as the case of transfer students), particular exceptions to the requirements above will be considered.

Interdisciplinary Advising in History and Literature

To facilitate this process, and to help the student select appropriate courses in both departments, the student should seek advising as follows:

1. The student should see the coordinators of the program during advising periods to ensure that departmental requirements and honors requirements for the major and minor are being met. The coordinators will also help the student to identify potential thesis advisors and to coordinate interdepartmental aspects of the program such as the oral defense. Finally, the coordinators will guide the student in selecting courses in the department that are particularly interdisciplinary in approach or that are appropriate to the student's focus. For example, a student may be directed to courses in both departments on American history and literature of the 19th century or on women in history and literature.
2. The student must select two thesis advisors, one from History and one from English. These advisors will help the student identify a thesis topic and guide him or her through the writing process, and may also help the student to select courses appropriate to his or her research interests.

2015-2016 Archived Catalog Information

History

Each student will take two courses from the introductory sequences (U.S. History, World History, Western Civilization, Empires and Globalization), as well as Gateway to the Past, and any seven additional History courses at or above the 200-level. Students may focus their upper-level courses in an area of interest; one upper-level course may be an internship, a directed study, or writing a senior honors essay, which must be done in consultation with a member of the History faculty.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

History

Each student will take two courses from the introductory sequences (U.S. History, World History, Western Civilization, Empires and Globalization), as well as Gateway to the Past, and any seven additional History courses at or above the 200-level. Students may focus their upper-level courses in an area of interest; one upper-level course may be an internship, a directed study, or writing a senior honors essay, which must be done in consultation with a member of the History faculty.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- **HST-200 Gateway to the Past: The Historian's Craft**

Credits:

4.00

Description:

Explores history as an evolving academic discipline, a method of inquiry into the past, and a profession. Students learn historical thinking and research skills that enable them to frame a research question, identify and retrieve required sources, and make an argument about the ideas and actions of past peoples and societies. Required for history majors. Offered annually during Fall term.

Term:

Offered Fall Term

Type:

Humanities & History, Humanities Literature Requirement

- **HST-210 Traditional Chinese Society from 1800 to 1949**

Credits:

4.00

Description:

Focuses on traditional Chinese society from 1800 to 1949. Explains how elements of Chinese traditional culture contribute to modern Chinese identity and everyday life.

Type:

Humanities & History

- **HST-216 The Thousand Year Reich: the Holy Roman Empire, 800-1806**

Credits:

4.00

Description:

Examines the purposes, ideology, structure, institutions, context, and historical evolution of Europe's most enduring, most important, most influential, and (before the European Union) most inclusive political formation, the Holy Roman Empire, during its thousand-year history from the coronation of Charlemagne in 800 to its dissolution in the Napoleonic Europe of 1806.

- **HST-218 History of the Mongols**

Credits:

4.00

Description:

The history of the Mongol Empire, from the emergence of unified Mongol federation at the beginning of 13th century to its dismemberment into independent territories in Mongolia, China, Transoxiana, Iran, and Kipchak Khanate. We will discuss the topological and geographical features of the Mongolian homeland; and the social, economic, and ideological aspects of their lives. The life and the military and political achievements of Genghis Khan will be highlighted, as well as the Mongols' rule over conquered realms. We will also explore through critical discussions the most important historical approaches to the Mongols.

- **HST-234 History of Sports in Boston and the World**

Credits:

4.00

Description:

Explore the modern Winter Olympics and the development of athletic events such as the Boston Marathon; as well as the history of basketball (invented in Massachusetts) and baseball and their importance to Boston's history. Examine some of the iconic sports figures of Boston, and the statues and monuments made to them.

Type:

Humanities & History

- **HST-235 History of Sport and the Olympic Games**

Credits:

4.00

Description:

Explore the History of Boston and around the world through sports, with special focus on American football, association football(soccer) and the World Cup; the development of the NCAA, Title IX and college athletics; the Olympic Games--ancient, revival and modern. Students will also analyze how athletics and athletic events have been commemorated by statues and memorials in and around Boston.

- **HST-237 Medieval Iran under the Nomadic Dynasties**

Credits:

4.00

Description:

Revolutionary changes through three crucial centuries of Iran's history (12th-15th), as Iran withstood two destructive invasions by nomadic leaders, including Genghis Khan and Tamerlane. Examines the social and economic changes Iran experienced, and the rise of Shi'ism and mysticism, which all resulted in the emergence of the Safavid dynasty. A multilateral perspective--political, cultural social, and economic--to conceptualize the different aspects of this important period.

Type:

Asian Studies

- **HST-238 Reemergence of Iran and Its Medieval & Early Modern History**

Credits:

4.00

Description:

Examines many different aspects of political, social, economic, and cultural history of Iran in the two centuries (1501-1722)of the Safavid dynasty. The Safavids raised Iran's culture and civilization to a high level which had never been in its Islamic period. But the Safavids also traumatized the unity of the Islamic world, preventing the Ottomans from prosecuting their military victories over the western world.

- **HST-246 History of Modern Iran**

Credits:

4.00

Description:

Examines the contemporary history of Persia (Iran) from the time of its independence in the beginning of the sixteenth century to the present with special concentration on geographical/historical background; social structure, ethnic, religious, and linguistic diversities; Safavid and Qajar dynasties; Anglo-Russian interventions and occupations; constitutional revolution and reform; centralization, secularization and modernization under Pahlavi dynasty; opposition to westernization and Islamic revolution.

Type:

Humanities & History,Diverse Perspectives

- **HST-247 History of Modern Middle East**

Credits:

4.00

Description:

Explores the broad historical forces, conflicts and major events that have shaped the contemporary nations of the modern Middle East. Topic include: the emergence of the modern Middle East from the empires of the sixteenth and seventeenth centuries; the age of colonialism; the rise of nationalism; socialism, capitalism; the impact of Israeli and Palestinian conflict on the region; oil, the Islamic Revolution in Iran and the rise of Islamic fundamentalist movements; U.S. policy; and Saddam Hussein's Iraq.

Term:

Offered Fall Term

Type:

Humanities & History,Cultural Diversity Opt B,Humanities Literature Requirement,BSBA SOCIAL CHANGE

- **HST-248 Peaceful Coexistence: Muslims, Christians, and Jews in Medieval Iberia**

Credits:

4.00

Description:

Surveys Muslim and Christian occupied territories on the Iberian Peninsula (modern-day Spain and Portugal), focusing on principal events and broad trends, 711-1492. Special emphasis will be placed on tolerance as manifested in the toleration of religious minorities, cultural and scientific interaction, translation and peaceful coexistence (*convivencia*); and on intolerance as manifested through warfare (*jihad*, *crusade*), frontier mentality, massacres, forced conversions, the setting up of the Inquisition and the final expulsion of the Jews in 1492 and of the descendants of the converted Muslims or *moriscos* in 1609 and 1814.

Type:

Global Engagement Experience, Humanities & History

• HST-251 Modern East Asia

Credits:

4.00

Description:

China, Japan, and Korea - East Asia's critical players - share many historical influences, but each has a distinct culture, and they competed with each other for much of the twentieth century, proud of their achievements but feeling threatened by their neighbors. Lectures interspersed with movies and documentaries to show how East Asia has developed in the past one-hundred-plus years.

Type:

Humanities & History

• HST-255 Films and Contemporary China

Credits:

4.00

Description:

Uses a series of films to demonstrate the changes in people's lives in contemporary China. It focuses on the Reform Era between 1980 and present. The topics include Chinese politics, economic growth, social change, and popular cultures.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities & History, Asian Studies, Humanities Literature Requirement

Offered Spring Term

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement

- **HST-263 Comparative Race Relations**

Credits:

4.00

Description:

Compares and analyzes the history of race and politics in South Africa and the United States from the 17th century to the present. Examines how race as a social and ideological construct influenced and informed political conflicts over land, labor, and social relations in the two countries including slavery, segregation, apartheid, and the struggle to create racial democracies.

Term:

Offered Fall Term

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, BSBA SOCIAL CHANGE, D

- **HST-265 Comparative Slavery**

Credits:

4.00

Description:

This lecture-discussion course compares the institution of slavery over time and across space. Beginning with its emergence and articulation in the Ancient World, the institution of slavery was evident on all of the continents and played a dynamic role in defining humanity and in forming social, economic, cultural, and political formations up to the Modern Era. The course examines the institution of slavery in its many manifestations from nomadic societies to sedentary ones, from kinship-based states to territorial-based ones, from tribal societies to advanced civilizations, from pre-capitalist economies to capitalist ones.

Type:

Humanities & History

- **HST-266 Crime and Punishment in Early Modern Europe: 1500-1800**

Credits:

4.00

Description:

Explores crime, law and punishment in Europe in the early modern era (1500-1800). Topics include: the nature of crime in early modern Europe; the purposes and roles of law (criminal, civil, and others); forms of punishment and what law, crime, and punishment tell us about early modern European society.

Type:

Humanities & History

- **HST-268 History of the Mediterranean**

Credits:

4.00

Description:

Explores the history of the Mediterranean from the ancient times to the 20th century, with emphasis on the extraordinary interaction between the rich cultural, ethnic and religious backgrounds of the peoples of Europe, Middle East, and North Africa.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement, Diverse Perspectives

- **HST-269 Early Modern France**

Credits:

4.00

Description:

Examines early modern France (1400-1789), emphasizing the development of religious, political, and legal institutions. Topics include: the emergence of France as an absolute monarchy; the Protestant and Catholic Reformations in France; the religious wars of the sixteenth century; France's role overseas; war and diplomacy with other European countries; the Enlightenment; the French Revolution; and the rise of Napoleon.

Term:

Occasional

Type:

- **HST-288 Presidents We Love to Hate**

Credits:

4.00

Description:

Some are born great, some achieve greatness, and some are complete disasters. Find out why some Presidents have been consistently ranked as great, been enshrined on Mount Rushmore, and why others have not. Even the greatest have been subject to criticism and ridicule, and even the worst have had their triumphs. Explore the reasons for this, and come to understand the historical context in which different chief executives have acted.

Type:

- **HST-290 19th Century America**

Credits:

4.00

Description:

Explores the history of the United States from 1810 to 1910. Students study the growth of American institutions, the rise and effects of a market society, westward expansion and Indian affairs, the enlivening of U.S. civic ideals, debates over free labor and slavery, the causes and effects of the Civil War, post-Civil War redefinitions of citizenship, immigration, Progressivism, and the nation's entry on to the world stage.

Term:

Offered Spring Term

Type:

Humanities & History, Humanities Literature Requirement

- **HST-363 Naval History: U.S.S. Constitution**

Prerequisites:

03 Feb 2010 02:57pm Eric A Hatch

Credits:

4.00

Description:

In 1794 Boston's citizens watched the largest ship built here up to that time come together at the water's edge. Students will explore the 203-year story of Constitution by learning how craftsmen built this massive ship without electric tools; by following her two hundred years of naval service to the nation; by examining life at sea for the 450 sailors and officers who lived on board for voyages lasting several months; and by surveying the ways Americans have adopted Constitution as a national symbol, using her image to adorn decorative as well as utilitarian objects. Meets at the USS CONSTITUTION Museum and the USS CONSTITUTION.

Type:

Humanities & History, Humanities Literature Requirement

- **HST-368 Boston's Historic Houses**

Credits:

4.00

Description:

Working with historic houses in Boston, students will learn that art of interpreting history. Using collections, archives, and other repositories, students will research the houses and the people who lived in them. Many of these houses have existed from colonial times and had various uses. Formerly:HST 368 Introduction to Historical Interpretation.

Term:

Occasional

Type:

Humanities & History,Expanded Classroom Requirement,Humanities Literature Requirement

- **HST-369 American Objects: Materials, Meaning and History**

Credits:

4.00

Description:

Explores American history through material objects - from colonial silver teapots to 1960s lava lamps. Students will investigate an object's purpose, how it was made and who made it, and interpret the object's cultural meanings for American history. Topics covered will include the decorative arts, vernacular architecture, archaeology, industrial design, ethnicity and gender, visual culture, and landscapes. Lectures and discussions will be complemented with visits to museums, historic houses, and other sites. Students will learn how to research and write about material cultures, placing objects or spaces in their historical context.

Type:

Humanities & History

- **HST-370 Workers in America**

Credits:

4.00

Description:

Examines how ordinary Americans shaped and have been shaped by the experience of work in a capitalist economic order. Surveys the world of work and workers, free and unfree, from 1800 to the present. Topics include changing conceptions of work, formation of workers' consciousness and

communities, working-class cultures, movements for labor reform, and the impact of race, ethnicity, and gender on labor markets, workplace dynamics, and working-class families and communities. Explores workers' experiences of industrialization and technological innovation, immigration and migration, consumerism and globalization.

Credits:

4.00

Description:

Investigates how Americans have understood and responded to health, illness, and death from the eighteenth century to the present. Examine interactions among patients, healers (orthodox and heterodox), the medical and scientific professions, business, and government. Explore the effects of scientific and technological advancements, industrialization, urbanization, immigration, war, and social movements on the nation's moral and political economies of health, and on evolving ideas about bodily integrity and autonomy, linked to historical relations of gender, race, class, and sexuality.

Type:

Cultural Diversity Opt A, Humanities & History

- **HST-H483 Death, Disease, Healing- U.S. History**

Prerequisites:

Permission of the instructor required.

Credits:

4.00

Description:

Investigates how Americans have understood and responded to health, illness, and death from the eighteenth century to the present. Examines interactions among patients, healers (orthodox and heterodox), the medical and scientific professions, business, and government. Explores the effects of scientific and technological advancements, industrialization, urbanization, immigration, war, and social movements on the nation's moral and political economies of health, and on evolving ideas about bodily integrity and autonomy, linked to historical relations of gender, race, class, and sexuality. This is an honors-level course.

Term:

Occasional

Type:

- **HST-484 History of the Emotions**

Credits:

4.00

Description:

Explores ideas about emotional life from the fields of history, anthropology, sociology, and psychology as well as the evolution of emotion rules and prescriptions, focusing on western Europe and the United States since 1700. In the eighteenth century, emotions were seen as a positive influence on politics and public life, especially during the French Revolution. After the fall of Robespierre, the emotions were banished to the private sphere - so we will read both primary sources and recent scholarship on 19th- and 20th- century ideas about masculinity and femininity, romantic love and marriage, childrearing, and about what parents and children are supposed feel toward each other, how ideas about these subjects have changed over time, and whether our feelings change with them.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement, Cultural Diversity Opt A, Diverse Perspectives

- **HST-494 Politics and Protest**

Credits:

4.00

Description:

Examines the impact of organized reform movements on American history from the 1800s to the twenty first century. In each era presented, students will explore the various dynamics that impact reform.

Term:

Occasional

Type:

- **HST-510 Independent Study**

Prerequisites:

An Independent Study form must be submitted to the CAS Dean's Office.

Credits:

1.00- 4.00

Description:

By special arrangement, members of the History department will schedule seminars or individual discussion sessions with students interested in directed reading and research. Open to Juniors and Seniors with the permission of the instructor.

Term:

Offered Both Fall and Spring

- **HST-522 History Internship**

Prerequisites:

Permission of instructor required.

Credits:

4.00

Description:

Require approximately 12 hours of work per week in a history-related position, at a museum, historical society, or archive. Designed to introduce the student to the professional opportunities and responsibilities in the fields of public history or historic preservation. Interested students should consult the instructor in advance. Prerequisite: Permission of instructor is required.

Term:

Offered Both Fall and Spring

Type:

Humanities & History, Humanities Literature Requirement, Expanded Classroom Requirement

- **HST-H555 Senior Honors Thesis**

Credits:

4.00

Description:

An individual program of reading, research, and writing on an approved topic, under the supervision of a History faculty member. The completed thesis will be at least 20-25 pages reflecting original research. The qualifying student must have a 3.5 overall grade point average, and a 3.7 grade point average in History classes, must be recommended by two History faculty members, and must submit a writing sample of at least 5 pages to the Department chair by the end of their junior year. Must be taken in the Fall of the Senior year.

Type:

Humanities & History, Humanities Literature Requirement, Honors

Illustration

A minor in Illustration provides an introduction to the theory and practice of the discipline. The curriculum is rooted in fundamental principles of visual communication related to picture making, with emphasis on the development of essential technical and conceptual skills. Students are introduced to traditional genres and applications (narrative, editorial, technical, advertising, visual development) in the context of contemporary professional practice.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Illustration Minor Requirements](#)
- [Illustration Courses](#)

Minor Requirements: 6 courses, 18 credits

BFA candidates may not double count major requirements towards the minor.

Required for All Students:

- **ADIL-S201 Illustration I: Visual Communication**

Prerequisites:

ADF-S101 and ADF-S166 and ADIL-S223 is recommended(Previously or concurrently)

Credits:

3.00

Description:

This course introduces fundamental concepts and principles of visual communication, with emphasis on the expression of ideas and storytelling through pictures. Topics include implied and sequential narrative, theatrical singing, and visual metaphor. Informed by lecture, discussion and examples, students explore these concepts through a series of assignments with defined objectives related to audience and function (description, symbolism, narrative, poetic allusion, etc.) Through preliminary studies and sketches, students are encouraged to explore multiple solutions, carefully considering concept, drawing, composition, and technical approach. Students are encouraged to use media and methods of choice.

Term:

Offered Fall Term

Required for Art & Design BFA students:

- **ADIL-S202 Illustration II: Process & Practice**

Prerequisites:

ADIL-S201;

Credits:

3.00

Description:

This course expands on concepts introduced in Illustration I, with emphasis on visual problem solving, generation of original ideas, and the process of picture making. Sequenced assignment each address a different set of parameters related to a different target audience, a different illustration genre (editorial, entertainment, institutional, educational, advertising, etc.) Emphasis is placed on the need to preserve spontaneity and authentic vitality in task-based creative work with multiple requirements, time restraints and periodic art direction. Students use traditional or digital media of their choice and are introduced to pre-production, formatting and presentation requirements for effective print and digital reproduction.

Term:

Offered Spring Term

Art & Design BFA students should choose four of the following:

- **ADF-S123 Painting**

Prerequisites:

ADF S101, ADF S166

Credits:

3.00

Description:

In this introductory course, students will learn to accurately perceive relationships of shape, form, color and value, and to translate that information through the medium of paint. In a series of in-class and outside projects on canvas, prepared paper and panel, students will explore various approaches to the use of acrylic and oil paint. Emphasis will be placed on the development of disciplined technical skills as well as the exploration of painting's potential as a medium of communication and creative visual expression.

Term:

Offered Spring Term

• ADIL-S223 Traditional Techniques

Prerequisites:

ADF-S166 and ADF-S101

Credits:

3.00

Description:

Students explore a variety of wet and dry medias, surfaces, tools and approaches traditionally used for illustration. Assignments involve observational subject matter, including still life, wildlife, urban and natural landscape, portrait and clothed figure. Media are handled expressively or with precision, and preliminary exercises provide opportunities for experimentation and practice. Final results are evaluated in terms of technical process and proficiency, readability and reproducibility, and successful application of fundamental principles of design and color theory.

Term:

Offered Fall Term

• ADIL-S255 Digital Techniques

Prerequisites:

Take ADF-S101 and ADF-S166;

Credits:

3.00

Description:

Introduction and exploration of applications used for digital drawing, painting, and sculpting, including Adobe Photoshop, Adobe Illustrator, and LightWave 3D modeling software. Similarities, compatibilities, and essential differences between applications are demonstrated. Efficient file management, help menus, online tutorials, scanning, formatting, printing, and presentation procedures are also covered. Assignments are observational (still life, landscape, portrait, and figure) - not invented imagery. Exercises provide opportunities for experimentation and practice. Final results are evaluated in terms of technical process and proficiency, readability and reproducibility, and successful application of fundamental principles of design and color theory.

Term:

Offered Spring Term

- **ADIL-S301 Illustration III: Style & Substance**

Prerequisites:

Take ADIL-S202;

Credits:

3.00

Description:

This course examines the elements of visual style, the relationship between style and meaning, and the role and impact of stylistic trends in contemporary illustration. Students explore aesthetics and factors that contribute to unique and authentic style. Art buyer choices and public tastes are analyzed. Assignments are approached professionally, as art direction, and within a set of parameters, students are encouraged to take advantage of opportunities for creative freedom. Assignments include an interdisciplinary collaborative project and the integration of text with image. Students practice with their preferred media as they develop awareness of elements that contribute to the characteristic look that identifies their work.

Term:

Offered Fall Term

• ADIL-S305 Figure in Context

Prerequisites:

ADF-S101 AND ADF-S166(OR ADF-S143 and ADF-S151), and ADF-S102 is recommended.(may be taken concurrently)

Credits:

3.00

Description:

Explores the relationship between the human figure and the environment, providing intensive observational drawing and painting practice as preliminary study and visual reference for spatially and compositionally cohesive narrative imagery. Principles of color theory, light logic, and linear and atmospheric perspective are applied to address both 2-dimensional and 3-dimensional concerns (composition, color and the illusion of volume and spatial depth). With attention to theatrical staging, students arrange pose, drapery, clothing, props, and lighting to express specific narrative and emotional context. Camera and dioramas are used for visual reference and students combine reference materials from various sources. Sculptural models are used to explore human skeletal and muscular anatomy.

Required for Non-Art & Design Majors:

• ADF-S101 Foundation Drawing I

Credits:

3.00

Description:

This course concentrates on the traditional techniques of observational drawing. Fundamental principles and elements of drawing are introduced in structured lessons and exercises, which are supplemented by additional outside assignments. Foundation Drawing I stresses the development of visual skills as well as the broad use of drawing concepts, vocabulary, techniques and variety of materials.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **ADF-S102 Foundation Drawing II**

Prerequisites:

ADF S101

Credits:

3.00

Description:

This course will refine the basic visual skills developed in Foundation Drawing I (ADF S101). The elements of color and mixed media are introduced to expand technical possibilities, while more intensive work with the nude human figure provides exposure to gesture, structure and complex form. As students begin to develop a more sophisticated and personal approach, issues of expression and interpretation will be investigated, focusing on personal style and expression.

Term:

Offered Both Fall and Spring

- **ADF-S166 2D/Color**

Credits:

3.00

Description:

This is an introductory-level course in the basic concepts and practices of two-dimensional design and color theory. The study of color and design is supportive of all studio disciplines and is vital to the understanding of all visual media. This course features an intensive, hands-on approach to color and design as students create, modify and master the three dimensions of color (hue, value, and strength) plus the principles of design (line, shape, value, composition and image). This in-depth study is essential and underlies all of the visual arts as they are practiced today. An understanding of color and design influences all artists' decisions, affecting the look, meaning and use of visual phenomena.

Type:

Arts Admin Minor Elective

Non-Art & Design Majors should choose two of the following:

• ADF-S123 Painting

Prerequisites:

ADF S101, ADF S166

Credits:

3.00

Description:

In this introductory course, students will learn to accurately perceive relationships of shape, form, color and value, and to translate that information through the medium of paint. In a series of in-class and outside projects on canvas, prepared paper and panel, students will explore various approaches to the use of acrylic and oil paint. Emphasis will be placed on the development of disciplined technical skills as well as the exploration of painting's potential as a medium of communication and creative visual expression.

Term:

Offered Spring Term

• ADIL-S202 Illustration II: Process & Practice

Prerequisites:

ADIL-S201;

Credits:

3.00

Description:

This course expands on concepts introduced in Illustration I, with emphasis on visual problem solving, generation of original ideas, and the process of picture making. Sequenced assignment each address a different set of parameters related to a different target audience, a different illustration genre (editorial, entertainment, institutional, educational, advertising, etc.) Emphasis is placed on the need to preserve spontaneity and authentic vitality in task-based creative work with multiple requirements, time restraints and periodic art direction. Students use traditional or digital media of their choice and are introduced to pre-production, formatting and presentation requirements for effective print and digital reproduction.

Term:

Offered Spring Term

• ADIL-S223 Traditional Techniques

Prerequisites:

ADF-S166 and ADF-S101

Credits:

3.00

Description:

Students explore a variety of wet and dry medias, surfaces, tools and approaches traditionally used for illustration. Assignments involve observational subject matter, including still life, wildlife, urban and natural landscape, portrait and clothed figure. Media are handled expressively or with precision, and preliminary exercises provide opportunities for experimentation and practice. Final results are evaluated in terms of technical process and proficiency, readability and reproducibility, and successful application of fundamental principles of design and color theory.

Term:

Offered Fall Term

• ADIL-S255 Digital Techniques

Prerequisites:

Take ADF-S101 and ADF-S166;

Credits:

3.00

Description:

Introduction and exploration of applications used for digital drawing, painting, and sculpting, including Adobe Photoshop, Adobe Illustrator, and LightWave 3D modeling software. Similarities, compatibilities, and essential differences between applications are demonstrated. Efficient file management, help menus, online tutorials, scanning, formatting, printing, and presentation procedures are also covered. Assignments are observational (still life, landscape, portrait, and figure) - not invented imagery. Exercises provide opportunities for experimentation and practice. Final results are evaluated in terms of technical process and proficiency, readability and reproducibility, and successful application of fundamental principles of design and color theory.

Term:

Offered Spring Term

- **ADIL-S305 Figure in Context**

Prerequisites:

ADF-S101 AND ADF-S166(OR ADF-S143 and ADF-S151), and ADF-S102 is recommended.(may be taken concurrently)

Credits:

3.00

Description:

Explores the relationship between the human figure and the environment, providing intensive observational drawing and painting practice as preliminary study and visual reference for spatially and compositionally cohesive narrative imagery. Principles of color theory, light logic, and linear and atmospheric perspective are applied to address both 2-dimensional and 3-dimensional concerns (composition, color and the illusion of volume and spatial depth). With attention to theatrical staging, students arrange pose, drapery, clothing, props, and lighting to express specific narrative and emotional context. Camera and dioramas are used for visual reference and students combine reference materials from various sources. Sculptural models are used to explore human skeletal and muscular anatomy.

2015-2016 Archived Catalog Information

Illustration

A minor in Illustration provides an introduction to the theory and practice of the discipline. The curriculum is rooted in fundamental principles of visual communication related to picture making, with emphasis on the development of essential technical and conceptual skills. Students are introduced to traditional genres and applications (narrative, editorial, technical, advertising, visual development) in the context of contemporary professional practice.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Illustration Minor Requirements](#)
- [Illustration Courses](#)
- ADIL-224 History of Illustration

Credits:

4.00

Description:

The study of how images have been used to illustrate ideas, tell stories, convey information and assist in human communication throughout history. Through presentation, lecture, discussion, research, field trips and selected readings, students explore the historical antecedents and significant trends in illustration before the late 20th century. Important illustration markets and applications are emphasized, and notable artists and artworks are presented in the context of the larger culture. The changing role, employment status and professional practices of the commercial artist are discussed. Attention is given to the impact of reproduction and distribution technologies on the evolution Illustration profession and markets for creative content as well as the impact of economics on intellectual property rights.

Term:

Offered Fall Term

• ADIL-338 Illustration Professional Practices

Prerequisites:

ADIL-S301

Credits:

3.00

Description:

An introduction to contemporary illustration professional practices within a broad range of specializations and related fields. Students identify personal interests, capabilities, strengths and career priorities and goals that will influence their lives as creative professionals. Contemporary professional issues, marketing and self-promotion are covered in depth. Assignments include logo design and a direct marketing/email promotional piece. Students research professional competitions and organizations as advertising and networking opportunities and identify prospective clients and employers, produce resumes and polish interviewing and presentation skills. Freelance/contractor self-employment issues and entrepreneurial small business practices are thoroughly addressed, including reproduction rights, pricing, licensing, negotiation, contracts, bookkeeping, taxes, insurance and retirement.

• ADIL-400 Illustration Internship

Prerequisites:

Take ADIL-338;

Credits:

3.00

Description:

Illustration Majors may choose to complete an Illustration Internship in substitution for the course Collaboration (ADIL-S402). The Internship is designed to give students experience and exposure to the professional world of illustration or an illustration-related field in order to prepare for employment. Student interns work on a part-time basis, essentially as apprentice employees. Interns maintain a journal of activities and observations. Classroom seminars will provide opportunities for reinforcing new skills, sharing learning experiences and discussing concerns. Before the end of the junior year, students interested in an internship should investigate potential employment directly related to their intended area of professional concentration. All internships must be approved in advance by the Illustration Program Director and should be completed during the senior year or the prior summer semester.

Type:

Expanded Classroom Requirement

- **ADIL-S201 Illustration I: Visual Communication**

Prerequisites:

ADF-S101 and ADF-S166 and ADIL-S223 is recommended(Previously or concurrently)

Credits:

3.00

Description:

This course introduces fundamental concepts and principles of visual communication, with emphasis on the expression of ideas and storytelling through pictures. Topics include implied and sequential narrative, theatrical staging, and visual metaphor. Informed by lecture, discussion and examples, students explore these concepts through a series of assignments with defined objectives related to audience and function (description, symbolism, narrative, poetic allusion, etc.) Through preliminary studies and sketches, students are encouraged to explore multiple solutions, carefully considering concept, drawing, composition, and technical approach. Students are encouraged to use media and methods of choice.

Term:

Offered Fall Term

- **ADIL-S202 Illustration II: Process & Practice**

Prerequisites:

ADIL-S201;

Credits:

3.00

Description:

This course expands on concepts introduced in Illustration I, with emphasis on visual problem solving, generation of original ideas, and the process of picture making. Sequenced assignments each address a different set of parameters related to a different target audience, a different illustration genre (editorial, entertainment, institutional, educational, advertising, etc.) Emphasis is placed on the need to preserve spontaneity and authentic vitality in

task-based creative work with multiple requirements, time restraints and periodic art direction. Students use traditional or digital media of their choice and are introduced to pre-production, formatting and presentation requirements for effective print and digital reproduction.

Term:

Offered Spring Term

- **ADIL-S214 Illustration for Designers**

Prerequisites:

ADF S102

Credits:

3.00

Description:

This course introduces the skills necessary for meeting clients' illustration needs in a variety of media appropriate to their context. Emphasis will be placed on developing the ability to draw real objects and real people while advancing a personal style. Development of visual research and photo reference, thumbnailing and rendering skills for ones presentation of ideas and concepts while designing the proper environment for their illustration will be required.

- **ADIL-S223 Traditional Techniques**

Prerequisites:

ADF-S166 and ADF-S101

Credits:

3.00

Description:

Students explore a variety of wet and dry medias, surfaces, tools and approaches traditionally used for illustration. Assignments involve observational subject matter, including still life, wildlife, urban and natural landscape, portrait and clothed figure. Media are handled expressively or with precision, and preliminary exercises provide opportunities for experimentation and practice. Final results are evaluated in terms of technical process and proficiency, readability and reproducibility, and successful application of fundamental principles of design and color theory.

Term:

Offered Fall Term

- **ADIL-S255 Digital Techniques**

Prerequisites:

Take ADF-S101 and ADF-S166;

Credits:

3.00

Description:

Introduction and exploration of applications used for digital drawing, painting, and sculpting, including Adobe Photoshop, Adobe Illustrator, and LightWave 3D modeling software. Similarities, compatibilities, and essential differences between applications are demonstrated. Efficient file management, help menus, online tutorials, scanning, formatting, printing, and presentation procedures are also covered. Assignments are observational (still life, landscape, portrait, and figure) - not invented imagery. Exercises provide opportunities for experimentation and practice. Final results are evaluated in terms of technical process and proficiency, readability and reproducibility, and successful application of fundamental principles of design and color theory.

Term:

Offered Spring Term

- **ADIL-S270 3D Modeling**

Prerequisites:

ADF S102 and ADF-S166

Credits:

3.00

Description:

This course addresses basic digital 3D modeling for film and interactive graphics and animation techniques used in computer animation, game development, visual effects and concept and production art. Students will be prepared for more advanced training in modeling, rigging and animation.

Using the basic functions and tools of Mudbox, students will be introduced to the fundamentals of polygon modeling and sculpting. They will explore Maya, using components to make objects and images to create skins and map textures with essential training in rendering, exporting, compositing and file management. Students will design simplified figurative characters posed in simple environments, explore basic rigging and 3D manipulation, use photo manipulation to create complex textures, and implement pan, tracking and simple walking animations.

- **ADIL-S301 Illustration III: Style & Substance**

Prerequisites:

Take ADIL-S202;

Credits:

3.00

Description:

This course examines the elements of visual style, the relationship between style and meaning, and the role and impact of stylistic trends in contemporary illustration. Students explore aesthetics and factors that contribute to unique and authentic style. Art buyer choices and public tastes are analyzed. Assignments are approached professionally, as art direction, and within a set of parameters, students are encouraged to take advantage of opportunities for creative freedom. Assignments include an interdisciplinary collaborative project and the integration of text with image. Students practice with their preferred media as they develop awareness of elements that contribute to the characteristic look that identifies their work.

Term:

Offered Fall Term

- **ADIL-S302 Illustration IV: Originality & Creativity**

Prerequisites:

Take ADIL-S301;

Credits:

3.00

Description:

This course provides an opportunity for students to consolidate the knowledge and experience from the three previous semesters of Illustration to expand their conceptual and technical skills as they strive for a synthesis of concept, process, technique, and style. Students will explore innovative and personal ways to express visual ideas, while focusing on advanced assignments that address a variety of real world applications and genres. Progressing from instructor-defined to student-defined objectives, assignments provide opportunity for students to develop an efficient and dependable ideation process and technical competence in a preferred medium. In the final weeks, students will be asked to develop a draft Studio Project Proposal Outline for the following semester.

Term:

Offered Spring Term

- **ADIL-S305 Figure in Context**

Prerequisites:

ADF-S101 AND ADF-S166(OR ADF-S143 and ADF-S151), and ADF-S102 is recommended.(may be taken concurrently)

Credits:

3.00

Description:

Explores the relationship between the human figure and the environment, providing intensive observational drawing and painting practice as preliminary study and visual reference for spatially and compositionally cohesive narrative imagery. Principles of color theory, light logic, and linear and atmospheric perspective are applied to address both 2-dimensional and 3-dimensional concerns (composition, color and the illusion of volume and spatial depth). With attention to theatrical staging, students arrange pose, drapery, clothing, props, and lighting to express specific narrative and emotional context. Camera and dioramas are used for visual reference and students combine reference materials from various sources. Sculptural models are used to explore human skeletal and muscular anatomy.

- **ADIL-S307 Visual Development**

Prerequisites:

Take ADIL-S201 and ADIL-S255 or ADG-S219;

Credits:

3.00

Description:

This studio elective explores the basic components of the pre-production process for animation, computer games, film and television - concept, character design, properties and assets, backgrounds and environments. Using a given story sequence and working as a team, students will produce everything from plot analysis to storyboards, maquettes, dioramas, background layouts and matte painting. Both aesthetic and technical issues will be addressed, with emphasis on effective process, including research and generation of ideas. Theories of dramatic staging, atmospheric and linear perspective and anatomy of visual storytelling will be reviewed with attention to narrative sequence, point of view, action, transitions and editing. Students will work with a variety of traditional 2D and 3D media and computer applications for drawing and painting (Photoshop, Painter, SketchUp, Blender, Maya) and be introduced to professional practices and presentation.

• ADIL-S401 Studio Project

Prerequisites:

Take ADIL-S302;

Credits:

3.00

Description:

This semester of rigorous intellectual and creative exploration provides opportunity to research a subject of personal interest with social, cultural, scientific or commercial relevance. Students visually communicate ideas and information from their research and analyze and synthesize information and data to produce original visual works for a particular audience. This studio practice has interdisciplinary focus and may be the spark for ideas to be expanded in Illustration Portfolio or Illustration Collaboration courses. Experience and insights are a higher priority than the tangible results. Students carefully document and evaluate their ideas, research activities and results.

Term:

Offered Fall Term

• ADIL-S402 Collaboration

Prerequisites:

ADIL-S302

Credits:

3.00

Description:

Creative collaboration provides a valuable opportunity for Illustration seniors to work with other artists or designers from any discipline - students or practicing professionals (on a pro bono basis), in partnership or groups - on original interdisciplinary creative projects related to theater (set, lighting and costume design), advertising (ads, packaging, signage and exhibitions), creative writing (publishing), journalism (commentary and reportage), medical or environmental science, biology, public service, or entrepreneurial licensed products. Content must derive from an existing source and all text must be previously published and written by someone other than the student illustrator. Collaborators divide tasks and responsibilities to best advantage.

Term:

Offered Spring Term

Type:

Expanded Classroom Requirement

• ADIL-S410 Portfolio

Prerequisites:

TAKE ADIL-S302;

Credits:

3.00

Description:

Concentrated studio practice within a student's preferred illustration-related field, genre, market or subject matter, using the preferred media and format and targeting the preferred audience. Projects may involve existing or self-generated content (creative writing, product design, etc.). Students develop a concise project outline and work independently to create a focused body of artwork to be used to obtain employment or freelance work. Progress is discussed in weekly group seminars and individual instructor critiques. Final artwork is reproduced and assembled in a professional quality print portfolio. Students also present the work on a professional web site and may choose to participate in a solo or group exhibition of the original artwork. Each student invites an outside professional (publisher, art director, licensing agent, artist rep., etc.) to evaluate their portfolio for a final Portfolio Review.

Term:

Offered Fall Term

- **ADIL-S500 Illustration Directed Studio**

Prerequisites:

Instructor's Approval

Credits:

3.00

Description:

The student completes a directed studio project under the supervision of a full-time Illustration faculty member. Directed Studio request forms must be accompanied by a written proposal with a schedule and must be approved by the instructor, the Illustration Program Director, and the Department Chair.

Term:

Offered Both Fall and Spring

2015-2016 Archived Catalog Information

Interior Design

The New England School of Art & Design offers a Bachelor of Fine Arts (BFA) in Interior Design.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Accelerated Bachelor's/Master's Degree in Interior Architecture](#)
- [Interior Design Courses](#)

Major Requirements: 28 courses, 88 credits

Courses numbered 200 and above have as a prerequisite the completion of the [Foundation Studies](#) program (with the exception of Foundation Drawing II) or its equivalent. Other exceptions may be made only with the permission of the instructor and the Interior Design program director.

The letter "S" preceding a course number indicates a studio course. A studio fee is assessed for all studio courses.

For specific sequence of courses, contact your advisor or the department.

- **ADF-S101 Foundation Drawing I**

Credits:

3.00

Description:

This course concentrates on the traditional techniques of observational drawing. Fundamental principles and elements of drawing are introduced in structured lessons and exercises, which are supplemented by additional outside assignments. Foundation Drawing I stresses the development of

visual skills as well as the broad use of drawing concepts, vocabulary, techniques and variety of materials.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **ADF-S102 Foundation Drawing II**

Prerequisites:

ADF S101

Credits:

3.00

Description:

This course will refine the basic visual skills developed in Foundation Drawing I (ADF S101). The elements of color and mixed media are introduced to expand technical possibilities, while more intensive work with the nude human figure provides exposure to gesture, structure and complex form. As students begin to develop a more sophisticated and personal approach, issues of expression and interpretation will be investigated, focusing on personal style and expression.

Term:

Offered Both Fall and Spring

- **ADF-S152 3-Dimensional Design**

Prerequisites:

ADF S151 or ADF S166

Credits:

3.00

Description:

This course focuses on the fundamental elements of three-dimensional form. Line, plane and volume will be explored as students develop visual analysis and critical thinking skills in the round. The role of scale, proportion, structure, surface, light and display will be addressed, as students create forms that activate space and engage the viewer. The course will proceed from work with simple forms and techniques to more challenging and comprehensive problems addressing both additive and subtractive methods.

Term:

Offered Both Fall and Spring

• ADF-S166 2D/Color

Credits:

3.00

Description:

This is an introductory-level course in the basic concepts and practices of two-dimensional design and color theory. The study of color and design is supportive of all studio disciplines and is vital to the understanding of all visual media. This course features an intensive, hands-on approach to color and design as students create, modify and master the three dimensions of color (hue, value, and strength) plus the principles of design (line, shape, value, composition and image). This in-depth study is essential and underlies all of the visual arts as they are practiced today. An understanding of color and design influences all artists' decisions, affecting the look, meaning and use of visual phenomena.

Type:

Arts Admin Minor Elective

• ADF-S172 CI: Integrated Studio II

Prerequisites:

ADF S101

Credits:

3.00

Description:

This course builds on the Integrated Studio 1 experience: synthesizing fundamental visual ideas. IS 2 investigates the construction, documentation, and transformation of volumetric form, environmental space, and time. Projects will explore narrative strategies and the creation of immersive experiences. Students will develop critical and analytical skills while employing a range of traditional and digital media-including video/sound capture and editing-as they explore the creative boundaries of the classroom studio, the city of Boston, and virtual space.

Type:

Creativity and Innovation

- **ADI-S106 Interior Design Communications**

Prerequisites:

Take ADF-S101 ADI-S108 OR ADI-S205;

Credits:

3.00

Description:

Interior Design Communications teaches students how drawing media, observational drawing, perspective theory, color and design graphics can be integrated into the designer's process. In addition to exploring contrast, accent, reflection, shade and shadow, the course underscores the importance of freehand sketching as a tool to foster intellectual inquiry and convey design concepts to a wider audience. The course introduces students to manual and digital methods for composing work for conceptual expression, technical drawing presentation, and portfolio purposes.

Term:

Offered Both Fall and Spring

- **ADI-S108 Perspective Principles**

Prerequisites:

Prior or concurrent drawing experience

Credits:

3.00

Description:

This course introduces students to the systems of perspective developed during the Renaissance as a means of creating the illusion of 3-dimensional space on a 2-dimensional surface. Using 1-, 2-, and 3-point perspective, students will learn to effectively represent space. Basic drafting techniques and architectural scale are introduced. Both free-hand sketching and technical drawing methods will be emphasized. Manipulation of drawing through computerized scanning and digital photography included.

Term:

Offered Both Fall and Spring

• ADI-S110 Digital Orthographics

Prerequisites:

Take ADI-S108 OR ADI-S205;

Credits:

3.00

Description:

This course will enable the student to produce, manipulate and print 2-dimensional drawings using digital software including Computer Aided Drafting (CAD). Students will acquire the skills necessary for producing measured architectural plans, elevations and sections as well as isometric and axonometric drawing types. Fundamentals of illustrating drawings in color, light and shadow through digital programs will be introduced.

Term:

Offered Both Fall and Spring

• ADI-S201 Interior Design Studio I

Prerequisites:

ADF S152, ADF S143, ADI S110 Prior to or concurrent with ADI 234 Take ADI S106 or ADI S205

Credits:

3.00

Description:

This studio introduces students to basic design principles, design theory and concept development. Emphasis will be placed on design process, problem solving, spatial organization, anthropometrics, universal design awareness, and presentation techniques. Students will be given a series of projects of increasing complexity, utilizing and building upon the skills developed in the Foundation courses. Students will be expected to produce process diagrams, plans, elevations, models, and finish boards.

Term:

Offered Both Fall and Spring

- **ADI-S202 Residential Design Studio**

Prerequisites:

ADI S201 AND ADF S102

Credits:

3.00

Description:

This course addresses residential interior environments on a large scale. Students will develop client contact and programming skills. Emphasis will be placed on residential precedents, design process, human factors, accessibility, building codes, diagramming, spatial organization, detailing, presentation techniques, furnishings, finishes and lighting.

Term:

Offered Both Fall and Spring

- **ADI-221 History of Furniture & Architecture I**

Credits:

4.00

Description:

The goal of this course is the enhancement of the student's critical comprehension of historic styles and the impact they have on contemporary design solutions. The survey begins with the Egyptian period and provides an overview of the history of furniture and architecture through the mid-1700s,

including ancient Greece and Rome, the Gothic and Renaissance, Baroque and Rococo periods. Emphasis will be placed on chronological periods, the visual characteristics of each style including regional idiosyncrasies, and the terminology germane to a study of furniture and architecture.

Term:

Offered Both Fall and Spring

Type:

Humanities & History, Humanities Literature Requirement

- **ADI-222 History of Furniture & Architecture II**

Prerequisites:

ADI 221

Credits:

4.00

Description:

A continuation of History of Furniture & Architecture I, this course will extend the investigation of furniture and architecture into the 20th century, while addressing issues concerning preservation, restoration, rehabilitation, and adaptive re-use. Drawing on the vast resources of the city of Boston and its environs, students will become actively involved in stylistic progression, local living history, and the benefits of preserving our past for future generations. Field trips will include visits to restored Federal, Victorian and Contemporary venues.

Term:

Offered Both Fall and Spring

Type:

Humanities & History, Humanities Literature Requirement

- **ADI-234 Introduction to Interior Design Theory & Criticism**

Prerequisites:

Taken concurrently with ADI S201

Credits:

3.00

Description:

This course introduces students to the important individuals, ideas and issues that have shaped the direction of contemporary interior design practice in the twentieth century, building upon the historical foundation established by the Ideas of Western Art and History of Furniture and Architecture classes. Intermixing lectures and readings with visits to important local buildings, it discusses the influences of culture, technology, fashion and media upon the work and thinking of the first generation of modern designers, as well as emerging social, moral and environmental imperatives that will form the basis of future practice; cultural identity, interdisciplinary collaboration, sustainability and universal design.

Term:

Offered Fall Term

Type:

Vis. & Perform Thry & Hst

- **ADI-242 Interior Codes & Construction**

Prerequisites:

Prerequisite: ADI S110 or S510.

Credits:

3.00

Description:

This course examines various interior construction assemblies of non-load-bearing walls, load-bearing walls, floors, stairs, elevators, fireplaces, ceilings, doors, interior windows, frames, millwork and fire-related construction. Emphasis will be placed on building codes including state, BOCA, Underwriters Laboratory, ASTM, state and federal accessibility codes and construction materials. Students will also be introduced to basic structural concepts and characteristics of structural materials.

Term:

Offered Both Fall and Spring

- **ADI-244 Interior Materials & Finishes**

Prerequisites:

Intended for majors only

Credits:

3.00

Description:

Students will study the visual qualities, technical characteristics and applications of the common materials and finishes used in interior installations. These materials include floor coverings, wall coverings, textiles, ceiling and sustainable materials. Related fire, health and safety codes, as well as maintenance and life cycle costs, will be discussed. Class material will be presented in the form of lectures, guest speakers and a tour of the Boston Design Center. Students will learn to analyze, select and specify materials and finishes for the appropriate applications, write specifications, and prepare a resource notebook.

Term:

Offered Both Fall and Spring

- **ADI-254 Lighting**

Prerequisites:

Prior drafting or CAD experience recommended

Credits:

3.00

Description:

This course introduces students to the art and technology of lighting and explores the use of lighting as a design element in the interior environment. Class material will be presented as a series of lectures, readings and demonstrations. Students will learn to analyze interior lighting installations, calculate lighting levels for interiors, select appropriate light fixtures and prepare a lighting plan based on one of their studio projects.

Term:

Offered Both Fall and Spring

- **ADI-S264 Advanced Interior Design Communication**

Prerequisites:

ADI S106 and ADI S110

Credits:

3.00

Description:

This course is designed to advance and reinforce presentation techniques and graphic technical skills introduced in Interior Design Communications. Students will continue to develop their proficiency in free hand sketching, rendering and perspective, and will learn various three-dimensional rendering software and other digital imaging techniques.

Term:

Offered Both Fall and Spring

- **ADI-S303 Contract Design Studio I**

Prerequisites:

ADF S102, ADI S201, ADI 242, ADI 244, ADI S264

Credits:

3.00

Description:

This commercial design studio focuses on the design of work environments. Students will develop programming and space planning skills unique to these environments through a series of small- to medium-sized projects. Emphasis will be placed on commercial precedents, programming, design process, human factors, building codes, ADA, spatial organization, detailing, presentation techniques, office furniture systems, equipment, finishes, and lighting.

Term:

Offered Both Fall and Spring

- **ADI-S304 Furniture and Detailing Studio**

Prerequisites:

ADI S201, ADI S264

Credits:

3.00

Description:

This course introduces students to the design process as it applies to furniture, addressing furniture ergonomics, materials, construction techniques, manufacturing and design. Students will research selected topics, and design seating, work/service pieces and cabinetry. Emphasis will be placed on furniture precedents, research, design process, human factors, accessibility, detailing, documentation and presentation techniques.

Term:

Offered Both Fall and Spring

- **ADI-S305 Contract Design Studio II**

Prerequisites:

ADI S202, ADI 221, ADI S110

Credits:

3.00

Description:

This studio focuses on adaptive re-use and renovation of commercial interiors with attention given to historical buildings in the Boston area. Emphasis on creative problem-solving methods and a philosophical approach to medium- and large-scale hospitality and retail design projects. Students will be required to incorporate the skills and knowledge gained throughout their studies to create a comprehensive project, including presentation drawings, models, material and furniture boards, and a set of construction documents and specifications.

Term:

Offered Fall Term

- **ADI-352 Environmental Systems**

Prerequisites:

ADI 242

Credits:

3.00

Description:

This course studies mechanical, electrical, and plumbing technology and systems commonly employed in residential and commercial interiors. It will introduce students to the vocabulary, concepts and basic components of these fields of engineering. This will enable students to integrate these building systems in their design work and communicate ideas effectively with project engineers and contractors. The course will include commonly used heating, ventilating, air conditioning, plumbing piping and fixtures, fire sprinklers, electrical supply and distribution, smoke detection and fire alarm systems. Related mechanical, electrical and plumbing codes will also be discussed.

Term:

Offered Both Fall and Spring

- **ADI-S372 Construction Documents**

Prerequisites:

ADI S110 AND ADI S201

Credits:

3.00

Description:

Building on the curriculum of Orthogonal Drawing, this course will explore in more detail the features of CAD and BIM software. Programs will be used as tools to draft, organize, and produce a set of construction documents. Students will complete a full set of contract documents.

Term:

Offered Both Fall and Spring

- **ADI-384 Interiors Marketing & Contracts**

Prerequisites:

ADI-S201; Intended for majors only

Credits:

3.00

Description:

This course will cover the business aspects of interior design, including firm management, client, and contractor relationships, project management, proposal writing, and market resourcing. In addition, students will be exposed to career planning practices, such as portfolio development, resume preparation and interviewing techniques. Tours of architectural and interior design firms will also be included.

Term:

Offered Both Fall and Spring

- **ADI-398 Senior Programming & Pre-Design**

Prerequisites:

ADI S201, ADI S202, ADI S303, ADI S304, ADI S372

Credits:

3.00

Description:

This course is designed to be the first part of the BFA Senior Studio in Interior Design. The senior ID project is intended as the culmination of the interior design studio sequence. It is an individual effort, supported by the studio faculty, that is inclusive of the entire design process from the programming phase through final design and documentation. The objective of part one, Senior Programming & Pre-Design, is for individual students to research, develop, and draft a program document which will guide their design work in part two, Senior Studio. Students will explore the possible project types and precedents, select and develop a client profile and program, and research and analyze an architectural site. Written and graphic analysis tools will be employed. The preliminary conceptual (pre-design) phase of work is also introduced.

Term:

Offered Spring Term

- **ADI-S401 Senior Studio**

Prerequisites:

ADI S201, ADI S202, ADI S303, ADI S304, ADI S305, ADI S372 AND ADI 398

Credits:

3.00

Description:

This studio course completes the undergraduate studio sequence in Interior Design. This final design studio emphasizes individual competence with respect to the total design process. Students will utilize the research and programming document produced in ADI 398, Senior Programming & Pre-Design, to develop a comprehensive design solution for their individual studio problem through schematics, design development, presentation drawings and specifications.

Term:

Offered Spring Term

- **ARH-101 Art History I**

Credits:

4.00

Description:

Surveys the art of Western civilization from prehistoric caves to medieval cathedrals. Considers works from the Ancient Near East, Ancient Egypt, Ancient Greece and Rome, the Byzantine Era, the Romanesque Period, and the Gothic Period in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **ARH-102 Art History II**

Credits:

4.00

Description:

Surveys the art of Europe and America from the Renaissance to the present. Considers work of painting, sculpture, and architecture from periods such as the Renaissance, the Baroque, the Rococo, Neoclassicism, Romanticism, Impressionism, Abstract Impressionism, and Post-Modernism in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst

Choose one of the following:

- **ADI-306 Portfolio**

Prerequisites:

Senior Status

Credits:

3.00

Description:

This course teaches students how to develop a professional portfolio. Students will investigate overall development of portfolio content, substance, and design through a variety of hands-on exercises including digital and mock-up layout techniques; methods of documenting and archiving work; presentation formats; design influence investigation, and more.

Term:

Offered Both Fall and Spring

- **ADI-400 Interior Design Internship**

Prerequisites:

ADI S202 and ADI S303; senior BFA standing required. This course fulfills the Expanded Classroom Requirement

Credits:

3.00

Description:

With the assistance of the faculty advisor, each student will identify an appropriate internship site with a local interior design firm. All interns are required to complete 120 hours of work/study within the semester, working a minimum of 8 hours per week under the direction of a qualified Interior Designer. Interns are expected to contribute to the host firm at a high level of design interaction. All interns will meet bi-weekly with the faculty advisor. The classroom seminars will reinforce new skills, share learning experiences, and answer questions or concerns. A firm site visit, production of firm profile, and participation in a professional organization are required within the seminar.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement

Portfolio may be taken in lieu of the Interior Design Internship ONLY if an internship waiver is fulfilled.

2015-2016 Archived Catalog Information

Interior Design

The New England School of Art & Design offers a Bachelor of Fine Arts (BFA) in Interior Design.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Accelerated Bachelor's/Master's Degree in Interior Architecture](#)
- [Interior Design Courses](#)

This program provides an accelerated path for undergraduate Interior Design majors to obtain a Master's degree in Interior Design/Interior Architecture through a 3-semester curriculum beyond their senior year.

Students are allowed to complete two masters-level courses during their senior year; these courses count toward the completion of the dual Bachelor's/Master's degree requirements.

Admission Requirements

- Nomination by a member of the full-time department faculty
- Personal interview with the program director
- Junior year (first semester) overall GPA of 3.0 or higher and a GPA of 3.3 or higher in the Interior Design major. Students who transfer to Suffolk in their junior year are eligible to apply, if all other criteria are met.
- Completion of a minimum of four undergraduate courses at Suffolk
- Priority application deadline is March 15 of the junior year, with enrollment in the first semester of the senior year (rolling admission thereafter, on a space available basis); students must complete the standard Suffolk University graduate application.
- The Office of Graduate Admission will admit students on the basis of recommendation by the program director.

Degree Requirements

1. Students admitted to this dual degree program must meet all the requirements of the Interior Design BFA degree program.
2. Student must also meet all requirements for the Master's degree in Interior Architecture.
3. The two graduate courses taken during the senior year will count toward BOTH the undergraduate and graduate degree requirements. Credit hours will be awarded based on the graduate course description.
4. Before enrolling in a particular graduate course during the senior year, a student must obtain permission from the program director.
5. Students are subject to the usual standards for academic standing, i.e., undergraduate standards for undergraduate courses and graduate standards for graduate courses.

Upon successful completion of all of the degree requirements, a student will receive a dual Bachelor's and Master's degree. A student may permanently exit the dual degree program and opt to graduate with a Bachelor's degree if all the requirements for a Bachelor's degree have been met. In this case, the graduate courses taken in the senior year will be counted as 4-credit courses applied toward the undergraduate degree requirements.

- ADI-01 Introduction to Interior Design & Decoration

Credits:

2.00

Description:

This elective course is designed to aid students in determining whether to pursue a career in interior design and decorating. Through both lectures and studio work, students will be shown basic drafting and graphic communication techniques used in presentation of visual ideas, as well as various elements of interior composition, such as space planning, color, furniture, finish and material selection. The final project will be suitable for inclusion in a portfolio. Normally offered each semester.

Term:

Offered Both Fall and Spring

- ADI-221 History of Furniture & Architecture I

Credits:

4.00

Description:

The goal of this course is the enhancement of the student's critical comprehension of historic styles and the impact they have on contemporary design solutions. The survey begins with the Egyptian period and provides an overview of the history of furniture and architecture through the mid-1700s, including ancient Greece and Rome, the Gothic and Renaissance, Baroque and Rococo periods. Emphasis will be placed on chronological periods, the visual characteristics of each style including regional idiosyncrasies, and the terminology germane to a study of furniture and architecture.

Term:

Offered Both Fall and Spring

Type:

Humanities & History, Humanities Literature Requirement

• **ADI-222 History of Furniture & Architecture II**

Prerequisites:

ADI 221

Credits:

4.00

Description:

A continuation of History of Furniture & Architecture I, this course will extend the investigation of furniture and architecture into the 20th century, while addressing issues concerning preservation, restoration, rehabilitation, and adaptive re-use. Drawing on the vast resources of the city of Boston and its environs, students will become actively involved in stylistic progression, local living history, and the benefits of preserving our past for future generations. Field trips will include visits to restored Federal, Victorian and Contemporary venues.

Term:

Offered Both Fall and Spring

Type:

- **ADI-234 Introduction to Interior Design Theory & Criticism**

Prerequisites:

Taken concurrently with ADI S201

Credits:

3.00

Description:

This course introduces students to the important individuals, ideas and issues that have shaped the direction of contemporary interior design practice in the twentieth century, building upon the historical foundation established by the Ideas of Western Art and History of Furniture and Architecture classes. Intermixing lectures and readings with visits to important local buildings, it discusses the influences of culture, technology, fashion and media upon the work and thinking of the first generation of modern designers, as well as emerging social, moral and environmental imperatives that will form the basis of future practice; cultural identity, interdisciplinary collaboration, sustainability and universal design.

Term:

Offered Fall Term

Type:

Vis. & Perform Thry & Hst

- **ADI-242 Interior Codes & Construction**

Prerequisites:

Prerequisite: ADI S110 or S510.

Credits:

3.00

Description:

This course examines various interior construction assemblies of non-load-bearing walls, load-bearing walls, floors, stairs, elevators, fireplaces, ceilings, doors, interior windows, frames, millwork and fire-related construction. Emphasis will be placed on building codes including state, BOCA, Underwriters Laboratory, ASTM, state and federal accessibility codes and construction materials. Students will also be introduced to basic structural concepts and characteristics of structural materials.

Term:

Offered Both Fall and Spring

- **ADI-244 Interior Materials & Finishes**

Prerequisites:

Intended for majors only

Credits:

3.00

Description:

Students will study the visual qualities, technical characteristics and applications of the common materials and finishes used in interior installations. These materials include floor coverings, wall coverings, textiles, ceiling and sustainable materials. Related fire, health and safety codes, as well as maintenance and life cycle costs, will be discussed. Class material will be presented in the form of lectures, guest speakers and a tour of the Boston Design Center. Students will learn to analyze, select and specify materials and finishes for the appropriate applications, write specifications, and prepare a resource notebook.

Term:

Offered Both Fall and Spring

- **ADI-254 Lighting**

Prerequisites:

Prior drafting or CAD experience recommended

Credits:

3.00

Description:

This course introduces students to the art and technology of lighting and explores the use of lighting as a design element in the interior environment. Class material will be presented as a series of lectures, readings and demonstrations. Students will learn to analyze interior lighting installations, calculate lighting levels for interiors, select appropriate light fixtures and prepare a lighting plan based on one of their studio projects.

Term:

Offered Both Fall and Spring

• ADI-306 Portfolio

Prerequisites:

Senior Status

Credits:

3.00

Description:

This course teaches students how to develop a professional portfolio. Students will investigate overall development of portfolio content, substance, and design through a variety of hands-on exercises including digital and mock-up layout techniques; methods of documenting and archiving work; presentation formats; design influence investigation, and more.

Term:

Offered Both Fall and Spring

• ADI-333 Linked Generations: Survey of Contemporary Spanish Architecture

Credits:

3.00

Description:

This seminar aims to reveal the key elements of contemporary practices by analyzing the relationship between the masters of Spanish architecture of the 20th C. and the generations following. It will focus on such figures such as Saenz de Oiza, Fisac and De la Sota, continuing with current masters such as Campo Baeza, Moneo and Navarro Baldeweg, the first generation of Spanish architects to have international recognition. More recent

inheritors include Aparicio, Abalo, Herreros, Mansilla & Tunon, Nieto Sobejano and Miralles, professionals with prominent academic positions worldwide. Attention will also be given to a new generation of promising architects (Garcia Abril, Sanchez, Jaque, Virseda Vila, Fernandez) whose projects are outstanding for the rigor of their construction and sensitivity to their natural and cultural surroundings. Class lectures will be accompanied by site visits to Madrid buildings designed by these architects, as well as to the studio offices where some of them actually work, to familiarize the students with how these small-scale firms develop their projects. Students will individually carry out a conceptual analysis of a prominent building through sketching and diagrammatic modeling of its principal architectural elements, with a final presentation of the results to a panel of critics.

- **ADI-352 Environmental Systems**

Prerequisites:

ADI 242

Credits:

3.00

Description:

This course studies mechanical, electrical, and plumbing technology and systems commonly employed in residential and commercial interiors. It will introduce students to the vocabulary, concepts and basic components of these fields of engineering. This will enable students to integrate these building systems in their design work and communicate ideas effectively with project engineers and contractors. The course will include commonly used heating, ventilating, air conditioning, plumbing piping and fixtures, fire sprinklers, electrical supply and distribution, smoke detection and fire alarm systems. Related mechanical, electrical and plumbing codes will also be discussed.

Term:

Offered Both Fall and Spring

- **ADI-384 Interiors Marketing & Contracts**

Prerequisites:

ADI-S201; Intended for majors only

Credits:

3.00

Description:

This course will cover the business aspects of interior design, including firm management, client, and contractor relationships, project management, proposal writing, and market resourcing. In addition, students will be exposed to career planning practices, such as portfolio development, resume preparation and interviewing techniques. Tours of architectural and interior design firms will also be included.

Term:

Offered Both Fall and Spring

- **ADI-398 Senior Programming & Pre-Design**

Prerequisites:

ADI S201, ADI S202, ADI S303, ADI S304, ADI S372

Credits:

3.00

Description:

This course is designed to be the first part of the BFA Senior Studio in Interior Design. The senior ID project is intended as the culmination of the interior design studio sequence. It is an individual effort, supported by the studio faculty, that is inclusive of the entire design process from the programming phase through final design and documentation. The objective of part one, Senior Programming & Pre-Design, is for individual students to research, develop, and draft a program document which will guide their design work in part two, Senior Studio. Students will explore the possible project types and precedents, select and develop a client profile and program, and research and analyze an architectural site. Written and graphic analysis tools will be employed. The preliminary conceptual (pre-design) phase of work is also introduced.

Term:

Offered Spring Term

- **ADI-400 Interior Design Internship**

Prerequisites:

ADI S202 and ADI S303; senior BFA standing required. This course fulfills the Expanded Classroom Requirement

Credits:

3.00

Description:

With the assistance of the faculty advisor, each student will identify an appropriate internship site with a local interior design firm. All interns are required to complete 120 hours of work/study within the semester, working a minimum of 8 hours per week under the direction of a qualified Interior Designer. Interns are expected to contribute to the host firm at a high level of design interaction. All interns will meet bi-weekly with the faculty advisor. The classroom seminars will reinforce new skills, share learning experiences, and answer questions or concerns. A firm site visit, production of firm profile, and participation in a professional organization are required within the seminar.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement

• ADI-500 Interior Design Directed Study

Prerequisites:

Consent of Program Director required.

Credits:

1.00- 6.00

Description:

Directed Study/Studio allows students to pursue an in-depth research project in an area of particular interest, directed by a qualified faculty member. Available every semester.

• ADI-H500 Interior Design Directed Study

Prerequisites:

Consent of Program Director required.

Credits:

1.00- 6.00

Description:

Directed Study/Studio allows students to pursue an in-depth research project in an area of particular interest, directed by a qualified faculty member. Available every semester.

Type:

Honors

• ADI-S106 Interior Design Communications

Prerequisites:

Take ADF-S101 ADI-S108 OR ADI-S205;

Credits:

3.00

Description:

Interior Design Communications teaches students how drawing media, observational drawing, perspective theory, color and design graphics can be integrated into the designer's process. In addition to exploring contrast, accent, reflection, shade and shadow, the course underscores the importance of freehand sketching as a tool to foster intellectual inquiry and convey design concepts to a wider audience. The course introduces students to manual and digital methods for composing work for conceptual expression, technical drawing presentation, and portfolio purposes.

Term:

Offered Both Fall and Spring

• ADI-S108 Perspective Principles

Prerequisites:

Prior or concurrent drawing experience

Credits:

3.00

Description:

This course introduces students to the systems of perspective developed during the Renaissance as a means of creating the illusion of 3-dimensional space on a 2-dimensional surface. Using 1-, 2-, and 3-point perspective, students will learn to effectively represent space. Basic drafting techniques and architectural scale are introduced. Both free-hand sketching and technical drawing methods will be emphasized. Manipulation of drawing through computerized scanning and digital photography included.

Term:

Offered Both Fall and Spring

• ADI-S110 Digital Orthographics

Prerequisites:

Take ADI-S108 OR ADI-S205;

Credits:

3.00

Description:

This course will enable the student to produce, manipulate and print 2-dimensional drawings using digital software including Computer Aided Drafting (CAD). Students will acquire the skills necessary for producing measured architectural plans, elevations and sections as well as isometric and axonometric drawing types. Fundamentals of illustrating drawings in color, light and shadow through digital programs will be introduced.

Term:

Offered Both Fall and Spring

• ADI-S201 Interior Design Studio I

Prerequisites:

ADF S152, ADF S143, ADI S110 Prior to or concurrent with ADI 234 Take ADI S106 or ADI S205

Credits:

3.00

Description:

This studio introduces students to basic design principles, design theory and concept development. Emphasis will be placed on design process, problem solving, spatial organization, anthropometrics, universal design awareness, and presentation techniques. Students will be given a series of projects of increasing complexity, utilizing and building upon the skills developed in the Foundation courses. Students will be expected to produce process diagrams, plans, elevations, models, and finish boards.

Term:

Offered Both Fall and Spring

- **ADI-S202 Residential Design Studio**

Prerequisites:

ADI S201 AND ADF S102

Credits:

3.00

Description:

This course addresses residential interior environments on a large scale. Students will develop client contact and programming skills. Emphasis will be placed on residential precedents, design process, human factors, accessibility, building codes, diagramming, spatial organization, detailing, presentation techniques, furnishings, finishes and lighting.

Term:

Offered Both Fall and Spring

- **ADI-S264 Advanced Interior Design Communication**

Prerequisites:

ADI S106 and ADI S110

Credits:

3.00

Description:

This course is designed to advance and reinforce presentation techniques and graphic technical skills introduced in Interior Design Communications. Students will continue to develop their proficiency in free hand sketching, rendering and perspective, and will learn various three-dimensional rendering software and other digital imaging techniques.

Term:

Offered Both Fall and Spring

- **ADI-S303 Contract Design Studio I**

Prerequisites:

ADF S102, ADI S201, ADI 242, ADI 244, ADI S264

Credits:

3.00

Description:

This commercial design studio focuses on the design of work environments. Students will develop programming and space planning skills unique to these environments through a series of small- to medium-sized projects. Emphasis will be placed on commercial precedents, programming, design process, human factors, building codes, ADA, spatial organization, detailing, presentation techniques, office furniture systems, equipment, finishes, and lighting.

Term:

Offered Both Fall and Spring

- **ADI-S304 Furniture and Detailing Studio**

Prerequisites:

ADI S201, ADI S264

Credits:

3.00

Description:

This course introduces students to the design process as it applies to furniture, addressing furniture ergonomics, materials, construction techniques, manufacturing and design. Students will research selected topics, and design seating, work/service pieces and cabinetry. Emphasis will be placed on furniture precedents, research, design process, human factors, accessibility, detailing, documentation and presentation techniques.

Term:

Offered Both Fall and Spring

- **ADI-S305 Contract Design Studio II**

Prerequisites:

ADI S202, ADI 221, ADI S110

Credits:

3.00

Description:

This studio focuses on adaptive re-use and renovation of commercial interiors with attention given to historical buildings in the Boston area. Emphasis on creative problem-solving methods and a philosophical approach to medium- and large-scale hospitality and retail design projects. Students will be required to incorporate the skills and knowledge gained throughout their studies to create a comprehensive project, including presentation drawings, models, material and furniture boards, and a set of construction documents and specifications.

Term:

Offered Fall Term

- **ADI-S366 Environmental Graphic Design**

Prerequisites:

ADI S372

Credits:

3.00

Description:

A cross-disciplinary course bringing together interior design students and graphic design students at the senior BFA level to collaborate on problem-solving in the visual and built environments. In the studio, students will be exposed to design issues and problems, both experiential and graphic. Students will be working in teams bringing new insight to solutions for a variety of client/project types. Field trips to fabricators, professional firms and EGD sites will be included. This is a survey class designed to introduce students to ways of producing three-dimensional graphic design projects within the built environment.

Term:

Offered Fall Term

• ADI-S372 Construction Documents

Prerequisites:

ADI S110 AND ADI S201

Credits:

3.00

Description:

Building on the curriculum of Orthogonal Drawing, this course will explore in more detail the features of CAD and BIM software. Programs will be used as tools to draft, organize, and produce a set of construction documents. Students will complete a full set of contract documents.

Term:

Offered Both Fall and Spring

• ADI-S401 Senior Studio

Prerequisites:

ADI S201, ADI S202, ADI S303, ADI S304, ADI S305, ADI S372 AND ADI 398

Credits:

3.00

Description:

This studio course completes the undergraduate studio sequence in Interior Design. This final design studio emphasizes individual competence with respect to the total design process. Students will utilize the research and programming document produced in ADI 398, Senior Programming & Pre-Design, to develop a comprehensive design solution for their individual studio problem through schematics, design development, presentation drawings and specifications.

Term:

Offered Spring Term

2015-2016 Archived Catalog Information

International Economics

The Department of Economics and the Department of World Languages & Cultural Studies jointly offer a career-oriented program that combines the study of international economics with knowledge of a world language and the politics, history, and cultures of other countries. International Economics is offered as both the BS and BA.

- [Major Requirements](#)
- [Societies](#)
- [Economics Courses](#)
- [French Courses](#)
- [Spanish Courses](#)

International Economics is offered as both the BS and BA.

Major Requirements for BS in International Economics: 9 courses, 34 credits

Students who wish to acquire a strong background in economics should choose the BS, which emphasizes economic decision making within a global environment.

Core Requirements (8 courses, 30 credits)

- EC-101 Applied Microeconomics

Prerequisites:

Non CAS majors need to have completed at least 15 credits.

Credits:

3.00

Description:

This course introduces students to foundational principles of microeconomic theory, with an emphasis on applications of concepts to management decision-making in specific industry and market settings. It describes and analyzes the interaction of supply and demand and the behavior of the prices of goods, services. It explains the determinations of costs, output, strategic pricing, and governance by firms under conditions of perfect and imperfect competition in a global economy. In addition, it describes the supply demand for factors of production and the impact of taxes and government regulation and intervention on firms and consumers.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-102 Global Macroeconomics**

Prerequisites:

Non-CAS majors need to have completed at least 15 credits

Credits:

3.00

Description:

This course examines the workings of the national and the global economy. It will describe the determination of Gross Domestic Product, the problems of unemployment, inflation, and the determination of economic growth. It will also describe and analyze the determination of the country's exchange rate, the balance of payments, and international borrowing and lending. A particular focus will be on understanding economic fluctuations (booms, busts, and recessions) in the domestic economy and its effects on other economies. It will analyze the role of the government and the effects of government spending and taxation on the economy. Furthermore, it will describe and analyze the determination of the quantity of money and interest rates in the economy and the role of the country's central bank. It examines the basis and pattern of international trade and the effects of a country's trade policy on the economy.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **STATS-250 Applied Statistics**

Prerequisites:

MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

Credits:

4.00

Description:

Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

Type:

Quantitative Reasoning

- **EC-430 International Trade Theory & Policy**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

This course examines theories of international trade. The policy implications of each theory are explored and the effect of trade on the welfare of the nation is examined. Also the development of trade blocs and the the political economy of trade are studied. Normally offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-442 International Monetary Economics**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

The balance of payments and foreign exchange markets and instruments, and the determination of exchange rates. Balance-of-payments adjustments under alternative exchange-rate systems, international liquidity, international economics policy and open economy macroeconomics.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-450 Applied Econometrics**

Prerequisites:

STATS-250 or permission of instructor

Credits:

4.00

Description:

This course begins with a brief review of statistical methods, including probability theory, estimation, and hypothesis testing. This background is used in the construction, estimation, and testing of econometric models. The consequences of a misspecified model, where the assumptions of a classical regression model are violated, are studied and the appropriate remedial measures are suggested. Other topics include dummy variables, binary choice models, and autoregressive models. Emphasis is on applied aspects of econometric modeling. There is extensive use of statistical software for data analyses. Normally offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

Choose one of the following Economics courses:

- **EC-141 Development Economics**

Credits:

4.00

Description:

Why do so many countries remain so poor? Why have some (e.g. the Asian tigers) grown so rapidly? Why have most of the countries of Eastern Europe and the Former Soviet Union been slow to ignite economic growth? These questions are addressed by looking at domestic factors (government policies, resource endowments) as well as the international environment (mobile investors, international financial institutions). Asks what economic choices these countries face now. Normally offered yearly. Cultural Diversity B

Type:

Cultural Diversity Opt B,Social Science,Asian Studies,BSJ SOCIAL SCIENCE,Diverse Perspectives

- **EC-151 Economic & Human Geography**

Credits:

4.00

Description:

The study of how economic and human activity is distributed across space, the reasons for these spatial distributions, and the processes that change the spatial organization of economic activity over time. Topics include: maps, map projections, and geographic information systems; population geography; the organization and location of cities, towns and villages; transportation and communication policy; industrial location; the geography of world trade; and geographic features of economic development. The course takes a global perspective, and draws on cases and examples from all over the world. Cultural Diversity B

Choose one of the following Economics courses:

- **EC-311 Intermediate Micro Theory**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

Theory of consumer behavior and demand. Theory of production and costs of production. Theory of the firm, and price and output decisions in different market structures, i.e., under perfect competition, monopoly, monopolistic competition and oligopoly. Decisions relating to pricing and employment of various inputs (labor and capital) under perfectly competitive, and less than perfectly competitive, resource markets. Required of all majors in Economics. Normally offered every semester.

Type:

Social Science,BSJ SOCIAL SCIENCE

• **EC-312 Intermediate Macro Theory**

Prerequisites:

EC-101 and EC-102

Credits:

4.00

Description:

This course covers the neoclassical and Keynesian models of aggregate economic activity. Coverage of the measurement of economic variables, such as aggregate income, the inflation rate, and the unemployment rate. Examines the behavior of the economy under conditions of price flexibility in the long run and price rigidity in the short run under rational and adaptive expectations. Analysis of the effect of changes in taxes and government expenditures, monetary policy and deficits on the economy. Coverage of the sources of economic growth. Required of all majors in Economics. Normally offered every semester.

Type:

Social Science,BSJ SOCIAL SCIENCE

Electives (1 course, 4 credits)

Choose one elective from the Economics course list.

Major Requirements for BA in International Economics: 11 courses, 42 credits

Students who wish to acquire a broad liberal arts preparation with a strong emphasis on languages and cultures should choose the BA. Students choosing the BA take five courses in French or Spanish. Those who enter the program with considerable foreign language experience will be required to take alternative courses as determined by advisor.

Core Requirements (6 courses, 22 credits)

- **EC-101 Applied Microeconomics**

Prerequisites:

Non CAS majors need to have completed at least 15 credits.

Credits:

3.00

Description:

This course introduces students to foundational principles of microeconomic theory, with an emphasis on applications of concepts to management decision-making in specific industry and market settings. It describes and analyzes the interaction of supply and demand and the behavior of the prices of goods, services. It explains the determinations of costs, output, strategic pricing, and governance by firms under conditions of perfect and imperfect competition in a global economy. In addition, it describes the supply demand for factors of production and the impact of taxes and government regulation and intervention on firms and consumers.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-102 Global Macroeconomics**

Prerequisites:

Non-CAS majors need to have completed at least 15 credits

Credits:

3.00

Description:

This course examines the workings of the national and the global economy. It will describe the determination of Gross Domestic Product, the problems of unemployment, inflation, and the determination of economic growth. It will also describe and analyze the determination of the country's exchange rate, the balance of payments, and international borrowing and lending. A particular focus will be on understanding economic fluctuations (booms, busts, and recessions) in the domestic economy and its effects on other economies. It will analyze the role of the government and the effects of government spending and taxation on the economy. Furthermore, it will describe and analyze the determination of the quantity of money and interest rates in the economy and the role of the country's central bank. It examines the basis and pattern of international trade and the effects of a country's trade policy on the economy.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-430 International Trade Theory & Policy**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

This course examines theories of international trade. The policy implications of each theory are explored and the effect of trade on the welfare of the nation is examined. Also the development of trade blocs and the the political economy of trade are studied. Normally offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-442 International Monetary Economics**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

The balance of payments and foreign exchange markets and instruments, and the determination of exchange rates. Balance-of-payments adjustments under alternative exchange-rate systems, international liquidity, international economics policy and open economy macroeconomics.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **STATS-250 Applied Statistics**

Prerequisites:

MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

Credits:

4.00

Description:

Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

Type:

Quantitative Reasoning

Choose one of the following Economics courses:

- **EC-141 Development Economics**

Credits:

4.00

Description:

Why do so many countries remain so poor? Why have some (e.g. the Asian tigers) grown so rapidly? Why have most of the countries of Eastern Europe and the Former Soviet Union been slow to ignite economic growth? These questions are addressed by looking at domestic factors (government policies, resource endowments) as well as the international environment (mobile investors, international financial institutions). Asks what economic choices these countries face now. Normally offered yearly. Cultural Diversity B

- EC-101 Applied Microeconomics

Prerequisites:

Non CAS majors need to have completed at least 15 credits.

Credits:

3.00

Description:

This course introduces students to foundational principles of microeconomic theory, with an emphasis on applications of concepts to management decision-making in specific industry and market settings. It describes and analyzes the interaction of supply and demand and the behavior of the prices of goods, services. It explains the determinations of costs, output, strategic pricing, and governance by firms under conditions of perfect and imperfect competition in a global economy. In addition, it describes the supply demand for factors of production and the impact of taxes and government regulation and intervention on firms and consumers.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-H101 Honors Principles of Microeconomics**

Prerequisites:

Honors Section Only : GPA of 3.3 or higher required.

Credits:

3.00

Description:

Introduction to the organization and operation of a market economy with a focus on how it allocates scarce resources; the analysis of consumer demand and profit maximizing behavior of business; examination of pricing and output decisions under conditions of competition, monopoly and imperfect competition. Analysis of markets for labor and capital. Policy issues include price ceilings and floors, competition and monopoly. Normally offered every semester.

Type:

Social Science,BSJ SOCIAL SCIENCE,Honors

- **EC-102 Global Macroeconomics**

Prerequisites:

Non-CAS majors need to have completed at least 15 credits

Credits:

3.00

Description:

This course examines the workings of the national and the global economy. It will describe the determination of Gross Domestic Product, the problems of unemployment, inflation, and the determination of economic growth. It will also describe and analyze the determination of the country's exchange rate, the balance of payments, and international borrowing and lending. A particular focus will be on understanding economic fluctuations (booms, busts, and recessions) in the domestic economy and its effects on other economies. It will analyze the role of the government and the effects of

government spending and taxation on the economy. Furthermore, it will describe and analyze the determination of the quantity of money and interest rates in the economy and the role of the country's central bank. It examines the basis and pattern of international trade and the effects of a country's trade policy on the economy.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-H102 Honors Global Macroeconomics**

Credits:

3.00

Description:

The measurement of economic growth; introduction to the theory of determination of national income and the price level; unemployment and inflation; theories on economic growth and the role of labor and capital in economic growth; functioning and impact of the monetary system; analysis of monetary and fiscal policies for economic stabilization; international transactions and their influence on the domestic economy. Prerequisites: GPA of 3.2 or higher. Normally offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE,Honors

- **EC-131 Environmental Economics**

Credits:

4.00

Description:

Identifies the environmental effects of economic activity, including polluted water and air, noise, and radiation, and values their costs and benefits. Analyzes mechanisms, including taxes and permits, for achieving a socially preferable level of pollution. Traces role played by institutions, including common ownership, in affecting environmental decay. Resource depletion (of oil, forests, and fisheries) and appropriate policy responses.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-141 Development Economics**

Credits:

4.00

Description:

Why do so many countries remain so poor? Why have some (e.g. the Asian tigers) grown so rapidly? Why have most of the countries of Eastern Europe and the Former Soviet Union been slow to ignite economic growth? These questions are addressed by looking at domestic factors (government policies, resource endowments) as well as the international environment (mobile investors, international financial institutions). - **EC-300 Professional Development in Economics**

Prerequisites:

EC-101 and EC-102 and at least 54 credits

Credits:

1.00

Description:

This one-credit course is designed to explore career opportunities in economics in depth. Classroom discussions, writing assignments, and site visits will help prepare students to identify and secure internship and post-graduate employment opportunities. Additional career paths, such as pursuing graduate studies in economics or related fields, and the application process, will also be addressed. The goal of this course is to help students reach their fullest professional potential following graduation. Ordinarily taken during junior year. Offered during the fall semester.

- **EC-311 Intermediate Micro Theory**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

Theory of consumer behavior and demand. Theory of production and costs of production. Theory of the firm, and price and output decisions in different market structures, i.e., under perfect competition, monopoly, monopolistic competition and oligopoly. Decisions relating to pricing and employment of various inputs (labor and capital) under perfectly competitive, and less than perfectly competitive, resource markets. Required of all majors in Economics. Normally offered every semester.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-312 Intermediate Macro Theory**

Prerequisites:

EC-101 and EC-102

Credits:

4.00

Description:

This course covers the neoclassical and Keynesian models of aggregate economic activity. Coverage of the measurement of economic variables, such as aggregate income, the inflation rate, and the unemployment rate. Examines the behavior of the economy under conditions of price flexibility in the long run and price rigidity in the short run under rational and adaptive expectations. Analysis of the effect of changes in taxes and government expenditures, monetary policy and deficits on the economy. Coverage of the sources of economic growth. Required of all majors in Economics. Normally offered every semester.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-402 Mathematical Economics**

Prerequisites:

EC-101 and MATH-134 or MATH-165

Credits:

4.00

Description:

This course introduces the mathematical basis of economic theory. Emphasis is placed on the mathematical tools that have been developed for various applications, with a focus on applied microeconomic analysis. The techniques of comparative-statics analysis are developed. Univariate and multivariate calculus are then presented in the context of unconstrained and constrained optimization. The course concludes by introducing the foundations of discrete-time and continuous-time dynamic optimization.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-420 Special Topics in Economics**

Credits:

4.00

Description:

Special Topics course. Topic varies semester to semester.

Type:

Social Science

- **EC-421 Public Economics: Tax and Budget**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

The theory of tax policy and tax structure. The effects on economic behavior (including labor supply, saving, risk-taking and investment, charitable giving, and growth) of different taxes (income, sales, value-added, inheritance, wealth, property). Tax equity, efficiency and incidence, in the United States and in comparative perspective. Additional topics include modeling state taxes; social security and pensions; and tax compensation. Normally offered yearly.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-423 Economics of Regulation**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

This course examines regulation and analyzes the structure, conduct, and performance of American industry. Monopoly and strategic behavior in oligopoly and monopolistic competition are considered. U.S. antitrust law and the effect of regulatory laws on industrial performance are explored. Regulatory practices, rate setting, deregulation, public-enterprise pricing, and issues in privatization are examined, with an emphasis on case studies and policy analysis. Normally offered every other year.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-430 International Trade Theory & Policy**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

This course examines theories of international trade. The policy implications of each theory are explored and the effect of trade on the welfare of the nation is examined. Also the development of trade blocs and the the political economy of trade are studied. Normally offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-431 History of Economic Thought**

Prerequisites:

EC-101 and EC-102

Credits:

4.00

Description:

Presents the leading contemporary schools of economic thought as the outcome of theoretical and philosophical controversies that began with the ancient Greeks and that continue today. The course covers the major contributors to economic thought, including Aristotle, Aquinas, the mercantilists, and the contributors to the 18th-century enlightenment, notably Adam Smith and David Hume. Going forward, it considers Marx, the neoclassical school of Jevons, Menger and Walras and the Keynesian school, along with some of the more modern schools such as behaviorism, institutionalism and cognitive economics. The contributions of the economists and philosophers studied in the course are considered in context of the times in which they wrote and lived. Students will acquire a grasp of the principal tenets of contemporary economic theory as well as an understanding of the historical origins of the disputes that still divide economists on major theoretical and philosophic issues.

Type:

BSJ SOCIAL SCIENCE

- **EC-432 Managerial Economics**

Prerequisites:

EC-101 and EC-102

Credits:

4.00

Description:

This is an applied course in microeconomics. The focus is on the application of economic theory and methods to examine how an organization can achieve its objectives most efficiently. Various economic tools that are frequently used in solving managerial problems will be presented. Topics include optimization techniques applied to demand and production functions, linear programming, risk analysis and portfolio theory. Normally offered every year.

Type:

Quantitative Reasoning

- **EC-433 Public Choice**

Prerequisites:

EC-101 and EC-102

Credits:

4.00

Description:

This course considers the degree to which it is possible to explain, predict, and guide political decision through the application of economic analysis. The course is organized around two competing visions of public choice: (1) a traditional organic approach that sees the core problem for public choice as requiring the maximization of social welfare and (2) a newer contractual approach that sees that problem as requiring attention to the institutional framework within which political decisions are made. Topics to be considered include the Arrow paradox and other problems in aggregating individual choices, rent-seeking, the Leviathan hypothesis, and non-market demand-revealing methods.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-435 Economics of Energy and Natural Resources**

Prerequisites:

Take EC-101;

Credits:

4.00

Description:

This course applies economic analysis to identify the origins, consequences, and policy implications of problems related to renewable and non-renewable natural resources, with particular attention to energy. Resources considered include forests, fisheries, water, minerals, and land. Energy resources covered include oil, gas, coal, nuclear, and alternatives (wind, solar, biomass, hydrogen, etc.), as well as electricity. Concepts examined include externalities, learning-by-doing, peak-load pricing, regulation, sustainability, cost-benefit analysis, and the commons problem.

Type:

BSJ SOCIAL SCIENCE,Social Science

- **EC-440 International Financial Economics**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

This course is a combination of International Finance and Corporate Finance and designed to give students a strong foundation in the theory and practice of multinational financial management. Course materials include (a) basics of corporate finance and capital asset pricing, (b) foreign currency futures, (c) derivative securities in foreign exchange markets such as currency futures, options, swaps, (d) exchange risk management for multinational corporations, (e) global capital markets and financial crisis.

Type:

Social Science

- **EC-442 International Monetary Economics**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

The balance of payments and foreign exchange markets and instruments, and the determination of exchange rates. Balance-of-payments adjustments under alternative exchange-rate systems, international liquidity, international economics policy and open economy macroeconomics.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-445 The Economics of the European Union**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

An economic analysis of the European Union, the history of European monetary and economic integration. and the creation of the Euro. A survey of the development and evolution of key European policies, such competition, industry, agriculture, environment, regional, etc. A discussion of economic implications of the enlargement of the European Union, as well as its trade relations with the U.S. and other countries within the context of the World Trade Organization.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-450 Applied Econometrics**

Prerequisites:

STATS-250 or permission of instructor

Credits:

4.00

Description:

This course begins with a brief review of statistical methods, including probability theory, estimation, and hypothesis testing. This background is used in the construction, estimation, and testing of econometric models. The consequences of a misspecified model, where the assumptions of a classical regression model are violated, are studied and the appropriate remedial measures are suggested. Other topics include dummy variables, binary choice models, and autoregressive models. Emphasis is on applied aspects of econometric modeling. There is extensive use of statistical software for data analyses. Normally offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-460 Game Theory**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

This course introduces students to the foundations of game theory using applications from economics and everyday decision-making. The course examines the common strategic elements of interactions between consumers and producers, governments and citizens, politicians and their constituencies, countries and their trading partners, and various other participants in social relationships. The course provides a theoretical framework for modeling strategic interaction, beginning with the development of the concept of a Nash equilibrium, reputation, signaling, collective-action problems, and voting procedures and strategies. Normally offered every other year.

Type:

Quantitative Reasoning

- **EC-483 Money, Banking & Financial Markets**

Prerequisites:

EC 101, EC 102

Credits:

4.00

Description:

This course examines the role of depository institutions and the Federal Reserve system in determining the supply of money. The course also explains the financial environment and the role of monetary policy decisions on changes in price, interest rates, money, and economic activity. The course provides the student with both theoretical and applied analysis. Prerequisites: EC 101, EC 102.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-490 Senior Seminar in Economics**

Prerequisites:

EC-450 or STATS-350 and Senior Standing; Or permission of Undergraduate Director.

Credits:

4.00

Description:

This is a required course for all students majoring in economics, to be taken in the spring semester of their senior year. Students are required to develop an economic thesis project in consultation with the professor for the course and to present it to the class.

Type:

BSJ SOCIAL SCIENCE, Social Science

- **EC-503 Internship in Economics**

Prerequisites:

Instructor's consent required

Credits:

4.00

Description:

Approximately 12 hours per week working in a position designed to give the student responsibility and a learning opportunity in economics. Interested students should consult the instructor in advance.

Type:

Social Science, BSJ SOCIAL SCIENCE

- **EC-504 Economic Competitiveness: Theory and Practice**

Prerequisites:

Instructor's consent required

Credits:

4.00

Description:

This course examines the concept of economic competitiveness among nations and states and its usefulness to policymakers seeking to improve economic conditions. The emphasis will be on state-based economic competitiveness. We will read the current literature on economic growth and competitiveness and explore the current controversy surrounding the shortcomings of business climate indices. Special attention will be given to Beacon Hill Institute's index which attempts to identify the states with the sets of policies that sustain long-term economic growth and sustainable high incomes for citizens. The student will apply a stress test to the BHI index identifying its strengths and weaknesses. To learn how the index is used by professionals, the student will also compare the index against similar measures and interview at least two practitioners on how their states apply the index. The student will meet regularly with her advisor and submit a research paper and a professional memorandum advising BHI on how best to improve the index.

Type:

Expanded Classroom Requirement, Social Science

• EC-510 EC Independent Study

Prerequisites:

An independent study form must be submitted to the CAS Dean's Office.

Credits:

1.00- 5.00

Description:

Independent study in economics

Type:

Social Science, BSJ SOCIAL SCIENCE

• EC-511 Professional Development in Economics

Prerequisites:

CAS-201 and at least 54 credits

Credits:

1.00

Description:

This one-credit course is designed to explore career opportunities in economics in depth. Classroom discussions, writing assignments, and site visits will help prepare students to identify and secure internship and post-graduate employment opportunities. Additional career paths, such as pursuing graduate studies in economics or related fields, and the application process, will also be addressed. The goal of this course is to help students reach their fullest professional potential following graduation.

• STATS-250 Applied Statistics

Prerequisites:

MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

Credits:

4.00

Description:

Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

Type:

Quantitative Reasoning

• STATS-H250 Honors Applied Statistics

Prerequisites:

MATH-128, MATH 130, 134, 146, or 165 and Honors Course; GPA of 3.3

Credits:

4.00

Description:

Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analyses. The use of computers is emphasized throughout the course. Prerequisite: MATH 130, MATH 134, MATH 146, or MATH 165 Honors Course GPA of 3.2 or higher required. 1 term - 4 credits Normally offered every year.

Type:

Quantitative Reasoning, Honors

• STATS-350 Applied Statistical Methods

Prerequisites:

STATS 250

Credits:

4.00

Description:

This application-oriented course is designed to go beyond the topics covered in STATS 250. It includes topics like Analysis of Variance (ANOVA), special topics in regression analysis and index numbers. Further, time series data, which consist of values corresponding to different time intervals, are analyzed. The objective is to examine past time series values to forecast, or predict future values. Seasonal variations are also incorporated in the forecasts. The course will provide useful computer skills involving various statistical packages and is an excellent preparation for graduate work in business and social sciences.

Type:

BA FOREIGN, Diverse Perspectives

- **FR-205 The Francophone World**

Prerequisites:

FR 202 or Instructor's consent

Credits:

4.00

Description:

Explores the francophone world through the study of short stories, print media, and film, by engaging with the rich textured and diverse francophone literary canon. Teaches advance notions of French grammar, write compositions, and the art of conversation related to cultural themes.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt B,BA FOREIGN,Diverse Perspectives

- **FR-206 Composition, Conversation and Professional Development**

Prerequisites:

FR-202

Credits:

4.00

Description:

This course enhances students' conversational and writing skills in French. Authentic language and formal writing skills are detailed. The development of oral proficiency is stressed with a focus on listening comprehension, reading and writing. Advanced French grammar is stressed with a focus on written grammatical exercises. This class is open to heritage speakers as well as those who have participated or are planning on participating in the CAVILAM, CCFS-Sorbonne Programs.

Term:

Alternates Fall & Spring

Type:

BA FOREIGN

- **FR-214 Marie Antoinette, Fashion Revolutionary**

Credits:

4.00

Description:

Explores the French Enlightenment and its culture leading up to the French revolution through a focus on one significant figure: Marie-Antoinette. Examines the relationship of female image and the body politic of eighteenth-century France. Considers the legacy of Marie-Antoinette as martyr and fetish object in the nineteenth and twentieth centuries, and focuses on her continuing relevance today. Journalism

The Communication & Journalism (CJN) Department offers course work leading to a Bachelor of Arts or Bachelor of Science with a major in [Advertising](#), [Global & Cultural Communication](#), Journalism, [Media & Film](#), or [Public Relations](#). A Bachelor of Science in Journalism is also offered to Journalism and Public Relations majors. The department also offers a [minor in Communication & Journalism](#).

All Communication & Journalism majors study under a faculty who have extensive academic and professional experience. CJN students begin their program by taking two foundation courses that focus on effective speaking, concise writing, and critical thinking. Then, each student selects required and elective courses in their major to develop theoretical and practical knowledge of their field.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Accelerated Bachelor's/Master's Degree in Communication](#)
- [Honors](#)
- [Communication & Journalism Courses](#)

We offer an accelerated path for undergraduate Communication & Journalism (CJN) majors to obtain a master's degree in Communication.

Who is eligible

- CJN majors who are rising seniors at Suffolk with a GPA of 3.5 or higher in their major and overall.
- Students must meet all of the requirements of one of the undergraduate degree programs (BA, BS, BSJ) offered by the Department of Communication & Journalism. In addition, they must meet all of the requirements of one of the Master's of Communication degree concentrations.
- Applications follow the regular admission procedures; please note that applicants for the accelerated degree will have the GRE requirement waived.

Degree Requirements

1. Students admitted to this dual degree program must meet all the requirements of an undergraduate degree program within the department of Communication & Journalism.
2. Student must also meet all requirements for the Master's degree in Communication.
3. Students will take two CJNI graduate courses during their senior year; one during the fall semester and one during the spring semester. The two graduate courses taken during the senior year will count toward BOTH the undergraduate and graduate degree requirements. Credit hours will be awarded based on the graduate course description.
4. The graduate courses taken during the senior year will be determined by the Communication graduate program director.
5. Students are subject to the usual standards for academic standing, i.e., undergraduate standards for undergraduate courses and graduate standards for graduate courses.

Upon successful completion of all of the degree requirements, a student will receive a dual Bachelor's and Master's degree. The exact degree will be awarded based on the specific undergraduate program the student completes. A student may permanently exit the dual degree program and opt to graduate with a Bachelor's degree if all the requirements for a Bachelor's degree have been met. In this case, the graduate courses taken in the senior year will be counted as 4-credit courses applied toward the undergraduate degree requirements.

2015-2016 Archived Catalog Information

Latin American & Caribbean Studies

The Latin American & Caribbean Studies major seeks to develop a deeper understanding of the peoples and cultures of our Latin American and Caribbean neighbors. Through a multidisciplinary major in the humanities and social sciences, students will be prepared to pursue their post-graduate interests in international organizations, education, business, government, communication, and journalism.

Demonstrated proficiency in Spanish beyond the intermediate level is required. Normally this can be fulfilled by successful completion of one 300-level course. For native speakers and in the case where the student's area of interest is better served by knowledge of another language (e.g., Portuguese or French), proficiency will be determined by an examination administered by the World Languages & Cultural Studies Department.

Students may major or minor in Latin American & Caribbean Studies.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Minor Requirements](#)
- [Honors](#)
- [Latin American & Caribbean Studies Courses](#)

Major Requirements: 10 courses, 40 credits

Core Requirements (5 courses, 20 credits)

- GVT-281 Intro to Comparative Politics

Prerequisites:

GVT 110 and GVT 120 or consent of instructor.

Credits:

4.00

Description:

This course examines various methods of comparing political systems. Institutions such as executive departments, legislatures, court systems and local governmental systems are examined comparatively. It includes analysis of the impact of different economic systems on political/governmental institutions, and on economic circumstances that impact government. It also looks at political socialization both in terms of process and comparative content. An effort is made to include countries from all regions of the world. Normally offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

Choose one of the following Sociology courses:

- **SOC-227 Race in American Society**

Credits:

4.00

Description:

Despite the election of Barack Obama as President of the United States, race remains one of the most divisive forces in U.S. society. While many of us struggle against racism, racial classification continues to affect where we live, where we work, and how we see ourselves. Racial classification affects our access to health care and our encounters with police officers. Distorted images of racial groups fill television and movie screens. Appeals to racism and fear of foreigners are dominant themes in elections to state and national offices. This course examines the formation and re-formation of racial classifications: how particular groups become racially identified, how these classifications change over time, and how conflicts over race have shaped American society. The meanings of race, as seen from a variety of perspectives, will be a consistent theme throughout the course.

Term:

Occasional

Type:

Cultural Diversity Opt A,Diverse Perspectives,Cultural Diversity Opt B

- **SOC-228 Cultural, Global and Social Perspectives**

Credits:

4.00

Description:

Enables students to examine, as well as develop an awareness and appreciation of, diversity within today's society. Providing an overview of the major racial, ethnic, and cultural groups in the U.S., the focus is on the ways in which cultural awareness enhances professional helping relationships and improves the operation of human services systems.

Term:

Type:

Cultural Diversity Opt A,Diverse Perspectives

Choose one of the following Economics courses:

- **EC-141 Development Economics**

Credits:

4.00

Description:

Why do so many countries remain so poor? Why have some (e.g. the Asian tigers) grown so rapidly? Why have most of the countries of Eastern Europe and the Former Soviet Union been slow to ignite economic growth? These questions are addressed by looking at domestic factors (government policies, resource endowments) as well as the international environment (mobile investors, international financial institutions). Asks what economic choices these countries face now. Normally offered yearly. Cultural Diversity B

Type:

Cultural Diversity Opt B,Social Science,Asian Studies,BSJ SOCIAL SCIENCE,Diverse Perspectives

- **EC-151 Economic & Human Geography**

Credits:

4.00

Description:

The study of how economic and human activity is distributed across space, the reasons for these spatial distributions, and the processes that change the spatial organization of economic activity over time. Topics include: maps, map projections, and geographic information systems; population geography; the organization and location of cities, towns and villages; transportation and communication policy; industrial location; the geography of world trade; and geographic features of economic development. The course takes a global perspective, and draws on cases and examples from all over the world. Cultural Diversity B

GVT 281 or instructor consent

Credits:

4.00

Description:

This course examines the evolution of Latin America in the context of globalization. The first part analyzes the main political and economic trends of Latin America as a region, while the second presents the main challenges Mexico is facing today in the area of security. The third part moves forward into the detailed explanation of the transformations of the largest South American countries such as Colombia, Argentina, Chile and Venezuela, among others. The final section looks at the relationship between Latin America and the United States.

Type:

Cultural Diversity Opt B, Social Science

• **GVT-466 Governance & Regional Political Economy**

Prerequisites:

GVT 261

Credits:

4.00

Description:

This course examines the intertwined nature of the globalization and regionalization processes from the perspective of global political economy. The first part of the course provides the basic elements and indicators to understand the main challenges the international economy is facing such as crisis, protectionism, and underdevelopment, inter alia. The second part presents the evolution of globalization and regionalism in the past decades. The third and final section compares how the distinct regions in the world are dealing with local and global problems; particularly attention is paid to the European Union, NAFTA, Mercosur and APEC.

Type:

Social Science

- **GVT-469 International Human Rights**

Prerequisites:

GVT 261 Junior status or above

Credits:

4.00

Description:

An examination of human rights at the end of the 20th century. Attention will be given to the origin and expansion of the concept of human rights in different political systems, the links between culture and human rights and the means and mechanisms for safeguarding human rights with particular reference to the United Nations system.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-507 GVT Study Trip**

Prerequisites:

INSTRUCTOR'S PERMISSION This course fulfills the Expanded Classroom Requirement

Credits:

4.00

Description:

APPROVAL OF DEPT. CHAIRPERSON. Specially arranged study trip to a foreign country for the purpose of obtaining knowledge through direct experience and observation. Includes prearranged site visits, meetings, required reading and written assignments. ECR

Type:

Social Science, Expanded Classroom Requirement

- **GVT-524 Washington Internship**

Prerequisites:

This course fulfills the Expanded Classroom Requirement

Credits:

8.00

Description:

A full-time summer internship in Washington D.C. Consult the Department for more details. ECR

Type:

Social Science, Expanded Classroom Requirement

- **GVT-525 Washington Internship Seminar**

Prerequisites:

Concurrent enrollment in GVT 523 or GVT 524; Sophomore standing;

Credits:

4.00

Description:

ECR

Type:

Social Science, Expanded Classroom Requirement

- **GVT-526 International Internship-London**

Prerequisites:

Juniors standing; GVT 528 & GVT 529 Concurrent

Credits:

8.00

Description:

A full-time, one-semester International Internship in London.

Type:

Social Science, Expanded Classroom Requirement

- **GVT-528 International Seminar I**

Prerequisites:

Concurrently with GVT 526 or GVT 530 and GVT 529

Credits:

4.00- 8.00

Description:

One of two required seminars to be taken by International interns and service learning participation. ECR

Type:

Social Science,Expanded Classroom Requirement

- **GVT-529 International Seminar II**

Prerequisites:

Concurrently with GVT 526 or GVT 530 and GVT 528

Credits:

4.00- 8.00

Description:

One of two required seminars to be taken by International interns and service learning participation ECR

Type:

Social Science,Expanded Classroom Requirement

History

- **HST-377 Caribbean and Latin-American Diaspora**

Credits:

4.00

Description:

A look at the migration of people, along with their culture, to and from the Caribbean and Latin America. The first half of the course looks at how European, Asian and African diasporas settled in the region, assimilated and contributed to the ethnic and cultural base of Caribbean and Latin America countries in the colonial period. The second half offers insight into how and why people from the Caribbean and Latin America would later form diasporas of their own in countries like the United States in the twentieth century. Students taking this course will get a sense of the struggles, accomplishments and culture of Caribbean and Latin American peoples in the United States. Formerly HST 286.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **HST-396 The African Diaspora**

Credits:

4.00

Description:

Examines the global dispersion of African people outside of the African continent. The history and culture of African descendant people and their communities in the Americas, Europe, and Asia will be included.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities & History, Cultural Diversity Opt A

Latin American & Caribbean Studies

- **FR-205 The Francophone World**

Prerequisites:

FR 202 or Instructor's consent

Credits:

4.00

Description:

Explores the francophone world through the study of short stories, print media, and film, by engaging with the rich textured and diverse francophone literary canon. Teaches advance notions of French grammar, write compositions, and the art of conversation related to cultural themes.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt B,BA FOREIGN,Diverse Perspectives

- **SPAN-315 Business Spanish**

Prerequisites:

SPAN 290 or SPAN 300 or Instructor's consent.

Credits:

4.00

Description:

Integrates language learning with culture via business context of the Hispanic world. Spanish for banking and finance, marketing and advertising, and international commerce are highlighted. Students increase their cross-cultural understanding and written and oral proficiency in business Spanish through a wide range of assignments.

Type:

Diverse Perspectives

- **SPAN-390 Introduction to Latin American and Caribbean Literature**

Prerequisites:

SPAN 300; SPAN 302 is strongly recommended

Credits:

4.00

Description:

Examines authors from Latin America and the Caribbean in their historical and cultural contexts. Reading and class discussions consider the relationship between the writer and society by covering such topics as colonialism, the oral tradition, modernism and the emergence of new narratives in the twentieth century. The Inca Garcilaso, Sor Juana, Carlos Fuentes, Rigoberta Menchu, and Pablo Neruda are among some writers studied.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities Literature Requirement, BA FOREIGN, Diverse Perspectives

- **SPAN-405 Women's Voices in Latin America**

Prerequisites:

SPAN-300; Spanish 302 or its equivalent is strongly recommended

Credits:

4.00

Description:

Examines the changing roles of women in Mexico, the Caribbean, Central and South America through fiction, non-fiction, drama, poetry and film. Special focus is placed on the impact that changes in social ideology and culture have had on their identity and writings. Texts available in English.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, BA FOREIGN

- **SPAN-407 Latin American Short Narrative**

Prerequisites:

Spanish 300; or Instructor's consent; Spanish 302 is strongly recommended

Credits:

4.00

Description:

Explores some of the major trends in the twentieth century Latin American story telling. Readings reflect the vast array of voices and styles, beginning with fantastic literature of the 1930's, the birth of magical realism and the more contemporary, socio-political narratives. Authors include Isabel Allende, Julio Cortazar, Rosario Castellanos, Gabriel Garcia Marquez, Juan Rulfo, Luisa Valenzuela, among others.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement, BA FOREIGN

• **SPAN-408 Latin American Cinema**

Prerequisites:

Take ENG-102 or ENG-103 or Instructor's consent. Span 302 is strongly recommended for Spanish and Latin American & Caribbean Studies majors and minors.

Credits:

4.00

Description:

Begins with the Cuban revolution as a point of departure and examines films from Argentina, Chile, Colombia, Mexico, and other Latin American countries. Students explore the relationship between film & society and consider how knowledge of a culture and its history is influenced and shaped by what is seen on the screen. Films in Spanish with English subtitles.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement

- **SPAN-416 Border Crossings the Latino Experience in the USA**

Prerequisites:

ENG-102 or ENG-103 or Instructor's consent. Span 302 is strongly recommended for Spanish and Latin American & Caribbean Studies majors and minors.

Credits:

4.00

Description:

Examines the myth of a singular Latino experience in the United States through a variety of genres and authors. Issues relating to culture, language, family, and religion are among some of the topics explored. Authors include Sandra Cisneros, *House on Mango Street*, Junot Diaz, *The Brief Wondrous Life of Oscar Wao*, Julia Alvarez, *How the Garcia Girls Lost Their Accents*, Tato Laviera, and *American*.

Term:

Occasional

Type:

Cultural Diversity Opt A, Humanities Literature Requirement

- **SPAN-427 U.S. Mexican Border in the New Millennium**

Prerequisites:

SPAN 290 or 300 or Instructor's consent

Credits:

4.00

Description:

Explores the literature, culture, and history of the United States-Mexico Border, and analyzes the profound changes that the gain/loss of territories created by the Treaty of Guadalupe Hidalgo caused for the citizens in the region. Emphasis is on contemporary border theatre and film. Students read

works of Salcedo, Galindo, Mijares, Rascon Banda, among others, and examine contemporary films and documentaries such as *Senorita Extraviada*, *Victoria para Chino*, and *Crossing Arizona*.

Term:

Occasional

Type:

BA FOREIGN

Sociology

- **SOC-227 Race in American Society**

Credits:

4.00

Description:

Despite the election of Barack Obama as President of the United States, race remains one of the most divisive forces in U.S. society. While many of us struggle against racism, racial classification continues to affect where we live, where we work, and how we see ourselves. Racial classification affects our access to health care and our encounters with police officers. Distorted images of racial groups fill television and movie screens. Appeals to racism and fear of foreigners are dominant themes in elections to state and national offices. This course examines the formation and re-formation of racial classifications: how particular groups become racially identified, how these classifications change over time, and how conflicts over race have shaped American society. The meanings of race, as seen from a variety of perspectives, will be a consistent theme throughout the course.

Term:

Occasional

Type:

Cultural Diversity Opt A,Diverse Perspectives,Cultural Diversity Opt B

- **SOC-347 Immigration Law and Policy**

Prerequisites:

Prerequisite: SOC 113 or SOC 116 OR Instructor's consent

Credits:

4.00

Description:

This course examines U.S. Immigration legislation and policies, focusing on how and why various immigration laws and policies have been established and implemented throughout history. We will address the intersection between immigration policy and race, ethnicity, nationality and socioeconomic status, as well as explore the effects that immigration laws have had on various immigrant groups and society in general.

Term:

Occasional

Type:

Cultural Diversity Opt A

• **SOC-327 Special Topics: General Sociology**

Credits:

4.00

Description:

A course with special interest topics in sociology which changes depending on the professor.

Term:

Occasional

Academic Catalogs

[Academic Catalogs](#) > [Undergraduate Catalog](#) > [College of Arts & Sciences](#) > [Majors, Minors, & Certificates](#) > Latin American & Caribbean Studies

2015-2016 Archived Catalog Information

Latin American & Caribbean Studies

The Latin American & Caribbean Studies major seeks to develop a deeper understanding of the peoples and cultures of our Latin American and Caribbean neighbors. Through a multidisciplinary major in the humanities and social sciences, students will be prepared to pursue their post-graduate interests in international organizations, education, business, government, communication, and journalism.

Demonstrated proficiency in Spanish beyond the intermediate level is required. Normally this can be fulfilled by successful completion of one 300-level course. For native speakers and in the case where the student's area of interest is better served by knowledge of another language (e.g., Portuguese or French), proficiency will be determined by an examination administered by the World Languages & Cultural Studies Department.

Students may major or minor in Latin American & Caribbean Studies.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Minor Requirements](#)
- [Honors](#)
- [Latin American & Caribbean Studies Courses](#)

Minor Requirements: 6 courses, 24 credits

Prerequisite

Demonstrated proficiency of Spanish, Portuguese, or French beyond the intermediate level is required. Normally this can be fulfilled by successful completion of one 300-level course.

The minor in Latin American & Caribbean Studies requires six courses (24 credits) of combined interdisciplinary study.

Students must take at least one course from the following disciplines: Government, Latin American & Caribbean Studies, and History.

Students must take three additional courses, which may include but are not restricted to related interdisciplinary fields: Communication & Journalism, Economics, and Sociology.

See the Latin American & Caribbean Studies Major Requirements tab for the list of courses.

Mathematics with Actuarial Concentration

The Mathematics & Computer Science Department offers two Mathematics major programs: [Pure Mathematics](#) and Mathematics with Actuarial Concentration. These programs are designed to provide a strong foundation upon which to begin a challenging and rewarding career immediately upon graduation or for pursuing graduate studies.

The department also offers minors in Pure Mathematics and Mathematics with Actuarial Concentration, both of which can be used to enhance the career options for students who choose to major in another discipline.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Mathematics with Actuarial Concentration Major Requirements](#)
- [Mathematics with Actuarial Concentration Minor Requirements](#)
- [Honors](#)
- [Mathematics Courses](#)
- [Math Statistics Courses](#)

Major Requirements: 17 courses, 62 credits

A student majoring in Mathematics with Actuarial Concentration must successfully complete 32 credits of coursework in mathematics, 15 credits of coursework in finance/accounting and statistics, and 15 credits in economics, computer science, and information systems, distributed as follows:

Mathematics Requirements (8 courses, 32 credits)

- MATH-165 Calculus I

Prerequisites:

MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

Credits:

4.00

Description:

Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

• MATH-166 Calculus II

Prerequisites:

MATH 165 with grade of C or better

Credits:

4.00

Description:

Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation, convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

• MATH-265 Calculus III

Prerequisites:

MATH 166 with grade of C or better

Credits:

4.00

Description:

Parametric equations and polar coordinates (curves, areas, conic sections); vectors and the geometry of space (the dot product, vector arithmetic, lines and planes in 3-space, the cross product, cylinders and quadratic surfaces); vector functions (limits, derivatives and integrals, motion in space); partial derivatives (functions of several variables, limits and continuity, tangent planes and differentials, chain rule, directional derivatives, gradient, extrema, Lagrange multipliers); multiple integrals (double integrals, applications); vector calculus (vector fields, line integrals, fundamental theorem for line integrals, Green's Theorem, curl and divergence, parametric surfaces, surface integrals). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-255 Probability and Statistics**

Prerequisites:

MATH-165 with a grade of C or better

Credits:

4.00

Description:

Topics include: random variable and distribution; expectation and variance; special discrete/continuous distributions (uniform, binomial, negative binomial, geometric, hypergeometric, Poisson, normal, and exponential distributions); joint distribution, marginal distribution and conditional distribution; covariance; limit theorems (law of large numbers and central limit theorem); introduction to confidence interval and hypothesis testing; regression analysis. Offered as needed.

- **MATH-290 Financial Mathematics I**

Prerequisites:

MATH-166 with a grade of C or better

Credits:

4.00

Description:

This course is mainly designed for students who are interested in financial mathematics and/or actuarial sciences, especially if they plan to take the second actuarial exam, and/or if they plan to study more in financial mathematics. The materials covered include time value of money, annuities, loans, bonds, cash flows and portfolios, general derivatives, options, hedging and investment strategies, forwards and futures, and swaps.

Type:

Expanded Classroom Requirement

- **MATH-331 Introduction to Abstract Math**

Prerequisites:

MATH-165 and MATH-166 with a grade of C or better

Credits:

4.00

Description:

this course is intended to provide a firm foundation for and a taste of the study of advanced mathematics. While the course content varies somewhat, it is designed to give students a deeper understanding of the algebraic and analytical structure of the integers, the rational numbers and the real numbers and how they act as a building block to a variety of fields of mathematics. Students are introduced to the process of mathematical discovery and the language of mathematics. Exercises and projects are designed to illustrate the need for proof and to further refine the student's ability to analyze, conjecture and write mathematical proofs. This course is a prerequisite for most upper level mathematics courses and, after completing it a student will be in a position to determine realistically if he or she ought to major or minor in mathematics.

- **MATH-431 Linear Algebra**

Prerequisites:

Math 331 must have grade C or higher

Credits:

4.00

Description:

System of linear equations, Gaussian elimination, matrices and their algebra, inverse of a matrix, determinants, cofactor expansion, Cramer's rule, vectors in and their algebra, abstract vector spaces, subspaces, linear independence, basis and dimension, linear transformations, isomorphism of vector spaces, rank and nullity, matrix of a linear transformation, inner product spaces, angle and orthogonality, eigenvalues and eigenvectors of a linear transformation, characteristic equation, Cayley-Hamilton theorem, diagonalization.

- **MATH-462 Real Analysis**

Prerequisites:

MATH 331 with at least a grade of C

Credits:

4.00

Description:

A detailed treatment of the basic concepts of analysis including the real numbers; completeness and its equivalence to other properties of the reals such as monotone convergence, Archimedean property, Bolzano-Weierstrass theorem; the topology of Euclidean spaces, compactness and the Heine-Borel theorem, connectedness, continuity and uniform continuity and uniform convergence of functions, pointwise and uniform convergence of functions, and an introduction to metric spaces.

Accounting/Finance/Statistics Requirements (5 courses, 16 credits)

- **ACCT-201 Accounting for Decision Making I**

Prerequisites:

MATH-128 or higher and WRI-102 or WRI-H103 or SBS-220

Credits:

3.00

Description:

Introduces students to the accounting cycle, the financial statements, and the theory underlying accounting as information. Provides users of accounting information with a basic understanding of how to appraise and manage a business. Addresses current accounting topics, including relevant ethical and international issues found in the financial press.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **ACCT-202 Accounting for Decision Making II**

Prerequisites:

ACCT-201

Credits:

3.00

Description:

Enables students to apply the concepts and skills from ACCT 201. They learn how to analyze the financial condition and performance of a firm, and how to use accounting information in business planning, decision-making, and control. Topics include cost-volume-profit analysis, costing systems, variance analysis, and the budget process. Discusses relevant current ethical and competitive issues found in the financial press.

Term:

Offered Both Fall and Spring

- **FIN-200 Business Finance**

Prerequisites:

MATH 128 or higher; ACCT 201; STATS 240 or STATS 250 (can take concurrently with FIN 200); Sophomore standing

Credits:

3.00

Description:

This course is a study of the functions of business finance and focuses on basic financial principles such as time value of money, risk and return tradeoffs, and asset valuation. Formally FIN 310.

Term:

Offered Both Fall and Spring

- **STATS-350 Applied Statistical Methods**

Prerequisites:

STATS 250

Credits:

4.00

Description:

This application-oriented course is designed to go beyond the topics covered in STATS 250. It includes topics like Analysis of Variance (ANOVA), special topics in regression analysis and index numbers. Further, time series data, which consist of values corresponding to different time intervals, are analyzed. The objective is to examine past time series values to forecast, or predict future values. Seasonal variations are also incorporated in the forecasts. The course will provide useful computer skills involving various statistical packages and is an excellent preparation for graduate work in business and social sciences.

Type:

Social Science

Choose one of the following Finance courses:

- **FIN-311 Intermediate Finance**

Prerequisites:

FIN 200 (formerly FIN 310)

Credits:

3.00

Description:

Intermediate Finance expands on basic financial concepts and introduces more advanced topics. Material emphasizes solutions to problems of capital structure, investment and financing. Other major topics include distribution policy, working capital management, derivative corporate securities, and corporate restructuring.

Term:

Offered Both Fall and Spring

- **FIN-313 General Insurance**

Prerequisites:

FIN 200 (formerly FIN 310); Junior standing

Credits:

3.00

Description:

This course includes the theory, practice and problems of risk bearing in business and personal pursuits including life, property and casualty insurance and dealing with contract analysis and investments as well as corporate risk management.

Term:

Offered Fall Term

- **FIN-315 Principles of Investments**

Prerequisites:

FIN 200 (formerly FIN 310); Junior standing

Credits:

3.00

Description:

This course covers the investment of funds by individuals and institutions. Focuses on analysis of investments and security markets, and the mechanics of trading and investing. A variety of investment vehicles are discussed, including stocks, bonds, futures, and options.

Term:

Offered Both Fall and Spring

- **FIN-411 Futures and Options**

Prerequisites:

FIN 315; Junior standing;

Credits:

3.00

Description:

This course is an in-depth analysis of derivatives: futures, options, and swaps. The course explains why these securities exist, where and how they are traded, how to employ them in managing risk, and how to accurately price them. It also covers the use of these derivatives in the context hedging or speculation.

Term:

Offered Spring Term

- **FIN-413 Investment Analysis and Portfolio Management**

Prerequisites:

FIN 315, Junior standing

Credits:

3.00

Description:

This course is an advanced course in investment analysis stressing efficient frontier and diversification. Also studies portfolio construction and management, and the tradeoff of risk versus return.

Term:

Offered Fall Term

- **EC-101 Applied Microeconomics**

Prerequisites:

Non CAS majors need to have completed at least 15 credits.

Credits:

3.00

Description:

This course introduces students to foundational principles of microeconomic theory, with an emphasis on applications of concepts to management decision-making in specific industry and market settings. It describes and analyzes the interaction of supply and demand and the behavior of the prices of goods, services. It explains the determinations of costs, output, strategic pricing, and governance by firms under conditions of perfect and imperfect competition in a global economy. In addition, it describes the supply demand for factors of production and the impact of taxes and government regulation and intervention on firms and consumers.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-102 Global Macroeconomics**

Prerequisites:

Non-CAS majors need to have completed at least 15 credits

Credits:

3.00

Description:

This course examines the workings of the national and the global economy. It will describe the determination of Gross Domestic Product, the problems of unemployment, inflation, and the determination of economic growth. It will also describe and analyze the determination of the country's exchange rate, the balance of payments, and international borrowing and lending. A particular focus will be on understanding economic fluctuations (booms, busts, and recessions) in the domestic economy and its effects on other economies. It will analyze the role of the government and the effects of government spending and taxation on the economy. Furthermore, it will describe and analyze the determination of the quantity of money and interest rates in the economy and the role of the country's central bank. It examines the basis and pattern of international trade and the effects of a country's trade policy on the economy.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **ISOM-120 Information Technology and Productivity**

Credits:

3.00

Description:

This course provides a comprehensive introduction to information technology and information systems concepts. Students learn the importance of modern information technologies in the workplace. The course covers technology resources of the digital age, such as computer software, hardware, communication, database and telecommunication systems. Students also learn to increase productivity through the integration and use of productivity software applications, such as spreadsheets, presentation software and databases. In addition, students learn the fundamental concepts of database design and relational database management systems (DBMS) such as Microsoft access.

Term:

Offered Both Fall and Spring

Minor Requirements: 7 courses, 26 credits

To qualify for a minor in Mathematics with Actuarial Concentration, a student must successfully complete seven courses (26 credits) with a GPA of at least 2.0, distributed as follows:

- MATH-165 Calculus I

Prerequisites:

MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

Credits:

4.00

Description:

Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-166 Calculus II**

Prerequisites:

MATH 165 with grade of C or better

Credits:

4.00

Description:

Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation, convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-255 Probability and Statistics**

Prerequisites:

MATH-165 with a grade of C or better

Credits:

4.00

Description:

Topics include: random variable and distribution; expectation and variance; special discrete/continuous distributions (uniform, binomial, negative binomial, geometric, hypergeometric, Poisson, normal, and exponential distributions); joint distribution, marginal distribution and conditional distribution; covariance; limit theorems (law of large numbers and central limit theorem); introduction to confidence interval and hypothesis testing; regression analysis. Offered as needed.

- **MATH-290 Financial Mathematics I**

Prerequisites:

MATH-166 with a grade of C or better

Credits:

4.00

Description:

This course is mainly designed for students who are interested in financial mathematics and/or actuarial sciences, especially if they plan to take the second actuarial exam, and/or if they plan to study more in financial mathematics. The materials covered include time value of money, annuities, loans, bonds, cash flows and portfolios, general derivatives, options, hedging and investment strategies, forwards and futures, and swaps.

Type:

Expanded Classroom Requirement

- **STATS-350 Applied Statistical Methods**

Prerequisites:

STATS 250

Credits:

4.00

Description:

This application-oriented course is designed to go beyond the topics covered in STATS 250. It includes topics like Analysis of Variance (ANOVA), special topics in regression analysis and index numbers. Further, time series data, which consist of values corresponding to different time intervals, are analyzed. The objective is to examine past time series values to forecast, or predict future values. Seasonal variations are also incorporated in the

forecasts. The course will provide useful computer skills involving various statistical packages and is an excellent preparation for graduate work in business and social sciences.

Type:

Social Science

- **EC-101 Applied Microeconomics**

Prerequisites:

Non CAS majors need to have completed at least 15 credits.

Credits:

3.00

Description:

This course introduces students to foundational principles of microeconomic theory, with an emphasis on applications of concepts to management decision-making in specific industry and market settings. It describes and analyzes the interaction of supply and demand and the behavior of the prices of goods, services. It explains the determinations of costs, output, strategic pricing, and governance by firms under conditions of perfect and imperfect competition in a global economy. In addition, it describes the supply demand for factors of production and the impact of taxes and government regulation and intervention on firms and consumers.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-102 Global Macroeconomics**

Prerequisites:

Non-CAS majors need to have completed at least 15 credits

Credits:

3.00

Description:

This course examines the workings of the national and the global economy. It will describe the determination of Gross Domestic Product, the problems of unemployment, inflation, and the determination of economic growth. It will also describe and analyze the determination of the country's exchange rate, the balance of payments, and international borrowing and lending. A particular focus will be on understanding economic fluctuations (booms, busts, and recessions) in the domestic economy and its effects on other economies. It will analyze the role of the government and the effects of government spending and taxation on the economy. Furthermore, it will describe and analyze the determination of the quantity of money and interest rates in the economy and the role of the country's central bank. It examines the basis and pattern of international trade and the effects of a country's trade policy on the economy.

Type:

Social Science,BSJ SOCIAL SCIENCE

Mathematics with Actuarial Concentration

The Mathematics & Computer Science Department offers two Mathematics major programs: [Pure Mathematics](#) and Mathematics with Actuarial Concentration. These programs are designed to provide a strong foundation upon which to begin a challenging and rewarding career immediately upon graduation or for pursuing graduate studies.

The department also offers minors in Pure Mathematics and Mathematics with Actuarial Concentration, both of which can be used to enhance the career options for students who choose to major in another discipline.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Mathematics with Actuarial Concentration Major Requirements](#)
- [Mathematics with Actuarial Concentration Minor Requirements](#)
- [Honors](#)
- [Mathematics Courses](#)
- [Math Statistics Courses](#)

In both the Pure Mathematics and Mathematics with Actuarial Concentration majors, students who have an overall GPA of 3.0 or better and a GPA of 3.0 or better in the major will be eligible for honors. To achieve honors a student must take a course of four credits or more in an advanced mathematics topic. This will typically be an independent study. The course should lead to a project or a senior thesis, done under the direction of a faculty member. The topic of study will be agreed upon by the student and faculty member.

Choose one of the following:

- **MATH-400 Senior Project in Mathematics**

Prerequisites:

Instructor permission required.

Credits:

4.00

Description:

Students study a particular topic in mathematics and demonstrate their results in a final project.

- **MATH-510 Independent Study**

Credits:

4.00

Description:

Members of the department will hold conference hours with students and will direct their readings and study of topics in mathematics which may be of interest to them. Prerequisite: Consent of instructor. 1 term - credits to be arranged.

- MATH-000 Mathshop - Bridge to College Math

Credits:

0.00

Description:

A NON-CREDIT, full semester workshop designed for students who need substantial review before starting MATH 104, MATH 106, OR MATH 121. Similar to a course, MATHSHOP meets three hours per week throughout the semester. Topics covered are tailored to the needs of students and include basic math material, basic algebra, graphing use of calculators, ways of dealing with math fears and study methods. Several sections normally offered each semester.

- **MATH-075 Review of Math Concepts for Calculus**

Credits:

0.00

Description:

The purpose of this non-credit course is to help engineering students review basic math contents and topics that will be used frequently in their major engineering courses. The course will cover basic algebra (for example, order of operations, exponents, simplifying algebraic expressions, combinations of operations and complex fractions), functions and graphs (including linear, polynomial, and rational, exponential and logarithmic functions) and basic knowledge in trigonometric functions (for example angles and radian measures, right triangle trigonometry, graphs of Sine and Cosine functions)

- **MATH-104 Precalculus for Management & Social Sciences**

Prerequisites:

MATH level 2 or Mathshop

Credits:

4.00

Description:

A selection of topics in algebra and elementary analytic geometry including, (but not restricted to): properties of real numbers, linear equations and inequalities, absolute value equations and inequalities, polynomials, rational expressions, exponents and radicals, quadratic equations, functions, linear, quadratic and polynomial models, rational, exponential and logarithmic functions. Applications and graphs are stressed throughout the course. This course is intended to prepare students who have only had one year of high school algebra to take MATH 134. Students may not use this course alone to satisfy the C.A.S. math requirement. Qualifying math placement exam score required. Students who are not prepared for this course should take MATHSHOP. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students. This course cannot be taken for credit by a student who already has credit for a more advanced course.

- **MATH-121 Precalculus With Elements of Calculus**

Prerequisites:

MATH-104 with a minimum grade of B or MATH level 4

Credits:

4.00

Description:

A review of topics in algebra, trigonometry and analytic geometry intended for students needing one additional semester of preparation before taking MATH 165. Students may not use this course alone to satisfy the CAS math requirement. Prerequisites: MATH 104 with B or MATH 108 with B or higher or qualifying placement exam score indicating solid grounding in intermediate algebra. 4 lecture hours plus 1 recitation session per week. Normally offered every semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students. This course cannot be taken for credit by a student who already has credit for a more advanced course.

- **MATH-128 Math for the Modern World**

Prerequisites:

MATH level 2, or Mathshop, or MATH-104

Credits:

4.00

Description:

From the ISBN on a book, to buying a car, from the size of small chips in a cell phone, to the size of the national debt, or just reading a graph in the daily newspaper, mathematics plays an important and vital role in countless areas of life and your future career and courses included. Mathematics is both an art and a tool created by humans. The common bond is a way of thinking and a way of reasoning to describe and solve problems of many types. This course uses the context of modern real life problems to introduce math needed for literacy and problem solving in contemporary life and work. It uses a minimal amount of algebra and focuses on math models, concepts and basic math manipulations. It encourages students to move from anxiety about math, to using formulas well, to thinking critically in the math context to use math to solve problems and pose new problems. Topics include scientific notation, basic financial math, linear, exponential and polynomial models and an introduction to probability. (Formerly Math 132)

- **MATH-130 Topics in Finite Mathematics**

Prerequisites:

MATH-104, or MATH-121, or MATH level 3

Credits:

4.00

Description:

Linear Modeling (for example, using linear functions to model supply/demand situations), graphing, linear programming, financial functions (compound interest, annuities, and amortization of loans) sets, Venn diagrams, counting and combinatorics, discrete probability, conditional probability, Bernoulli experiments, Bayes theorem. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

- **MATH-132 Math-Art, Tool and Human Side**

Prerequisites:

MATH-000 or appropriate Math Placement Exam score. Course does not fulfill math requirement for SBS majors.

Credits:

4.00

Description:

Mathematics is both an art and a tool. It has been used in many ways in contemporary and ancient society. The common bond is a way of thinking and a way of using reason to solve problems and describe things of all sorts. The course is designed to cultivate an appreciation of the significance of mathematics in daily life and develop students' mathematical reasoning. Topics will vary from section to section. Examples of topics that might be included are: the real meaning of a newspaper graph, methods to tally votes, fair division, routes and networks, consumer mathematics, the 'real' cost of a house, shapes and patterns, fractals, soap film surfaces, prime numbers and encryption, new discoveries in mathematics.

- **MATH-134 Calculus for Management & Social Sciences**

Prerequisites:

MATH-104, MATH-121 or MATH level 4

Credits:

4.00

Description:

A one-semester introduction to differential and integral calculus. Theory is presented informally and topics and techniques are limited to polynomials, rational functions, logarithmic and exponential functions. Topics include a review of precalculus, linear regression, limits and continuity, derivatives, differentiation rules, implicit differentiation, related rates, applications of derivatives to graphing, minima/maxima, applications of the derivative, marginal analysis, differential equations of growth and decay, anti-derivatives, the definite integral, the Fundamental Theorem of Calculus, area measurements. This course cannot be used to satisfy core or complementary requirements by students majoring in chemistry, computer science, engineering, mathematics, or physics. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

- **MATH-165 Calculus I**

Prerequisites:

MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

Credits:

4.00

Description:

Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-166 Calculus II**

Prerequisites:

MATH 165 with grade of C or better

Credits:

4.00

Description:

Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation,

convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-200 Modern Mathematics and Career Exploration**

Prerequisites:

Freshman or Sophomore Status

Credits:

1.00

Description:

This one credit course aims to help freshmen and sophomore students form an idea of the scope of the vast and rapidly growing field of mathematics and the many career options, and begin to map out steps toward a potential career path. Mathematics is a diverse discipline that is constantly evolving. It ranges from applied mathematics (tailored to specific real world problems), to mathematical physics (which crafts the mathematical basis for the understanding of physical phenomena), to pure mathematics (which is studied for its intrinsic interest). As the study of such varied concepts as quantity, structure, space and change, mathematics has something for everyone; and valuable applications to many other fields, from business and finance to meteorology, chemistry, ecology and biology, among many others. This module aims to move beyond the foundational math generally taught in freshmen and sophomore year by presenting several areas of recent development and application. In this team-taught seminar-style course, two or three different professors will introduce students to their research areas and related topics. Some of the areas represented among the faculty include fractal geometry, number theory, algebraic geometry, and probability. Students will also be introduced to resources provided by national mathematical communities on mathematical career paths and backgrounds needed.

- **MATH-255 Probability and Statistics**

Prerequisites:

MATH-165 with a grade of C or better

Credits:

4.00

Description:

Topics include: random variable and distribution; expectation and variance; special discrete/continuous distributions (uniform, binomial, negative binomial, geometric, hypergeometric, Poisson, normal, and exponential distributions); joint distribution, marginal distribution and conditional

distribution; covariance; limit theorems (law of large numbers and central limit theorem); introduction to confidence interval and hypothesis testing; regression analysis. Offered as needed.

- **MATH-256 Statistics With R**

Prerequisites:

MATH 255 or permission of instructor

Credits:

1.00

Description:

The course uses free software R to introduce key concepts in statistics. Topics include Descriptive statistics and graphics, One- and two-sample tests, Regression and correlation, and Analysis of variance. Data from financial markets or computer networks will be used for homework assignments and projects. We will focus on hands on experiences with R rather than theoretical details about statistical analysis.

- **MATH-265 Calculus III**

Prerequisites:

MATH 166 with grade of C or better

Credits:

4.00

Description:

Parametric equations and polar coordinates (curves, areas, conic sections); vectors and the geometry of space (the dot product, vector arithmetic, lines and planes in 3-space, the cross product, cylinders and quadratic surfaces); vector functions (limits, derivatives and integrals, motion in space); partial derivatives (functions of several variables, limits and continuity, tangent planes and differentials, chain rule, directional derivatives, gradient, extrema, Lagrange multipliers); multiple integrals (double integrals, applications); vector calculus (vector fields, line integrals, fundamental theorem for line integrals, Green's Theorem, curl and divergence, parametric surfaces, surface integrals). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-285 Discrete Mathematics**

Prerequisites:

MATH-165 with a grade of C or better

Credits:

4.00

Description:

Topics mostly selected from the following list: Logic and set theory, elementary number theory, relations and functions and their properties (equivalence relations, partial order relations, recurrence relations and their solutions); computational complexity of algorithms (big O notation); graphs and their properties (isomorphisms of graphs, Euler and Hamilton paths, shortest path problem, graph coloring) trees (tree traversal, minimum spanning trees); finite state machines; methods of proof (proof by induction, proof by contradiction). Prerequisite: MATH 220 or permission of instructor. 1 term - 4 credits (4 lecture hours per week). Normally offered at least once each year.

- **MATH-290 Financial Mathematics I**

Prerequisites:

MATH-166 with a grade of C or better

Credits:

4.00

Description:

This course is mainly designed for students who are interested in financial mathematics and/or actuarial sciences, especially if they plan to take the second actuarial exam, and/or if they plan to study more in financial mathematics. The materials covered include time value of money, annuities, loans, bonds, cash flows and portfolios, general derivatives, options, hedging and investment strategies, forwards and futures, and swaps.

Type:

Expanded Classroom Requirement

- **MATH-331 Introduction to Abstract Math**

Prerequisites:

MATH-165 and MATH-166 with a grade of C or better

Credits:

4.00

Description:

this course is intended to provide a firm foundation for and a taste of the study of advanced mathematics. While the course content varies somewhat, it is designed to give students a deeper understanding of the algebraic and analytical structure of the integers, the rational numbers and the real numbers and how they act as a building block to a variety of fields of mathematics. Students are introduced to the process of mathematical discovery and the language of mathematics. Exercises and projects are designed to illustrate the need for proof and to further refine the student's ability to analyze, conjecture and write mathematical proofs. This course is a prerequisite for most upper level mathematics courses and, after completing it a student will be in a position to determine realistically if he or she ought to major or minor in mathematics.

- **MATH-373 Ordinary Differential Equations**

Prerequisites:

MATH-265 (may be taken concurrently)

Credits:

4.00

Description:

A first course in differential equations. Topics generally include separable, homogenous, exact, and linear first order differential equations; variations of parameters, differential operators, the Laplace transform, inverse transforms, systems of differential equations, power series solutions, Fourier series, and applications.

- **MATH-400 Senior Project in Mathematics**

Prerequisites:

Instructor permission required.

Credits:

4.00

Description:

Students study a particular topic in mathematics and demonstrate their results in a final project.

- **MATH-431 Linear Algebra**

Prerequisites:

Math 331 must have grade C or higher

Credits:

4.00

Description:

System of linear equations, Gaussian elimination, matrices and their algebra, inverse of a matrix, determinants, cofactor expansion, Cramer's rule, vectors in and their algebra, abstract vector spaces, subspaces, linear independence, basis and dimension, linear transformations, isomorphism of vector spaces, rank and nullity, matrix of a linear transformation, inner product spaces, angle and orthogonality, eigenvalues and eigenvectors of a linear transformation, characteristic equation, Cayley-Hamilton theorem, diagonalization.

- **MATH-432 Abstract Algebra**

Prerequisites:

MATH 431

Credits:

4.00

Description:

An introduction to elementary group theory, including properties of groups, subgroups, first isomorphism theorem for groups, normal subgroups, finite group classification; elementary properties of rings, such as homomorphisms of rings, ideals, fields, Euclidean algorithm, rings of polynomials, factorization theory, integral domains, associates, primes and units in domains, and other topics in number theory. Prerequisite: MATH 431 with a grade of C or higher.

- **MATH-462 Real Analysis**

Prerequisites:

MATH 331 with at least a grade of C

Credits:

4.00

Description:

A detailed treatment of the basic concepts of analysis including the real numbers; completeness and its equivalence to other properties of the reals such as monotone convergence, Archimedean property, Bolzano-Weierstrass theorem; the topology of Euclidean spaces, compactness and the Heine-Borel theorem, connectedness, continuity and uniform continuity and uniform convergence of functions, pointwise and uniform convergence of functions, and an introduction to metric spaces.

- **MATH-481 Complex Analysis I**

Prerequisites:

MATH 462

Credits:

4.00

Description:

Construction and properties of complex numbers, calculus in the complex plane, analytic functions, contour integrals and the basics of Cauchy theory, power series representations. Prerequisite: MATH 331 or instructor's consent.

- **MATH-510 Independent Study**

Credits:

4.00

Description:

Members of the department will hold conference hours with students and will direct their readings and study of topics in mathematics which may be of interest to them. Prerequisite: Consent of instructor. 1 term - credits to be arranged.

- **MATH-511 Launching a Career in Mathematics**

Prerequisites:

Junior or Senior standing

Credits:

1.00

Description:

This team-taught course is designed to explore career opportunities in Mathematics in depth. This course focuses on career search, the application process, entry, transition and networking for career success. Alternative options such as graduate school will also be explored. Students articulate and reflect on academic work, and co-curricular experiences from the perspective of professionals entering or advancing their careers. The goal of this course is to help students reach their fullest professional potential following graduation.

- **MATH-R104 Recitation for Pre-Calculus for Management and Social Sciences**

Prerequisites:

Appropriate Math Placement Exam score. Must be taken concurrently with MATH 104

Credits:

0.00

Description:

Taken simultaneously with Math 104. The recitation is a hybrid course. Once every two weeks students meet with an instructor to do work that enhances understanding of the course material. Such work can include practice problems, homework problems and sometimes quizzes on a laptop as well as question-answer time and group project work. On alternate weeks students do on line work such as lecture demonstration of additional examples or homework projects.

- **MATH-R128 Recitation for Math for the Modern World**

Prerequisites:

MATH-000 or appropriate Math Placement Exam score. Must be taken concurrently with MATH 128. This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

Credits:

0.00

Description:

Hands on problem solving, discussion and examples of Math for the Modern World.

- **MATH-R130 Recitation for Finite Mathematics**

Prerequisites:

MATH 104 or appropriate math placement score. Must be taken concurrently with MATH 130

Credits:

0.00

Description:

Taken simultaneously with Math 130. The recitation is a hybrid course. Once every two weeks students meet with an instructor to do work that enhances understanding of the course material. Such work can include practice problems, homework problems and sometimes quizzes on a laptop as well as question-answer time and group project work. On alternate weeks students do on line work such as lecture demonstration of additional examples or homework projects.

- **MATH-R132 Recitation for Math-Art, Tool and Humanside**

Prerequisites:

MATH-000 or appropriate Math Placement Exam score. Must be taken concurrently with MATH 132. This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

Credits:

0.00

Description:

Taken simultaneously with Math 132. The recitation is a hybrid course. Once every two weeks students meet with an instructor to do work that enhances understanding of the course material. Such work can include practice problems, homework problems and sometimes quizzes on a laptop as

well as question-answer time and group project work. On alternate weeks students do on line work such as lecture demonstration of additional examples or homework projects.

- **MATH-R134 Recitation for Calculus for Management And Social Sciences**

Prerequisites:

MATH 104 or appropriate math placement score. Must be taken concurrently with MATH 134.

Credits:

0.00

Description:

Taken simultaneously with Math 134. The recitation is a hybrid course. Once every two weeks students meet with an instructor to do work that enhances understanding of the course material. Such work can include practice problems, homework problems and sometimes quizzes on a laptop as well as question-answer time and group project work. On alternate weeks students do on line work such as lecture demonstration of additional examples or homework projects.

Prerequisites:

Math 128 or higher. REMINDER: STATS 240 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

Credits:

4.00

Description:

Topics include: data presentation, measures of central locations and dispersion, probability and probability distributions, estimation, hypothesis testing, simple and multiple regression models. The use of Excel and SPSS will be emphasized throughout the course. 1 term - 4 credits (4 hours per week). Normally offered each semester. STATS 240 satisfies the same requirements as STATS 250

Type:

Quantitative Reasoning

- **STATS-250 Applied Statistics**

Prerequisites:

MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

Credits:

4.00

Description:

Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

Type:

Quantitative Reasoning

Media & Film

The Communication & Journalism (CJN) Department offers course work leading to a Bachelor of Arts or Bachelor of Science with a major in [Advertising](#), [Global & Cultural Communication](#), [Journalism](#), Media & Film, or [Public Relations](#). A Bachelor of Science in Journalism is also offered to Journalism and Public Relations majors. The department also offers a [minor in Communication & Journalism](#).

All Communication & Journalism majors study under a faculty who have extensive academic and professional experience. CJN students begin their program by taking two foundation courses that focus on effective speaking, concise writing, and critical thinking. Then, each student selects required and elective courses in their major to develop theoretical and practical knowledge of their field.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Media & Film Major Requirements](#)
- [Production Concentration](#)
- [Accelerated Bachelor's/Master's Degree in Communication](#)
- [Honors](#)
- [Communication & Journalism Courses](#)

Major Requirements: 12 courses, 48 credits

Core Requirements (11 courses, 44 credits)

Note: All students should take CJN-101 and CJN-103 during their first year.

- CJN-101 Introduction to Communication

Credits:

4.00

Description:

An introduction to the discipline addressing social science, humanities and practical art approaches to the study of communication. Students investigate the broad themes and foundational concepts which unify the discipline in order to understand the diverse fields, functions and purposes of communication.

Term:

Offered Both Fall and Spring

• CJN-103 Presentations Skills**Credits:**

4.00

Description:

The development and delivery of oral presentations. Students acquire skills in oral and physical delivery, organization, persuasion, critical thinking, and use of support media.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

• CJN-152 Visual Aesthetics**Credits:**

4.00

Description:

This course provides an introduction to a humanities approach to a range of media, including but not limited to film and television. The course helps students develop visual literacies, enriching their understanding of multiple forms of media. The class also explores how media texts are constructed for specific cultural, entertainment, informative and propaganda purposes.

Term:

Offered Both Fall and Spring

Type:

Vis. & Perform Thry & Hst

- **CJN-255 Introduction to Media**

Credits:

4.00

Description:

An introduction to the role of media in contemporary society, focusing on media's influence on cultural, political, and ideological processes. An examination of the historical contexts within which newspapers, radio, television, and new media technologies develop, and how audiences interact with and influence the use of media.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **CJN-321 Research Methods in Communication**

Credits:

4.00

Description:

Students learn the research traditions in communication grounded in the humanities and social sciences. They are exposed to an array of qualitative methods, with in-depth study of select methodologies. Students learn how to read scholarly articles, write in an academic style, and design a research project.

Term:

- **CJN-387 Media and Film Criticism**

Credits:

4.00

Description:

Examination of media including film, television, radio, music, newspapers, and magazines. Theories of media criticism are discussed and applied to specific media or media products. Students are introduced to criticisms such as genre, formalist, narrative, cultural, critical cultural, and feminist.

Term:

Offered Fall Term

- **CJN-400 Media Effects and Audiences**

Prerequisites:

Prerequisite: CJN-255

Credits:

4.00

Description:

Explores the social influence of the media on U.S. society. Attention is given to the theoretical perspectives that inform media research. By the end of the semester, students will develop a critical understanding of the role and influence of the media in U.S. society.

Term:

Offered Fall Term

Type:

Social Science

- **CJN-466 Seminar in Media/Film**

Prerequisites:

Senior standing required.

Credits:

4.00

Description:

Functions as a capstone media/film course and merges theoretical and practical knowledge from previous classes. Students revisit concepts and apply them to advanced courses and/or create their own advanced work.

Term:

Offered Spring Term

- **CJN-2355 Production I**

Prerequisites:

CJN-152

Credits:

4.00

Description:

Building on skills acquired in CJN 2355, students use advanced equipment and production techniques to produce complex video projects, including fiction filmmaking. Projects cover various styles and genres, such as music video and film noir.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement

• CJN-3455 Production II

- [Media & Film Major Requirements](#)
- [Production Concentration](#)
- [Accelerated Bachelor's/Master's Degree in Communication](#)
- [Honors](#)
- [Communication & Journalism Courses](#)

We offer an accelerated path for undergraduate Communication & Journalism (CJN) majors to obtain a master's degree in Communication.

Who is eligible

- CJN majors who are rising seniors at Suffolk with a GPA of 3.5 or higher in their major and overall.
- Students must meet all of the requirements of one of the undergraduate degree programs (BA, BS, BSJ) offered by the Department of Communication & Journalism. In addition, they must meet all of the requirements of one of the Master's of Communication degree concentrations.
- Applications follow the regular admission procedures; please note that applicants for the accelerated degree will have the GRE requirement waived.

Degree Requirements

1. Students admitted to this dual degree program must meet all the requirements of an undergraduate degree program within the department of Communication & Journalism.
2. Student must also meet all requirements for the Master's degree in Communication.
3. Students will take two CJN graduate courses during their senior year; one during the fall semester and one during the spring semester. The two graduate courses taken during the senior year will count toward BOTH the undergraduate and graduate degree requirements. Credit hours will be awarded based on the graduate course description.
4. The graduate courses taken during the senior year will be determined by the Communication graduate program director.
5. Students are subject to the usual standards for academic standing, i.e., undergraduate standards for undergraduate courses and graduate standards for graduate courses.

Upon successful completion of all of the degree requirements, a student will receive a dual Bachelor's and Master's degree. The exact degree will be awarded based on the specific undergraduate program the student completes. A student may permanently exit the dual degree program and opt to graduate with a Bachelor's degree if all the requirements for a Bachelor's degree have been met. In this case, the graduate courses taken in the senior year will be counted as 4-credit courses applied toward the undergraduate degree requirements.

4.00

Description:

Students study cinematography techniques and theory, putting them into practical application in various projects using video cameras, lighting, and composition to create images and scenes. Students produce work in multiple environments including stage and on-location shoots.

Term:

Occasional

- **CJN-355 Media Production**

Prerequisites:

This course is now being offered as CJN-2355

Credits:

4.00

Description:

Practical exposure to methods of production and production equipment of the media. Students are introduced to basic theoretical concepts, such as three-point lighting and white balancing, and apply those to their productions. Students create a variety of non-fiction videos in teams and/or by themselves.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement

- **CJN-356 TV Studio Production**

Credits:

4.00

Description:

Provides students with a hands-on introduction to the process of planning, preparing, producing, and evaluating studio productions. Students are exposed to the elements and terminology of a multi-camera studio with live switching, audio mixing, and studio lighting. Students produce interviews, public service announcements, and a live variety/talk show.

Term:

Offered Both Fall and Spring

- **CJN-357 Post Production**

Credits:

4.00

Description:

An exploration into the activities that wrap up the creation of films and television programs. Students create and add motion-graphics and visual effects to edited programs, generating output for videotape, the web, and DVD platforms.

Term:

Occasional

- **CJN-358 Family Communication**

Credits:

4.00

Description:

Looks at different family structures using communication concepts and theories as a focus to glance at family life. Communication issues include the creation of meaning and identity through storytelling, rules and roles, conflict, power, intimacy, and challenges to the family unit. Examines both fictional and real families portrayed in television, movies, documentaries, as well as in fiction and non-fiction writing. Final projects include a paper and presentation about a family communication concept as applied to a family unit.

Term:

Occasional

- **CJN-359 Advertising Copy**

Prerequisites:

CJN 257

Credits:

4.00

Description:

Continuation of basic advertising, with an emphasis on practical advertising and advertising campaigns.

Term:

Offered Both Fall and Spring

- **CJN-361 Television News Producing**

Prerequisites:

CJN-2355(formerly CJN-355)

Credits:

4.00

Description:

Students produce news segments, series, and/or specials leading to broadcast quality products. Emphasis is on the pacing, timing, and flow of newscasts, as well as pre-production, tease(script and on-camera) and the issues of an audience and professional ethics. Cannot be taken concurrently with CJN 483

Term:

Alternates Fall & Spring

• **CJN-363 Online Journalism**

Credits:

4.00

Description:

The development and implementation of news stories for web media. Emphasis is on the narrative form in the integration of writing, video, sound, and photography in producing news content for the web.

Term:

Alternates Fall & Spring

• **CJN-365 American Cinema**

Credits:

4.00

Description:

Trends in Hollywood and U.S. independent cinema from 1970 onwards, including maverick directors, Hollywood blockbusters, and, when possible, class visits by New England-based filmmakers.

Term:

Occasional

- **CJN-366 Great Film Directors**

Credits:

4.00

Description:

An in-depth look at the films of one great film director, either American or foreign, demonstrating how the filmmaker develops his/her themes over the course of a career. Can be taken for credit more than once, but only counts once towards the major. A different director is studied each time.

Term:

Occasional

Type:

Humanities & History

- **CJN-375 Organizational Communication**

Credits:

4.00

Description:

Historical development of the theory of organizations, examination of information flow, network analysis, communication overload and underload, corporate culture, superior-subordinate communications, organizational effectiveness, and change processes.

Term:

Offered Fall Term

Type:

Social Science

- **CJN-377 Public Relations III: Writing**

Prerequisites:

CJN-277; This course is now being offered as CJN-3377

Credits:

4.00

Description:

An applied course that focuses on Public Relations research methods, the development of persuasive messages, and the selection, development and editing of appropriate materials used to communication with an organization's stakeholders.

Term:

Offered Both Fall and Spring

- **CJN-378 Event Planning and Promotion**

Prerequisites:

CJN-2277(formerly CJN-277)

Credits:

4.00

Description:

Examines how events are built, promoted, managed, and assessed, with an emphasis on conventions, trade shows, and nonprofit events. Issues analyzed include facilities planning and contracts, legal issues, volunteer management, budgeting, marketing, and planner/staff communication.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **CJN-381 Business of Media**

Prerequisites:

CJN-255

Credits:

4.00

Description:

Explores the market environment of the production and distribution of video and film. Topics include ownership and control, market structure and competition, audience measurement, and the impact of new technologies on media markets. Students work on a proposal to launch a media company.

Term:

Alternates Fall & Spring

Type:

Arts Admin Minor Elective

• CJN-383 Online Advertising

Prerequisites:

CJN-257;

Credits:

4.00

Description:

All forms of online advertising are explored, including paid search, with a focus on building a brand online.

Term:

Alternates Fall & Spring

Type:

Arts Admin Minor Elective

- **CJN-385 Globalization of Media and Telecommunications**

Credits:

4.00

Description:

A critique of the circulation of media goods and ideologies from both a cultural and political/economic perspective. Topics include global Hollywood, the images of Muslim women in transnational media, the information society, and global social movements.

Term:

Offered Spring Term

Type:

Cultural Diversity Opt B,BSBA SOCIAL CHANGE,Diverse Perspectives

- **CJN-387 Media and Film Criticism**

Credits:

4.00

Description:

Examination of media including film, television, radio, music, newspapers, and magazines. Theories of media criticism are discussed and applied to specific media or media products. Students are introduced to criticisms such as genre, formalist, narrative, cultural, critical cultural, and feminist.

Term:

Offered Fall Term

- **CJN-389 Social Media**

Credits:

4.00

Description:

Social media sites such as Facebook, MySpace, and Twitter are examined from a cultural and critical perspective. The use of social media for community formation, social presence, identity building, and social activism are considered. The roles of advertising, public relations, and branding are examined.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **CJN-400 Media Effects and Audiences**

Prerequisites:

Prerequisite: CJN-255

Credits:

4.00

Description:

Explores the social influence of the media on U.S. society. Attention is given to the theoretical perspectives that inform media research. By the end of the semester, students will develop a critical understanding of the role and influence of the media in U.S. society.

Term:

Offered Fall Term

Type:

Social Science

- **CJN-401 Networked Culture**

Credits:

4.00

Description:

Explores the influence of media convergence, digital technologies, and networked culture on the production, distribution, and consumption of media texts. Through theory, analysis and practice, students learn broad conceptual frameworks and develop models about the emergence and evolution of digital and mobile communication technologies that have shaped the contemporary media landscape. Case studies are drawn from media industries including journalism, advertising, public relations, film and television, music, video games, and the arts.

Term:

Occasional

• CJN-403 Issues in Journalism

Prerequisites:

CJN-112

Credits:

4.00

Description:

Each time this course is offered it examines a different issue in Journalism, such as social justice journalism, electronic journalism, ethics, political journalism, or international journalism.

Term:

Offered Fall Term

• CJN-405 Communication Theory

Prerequisites:

CJN Majors with Senior Standing

Credits:

4.00

Description:

Interdisciplinary examination of the development of communication theories from the classical tradition to the modern perspectives of rhetoricians, scientists, psychologists, sociologists, philosophers, and others.

Term:

Offered Both Fall and Spring

- **CJN-415 Review Writing**

Credits:

4.00

Description:

Analysis and critique of movies, theater, music, art, and food.

Term:

Offered Both Fall and Spring

- **CJN-421 Media Seminar**

Prerequisites:

Take CJN-255;CJN Majors with Senior Standing

Credits:

4.00

Description:

In an interactive and intensive seminar format, students examine special media topics through class discussion and engaging in original research. Topics may include: women, gender, and communication technologies; media and social movements; topics in cultural studies; media and democracy; media and community; and participatory media culture.

Term:

Offered Spring Term

- **CJN-437 Ad Campaigns**

Prerequisites:

CJN 359, CJN 257

Credits:

4.00

Description:

Principles of advertising campaigns. Students design, plan, and produce a national advertising campaign for a client as members of a simulated agency team.

Term:

Offered Spring Term

- **CJN-440 Health Communication**

Prerequisites:

CJN-277;

Credits:

4.00

Description:

This course examines the important functions performed by human and mediated communication for health care consumers and providers. In particular, the course focuses on the use of communication strategies to inform and influence individual and community decisions regarding health.

Term:

Occasional

- **CJN-441 Risk and Crisis Communication**

Prerequisites:

CJN-2277(formerly CJN-277)

Credits:

4.00

Description:

Provides students with insight into effective risk and crisis management within organizations, including health organizations. Focuses on the application of theories, strategies, and tactics from a public relations perspective. Students understand how communication can prevent, cause, accelerate, and assist in recovery from a crisis.

Term:

Occasional

- **CJN-442 Boston Sports Media**

Credits:

4.00

Description:

The history of Boston sports includes a rich media tradition that has been chronicled in various Boston sports media outlets. This course takes both an historic and contemporary approach to understanding and analyzing Boston sports media and their relationship to Boston college and professional sports.

Term:

Occasional

- **CJN-443 Advanced Reporting and Feature Writing**

Credits:

4.00

Description:

Principles and techniques of advanced news, features, and investigative reporting are studied and applied, with a focus on enterprise reporting. Students develop, organize and write detailed news and news-feature stories based on original research.

Term:

Offered Fall Term

• CJN-444 Advanced Health Communication

Prerequisites:

CJN-340

Credits:

4.00

Description:

Explores theory and research in the development of persuasive health campaigns in many contexts including social marketing. Examines aspects of health campaigns including formative research, audience segmentation, key message tailoring, and communication tools.

Term:

Occasional

• CJN-455 Advanced Media Production

Prerequisites:

CJN 355

Credits:

4.00

Description:

The course focus is on specialized production techniques including advanced lighting, sound recording, cinematography and editing techniques. Students work in teams to create a variety of fiction productions.

Term:

Offered Both Fall and Spring

- **CJN-457 Integrated Marketing Communication**

Prerequisites:

CJN-2277(formerly CJN-277)

Credits:

4.00

Description:

Examines the integration of advertising, promotion, public relations and marketing communication in the strategic communication process. By learning the fundamentals of interpersonal and persuasive communication, students have an opportunity to develop an effective communication plan for a brand that includes creative copy.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **CJN-458 Advanced Sports Public Relations**

Prerequisites:

CJN-258

Credits:

4.00

Description:

Focuses on the theory and practice of effective sports public relations management including the development of sport, team, and league public relations campaigns. Also focuses on sports public relations in the context of stakeholder relations in sports.

Term:

Occasional

- **CJN-465 Film and Society**

Credits:

4.00

Description:

A study of how cinema reflects, and reflects on, the values of the society in which it is produced. The course features films and filmmakers who emphasize political and social issues dealing with race, gender, sexuality, and other important concerns.

Term:

Occasional

- **CJN-466 Seminar in Media/Film**

Prerequisites:

Senior standing required.

Credits:

4.00

Description:

Functions as a capstone media/film course and merges theoretical and practical knowledge from previous classes. Students revisit concepts and apply them to advanced courses and/or create their own advanced work.

Term:

Offered Spring Term

- **CJN-470 Rhetoric and Global Context**

Prerequisites:

CJN-216

Credits:

4.00

Description:

Rhetoric is the strategic use of symbols to create meaning. Films, television, music, and new media communicate these meanings. Explores how rhetorical messages shape our personal and cultural identities. Topics include gender, social networking, food, politics, religion, and fashion.

Term:

Offered Fall Term

- **CJN-477 Public Relations IV: Campaigns**

Prerequisites:

CJN-277 and CJN-377 and Senior Standing. This course is now being offered as CJN-4477

Credits:

4.00

Description:

Examines case studies and typical public relations problems experienced by profit and not-for-profit organizations. The course provides students with an opportunity to demonstrate their mastery of the skills, techniques, and knowledge of public relations by creating a comprehensive campaign for an actual client. Fulfills ECR requirement.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement

- **CJN-H477 Public Relations IV Honors: Campaigns**

Prerequisites:

CJN 277 and CJN 377; Over 84 credits and by invitation only;

Credits:

4.00

Description:

HONORS SECTION. INVITATION ONLY! Examines case studies and typical public relations problems experienced by profit and not-for-profit organizations. The course provides students with an opportunity to demonstrate their mastery of the skills, techniques, and knowledge of public relations by creating a comprehensive campaign for an actual client. Fulfills ECR requirement.

Type:

Expanded Classroom Requirement, Honors

- **CJN-479 Environmental Public Relations**

Credits:

4.00

Description:

Examines public issues involving the environment. Focuses on public relations strategies for government agencies, corporations, and other organizations concerned with the environment.

Term:

Occasional

- **CJN-480 Documentary Film Production**

Credits:

4.00

Description:

Students analyze contemporary documentaries and study documentary history and theory. Working in teams, students produce, write, direct, crew, and edit documentary shorts.

Term:

Occasional

- **CJN-481 Making the Short Film**

Credits:

4.00

Description:

This advanced class works together as a crew to create of a short narrative film shot in HD video. Students learn the process of making professional-quality work, and each student is responsible for various crew positions during pre-production and the shooting of the film.

Term:

Occasional

- **CJN-482 Cultural Theory and Practice Cultural Theory & Practice**

Prerequisites:

CJN-216

Credits:

4.00

Description:

In a world of globalization and multiculturalism, communication is critical to understanding. Explores theoretical approaches to communication and applies them to specific contexts. Emerging trends in global, ethical, legal, political and social communication issues are explored.

Term:

Offered Spring Term

- **CJN-483 Suffolk TV News**

Prerequisites:

CJN-253 and CJN-2355(formerly CJN-355) and CJN-353 or CJN-361 or instructor's consent

Credits:

4.00

Description:

Students write, direct, crew, edit, and serve as talent in producing the CJN Department's weekly news program aired on Boston Cable Access. Cannot be taken concurrently with CJN 361 or CJN 353.

Term:

Offered Spring Term

- **CJN-L483 Suffolk TV News Lab**

Prerequisites:

CJN-253 and CJN-2355(formerly CJN-355) and CJN-353 or CJN-361 or instructor's consent

Credits:

4.00

Description:

Students write, direct, crew, edit, and serve as talent in producing the CJN Department's weekly news program aired on Boston Cable Access. Cannot be taken concurrently with CJN 361 or CJN 353.

Term:

Offered Spring Term

- **CJN-485 Rhetoric of Protest & Reform**

Credits:

4.00

Description:

Examines the persuasive strategies of social reform movements with an emphasis on the civil rights', women's rights, and gay rights movements in the United States.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt A, Humanities & History, BSBA SOCIAL CHANGE, Diverse Perspectives

- **CJN-488 Grant Writing**

Credits:

4.00

Description:

Hands-on course that explores the process of writing and submitting grants to foundations, associations, the government, and other grantors on behalf of nonprofit organizations. Students learn how to identify grant resources through research, compile an effective submission, and write supporting material such as cover letters and appendices. Also covers how grants are reviewed and tips for successful grant submissions.

Term:

Occasional

- **CJN-489 Political Communication**

Credits:

4.00

Description:

Examination of special circumstances created by politics and their impact on attempts at persuasion. Case studies of famous politicians' political campaigns are combined with discussions of current trends in media and politics.

Term:

Occasional

- **CJN-490 Temple Street Project**

Prerequisites:

CJN-253 and CJN-2355(formerly CJN-355)

Credits:

4.00

Description:

Students write, direct, crew, edit, and serve as talent in producing the CJN Department's magazine- format television program aired on Boston Cable Access.

Term:

Offered Fall Term

- **CJN-491 Special Topics in Communications and Journalism**

Credits:

4.00

Description:

Explores current issues in the field of communication.

Term:

Offered Both Fall and Spring

- **CJN-492 Special Topics in Public Relations**

Credits:

4.00

Description:

Explores current issues in public relations.

Term:

Occasional

- **CJN-493 Special Topics in Film**

Credits:

4.00

Description:

Explores film theory, history, criticism, and genre.

Term:

Occasional

- **CJN-494 Special Topics in Advertising**

Credits:

4.00

Description:

Current issues in the field of advertising. Normally offered every semester.

Term:

Occasional

- **CJN-503 Experiential Learning in Communication**

Prerequisites:

16 Hrs of CJN coursework or CJN advisor consent

Credits:

1.00-12.00

Description:

Internships and practicum in Communication and Journalism are available prior to the start of each semester.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement

- **CJN-505 Communication and Journalism Practicum**

Prerequisites:

12 hours of CJN coursework and CJN advisor consent

Credits:

1.00-12.00

Description:

Practicum and internship projects are available prior to the start of each semester. Prerequisites: Journalism majors with a minimum of 12 credits of coursework or permission of the Department Chairperson. 1-3 terms : 1-12 credits.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement

- **CJN-506 Honors Seminar**

Prerequisites:

Senior CJN majors with an overall cumulative grade point average of 3.0, and a major GPA of 3.4

Credits:

4.00

Description:

Senior CJN majors meeting requirements for Departmental Honors are invited to participate in this seminar, which entails research and presentation of an approved topic.

Term:

Offered Spring Term

- **CJN-510 Independent Study**

Prerequisites:

An independent study form must be submitted to the CAS Dean's Office.

Credits:

1.00-12.00

Description:

An independent study experience in Communication and Journalism is available prior to the start of each semester.

Term:

Offered Both Fall and Spring

- **CJN-2277 Public Relations I: Principles**

Credits:

4.00

Description:

Effective public relations involve an understanding of the history, theory, and practice of public relations including public relations concepts, the role of the practitioner, and the foundations of public relations. This course seeks to provide that foundation as an introduction to the field of public relations. Issues surrounding the history, legality, process, and principles of public relations are explored.

Term:

Offered Both Fall and Spring

- **CJN-2355 Production I**

Prerequisites:

CJN-152

Credits:

4.00

Description:

Building on skills acquired in CJN 2355, students use advanced equipment and production techniques to produce complex video projects, including fiction filmmaking. Projects cover various styles and genres, such as music video and film noir.

Term:

Offered Both Fall and Spring

Type:

- **CJN-3376 Public Relations II: Research**

Prerequisites:

CJN-2277 (Formerly CJN-277)

Credits:

4.00

Description:

Examines how research aids the public relations practice. Students learn research methods that address public relations planning and problem-solving. Assignments provide students with hands-on practice using research for a PR project.

Term:

Offered Both Fall and Spring

- **CJN-3377 Public Relations III: Strategic Writing**

Prerequisites:

CJN-2277(formerly CJN-277);

Credits:

4.00

Description:

Focuses on writing principles for public relations including the formulation of clear PR objectives, determining the knowledge of the target audience, and the development of key messages. Students apply these principles to common PR formats, including news releases, pitch letters, biographies, speeches, emails, digital content, and social media posts.

Term:

Offered Both Fall and Spring

- **CJN-3455 Production II**

Prerequisites:

CJN-2355(formerly CJN-355)

Credits:

4.00

Description:

Building on skills acquired in CJN 252, students will use advanced equipment and production techniques to produce complex video projects in a variety of styles and genres, such as music video and film noir.

Term:

Offered Both Fall and Spring

- **CJN-4455 Production III**

Prerequisites:

CJN-3455(formerly CJN-455)

Credits:

4.00

Description:

Builds on the theories and techniques developed in CJN 3455, focusing on the advanced concepts and skills needed to design and produce professional-level media content for digital distribution. Provides the opportunity to produce high-quality material for student media portfolios in various genres.

Term:

Offered Spring Term

- **CJN-4477 Public Relations IV: Campaigns**

Prerequisites:

CJN-2277(formerly CJN-277) and CJN-3377(formerly CJN-377) and Senior Standing.

Credits:

4.00

Description:

Examines typical public relations problems experienced by profit and not-for-profit organizations. Provides students with an opportunity to demonstrate their mastery of the skills, techniques, and knowledge of public relations by creating a comprehensive campaign plan for a community client.

Term:

Offered Both Fall and Spring

• **CJN-H4477 Public Relations IV Honors: Campaigns**

Prerequisites:

CJN-2277(formerly CJN-277) and CJN-377(formerly CJN-377) and CJN-3376 and by invitation only.

Credits:

4.00

Description:

Examines typical public relations problems experienced by profit and not-for-profit organizations. Provides honors students with an opportunity to demonstrate their mastery of the skills, techniques, and knowledge of public relations by creating a comprehensive campaign plan for a community client.

2015-2016 Archived Catalog Information

Medical Dosimetry Certificate

The Physics & Engineering Department provides a rigorous and comprehensive education to students interested in pursuing careers in medical dosimetry. Students receive instruction from a multifaceted faculty in diverse clinical settings while using the most advanced technologies to develop clinical skills that will prepare them for entry level positions. Graduates of our program will think critically, communicate effectively, and appreciate the importance of continued education in maintaining their competence.

View the Federally Mandated [Gainful Employment Disclosure for the Certificate in Medical Dosimetry](#).

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Requirements](#)
- [Medical Dosimetry Courses](#)

Certificate Requirements: 19 courses and corresponding laboratories and clinical hours, 62 credits

Core Requirements (17 courses and corresponding laboratories where applicable, 54 credits)

- **PHYS-206 Introduction to Radiation Oncology**

Prerequisites:

Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:

4.00

Description:

This course will serve as an introduction to the role of the radiation therapist and medical dosimetrist in a Radiation Oncology department. Through a combination of detailed lectures, discussions, role-playing, case studies, and hands-on laboratory exercises, students will be introduced to the professional and clinical aspects of their respective professions. Additional topics included radiation safety, patients rights, infection control, communication for the clinic, patient assessment, and psychosocial aspects of cancer including death and dying.

Term:

Offered Fall Term

• **PHYS-301 Clinical Radiation I**

Prerequisites:

PHYS 206; Radiation Therapy & Medical Dosimetry Students Only

Credits:

3.00

Description:

Through a systems-based approach, this course will review anatomy and physiology while teaching medical terminology. This course will also discuss the major cancers associated with each anatomical system and introduce the student to radiation therapy treatment techniques and procedures.

Term:

Offered Spring Term

• **PHYS-302 Clinical Radiation II**

Prerequisites:

Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:

3.00

Description:

This course is a continuation of MS 301. Through the same didactic approach, the course will cover all of the anatomical systems and their related medical terminology NOT covered in MS 301.

Term:

Offered Fall Term

• PHYS-L311 Medical Dosimetry Rotation I

Prerequisites:

Medical Dosimetry Students Only

Credits:

1.00

Description:

Under the supervision of a Certified Medical Dosimetrist, students will gain hands on treatment planning experience in a clinical setting. Two,8-hour days per week, TTH.

Term:

Offered Spring Term

• PHYS-L312 Medical Dosimetry Rotation II

Prerequisites:

Medical Dosimetry Students Only

Credits:

1.00

Description:

Under the supervision of a certified medical dosimetrist, students will gain hands on treatment planning experience in a clinical setting. Three 8-hour days per week, MWF.

Term:

Offered Fall Term

- **PHYS-L313 Medical Dosimetry Rotation III**

Prerequisites:

PHYS L312, Medical Dosimetry Students Only

Credits:

1.00

Description:

Under the supervision of a Certified Medical Dosimetrist, students will gain hands on treatment planning experience in a clinical setting. Three, 8-hour days per week, MWF.

Term:

Offered Spring Term

- **PHYS-L314 Medical Dosimetry Practicum**

Prerequisites:

Take PHYS-301 and PHYS-L311; *Course fulfills the following: Expanded Classroom Requirement.

Credits:

1.00

Description:

Student dosimetrists will spend 12 weeks (full-time, 40 hrs/wk) gaining hands on treatment planning experience in the department of radiation oncology at our clinical affiliates. Under constant supervision of certified medical dosimetrists, the student will be guided toward the application of theory in the real world of cancer treatment planning.

Term:

Summer

Type:

Expanded Classroom Requirement

- **PHYS-315 Radiation Physics I**

Prerequisites:

PHYS L315 concurrently; Radiation Biology, Radiation Science, Radiation Therapy (Major or Certificate), or Medical Dosimetry Students Only

Credits:

3.00

Description:

Content is designed to establish a thorough knowledge of the radiation physics used in radiation therapy treatments. Topics to be covered in this course include a review of basic physics (energy, mass, matter, SI units), structure of matter, types of radiations, nuclear transformations, radioactive decay, the fundamentals of x-ray generators and x-ray production, interactions of x and gamma rays with matter, absorbed dose, measurements of dose, principles of and practical use of ionization chambers and electrometers, Geiger counters and other survey meters, principles and practical use of TLDs, film, calorimetry, scintillation detectors, radiation protection and quality assurance.

Term:

Offered Fall Term

- **PHYS-L315 Radiation Physics I Lab**

Prerequisites:

PHYS 315 concurrently

Credits:

1.00

Description:

This lab will cover a broad range of experiments associated with the Department of Radiation Oncology at Massachusetts General Hospital. Topics include: Quality assurance measurements for radiation therapy, calibration of radiation teletherapy unit using ionization chambers, measurements of dose distribution via film, measurements of dose in a phantom via TLDs, radiation protection survey of therapy installation and brachytherapy sources, and radiation biology.

Term:

Offered Fall Term

Type:

Expanded Classroom Requirement

• PHYS-317 Radiation Physics II

Prerequisites:

PHYS 315; Radiation Science, Radiation Therapy and Medical Dosimetry Students Only

Credits:

4.00

Description:

This course is intended to expand on the concepts and theories presented in Radiation Physics I. It will provide a detailed analysis of the treatment units used in external beam radiation therapy, their beam geometry, basic dose calculations and dose distributions. This course will also cover the principles, theories, and uses of brachytherapy. This course was previously MS 412

Term:

Offered Spring Term

• PHYS-415 Dosimetry I

Prerequisites:

PHYS 315; PHYS L415 concurrently; Radiation Therapy & Medical Dosimetry Students Only

Credits:

3.00

Description:

This course will discuss the factors that influence treatment planning and govern the clinical aspects of patient treatment. Topics to be covered include treatment planning with 3-D CT and MRI beams, isodose plan descriptions, clinical applications of treatment beams and advanced dosimetric calculations. This course will also contrast new emerging technologies with conventional radiation therapy techniques (SRT, SRS, IMRT, Image Guided Therapy, Respiratory Gating).

Term:

Offered Spring Term

- **PHYS-L415 Dosimetry I Lab**

Prerequisites:

PHYS 415 concurrently; Radiation Therapy & Medical Dosimetry Students Only

Credits:

1.00

Description:

This lab will provide the student with the opportunity to apply clinical dosimetry principles and theories learned in the classroom to actual treatment planning situations within the clinic. Through hands-on lab exercises the student will demonstrate the use of the treatment planning instruments and interpret information they compute.

Term:

Offered Spring Term

- **PHYS-416 Radiation Biology**

Prerequisites:

PHYS 315;

Credits:

4.00

Description:

Topics covered include: physio-chemical aspects of energy absorption, the sequence of events after irradiation occurring on the molecular, cellular and organized tissue levels, radiation response and repair of eukaryotic cells, effects of radiation quality, dose rate, environmental conditions, cell cycle kinetics, tumor and normal cell population dynamics, radiation-induced carcinogenesis and mutagenesis, tumor pathophysiology and radiobiology, and recent advances in experimental radiation oncology.

Term:

Offered Spring Term

- **PHYS-417 Dosimetry II**

Prerequisites:

Medical Dosimetry Students Only

Credits:

4.00

Description:

This course is a continuation of Clinical Dosimetry I and will focus on advanced treatment planning techniques including intensity modulated radiation therapy (IMRT), arc therapy, stereotactic treatment planning, and proton therapy. The advantages of each technique/modality over conventional 3D-treatment planning will be discussed. This will also be contrasted against the specific challenges presented by each technique such as the need for better immobilization, need for 4D CT scanning and daily IGRT (kV matching and/or CBCT).

Term:

Offered Fall Term

- **PHYS-420 Radiation Oncology & Pathology**

Prerequisites:

Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:

4.00

Description:

This course, taught by Massachusetts General Hospital physicians will review cancer epidemiology, etiology, detection, diagnosis and prevention, lymphatic drainage, and treatment. The pathology(s) of each cancer will be presented in detail including the rationale for each preferred modality of treatment.

Term:

Offered Fall Term

• **PHYS-422 Radiology**

Prerequisites:

Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:

4.00

Description:

This course will begin with an introduction to radiology, reviewing x-ray production and discussing basic radiation physics, image formation (Kv, mA) and distortion (blur, magnification), conventional processing and digital imaging. The above-mentioned radiographic imaging concepts will be presented with conventional lectures as well as with several imaging laboratories. In addition, the basic principles of each imaging modality, including mammography, CT, MRI, Nuc Med, and Ultra Sound, will be presented. With the use of departmental tours and guest lecturers, the use, benefits and limitations of each will be discussed. Building upon the information previously presented, radiographic anatomy will also be covered with an emphasis on cross sectional anatomy. Students will review basic anatomy viewed in sectional planes (axial/transverse) of the body. Using CT and MRI images, the topographic relationship between internal organs and surface anatomy will be interpreted and discussed.

Term:

Offered Fall Term

• **PHYS-435 Brachytherapy**

Prerequisites:

Medical Dosimetry Students Only

Credits:

4.00

Description:

Topics in this course will include, radioactive sources, calibration, instrumentation, factors affecting dose calculations, definitions of LDR, MDR and HDR, treatment planning and clinical dose calculation, implantation techniques, implant localization/verification, regulations, radiation safety, storage and QA. Detailed coverage of prostate brachytherapy including LDR and HDR will be emphasized.

Term:

Offered Spring Term

- **PHYS-450 Dosimetry Systems and Networking and Quality Assurance**

Prerequisites:

Senior Status; Medical Dosimetry Students Only

Credits:

4.00

Description:

This course is designed for the medical dosimetry student, to include a general overview of computer systems and networking in the field of radiation oncology. A historical view of computers will be covered as well as the intricate uses in the medical field today. Oncology information systems such as MOSAIC and ARIA, as well as radiation therapy software used for imaging, contouring, treatment planning, and patient charting applications will be covered. Data and system security will also be addressed.

Term:

Offered Spring Term

- **PHYS-476 Senior Seminar for Medical Dosimetry**

Prerequisites:

Senior Status, Radiation Therapy & Medical Dosimetry Students Only

Credits:

4.00

Description:

This course will be available to second year clinical students enrolled in the Medical Dosimetry program. This seminar style course will serve a number of purposes; one will be to prepare our graduating students for board certification in MDCB for Medical Dosimetry. Exam preparation will include the use of lectures, online teaching tools, mini mock exams, and a full-length mock exam. The seminar will also assist students with the preparation of their professional resumes including discussions regarding the skills necessary to make job interviews successful.

Biostatistics Requirement (1 course, 4 credits)

Choose one of the following:

- **BIO-273 Biostatistics**

Prerequisites:

BIO 111/L111

Credits:

4.00

Description:

Introduction to the statistical methods used to evaluate biological problems. Sampling, probability, confidence intervals, hypothesis tests, experimental design, analysis of variance, regression, and correlation are some of the topics offered. Software for data handling, graphics, and analysis will be used.

Term:

Offered Fall Term

Type:

Quantitative Reasoning

• STATS-250 Applied Statistics

Prerequisites:

MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

Credits:

4.00

Description:

Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

Type:

Quantitative Reasoning

• PSYCH-215 Behavioral Statistics

Prerequisites:

PSYCH 114; Restricted to majors only unless with permission of instructor.

Credits:

4.00

Description:

Introduces the use of statistics as tools for description and decision-making, including hypothesis testing. Prepares students for the analysis, interpretation, and evaluation of psychological research. Required for psychology majors; should be taken before the junior year. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Ethics Requirement (1 course, 4 credits)

Choose one of the following:

- **PHIL-119 Ethics**

Credits:

4.00

Description:

A systematic introduction to the major thinkers and their positions on the main issues of ethics, such as: What is morality? What are moral values? How should we live our lives? Are there objective, universal, absolute moral standards? If so, what are they, and what is their basis? 1 term - credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- **PHIL-123 Social Ethics: The Good Life**

Credits:

4.00

Description:

An examination of contemporary Western society, particularly in the United States, in relation to philosophical attempts to define the good life. Current books that exhibit a philosophical approach towards important contemporary social issues will be discussed, as well as classics in philosophy. Topics may include: civic virtue, consumerism, current events, economic justice, popular culture (film, music, television), religion and secularism, etc. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- **PHIL-127 Contemporary Moral Issues**

Credits:

4.00

Description:

A critical examination of a number of contemporary moral issues such as: abortion, affirmative action, animal rights, capital punishment, cloning, drug legalization, environmental ethics, euthanasia, genetic engineering, gun control, pornography, same-sex marriage, suicide, war and terrorism, etc. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- **PHIL-363 Bio and Medical Ethics**

Prerequisites:

Prerequisite: Phil 119, or 123, or 127.

Credits:

4.00

Description:

An examination of the moral problems facing health-care practitioners, their patients, and others involved with the practice of medicine in today's society. Issues include euthanasia, the ethics of medical experimentation, the use of reproductive technologies, genetic counseling and genetic engineering, truth-telling and confidentiality in doctor-patient relationships, the cost and availability of medical care. Normally offered every third year.

Term:

Occasional

Required Clinical Hours:

14 hours per week; Semester 2, Year 1

40 hours per week; 13 week Summer Session

24 hours per week, Year 2

Note:

The department reserves the right to require the withdrawal of a student from the Medical Dosimetry program if, in its estimation, the probability of the student's success is doubtful. Factors such as academic performance, interest, effort, and suitability for the field will be considered. Students who defer entry into the program, for any reason, will forfeit their space in the program and will be required to reapply for the following year. A student may be dismissed from the Medical Dosimetry program if he/she fails to maintain the minimum cumulative GPA of 3.0 or if he/she achieves a final grade lower than "B" in any of the Medical Dosimetry Certificate courses listed above.

If admitted into the Medical Dosimetry program, part-time and full-time students must complete clinical requirements within three years of being admitted. Medical Dosimetry graduates may seek employment immediately following graduation and will also be eligible to apply for the Medical Dosimetry Certification Board (MDCB) Medical Dosimetry Certificate Exam.

2015-2016 Archived Catalog Information

Medical Dosimetry Certificate

The Physics & Engineering Department provides a rigorous and comprehensive education to students interested in pursuing careers in medical dosimetry. Students receive instruction from a multifaceted faculty in diverse clinical settings while using the most advanced technologies to develop clinical skills that will prepare them for entry level positions. Graduates of our program will think critically, communicate effectively, and appreciate the importance of continued education in maintaining their competence.

View the Federally Mandated [Gainful Employment Disclosure for the Certificate in Medical Dosimetry](#).

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Requirements](#)
- [Medical Dosimetry Courses](#)
- **PHYS-206 Introduction to Radiation Oncology**

Prerequisites:

Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:

4.00

Description:

This course will serve as an introduction to the role of the radiation therapist and medical dosimetrist in a Radiation Oncology department. Through a combination of detailed lectures, discussions, role-playing, case studies, and hands-on laboratory exercises, students will be introduced to the professional and clinical aspects of their respective professions. Additional topics included radiation safety, patients rights, infection control, communication for the clinic, patient assessment, and psychosocial aspects of cancer including death and dying.

Term:

Offered Fall Term

- **PHYS-301 Clinical Radiation I**

Prerequisites:

PHYS 206; Radiation Therapy & Medical Dosimetry Students Only

Credits:

3.00

Description:

Through a systems-based approach, this course will review anatomy and physiology while teaching medical terminology. This course will also discuss the major cancers associated with each anatomical system and introduce the student to radiation therapy treatment techniques and procedures.

Term:

Offered Spring Term

- **PHYS-302 Clinical Radiation II**

Prerequisites:

Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:

3.00

Description:

This course is a continuation of MS 301. Through the same didactic approach, the course will cover all of the anatomical systems and their related medical terminology NOT covered in MS 301.

Term:

Offered Fall Term

- **PHYS-L311 Medical Dosimetry Rotation I**

Prerequisites:

Medical Dosimetry Students Only

Credits:

1.00

Description:

Under the supervision of a Certified Medical Dosimetrist, students will gain hands on treatment planning experience in a clinical setting. Two,8-hour days per week, TTH.

Term:

Offered Spring Term

- **PHYS-L312 Medical Dosimetry Rotation II**

Prerequisites:

Medical Dosimetry Students Only

Credits:

1.00

Description:

Under the supervision of a certified medical dosimetrist, students will gain hands on treatment planning experience in a clinical setting. Three 8-hour days per week, MWF.

Term:

Offered Fall Term

- **PHYS-L313 Medical Dosimetry Rotation III**

Prerequisites:

PHYS L312, Medical Dosimetry Students Only

Credits:

1.00

Description:

Under the supervision of a Certified Medical Dosimetrist, students will gain hands on treatment planning experience in a clinical setting. Three, 8-hour days per week, MWF.

Term:

Offered Spring Term

• **PHYS-L314 Medical Dosimetry Practicum**

Prerequisites:

Take PHYS-301 and PHYS-L311; *Course fulfills the following: Expanded Classroom Requirement.

Credits:

1.00

Description:

Student dosimetrists will spend 12 weeks (full-time, 40 hrs/wk) gaining hands on treatment planning experience in the department of radiation oncology at our clinical affiliates. Under constant supervision of certified medical dosimetrists, the student will be guided toward the application of theory in the real world of cancer treatment planning.

Term:

Summer

Type:

Expanded Classroom Requirement

• PHYS-315 Radiation Physics I

Prerequisites:

PHYS L315 concurrently; Radiation Biology, Radiation Science, Radiation Therapy (Major or Certificate), or Medical Dosimetry Students Only

Credits:

3.00

Description:

Content is designed to establish a thorough knowledge of the radiation physics used in radiation therapy treatments. Topics to be covered in this course include a review of basic physics (energy, mass, matter, SI units), structure of matter, types of radiations, nuclear transformations, radioactive decay, the fundamentals of x-ray generators and x-ray production, interactions of x and gamma rays with matter, absorbed dose, measurements of dose, principles of and practical use of ionization chambers and electrometers, Geiger counters and other survey meters, principles and practical use of TLDs, film, calorimetry, scintillation detectors, radiation protection and quality assurance.

Term:

Offered Fall Term

• PHYS-L315 Radiation Physics I Lab

Prerequisites:

PHYS 315 concurrently

Credits:

1.00

Description:

This lab will cover a broad range of experiments associated with the Department of Radiation Oncology at Massachusetts General Hospital. Topics include: Quality assurance measurements for radiation therapy, calibration of radiation teletherapy unit using ionization chambers, measurements of dose distribution via film, measurements of dose in a phantom via TLDs, radiation protection survey of therapy installation and brachytherapy sources, and radiation biology.

Term:

Offered Fall Term

Type:

Expanded Classroom Requirement

- **PHYS-317 Radiation Physics II**

Prerequisites:

PHYS 315; Radiation Science, Radiation Therapy and Medical Dosimetry Students Only

Credits:

4.00

Description:

This course is intended to expand on the concepts and theories presented in Radiation Physics I. It will provide a detailed analysis of the treatment units used in external beam radiation therapy, their beam geometry, basic dose calculations and dose distributions. This course will also cover the principles, theories, and uses of brachytherapy. This course was previously MS 412

Term:

Offered Spring Term

- **PHYS-415 Dosimetry I**

Prerequisites:

PHYS 315; PHYS L415 concurrently; Radiation Therapy & Medical Dosimetry Students Only

Credits:

3.00

Description:

This course will discuss the factors that influence treatment planning and govern the clinical aspects of patient treatment. Topics to be covered include treatment planning with 3-D CT and MRI beams, isodose plan descriptions, clinical applications of treatment beams and advanced dosimetric calculations. This course will also contrast new emerging technologies with conventional radiation therapy techniques (SRT, SRS, IMRT, Image Guided Therapy, Respiratory Gating).

Term:

Offered Spring Term

- **PHYS-L415 Dosimetry I Lab**

Prerequisites:

PHYS 415 concurrently; Radiation Therapy & Medical Dosimetry Students Only

Credits:

1.00

Description:

This lab will provide the student with the opportunity to apply clinical dosimetry principles and theories learned in the classroom to actual treatment planning situations within the clinic. Through hands-on lab exercises the student will demonstrate the use of the treatment planning instruments and interpret information they compute.

Term:

Offered Spring Term

- **PHYS-416 Radiation Biology**

Prerequisites:

PHYS 315;

Credits:

4.00

Description:

Topics covered include: physio-chemical aspects of energy absorption, the sequence of events after irradiation occurring on the molecular, cellular and organized tissue levels, radiation response and repair of eukaryotic cells, effects of radiation quality, dose rate, environmental conditions, cell cycle kinetics, tumor and normal cell population dynamics, radiation-induced carcinogenesis and mutagenesis, tumor pathophysiology and radiobiology, and recent advances in experimental radiation oncology.

Term:

Offered Spring Term

- **PHYS-417 Dosimetry II**

Prerequisites:

Medical Dosimetry Students Only

Credits:

4.00

Description:

This course is a continuation of Clinical Dosimetry I and will focus on advanced treatment planning techniques including intensity modulated radiation therapy (IMRT), arc therapy, stereotactic treatment planning, and proton therapy. The advantages of each technique/modality over conventional 3D-treatment planning will be discussed. This will also be contrasted against the specific challenges presented by each technique such as the need for better immobilization, need for 4D CT scanning and daily IGRT (kV matching and/or CBCT).

Term:

Offered Fall Term

- **PHYS-420 Radiation Oncology & Pathology**

Prerequisites:

Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:

4.00

Description:

This course, taught by Massachusetts General Hospital physicians will review cancer epidemiology, etiology, detection, diagnosis and prevention, lymphatic drainage, and treatment. The pathology(s) of each cancer will be presented in detail including the rationale for each preferred modality of treatment.

Term:

Offered Fall Term

- **PHYS-422 Radiology**

Prerequisites:

Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:

4.00

Description:

This course will begin with an introduction to radiology, reviewing x-ray production and discussing basic radiation physics, image formation (Kv, mA) and distortion (blur, magnification), conventional processing and digital imaging. The above-mentioned radiographic imaging concepts will be presented with conventional lectures as well as with several imaging laboratories. Music History

The Music History major and Music History minor are available through the World Languages & Cultural Studies Department.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Minor Requirements](#)
- [Honors](#)
- [Music History Courses](#)

Major Requirements: 10 courses, 40 credits

Core Requirements (2 courses, 8 credits)

- MUH-101 History of Music I

Credits:

4.00

Description:

Surveys Western music from CE800-1800, from Gregorian to Beethoven; selected major composers, representative masterworks, and the musical styles of the Medieval, Renaissance, Baroque, and Classical periods; links the music to some of the major historical, cultural, artistic, and intellectual trends of these periods. Normally offered yearly.

Term:

Offered Fall Term

Type:

Humanities & History, Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **MUH-102 History of Music II**

Credits:

4.00

Description:

Surveys Western art music from 1800-present, from Schubert to Jennifer Higdon; selected major composers, representative masterworks, and the musical styles of Romantic, Contemporary, and post-Modern periods; links the music to some of the major historical, cultural, artistic, and intellectual trends of these periods. Normally offered yearly.

Term:

Offered Spring Term

Type:

Humanities & History, Humanities Literature Requirement, Vis. & Perform Thry & Hst

Advanced Courses (8 courses, 32 credits)

Choose from the following. Students may choose eight Music History courses or combine Music History courses and related options.

Music History Courses (6-8 courses, 24-32 credits)

- **MUH-211 Music of the United States**

Credits:

4.00

Description:

Surveys American music from Colonial times to the present; various attempts to create an indigenous musical style; vernacular and art music genres including folk, concert, and religious music, jazz and musical theatre; includes music of Billings, Amy Beach, Ives, Copland, Bernstein, and Libby Larsen. Normally offered yearly.

Term:

Alternates Fall & Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **MUH-212 Popular Music in the United States**

Credits:

4.00

Description:

Covers various popular music styles that emerged in America from 1850 to the present including minstrelsy, art song, piano music, band music, blues, jazz, country, rock and rap; includes representative musical selections, emphasis the social and cultural factors that foster the emergence and developed of these genres. Normally offered every other year.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **MUH-221 History of Women in Music**

Credits:

4.00

Description:

Surveys music in the lives of women, including composers, performers, producers, mothers, and educators from the Middle Ages to the present; examines issues of gender and control, perspective in historical narrative, and religious and secular traditions that impact the cross-cultural reception of women's music. Normally offered every year.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement

- **MUH-223 World Music**

Credits:

4.00

Description:

Covers topics in folk, traditional, and modern music of Africa, the Middle East, Asia, and Europe in the context of the cultures and lives of the indigenous peoples of those regions; examines how music interacts with the issues of race, gender, class, religion, politics, and social movements. Normally offered every other year.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, Diverse Perspectives

- **MUH-227 Jazz and Blues**

Credits:

4.00

Description:

Follows the evolution of jazz from blues and ragtime through Dixieland, Swing, Bebop, Cool, Latin, Modern, Free, Fusion, and Avant-Garde to Post-modern expressions of the present; the contributions of major soloists, arrangers, composers, leaders, and bands. Normally offered every year.

Term:

Occasional

Type:

Cultural Diversity Opt A, Humanities & History, Humanities Literature Requirement

- **MUH-331 Music in Film**

Credits:

4.00

Description:

Studies the history and development of film music in Hollywood through its major composers and styles, the techniques of film scoring, and how music and its relationship to film have changed over the last century; critical listening to movie music while viewing films. Normally offered every other year.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **MUH-510 Independent Study**

Credits:

1.00- 4.00

Description:

Substantive reading/research in area of special interest directed by a faculty member.

Related Options (A maximum of 2 courses, 8 credits)

Or choose any [Art History](#) course at the 200-level or above

Notes:

- AP Credit: not applicable.
- A maximum of 3 courses taken at other institutions or as part of a study abroad program may be applied toward the major.
- Independent Study (MUH-510) may be taken only once (permission required).
- Any Seminar for Freshmen with a strong music component (50% or more of course content) may count toward the major with approval of the student's advisor.

- [Honors](#)
- [Music History Courses](#)

Students interested in honors should consult with the department chair during the spring semester of their junior year. Qualifying students must have a 3.2 overall GPA as well as a 3.5 overall GPA in Music History courses.

Honors candidates should register for Music History-502 in the fall semester of the senior year. Under the guidance of a faculty member, they will use this course to complete a research paper, which will be evaluated by all the professors in the student's field of study. If the evaluation is positive, the student will make an oral presentation of the paper in the spring.

Surveys Western art music from 1800-present, from Schubert to Jennifer Higdon; selected major composers, representative masterworks, and the musical styles of Romantic, Contemporary, and post-Modern periods; links the music to some of the major historical, cultural, artistic, and intellectual trends of these periods. Normally offered yearly.

Term:

Offered Spring Term

Type:

Humanities & History, Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **MUH-211 Music of the United States**

Credits:

4.00

Description:

Surveys American music from Colonial times to the present; various attempts to create an indigenous musical style; vernacular and art music genres including folk, concert, and religious music, jazz and musical theatre; includes music of Billings, Amy Beach, Ives, Copland, Bernstein, and Libby Larsen. Normally offered yearly.

Term:

Alternates Fall & Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst

- MUH-212 Popular Music in the United States

Credits:

4.00

Description:

Covers various popular music styles that emerged in America from 1850 to the present including minstrelsy, art song, piano music, band music, blues, jazz, country, rock and rap; includes representative musical selections, emphasis the social and cultural factors that foster the emergence and developed of these genres. Normally offered every other year.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- MUH-221 History of Women in Music

Credits:

4.00

Description:

Surveys music in the lives of women, including composers, performers, producers, mothers, and educators from the Middle Ages to the present; examines issues of gender and control, perspective in historical narrative, and religious and secular traditions that impact the cross-cultural reception of women's music. Normally offered every year.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement

- **MUH-223 World Music**

Credits:

4.00

Description:

Covers topics in folk, traditional, and modern music of Africa, the Middle East, Asia, and Europe in the context of the cultures and lives of the indigenous peoples of those regions; examines how music interacts with the issues of race, gender, class, religion, politics, and social movements. Normally offered every other year.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, Diverse Perspectives

- **MUH-227 Jazz and Blues**

Credits:

4.00

Description:

Follows the evolution of jazz from blues and ragtime through Dixieland, Swing, Bebop, Cool, Latin, Modern, Free, Fusion, and Avant-Garde to Post-modern expressions of the present; the contributions of major soloists, arrangers, composers, leaders, and bands. Normally offered every year.

Term:

Occasional

Type:

Cultural Diversity Opt A, Humanities & History, Humanities Literature Requirement

- **MUH-290 Internship in Music**

Prerequisites:

ARH-101, ARH-102, and Permission of Instructor

Credits:

1.00- 4.00

Description:

Designed to accompany an internship at a local museum, library, school, booking agency, or other music organization or institution, this independent study course will carry variable credit depending on the number of hours devoted to the internship and the related academic work done by the student.

- **MUH-331 Music in Film**

Credits:

4.00

Description:

Studies the history and development of film music in Hollywood through its major composers and styles, the techniques of film scoring, and how music and its relationship to film have changed over the last century; critical listening to movie music while viewing films. Normally offered every other year.

Major Requirements: 9 courses, 36 credits

Core Requirements (6 courses, 24 credits)

- PHIL-210 History of Ancient & Medieval Philosophy

Credits:

4.00

Description:

The study of philosophical thought from the period of the ancient Greek philosophers through the Medieval thinkers, including such philosophers as Socrates, Plato, Aristotle, Epicurus, Zeno, Parmenides, Pythagoras, Protagoras, Augustine, Aquinas, Anselm, and Abelard. An introductory course designed to equip the student with a well grounded understanding and appreciation of Philosophy. 1 term - 4 credits. Normally offered every year.

Term:

Offered Fall Term

Type:

Humanities & History, Humanities Literature Requirement

• PHIL-211 History of Modern Philosophy

Credits:

4.00

Description:

A study of the prominent modern thinkers, such as Descartes, Leibniz, Spinoza, Locke, Berkeley, Hume, and Kant. The course is an historical survey of the key concepts, problems and developments in modern philosophy including rationalism, empiricism, and skepticism. The following themes central to Modern philosophy will be addressed: the nature of reality; the limits of human knowledge; self and self-identity; mind and body; freedom in theory and practice; reason vs. sentiment in ethics. 1 term - 4 credits. Normally offered every year.

Term:

Offered Spring Term

Type:

Humanities & History, Humanities Literature Requirement

• PHIL-515 Senior Symposium

Prerequisites:

Prerequisite: PHIL 210 and 211 and consent of instructor.

Credits:

4.00

Description:

This is a required course for all students in the major, to be taken in the Spring Semester of their senior year. Students will prepare a portfolio of their previous coursework, collaborate with the faculty symposium leader on a selection of texts to read in common with other seniors, and prepare one paper for delivery at the Senior Symposium, usually held in late April. Students seeking Honors in Philosophy must take this course to complete the senior thesis. PHIL 210 and 211 and consent of instructor. 1 term - 4 credits. Normally offered Spring Semester every year.

Term:

Offered Spring Term

Choose one course at the 400-level

Choose one of the following:

- **PHIL-113 Critical Thinking and Argumentation**

Credits:

4.00

Description:

An introduction to non-formal methods of analyzing and formulating arguments, including treatment of such concepts/topics as: the nature of argument, induction, deduction, validity, soundness, aspects of language which tend to interfere with logical thought, definition, role of emotion, types of disagreement, and fallacies. The course also emphasizes the practical application of sound reasoning in both evaluating arguments and making arguments of one's own about matters of issues facing society. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

Type:

Humanities & History, Humanities Literature Requirement

- **PHIL-212 Formal Logic**

Credits:

4.00

Description:

An introduction to formal (or semi-formal) study of the basic types of deductive arguments (propositional and syllogistic logic). 1 term - 4 credits. Normally offered every year.

Term:

Occasional

Type:

Quantitative Reasoning

Choose one of the following:

- **PHIL-119 Ethics**

Credits:

4.00

Description:

A systematic introduction to the major thinkers and their positions on the main issues of ethics, such as: What is morality? What are moral values? How should we live our lives? Are there objective, universal, absolute moral standards? If so, what are they, and what is their basis? 1 term - credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- **PHIL-123 Social Ethics: The Good Life**

Credits:

4.00

Description:

An examination of contemporary Western society, particularly in the United States, in relation to philosophical attempts to define the good life. Current books that exhibit a philosophical approach towards important contemporary social issues will be discussed, as well as classics in philosophy. Topics may include: civic virtue, consumerism, current events, economic justice, popular culture (film, music, television), religion and secularism, etc. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

• PHIL-127 Contemporary Moral Issues

Credits:

4.00

Description:

A critical examination of a number of contemporary moral issues such as: abortion, affirmative action, animal rights, capital punishment, cloning, drug legalization, environmental ethics, euthanasia, genetic engineering, gun control, pornography, same-sex marriage, suicide, war and terrorism, etc. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

Electives (3 courses, 12 credits)

Students are required to take three additional courses selected with the help of an advisor. At least one of these additional courses should be at the 200-level or higher and one should be at the 300-level or higher. A detailed program suited to the needs of the individual student will be developed for each Philosophy major.

Major Requirements with Applied Ethics Concentration: 8 courses, 32 credits

This concentration is intended to train students to think systematically and critically about the social, moral, and political intricacies of public policy. Areas of study include business ethics; environmental ethics; medical and bioethics; the philosophy of law; the philosophy of race and gender; moral questions in the conduct of war, democracy, and the war on terrorism; and others.

In addition to a rigorous training in the history of ethics and social thought, students who choose this concentration will be required to take two applied ethics classes and complete an internship or residency. Possible internship sites include hospital ethics boards, the MA ethics commission, non-profits promoting equal access to housing and education, and many more placements. The internship requirement is meant to help students integrate their theoretical studies with real world experience, and will be closely supervised by the department's faculty.

Graduates of the Applied Ethics concentration will be especially well prepared for careers in government, public policy, and non-profit organizations. They will also be in an excellent position to apply to law school, and to graduate programs in the humanities and social sciences.

Requirements for the Applied Ethics concentration supersede all other requirements for the major.

Core Requirements (4 courses, 16 credits)

Choose one of the following:

- **PHIL-113 Critical Thinking and Argumentation**

Credits:

4.00

Description:

An introduction to non-formal methods of analyzing and formulating arguments, including treatment of such concepts/topics as: the nature of argument, induction, deduction, validity, soundness, aspects of language which tend to interfere with logical thought, definition, role of emotion, types of disagreement, and fallacies. 4.00

Description:

A critical examination of a number of contemporary moral issues such as: abortion, affirmative action, animal rights, capital punishment, cloning, drug legalization, environmental ethics, euthanasia, genetic engineering, gun control, pornography, same-sex marriage, suicide, war and terrorism, etc. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- **PHIL-251 Philosophy of Race & Gender**

Credits:

4.00

Description:

Prejudice of many kinds, such as racism and sexism, is so embedded in our social institutions, and is so traditional and pervasive that we often fail to notice it. In this course, we will deal with the history and nature of racism and sexism, as well as with possible solutions to these problems, including affirmative action and busing. Also to be discussed will be homosexuality, pornography and sex roles. 1 term - 4 credits. Normally offered alternate years. C a

Term:

Occasional

Type:

Cultural Diversity Opt A

- **PHIL-319 Topics in Applied Ethics**

Prerequisites:

PHIL-119, PHIL-123, PHIL-127 or PHIL-120

Credits:

4.00

Description:

This course will address in depth one or more specific issues in applied ethics. Topics will vary and may range from applied issues in political thought, such as just war theory or transitional justice, to specific questions in professional ethics or social policy, such as end-of-life care, economic justice, or the role of technology in the human future. Prerequisite: PHIL 119, or 123, or 127. 1 term - 4 credits. Normally offered every other year.

Term:

Occasional

Type:

Cultural Diversity Opt B

- **PHIL-362 Environmental Ethics**

Prerequisites:

PHIL-119, PHIL-123, PHIL-127 or PHIL-120

Credits:

4.00

Description:

An examination of the moral issues involved in the interaction of humans with their natural environment. Topics include: the environmental crisis, human-centered vs. nature-centered ethics, intrinsic value in nature, obligations to future generations, the importance of preserving endangered species and wilderness, radical ecology, eco-feminism, and the role of social justice in environmental issues. Prerequisite: PHIL 119, or 123, or 127. 1 term -4 credits. Normally offered every year.

Term:

Occasional

- **PHIL-363 Bio and Medical Ethics**

Prerequisites:

Prerequisite: Phil 119, or 123, or 127.

Credits:

4.00

Description:

An examination of the moral problems facing health-care practitioners, their patients, and others involved with the practice of medicine in today's society. Issues include euthanasia, the ethics of medical experimentation, the use of reproductive technologies, genetic counseling and genetic engineering, truth-telling and confidentiality in doctor-patient relationships, the cost and availability of medical care. Normally offered every third year.

Term:

Occasional

- **PHIL-364 Business Ethics**

Prerequisites:

PHIL-119, PHIL-123, PHIL-127 or PHIL-120

Credits:

4.00

Description:

An examination of the ethical questions in the working life and policies of the business and professional sectors of society. The focus will vary, but common themes will include: the role of commerce in civil society; the relation of business to conceptions of economic and social justice; the meaning and application of codes of ethics; obligations of corporations and professional organizations to shareholders and stakeholders; responsibilities to clients and colleagues; workplace conduct; the nature of success and conflicts between legal and moral obligations; the impact of globalization. The course will employ a variety of readings, including ethical theory and specific case studies. Prerequisite: PHIL 119, or 123, or 127. 1 term -4 credits. Normally offered every other year.

Term:

Occasional

Political/Legal Thought Requirement (1 course, 4 credits)

Choose one of the following:

- **PHIL-250 Social & Political Philosophy**

Credits:

4.00

Description:

An examination of persistent debates in political and social philosophy, such as the meaning of property and welfare, the tensions between liberty and equality, censorship and freedom of expression, the relation of church and state, the possibility of political education and civic virtue, legitimacy of the state and revolution, war and problems of end and means, addressing historic injustice, such as racism, genocide, or sexism, among other topics. The class will focus on no more than two such themes. Students will read both classic and contemporary writings to address both the historical roots and the contemporary treatment of these questions. 1 term - 4 credits. Normally offered every year.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

Senior Symposium Requirement (1 course, 4 credits)

Choose one of the following:

- **PHIL-513 Internship in Applied Ethics**

Prerequisites:

PHIL-119, PHIL-123, PHIL-127 or PHIL-120 and consent of instructor

Credits:

4.00

Description:

Students in this course will serve as interns in a department-approved position with a service provider, professional organization, government agency, or non-governmental organization whose work is relevant to issues in applied ethics. A faculty mentor will meet with students regularly to develop individually designed programs of readings and to discuss this material and its relation to the internship experience. In addition to the substantial time commitment to the internship, course requirements will usually include a journal and a research project. PHIL 119 or 123 or 127 and consent of instructor. 1 term -4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement

- **PHIL-515 Senior Symposium**

Prerequisites:

Prerequisite: PHIL 210 and 211 and consent of instructor.

Credits:

In order to be eligible for honors in Philosophy, students must satisfy the following criteria:

1. Students must major in Philosophy and have an overall GPA of 3.5, and a 3.5 GPA in Philosophy courses.
2. Candidates must complete either two years of language study by graduation or PHIL-212 (Formal Logic) and PHIL-423 (Advanced Formal Logic) or the equivalent in exceptional cases.
3. Candidates should consult with the chair of the Philosophy department at the beginning of their junior year in order to apply for admission to the honors program in Philosophy. They must find a thesis supervisor by the end of their junior year.
4. Honors candidates must take a minimum of two 400-level courses.
5. Honors candidates should register for PHIL-515 (Senior Symposium) during the second half of their senior year. They must coordinate their thesis work (guided by their chosen supervisor) with the instructor in PHIL-515. For honors students, this course will entail completion of a major research

paper, based on a proposal developed in PHIL-514. Research papers will be read and evaluated by the faculty of the department. Honors students will then defend their papers in individual sessions with the faculty. Honors will be awarded by a majority vote of the faculty.

- **PHIL-212 Formal Logic**

Occasional

Type:

Honors

- **PHIL-120 Ethics and Civic Life**

Credits:

4.00

Description:

In this class you will be introduced to the perspectives and methods of politics, philosophy, and economics and see how these three disciplines present distinct but interconnected dimensions of current social and political issues.

Type:

Diverse Perspectives

- **PHIL-123 Social Ethics: The Good Life**

Credits:

4.00

Description:

An examination of contemporary Western society, particularly in the United States, in relation to philosophical attempts to define the good life. Current books that exhibit a philosophical approach towards important contemporary social issues will be discussed, as well as classics in philosophy. Topics may include: civic virtue, consumerism, current events, economic justice, popular culture (film, music, television), religion and secularism, etc. 1 term - 4 credits. Normally offered every year.

- **PHIL-210 History of Ancient & Medieval Philosophy**

Credits:

4.00

Description:

The study of philosophical thought from the period of the ancient Greek philosophers through the Medieval thinkers, including such philosophers as Socrates, Plato, Aristotle, Epicurus, Zeno, Parmenides, Pythagoras, Protagoras, Augustine, Aquinas, Anselm, and Abelard. An introductory course designed to equip the student with a well grounded understanding and appreciation of Philosophy. 1 term - 4 credits. Normally offered every year.

Term:

Offered Fall Term

Type:

Humanities & History,Humanities Literature Requirement

- **PHIL-211 History of Modern Philosophy**

Credits:

4.00

Description:

A study of the prominent modern thinkers, such as Descartes, Leibniz, Spinoza, Locke, Berkeley, Hume, and Kant. The course is an historical survey of the key concepts, problems and developments in modern philosophy including rationalism, empiricism, and skepticism. The following themes central to Modern philosophy will be addressed: the nature of reality; the limits of human knowledge; self and self-identity; mind and body; freedom in theory and practice; reason vs. sentiment in ethics. 1 term - 4 credits. Normally offered every year.

Term:

Offered Spring Term

Type:

Humanities & History, Humanities Literature Requirement

• **PHIL-212 Formal Logic**

Credits:

4.00

Description:

An introduction to formal (or semi-formal) study of the basic types of deductive arguments (propositional and syllogistic logic). 1 term - 4 credits. Normally offered every year.

Term:

Occasional

Type:

Quantitative Reasoning

• **PHIL-219 Philosophy of Art**

Credits:

4.00

Description:

What counts as art? What is beauty? Are there objective standards of beauty? This course examines the nature of aesthetic experience, art, beauty, and creativity. Through the classic and contemporary readings, the students will be introduced to philosophical issues concerning the meaning of art, artistic representation, perceptions of art, interpretation, and criticism. Students will be encouraged to reflect on their own experience of art and explore the relationships among the artist, the audience, the artwork, and the world. 1 term - 4 credits. Normally offered every third year.

Type:

Humanities & History, Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **PHIL-228 Feminist Philosophy**

Credits:

4.00

Description:

This course is an introduction to the philosophy of feminist thought. Feminist theories of epistemology, metaphysics and morality will be examined as critiques of traditional philosophy,. Feminist perspectives and methodologies include radical, liberal, postmodern, as well as more recent trends in ecofeminism. Special emphasis will be placed on explicit and implicit practices of alienation and exclusion as they have unfolded in the gendering of thought, truth, and reality. 1 term - 4 credits. Normally offered every third year. C b

Term:

Occasional

Type:

Cultural Diversity Opt A, Cultural Diversity BFA, Diverse Perspectives

- **PHIL-229 Eco-Feminism**

Prerequisites:

PHIL 119, or PHIL 123, or PHIL 127

Credits:

4.00

Description:

Examines the political, social, and ecological problems facing us as a global community. Having its roots in feminist theory and deep-ecology, eco-feminism provides a critical framework for ecological responsibility and accountability. Writings from eco-feminist thinkers and environmental activists around the world will be used to highlight the philosophical and political conflicts and challenges, including globalization and loss of biodiversity, global warming, international human rights, the relationship of gender and nature, and modes of redress for eco-justice and sustainable development.

Type:

Diverse Perspectives

- **PHIL-235 The Meaning of Life**

Credits:

4.00

Description:

The question about the meaning of life is among the oldest and most perplexing questions of humanity. What do we live for? Which beliefs, values, and experiences sustain meaningful, fulfilling existence? Are we authors of our own destinies or powerless pawns in an unfathomable cosmic game? Does death render all our efforts superfluous? While our main focus will be philosophical, students will also explore the multiplicity of perspectives on life-meaning through the works of artists, poets, theologians, and psychologists. We will approach the question of the meaning of life both as an exciting intellectual endeavor and an existential challenge of great practical importance.

- **PHIL-250 Social & Political Philosophy**

Credits:

4.00

Description:

An examination of persistent debates in political and social philosophy, such as the meaning of property and welfare, the tensions between liberty and equality, censorship and freedom of expression, the relation of church and state, the possibility of political education and civic virtue, legitimacy of the state and revolution, war and problems of end and means, addressing historic injustice, such as racism, genocide, or sexism, among other topics. The class will focus on no more than two such themes. Students will read both classic and contemporary writings to address both the historical roots and the contemporary treatment of these questions. 1 term - 4 credits. Normally offered every year.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **PHIL-251 Philosophy of Race & Gender**

Credits:

4.00

Description:

Prejudice of many kinds, such as racism and sexism, is so embedded in our social institutions, and is so traditional and pervasive that we often fail to notice it. In this course, we will deal with the history and nature of racism and sexism, as well as with possible solutions to these problems, including affirmative action and busing. Also to be discussed will be homosexuality, pornography and sex roles. 1 term - 4 credits. Normally offered alternate years. C a

Term:

Occasional

Type:

Cultural Diversity Opt A

- **PHIL-255 Science, Myth, and Society**

Credits:

4.00

Description:

Both mythology and science arise from the human need to explain the world, to understand its laws, and give an account of its origin. This course focuses on the controversial relationship between myth and science and explores their historical roots, their social influence and their respective views of reality, human nature, and origin of the universe. Both historical controversies and contemporary debates, such as evolution vs. intelligent design,

will be considered. Topics in the philosophy of science, such as the nature and scope of the scientific method, will also be addressed. 1 term - 4 credits. Normally offered alternate years.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **PHIL-260 Philosophy of Religion**

Credits:

4.00

Description:

This course analyzes and interprets fundamental religious concepts and beliefs, examines the rational support for religious faith, and addresses the relation between religion and society. Fundamental questions concerning the nature and existence of God, salvation, and immortality will be explored, and for this the primary focus will be Western religious conceptions but may broaden to include other world religions. Other topics may include: whether all religions can be equally valid and true; the relation of religion and the state; the status of miracles; the history and psychology of religion; the conflict between religion and science. 1 term - 4 credits. Normally offered alternate years.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **PHIL-261 Eastern Philosophy**

Credits:

4.00

Description:

The exposition and critical evaluation of Hinduism, Buddhism, Confucianism, Taoism, and Islam. Special attention is given to foundation principles as well as to the similarities and differences of each of these philosophies to basic ideas in Western philosophy. 1 term - 4 credits. Normally offered alternate years. C b

• PHIL-266 African Philosophy

Credits:

4.00

Description:

An introduction to both traditional and modern philosophy from the African continent. Topics include: the intellectual dimensions of oral-traditional cultures within Africa; the impact of colonialism on African belief systems; philosophical responses to colonization; contributions of modern and contemporary African thinkers to the fields of social, political, moral and aesthetic philosophy.

• PHIL-267 Chinese Philosophy

Credits:

4.00

Description:

A survey of the main developments in Chinese Philosophy. The course begins with the early dynastic concept of humanism and then turns to Confucius and Mencius. Having developed the central Confucian doctrines, students next examine the Taoist response to Confucianism in the writings of Lao Tzu and Chuang Tzu. The course then considers Zen Buddhism, which is called Ch'an Buddhism in China, where it originated. In particular, students study the concept of sudden enlightenment before turning to the Neo-Confucian scholars.

Expanded Classroom Requirement

• PHIL-316 Existentialism

Prerequisites:

Prerequisite: One course in Philosophy or consent of instructor.

Credits:

4.00

Description:

An overview of the existentialist tradition. Primary focus on issues and problems arising from the existentialist reaction to classical philosophy. Topics include: paradoxes and contradictions of human nature and human condition; radical freedom, commitment, and responsibility; existential anxiety, meaninglessness and the rejection of God; authenticity and self-deception; individuality and community. Philosophers to be discussed will include Kierkegaard, Nietzsche, Sartre, Camus, Dostoevsky, and Heidegger. Prerequisite: One course in Philosophy or consent of instructor. 1 term - 4 credits. Normally offered every other year.

Term:

Occasional

• PHIL-317 Independent Research

Prerequisites:

Prerequisite: Consent of instructor.

Credits:

1.00- 4.00

Description:

This course focuses on philosophical research and writing. It is designed as an independent research course to allow students the opportunity to focus on a topic of their choice and develop critical skills in writing and research methods. Students will be required to produce a research paper of a length commensurate with the number of credits in the course, complete with abstract, thesis, outline, bibliography, and primary and secondary sources. Students will be expected to follow MLA guidelines. Prerequisite: Consent of instructor. 1 term -1-4 credits (variable). Normally offered on an as-needed basis.

Term:

Occasional

- **PHIL-318 Philosophy of Law**

Prerequisites:

Prerequisite: One course in Philosophy or Instructor's consent

Credits:

4.00

Description:

Readings may include a range of classical authors, such as Plato and Aquinas, as well as the works of such 20th-century legal philosophers as H.L.A. Hart, Dworkin and Rawls. Also included may be leading jurists such as Oliver Wendell Holmes and Learned Hand. Issues discussed may include the nature of law, its relation to justice, and how the legal system should operate to arrive at just decisions. Prerequisite: One course in Philosophy or consent of instructor. 1 term - 4 credits. Normally offered every third year.

Term:

Occasional

- **PHIL-319 Topics in Applied Ethics**

Prerequisites:

PHIL-119, PHIL-123, PHIL-127 or PHIL-120

Credits:

4.00

Description:

This course will address in depth one or more specific issues in applied ethics. Topics will vary and may range from applied issues in political thought, such as just war theory or transitional justice, to specific questions in professional ethics or social policy, such as end-of-life care, economic justice, or the role of technology in the human future. Prerequisite: PHIL 119, or 123, or 127. 1 term - 4 credits. Normally offered every other year.

Term:

Occasional

Type:

Cultural Diversity Opt B

• PHIL-362 Environmental Ethics

Prerequisites:

PHIL-119, PHIL-123, PHIL-127 or PHIL-120

Credits:

4.00

Description:

An examination of the moral issues involved in the interaction of humans with their natural environment. Topics include: the environmental crisis, human-centered vs. nature-centered ethics, intrinsic value in nature, obligations to future generations, the importance of preserving endangered species and wilderness, radical ecology, eco-feminism, and the role of social justice in environmental issues. Prerequisite: PHIL 119, or 123, or 127. 1 term -4 credits. Normally offered every year.

Term:

Occasional

• PHIL-363 Bio and Medical Ethics

Prerequisites:

Prerequisite: Phil 119, or 123, or 127.

Credits:

4.00

Description:

An examination of the moral problems facing health-care practitioners, their patients, and others involved with the practice of medicine in today's society. Issues include euthanasia, the ethics of medical experimentation, the use of reproductive technologies, genetic counseling and genetic

engineering, truth-telling and confidentiality in doctor-patient relationships, the cost and availability of medical care. Normally offered every third year.

Term:

Occasional

- **PHIL-364 Business Ethics**

Prerequisites:

PHIL-119, PHIL-123, PHIL-127 or PHIL-120

Credits:

4.00

Description:

An examination of the ethical questions in the working life and policies of the business and professional sectors of society. The focus will vary, but common themes will include: the role of commerce in civil society; the relation of business to conceptions of economic and social justice; the meaning and application of codes of ethics; obligations of corporations and professional organizations to shareholders and stakeholders; responsibilities to clients and colleagues; workplace conduct; the nature of success and conflicts between legal and moral obligations; the impact of globalization. The course will employ a variety of readings, including ethical theory and specific case studies. Prerequisite: PHIL 119, or 123, or 127. 1 term -4 credits. Normally offered every other year.

Term:

Occasional

- **PHIL-401 History of Ethics and Political Philosophy 1: Ancient and Medieval**

Prerequisites:

PHIL-210 , PHIL-211, 4 credits of a 400-level PHIL course, and Instructor consent

Credits:

4.00

Description:

A survey of major works and themes of moral and political philosophy from ancient Greece to the late medieval period. Topics covered will include the nature of moral duties, the connection between happiness and morality, citizenship and virtue, the meaning of a good life, the attractions and limitations of moral relativism, the foundations of legitimate government, arguments for and against democracy, realism and idealism in statecraft, and the relationship between law and ethics. Authors may include the Pre-Socratic thinkers, Plato, Aristotle, Cicero, Augustine, and Aquinas, among others. Prerequisite: Consent of instructor. 1 term -4 credits. Normally offered every year in the fall.

Term:

Offered Fall Term

- **PHIL-402 History of Ethics & Political Philosophy II**

Prerequisites:

PHIL-210, PHIL-211, 1 400-level PHIL course, and Instructor consent

Credits:

4.00

Description:

A continuation of PHIL 401, covering the early modern era to the dawn of the 20th century. Authors may include Machiavelli, Hobbes, Locke, Rousseau, Kant, Hegel, Mill, Marx, and Nietzsche, among others. Prerequisite: Consent of instructor. 1 term -4 credits. Normally offered every year in the spring.

Term:

Offered Spring Term

- **PHIL-414 Topics in Philosophy**

Credits:

4.00

Description:

A detailed exposition and evaluation of a specific topic or of the views of one major philosophical thinker or group of thinkers. Readings from both primary and secondary sources. Prerequisite: PHIL 210 or 211 or consent of instructor. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- **PHIL-416 Plato: Profiles in Philosophy**

Prerequisites:

Prerequisite: PHIL 210 or consent of instructor.

Credits:

4.00

Description:

A detailed study of Platonic texts and issues. Works studied will vary but will often include dialogues such as the Apology, Euthyphro, Phaedo, Republic, and Symposium. Themes may include, among others: the nature of philosophy and its relation to society; the dialogue form and the character of Socrates; the difference between truth and opinion; the meaning of virtue; justice and the ideal regime; the theory of forms and the nature of reality; love, death, and transcendence. Prerequisite: PHIL 210 or consent of instructor. 1 term ? 4 credits. Normally offered every third year.

- **PHIL-418 Kant: Profiles in Philosophy**

Prerequisites:

PHIL 211

Credits:

4.00

Description:

An examination of Kant's ethics and theory of knowledge, including the following topics: structures of our knowledge of nature and the empirical world; the limits of rationality; the possibility of any knowledge of God, the soul and other metaphysical entities; the antinomies (paradoxes) of pure reason; Kant's theory of unconditional morality based on duty; the idea of the categorical imperative; autonomy and universal moral law; the problem of evil. Selections from Kant's political writings will also be introduced. Prerequisite: PHIL 211 or consent of instructor. 1 term - 4 credits. Normally offered every third year.

Term:

Occasional

- **PHIL-423 Advanced Formal Logic**

Prerequisites:

Prerequisite: PHIL 212 or consent of instructor.

Credits:

4.00

Description:

In this course, students will put to work the logical theory developed in Formal Logic (Phil 212). In particular, students will use First-Order Logic to investigate computability and computation theory. Goedel's First and Second Incompleteness Theorems are a particular focus in the course.

Prerequisite: PHIL 212 or consent of instructor. 1 term -4 credits. Normally offered alternate years.

Term:

Occasional

- **PHIL-510 Independent Study**

Prerequisites:

Prerequisite: PHIL 210 and 211 and consent of instructor.

Credits:

1.00- 4.00

Description:

Students meet with a department member to pursue advanced studies in areas of particular interest to them.

Term:

Offered Both Fall and Spring

- **PHIL-513 Internship in Applied Ethics**

Prerequisites:

PHIL-119, PHIL-123, PHIL-127 or PHIL-120 and consent of instructor

Credits:

4.00

Description:

Students in this course will serve as interns in a department-approved position with a service provider, professional organization, government agency, or non-governmental organization whose work is relevant to issues in applied ethics. A faculty mentor will meet with students regularly to develop individually designed programs of readings and to discuss this material and its relation to the internship experience. In addition to the substantial time commitment to the internship, course requirements will usually include a journal and a research project. PHIL 119 or 123 or 127 and consent of instructor. 1 term -4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement

- **PHIL-515 Senior Symposium**

Prerequisites:

Prerequisite: PHIL 210 and 211 and consent of instructor.

Credits:

4.00

Description:

This is a required course for all students in the major, to be taken in the Spring Semester of their senior year. Students will prepare a portfolio of their previous coursework, collaborate with the faculty symposium leader on a selection of texts to read in common with other seniors, and prepare one paper for delivery at the Senior Symposium, usually held in late April. Students seeking Honors in Philosophy must take this course to complete the senior thesis. PHIL 210 and 211 and consent of instructor. 1 term - 4 credits. Normally offered Spring Semester every year.

Term:

- **PPE-401 Political Economy**

Prerequisites:

PHIL-119, PHIL-123,PHIL-127, or PHIL-120 and 2 of the following courses: GVT-110 GVT-225 EC-101 EC-102 PHIL-250 STATS-240 STATS-250
GVT-201 PHIL-212

Credits:

4.00

Description:

This interdisciplinary class brings together the fields of politics, philosophy, and economics at a high academic level. You will be confronted with hard questions about the sources, ends, and limits of government; the usefulness and troubles of free markets; the proper distribution of economic advantages in society; and what works best for building a just and efficient system of economic institutions.

- **PPE-510 Independent Study**

Credits:

1.00- 4.00

Description:

Independent Study

- **RS-111 Introduction to World Religions: Western Traditions**

Credits:

4.00

Description:

This course will explore the comparative history and structure of Western religious traditions, broadly understood, and their impact on other world religions, while attempting to recognize the similarities and the differences among them. Traditions to be studied include Greek and Roman religion, the monotheistic faiths (Judaism, Christianity, and Islam, as well as Zoroastrianism, Sikhism and Bahaism). We will also explore the impact of the Western religions on indigenous traditions, such as African religion, Native American religion, and Pacific Island religion. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. 1 term - 4 credits. Normally offered every year.

Type:

Diverse Perspectives

• RS-112 Introduction to World Religions: Eastern Traditions

Credits:

4.00

Description:

This course will examine a variety of Eastern religions, including Hinduism, Buddhism, Jainism, Confucianism, Taoism, and Shintoism. Possible connections to be explored will be the impact of these traditions on others, such as Pacific Islands and African religion, as well as the growing place of Eastern religion in the West. This course will explore the history and structure of each tradition, while attempting to recognize the similarities and the differences among them. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. Normally offered every year. Cultural Diversity B

2015-2016 Archived Catalog Information

Physics

The Physics & Engineering Department offers a major and minor in physics, as well as concentrations in astrophysics and planetary science. Our students receive a thorough foundation in fundamental and applied physics--both theoretical and experimental--allowing them to develop the necessary skills for critical thinking, problem solving, and scientific communication. An essential part of their training is guided research that involves students working in internships or working with a faculty advisor on a thesis in physics or applied physics.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Concentrations](#)
- [Minor Requirements](#)
- [Honors](#)

- [Physics Courses](#)

Major Requirements: 22 courses and corresponding laboratories, 86 credits

The department offers several programs leading to a BS, including:

- Physics
- Physics with a concentration in astrophysics
- Physics with a concentration in planetary science

A transfer student must see the chair of the department to determine which courses may be accepted for credit toward requirements of the Physics major. A minimum of 16 hours of the core requirements must be taken at Suffolk University.

Core Requirements (13 courses and corresponding laboratories, 50 credits)

- **PHYS-151 University Physics I**

Prerequisites:

Take MATH-121 or MATH 165. PHYS L151 concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **PHYS-L151 University Physics Lab I**

Prerequisites:

PHYS 151 concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **PHYS-152 University Physics II**

Prerequisites:

PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

Credits:

3.00

Description:

This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **PHYS-L152 University Physics Lab II**

Prerequisites:

PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• PHYS-153 University Physics III

Prerequisites:

Take MATH-121 or MATH-165;

Credits:

3.00

Description:

This calculus-based course is the introduction of the topics of modern physics. It begins with special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom. Then Schrodinger's equation is introduced with use of wave functions, particle box, barrier penetration, quantum mechanical tunneling, the Pauli Exclusion principle, the development of the periodic table, and the X-ray spectra. Development of solid state physics with bonding in molecules, band theory of solids and semiconductor behavior. The final topics cover nuclear physics, radioactivity, half-life, nuclear fission and fusion, medical uses of radiation, elementary particle physics and introduction to astrophysics.

Term:

Offered Fall Term

Description:

The laboratory consists of experiments to illustrate the basic concepts of special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom.

Type:

SCI TECH ENGR

- **PHYS-333 Math Methods of Physics**

Prerequisites:

Take ECE-225 and ECE-L225;

Credits:

4.00

Description:

Applications of specific mathematical methods to problems in physics. Topics include complex analysis, integral transforms, eigenvalue problems, partial differential equations and group theory. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:

Offered Fall Term

- **PHYS-361 Classical Mechanics I**

Prerequisites:

PHYS 152 ; MATH 265 which may be taken concurrently

Credits:

4.00

Description:

Newton's laws of motion, projectiles, momentum, energy, conservation laws, oscillations, Lagrange equations, generalized momenta, central forces, orbits. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:

Offered Fall Term

• PHYS-362 Classical Mechanics II

Prerequisites:

PHYS 361

Credits:

4.00

Description:

Mechanics in non-inertial frames, rotational motion of rigid bodies, coupled oscillations, nonlinear mechanics and chaos, Hamiltonian mechanics, collision theory, continuum mechanics. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:

Offered Spring Term

- **PHYS-431 Undergraduate Research in Physics**

Credits:

4.00

Description:

This course provides a mechanism for students to receive academic credit for engaging in research. A faculty member in the physics department will serve as the research advisor for each student. This faculty advisor will have the primary responsibility for overseeing each individual student's work and will decide the grade for the course. The research project may be initiated by the student or by a faculty member.

Term:

Offered Spring Term

- **PHYS-477 Electricity and Magnetism**

Credits:

4.00

Description:

Electrostatic field energy, methods for solution of boundary value problems. The magnetostatic field and magnetic circuits. Electromagnetic field energy, plane waves, wave guides and cavity resonators. Interaction of charge particles with electromagnetic fields. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:

Offered Fall Term

- **PHYS-453 Modern Physics**

Prerequisites:

PHYS-153;

Credits:

4.00

Description:

Topics include atoms and elementary particles, atomic, molecular and nuclear systems. Quantum states and probability amplitude, wave mechanics and thermal properties of matter. Atomic spectra and structure, and molecular systems. Nuclear reactions, alpha and beta decay and high energy physics. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:

Offered Fall Term

- **PHYS-464 Statistical Physics**

Prerequisites:

PHYS-361, PHYS-151, PHYS-L151, PHYS-152, PHYS-L152, PHYS-153 and PHYS-L153

Credits:

4.00

Description:

Macroscopic objects are made up of huge numbers of fundamental particles whose interactions are well understood. Physical properties that emerge from these interactions are, however, not simply related to these fundamental interactions. In this course we will develop the tools of statistical physics, which will allow us to predict emergent cooperative phenomena. We will apply those tools to a wide variety of physical questions, including the behavior of glasses, polymers, heat engines, magnets, and electrons in solids. Computer simulations will be extensively used to aid visualization and provide concrete realization of models in order to impart deeper understanding of statistical physics.

- **PHYS-L455 Advanced Laboratory**

Prerequisites:

PHYS 451 and PHYS 452 or equivalent.

Credits:

2.00

Description:

Classical and modern experiments in physics; Experiments may include Frank Hertz experiment, Hall effect, nuclear magnetic resonance, quantum dots, detection of muons, x-ray spectroscopy, ellipsometry, physics of timbre of musical instruments, data acquisition.

Term:

Offered Fall Term

Choose one of the following:

- **PHYS-461 Quantum Mechanics I**

Prerequisites:

PHYS-361

Credits:

4.00

Description:

Non-relativistic study of particle systems, wave mechanical treatment, development of the concepts of observables, state vectors, operators and matrix representations. Hilbert space, angular momenta, coupling, symmetries, scattering, and perturbation theory. Harmonic oscillator and Hydrogen atom. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once a week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:

Offered Fall Term

- **PHYS-462 Quantum Mechanics II**

Prerequisites:

PHYS 461, PHYS 361 and PHYS 362.

Credits:

4.00

Description:

Non-relativistic study of particle systems, wave mechanical treatment, development of the concepts of observables, state vectors, operators and matrix representations. Hilbert space, angular momenta, coupling, symmetries, scattering, and perturbation theory. Harmonic oscillator and Hydrogen atom. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:

Offered Spring Term

Choose one Physics elective

Math and Basic Science Requirements (9 courses and corresponding laboratories, 36 credits)

Choose two of the following and the corresponding laboratories:

- **CHEM-111 General Chemistry I**

Prerequisites:

Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:

3.00

Description:

Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

• **CHEM-L111 General Chemistry I Lab**

Prerequisites:

Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **CHEM-112 General Chemistry II**

Prerequisites:

CHEM 111/L111; CHEM-L112 must be taken concurrently.

Credits:

3.00

Description:

This course is a continuation of General Chemistry I. Fundamental principles of chemistry are discussed. Introduces thermochemistry, gases, solution chemistry, chemical kinetics, chemical equilibrium, acid-base systems, and thermodynamics.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS

- **CHEM-L112 General Chemistry II Lab**

Prerequisites:

CHEM 112 must be taken concurrently;

Credits:

1.00

Description:

This course is a continuation of General Chemistry I Lab. Apply the basic principles of chemistry through discovery laboratory experiments with an emphasis on quantitative analysis. Execute basic analytical techniques such as gravimetric analysis, the application of Beer's Law, and acid-base titrations. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **BIO-111 Introduction to the Cell**

Prerequisites:

Must take BIO L111 concurrently

Credits:

3.00

Description:

Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L111 Introduction to the Cell Laboratory**

Prerequisites:

Concurrently with BIO 111

Credits:

1.00

Description:

Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis,and cell isolation.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

Choose one [Science](#) elective (Science course 200-level or higher).

Choose the five courses below and the corresponding laboratory where applicable.

- **MATH-165 Calculus I**

Prerequisites:

MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

Credits:

4.00

Description:

Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-166 Calculus II**

Prerequisites:

MATH 165 with grade of C or better

Credits:

4.00

Description:

Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation, convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-265 Calculus III**

Prerequisites:

MATH 166 with grade of C or better

Credits:

4.00

Description:

Parametric equations and polar coordinates (curves, areas, conic sections); vectors and the geometry of space (the dot product, vector arithmetic, lines and planes in 3-space, the cross product, cylinders and quadratic surfaces); vector functions (limits, derivatives and integrals, motion in space); partial derivatives (functions of several variables, limits and continuity, tangent planes and differentials, chain rule, directional derivatives, gradient, extrema, Lagrange multipliers); multiple integrals (double integrals, applications); vector calculus (vector fields, line integrals, fundamental theorem for line integrals, Green's Theorem, curl and divergence, parametric surfaces, surface integrals). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **ECE-101 Digital Electronics**

Prerequisites:

ECE L101 MUST BE TAKEN CONCURRENTLY

Credits:

3.00

Description:

This course introduces the elements and tools of digital design. The course covers Boolean algebra, Karnaugh maps, Logic gates and digital circuits, analysis and design of combinational and sequential circuits, and timing issues. Adders, decoders, multiplexers, flip-flops, counters, and registers are implemented using TTL or CMOS ICs as well as VHDL-programmed FPGAs. Formerly ECE 203

Term:

Offered Fall Term

- **ECE-L101 Digital Electronics-Lab**

Prerequisites:

ECE 101 MUST BE TAKEN CONCURRENTLY.

Credits:

1.00

Description:

Illustrates the concepts of ECE-101. Exercises in various forms of Combinational and Sequential Logic design. Use of test equipment. Design projects will include a digital security system, use of PSPICE to verify feasibility of some designs. FPGA board citing Xilinx, software development tools from Xilinx and other third parties are introduced. Offered yearly. Formerly ECE L203

Term:

Offered Fall Term

- **CMPSC-F131 Computer Science I**

Credits:

4.00

Description:

This is a rigorous introduction to computer science in Java with an emphasis on problem solving, structured programming, object-oriented programming, and graphical user interfaces. Topics include expressions, input/output, control structures, intrinsic data types, classes and methods, iteration, top-down programming, arrays, graphical user interfaces, and elements of UML. Normally offered each semester.

Type:

Quantitative Reasoning

Choose one of the following and its corresponding laboratory where applicable:

- **ENS-333 Programming for Engineers**

Prerequisites:

ENS L333 concurrently

Credits:

3.00

Description:

This course will introduce programming concepts in the context of solving engineering problems. Emphasis will be placed on applying the high-level programming skills learned to particular platforms such as embedded systems. Students will implement various microcontroller programming exercises as well as an end of the semester project.

Term:

Offered Spring Term

- **ENS-L333 Programming for Engineers Lab**

Prerequisites:

ENS 333 concurrently

Credits:

1.00

Description:

The Programming for Engineers lab is designed to supplement the Programming for Engineers Course.

- **CMPSC-F132 Computer Science II**

Prerequisites:

Credits:

4.00

Description:

Computer Science II (CSII) is the continuation of Computer Science I. The purpose of CSII is to expand students' understanding of Computer Science and computer programming, assuming that they have the basic knowledge of the Java language. The course introduce another programming language - C - and also focuses on the pure Object-Oriented features of Java, such as inheritance, polymorphism, and exceptions, as well as on simple data structures (lists, stacks, and queues) and algorithms (searching and sorting). By the end of the semester students will be able to develop sizable (several pages long) computer programs in the C and Java languages. Efficient C and Java program development requires an Integrated Development Environment (IDE) - a collection of tools that make it possible to edit, compile, and debug C and Java programs. Our IDE of choice is Eclipse. Eclipse is free and available for many operating systems, including Microsoft Windows (all flavors), Linux, Unix, and Mac OS X.

Type:

Quantitative Reasoning

2015-2016 Archived Catalog Information

Physics

The Physics & Engineering Department offers a major and minor in physics, as well as concentrations in astrophysics and planetary science. Our students receive a thorough foundation in fundamental and applied physics--both theoretical and experimental--allowing them to develop the necessary skills for critical thinking, problem solving, and scientific communication. An essential part of their training is guided research that involves students working in internships or working with a faculty advisor on a thesis in physics or applied physics.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Concentrations](#)
- [Minor Requirements](#)
- [Honors](#)
- [Societies](#)
- [Physics Courses](#)

Students may choose a concentration in either Astrophysics or Planetary Science.

The Astrophysics concentration is directed towards students interested in pursuing graduate studies in astrophysics and is run in close collaboration with Suffolk's Madrid campus. Students are required to spend Summer Session I following their junior year in Madrid to take upper-level courses in astrophysics. These courses will include trips to the Canary Islands to take data at one of the world's major astronomical observatories, the Tenerife Observatory.

The Planetary Science concentration provides core training in earth and planetary sciences, together with mathematics, applied physics, computational and instrumental technology, needed for professions in the earth and space sciences.

Physics Major with Astrophysics or Planetary Science Concentration Requirements: 22 courses and corresponding laboratories, 86 credits

Core Requirements (10 courses, 38 credits)

- **PHYS-151 University Physics I**

Prerequisites:

Take MATH-121 or MATH 165. PHYS L151 concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **PHYS-L151 University Physics Lab I**

Prerequisites:

PHYS 151 concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **PHYS-152 University Physics II**

Prerequisites:

PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

Credits:

3.00

Description:

This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **PHYS-L152 University Physics Lab II**

Prerequisites:

PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• PHYS-153 University Physics III

Prerequisites:

Take MATH-121 or MATH-165;

Credits:

3.00

Description:

This calculus-based course is the introduction of the topics of modern physics. It begins with special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom. Then Schrodinger's equation is introduced with use of wave functions, particle box, barrier penetration, quantum mechanical tunneling, the Pauli Exclusion principle, the development of the periodic table, and the X-ray spectra. Development of solid state physics with bonding in molecules, band theory of solids and semiconductor behavior. The final topics cover nuclear physics, radioactivity, half-life, nuclear fission and fusion, medical uses of radiation, elementary particle physics and introduction to astrophysics.

Term:

Offered Fall Term

Type:

SCI TECH ENGR

• PHYS-L153 University Physics III Lab

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts of special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom.

Type:

SCI TECH ENGR

- **PHYS-205 Introduction to Astrophysics**

Prerequisites:

Prerequisite: PHYS 151-152

Credits:

4.00

Description:

An introduction to the concepts and methods of astrophysics; including a history of astronomy from the ancients to Newton; light; telescopes; sun, earth, moon planets, comets, asteroids, meteors, space programs, science and technology in society. Astronomy of the cosmos; sun, stars, interstellar materials, galaxies, pulsars, quasars, black holes; nature of time relativity, cosmology.

Term:

Offered Fall Term

- **PHYS-361 Classical Mechanics I**

Prerequisites:

PHYS 152 ; MATH 265 which may be taken concurrently

Credits:

4.00

Description:

Newton's laws of motion, projectiles, momentum, energy, conservation laws, oscillations, Lagrange equations, generalized momenta, central forces, orbits. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:

Offered Fall Term

- **PHYS-431 Undergraduate Research in Physics**

Credits:

4.00

Description:

This course provides a mechanism for students to receive academic credit for engaging in research. A faculty member in the physics department will serve as the research advisor for each student. This faculty advisor will have the primary responsibility for overseeing each individual student's work and will decide the grade for the course. The research project may be initiated by the student or by a faculty member.

Term:

Offered Spring Term

- **PHYS-477 Electricity and Magnetism**

Credits:

4.00

Description:

Electrostatic field energy, methods for solution of boundary value problems. The magnetostatic field and magnetic circuits. Electromagnetic field energy, plane waves, wave guides and cavity resonators. Interaction of charge particles with electromagnetic fields. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:

Offered Fall Term

- **PHYS-453 Modern Physics**

Prerequisites:

PHYS-153;

Credits:

4.00

Description:

Topics include atoms and elementary particles, atomic, molecular and nuclear systems. Quantum states and probability amplitude, wave mechanics and thermal properties of matter. Atomic spectra and structure, and molecular systems. Nuclear reactions, alpha and beta decay and high energy physics. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. Term:

Offered Fall Term

- **PHYS-464 Statistical Physics**

Prerequisites:

PHYS-361, PHYS-151, PHYS-L151, PHYS-152, PHYS-L152, PHYS-153 and PHYS-L153

Credits:

4.00

Description:

Macroscopic objects are made up of huge numbers of fundamental particles whose interactions are well understood. Physical properties that emerge from these interactions are, however, not simply related to these fundamental interactions. In this course we will develop the tools of statistical physics, which will allow us to predict emergent cooperative phenomena. We will apply those tools to a wide variety of physical questions, including the behavior of glasses, polymers, heat engines, magnets, and electrons in solids. Computer simulations will be extensively used to aid visualization and provide concrete realization of models in order to impart deeper understanding of statistical physics.

- **PHYS-L455 Advanced Laboratory**

Prerequisites:

PHYS 451 and PHYS 452 or equivalent.

Credits:

2.00

Description:

Classical and modern experiments in physics; Experiments may include Frank Hertz experiment, Hall effect, nuclear magnetic resonance, quantum dots, detection of muons, x-ray spectroscopy, ellipsometry, physics of timbre of musical instruments, data acquisition.

Term:

Offered Fall Term

Choose one of the following concentrations:

Astrophysics Concentration Requirements (3 courses and corresponding laboratories where applicable, 12 credits)

- **PHYS-381 Observational Astronomy**

Prerequisites:

PHYS 151 AND PHYS 152 OR PHYS 153.

Credits:

2.00- 3.00

Description:

The topics covered include theoretical foundations of observational astronomy, designs of telescopes, instrumentation for telescopes, data acquisition and management, as well as practical problems in observational astronomy. Offered together with the laboratory component PHYS L381.

- **PHYS-L381 Laboratory Research Assistantship III**

Prerequisites:

Permission of Dept. Chair Required

Credits:

1.00- 2.00

Description:

This is a laboratory based research experience which involves teams of students assisting faculty in Physics/Astronomy research projects. Students will participate in an intensive laboratory training period in the Canary Islands and will follow through with research work in consultation with faculty based in the Madrid and Boston campuses. A final paper and presentation is required. Permission of department chair is required for registration and determination of course credits.

- **PHYS-461 Quantum Mechanics I**

Prerequisites:

PHYS-361

Credits:

4.00

Description:

Non-relativistic study of particle systems, wave mechanical treatment, development of the concepts of observables, state vectors, operators and matrix representations. Hilbert space, angular momenta, coupling, symmetries, scattering, and perturbation theory. Harmonic oscillator and Hydrogen atom. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once a week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:

Offered Fall Term

- **PHYS-463 Stellar Astrophysics**

Prerequisites:

Prerequisite: PHYS 451-452, PHYS 461-462 1 term - 4 credits

Credits:

4.00

Description:

Physics of stars. Stellar atmospheres. Stellar interiors. Stellar evolution.

Term:

Summer

Planetary Science Concentration Requirements (3 courses, 12 credits)

- **PHYS-213 Introduction to Earth & Planetary Interiors**

Prerequisites:

CHEM-111 and CHEM-112 OR PHYS-111 and PHYS-112

Credits:

4.00

Description:

This course introduces science majors to the constitution, composition, and energetics of the Earth's interior. It includes several important topics in Earth and planetary sciences, such as the geomagnetic field and the geodynamo, concepts of seismic exploration, geophysical fluid dynamics, and applications of geophysical methods in exploration of energy resources. It also relates the inner dynamics of planets to their surface and atmospheric effects by including topics such as evolution of planetary tectonics using seismology, gravity, geodesy, magnetics, and heat flow; dynamics of water and carbon cycles; and the origin of water on Earth and Mars. This course welcomes basic science, environmental science, engineering, and math majors.

• PHYS-350 Planetary Materials

Prerequisites:

PHYS-213

Credits:

4.00

Description:

This course provides an overview of the chemical and physical properties of the material constituents of the Earth and terrestrial planets, including minerals, rocks, lavas, and supercritical water. Topics include mineral structure and composition, bonding, optical properties, x-ray diffraction, phase transformations, and surface properties. The physics and chemistry of energy materials, synthetic nanomaterials will be included with emphasis/focus on energy resources, environmental impact, and geopolitical implications. There are no mandatory prerequisites for this course, but students who have taken introductory chemistry and/or physics will be familiar with some concepts discussed, and will find the going easier. Some background in Earth science is assumed (at the level of PHYS-213), and competence in basic chemistry is expected (some review will be provided where appropriate). The course is not mathematically intensive, but an appreciation of the fundamentals of calculus is important.

• SCI-210 Earth and Planetary Crystals

Credits:

4.00

Description:

This course will provide undergraduate students of various disciplines with an introduction to gems and crystals using interactive, evidence-based teaching approaches. Crystalline forms of matter are critical to our existence. Using innovative teaching strategies of in-class hands-on demonstration, supplemented with visuals of crystal details, the course provides students insights into the formation, alteration and unique properties that make

crystals invaluable. Topics range from the study of proteins and nucleic acids to the interior of planets. The in-class lectures will provide a basic guide that will serve as a platform for individually catered in-depth study. Therefore, the course is open to advanced students as well, who can pick up higher level of information for discussion and class projects.

Type:

NATURAL SCIENCE FOR BS,NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGR

Math and Science Requirements (9 courses, 36 credits)

- **MATH-165 Calculus I**

Prerequisites:

MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

Credits:

4.00

Description:

Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications(curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-166 Calculus II**

Prerequisites:

MATH 165 with grade of C or better

Credits:

4.00

Description:

Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations

(separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation, convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-265 Calculus III**

Prerequisites:

MATH 166 with grade of C or better

Credits:

4.00

Description:

Parametric equations and polar coordinates (curves, areas, conic sections); vectors and the geometry of space (the dot product, vector arithmetic, lines and planes in 3-space, the cross product, cylinders and quadratic surfaces); vector functions (limits, derivatives and integrals, motion in space); partial derivatives (functions of several variables, limits and continuity, tangent planes and differentials, chain rule, directional derivatives, gradient, extrema, Lagrange multipliers); multiple integrals (double integrals, applications); vector calculus (vector fields, line integrals, fundamental theorem for line integrals, Green's Theorem, curl and divergence, parametric surfaces, surface integrals). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **CMPSC-F131 Computer Science I**

Credits:

4.00

Description:

This is a rigorous introduction to computer science in Java with an emphasis on problem solving, structured programming, object-oriented programming, and graphical user interfaces. Topics include expressions, input/output, control structures, intrinsic data types, classes and methods, iteration, top-down programming, arrays, graphical user interfaces, and elements of UML. Normally offered each semester.

Type:

Quantitative Reasoning

• CMPSC-F132 Computer Science II

Prerequisites:

CMPSC F131

Credits:

4.00

Description:

Computer Science II (CSII) is the continuation of Computer Science I. The purpose of CSII is to expand students' understanding of Computer Science and computer programming, assuming that they have the basic knowledge of the Java language. The course introduces another programming language - C - and also focuses on the pure Object-Oriented features of Java, such as inheritance, polymorphism, and exceptions, as well as on simple data structures (lists, stacks, and queues) and algorithms (searching and sorting). By the end of the semester students will be able to develop sizable (several pages long) computer programs in the C and Java languages. Efficient C and Java program development requires an Integrated Development Environment (IDE) - a collection of tools that make it possible to edit, compile, and debug C and Java programs. Our IDE of choice is Eclipse. Eclipse is free and available for many operating systems, including Microsoft Windows (all flavors), Linux, Unix, and Mac OS X.

Type:

Quantitative Reasoning

Choose two [Science](#) electives (Science courses at the 200-level or higher).

Choose two courses and the corresponding laboratories from the following:

• CHEM-111 General Chemistry I

Prerequisites:

Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:

3.00

Description:

Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **CHEM-L111 General Chemistry I Lab**

Prerequisites:

Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **CHEM-112 General Chemistry II**

Prerequisites:

CHEM 111/L111; CHEM-L112 must be taken concurrently.

Credits:

3.00

Description:

This course is a continuation of General Chemistry I. Fundamental principles of chemistry are discussed. Introduces thermochemistry, gases, solution chemistry, chemical kinetics, chemical equilibrium, acid-base systems, and thermodynamics.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

• CHEM-L112 General Chemistry II Lab

Prerequisites:

CHEM 112 must be taken concurrently;

Credits:

1.00

Description:

This course is a continuation of General Chemistry I Lab. Apply the basic principles of chemistry through discovery laboratory experiments with an emphasis on quantitative analysis. Execute basic analytical techniques such as gravimetric analysis, the application of Beer's Law, and acid-base titrations. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **BIO-111 Introduction to the Cell**

Prerequisites:

Must take BIO L111 concurrently

Credits:

3.00

Description:

Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **BIO-L111 Introduction to the Cell Laboratory**

Prerequisites:

Concurrently with BIO 111

Credits:

1.00

Description:

Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

2015-2016 Archived Catalog Information

Physics

The Physics & Engineering Department offers a major and minor in physics, as well as concentrations in astrophysics and planetary science. Our students receive a thorough foundation in fundamental and applied physics--both theoretical and experimental--allowing them to develop the necessary skills for critical thinking, problem solving, and scientific communication. An essential part of their training is guided research that involves students working in internships or working with a faculty advisor on a thesis in physics or applied physics.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Concentrations](#)
- [Minor Requirements](#)
- [Honors](#)
- [Societies](#)
- [Physics Courses](#)

Minor Requirements: 5 courses and corresponding laboratories, 20 credits

- PHYS-151 University Physics I

Prerequisites:

Take MATH-121 or MATH 165. PHYS L151 concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• **PHYS-L151 University Physics Lab I**

Prerequisites:

PHYS 151 concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• **PHYS-152 University Physics II**

Prerequisites:

PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

Credits:

3.00

Description:

This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• **PHYS-L152 University Physics Lab II**

Prerequisites:

PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

- **PHYS-153 University Physics III**

Prerequisites:

Take MATH-121 or MATH-165;

Credits:

3.00

Description:

This calculus-based course is the introduction of the topics of modern physics. It begins with special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom. Then Schrodinger's equation is introduced with use of wave functions, particle box, barrier penetration, quantum mechanical tunneling, the Pauli Exclusion principle, the development of the periodic table, and the X-ray spectra. Development of solid state physics with bonding in molecules, band theory of solids and semiconductor behavior. The final topics cover nuclear physics, radioactivity, half-life, nuclear fission and fusion, medical uses of radiation, elementary particle physics and introduction to astrophysics.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **PHYS-L153 University Physics III Lab**

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts of special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon

interactions, pair production, and the Bohr theory of the atom.

Type:

SCI TECH ENGR

Choose one of the following:

- **PHYS-205 Introduction to Astrophysics**

Prerequisites:

Prerequisite: PHYS 151-152

Credits:

4.00

Description:

An introduction to the concepts and methods of astrophysics; including a history of astronomy from the ancients to Newton; light; telescopes; sun, earth, moon planets, comets, asteroids, meteors, space programs, science and technology in society. Astronomy of the cosmos; sun, stars, interstellar materials, galaxies, pulsars, quasars, black holes; nature of time relativity, cosmology.

Term:

Offered Fall Term

- **PHYS-361 Classical Mechanics I**

Prerequisites:

PHYS 152 ; MATH 265 which may be taken concurrently

Credits:

4.00

Description:

Newton's laws of motion, projectiles, momentum, energy, conservation laws, oscillations, Lagrange equations, generalized momenta, central forces, orbits. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:

Offered Fall Term

- **PHYS-453 Modern Physics**

Prerequisites:

PHYS-153;

Credits:

4.00

Description:

Topics include atoms and elementary particles, atomic, molecular and nuclear systems. Quantum states and probability amplitude, wave mechanics and thermal properties of matter. Atomic spectra and structure, and molecular systems. Nuclear reactions, alpha and beta decay and high energy physics. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:

Offered Fall Term

Choose one of the following:

- **PHYS-461 Quantum Mechanics I**

Prerequisites:

PHYS-361

Credits:

4.00

Description:

Non-relativistic study of particle systems, wave mechanical treatment, development of the concepts of observables, state vectors, operators and matrix representations. Hilbert space, angular momenta, coupling, symmetries, scattering, and perturbation theory. Harmonic oscillator and Hydrogen atom. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once a week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:

Offered Fall Term

• PHYS-462 Quantum Mechanics II

Prerequisites:

PHYS 461, PHYS 361 and PHYS 362.

Credits:

4.00

Description:

Non-relativistic study of particle systems, wave mechanical treatment, development of the concepts of observables, state vectors, operators and matrix representations. Hilbert space, angular momenta, coupling, symmetries, scattering, and perturbation theory. Harmonic oscillator and Hydrogen atom. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:

Offered Spring Term

- **PHYS-464 Statistical Physics**

Prerequisites:

PHYS-361, PHYS-151, PHYS-L151, PHYS-152, PHYS-L152, PHYS-153 and PHYS-L153

Credits:

4.00

Description:

Macroscopic objects are made up of huge numbers of fundamental particles whose interactions are well understood. Physical properties that emerge from these interactions are, however, not simply related to these fundamental interactions. In this course we will develop the tools of statistical physics, which will allow us to predict emergent cooperative phenomena. We will apply those tools to a wide variety of physical questions, including the behavior of glasses, polymers, heat engines, magnets, and electrons in solids. Computer simulations will be extensively used to aid visualization and provide concrete realization of models in order to impart deeper understanding of statistical physics.

- **PHYS-477 Electricity and Magnetism**

Credits:

4.00

Description:

Electrostatic field energy, methods for solution of boundary value problems. The magnetostatic field and magnetic circuits. Electromagnetic field energy, plane waves, wave guides and cavity resonators. Interaction of charge particles with electromagnetic fields. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:

Offered Fall Term

Note:

Most of these courses have substantial mathematics prerequisites (Calculus I, II, Multivariable Calculus) so it might not be possible for a non-science major to minor in physics.

The honors program is designed to prepare students for graduate school in physics. It is designed to provide these students with additional training for standardized examinations required for graduate school and give them exposure to graduate-level coursework.

Requirements

Students may enroll starting in the beginning of sophomore year, with permission of the departmental honors committee, and must meet the following requirements:

1. The student must maintain a minimum 3.4 grade point average in the mathematics and science requirements for the major and must also complete at least 15 of these credits at Suffolk University.
2. The student must successfully complete a competency exam administered by the department at the end of the junior year. The examination covers all technical courses required for the major, taken by the student up to and including that semester. The test consists of problems selected from all of the

main topics in each course. A three-person honors committee will assist students in preparing for the examination.

3. At the end of the senior year, the student must pass an oral examination administered by the honors committee.

4. The student must complete additional coursework in the form of PHYS-533, Special Topics in Physics, to help prepare for graduate school in physics.

Sigma Pi Sigma

The Suffolk University Chapter of the National Society of Physics Students was established in 1979. Election to Sigma Pi Sigma membership is conducted by the active Sigma Pi Sigma members. To be eligible, a student does not have to be a Physics major but must rank in the upper 20% of his/her class, have a minimum cumulative grade point average of 3.0, and a Physics grade point average of 3.3.

Society of Physics Students

The Society of Physics Students (SPS) is the student wing of American Institute of Physics (AIP). As a professional student association, it is focused on helping students develop the well-rounded skillset needed to succeed beyond the classroom. The Suffolk University chapter is open to any Suffolk student interested in physics. This network connects students across 200 colleges nationwide, many of which are right here in Boston. SPS provides and supports opportunities for students to develop professionally by attending conferences and workshops, organizing conferences, and participating in internship

programs. It recognizes the need for students to develop leadership skills and experience in science outreach activities while they are in an undergraduate program.

The SPS helps students become contributing members of the professional community. Course work develops only one range of skills. Other skills needed to flourish professionally include effective communication and personal interactions, leadership experience, establishing a personal network of contacts, presenting scholarly work in professional meetings and journals, and providing outreach services to the campus and local communities.

• MS-301 Clinical Radiation I

Prerequisites:

BIO 204 and MS 200

Credits:

3.00

Description:

Through a systems-based approach, this course will review anatomy and physiology while teaching medical terminology. This course will also discuss the major cancers associated with each anatomical system and introduce the student to radiation therapy treatment techniques and procedures.

Term:

Offered Spring Term

• MS-L301 Clinical Radiation Lab I

Prerequisites:

MS 301 concurrently

Credits:

1.00

Description:

Provides the necessary clinical experience to become a radiation therapist. All labs are conducted at our clinical affiliates. Under the supervision of licensed radiation therapists, the students will become increasingly proficient in the manipulation of treatment equipment, will gain a thorough understanding of radiation treatment plans, will deliver a prescribed radiation dose to cancer patients, and will acquire knowledge of all relevant aspects of patient care. These labs are available only to students enrolled in the clinical track.

Term:

Offered Spring Term

• MS-L303 Clinical Radiation III Lab

Prerequisites:

MS 303 concurrent

Credits:

1.00

Description:

Provides the necessary clinical experience to become a radiation therapist. All labs are conducted at our clinical affiliates. Under the supervision of licensed radiation therapists, the students will become increasingly proficient in the manipulation of treatment equipment, will gain a thorough understanding of radiation treatment plans, will deliver a prescribed radiation dose to cancer patients, and will acquire knowledge of all relevant aspects of patient care. These labs are available only to students enrolled in the clinical track.

Term:

Offered Spring Term

- **MS-L304 Clinical Practicum for Radiation Therapy**

Prerequisites:

Take MS-301 MS-L301;

Credits:

1.00

Description:

Student radiation therapists will spend 12 weeks (full-time, 40 hrs/wk) gaining hands on patient care experience in the department of radiation oncology at our clinical affiliates. Under constant supervision by licensed therapists, the student will be guided toward the application of theory in the real world of cancer treatment.

Term:

Summer

Type:

Expanded Classroom Requirement

- **MS-L311 Clinical Dosimetry Rotation I**

Prerequisites:

MS-L111 and take MS-301 concurrently

Credits:

1.00

Description:

Under the supervision of a Certified Medical Dosimetrist, students will gain hands on treatment planning experience in a clinical setting. Two, 8-hour days per week, TTH.

Term:

Offered Spring Term

- **MS-L313 Clinical Dosimetry Rotation III**

Prerequisites:

MS-L312 and MS-303 concurrently

Credits:

1.00

Description:

Under the supervision of a Certified Medical Dosimetrist, students will gain hands on treatment planning experience in a clinical setting. Three, 8-hour days per week, MWF.

Term:

Offered Spring Term

- **MS-L314 Clinical Practicum for Dosimetry**

Prerequisites:

Take MS-301 and MS-L311;

Credits:

1.00

Description:

Student dosimetrists will spend 12 weeks (full-time, 40 hrs/wk) gaining hands on treatment planning experience in the department of radiation oncology at our clinical affiliates. Under constant supervision of certified medical dosimetrists, the student will be guided toward the application of theory in the real world of cancer treatment planning.

Term:

Summer

Type:

Expanded Classroom Requirement

- **MS-317 Radiation Physics II**

Prerequisites:

MS 315

Credits:

4.00

Description:

This course is intended to expand on the concepts and theories presented in Radiation Physics I. It will provide a detailed analysis of the treatment units used in external beam radiation therapy, their beam geometry, basic dose calculations and dose distributions. This course will also cover the principles, theories, and uses of brachytherapy. This course was previously MS 412

Term:

Offered Spring Term

- **MS-415 Clinical Dosimetry**

Prerequisites:

MS 315;MSL415 concurrently

Credits:

3.00

Description:

This course will discuss the factors that influence treatment planning and govern the clinical aspects of patient treatment. Topics to be covered include treatment planning with 3-D CT and MRI beams, isodose plan descriptions, clinical applications of treatment beams and advanced dosimetric calculations. This course will also contrast new emerging technologies with conventional radiation therapy techniques (SRT, SRS, IMRT, Image Guided Therapy, Respiratory Gating).

Term:

Offered Spring Term

• MS-L415 Clinical Dosimetry Lab

Prerequisites:

MS 315, MS L315, MS 415 concurrently

Credits:

1.00

Description:

This lab will provide the student with the opportunity to apply clinical dosimetry principles and theories learned in the classroom to actual treatment planning situations within the clinic. Through hands-on lab exercises the student will demonstrate the use of the treatment planning instruments and interpret information they compute.

Term:

Offered Spring Term

• MS-416 Radiation Biology

Prerequisites:

Take BIO 403, MS 315 and MS L315.

Credits:

4.00

Description:

Topics covered include: physio-chemical aspects of energy absorption, the sequence of events after irradiation occurring on the molecular, cellular and organized tissue levels, radiation response and repair of eukaryotic cells, effects of radiation quality, dose rate, environmental conditions, cell cycle kinetics, tumor and normal cell population dynamics, radiation-induced carcinogenesis and mutagenesis, tumor pathophysiology and radiobiology, and recent advances in experimental radiation oncology.

Term:

Offered Spring Term

• MS-435 Brachytherapy

Prerequisites:

MS-417;

Credits:

4.00

Description:

Topics in this course will include, radioactive sources, calibration, instrumentation, factors affecting dose calculations, definitions of LDR, MDR and HDR, treatment planning and clinical dose calculation, implantation techniques, implant localization/verification, regulations, radiation safety, storage and QA. Detailed coverage of prostate brachytherapy including LDR and HDR will be emphasized.

Term:

Offered Spring Term

• MS-450 Dosimetry Systems and Networking

Credits:

4.00

Description:

This course is designed for the medical dosimetry student, to include a general overview of computer systems and networking in the field of radiation oncology. A historical view of computers will be covered as well as the intricate uses in the medical field today. Oncology information systems such as

MOSAIC and ARIA, as well as radiation therapy software used for imaging, contouring, treatment planning, and patient charting applications will be covered. Data and system security will also be addressed.

Term:

Offered Spring Term

- **MS-455 Advanced Radiation Treatment Techniques**

Prerequisites:

MS 302 & RT Clinical Student

Credits:

1.00

Description:

For the senior radiation therapy student, this course will emphasize advanced radiation treatment techniques, including patient simulation, immobilization, contouring, beam modification, as well as special procedures.

- **MS-465 Senior Seminar for Medical Sciences**

Prerequisites:

Senior status

Credits:

4.00

Description:

This course will be available to senior students enrolled in the Radiation Therapy and Medical Dosimetry programs. This seminar style course will serve a number of purposes; one will be to prepare our graduating students for board certification in their respective disciplines (AART for Radiation Therapy and MDCB for Medical Dosimetry). Exam preparation will include the use of lectures, student teaching, online teaching tools, mini mock exams, and a full-length mock exam. The seminar will also assist students with the preparation of their professional resumes including discussions regarding the skills necessary to make job interviews successful.

- **PHYS-111 College Physics I**

Prerequisites:

Take MATH-121 or MATH-134 or permission of Physics department chair;PHYS L111 taken concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **PHYS-L111 College Physics Lab I**

Prerequisites:

PHYS 111 concurrently

Credits:

1.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course. Error propagation, use of Excel, laboratory notebooks and formal reports required.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **PHYS-112 College Physics II**

Prerequisites:

PHYS-111 and PHYS-L11. Must be taken concurrently with PHYS-L112.

Credits:

3.00

Description:

Continuation of the fundamental principles of physics. Study of electric forces and fields, electric potential, DC circuits, electromagnetic induction, magnetic fields, AC circuits, introduction to optics, introduction to atomic, nuclear and particle physics.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **PHYS-L112 College Physics Lab II**

Prerequisites:

PHYS 111 and PHYS L111; PHYS 112 must be taken concurrently

Credits:

1.00

Description:

Continuation of the fundamental principles of physics. Study of electric forces and fields, electric potential, DC circuits, electromagnetic induction, magnetic fields, AC circuits, introduction to optics, introduction to atomic, nuclear and particle physics. The laboratory consists of experiments to

illustrate the basic concepts studied in the course. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

- **PHYS-151 University Physics I**

Prerequisites:

Take MATH-121 or MATH 165. PHYS L151 concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **PHYS-L151 University Physics Lab I**

Prerequisites:

PHYS 151 concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **PHYS-152 University Physics II**

Prerequisites:

PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

Credits:

3.00

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **PHYS-L152 University Physics Lab II**

Prerequisites:

PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• PHYS-153 University Physics III

Prerequisites:

Take MATH-121 or MATH-165;

Credits:

3.00

Description:

This calculus-based course is the introduction of the topics of modern physics. It begins with special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom. Then Schrodinger's equation is introduced with use of wave functions, particle box, barrier penetration, quantum mechanical tunneling, the Pauli Exclusion principle, the development of the periodic table, and the X-ray spectra. Development of solid state physics with bonding in molecules, band theory of solids and semiconductor behavior. The final topics cover nuclear physics, radioactivity, half-life, nuclear fission and fusion, medical uses of radiation, elementary particle physics and introduction to astrophysics.

Term:

Offered Fall Term

Type:

SCI TECH ENGR

- **PHYS-L153 University Physics III Lab**

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts of special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom.

Type:

SCI TECH ENGR

- **PHYS-205 Introduction to Astrophysics**

Prerequisites:

Prerequisite: PHYS 151-152

Credits:

4.00

Description:

An introduction to the concepts and methods of astrophysics; including a history of astronomy from the ancients to Newton; light; telescopes; sun, earth, moon planets, comets, asteroids, meteors, space programs, science and technology in society. Astronomy of the cosmos; sun, stars, interstellar materials, galaxies, pulsars, quasars, black holes; nature of time relativity, cosmology.

Term:

Offered Fall Term

- **PHYS-206 Introduction to Radiation Oncology**

Prerequisites:

Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:

4.00

Description:

This course will serve as an introduction to the role of the radiation therapist and medical dosimetrist in a Radiation Oncology department. Through a combination of detailed lectures, discussions, role-playing, case studies, and hands-on laboratory exercises, students will be introduced to the professional and clinical aspects of their respective professions. Additional topics included radiation safety, patients rights, infection control, communication for the clinic, patient assessment, and psychosocial aspects of cancer including death and dying.

Term:

Offered Fall Term

- **PHYS-213 Introduction to Earth & Planetary Interiors**

Prerequisites:

CHEM-111 and CHEM-112 OR PHYS-111 and PHYS-112

Credits:

4.00

Description:

This course introduces science majors to the constitution, composition, and energetics of the Earth's interior. It includes several important topics in Earth and planetary sciences, such as the geomagnetic field and the geodynamo, concepts of seismic exploration, geophysical fluid dynamics, and applications of geophysical methods in exploration of energy resources. It also relates the inner dynamics of planets to their surface and atmospheric effects by including topics such as evolution of planetary tectonics using seismology, gravity, geodesy, magnetism, and heat flow; dynamics of water

and carbon cycles; and the origin of water on Earth and Mars. This course welcomes basic science, environmental science, engineering, and math majors.

- **PHYS-215 Nanomaterials and the Energy Problem**

Prerequisites:

CHEM 111-112 or PHYS 111-112 Or Permission of Instructor

Credits:

4.00

Description:

This course is designed as an introduction to nanotechnology and some of its important uses. It is aimed at science majors who have taken basic courses in physics or chemistry. The course will cover the properties and uses of carbon-nanotubes, nanocomposites, and other nanomaterials that are being fabricated in labs and industries around the world. It will serve as an introduction to the important role of nanomaterials in solving modern-day energy problems.

Term:

Occasional

- **PHYS-301 Clinical Radiation I**

Prerequisites:

PHYS 206; Radiation Therapy & Medical Dosimetry Students Only

Credits:

3.00

Description:

Through a systems-based approach, this course will review anatomy and physiology while teaching medical terminology. This course will also discuss the major cancers associated with each anatomical system and introduce the student to radiation therapy treatment techniques and procedures.

Term:

Offered Spring Term

- **PHYS-L301 Radiation Therapy Rotation I**

Prerequisites:

Radiation Therapy Students Only

Credits:

1.00

Description:

Provides the necessary clinical experience to become a radiation therapist. All labs are conducted at our clinical affiliates. Under the supervision of licensed radiation therapists, the students will become increasingly proficient in the manipulation of treatment equipment, will gain a thorough understanding of radiation treatment plans, will deliver a prescribed radiation dose to cancer patients, and will acquire knowledge of all relevant aspects of patient care. These labs are available only to students enrolled in the clinical track.

Term:

Offered Spring Term

- **PHYS-302 Clinical Radiation II**

Prerequisites:

Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:

3.00

Description:

This course is a continuation of MS 301. Through the same didactic approach, the course will cover all of the anatomical systems and their related medical terminology NOT covered in MS 301.

Term:

Offered Fall Term

• PHYS-L302 Radiation Therapy Rotation II

Prerequisites:

Radiation Therapy (Major or Certificate) Students Only

Credits:

1.00

Description:

Provides the necessary clinical experience to become a radiation therapist. All labs are conducted at our clinical affiliates. Under the supervision of licensed radiation therapists, the students will become increasingly proficient in the manipulation of treatment equipment, will gain a thorough understanding of radiation treatment plans, will deliver a prescribed radiation dose to cancer patients, and will acquire knowledge of all relevant aspects of patient care. These labs are available only to students enrolled in the clinical track.

Term:

Offered Fall Term

• PHYS-L303 Radiation Therapy Rotation III

Prerequisites:

PHYS L302; Radiation Therapy Students Only

Credits:

1.00

Description:

Provides the necessary clinical experience to become a radiation therapist. All labs are conducted at our clinical affiliates. Under the supervision of licensed radiation therapists, the students will become increasingly proficient in the manipulation of treatment equipment, will gain a thorough understanding of radiation treatment plans, will deliver a prescribed radiation dose to cancer patients, and will acquire knowledge of all relevant aspects of patient care. These labs are available only to students enrolled in the clinical track.

Term:

- **PHYS-L304 Radiation Therapy Practicum**

Prerequisites:

Take PHYS-301 PHYS-L301;*Course fulfills the following: Expanded Classroom Requirement.

Credits:

1.00

Description:

Student radiation therapists will spend 12 weeks (full-time, 40 hrs/wk) gaining hands on patient care experience in the department of radiation oncology at our clinical affiliates. Under constant supervision by licensed therapists, the student will be guided toward the application of theory in the real world of cancer treatment.

Term:

Summer

Type:

Expanded Classroom Requirement

- **PHYS-L311 Medical Dosimetry Rotation I**

Prerequisites:

Medical Dosimetry Students Only

Credits:

1.00

Description:

Under the supervision of a Certified Medical Dosimetrist, students will gain hands on treatment planning experience in a clinical setting. Two,8-hour days per week, TTH.

Term:

Offered Spring Term

- **PHYS-L312 Medical Dosimetry Rotation II**

Prerequisites:

Medical Dosimetry Students Only

Credits:

1.00

Description:

Under the supervision of a certified medical dosimetrist, students will gain hands on treatment planning experience in a clinical setting. Three 8-hour days per week, MWF.

Term:

Offered Fall Term

- **PHYS-L313 Medical Dosimetry Rotation III**

Prerequisites:

PHYS L312, Medical Dosimetry Students Only

Credits:

1.00

Description:

Under the supervision of a Certified Medical Dosimetrist, students will gain hands on treatment planning experience in a clinical setting. Three, 8-hour days per week, MWF.

Term:

Offered Spring Term

- **PHYS-L314 Medical Dosimetry Practicum**

Prerequisites:

Take PHYS-301 and PHYS-L311; *Course fulfills the following: Expanded Classroom Requirement.

Credits:

1.00

Description:

Student dosimetrists will spend 12 weeks (full-time, 40 hrs/wk) gaining hands on treatment planning experience in the department of radiation oncology at our clinical affiliates. Under constant supervision of certified medical dosimetrists, the student will be guided toward the application of theory in the real world of cancer treatment planning.

Term:

Summer

Type:

Expanded Classroom Requirement

- **PHYS-315 Radiation Physics I**

Prerequisites:

PHYS L315 concurrently; Radiation Biology, Radiation Science, Radiation Therapy (Major or Certificate), or Medical Dosimetry Students Only

Credits:

3.00

Description:

Content is designed to establish a thorough knowledge of the radiation physics used in radiation therapy treatments. Topics to be covered in this course include a review of basic physics (energy, mass, matter, SI units), structure of matter, types of radiations, nuclear transformations, radioactive decay, the fundamentals of x-ray generators and x-ray production, interactions of x and gamma rays with matter, absorbed dose, measurements of

dose, principles of and practical use of ionization chambers and electrometers, Geiger counters and other survey meters, principles and practical use of TLDs, film, calorimetry, scintillation detectors, radiation protection and quality assurance.

Term:

Offered Fall Term

• PHYS-L315 Radiation Physics I Lab

Prerequisites:

PHYS 315 concurrently

Credits:

1.00

Description:

This lab will cover a broad range of experiments associated with the Department of Radiation Oncology at Massachusetts General Hospital. Topics include: Quality assurance measurements for radiation therapy, calibration of radiation teletherapy unit using ionization chambers, measurements of dose distribution via film, measurements of dose in a phantom via TLDs, radiation protection survey of therapy installation and brachytherapy sources, and radiation biology.

Term:

Offered Fall Term

Type:

Expanded Classroom Requirement

• PHYS-317 Radiation Physics II

Prerequisites:

PHYS 315; Radiation Science, Radiation Therapy and Medical Dosimetry Students Only

Credits:

4.00

Description:

This course is intended to expand on the concepts and theories presented in Radiation Physics I. It will provide a detailed analysis of the treatment units used in external beam radiation therapy, their beam geometry, basic dose calculations and dose distributions. This course will also cover the principles, theories, and uses of brachytherapy. This course was previously MS 412

Term:

Offered Spring Term

• PHYS-333 Math Methods of Physics

Prerequisites:

Take ECE-225 and ECE-L225;

Credits:

4.00

Description:

Applications of specific mathematical methods to problems in physics. Topics include complex analysis, integral transforms, eigenvalue problems, partial differential equations and group theory. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:

Offered Fall Term

• PHYS-350 Planetary Materials

Prerequisites:

PHYS-213

Credits:

4.00

Description:

This course provides an overview of the chemical and physical properties of the material constituents of the Earth and terrestrial planets, including minerals, rocks, lavas, and supercritical water. Topics include mineral structure and composition, bonding, optical properties, x-ray diffraction, phase transformations, and surface properties. The physics and chemistry of energy materials, synthetic nanomaterials will be included with emphasis/focus on energy resources, environmental impact, and geopolitical implications. There are no mandatory prerequisites for this course, but students who have taken introductory chemistry and/or physics will be familiar with some concepts discussed, and will find the going easier. Some background in Earth science is assumed (at the level of PHYS-213), and competence in basic chemistry is expected (some review will be provided where appropriate). The course is not mathematically intensive, but an appreciation of the fundamentals of calculus is important.

- **PHYS-360 Topics in Astrobiology and Life in Extreme Environments**

Prerequisites:

BIO-111 and PHYS-213

Credits:

4.00

Description:

The discovery of extreme environments and new insights into evolution, emergence and sustenance of life has expanded the view of life into a broader feasibility outside Earth. Discovery of exoplanets has opened up serious scientific exploration towards search for life in other planets. This upper-level course will introduce the scientific principles that underlie this newly evolving science of astrobiology. Discussion will include unique perspectives in life at extreme environments within Earth and their implication to the concepts of evolution and origins of life that form the basis for better understanding the habitability within our planet as well as any possibility of life in other planets.

- **PHYS-361 Classical Mechanics I**

Prerequisites:

PHYS 152 ; MATH 265 which may be taken concurrently

Credits:

4.00

Description:

Newton's laws of motion, projectiles, momentum, energy, conservation laws, oscillations, Lagrange equations, generalized momenta, central forces, orbits. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:

Offered Fall Term

• PHYS-362 Classical Mechanics II

Prerequisites:

PHYS 361

Credits:

4.00

Description:

Mechanics in non-inertial frames, rotational motion of rigid bodies, coupled oscillations, nonlinear mechanics and chaos, Hamiltonian mechanics, collision theory, continuum mechanics. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:

Offered Spring Term

• PHYS-381 Observational Astronomy

Prerequisites:

PHYS 151 AND PHYS 152 OR PHYS 153.

Credits:

2.00- 3.00

Description:

The topics covered include theoretical foundations of observational astronomy, designs of telescopes, instrumentation for telescopes, data acquisition and management, as well as practical problems in observational astronomy. Offered together with the laboratory component PHYS L381.

- **PHYS-L381 Laboratory Research Assistantship III**

Prerequisites:

Permission of Dept. Chair Required

Credits:

1.00- 2.00

Description:

This is a laboratory based research experience which involves teams of students assisting faculty in Physics/Astronomy research projects. Students will participate in an intensive laboratory training period in the Canary Islands and will follow through with research work in consultation with faculty based in the Madrid and Boston campuses. A final paper and presentation is required. Permission of department chair is required for registration and determination of course credits.

- **PHYS-411 Physics Senior Project**

Prerequisites:

Senior Standing

Credits:

4.00

Description:

The senior project is the capstone research experience of the undergraduate Physics Major. This one semester course requires students to work one on one with faculty in an area of mutually agreed upon research. In general, the effort will involve the use of mathematical and programming skills, laboratory techniques, and possibly field work. The end result will be both a paper and a formal presentation to both faculty and students.

Term:

Offered Spring Term

- **PHYS-415 Dosimetry I**

Prerequisites:

PHYS 315; PHYS L415 concurrently; Radiation Therapy & Medical Dosimetry Students Only

Credits:

3.00

Description:

This course will discuss the factors that influence treatment planning and govern the clinical aspects of patient treatment. Topics to be covered include treatment planning with 3-D CT and MRI beams, isodose plan descriptions, clinical applications of treatment beams and advanced dosimetric calculations. This course will also contrast new emerging technologies with conventional radiation therapy techniques (SRT, SRS, IMRT, Image Guided Therapy, Respiratory Gating).

Term:

Offered Spring Term

- **PHYS-L415 Dosimetry I Lab**

Prerequisites:

PHYS 415 concurrently; Radiation Therapy & Medical Dosimetry Students Only

Credits:

1.00

Description:

This lab will provide the student with the opportunity to apply clinical dosimetry principles and theories learned in the classroom to actual treatment planning situations within the clinic. Through hands-on lab exercises the student will demonstrate the use of the treatment planning instruments and interpret information they compute.

Term:

Offered Spring Term

- **PHYS-416 Radiation Biology**

Prerequisites:

PHYS 315;

Credits:

4.00

Description:

Topics covered include: physio-chemical aspects of energy absorption, the sequence of events after irradiation occurring on the molecular, cellular and organized tissue levels, radiation response and repair of eukaryotic cells, effects of radiation quality, dose rate, environmental conditions, cell cycle kinetics, tumor and normal cell population dynamics, radiation-induced carcinogenesis and mutagenesis, tumor pathophysiology and radiobiology, and recent advances in experimental radiation oncology.

Term:

Offered Spring Term

- **PHYS-417 Dosimetry II**

Prerequisites:

Medical Dosimetry Students Only

Credits:

4.00

Description:

This course is a continuation of Clinical Dosimetry I and will focus on advanced treatment planning techniques including intensity modulated radiation therapy (IMRT), arc therapy, stereotactic treatment planning, and proton therapy. The advantages of each technique/modality over conventional 3D-treatment planning will be discussed. This will also be contrasted against the specific challenges presented by each technique such as the need for better immobilization, need for 4D CT scanning and daily IGRT (kV matching and/or CBCT).

Term:

Offered Fall Term

- **PHYS-420 Radiation Oncology & Pathology**

Prerequisites:

Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:

4.00

Description:

This course, taught by Massachusetts General Hospital physicians will review cancer epidemiology, etiology, detection, diagnosis and prevention, lymphatic drainage, and treatment. The pathology(s) of each cancer will be presented in detail including the rationale for each preferred modality of treatment.

Term:

Offered Fall Term

- **PHYS-422 Radiology**

Prerequisites:

Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:

4.00

Description:

This course will begin with an introduction to radiology, reviewing x-ray production and discussing basic radiation physics, image formation (Kv, mA) and distortion (blur, magnification), conventional processing and digital imaging. The above-mentioned radiographic imaging concepts will be presented with conventional lectures as well as with several imaging laboratories. In addition, the basic principles of each imaging modality, including mammography, CT, MRI, Nuc Med, and Ultra Sound, will be presented. With the use of departmental tours and guest lecturers, the use, benefits and limitations of each will be discussed. Building upon the information previously presented, radiographic anatomy will also be covered with an emphasis on cross sectional anatomy. Students will review basic anatomy viewed in sectional planes (axial/transverse) of the body. Using CT and MRI images, the topographic relationship between internal organs and surface anatomy will be interpreted and discussed.

Term:

Offered Fall Term

- **PHYS-431 Undergraduate Research in Physics**

Credits:

4.00

Description:

This course provides a mechanism for students to receive academic credit for engaging in research. A faculty member in the physics department will serve as the research advisor for each student. This faculty advisor will have the primary responsibility for overseeing each individual student's work and will decide the grade for the course. The research project may be initiated by the student or by a faculty member.

Term:

Offered Spring Term

- **PHYS-435 Brachytherapy**

Prerequisites:

Medical Dosimetry Students Only

Credits:

4.00

Description:

Topics in this course will include, radioactive sources, calibration, instrumentation, factors affecting dose calculations, definitions of LDR, MDR and HDR, treatment planning and clinical dose calculation, implantation techniques, implant localization/verification, regulations, radiation safety, storage and QA. Detailed coverage of prostate brachytherapy including LDR and HDR will be emphasized.

Term:

Offered Spring Term

- **PHYS-450 Dosimetry Systems and Networking and Quality Assurance**

Prerequisites:

Senior Status; Medical Dosimetry Students Only

Credits:

4.00

Description:

This course is designed for the medical dosimetry student, to include a general overview of computer systems and networking in the field of radiation oncology. A historical view of computers will be covered as well as the intricate uses in the medical field today. Oncology information systems such as MOSAIC and ARIA, as well as radiation therapy software used for imaging, contouring, treatment planning, and patient charting applications will be covered. Data and system security will also be addressed.

Term:

Offered Spring Term

- **PHYS-451 Modern Physics I**

Prerequisites:

PHYS 152

Credits:

4.00

Description:

Atoms and elementary particles, atomic, molecular and nuclear systems. Quantum states and probability amplitude, wave mechanics, and thermal properties of matter. Atomic spectra and structure, and molecular systems. Nuclear reactions, alpha and beta decay, and high energy physics.

- **PHYS-453 Modern Physics**

Prerequisites:

PHYS-153;

Credits:

4.00

Description:

Topics include atoms and elementary particles, atomic, molecular and nuclear systems. Quantum states and probability amplitude, wave mechanics and thermal properties of matter. Atomic spectra and structure, and molecular systems. Nuclear reactions, alpha and beta decay and high energy physics. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:

Offered Fall Term

- **PHYS-L455 Advanced Laboratory**

Prerequisites:

PHYS 451 and PHYS 452 or equivalent.

Credits:

2.00

Description:

Classical and modern experiments in physics; Experiments may include Frank Hertz experiment, Hall effect, nuclear magnetic resonance, quantum dots, detection of muons, x-ray spectroscopy, ellipsometry, physics of timbre of musical instruments, data acquisition.

Term:

Offered Fall Term

• PHYS-461 Quantum Mechanics I

Prerequisites:

PHYS-361

Credits:

4.00

Description:

Non-relativistic study of particle systems, wave mechanical treatment, development of the concepts of observables, state vectors, operators and matrix representations. Hilbert space, angular momenta, coupling, symmetries, scattering, and perturbation theory. Harmonic oscillator and Hydrogen atom. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once a week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:

Offered Fall Term

• PHYS-462 Quantum Mechanics II

Prerequisites:

PHYS 461, PHYS 361 and PHYS 362.

Credits:

4.00

Description:

Non-relativistic study of particle systems, wave mechanical treatment, development of the concepts of observables, state vectors, operators and matrix representations. Hilbert space, angular momenta, coupling, symmetries, scattering, and perturbation theory. Harmonic oscillator and Hydrogen atom. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:

Offered Spring Term

• PHYS-463 Stellar Astrophysics

Prerequisites:

Prerequisite: PHYS 451-452, PHYS 461-462 1 term - 4 credits

Credits:

4.00

Description:

Physics of stars. Stellar atmospheres. Stellar interiors. Stellar evolution.

Term:

Summer

• PHYS-464 Statistical Physics

Prerequisites:

PHYS-361, PHYS-151, PHYS-L151, PHYS-152, PHYS-L152, PHYS-153 and PHYS-L153

Credits:

4.00

Description:

Macroscopic objects are made up of huge numbers of fundamental particles whose interactions are well understood. Physical properties that emerge from these interactions are, however, not simply related to these fundamental interactions. In this course we will develop the tools of statistical physics, which will allow us to predict emergent cooperative phenomena. We will apply those tools to a wide variety of physical questions, including the behavior of glasses, polymers, heat engines, magnets, and electrons in solids. Computer simulations will be extensively used to aid visualization and provide concrete realization of models in order to impart deeper understanding of statistical physics.

- **PHYS-470 Radiation Science Internship**

Prerequisites:

Radiation Science Majors with 54 credits only

Credits:

1.00- 4.00

Description:

Enables opportunity for students to participate in career-related experiential internship. Assists students in preparing for Radiation Science-related career and provides exposure to potential career option. Promotes development of necessary professional skills.

- **PHYS-475 Senior Seminar for Radiation Therapy**

Prerequisites:

Senior status, Radiation Therapy & Medical Dosimetry Students Only

Credits:

4.00

Description:

This course will be available to senior students enrolled in the Radiation Therapy and Medical Dosimetry programs. This seminar style course will serve a number of purposes; one will be to prepare our graduating students for board certification in their respective disciplines (AART for Radiation Therapy and MDCB for Medical Dosimetry). Exam preparation will include the use of lectures, student teaching, online teaching tools, mini mock exams, and a full-length mock exam. The seminar will also assist students with the preparation of their professional resumes including discussions regarding the skills necessary to make job interviews successful.

- **PHYS-476 Senior Seminar for Medical Dosimetry**

Prerequisites:

Senior Status, Radiation Therapy & Medical Dosimetry Students Only

Credits:

4.00

Description:

This course will be available to second year clinical students enrolled in the Medical Dosimetry program. This seminar style course will serve a number of purposes; one will be to prepare our graduating students for board certification in MDCB for Medical Dosimetry. Exam preparation will include the use of lectures, online teaching tools, mini mock exams, and a full-length mock exam. The seminar will also assist students with the preparation of their professional resumes including discussions regarding the skills necessary to make job interviews successful.

- **PHYS-477 Electricity and Magnetism**

Credits:

4.00

Description:

Electrostatic field energy, methods for solution of boundary value problems. The magnetostatic field and magnetic circuits. Electromagnetic field energy, plane waves, wave guides and cavity resonators. Interaction of charge particles with electromagnetic fields. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:

Offered Fall Term

- **PHYS-510 Independent Study**

Credits:

4.00

Description:

Directed reading, lectures, seminar and research in selected areas of special interest.

Term:

Occasional

- **PHYS-570 Internship in Physics**

Prerequisites:

At least 54 credits

Credits:

2.00- 4.00

Description:

Those students who intend to complete an internship must secure their own internship position prior to the start of the semester. A list of potential internship sites and their descriptions are available for students in the department's front office.

Type:

Expanded Classroom Requirement

- **SCI-101 Physical Science I**

Prerequisites:

One course of MATH 104,121,128(formerly 132),130,134, or 165; SCI L101 taken concurrently

Credits:

3.00

Description:

Topics in the physical sciences treated at a level appropriate for non-science majors. Newton's laws, circular motion, heat, electricity and magnetism, optics, and atomic physics are discussed with problem sets required to illustrate the concepts.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

• **SCI-L101 Physical Science Lab I**

Prerequisites:

SCI 101 concurrently

Credits:

1.00

Description:

Laboratory experiments and exercises to illustrate the principles covered in Science 101. On-time attendance is mandatory for pre-lab lectures. Weekly lab write-ups completed during the lab.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

• **SCI-102 Intro to Physical Science II**

Prerequisites:

One course of MATH 104 OR MATH 121 OR MATH 130 OR MATH 132 OR MATH 134 OR MATH 165. SCI L102 Must be taken concurrently

Credits:

3.00

Description:

Continuation of topics in the physical sciences for nonscience majors. Nuclear physics, chemical reactions, organic compounds, latitude and longitude, study of the solar system, astronomy, and cosmology are all covered.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

• **SCI-L102 Physical Science Lab II**

Prerequisites:

SCI 102 concurrently

Credits:

1.00

Description:

Laboratory experiments and exercises to illustrate the principles covered in Science 102. On-time attendance is mandatory for pre-lab lectures. Weekly lab write-ups completed during the lab.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

• **SCI-L105 Composite Science Lab**

Prerequisites:

Permission of the department, transfer student status- 2 credits

Credits:

2.00

Description:

Combination of lecture and lab involving subject matter in the Physical Sciences (not Life Sciences). This is intended for transfer students who have received course credit in the physical sciences from another school and who still need to satisfy a two credit laboratory requirement.

Term:

Offered Both Fall and Spring

- **SCI-L106 Composite Science Lab**

Prerequisites:

Permission of the department, transfer student status- 1 credit

Credits:

1.00

Description:

Combination of lecture and lab involving subject matter in the Physical Sciences (not Life Sciences). This is intended for transfer students only who have received course credit in the physical sciences from another school and who still need to satisfy a one credit laboratory requirement.

Term:

Offered Both Fall and Spring

- **SCI-108 Introduction to Cancer Care**

Credits:

4.00

Description:

This course will introduce the students to the top ten U.S. adult cancers, as well as the most common pediatric cancers. Topics to be covered include cancer causes, detection, and prevention. Psychosocial aspects of being diagnosed with cancer and the role nutrition plays for cancer patients will be described. The course will also discuss the major treatment modalities for each cancer including radiation therapy, surgery, chemotherapy, and bone marrow transplants. The goals and objectives of the course will be met through the use of various teaching tools including but not limited to: PowerPoint presentations, videos, guest lectures, and a poster project with a presentation component. Cognitive assessment of the students will be accomplished through homework, quizzes, exams, and a group poster and oral presentation. Students with any type of academic background are welcome.

- **SCI-113 A Habitable Earth Within the Solar System**

Credits:

4.00

Description:

This course introduces non-science majors to concepts that are central to making our planet habitable. It presents Earth in context of the solar system with a broad view of global climate change and energy resources in a quest to better understand the workings our planet. This course on Earth and Planetary Science is suitable for students who may have taken their last science and math course several years ago, or are just curious about knowing facts on major issues that pertain to the future of our planet. Together with a reading component, this course aims to give students a flavor of how researchers think, investigate and develop conclusions that directly affect our political and economic future. Topics covered in this course range from the solar system to the study of search for other habitable Earth-like planets, search for extraterrestrial life, and evolution of life on Earth. Other

characteristics of this course are heavy use of audio-visual materials often including computer animations and simulations, in-class experiment demonstration, and intensive use of INTERNET-based resources.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGR

• SCI-161 Physical Science

Prerequisites:

One course from MATH 104 OR MATH 121 OR MATH 130 OR MATH 134 OR MATH 165 or permission of Dept. Chair. Students who have taken SCI 101/L101 or SCI 102/L102 are not eligible to take SCI 161.

Credits:

4.00

Description:

This is a one-semester, non-lab introduction to the physical sciences. The student will obtain a good understanding of a wide variety of topics covered in selected chapters of the text (measurements, Newton's laws, energy, heat and global warming, wave motion, electricity and magnetism, atomic physics, nuclear physics, chemical reactions, and astronomy) and will be able to solve problems illustrating the most important concepts. Students who have taken SCI 101/L101 or SCI 102/L102 are not eligible to take SCI 161.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ

• SCI-165 Inner Workings of Physics Universe

Credits:

4.00

Description:

About 15 billion years ago, (data indicate) the big bang occurred and the universe was born. With it came physical laws and a spectacular array of consequences that lead to the universe as we know it. This non-lab , 4 credit course explores the inner workings of the physical universe in terms of the scientific inquiry which lead to Newton's laws, an understanding of energy, waves, light, electricity, atomic structure, chemical reactions, nuclear physics, particle physics, relativity, and the big bang theory. During the course, students will learn to make use of modern resources to access scientific and technical literature to research a scientific topic. They will learn to distinguish between science and technology (e.g. quantum mechanics and nanotechnology, the discovery of the Higgs boson and the large hadron collider that made it possible, etc.) and to understand how the science, technology, and engineering disciplines play a crucial role in recognizing and solving problems of society and the world that we share.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **SCI-H171 The Built World: How Humans Engineer Environments- Honors**

Prerequisites:

Honors students or at least a 3.3 GPA only

Credits:

4.00

Description:

The most basic needs of humans have not changed - water, food, and shelter - but the means of meeting these needs has. In this course, we will examine how technology-driven societies operate by studying how cities are built and how they function. Topics will include water supply and distribution systems; transportation systems (including road and bridge design and construction); building design, construction, and operation (including skyscraper and sustainable building design), and waste removal systems (municipal and industrial wastewater removal and treatment, solid waste removal and treatment). This is not a course about little gadgets and widgets; this is a course about big engineering marvels; and it emphasizes applications of science - how things work - rather than scientific theory.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGNR,Honors

- **SCI-173 Geographic Information Science (GIS) The Power of Digital Maps**

Prerequisites:

SCI L173 Must be taken concurrently Knowledge of Windows type Application

Credits:

3.00

Description:

Geographic Information Science (GIS) link information (number of fire hydrants on a block) to features on a map (e.g., a point representing street address) that has a designated geographic location (as designated by global coordinates). Unlike paper maps, GIS software allows the production of interactive maps that allows the user to layer data, to indicate spatial patterns, to analyze trends, and to combine different features of the mapped area in novel ways. For example, a business person may wish to use GIS to determine the optimum location of retail outlet (based on the mapped demographics of a neighborhood), while an environmental engineer may use GIS to describe the location of outfalls to see how they correlate to areas of stream pollution. In this course, students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

• SCI-L173 GIS Lab

Prerequisites:

Must be taken concurrently with SCI-173

Credits:

1.00

Description:

This laboratory illustrates concepts and methods taught in SCI 173. In this lab students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **SCI-181 Science and Life in the 21st Century**

Credits:

4.00

Description:

This is a four credit, non-lab, science course that examines the central scientific problems confronting the 21st century. The course studies particular topics and teaches the necessary science around these topics to provide a good understanding of the issues. The topics currently are: Energy, Science and Economic Decisions, Sustainability of Life on Earth, Health and Science.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGR

- **SCI-201 Physics for Future Presidents**

Credits:

4.00

Description:

This course presents a topical introduction to the key principles and concepts of physics in the context of the world events and natural phenomena that confront world leaders and that require informed decisions and responses. Energy, health, counter-terrorism, remote sensing, space programs, nuclear proliferation, and a host of other modern challenges have technological and scientific dimensions, the understanding of which is essential to avoiding disastrous policy decisions. This course considers the application of physics to these societal challenges. The material is covered at a level and pace that a future world leader should be able to handle; the emphasis is on the development of physical reasoning skills, and not on detailed, mathematical problem solving.

Type:

SCI TECH ENGNR

- **SCI-210 Earth and Planetary Crystals**

Credits:

4.00

Description:

This course will provide undergraduate students of various disciplines with an introduction to gems and crystals using interactive, evidence-based teaching approaches. Crystalline forms of matter are critical to our existence. Using innovative teaching strategies of in-class hands-on demonstration, supplemented with visuals of crystal details, the course provides students insights into the formation, alteration and unique properties that make crystals invaluable. Topics range from the study of proteins and nucleic acids to the interior of planets. The in-class lectures will provide a basic guide that will serve as a platform for individually catered in-depth study. Therefore, the course is open to advanced students as well, who can pick up higher level of information for discussion and class projects.

Type:

NATURAL SCIENCE FOR BS,NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGNR

2015-2016 Archived Catalog Information

Politics, Philosophy, & Economics

The Politics, Philosophy, & Economics (PPE) program is an interdisciplinary major drawing from three academic disciplines: political science, philosophy, and economics. The program is structured to provide students with a foundation in policy, ethics, and economics so that they may develop a comprehensive understanding of the complexity of contemporary and enduring social issues.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Politics, Philosophy, & Economics Courses](#)

Major Requirements: 14 courses, 56 credits

Core Requirements (8 classes, 32 credits)

- GVT-110 Introduction to American Democracy

Credits:

4.00

Description:

An introduction to the American political system and constitutional framework. Focus will be on the interplay of various institutions (the Presidency, Congress and the Judiciary) in creating public policies. Contemporary public issues will be discussed, as will the role of political theory in shaping American democracy. Attention will be given to the role of the news media, public opinion, political ideology, political parties and interest groups in the American system.

Type:

- **GVT-243 American Constitutional Law**

Prerequisites:

not open to freshmen

Credits:

4.00

Description:

The growth of Constitutional law and the role of the Supreme Court is examined by analysis of court decisions dealing with Judicial Review, Federalism, Presidential and Congressional powers. Normally offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-101 Applied Microeconomics**

Prerequisites:

Non CAS majors need to have completed at least 15 credits.

Credits:

3.00

Description:

This course introduces students to foundational principles of microeconomic theory, with an emphasis on applications of concepts to management decision-making in specific industry and market settings. It describes and analyzes the interaction of supply and demand and the behavior of the prices of goods, services. It explains the determinations of costs, output, strategic pricing, and governance by firms under conditions of perfect and imperfect competition in a global economy. In addition, it describes the supply demand for factors of production and the impact of taxes and government regulation and intervention on firms and consumers.

Type:

- **EC-102 Global Macroeconomics**

Prerequisites:

Non-CAS majors need to have completed at least 15 credits

Credits:

3.00

Description:

This course examines the workings of the national and the global economy. It will describe the determination of Gross Domestic Product, the problems of unemployment, inflation, and the determination of economic growth. It will also describe and analyze the determination of the country's exchange rate, the balance of payments, and international borrowing and lending. A particular focus will be on understanding economic fluctuations (booms, busts, and recessions) in the domestic economy and its effects on other economies. It will analyze the role of the government and the effects of government spending and taxation on the economy. Furthermore, it will describe and analyze the determination of the quantity of money and interest rates in the economy and the role of the country's central bank. It examines the basis and pattern of international trade and the effects of a country's trade policy on the economy.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **PHIL-120 Ethics and Civic Life**

Credits:

4.00

Description:

In this class you will be introduced to the perspectives and methods of politics, philosophy, and economics and see how these three disciplines present distinct but interconnected dimensions of current social and political issues.

Type:

Diverse Perspectives

- **PHIL-250 Social & Political Philosophy**

Credits:

4.00

Description:

An examination of persistent debates in political and social philosophy, such as the meaning of property and welfare, the tensions between liberty and equality, censorship and freedom of expression, the relation of church and state, the possibility of political education and civic virtue, legitimacy of the state and revolution, war and problems of end and means, addressing historic injustice, such as racism, genocide, or sexism, among other topics. The class will focus on no more than two such themes. Students will read both classic and contemporary writings to address both the historical roots and the contemporary treatment of these questions. 1 term - 4 credits. Normally offered every year.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

Choose one of the following:

- **STATS-240 Introduction to Statistics**

Prerequisites:

Math 128 or higher. REMINDER: STATS 240 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

Credits:

4.00

Description:

Topics include: data presentation, measures of central locations and dispersion, probability and probability distributions, estimation, hypothesis testing, simple and multiple regression models. The use of Excel and SPSS will be emphasized throughout the course. 1 term - 4 credits (4 hours per week). Normally offered each semester. STATS 240 satisfies the same requirements as STATS 250

Type:

Quantitative Reasoning

- **STATS-250 Applied Statistics**

Prerequisites:

MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

Credits:

4.00

Description:

Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

Type:

Quantitative Reasoning

- **GVT-201 Statistics for Political Science**

Prerequisites:

Sophomore Standing GVT 110 and 120 and Math 128 or higher.

Credits:

4.00

Description:

This course is an introduction to statistics and empirical research methods generally used in political science. The course will emphasize the use of statistics and its value in substantive political science research. Statistics is a tool for drawing conclusions and making inferences from observable evidence. As well, the specification of conditions under which evidence is observed affects the conclusions and arguments that political scientists draw about how social and political processes work. The purpose of this course is to equip students with tools to interpret and conduct original data

analysis, critique and make an argument based on data, and provide a view into the process of political science research and how political scientists use statistical methods and research design to answer substantive questions about politics. Since most applied data analysis utilizes data management software, students will learn how to use SPSS as a tool for conducting data analysis. Prerequisites: Sophomore Standing, GVT 110 and 120 and Math 130 or instructor's consent. 1 term - 4 credits.

Type:

Quantitative Reasoning

- **PHIL-212 Formal Logic**

Credits:

4.00

Description:

An introduction to formal (or semi-formal) study of the basic types of deductive arguments (propositional and syllogistic logic). 1 term - 4 credits. Normally offered every year.

Term:

Occasional

Type:

Quantitative Reasoning

Senior Capstone Course

- **PPE-401 Political Economy**

Prerequisites:

PHIL-119, PHIL-123, PHIL-127, or PHIL-120 and 2 of the following courses: GVT-110 GVT-225 EC-101 EC-102 PHIL-250 STATS-240 STATS-250 GVT-201 PHIL-212

Credits:

4.00

Description:

This interdisciplinary class brings together the fields of politics, philosophy, and economics at a high academic level. You will be confronted with hard questions about the sources, ends, and limits of government; the usefulness and troubles of free markets; the proper distribution of economic advantages in society; and what works best for building a just and efficient system of economic institutions.

Electives (6 courses, 24 credits)

In addition to the above requirements, students must choose two courses from each of the groups A, B, and C listed below.

A. Government

Choose any [Government](#) course at the 300-level or higher, including all internship options

B. Philosophy

- **PHIL-309 Philosophy of Freedom**

Prerequisites:

Prerequisite: One Philosophy course or consent of instructor.

Credits:

4.00

Description:

Focuses on the paradoxical relationship between freedom and responsibility and how that affects our thinking about freedom in the individual, social and political sphere. Both classical and contemporary thinkers will be considered. Prerequisite: One course in Philosophy or consent of instructor. 1 term - 4 credits. Normally offered every other year.

Term:

Offered Spring Term

- **PHIL-319 Topics in Applied Ethics**

Prerequisites:

PHIL-119, PHIL-123, PHIL-127 or PHIL-120

Credits:

4.00

Description:

This course will address in depth one or more specific issues in applied ethics. Topics will vary and may range from applied issues in political thought, such as just war theory or transitional justice, to specific questions in professional ethics or social policy, such as end-of-life care, economic justice, or the role of technology in the human future. Prerequisite: PHIL 119, or 123, or 127. 1 term - 4 credits. Normally offered every other year.

Term:

Occasional

Type:

Cultural Diversity Opt B

• **PHIL-362 Environmental Ethics**

Prerequisites:

PHIL-119, PHIL-123, PHIL-127 or PHIL-120

Credits:

4.00

Description:

An examination of the moral issues involved in the interaction of humans with their natural environment. Topics include: the environmental crisis, human-centered vs. nature-centered ethics, intrinsic value in nature, obligations to future generations, the importance of preserving endangered species and wilderness, radical ecology, eco-feminism, and the role of social justice in environmental issues. Prerequisite: PHIL 119, or 123, or 127. 1 term -4 credits. Normally offered every year.

Term:

Occasional

- **PHIL-363 Bio and Medical Ethics**

Prerequisites:

Prerequisite: Phil 119, or 123, or 127.

Credits:

4.00

Description:

An examination of the moral problems facing health-care practitioners, their patients, and others involved with the practice of medicine in today's society. Issues include euthanasia, the ethics of medical experimentation, the use of reproductive technologies, genetic counseling and genetic engineering, truth-telling and confidentiality in doctor-patient relationships, the cost and availability of medical care. Normally offered every third year.

Term:

Occasional

- **PHIL-364 Business Ethics**

Prerequisites:

PHIL-119, PHIL-123, PHIL-127 or PHIL-120

Credits:

4.00

Description:

An examination of the ethical questions in the working life and policies of the business and professional sectors of society. The focus will vary, but common themes will include: the role of commerce in civil society; the relation of business to conceptions of economic and social justice; the meaning and application of codes of ethics; obligations of corporations and professional organizations to shareholders and stakeholders; responsibilities to clients and colleagues; workplace conduct; the nature of success and conflicts between legal and moral obligations; the impact of globalization. The course will employ a variety of readings, including ethical theory and specific case studies. Prerequisite: PHIL 119, or 123, or 127. 1 term -4 credits. Normally offered every other year.

Term:

Occasional

- **PHIL-401 History of Ethics and Political Philosophy 1: Ancient and Medieval**

Prerequisites:

PHIL-210 , PHIL-211, 4 credits of a 400-level PHIL course, and Instructor consent

Credits:

4.00

Description:

A survey of major works and themes of moral and political philosophy from ancient Greece to the late medieval period. Topics covered will include the nature of moral duties, the connection between happiness and morality, citizenship and virtue, the meaning of a good life, the attractions and limitations of moral relativism, the foundations of legitimate government, arguments for and against democracy, realism and idealism in statecraft, and the relationship between law and ethics. Authors may include the Pre-Socratic thinkers, Plato, Aristotle, Cicero, Augustine, and Aquinas, among others. Prerequisite: Consent of instructor. 1 term -4 credits. Normally offered every year in the fall.

Term:

Offered Fall Term

- **PHIL-402 History of Ethics & Political Philosophy II**

Prerequisites:

PHIL-210, PHIL-211, 1 400-level PHIL course, and Instructor consent

Credits:

4.00

Description:

A continuation of PHIL 401, covering the early modern era to the dawn of the 20th century. Authors may include Machiavelli, Hobbes, Locke, Rousseau, Kant, Hegel, Mill, Marx, and Nietzsche, among others. Prerequisite: Consent of instructor. 1 term -4 credits. Normally offered every year in the spring.

Term:

Offered Spring Term

- **PHIL-513 Internship in Applied Ethics**

Prerequisites:

PHIL-119, PHIL-123, PHIL-127 or PHIL-120 and consent of instructor

Credits:

4.00

Description:

Students in this course will serve as interns in a department-approved position with a service provider, professional organization, government agency, or non-governmental organization whose work is relevant to issues in applied ethics. A faculty mentor will meet with students regularly to develop individually designed programs of readings and to discuss this material and its relation to the internship experience. In addition to the substantial time commitment to the internship, course requirements will usually include a journal and a research project. PHIL 119 or 123 or 127 and consent of instructor. 1 term -4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement

Or choose any other 400-level [Philosophy](#) courses, when these are on a relevant topic

C. Economics

At least one of the two courses must be at the 300-level or higher.

- **EC-131 Environmental Economics**

Credits:

4.00

Description:

Identifies the environmental effects of economic activity, including polluted water and air, noise, and radiation, and values their costs and benefits. Analyzes mechanisms, including taxes and permits, for achieving a socially preferable level of pollution. Traces role played by institutions, including common ownership, in affecting environmental decay. Resource depletion (of oil, forests, and fisheries) and appropriate policy responses.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-141 Development Economics**

Credits:

4.00

Description:

Why do so many countries remain so poor? Why have some (e.g. the Asian tigers) grown so rapidly? Why have most of the countries of Eastern Europe and the Former Soviet Union been slow to ignite economic growth? These questions are addressed by looking at domestic factors (government policies, resource endowments) as well as the international environment (mobile investors, international financial institutions). Asks what economic choices these countries face now. Normally offered yearly. Cultural Diversity B

Type:

Cultural Diversity Opt B,Social Science,Asian Studies,BSJ SOCIAL SCIENCE,Diverse Perspectives

- **EC-151 Economic & Human Geography**

Credits:

4.00

Description:

The study of how economic and human activity is distributed across space, the reasons for these spatial distributions, and the processes that change the spatial organization of economic activity over time. Topics include: maps, map projections, and geographic information systems; population geography; the organization and location of cities, towns and villages; transportation and communication policy; industrial location; the geography of world trade; and geographic features of economic development. The course takes a global perspective, and draws on cases and examples from all over the world. Cultural Diversity B

Type:

- **EC-311 Intermediate Micro Theory**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

Theory of consumer behavior and demand. Theory of production and costs of production. Theory of the firm, and price and output decisions in different market structures, i.e., under perfect competition, monopoly, monopolistic competition and oligopoly. Decisions relating to pricing and employment of various inputs (labor and capital) under perfectly competitive, and less than perfectly competitive, resource markets. Required of all majors in Economics. Normally offered every semester.

Type:

Social Science, BSJ SOCIAL SCIENCE

- **EC-421 Public Economics: Tax and Budget**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

The theory of tax policy and tax structure. The effects on economic behavior (including labor supply, saving, risk-taking and investment, charitable giving, and growth) of different taxes (income, sales, value-added, inheritance, wealth, property). Tax equity, efficiency and incidence, in the United States and in comparative perspective. Additional topics include modeling state taxes; social security and pensions; and tax compensation. Normally offered yearly.

Type:

- **EC-423 Economics of Regulation**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

This course examines regulation and analyzes the structure, conduct, and performance of American industry. Monopoly and strategic behavior in oligopoly and monopolistic competition are considered. U.S. antitrust law and the effect of regulatory laws on industrial performance are explored. Regulatory practices, rate setting, deregulation, public-enterprise pricing, and issues in privatization are examined, with an emphasis on case studies and policy analysis. Normally offered every other year.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-430 International Trade Theory & Policy**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

This course examines theories of international trade. The policy implications of each theory are explored and the effect of trade on the welfare of the nation is examined. Also the development of trade blocs and the the political economy of trade are studied. Normally offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-433 Public Choice**

Prerequisites:

EC-101 and EC-102

Credits:

4.00

Description:

This course considers the degree to which it is possible to explain, predict, and guide political decision through the application of economic analysis. The course is organized around two competing visions of public choice: (1) a traditional organic approach that sees the core problem for public choice as requiring the maximization of social welfare and (2) a newer contractual approach that sees that problem as requiring attention to the institutional framework within which political decisions are made. Topics to be considered include the Arrow paradox and other problems in aggregating individual choices, rent-seeking, the Leviathan hypothesis, and non- market demand-revealing methods.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-442 International Monetary Economics**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

The balance of payments and foreign exchange markets and instruments, and the determination of exchange rates. Balance-of-payments adjustments under alternative exchange-rate systems, international liquidity, international economics policy and open economy macroeconomics.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **EC-460 Game Theory**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

This course introduces students to the foundations of game theory using applications from economics and everyday decision-making. The course examines the common strategic elements of interactions between consumers and producers, governments and citizens, politicians and their constituencies, countries and their trading partners, and various other participants in social relationships. The course provides a theoretical framework for modeling strategic interaction, beginning with the development of the concept of a Nash equilibrium, reputation, signaling, collective-action problems, and voting procedures and strategies. Normally offered every other year.

Type:

Quantitative Reasoning

- **EC-503 Internship in Economics**

Prerequisites:

Instructor's consent required

Credits:

4.00

Description:

Approximately 12 hours per week working in a position designed to give the student responsibility and a learning opportunity in economics. Interested students should consult the instructor in advance.

Type:

Social Science,BSJ SOCIAL SCIENCE

Psychology

The Psychology major may be taken as either a BA or BS. The 10 Psychology courses required for the major are of five types:

1. Core requirements (three courses);
2. Distribution requirements (three courses, one from each bases group);
3. Elective courses (two courses, may be taken to complete your 10 course requirement);
4. An experiential course requirement (one course);
5. And a senior capstone requirement

The major is designed to maximize both exposure to core disciplines within the field of psychology (core and distribution requirements) and individual student choice (elective courses). Students must complete at least 16 credits (four courses) in residence at Suffolk University.

A minor in Psychology is also available.

The Psychology Department provides numerous directed research opportunities for students; you can learn more about them in the Research Opportunities tab on the Psychology [Academics page](#).

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Societies](#)
- [Psychology Courses](#)

Major Requirements: 10 courses, minimum of 40 credits

The requirements for the Psychology major are described below. Note that the first digit of the course number indicates the academic level of the course and recommended sequence for a student to progress through the curriculum (e.g. 100-level courses should be taken before 200-level courses early in the curriculum; 300-level courses are typically taken after 200-level courses in the junior and senior years). 500-level courses are upper-level courses that require approval by the instructor; they are appropriate for juniors and seniors. Please note that this coding system is provided only as a guideline. Students should consult with their departmental academic advisor to determine optimal course scheduling. A minimum of 40 credits (10 courses) are required for the major.

Core Requirements (3 courses, 12 credits)

- **PSYCH-114 General Psychology**

Credits:

4.00

Description:

Surveys core theoretical concepts and contemporary empirical research from the major sub-fields of psychology: physiology; perception; cognition; learning; emotion; motivation; development; personality; psychopathology; psychotherapy; and social behavior. Required for psychology majors. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **PSYCH-215 Behavioral Statistics**

Prerequisites:

PSYCH 114; Restricted to majors only unless with permission of instructor.

Credits:

4.00

Description:

Introduces the use of statistics as tools for description and decision-making, including hypothesis testing. Prepares students for the analysis, interpretation, and evaluation of psychological research. Required for psychology majors; should be taken before the junior year. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Quantitative Reasoning

• **PSYCH-216 Research Methods and Design**

Prerequisites:

PSYCH 114 and PSYCH 215

Credits:

4.00

Description:

First provides an overview of the historical background and conceptual foundation of psychology as a science before introducing students to research methods employed in psychology including naturalistic observation, qualitative, correlational, quasi-experimental, and experimental designs. The experimental method and principles of experimental design are emphasized. The laboratory component of the class helps familiarize students with practical issues that arise when implementing an empirical research study. Required for psychology majors; should be taken before the junior year. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Social Science

PSYCH-114, General Psychology, is a prerequisite for most Psychology courses (see individual course descriptions for prerequisite information). It is generally recommended that Psychology majors take this course in the first semester of the freshman year. The two-course methods sequence, Behavioral Statistics and Research Methods and Design, should be completed by the end of the sophomore year.

Distribution Requirements (3 courses, 12 credits)

Students select at least three distribution courses to count toward the major, with at least one from each bases group. In keeping with the latest trends in the field, we have designed distribution requirements to provide students with a breadth of psychology training in the areas of social and cultural psychology, the neurological and biological bases of behavior, and developmental perspectives in psychological science. All 300-level courses require sophomore standing and PSYCH-114 as a prerequisite, and typically incorporate a substantive critical-analysis writing or presentation component (e.g., a research paper) into the curriculum.

Social or Cultural Bases

- **PSYCH-226 Theories of Personality**

Prerequisites:

PSYCH 114

Credits:

4.00

Description:

Surveys the major theoretical approaches to personality including representative theorists from the psychoanalytic, trait, cognitive, behavioral, and humanistic perspectives. Topics include personality dynamics, personality development, and the study of individual differences. Normally offered yearly.

Term:

Offered Fall Term

Type:

Social Science

- **PSYCH-241 Social Psychology**

Prerequisites:

PSYCH 114

Credits:

4.00

Description:

Studies the social determinants of the behavior of individuals in relation to groups and surveys current research findings in such major content areas as attribution, prejudice, conformity, obedience, social cognition, interpersonal attraction, altruism, and aggression. Normally offered every semester.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **PSYCH-324 Psychology of Identity and the Self**

Prerequisites:

PSYCH 114 and Sophomore Standing.

Credits:

4.00

Description:

Focuses on the processes by which self-knowledge, self-awareness, self-conceptions, self-esteem, self-consciousness, and self-blame are developed and maintained. May also include consideration of: identity and the life story; biography, narrative, and lives; cognition and personality; cultural conceptions of self; and self psychology. Normally offered alternate years.

Term:

Offered Spring Term

Type:

Social Science

• PSYCH-312 Cognitive Neuroscience

Prerequisites:

PSYCH 114, PSYCH 215, PSYCH 216 and sophomore standing.

Credits:

4.00

Description:

Examines theory and research on a number of human cognitive processes, including topics of attention, perception, learning, memory, language processing, problem solving, social cognition, emotion, and reasoning. The field of cognition integrates knowledge from the multiple disciplines of neuropsychology, neuroscience, linguistics, and information science. Normally offered yearly.

Term:

Offered Fall Term

Type:

Social Science

• PSYCH-313 Physiological Psychology

Prerequisites:

PSYCH 114, PSYCH 215 and PSYCH 216.

Credits:

4.00

Description:

Explores the organic basis for human and animal behavior. Topics include nervous system structure and function as well as neurological contributions to motivation, emotion, stress, and abnormal functioning. Normally offered yearly.

Term:

Offered Fall Term

Type:

Social Science

- **PSYCH-325 Health Psychology**

Prerequisites:

PSYCH 114 and Sophomore Standing

Credits:

4.00

Description:

Surveys theory and research in health psychology and behavioral medicine. Examines the bidirectional effects of social and behavioral processes on physical health and functioning, including topics such as HIV/AIDS, cancer, and cardiovascular disease. Psychological and physiological perspectives on stress and coping are a primary focus throughout the semester. Normally offered yearly.

Term:

Offered Fall Term

Type:

Social Science

Developmental Bases

- **PSYCH-233 Child Development**

Prerequisites:

PSYCH 114

Credits:

4.00

Description:

Examines physical, cognitive, emotional, and social development in youth (i.e., from conception through adolescence). Surveys major developmental approaches including biological, learning, and contextual/environmental theories. Major focus is on normal development. Normally offered every semester.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **PSYCH-333 Adult Development & Aging**

Prerequisites:

PSYCH 114 and Sophomore Standing.

Credits:

4.00

Description:

Surveys theory and research about the physical, mental, and psychological aspects of life-span development. Age-related changes in mental health, personality, self-image, sexual relations, friendships, career development and spirituality are explored. Aging may also be explored as a global, demographic and cross-cultural issue. Research surrounding death and dying, bereavement, and hospice/nursing home care is also presented. Normally offered alternate years.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **PSYCH-334 Adolescent Development**

Prerequisites:

PSYCH-114 and sophomore standing

Credits:

4.00

Description:

Examines the physical, cognitive, emotional and social aspects of adolescence. Attention is given to identity, parent-adolescent relationships, values, sexuality, and career development as well as psychopathology, drug use and abuse, delinquency, and alienation. Normally offered yearly.

Term:

Offered Fall Term

Type:

Social Science

Elective Courses (2 courses, 6 credits)

Choose two of the following:

- **PSYCH-222 Human Sexuality**

Credits:

4.00

Description:

Examines the field of human sexuality across the life span. Topics include: sexual anatomy and physiology, sexual development, typical and atypical sexual behavior, sexual dysfunctions, current research on human sexuality, and relationship issues as they relate to sexuality and intimacy. Normally offered yearly.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **PSYCH-236 Psychology of the Family**

Credits:

4.00

Description:

Focuses on the various forms and structures of families and family life over time and across cultures, with emphasis on the psychological impact of such forms. The complex relationship among individual psychology, family relationships, and the larger social context is addressed. Topics include marriage, parenting, and divorce. Normally offered every semester.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **PSYCH-243 Organizational Psychology**

Prerequisites:

Take PSYCH-114;

Credits:

4.00

Description:

Focuses on diversity concerns in various aspects of the psychology of the workforce. This includes job analysis, recruitment, selection, evaluation, training, retention, and termination. Employee morale, well-being, stress, and hardiness are considered.

Type:

Cultural Diversity Opt A, Social Science, Diverse Perspectives

- **PSYCH-245 Consumer Psychology**

Credits:

4.00

Description:

Investigates the perceptual and motivational bases of consumer decision making in relation to advertising, packaging, brand loyalty, and other marketing considerations. Prior familiarity with psychological principles helpful but not essential. Normally offered alternate years.

Term:

Offered Fall Term

Type:

Social Science

- **PSYCH-247 Asian Perspectives on Health and Work**

Credits:

4.00

Description:

Examines theoretical and empirical approaches that provide insight into Asian viewpoints on socialization practices, family systems, health/well-being, cultural traditions/values, and spiritual philosophy/literature. Explores the diversity among Asian cultures in terms of language, history, religion/spiritual faith, and healthcare practices, all of which play a significant role in shaping the psychological characteristics, interpersonal relationships, and work dynamics of Asians and Asian immigrants. Students critically analyze similarities and differences between Asian and Western psychological perspectives of health and work through didactic and experiential learning components. This course fulfills the Cultural Diversity Requirement and may fulfill the Expanded Classroom Requirement. Normally offered alternate years.

Term:

Offered Spring Term

Type:

Social Science,Asian Studies,Cultural Diversity Opt A,Diverse Perspectives

- **PSYCH-314 Learning & Reinforcement**

Prerequisites:

PSYCH 114 and Sophomore standing

Credits:

4.00

Description:

Examines the process of the storage of information, including its affective coloration and the role of incentives and rewards. Topics include: principles of classical and operant conditioning; verbal and episodic learning; and traditional and contemporary theory. Normally offered alternate years.

Term:

Offered Fall Term

Type:

Social Science

- **PSYCH-315 Neuropsychological Syndromes**

Prerequisites:

Take PSYCH-215 PSYCH-216;

Credits:

4.00

Description:

Provides students with a neuropsychological perspective on common neuropsychological disorders, including attention-deficit hyperactivity disorder (ADHD), learning disabilities, autistic spectrum disorders, seizure disorders, traumatic brain injury (TBI), multiple sclerosis, HIV, and various dementias. Normal aging will also be considered.

Term:

Offered Fall Term

Type:

Social Science

- **PSYCH-317 Psychology of Addictions**

Prerequisites:

PSYCH 114 and Sophomore standing

Credits:

4.00

Description:

Examines patterns of addictive behavior with an emphasis on physiological etiology. Social, historical, and other psychological perspectives are also discussed. Populations at high risk, the consequences of addiction, and research on interventions and treatment will also be addressed. Normally offered yearly.

Term:

Offered Spring Term

Type:

Social Science

- **PSYCH-321 Introduction to Counseling Skills**

Prerequisites:

PSYCH 114 and Sophomore standing

Credits:

4.00

Description:

Explores and examines basic models of helping and provides supervised practice of helping skills. Format includes lecture, discussion, role play, and video feedback. Normally offered yearly.

Term:

Offered Fall Term

Type:

Social Science

- **PSYCH-326 Abnormal Psychology**

Prerequisites:

PSYCH 114, and Sophomore standing or permission of the instructor

Credits:

4.00

Description:

Introduces the concepts of psychological disorder and focuses on description and etiology of various mental health problems from a variety of different theoretical perspectives. Students develop familiarity with the DSM classification system and major disorders described within it, including mood and anxiety disorders, thought disorders, and personality disorders. Normally offered each semester.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **PSYCH-336 Developmental Psychopathology**

Prerequisites:

PSYCH 114 and sophomore standing

Credits:

4.00

Description:

Examines the etiology and symptoms of disorders of childhood and adolescence, as well as current therapeutic approaches. Developmental changes in the incidence of externalizing disorders, such as conduct disorder and attention deficit disorder, and internalizing disorders, such as depression and eating disorders, are addressed. Disorders that affect both behavioral and mental functioning such as Fetal Alcohol Syndrome and autism may also be included. The role of development in the understanding and treatment of the childhood disorders is reviewed. Normally offered yearly.

Term:

Offered Fall Term

Type:

Social Science

• **PSYCH-348 Introduction to Forensic Psychology**

Prerequisites:

PSYCH 114. 54 credits or more only.

Credits:

4.00

Description:

The interface of psychology and the law will be examined in the context of forensic psychological evaluations performed for courts, attorneys and related agencies or facilities. Topics ranging from the role of psychologists in the courtroom, standards of practice, the detection of deception, civil commitment, and ethical issues in forensic psychology will be discussed. Legal standards and the assessment of competence to stand trial, insanity defenses, child abuse and neglect, and child custody/visitation will be explored. This course will review the theoretical and conceptual aspects of the psycho-legal issues in question as well as the practical applications of the skills and knowledge domains needed to perform forensic psychological evaluations. The study of relevant laws and regulations as applied to the interface of psychology and the law will be considered. Discussion will include specialized forensic topics such as expert testimony, the evaluation of sexual offenders, violence risk assessment, and forensic psychological testing.

Type:

Experiential Requirement

Choose one of the following:

- **PSYCH-346 Community Psychology**

Prerequisites:

PSYCH-114 and Junior standing

Credits:

4.00

Description:

Explores the efforts of psychologists to enhance the well-being of groups and communities. Complementing clinical approaches, community approaches have implications for both theory (e.g., environmental and/or person-environment theories) and practice (e.g., prevention-oriented paradigms targeted to groups and social systems). Students will be expected to attend weekly two-hour lectures to examine key concepts within the field (e.g., competence building, empowerment) as well as to engage in weekly community service activity. Normally offered every semester. This course fulfills the Expanded Classroom Requirement.

Term:

Offered Both Fall and Spring

Type:

Social Science, Expanded Classroom Requirement, Local Engagement Experience

- **PSYCH-350 Psychology Internship**

Prerequisites:

PSYCH-340 and Junior Standing. Restricted to majors only unless permission of instructor. This course fulfills the Expanded Classroom Requirement

Credits:

4.00

Description:

Provides majors the opportunity to gain a meaningful field experience in a professional setting that is consistent with their academic background and career goals. Students are on site a minimum of 6 hours a week and must accrue at least 60 hours of field experience. Seminar discussions focus on career exploration, the integration of academic knowledge with the demands of the workplace, and professional issues, including ethics, self-reflection, and cultural sensitivity. Students are required to secure an internship before the course begins. Normally offered every semester.

Term:

Offered Both Fall and Spring

Type:

Social Science, Expanded Classroom Requirement

Those students who intend to complete an internship must secure their own internship position prior to the start of the semester. A list of potential internship sites and their descriptions are available for students in the department's front office.

Senior Capstone Requirement

The capstone requirement should be completed during the senior year. Prerequisites include completion of departmental Core and Distribution requirements.

Students enroll in one of the following courses. Note: PSYCH-428 is by invitation only.

- **PSYCH-408 Senior Capstone: History & Systems Of Psychology**

Prerequisites:

PSYCH 114, PSYCH 215, PSYCH 216 and senior standing

Credits:

4.00

Description:

Presents the historical context for the development of core ideas, theoretical positions, and research in the field of Psychology. The interconnections between systematic orientations and domains of psychology are examined along with their relation to contemporary concepts and issues in the field of psychology. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **PSYCH-428 Honors Capstone: History & Systems Of Psychology**

Prerequisites:

PSYCH 114, PSYCH 215 & 216; Senior standing and admission by invitation only.

Credits:

4.00

Description:

Examines both historical and contemporary theories in the field, along with current empirical research. Emphasizes the reading of primary source material, critical thinking, and seminar discussion. Assessment and measurement issues emphasized, along with substantive writing, typically in the form of an empirical research proposal or a critical review of the theory and research in a focused domain. Admission by invitation only. Normally offered yearly.

Social Science

2015-2016 Archived Catalog Information

Psychology

The Psychology major may be taken as either a BA or BS. The 10 Psychology courses required for the major are of five types:

1. Core requirements (three courses);
2. Distribution requirements (three courses, one from each bases group);
3. Elective courses (two courses, may be taken to complete your 10 course requirement);
4. An experiential course requirement (one course);
5. And a senior capstone requirement

The major is designed to maximize both exposure to core disciplines within the field of psychology (core and distribution requirements) and individual student choice (elective courses). Students must complete at least 16 credits (four courses) in residence at Suffolk University.

A minor in Psychology is also available.

The Psychology Department provides numerous directed research opportunities for students; you can learn more about them in the Research Opportunities tab on the Psychology [Academics page](#).

Course descriptions may be updated periodically to reflect changes since the last published catalog.

This program is designed to provide an accelerated path for undergraduate Psychology majors at Suffolk to obtain a Master's degree in Mental Health Counseling. The program allows motivated Psychology majors to complete a graduate degree more quickly and at a reduced cost. Students benefit from the

experience of a smooth transition from undergraduate to graduate study in a familiar environment; many will be able to continue research with faculty mentors.

Degree Requirements

1. Students admitted to this dual degree program must meet all the requirements of an undergraduate Psychology degree program.
2. Student must also meet all requirements for the Master's degree in Mental Health Counseling.
3. The two graduate courses taken during the senior year will count toward BOTH the undergraduate and graduate degree requirements. Credit hours will be awarded based on the graduate course description.
4. Before enrolling in a particular graduate course during the senior year, a student must obtain permission from the MHC graduate program director.
5. Students are subject to the usual standards for academic standing, i.e., undergraduate standards for undergraduate courses and graduate standards for graduate courses.

Upon successful completion of all of the degree requirements, a student will receive a dual Bachelor's and Master's degree. The exact degree (BA/BS and Master's) will be awarded based on the specific undergraduate program the student completes. A student may permanently exit the dual degree program and opt to graduate with a Bachelor's degree if all the requirements for a Bachelor's degree have been met. In this case, the graduate courses taken in the senior year will be counted as 4-credit courses applied toward the undergraduate degree requirements.

Psi Chi, the National Honor Society in Psychology

The Suffolk University chapter of Psi Chi, the national honor society in psychology, was chartered on April 28, 1978. Psi Chi is a member of the American Association of College Honor Societies. Here at Suffolk we invite the top ten percent of our junior and senior class. Students will be contacted each spring with an invitation. Criteria for membership include:

1. Junior or senior class status
2. Completion of at least five courses in Psychology at Suffolk
3. Cumulative GPA in the top 10% of juniors and seniors

New members are inducted into the Psi Chi National Honor Society at an induction ceremony held in April.

- NEUR-101 Intro to Neuroscience

Credits:

4.00

Description:

Introduces the field of neuroscience, the study of the organization and function of the nervous system of humans and other animals. Neuroscientists examine how individual neurons function as signaling devices, how groups of neurons operate as circuits to produce fundamental units of behavior, and how much larger systems in the brain subserve complex functions such as memory and consciousness. Topics include the neuron and neural transmission, the overall function and organization of the nervous system, the development of the brain, neural plasticity, sleep, memory and other higher cognitive functions. Normally offered alternate years.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ

- **PSYCH-114 General Psychology**

Credits:

4.00

Description:

Surveys core theoretical concepts and contemporary empirical research from the major sub-fields of psychology: physiology; perception; cognition; learning; emotion; motivation; development; personality; psychopathology; psychotherapy; and social behavior. Required for psychology majors. Offered every semester.

Term:

Offered Both Fall and Spring

PSYCH 114, PSYCH 215 and PSYCH 216.

Credits:

4.00

Description:

Explores the organic basis for human and animal behavior. Topics include nervous system structure and function as well as neurological contributions to motivation, emotion, stress, and abnormal functioning. Normally offered yearly.

Term:

Offered Fall Term

Type:

Social Science

- **PSYCH-314 Learning & Reinforcement**

Prerequisites:

PSYCH 114 and Sophomore standing

Credits:

4.00

Description:

Examines the process of the storage of information, including its affective coloration and the role of incentives and rewards. Topics include: principles of classical and operant conditioning; verbal and episodic learning; and traditional and contemporary theory. Normally offered alternate years.

Term:

Offered Fall Term

Type:

Social Science

- **PSYCH-315 Neuropsychological Syndromes**

Prerequisites:

Take PSYCH-215 PSYCH-216;

Credits:

4.00

Description:

Provides students with a neuropsychological perspective on common neuropsychological disorders, including attention-deficit hyperactivity disorder (ADHD), learning disabilities, autistic spectrum disorders, seizure disorders, traumatic brain injury (TBI), multiple sclerosis, HIV, and various

dementias. Normal aging will also be considered.

Term:

Offered Fall Term

Type:

Social Science

- **PSYCH-317 Psychology of Addictions**

Prerequisites:

PSYCH 114 and Sophomore standing

Credits:

4.00

Description:

Examines patterns of addictive behavior with an emphasis on physiological etiology. Social, historical, and other psychological perspectives are also discussed. Populations at high risk, the consequences of addiction, and research on interventions and treatment will also be addressed. Normally offered yearly.

Term:

Offered Spring Term

Type:

Social Science

- **PSYCH-321 Introduction to Counseling Skills**

Prerequisites:

PSYCH 114 and Sophomore standing

Credits:

4.00

Description:

Explores and examines basic models of helping and provides supervised practice of helping skills. Format includes lecture, discussion, role play, and video feedback. Normally offered yearly.

Term:

Offered Fall Term

Type:

Social Science

- **PSYCH-324 Psychology of Identity and the Self**

Prerequisites:

PSYCH 114 and Sophomore Standing.

Credits:

4.00

Description:

Focuses on the processes by which self-knowledge, self-awareness, self-conceptions, self-esteem, self-consciousness, and self-blame are developed and maintained. May also include consideration of: identity and the life story; biography, narrative, and lives; cognition and personality; cultural conceptions of self; and self psychology. Normally offered alternate years.

Term:

Offered Spring Term

Type:

Social Science

- **PSYCH-325 Health Psychology**

Prerequisites:

PSYCH 114 and Sophomore Standing

Credits:

4.00

Description:

Surveys theory and research in health psychology and behavioral medicine. Examines the bidirectional effects of social and behavioral processes on physical health and functioning, including topics such as HIV/AIDS, cancer, and cardiovascular disease. Psychological and physiological perspectives on stress and coping are a primary focus throughout the semester. Normally offered yearly.

Term:

Offered Fall Term

Type:

Social Science

• **PSYCH-326 Abnormal Psychology**

Prerequisites:

PSYCH 114, and Sophomore standing or permission of the instructor

Credits:

4.00

Description:

Introduces the concepts of psychological disorder and focuses on description and etiology of various mental health problems from a variety of different theoretical perspectives. Students develop familiarity with the DSM classification system and major disorders described within it, including mood and anxiety disorders, thought disorders, and personality disorders. Normally offered each semester.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **PSYCH-333 Adult Development & Aging**

Prerequisites:

PSYCH 114 and Sophomore Standing.

Credits:

4.00

Description:

Surveys theory and research about the physical, mental, and psychological aspects of life-span development. Age-related changes in mental health, personality, self-image, sexual relations, friendships, career development and spirituality are explored. Aging may also be explored as a global, demographic and cross-cultural issue. Research surrounding death and dying, bereavement, and hospice/nursing home care is also presented. Normally offered alternate years.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **PSYCH-334 Adolescent Development**

Prerequisites:

PSYCH-114 and sophomore standing

Credits:

4.00

Description:

Examines the physical, cognitive, emotional and social aspects of adolescence. Attention is given to identity, parent-adolescent relationships, values, sexuality, and career development as well as psychopathology, drug use and abuse, delinquency, and alienation. Normally offered yearly.

Term:

Offered Fall Term

Type:

Social Science

- **PSYCH-336 Developmental Psychopathology**

Prerequisites:

PSYCH 114 and sophomore standing

Credits:

4.00

Description:

Examines the etiology and symptoms of disorders of childhood and adolescence, as well as current therapeutic approaches. Developmental changes in the incidence of externalizing disorders, such as conduct disorder and attention deficit disorder, and internalizing disorders, such as depression and eating disorders, are addressed. Disorders that affect both behavioral and mental functioning such as Fetal Alcohol Syndrome and autism may also be included. The role of development in the understanding and treatment of the childhood disorders is reviewed. Normally offered yearly.

Term:

Offered Fall Term

Type:

Social Science

- **PSYCH-340 Professional Development in Psychology**

Prerequisites:

PSYCH-114; Psychology majors with 32 or more credits;

Credits:

1.00

Description:

Professional Development in Psychology is a one-credit hybrid course designed to enhance your understanding of career options that are available to psychology majors and provide you with the skills and knowledge needed to secure an internship. Through class discussions, readings, and engaging assignments, students will learn about multiple career paths open to psychology majors, develop internship and job search skills, discover on and off-campus resources related to career development, and gain knowledge aimed at maximizing their opportunities for success post-graduation.

Type:

Social Science

- **PSYCH-346 Community Psychology**

Prerequisites:

PSYCH-114 and Junior standing

Credits:

4.00

Description:

Explores the efforts of psychologists to enhance the well-being of groups and communities. Complementing clinical approaches, community approaches have implications for both theory (e.g., environmental and/or person-environment theories) and practice (e.g., prevention-oriented paradigms targeted to groups and social systems). Students will be expected to attend weekly two-hour lectures to examine key concepts within the field (e.g., competence building, empowerment) as well as to engage in weekly community service activity. Normally offered every semester. This course fulfills the Expanded Classroom Requirement.

Term:

Offered Both Fall and Spring

Type:

Social Science, Expanded Classroom Requirement, Local Engagement Experience

• PSYCH-348 Introduction to Forensic Psychology

Prerequisites:

PSYCH 114. 54 credits or more only.

Credits:

4.00

Description:

The interface of psychology and the law will be examined in the context of forensic psychological evaluations performed for courts, attorneys and related agencies or facilities. Topics ranging from the role of psychologists in the courtroom, standards of practice, the detection of deception, civil commitment, and ethical issues in forensic psychology will be discussed. Legal standards and the assessment of competence to stand trial, insanity defenses, child abuse and neglect, and child custody/visitation will be explored. This course will review the theoretical and conceptual aspects of the psycho-legal issues in question as well as the practical applications of the skills and knowledge domains needed to perform forensic psychological evaluations. The study of relevant laws and regulations as applied to the interface of psychology and the law will be considered. Discussion will include specialized forensic topics such as expert testimony, the evaluation of sexual offenders, violence risk assessment, and forensic psychological testing.

Type:

Social Science

• PSYCH-350 Psychology Internship

Prerequisites:

PSYCH-340 and Junior Standing. Restricted to majors only unless permission of instructor. This course fulfills the Expanded Classroom Requirement

Credits:

4.00

Description:

Provides majors the opportunity to gain a meaningful field experience in a professional setting that is consistent with their academic background and career goals. Students are on site a minimum of 6 hours a week and must accrue at least 60 hours of field experience. Seminar discussions focus on career exploration, the integration of academic knowledge with the demands of the workplace, and professional issues, including ethics, self-reflection, and cultural sensitivity. Students are required to secure an internship before the course begins. Normally offered every semester.

Term:

Offered Both Fall and Spring

Type:

Social Science, Expanded Classroom Requirement

- **PSYCH-408 Senior Capstone: History & Systems Of Psychology**

Prerequisites:

PSYCH 114, PSYCH 215, PSYCH 216 and senior standing

Credits:

4.00

Description:

Presents the historical context for the development of core ideas, theoretical positions, and research in the field of Psychology. The interconnections between systematic orientations and domains of psychology are examined along with their relation to contemporary concepts and issues in the field of psychology. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **PSYCH-422 Groups in Schools**

Prerequisites:

Senior status and permission of department chair required.

Credits:

4.00

Description:

An overview of the various group counseling formats utilized in schools, and related theories. Issues related to the development and implementation of small counseling groups (e.g., group dynamics and processes for group member selection) and larger educational and prevention-based groups (e.g., fostering positive mental health, career-related programming, anti-bullying) will be explored and discussed.

Type:

Social Science

- **PSYCH-428 Honors Capstone: History & Systems Of Psychology**

Prerequisites:

PSYCH 114, PSYCH 215 & 216; Senior standing and admission by invitation only.

Credits:

4.00

Description:

Examines both historical and contemporary theories in the field, along with current empirical research. Emphasizes the reading of primary source material, critical thinking, and seminar discussion. Assessment and measurement issues emphasized, along with substantive writing, typically in the form of an empirical research proposal or a critical review of the theory and research in a focused domain. Admission by invitation only. Normally offered yearly.

Term:

Offered Fall Term

Type:

Social Science

- **PSYCH-510 Independent Study**

Prerequisites:

JR or SR status; Majors Only; Department chair consent.

Credits:

1.00- 4.00

Description:

Substantive reading/research in area of special interest directed by a faculty member.

Term:

Offered Both Fall and Spring

Type:

Social Science

2015-2016 Archived Catalog Information

Public Relations

The Communication & Journalism (CJN) Department offers course work leading to a Bachelor of Arts or Bachelor of Science with a major in [Advertising](#), [Global & Cultural Communication](#), [Journalism](#), [Media & Film](#), or Public Relations. A Bachelor of Science in Journalism is also offered to Journalism and Public Relations majors. The department also offers a [minor in Communication & Journalism](#).

All Communication & Journalism majors study under a faculty who have extensive academic and professional experience. CJN students begin their program by taking two foundation courses that focus on effective speaking, concise writing, and critical thinking. Then, each student selects required and elective courses in their major to develop theoretical and practical knowledge of their field.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Public Relations Major Requirements](#)
- [Accelerated Bachelor's/Master's Degree in Communication](#)
- [Honors](#)
- [Communication & Journalism Courses](#)

Major Requirements: 12 courses, 48 credits

Core Requirements (10 courses, 40 credits)

Note: All students should take CJN-101 and CJN-103 during their first year.

- CJN-101 Introduction to Communication

Arts Admin Minor Elective

- **CJN-378 Event Planning and Promotion**

Prerequisites:

CJN-2277(formerly CJN-277)

Credits:

4.00

Description:

Examines how events are built, promoted, managed, and assessed, with an emphasis on conventions, trade shows, and nonprofit events. Issues analyzed include facilities planning and contracts, legal issues, volunteer management, budgeting, marketing, and planner/staff communication.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **CJN-389 Social Media**

Credits:

4.00

Description:

Social media sites such as Facebook, MySpace, and Twitter are examined from a cultural and critical perspective. The use of social media for community formation, social presence, identity building, and social activism are considered. The roles of advertising, public relations, and branding are examined.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **CJN-2277 Public Relations I: Principles**

Credits:

4.00

Description:

Effective public relations involve an understanding of the history, theory, and practice of public relations including public relations concepts, the role of the practitioner, and the foundations of public relations. This course seeks to provide that foundation as an introduction to the field of public relations. Issues surrounding the history, legality, process, and principles of public relations are explored.

Term:

Offered Both Fall and Spring

- **CJN-3376 Public Relations II: Research**

Prerequisites:

CJN-2277 (Formerly CJN-277)

Credits:

4.00

Description:

Examines how research aids the public relations practice. Students learn research methods that address public relations planning and problem-solving. Assignments provide students with hands-on practice using research for a PR project.

Term:

Offered Both Fall and Spring

- **CJN-3377 Public Relations III: Strategic Writing**

Prerequisites:

CJN-2277(formerly CJN-277);

Credits:

4.00

Description:

Focuses on writing principles for public relations including the formulation of clear PR objectives, determining the knowledge of the target audience, and the development of key messages. Students apply these principles to common PR formats, including news releases, pitch letters, biographies, speeches, emails, digital content, and social media posts.

Term:

Offered Both Fall and Spring

Choose one of the following:

- **CJN-4477 Public Relations IV: Campaigns**

Prerequisites:

CJN-2277(formerly CJN-277) and CJN-3377(formerly CJN-377) and Senior Standing.

Credits:

4.00

Description:

Examines typical public relations problems experienced by profit and not-for-profit organizations. Provides students with an opportunity to demonstrate their mastery of the skills, techniques, and knowledge of public relations by creating a comprehensive campaign plan for a community client.

Term:

Offered Both Fall and Spring

- **CJN-H4477 Public Relations IV Honors: Campaigns**

Prerequisites:

CJN-2277(formerly CJN-277) and CJN-377(formerly CJN-377) and CJN-3376 and by invitation only.

- [Accelerated Bachelor's/Master's Degree in Communication](#)
- [Honors](#)
- [Communication & Journalism Courses](#)

We offer an accelerated path for undergraduate Communication & Journalism (CJN) majors to obtain a master's degree in Communication.

Who is eligible

- CJN majors who are rising seniors at Suffolk with a GPA of 3.5 or higher in their major and overall.
- Students must meet all of the requirements of one of the undergraduate degree programs (BA, BS, BSJ) offered by the Department of Communication & Journalism. In addition, they must meet all of the requirements of one of the Master's of Communication degree concentrations.
- Applications follow the regular admission procedures; please note that applicants for the accelerated degree will have the GRE requirement waived.

Degree Requirements

1. Students admitted to this dual degree program must meet all the requirements of an undergraduate degree program within the department of Communication & Journalism.
2. Student must also meet all requirements for the Master's degree in Communication.
3. Students will take two CJNI graduate courses during their senior year; one during the fall semester and one during the spring semester. The two graduate courses taken during the senior year will count toward BOTH the undergraduate and graduate degree requirements. Credit hours will be awarded based on the graduate course description.
4. The graduate courses taken during the senior year will be determined by the Communication graduate program director.
5. Students are subject to the usual standards for academic standing, i.e., undergraduate standards for undergraduate courses and graduate standards for graduate courses.

Upon successful completion of all of the degree requirements, a student will receive a dual Bachelor's and Master's degree. The exact degree will be awarded based on the specific undergraduate program the student completes. A student may permanently exit the dual degree program and opt to graduate with a Bachelor's degree if all the requirements for a Bachelor's degree have been met. In this case, the graduate courses taken in the senior year will be counted as 4-credit courses applied toward the undergraduate degree requirements.

- **CJN-506 Honors Seminar**

Prerequisites:

Senior CJN majors with an overall cumulative grade point average of 3.0, and a major GPA of 3.4

Credits:

4.00

Description:

Senior CJN majors meeting requirements for Departmental Honors are invited to participate in this seminar, which entails research and presentation of an approved topic.

Term:

Offered Spring Term

- **CJN-510 Independent Study**

Prerequisites:

An independent study form must be submitted to the CAS Dean's Office.

Credits:

1.00-12.00

Description:

An independent study experience in Communication and Journalism is available prior to the start of each semester.

Term:

Offered Both Fall and Spring

- **CJN-2277 Public Relations I: Principles**

Credits:

4.00

Description:

Effective public relations involve an understanding of the history, theory, and practice of public relations including public relations concepts, the role of the practitioner, and the foundations of public relations. This course seeks to provide that foundation as an introduction to the field of public relations. Issues surrounding the history, legality, process, and principles of public relations are explored.

Term:

Offered Both Fall and Spring

- **CJN-2355 Production I**

Prerequisites:

CJN-152

Credits:

4.00

Description:

Building on skills acquired in CJN 2355, students use advanced equipment and production techniques to produce complex video projects, including fiction filmmaking. Projects cover various styles and genres, such as music video and film noir.

Term:

Offered Both Fall and Spring

Type:

- **CJN-3376 Public Relations II: Research**

Prerequisites:

CJN-2277 (Formerly CJN-277)

Credits:

4.00

Description:

Examines how research aids the public relations practice. Students learn research methods that address public relations planning and problem-solving. Assignments provide students with hands-on practice using research for a PR project.

Term:

Offered Both Fall and Spring

- **CJN-3377 Public Relations III: Strategic Writing**

Prerequisites:

CJN-2277(formerly CJN-277);

Credits:

4.00

Description:

Focuses on writing principles for public relations including the formulation of clear PR objectives, determining the knowledge of the target audience, and the development of key messages. Students apply these principles to common PR formats, including news releases, pitch letters, biographies, speeches, emails, digital content, and social media posts.

Term:

Offered Both Fall and Spring

- **CJN-3455 Production II**

Prerequisites:

CJN-2355(formerly CJN-355)

Credits:

4.00

Description:

Building on skills acquired in CJN 252, students will use advanced equipment and production techniques to produce complex video projects in a variety of styles and genres, such as music video and film noir.

Term:

Offered Both Fall and Spring

- **CJN-4455 Production III**

Prerequisites:

CJN-3455(formerly CJN-455)

Credits:

4.00

Description:

Builds on the theories and techniques developed in CJN 3455, focusing on the advanced concepts and skills needed to design and produce professional-level media content for digital distribution. Provides the opportunity to produce high-quality material for student media portfolios in various genres.

Term:

Offered Spring Term

- **CJN-4477 Public Relations IV: Campaigns**

Prerequisites:

CJN-2277(formerly CJN-277) and CJN-3377(formerly CJN-377) and Senior Standing.

Credits:

4.00

Description:

Examines typical public relations problems experienced by profit and not-for-profit organizations. Provides students with an opportunity to demonstrate their mastery of the skills, techniques, and knowledge of public relations by creating a comprehensive campaign plan for a community client.

Term:

Offered Both Fall and Spring

• **CJN-H4477 Public Relations IV Honors: Campaigns**

Prerequisites:

CJN-2277(formerly CJN-277) and CJN-377(formerly CJN-377) and CJN-3376 and by invitation only.

Credits:

4.00

Description:

Examines typical public relations problems experienced by profit and not-for-profit organizations. Provides honors students with an opportunity to demonstrate their mastery of the skills, techniques, and knowledge of public relations by creating a comprehensive campaign plan for a community client.

Term:

Offered Spring Term

Pure Mathematics

The Mathematics & Computer Science Department offers two Mathematics major programs: Pure Mathematics and [Mathematics with Actuarial Concentration](#). These programs are designed to provide a strong foundation upon which to begin a challenging and rewarding career immediately upon graduation or for pursuing graduate studies.

The department also offers minors in Pure Mathematics and Mathematics with Actuarial Concentration, both of which can be used to enhance the career options for students who choose to major in another discipline.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Pure Mathematics Major Requirements](#)
- [Pure Mathematics Minor Requirements](#)
- [Honors](#)
- [Mathematics Courses](#)
- [Math Statistics Courses](#)

Major Requirements: 13 courses and corresponding laboratories, 52 credits

A student majoring in Pure Mathematics must successfully complete 40 credits of coursework in mathematics plus 12 credits of coursework in Computer Science and Physics, distributed as follows:

Mathematics Requirements (10 courses, 40 credits)

- MATH-165 Calculus I

Prerequisites:

MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

Credits:

4.00

Description:

Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

• MATH-166 Calculus II

Prerequisites:

MATH 165 with grade of C or better

Credits:

4.00

Description:

Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation, convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

• MATH-265 Calculus III

Prerequisites:

MATH 166 with grade of C or better

Credits:

4.00

Description:

Parametric equations and polar coordinates (curves, areas, conic sections); vectors and the geometry of space (the dot product, vector arithmetic, lines and planes in 3-space, the cross product, cylinders and quadratic surfaces); vector functions (limits, derivatives and integrals, motion in space); partial derivatives (functions of several variables, limits and continuity, tangent planes and differentials, chain rule, directional derivatives, gradient, extrema, Lagrange multipliers); multiple integrals (double integrals, applications); vector calculus (vector fields, line integrals, fundamental theorem for line integrals, Green's Theorem, curl and divergence, parametric surfaces, surface integrals). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-331 Introduction to Abstract Math**

Prerequisites:

MATH-165 and MATH-166 with a grade of C or better

Credits:

4.00

Description:

this course is intended to provide a firm foundation for and a taste of the study of advanced mathematics. While the course content varies somewhat, it is designed to give students a deeper understanding of the algebraic and analytical structure of the integers, the rational numbers and the real numbers and how they act as a building block to a variety of fields of mathematics. Students are introduced to the process of mathematical discovery and the language of mathematics. Exercises and projects are designed to illustrate the need for proof and to further refine the student's ability to analyze, conjecture and write mathematical proofs. This course is a prerequisite for most upper level mathematics courses and, after completing it a student will be in a position to determine realistically if he or she ought to major or minor in mathematics.

- **MATH-431 Linear Algebra**

Prerequisites:

Math 331 must have grade C or higher

Credits:

4.00

Description:

System of linear equations, Gaussian elimination, matrices and their algebra, inverse of a matrix, determinants, cofactor expansion, Cramer's rule, vectors in and their algebra, abstract vector spaces, subspaces, linear independence, basis and dimension, linear transformations, isomorphism of

vector spaces, rank and nullity, matrix of a linear transformation, inner product spaces, angle and orthogonality, eigenvalues and eigenvectors of a linear transformation, characteristic equation, Cayley-Hamilton theorem, diagonalization.

- **MATH-432 Abstract Algebra**

Prerequisites:

MATH 431

Credits:

4.00

Description:

An introduction to elementary group theory, including properties of groups, subgroups, first isomorphism theorem for groups, normal subgroups, finite group classification; elementary properties of rings, such as homomorphisms of rings, ideals, fields, Euclidean algorithm, rings of polynomials, factorization theory, integral domains, associates, primes and units in domains, and other topics in number theory. Prerequisite: MATH 431 with a grade of C or higher.

- **MATH-462 Real Analysis**

Prerequisites:

MATH 331 with at least a grade of C

Credits:

4.00

Description:

A detailed treatment of the basic concepts of analysis including the real numbers; completeness and its equivalence to other properties of the reals such as monotone convergence, Archimedean property, Bolzano-Weierstrass theorem; the topology of Euclidean spaces, compactness and the Heine-Borel theorem, connectedness, continuity and uniform continuity and uniform convergence of functions, pointwise and uniform convergence of functions, and an introduction to metric spaces.

Choose two additional 4-credit Mathematics courses at the 200-, 300-, or 400-level

Choose one additional 4-credit Mathematics course at the 300- or 400-level

Complementary Major Requirements (3 courses and corresponding laboratories, 12 credits)

- **CMPSC-F131 Computer Science I**

Credits:

4.00

Description:

This is a rigorous introduction to computer science in Java with an emphasis on problem solving, structured programming, object-oriented programming, and graphical user interfaces. Topics include expressions, input/output, control structures, intrinsic data types, classes and methods, iteration, top-down programming, arrays, graphical user interfaces, and elements of UML. Normally offered each semester.

Type:

Quantitative Reasoning

- **PHYS-151 University Physics I**

Prerequisites:

Take MATH-121 or MATH 165. PHYS L151 concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **PHYS-L151 University Physics Lab I**

Prerequisites:

PHYS 151 concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **PHYS-152 University Physics II**

Prerequisites:

PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

Credits:

3.00

Description:

This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• **PHYS-L152 University Physics Lab II**

Prerequisites:

PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- [Pure Mathematics Minor Requirements](#)
- [Honors](#)
- [Mathematics Courses](#)
- [Math Statistics Courses](#)

Minor Requirements: 5 courses, 20 credits

To qualify for a minor in Pure Mathematics, a student must successfully complete five courses (20 credits) with a GPA of at least 2.0, distributed as follows:

- MATH-165 Calculus I

Prerequisites:

MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

Credits:

4.00

Description:

Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-166 Calculus II**

Prerequisites:

MATH 165 with grade of C or better

Credits:

4.00

Description:

Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation, convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-265 Calculus III**

Prerequisites:

MATH 166 with grade of C or better

Credits:

4.00

Description:

Parametric equations and polar coordinates (curves, areas, conic sections); vectors and the geometry of space (the dot product, vector arithmetic, lines and planes in 3-space, the cross product, cylinders and quadratic surfaces); vector functions (limits, derivatives and integrals, motion in space); partial derivatives (functions of several variables, limits and continuity, tangent planes and differentials, chain rule, directional derivatives, gradient, extrema, Lagrange multipliers); multiple integrals (double integrals, applications); vector calculus (vector fields, line integrals, fundamental theorem for line integrals, Green's Theorem, curl and divergence, parametric surfaces, surface integrals). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- [Mathematics Courses](#)
- [Math Statistics Courses](#)

In both the Pure Mathematics and Mathematics with Actuarial Concentration majors, students who have an overall GPA of 3.0 or better and a GPA of 3.0 or better in the major will be eligible for honors. To achieve honors a student must take a course of four credits or more in an advanced mathematics topic. This will typically be an independent study. The course should lead to a project or a senior thesis, done under the direction of a faculty member. The topic of study will be agreed upon by the student and faculty member.

Choose one of the following:

- **MATH-400 Senior Project in Mathematics**

Prerequisites:

Instructor permission required.

Credits:

4.00

Description:

Students study a particular topic in mathematics and demonstrate their results in a final project.

- **MATH-510 Independent Study**

Credits:

4.00

Description:

Members of the department will hold conference hours with students and will direct their readings and study of topics in mathematics which may be of interest to them. Prerequisite: Consent of instructor. 1 term - credits to be arranged.

- MATH-000 Mathshop - Bridge to College Math

Credits:

0.00

Description:

A NON-CREDIT, full semester workshop designed for students who need substantial review before starting MATH 104, MATH 106, OR MATH 121. Similar to a course, MATHSHOP meets three hours per week throughout the semester. Topics covered are tailored to the needs of students and include basic math material, basic algebra, graphing use of calculators, ways of dealing with math fears and study methods. Several sections normally offered each semester.

- **MATH-075 Review of Math Concepts for Calculus**

Credits:

0.00

Description:

The purpose of this non-credit course is to help engineering students review basic math contents and topics that will be used frequently in their major engineering courses. The course will cover basic algebra (for example, order of operations, exponents, simplifying algebraic expressions, combinations of operations and complex fractions), functions and graphs (including linear, polynomial, and rational, exponential and logarithmic functions) and basic knowledge in trigonometric functions (for example angles and radian measures, right triangle trigonometry, graphs of Sine and Cosine functions)

- **MATH-104 Precalculus for Management & Social Sciences**

Prerequisites:

MATH level 2 or Mathshop

Credits:

4.00

Description:

A selection of topics in algebra and elementary analytic geometry including, (but not restricted to): properties of real numbers, linear equations and inequalities, absolute value equations and inequalities, polynomials, rational expressions, exponents and radicals, quadratic equations, functions, linear, quadratic and polynomial models, rational, exponential and logarithmic functions. Applications and graphs are stressed throughout the course. This course is intended to prepare students who have only had one year of high school algebra to take MATH 134. Students may not use this course alone to satisfy the C.A.S. math requirement. Qualifying math placement exam score required. Students who are not prepared for this course should take MATHSHOP. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students. This course cannot be taken for credit by a student who already has credit for a more advanced course.

- **MATH-121 Precalculus With Elements of Calculus**

Prerequisites:

MATH-104 with a minimum grade of B or MATH level 4

Credits:

4.00

Description:

A review of topics in algebra, trigonometry and analytic geometry intended for students needing one additional semester of preparation before taking MATH 165. Students may not use this course alone to satisfy the CAS math requirement. Prerequisites: MATH 104 with B or MATH 108 with B or higher or qualifying placement exam score indicating solid grounding in intermediate algebra. 4 lecture hours plus 1 recitation session per week. Normally offered every semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students. This course cannot be taken for credit by a student who already has credit for a more advanced course.

- **MATH-128 Math for the Modern World**

Prerequisites:

MATH level 2, or Mathshop, or MATH-104

Credits:

4.00

Description:

From the ISBN on a book, to buying a car, from the size of small chips in a cell phone, to the size of the national debt, or just reading a graph in the daily newspaper, mathematics plays an important and vital role in countless areas of life and your future career and courses included. Mathematics is both an art and a tool created by humans. The common bond is a way of thinking and a way of reasoning to describe and solve problems of many types. This course uses the context of modern real life problems to introduce math needed for literacy and problem solving in contemporary life and work. It uses a minimal amount of algebra and focuses on math models, concepts and basic math manipulations. It encourages students to move from anxiety about math, to using formulas well, to thinking critically in the math context to use math to solve problems and pose new problems. Topics include scientific notation, basic financial math, linear, exponential and polynomial models and an introduction to probability. (Formerly Math 132)

- **MATH-130 Topics in Finite Mathematics**

Prerequisites:

MATH-104, or MATH-121, or MATH level 3

Credits:

4.00

Description:

Linear Modeling (for example, using linear functions to model supply/demand situations), graphing, linear programming, financial functions (compound interest, annuities, and amortization of loans) sets, Venn diagrams, counting and combinatorics, discrete probability, conditional probability, Bernoulli experiments, Bayes theorem. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

• MATH-132 Math-Art, Tool and Human Side

Prerequisites:

MATH-000 or appropriate Math Placement Exam score. Course does not fulfill math requirement for SBS majors.

Credits:

4.00

Description:

Mathematics is both an art and a tool. It has been used in many ways in contemporary and ancient society. The common bond is a way of thinking and a way of using reason to solve problems and describe things of all sorts. The course is designed to cultivate an appreciation of the significance of mathematics in daily life and develop students' mathematical reasoning. Topics will vary from section to section. Examples of topics that might be included are: the real meaning of a newspaper graph, methods to tally votes, fair division, routes and networks, consumer mathematics, the 'real' cost of a house, shapes and patterns, fractals, soap film surfaces, prime numbers and encryption, new discoveries in mathematics.

• MATH-134 Calculus for Management & Social Sciences

Prerequisites:

MATH-104, MATH-121 or MATH level 4

Credits:

4.00

Description:

A one-semester introduction to differential and integral calculus. Theory is presented informally and topics and techniques are limited to polynomials, rational functions, logarithmic and exponential functions. Topics include a review of precalculus, linear regression, limits and continuity, derivatives, differentiation rules, implicit differentiation, related rates, applications of derivatives to graphing, minima/maxima, applications of the derivative, marginal analysis, differential equations of growth and decay, anti-derivatives, the definite integral, the Fundamental Theorem of Calculus, area measurements. This course cannot be used to satisfy core or complementary requirements by students majoring in chemistry, computer science, engineering, mathematics, or physics. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

- **MATH-165 Calculus I**

Prerequisites:

MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

Credits:

4.00

Description:

Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-166 Calculus II**

Prerequisites:

MATH 165 with grade of C or better

Credits:

4.00

Description:

Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation,

convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-200 Modern Mathematics and Career Exploration**

Prerequisites:

Freshman or Sophomore Status

Credits:

1.00

Description:

This one credit course aims to help freshmen and sophomore students form an idea of the scope of the vast and rapidly growing field of mathematics and the many career options, and begin to map out steps toward a potential career path. Mathematics is a diverse discipline that is constantly evolving. It ranges from applied mathematics (tailored to specific real world problems), to mathematical physics (which crafts the mathematical basis for the understanding of physical phenomena), to pure mathematics (which is studied for its intrinsic interest). As the study of such varied concepts as quantity, structure, space and change, mathematics has something for everyone; and valuable applications to many other fields, from business and finance to meteorology, chemistry, ecology and biology, among many others. This module aims to move beyond the foundational math generally taught in freshmen and sophomore year by presenting several areas of recent development and application. In this team-taught seminar-style course, two or three different professors will introduce students to their research areas and related topics. Some of the areas represented among the faculty include fractal geometry, number theory, algebraic geometry, and probability. Students will also be introduced to resources provided by national mathematical communities on mathematical career paths and backgrounds needed.

- **MATH-255 Probability and Statistics**

Prerequisites:

MATH-165 with a grade of C or better

Credits:

4.00

Description:

Topics include: random variable and distribution; expectation and variance; special discrete/continuous distributions (uniform, binomial, negative binomial, geometric, hypergeometric, Poisson, normal, and exponential distributions); joint distribution, marginal distribution and conditional

distribution; covariance; limit theorems (law of large numbers and central limit theorem); introduction to confidence interval and hypothesis testing; regression analysis. Offered as needed.

- **MATH-256 Statistics With R**

Prerequisites:

MATH 255 or permission of instructor

Credits:

1.00

Description:

The course uses free software R to introduce key concepts in statistics. Topics include Descriptive statistics and graphics, One- and two-sample tests, Regression and correlation, and Analysis of variance. Data from financial markets or computer networks will be used for homework assignments and projects. We will focus on hands on experiences with R rather than theoretical details about statistical analysis.

- **MATH-265 Calculus III**

Prerequisites:

MATH 166 with grade of C or better

Credits:

4.00

Description:

Parametric equations and polar coordinates (curves, areas, conic sections); vectors and the geometry of space (the dot product, vector arithmetic, lines and planes in 3-space, the cross product, cylinders and quadratic surfaces); vector functions (limits, derivatives and integrals, motion in space); partial derivatives (functions of several variables, limits and continuity, tangent planes and differentials, chain rule, directional derivatives, gradient, extrema, Lagrange multipliers); multiple integrals (double integrals, applications); vector calculus (vector fields, line integrals, fundamental theorem for line integrals, Green's Theorem, curl and divergence, parametric surfaces, surface integrals). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-285 Discrete Mathematics**

Prerequisites:

MATH-165 with a grade of C or better

Credits:

4.00

Description:

Topics mostly selected from the following list: Logic and set theory, elementary number theory, relations and functions and their properties (equivalence relations, partial order relations, recurrence relations and their solutions); computational complexity of algorithms (big O notation); graphs and their properties (isomorphisms of graphs, Euler and Hamilton paths, shortest path problem, graph coloring) trees (tree traversal, minimum spanning trees); finite state machines; methods of proof (proof by induction, proof by contradiction). Prerequisite: MATH 220 or permission of instructor. 1 term - 4 credits (4 lecture hours per week). Normally offered at least once each year.

• MATH-290 Financial Mathematics I

Prerequisites:

MATH-166 with a grade of C or better

Credits:

4.00

Description:

This course is mainly designed for students who are interested in financial mathematics and/or actuarial sciences, especially if they plan to take the second actuarial exam, and/or if they plan to study more in financial mathematics. The materials covered include time value of money, annuities, loans, bonds, cash flows and portfolios, general derivatives, options, hedging and investment strategies, forwards and futures, and swaps.

Type:

Expanded Classroom Requirement

• MATH-331 Introduction to Abstract Math

Prerequisites:

MATH-165 and MATH-166 with a grade of C or better

Credits:

4.00

Description:

this course is intended to provide a firm foundation for and a taste of the study of advanced mathematics. While the course content varies somewhat, it is designed to give students a deeper understanding of the algebraic and analytical structure of the integers, the rational numbers and the real numbers and how they act as a building block to a variety of fields of mathematics. Students are introduced to the process of mathematical discovery and the language of mathematics. Exercises and projects are designed to illustrate the need for proof and to further refine the student's ability to analyze, conjecture and write mathematical proofs. This course is a prerequisite for most upper level mathematics courses and, after completing it a student will be in a position to determine realistically if he or she ought to major or minor in mathematics.

- **MATH-373 Ordinary Differential Equations**

Prerequisites:

MATH-265 (may be taken concurrently)

Credits:

4.00

Description:

A first course in differential equations. Topics generally include separable, homogenous, exact, and linear first order differential equations; variations of parameters, differential operators, the Laplace transform, inverse transforms, systems of differential equations, power series solutions, Fourier series, and applications.

- **MATH-400 Senior Project in Mathematics**

Prerequisites:

Instructor permission required.

Credits:

4.00

Description:

Students study a particular topic in mathematics and demonstrate their results in a final project.

- **MATH-431 Linear Algebra**

Prerequisites:

Math 331 must have grade C or higher

Credits:

4.00

Description:

System of linear equations, Gaussian elimination, matrices and their algebra, inverse of a matrix, determinants, cofactor expansion, Cramer's rule, vectors in and their algebra, abstract vector spaces, subspaces, linear independence, basis and dimension, linear transformations, isomorphism of vector spaces, rank and nullity, matrix of a linear transformation, inner product spaces, angle and orthogonality, eigenvalues and eigenvectors of a linear transformation, characteristic equation, Cayley-Hamilton theorem, diagonalization.

- **MATH-432 Abstract Algebra**

Prerequisites:

MATH 431

Credits:

4.00

Description:

An introduction to elementary group theory, including properties of groups, subgroups, first isomorphism theorem for groups, normal subgroups, finite group classification; elementary properties of rings, such as homomorphisms of rings, ideals, fields, Euclidean algorithm, rings of polynomials, factorization theory, integral domains, associates, primes and units in domains, and other topics in number theory. Prerequisite: MATH 431 with a grade of C or higher.

- **MATH-462 Real Analysis**

Prerequisites:

MATH 331 with at least a grade of C

Credits:

4.00

Description:

A detailed treatment of the basic concepts of analysis including the real numbers; completeness and its equivalence to other properties of the reals such as monotone convergence, Archimedean property, Bolzano-Weierstrass theorem; the topology of Euclidean spaces, compactness and the Heine-Borel theorem, connectedness, continuity and uniform continuity and uniform convergence of functions, pointwise and uniform convergence of functions, and an introduction to metric spaces.

- **MATH-481 Complex Analysis I**

Prerequisites:

MATH 462

Credits:

4.00

Description:

Construction and properties of complex numbers, calculus in the complex plane, analytic functions, contour integrals and the basics of Cauchy theory, power series representations. Prerequisite: MATH 331 or instructor's consent.

- **MATH-510 Independent Study**

Credits:

4.00

Description:

Members of the department will hold conference hours with students and will direct their readings and study of topics in mathematics which may be of interest to them. Prerequisite: Consent of instructor. 1 term - credits to be arranged.

- **MATH-511 Launching a Career in Mathematics**

Prerequisites:

Junior or Senior standing

Credits:

1.00

Description:

This team-taught course is designed to explore career opportunities in Mathematics in depth. This course focuses on career search, the application process, entry, transition and networking for career success. Alternative options such as graduate school will also be explored. Students articulate and reflect on academic work, and co-curricular experiences from the perspective of professionals entering or advancing their careers. The goal of this course is to help students reach their fullest professional potential following graduation.

- **MATH-R104 Recitation for Pre-Calculus for Management and Social Sciences**

Prerequisites:

Appropriate Math Placement Exam score. Must be taken concurrently with MATH 104

Credits:

0.00

Description:

Taken simultaneously with Math 104. The recitation is a hybrid course. Once every two weeks students meet with an instructor to do work that enhances understanding of the course material. Such work can include practice problems, homework problems and sometimes quizzes on a laptop as well as question-answer time and group project work. On alternate weeks students do on line work such as lecture demonstration of additional examples or homework projects.

- **MATH-R128 Recitation for Math for the Modern World**

Prerequisites:

MATH-000 or appropriate Math Placement Exam score. Must be taken concurrently with MATH 128. This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

Credits:

0.00

Description:

Hands on problem solving, discussion and examples of Math for the Modern World.

- **MATH-R130 Recitation for Finite Mathematics**

Prerequisites:

MATH 104 or appropriate math placement score. Must be taken concurrently with MATH 130

Credits:

0.00

Description:

Taken simultaneously with Math 130. The recitation is a hybrid course. Once every two weeks students meet with an instructor to do work that enhances understanding of the course material. Such work can include practice problems, homework problems and sometimes quizzes on a laptop as well as question-answer time and group project work. On alternate weeks students do on line work such as lecture demonstration of additional examples or homework projects.

- **MATH-R132 Recitation for Math-Art, Tool and Humanside**

Prerequisites:

MATH-000 or appropriate Math Placement Exam score. Must be taken concurrently with MATH 132. This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

Credits:

0.00

Description:

Taken simultaneously with Math 132. The recitation is a hybrid course. Once every two weeks students meet with an instructor to do work that enhances understanding of the course material. Such work can include practice problems, homework problems and sometimes quizzes on a laptop as

well as question-answer time and group project work. On alternate weeks students do on line work such as lecture demonstration of additional examples or homework projects.

- **MATH-R134 Recitation for Calculus for Management And Social Sciences**

Prerequisites:

MATH 104 or appropriate math placement score. Must be taken concurrently with MATH 134.

Credits:

0.00

Description:

Taken simultaneously with Math 134. The recitation is a hybrid course. Once every two weeks students meet with an instructor to do work that enhances understanding of the course material. Such work can include practice problems, homework problems and sometimes quizzes on a laptop as well as question-answer time and group project work. On alternate weeks students do on line work such as lecture demonstration of additional examples or homework projects.

2015-2016 Archived Catalog Information

Pure Mathematics

The Mathematics & Computer Science Department offers two Mathematics major programs: Pure Mathematics and [Mathematics with Actuarial Concentration](#). These programs are designed to provide a strong foundation upon which to begin a challenging and rewarding career immediately upon graduation or for pursuing graduate studies.

The department also offers minors in Pure Mathematics and Mathematics with Actuarial Concentration, both of which can be used to enhance the career options for students who choose to major in another discipline.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Pure Mathematics Major Requirements](#)
- [Pure Mathematics Minor Requirements](#)
- [Honors](#)
- [Mathematics Courses](#)
- [Math Statistics Courses](#)

- **STATS-240 Introduction to Statistics**

Prerequisites:

Math 128 or higher. REMINDER: STATS 240 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

Credits:

4.00

Description:

Topics include: data presentation, measures of central locations and dispersion, probability and probability distributions, estimation, hypothesis testing, simple and multiple regression models. The use of Excel and SPSS will be emphasized throughout the course. 1 term - 4 credits (4 hours per week). Normally offered each semester. STATS 240 satisfies the same requirements as STATS 250

Type:

Quantitative Reasoning

- **STATS-250 Applied Statistics**

Prerequisites:

MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

Credits:

4.00

Description:

Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

Type:

Quantitative Reasoning

- **STATS-H250 Honors Applied Statistics**

Prerequisites:

MATH-128, MATH 130, 134, 146, or 165 and Honors Course; GPA of 3.3

Credits:

4.00

Description:

Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analyses. The use of computers is emphasized throughout the course. Prerequisite: MATH 130, MATH 134, MATH 146, or MATH 165 Honors Course GPA of 3.2 or higher required. 1 term - 4 credits Normally offered every year.

Type:

Quantitative Reasoning,Honors

- **STATS-350 Applied Statistical Methods**

Prerequisites:

STATS 250

Credits:

4.00

Description:

This application-oriented course is designed to go beyond the topics covered in STATS 250. It includes topics like Analysis of Variance (ANOVA), special topics in regression analysis and index numbers. Further, time series data, which consist of values corresponding to different time intervals, are analyzed. The objective is to examine past time series values to forecast, or predict future values. Seasonal variations are also incorporated in the forecasts. The course will provide useful computer skills involving various statistical packages and is an excellent preparation for graduate work in business and social sciences.

Type:

Social Science

- **STATS-R240 Statistics Recitation**

Credits:

0.00

Description:

This course is taken as a co-requisite to Stats240. The recitation is a hybrid course. Once every two weeks students meet with an instructor to do work that enhances understanding of the course material. On alternate weeks students work on individual and group homework.

Radiation Science & Therapy

The Physics & Engineering Department provides a rigorous and comprehensive education to students interested in pursuing careers in the medical field, research, and radiation therapy. Students receive instruction from a multifaceted faculty in diverse classroom and clinical settings while using the most advanced technologies to develop skills that will prepare them for entry level positions. Graduates of our program will think critically, communicate effectively, and appreciate the importance of continued education in maintaining their competence.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Radiation Science Major Requirements](#)
- [Radiation Therapy Major Requirements](#)
- [Minor Requirements](#)
- [Radiation Science & Therapy Courses](#)

Radiation Science Major Requirements: 20 courses and corresponding laboratories, 80 credits

Clinical training is not included as part of the Radiation Science degree.

Core Requirements (11 courses and corresponding laboratories where applicable, 44 credits)

- SCI-108 Introduction to Cancer Care

Credits:

4.00

Description:

This course will introduce the students to the top ten U.S. adult cancers, as well as the most common pediatric cancers. Topics to be covered include cancer causes, detection, and prevention. Psychosocial aspects of being diagnosed with cancer and the role nutrition plays for cancer patients will be described. The course will also discuss the major treatment modalities for each cancer including radiation therapy, surgery, chemotherapy, and bone marrow transplants. The goals and objectives of the course will be met through the use of various teaching tools including but not limited to: PowerPoint presentations, videos, guest lectures, and a poster project with a presentation component. Cognitive assessment of the students will be accomplished through homework, quizzes, exams, and a group poster and oral presentation. Students with any type of academic background are welcome.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGNR,NATURAL SCIENCE FOR BS

- **BIO-111 Introduction to the Cell**

Prerequisites:

Must take BIO L111 concurrently

Credits:

3.00

Description:

Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L111 Introduction to the Cell Laboratory**

Prerequisites:

Concurrently with BIO 111

Credits:

1.00

Description:

Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **BIO-203 Anatomy and Physiology I**

Prerequisites:

BIO L203 MUST BE TAKEN CONCURRENTLY BIO 111, BIO L111.

Credits:

3.00

Description:

First part of a systematic survey of the structural and functional interrelations of the organ systems of the human body. This course emphasizes histology and physiology in the understanding of the integumentary, skeletal, muscular, and nervous systems. Medical terminology will be used.

Term:

Offered Fall Term

- **BIO-L203 Anatomy & Physiology Lab I**

Prerequisites:

BIO 111/L111; Must take BIO-203 concurrently

Credits:

1.00

Description:

A study of the human skeletal system and a comparative look at other organ systems involving observation of anatomical models and dissection of mammalian specimens. Also includes microscopy and computer simulations of physiological processes.

Term:

Offered Fall Term

- **BIO-204 Anatomy and Physiology II**

Prerequisites:

BIO 203, BIO L203; BIO L204 must be taken concurrently;

Credits:

3.00

Description:

Conclusion of a systematic survey of the structural and functional interrelations of the organ systems of the human body. This course investigates the endocrine, circulatory, respiratory, digestive, urinary, and reproductive systems as well as the physiology of immune responses, nutrition, and acid-base balance. Medical terminology will be used.

Term:

Offered Spring Term

- **BIO-L204 Anatomy & Physiology Lab II**

Prerequisites:

BIO 203/L203 and BIO 204 must be taken concurrently;

Credits:

1.00

Description:

A study of the human viscera using anatomical models and dissection of mammalian specimens. Also includes microscopy of tissues and physiological experiments.

Term:

Offered Spring Term

• CHEM-111 General Chemistry I

Prerequisites:

Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:

3.00

Description:

Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• CHEM-L111 General Chemistry I Lab

Prerequisites:

Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• CHEM-112 General Chemistry II

Prerequisites:

CHEM 111/L111; CHEM-L112 must be taken concurrently.

Credits:

3.00

Description:

This course is a continuation of General Chemistry I. Fundamental principles of chemistry are discussed. Introduces thermochemistry, gases, solution chemistry, chemical kinetics, chemical equilibrium, acid-base systems, and thermodynamics.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **CHEM-L112 General Chemistry II Lab**

Prerequisites:

CHEM 112 must be taken concurrently;

Credits:

1.00

Description:

This course is a continuation of General Chemistry I Lab. Apply the basic principles of chemistry through discovery laboratory experiments with an emphasis on quantitative analysis. Execute basic analytical techniques such as gravimetric analysis, the application of Beer's Law, and acid-base titrations. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **PHYS-315 Radiation Physics I**

Prerequisites:

PHYS L315 concurrently; Radiation Biology, Radiation Science, Radiation Therapy (Major or Certificate), or Medical Dosimetry Students Only

Credits:

3.00

Description:

Content is designed to establish a thorough knowledge of the radiation physics used in radiation therapy treatments. Topics to be covered in this course include a review of basic physics (energy, mass, matter, SI units), structure of matter, types of radiations, nuclear transformations, radioactive decay, the fundamentals of x-ray generators and x-ray production, interactions of x and gamma rays with matter, absorbed dose, measurements of dose, principles of and practical use of ionization chambers and electrometers, Geiger counters and other survey meters, principles and practical use of TLDs, film, calorimetry, scintillation detectors, radiation protection and quality assurance.

Term:

Offered Fall Term

• **PHYS-L315 Radiation Physics I Lab**

Prerequisites:

PHYS 315 concurrently

Credits:

1.00

Description:

This lab will cover a broad range of experiments associated with the Department of Radiation Oncology at Massachusetts General Hospital. Topics include: Quality assurance measurements for radiation therapy, calibration of radiation teletherapy unit using ionization chambers, measurements of dose distribution via film, measurements of dose in a phantom via TLDs, radiation protection survey of therapy installation and brachytherapy sources, and radiation biology.

Term:

Offered Fall Term

Type:

Expanded Classroom Requirement

• **PHYS-317 Radiation Physics II**

Prerequisites:

PHYS 315; Radiation Science, Radiation Therapy and Medical Dosimetry Students Only

Credits:

4.00

Description:

This course is intended to expand on the concepts and theories presented in Radiation Physics I. It will provide a detailed analysis of the treatment units used in external beam radiation therapy, their beam geometry, basic dose calculations and dose distributions. This course will also cover the principles, theories, and uses of brachytherapy. This course was previously MS 412

Term:

Offered Spring Term

- **CHEM-211 Organic Chemistry I**

Prerequisites:

CHEM 112 and CHEM-L112. CHEM-L211 must be taken concurrently.

Credits:

3.00

Description:

Introduces basic theories of structure, bonding, and chemical reactivity as specifically applied to modern organic chemistry. Includes functional groups, acid/base chemistry, nomenclature, resonance, spectroscopy, and stereochemistry.

Term:

Offered Fall Term

- **CHEM-L211 Organic Chemistry Laboratory I**

Prerequisites:

CHEM-112 and CHEM-L112. Must be taken concurrently with CHEM 211.

Credits:

1.00

Description:

Introduces synthetic organic chemistry techniques. Includes melting point determination, distillation, crystallization, extraction, chromatographic separations, and infrared spectroscopy. Discusses experimental design within the context of green organic chemistry.

Term:

Offered Fall Term

- **CHEM-212 Organic Chemistry II**

Prerequisites:

CHEM 211 and CHEM L211. Must take CHEM-L212 concurrently.

Credits:

3.00

Description:

Builds on the core competencies acquired in Organic Chemistry I. Includes detailed mechanistic discussions of substitution, elimination, and addition reactions. Emphasizes organic synthesis, structure determination, and spectroscopy.

Term:

Offered Spring Term

- **CHEM-L212 Organic Chemistry Laboratory II**

Prerequisites:

CHEM-211 and CHEM-L211. Must be take CHEM-212 concurrently.

Credits:

1.00

Description:

Builds on the core competencies acquired in Organic Chemistry Laboratory I. Emphasizes the characterization of organic molecules via nuclear magnetic resonance spectroscopy. Discusses experimental design within the context of green organic chemistry.

Term:

Offered Spring Term

- **PHYS-416 Radiation Biology**

Prerequisites:

PHYS 315;

Credits:

4.00

Description:

Topics covered include: physio-chemical aspects of energy absorption, the sequence of events after irradiation occurring on the molecular, cellular and organized tissue levels, radiation response and repair of eukaryotic cells, effects of radiation quality, dose rate, environmental conditions, cell cycle kinetics, tumor and normal cell population dynamics, radiation-induced carcinogenesis and mutagenesis, tumor pathophysiology and radiobiology, and recent advances in experimental radiation oncology.

Term:

Offered Spring Term

Physics Requirement (2 courses and corresponding laboratories, 8 credits)

Choose one of the following sequences:

- **PHYS-111 College Physics I**

Prerequisites:

Take MATH-121 or MATH-134 or permission of Physics department chair;PHYS L111 taken concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• **PHYS-L111 College Physics Lab I**

Prerequisites:

PHYS 111 concurrently

Credits:

1.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course. Error propagation, use of Excel, laboratory notebooks and formal reports required.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• **PHYS-112 College Physics II**

Prerequisites:

PHYS-111 and PHYS-L11. Must be taken concurrently with PHYS-L112.

Credits:

3.00

Description:

Continuation of the fundamental principles of physics. Study of electric forces and fields, electric potential, DC circuits, electromagnetic induction, magnetic fields, AC circuits, introduction to optics, introduction to atomic, nuclear and particle physics.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **PHYS-L112 College Physics Lab II**

Prerequisites:

PHYS 111 and PHYS L111; PHYS 112 must be taken concurrently

Credits:

1.00

Description:

Continuation of the fundamental principles of physics. Study of electric forces and fields, electric potential, DC circuits, electromagnetic induction, magnetic fields, AC circuits, introduction to optics, introduction to atomic, nuclear and particle physics. The laboratory consists of experiments to illustrate the basic concepts studied in the course. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Spring Term

Type:

or

- **PHYS-151 University Physics I**

Prerequisites:

Take MATH-121 or MATH 165. PHYS L151 concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **PHYS-L151 University Physics Lab I**

Prerequisites:

PHYS 151 concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and

integration required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **PHYS-152 University Physics II**

Prerequisites:

PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

Credits:

3.00

Description:

This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **PHYS-L152 University Physics Lab II**

Prerequisites:

PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

Mathematics Requirement (1 course, 4 credits)

Choose one of the following:

- **MATH-134 Calculus for Management & Social Sciences**

Prerequisites:

MATH-104, MATH-121 or MATH level 4

Credits:

4.00

Description:

A one-semester introduction to differential and integral calculus. Theory is presented informally and topics and techniques are limited to polynomials, rational functions, logarithmic and exponential functions. Topics include a review of precalculus, linear regression, limits and continuity, derivatives, differentiation rules, implicit differentiation, related rates, applications of derivatives to graphing, minima/maxima, applications of the derivative, marginal analysis, differential equations of growth and decay, anti-derivatives, the definite integral, the Fundamental Theorem of Calculus, area measurements. This course cannot be used to satisfy core or complementary requirements by students majoring in chemistry, computer science, engineering, mathematics, or physics. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

• MATH-165 Calculus I

Prerequisites:

MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

Credits:

4.00

Description:

Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

Note:

If planning to apply to the [Medical Dosimetry Certificate](#) program during senior year or after graduation, students must take both MATH-165 and MATH-166.

Biostatistics Requirement (1 course, 4 credits)

Choose one of the following:

• BIO-273 Biostatistics

Prerequisites:

BIO 111/L111

Credits:

4.00

Description:

Introduction to the statistical methods used to evaluate biological problems. Sampling, probability, confidence intervals, hypothesis tests, experimental design, analysis of variance, regression, and correlation are some of the topics offered. Software for data handling, graphics, and analysis will be used.

Term:

Offered Fall Term

Type:

Quantitative Reasoning

• STATS-250 Applied Statistics

Prerequisites:

MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

Credits:

4.00

Description:

Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

Type:

Quantitative Reasoning

• PSYCH-215 Behavioral Statistics

Prerequisites:

PSYCH 114; Restricted to majors only unless with permission of instructor.

Credits:

4.00

Description:

Introduces the use of statistics as tools for description and decision-making, including hypothesis testing. Prepares students for the analysis, interpretation, and evaluation of psychological research. Required for psychology majors; should be taken before the junior year. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Quantitative Reasoning

Electives (5 courses and corresponding laboratories where applicable, 20 credits)

Choose five of the following:

- **BIO-114 Organismal Biology**

Prerequisites:

Must take BIO L114 concurrently.

Credits:

3.00

Description:

Rigorous introduction to organismal biology emphasizing evolution, phylogenetics, form, and function. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L114 Organismal Biology Laboratory**

Prerequisites:

Must take BIO 114 concurrently

Credits:

1.00

Description:

A series of laboratory experiences in evolution, diversity, anatomy and physiology.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **BIO-233 Human Nutrition**

Prerequisites:

BIO 111/L111 and BIO 114/L114;

Credits:

4.00

Description:

This interactive introduction to nutrition explores the science of human nutrition and further reviews concepts of how nutrition can promote health and well being. The course will review specific nutrient needs and functions, nutrient digestion, and the role of diet in well being and in the presence of chronic disease. Weekly course work encourages scientific literacy and fosters critical evaluation of nutrition in the news and in social media.

- **BIO-262 Principles of Cell Culture**

Prerequisites:

BIO 111, L111 and BIO 114, L114 and CHEM 111, L111

Credits:

4.00

Description:

The course is designed as an application base educational experience that will allow students to learn the standard techniques associated with successful cell culture. As such, students are responsible for the maintenance, propagation, isolation, and preservation of their cells. A number of cell types and experimental manipulations of the cultures are investigated throughout the semester.

Term:

Offered Spring Term

- **BIO-274 Genetics**

Prerequisites:

BIO 111/L111 and BIO 114/L114; BIO L274 concurrently;

Credits:

3.00

Description:

An examination of the basic principles of genetics in eukaryotes and prokaryotes at the level of molecules, cells, and multicellular organisms, including humans. Topics include Mendelian and non-Mendelian inheritance, structure and function of chromosomes and genomes, biological variation resulting from recombination, mutation, and selection, and population genetics.

Term:

Offered Fall Term

- **BIO-L274 Genetics Lab**

Prerequisites:

BIO-111, BIO-L111, BIO-114, and BIO-L114. Must be taken concurrently with BIO 274.

Credits:

1.00

Description:

Experiments designed to demonstrate principles presented in lecture, using a range of genetic model organisms that include *E. coli*, *B. subtilis*, *S. cerevisiae*, *D. melanogaster*, *S. fimicola*, and *C. elegans*.

Term:

Offered Fall Term

- **BIO-285 Microbiology**

Prerequisites:

BIO-111 and BIO-L111; BIO-L285 concurrently;

Credits:

3.00

Description:

Viruses and bacteria are surveyed in terms of their ecology, biochemistry, taxonomy, molecular biology and control.

Term:

Offered Spring Term

- **BIO-L285 Microbiology Laboratory**

Prerequisites:

BIO 111/L111; BIO 285 concurrently;

Credits:

1.00

Description:

Introduction to microbiological techniques and their applications to health, research and industry.

Term:

Offered Fall Term

- **BIO-304 Comparative Animal Physiology**

Prerequisites:

BIO-114 and BIO-L114. Must take BIO-L304 concurrently

Credits:

3.00

Description:

Mechanisms of physiological adaptations to environmental challenges are studied. Examples of gas exchange, osmoregulation, fluid transport, temperature regulation, nervous control, and movement are examined in various animal forms through class lecture and discussion, required readings, and external lectures. Spring semester.

Term:

Offered Spring Term

- **BIO-L304 Comp Animal Physiology Lab**

Prerequisites:

BIO-114 and BIO-L114. Must take BIO-304 concurrently.

Credits:

1.00

Description:

Selected physiological processes and mechanisms or adaptation in invertebrate and vertebrate animals are examined by observation and controlled experiments.

- **BIO-360 Cancer Biology**

Prerequisites:

BIO-111, BIO-L111, BIO-114, BIO-L114, BIO-274, and BIO-L274

Credits:

4.00

Description:

An examination of molecular and cellular mechanisms that lead to the development of cancer. Factors contributing to tumorigenesis, angiogenesis, and metastasis will be discussed; these factors, oncogenes, tumor suppressor genes, and signal transduction networks. In addition, an investigation of current strategies for cancer prevention and treatment will be considered.

- **BIO-377 Immunology**

Prerequisites:

BIO-114/L114; CHEM-211/L211; BIO-L377 concurrently;

Credits:

3.00

Description:

The concept of immunity, response to infection, structure of the immune system, biochemistry of immunoglobins, antigen-antibody interactions, allergy, immunological injury, lymphocyte subpopulations and cellular immunity, tolerance suppression and enhancement. Taught alternate/even years.

Term:

Offered Spring Term

- **BIO-L377 Immunology Laboratory**

Prerequisites:

BIO-114 and BIO-L114 and CHEM-211 and CHEM-L211. Must take BIO-377 concurrently.

Credits:

1.00

Description:

Anatomy of the immune system , immunoglobulin purification, hemagglutination, enzyme immunoassay. Immuno-chemistry, immunoelectrophoresis, gel precipitation assay.

Term:

Occasional

- **BIO-385 Advanced Microbiology**

Prerequisites:

BIO-285 and BIO-L285 BIO L385 must be taken concurrently

Credits:

3.00

Description:

Pathogenesis and host-parasite relationships; epidemiology and public health aspects of pathogenic microorganisms are stressed; molecular biology, applied and industrial microbiology. Current literature reviews. Taught alternate/odd years.

Term:

Offered Spring Term

- **BIO-L385 Advanced Microbiology Lab**

Prerequisites:

BIO 285/L285; BIO 385 must be taken concurrently

Credits:

1.00

Description:

Isolation, quantization and cultivation of microorganisms, advanced general and applied microbiology and molecular biology. Experience in media, chemical and culture preparations.

Term:

Offered Spring Term

- **BIO-403 Cell Biology**

Prerequisites:

BIO 111/L111; CHEM-211/L211; BIO-L403 concurrently;

Credits:

3.00

Description:

The study of cells, approached through examinations of biochemical mechanisms, the relation between the structure and function of biological molecules and organelles, and the regulation of normal and diseased cells.

Term:

Offered Fall Term

- **BIO-L403 Cell Biology Lab**

Prerequisites:

BIO-111 and BIO-L11 and CHEM-211 and CHEM-L211. Must take BIO-403 concurrently.

Credits:

1.00

Description:

Examination of biological molecules and their role in cell function. Techniques used in these examinations will include enzymatic analyses, gel electrophoresis, immunologic identification, chromatography, and spectroscopy. Students are expected to develop their proficiency in the laboratory techniques used, to analyze their results in a quantitative manner, and to present their findings.

Term:

Offered Fall Term

- **BIO-474 Molecular Genetics**

Prerequisites:

CHEM-311 or BIO-274 and BIO-L274 and BIO-L474 concurrently

Credits:

3.00

Description:

An examination of concepts and techniques of modern molecular biology. Topics include the structure and function of DNA, RNA, and proteins, the regulation of gene expression in prokaryotes and eukaryotes at transcriptional and post-transcriptional levels, genetic modification of organisms, and genome analysis. This course will incorporate readings and discussions of primary scientific literature. Spring semester.

Term:

Occasional

- **BIO-L474 Molecular Genetics Lab**

Prerequisites:

Take CHEM-331 or BIO-274 and BIO-L274. BIO-474 must be taken concurrently.

Credits:

1.00

Description:

This upper level laboratory course will consist of a semester-long project in the form of a series of consecutive experiments involving the generation of a genetically modified organism and its subsequent molecular analysis. Techniques employed will include genetic screens, DNA isolation, restriction endonuclease analysis, transformation of bacteria, gel electrophoresis, gene reported assays, RNA isolation, reverse transcription, and quantitative PCR.

Term:

Occasional

- **BIO-475 Developmental Biology**

Prerequisites:

BIO-114, L114 and CHEM-211, L211, and BIO-L475 concurrently

Credits:

3.00

Description:

This course focuses on embryonic development in vertebrates. The conceptual focus on evolutionary developmental biology includes comparative developmental mechanisms and Epigenetic processes.

Term:

Offered Fall Term

- **BIO-L475 Developmental Biology Lab**

Prerequisites:

BIO 114/L114, CHEM 211/L211 BIO 475 must be taken concurrently

Credits:

1.00

Description:

This laboratory course complements the lecture course. Exercises include internet exercises, examination of embryos, biochemical tests, use of developmental models, and student presentations. A number of model organisms are examined.

Term:

Offered Fall Term

• CHEM-314 Instrumental Analysis

Prerequisites:

CHEM 211; CHEM L314 must be taken concurrently.

Credits:

3.00

Description:

Theory and application of analytical instruments: ultraviolet, visible, fluorescence, atomic and emission spectroscopy; chromatographic methods; electrochemical measurements. Prerequisites: CHEM 211; CHEM L314 must be taken concurrently. 3 hour lecture. 1 term - 3 credits. Normally offered Fall/Spring, days.

Term:

Alternates Fall & Spring

• CHEM-L314 Instrumental Analysis Lab

Prerequisites:

CHEM L211; CHEM 314 must be taken concurrently

Credits:

1.00

Description:

Laboratory experiments in chemical analysis using instrumental techniques, including spectroscopy and chromatography. Data collection and evaluation includes computer-based methods. Reports are prepared in professional style. Prerequisites: CHEM L112; CHEM 314 must be taken

concurrently. 4-hour Laboratory. 1 term - 1 credit. Normally offered Fall/Spring.

Term:

Alternates Fall & Spring

• CHEM-331 Biochemistry I

Prerequisites:

CHEM 212/L212 or permission of instructor. CHEM L331 must be taken concurrently.

Credits:

3.00

Description:

Explores the foundations of biochemistry, including the structure, organization and behavior of proteins, carbohydrates, lipids, and nucleic acids. Topics include enzyme catalysis, kinetics, and inhibition as well as protein regulation and membrane structure. Introduces the use of biochemical literature and computer-based bioinformatics techniques. Offered every fall.

Term:

Offered Fall Term

• CHEM-L331 Biochemical Techniques I

Prerequisites:

Must be taken concurrently with CHEM 331. Take CHEM-212 and CHEM-L212 or permission of instructor.

Credits:

1.00

Description:

Laboratory course introducing biochemical techniques. Includes buffer preparation, PCR, purification of DNA and proteins, agarose and polyacrylamide gel electrophoresis, protein quantitation and detection, and enzyme kinetic assays. Offered every Fall.

Term:

Offered Fall Term

- **CHEM-332 Biochemistry II**

Prerequisites:

CHEM 331

Credits:

4.00

Description:

This course explores the principles of bioenergetics and metabolism of biological compounds. Coverage includes intermediary metabolism of carbohydrates, lipids, amino acids, oxidative phosphorylation, and synthesis of purines and pyrimidines. Additional topics include the regulation and integration of metabolism. Lectures will be supplemented with discussions of the biochemical literature. Prerequisites: CHEM 331. 3 hours of lecture and 1 hour of recitation per week. Offered every Spring, days only.

Term:

Offered Spring Term

- **CHEM-390 Advanced Organic Chemistry**

Prerequisites:

Prerequisite: CHEM 212.

Credits:

3.00

Description:

Expands on topics introduced in Organic Chemistry I and II; depending on student interest, may include in-depth discussions of carbonyl chemistry, industrial organic chemistry, organometallic chemistry and biomolecules. Prerequisite: CHEM 212, concurrent enrollment in CHEM L390 required. 3 hours of lecture per week. Normally offered alternate years.

Term:

Alternates Fall & Spring

- **HLTH-301 Introduction to the U.S. Healthcare Systems**

Prerequisites:

Junior standing

Credits:

3.00

Description:

This course presents an overview of the origins, components, organization, and operation of the health system in the United States. It is an introduction to the major health issues and institutions, including the settings in which health services are delivered, providers of these services, and the public and private payers for services.

- **HLTH-325 Legal Environment of Healthcare**

Credits:

3.00

Description:

Students investigate the structural and functional aspects of the legal, institutional, and political factors that condition the character of the US healthcare industry, the role of the healthcare manager, the legislative process, administrative policy-making, and national trends related to political parties and interest groups. Topics in healthcare law include medical malpractice, informed consent, confidentiality of patient information, healthcare liability, and administrative law.

- **PHYS-215 Nanomaterials and the Energy Problem**

Prerequisites:

CHEM 111-112 or PHYS 111-112 Or Permission of Instructor

Credits:

4.00

Description:

This course is designed as an introduction to nanotechnology and some of its important uses. It is aimed at science majors who have taken basic courses in physics or chemistry. The course will cover the properties and uses of carbon-nanotubes, nanocomposites, and other nanomaterials that are being fabricated in labs and industries around the world. It will serve as an introduction to the important role of nanomaterials in solving modern-day energy problems.

Term:

Occasional

- **MATH-130 Topics in Finite Mathematics**

Prerequisites:

MATH-104, or MATH-121, or MATH level 3

Credits:

4.00

Description:

Linear Modeling (for example, using linear functions to model supply/demand situations), graphing, linear programming, financial functions (compound interest, annuities, and amortization of loans) sets, Venn diagrams, counting and combinatorics, discrete probability, conditional probability, Bernoulli experiments, Bayes theorem. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

- **MATH-166 Calculus II**

Prerequisites:

MATH 165 with grade of C or better

Credits:

4.00

Description:

Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation, convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-255 Probability and Statistics**

Prerequisites:

MATH-165 with a grade of C or better

Credits:

4.00

Description:

Topics include: random variable and distribution; expectation and variance; special discrete/continuous distributions (uniform, binomial, negative binomial, geometric, hypergeometric, Poisson, normal, and exponential distributions); joint distribution, marginal distribution and conditional distribution; covariance; limit theorems (law of large numbers and central limit theorem); introduction to confidence interval and hypothesis testing; regression analysis. Offered as needed.

- **MATH-265 Calculus III**

Prerequisites:

MATH 166 with grade of C or better

Credits:

4.00

Description:

Parametric equations and polar coordinates (curves, areas, conic sections); vectors and the geometry of space (the dot product, vector arithmetic, lines and planes in 3-space, the cross product, cylinders and quadratic surfaces); vector functions (limits, derivatives and integrals, motion in space); partial derivatives (functions of several variables, limits and continuity, tangent planes and differentials, chain rule, directional derivatives, gradient,

extrema, Lagrange multipliers); multiple integrals (double integrals, applications); vector calculus (vector fields, line integrals, fundamental theorem for line integrals, Green's Theorem, curl and divergence, parametric surfaces, surface integrals). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-285 Discrete Mathematics**

Prerequisites:

MATH-165 with a grade of C or better

Credits:

4.00

Description:

Topics mostly selected from the following list: Logic and set theory, elementary number theory, relations and functions and their properties (equivalence relations, partial order relations, recurrence relations and their solutions); computational complexity of algorithms (big O notation); graphs and their properties (isomorphisms of graphs, Euler and Hamilton paths, shortest path problem, graph coloring) trees (tree traversal, minimum spanning trees); finite state machines; methods of proof (proof by induction, proof by contradiction). Prerequisite: MATH 220 or permission of instructor. 1 term - 4 credits (4 lecture hours per week). Normally offered at least once each year.

- **MATH-331 Introduction to Abstract Math**

Prerequisites:

MATH-165 and MATH-166 with a grade of C or better

Credits:

4.00

Description:

this course is intended to provide a firm foundation for and a taste of the study of advanced mathematics. While the course content varies somewhat, it is designed to give students a deeper understanding of the algebraic and analytical structure of the integers, the rational numbers and the real numbers and how they act as a building block to a variety of fields of mathematics. Students are introduced to the process of mathematical discovery and the language of mathematics. Exercises and projects are designed to illustrate the need for proof and to further refine the student's ability to analyze, conjecture and write mathematical proofs. This course is a prerequisite for most upper level mathematics courses and, after completing it a student will be in a position to determine realistically if he or she ought to major or minor in mathematics.

- **PHIL-363 Bio and Medical Ethics**

Prerequisites:

Prerequisite: Phil 119, or 123, or 127.

Credits:

4.00

Description:

An examination of the moral problems facing health-care practitioners, their patients, and others involved with the practice of medicine in today's society. Issues include euthanasia, the ethics of medical experimentation, the use of reproductive technologies, genetic counseling and genetic engineering, truth-telling and confidentiality in doctor-patient relationships, the cost and availability of medical care. Normally offered every third year.

Term:

Occasional

- **PSYCH-114 General Psychology**

Credits:

4.00

Description:

Surveys core theoretical concepts and contemporary empirical research from the major sub-fields of psychology: physiology; perception; cognition; learning; emotion; motivation; development; personality; psychopathology; psychotherapy; and social behavior. Required for psychology majors. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **PSYCH-233 Child Development**

Prerequisites:

PSYCH 114

Credits:

4.00

Description:

Examines physical, cognitive, emotional, and social development in youth (i.e., from conception through adolescence). Surveys major developmental approaches including biological, learning, and contextual/environmental theories. Major focus is on normal development. Normally offered every semester.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **PSYCH-236 Psychology of the Family**

Credits:

4.00

Description:

Focuses on the various forms and structures of families and family life over time and across cultures, with emphasis on the psychological impact of such forms. The complex relationship among individual psychology, family relationships, and the larger social context is addressed. Topics include marriage, parenting, and divorce. Normally offered every semester.

Term:

Offered Both Fall and Spring

Type:

- **PSYCH-321 Introduction to Counseling Skills**

Prerequisites:

PSYCH 114 and Sophomore standing

Credits:

4.00

Description:

Explores and examines basic models of helping and provides supervised practice of helping skills. Format includes lecture, discussion, role play, and video feedback. Normally offered yearly.

Term:

Offered Fall Term

Type:

Social Science

- **PSYCH-326 Abnormal Psychology**

Prerequisites:

PSYCH 114, and Sophomore standing or permission of the instructor

Credits:

4.00

Description:

Introduces the concepts of psychological disorder and focuses on description and etiology of various mental health problems from a variety of different theoretical perspectives. Students develop familiarity with the DSM classification system and major disorders described within it, including mood and anxiety disorders, thought disorders, and personality disorders. Normally offered each semester.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **PSYCH-333 Adult Development & Aging**

Prerequisites:

PSYCH 114 and Sophomore Standing.

Credits:

4.00

Description:

Surveys theory and research about the physical, mental, and psychological aspects of life-span development. Age-related changes in mental health, personality, self-image, sexual relations, friendships, career development and spirituality are explored. Aging may also be explored as a global, demographic and cross-cultural issue. Research surrounding death and dying, bereavement, and hospice/nursing home care is also presented. Normally offered alternate years.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **PSYCH-336 Developmental Psychopathology**

Prerequisites:

PSYCH 114 and sophomore standing

Credits:

4.00

Description:

Examines the etiology and symptoms of disorders of childhood and adolescence, as well as current therapeutic approaches. Developmental changes in the incidence of externalizing disorders, such as conduct disorder and attention deficit disorder, and internalizing disorders, such as depression and eating disorders, are addressed. Disorders that affect both behavioral and mental functioning such as Fetal Alcohol Syndrome and autism may also be included. The role of development in the understanding and treatment of the childhood disorders is reviewed. Normally offered yearly.

Term:

Offered Fall Term

Type:

Social Science

- **SOC-113 Introduction to Sociology**

Credits:

4.00

Description:

An introduction to the sociological understanding of human interaction, group process and social structures. Students are introduced to basic concepts, theories and methods of sociological investigation. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **SOC-220 Childhood and Adolescence in Contemporary Society**

Credits:

4.00

Description:

This course examines the development of children and adolescents from biological, psychological, and sociological perspectives. Major themes and changes associated with each developmental stage are discussed. The course explores practical implications of theory and research (parenting, juvenile justice, etc.), and current topics in child and adolescent development. Class format includes lectures discussion, debates and direct observation of children.

Term:

Occasional

• SOC-242 Law, Health & Human Rights

Credits:

4.00

Description:

This course will look at the special opportunities and obligations of those in the health and legal professions to protect human rights. There will be an overview of human rights doctrine and key documents. Students will learn to apply human rights principles to particular occupations in the health and legal professions.

Term:

Occasional

• SOC-253 Sociology of Health and Illness

Credits:

4.00

Description:

This course provides students with an introduction to how social norms, structures, and practices shape experiences of illness and health. Among the topics that will be covered are: health and the environment, the reasons some groups of people are less healthy than others, living with chronic illness and disabilities, and public debates surrounding issues such as performance enhancing drugs and sports, Attention Deficit Disorder and the HPV vaccine. Required for all students in the health, Medicine and the Body Concentration.

Term:

Occasional

- **SOC-254 U.S. Health Care Landscapes**

Prerequisites:

This course fulfills the ECR requirement.

Credits:

4.00

Description:

In this course, students will learn about how the U.S. health care system works. We will study the politics and economics of the health care system and discuss the key health care policy issues of this decade. Using the theoretical perspectives provided by sociology, we will look at issues of power, hierarchy, race, and gender vis-a-vis the health care system. Reading for this course centers on first person narratives by people working in the health care system. This course fulfills the ECR requirement.

Term:

Occasional

Type:

Expanded Classroom Requirement

- **SOC-256 Sociology of Aging**

Credits:

4.00

Description:

Consideration of the physiological, psychological and social factors associated with the aging process. Contemporary American values toward the elderly are compared and contrasted with historical and cross-cultural studies. Current opportunities and techniques enabling the elderly to enrich and expand their societal roles are explored.

Term:

Occasional

- **SOC-354 Death and Dying**

Credits:

4.00

Description:

An examination of changing definitions of life and death, social factors affecting causes and rates of death, care of the dying and their families, institutionalization, the funeral industry, suicide, crisis intervention, and the impact of technology on the dying process.

Term:

Occasional

Type:

Diverse Perspectives

- **SOC-355 Women and Health**

Credits:

4.00

Description:

An exploration of topics that relate particularly to women as providers and consumers in the health care system. The course will consider historical and current information on issues of reproduction, technology, health and illness.

Term:

Occasional

- **SOC-357 Global Health and Healing**

Credits:

4.00

Description:

An examination of how different cultures understand health and illness. Healing approaches from Asia, Africa and the Americas will be explored.

Term:

Occasional

Type:

Cultural Diversity Opt B,Diverse Perspectives

Please check with the program director for potential Radiation Science elective approval of other biology, chemistry, physics, math, psychology, or sociology courses.

2015-2016 Archived Catalog Information

Radiation Science & Therapy

The Physics & Engineering Department provides a rigorous and comprehensive education to students interested in pursuing careers in the medical field, research, and radiation therapy. Students receive instruction from a multifaceted faculty in diverse classroom and clinical settings while using the most advanced technologies to develop skills that will prepare them for entry level positions. Graduates of our program will think critically, communicate effectively, and appreciate the importance of continued education in maintaining their competence.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

Radiation Therapy Major Requirements: 22 courses and corresponding laboratories, 78 credits

Students must apply to this selective program in their sophomore year.

Core Requirements (17 courses and corresponding laboratories where applicable, 62 credits)

- **SCI-108 Introduction to Cancer Care**

Credits:

4.00

Description:

This course will introduce the students to the top ten U.S. adult cancers, as well as the most common pediatric cancers. Topics to be covered include cancer causes, detection, and prevention. Psychosocial aspects of being diagnosed with cancer and the role nutrition plays for cancer patients will be described. The course will also discuss the major treatment modalities for each cancer including radiation therapy, surgery, chemotherapy, and bone marrow transplants. The goals and objectives of the course will be met through the use of various teaching tools including but not limited to: PowerPoint presentations, videos, guest lectures, and a poster project with a presentation component. Cognitive assessment of the students will be accomplished through homework, quizzes, exams, and a group poster and oral presentation. Students with any type of academic background are welcome.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGR,NATURAL SCIENCE FOR BS

• BIO-111 Introduction to the Cell

Prerequisites:

Must take BIO L111 concurrently

Credits:

3.00

Description:

Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **BIO-L111 Introduction to the Cell Laboratory**

Prerequisites:

Concurrently with BIO 111

Credits:

1.00

Description:

Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-203 Anatomy and Physiology I**

Prerequisites:

BIO L203 MUST BE TAKEN CONCURRENTLY BIO 111, BIO L111.

Credits:

3.00

Description:

First part of a systematic survey of the structural and functional interrelations of the organ systems of the human body. This course emphasizes histology and physiology in the understanding of the integumentary, skeletal, muscular, and nervous systems. Medical terminology will be used.

Term:

Offered Fall Term

- **BIO-L203 Anatomy & Physiology Lab I**

Prerequisites:

BIO 111/L111; Must take BIO-203 concurrently

Credits:

1.00

Description:

A study of the human skeletal system and a comparative look at other organ systems involving observation of anatomical models and dissection of mammalian specimens. Also includes microscopy and computer simulations of physiological processes.

Term:

Offered Fall Term

- **BIO-204 Anatomy and Physiology II**

Prerequisites:

BIO 203, BIO L203; BIO L204 must be taken concurrently;

Credits:

3.00

Description:

Conclusion of a systematic survey of the structural and functional interrelations of the organ systems of the human body. This course investigates the endocrine, circulatory, respiratory, digestive, urinary, and reproductive systems as well as the physiology of immune responses, nutrition, and acid-base balance. Medical terminology will be used.

Term:

Offered Spring Term

- **BIO-L204 Anatomy & Physiology Lab II**

Prerequisites:

BIO 203/L203 and BIO 204 must be taken concurrently;

Credits:

1.00

Description:

A study of the human viscera using anatomical models and dissection of mammalian specimens. Also includes microscopy of tissues and physiological experiments.

Term:

Offered Spring Term

• **CHEM-111 General Chemistry I**

Prerequisites:

Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:

3.00

Description:

Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• CHEM-L111 General Chemistry I Lab

Prerequisites:

Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

• CHEM-112 General Chemistry II

Prerequisites:

CHEM 111/L111; CHEM-L112 must be taken concurrently.

Credits:

3.00

Description:

This course is a continuation of General Chemistry I. Fundamental principles of chemistry are discussed. Introduces thermochemistry, gases, solution chemistry, chemical kinetics, chemical equilibrium, acid-base systems, and thermodynamics.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

• CHEM-L112 General Chemistry II Lab

Prerequisites:

CHEM 112 must be taken concurrently;

Credits:

1.00

Description:

This course is a continuation of General Chemistry I Lab. Apply the basic principles of chemistry through discovery laboratory experiments with an emphasis on quantitative analysis. Execute basic analytical techniques such as gravimetric analysis, the application of Beer's Law, and acid-base titrations. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

• PHYS-315 Radiation Physics I

Prerequisites:

PHYS L315 concurrently; Radiation Biology, Radiation Science, Radiation Therapy (Major or Certificate), or Medical Dosimetry Students Only

Credits:

3.00

Description:

Content is designed to establish a thorough knowledge of the radiation physics used in radiation therapy treatments. Topics to be covered in this course include a review of basic physics (energy, mass, matter, SI units), structure of matter, types of radiations, nuclear transformations, radioactive decay, the fundamentals of x-ray generators and x-ray production, interactions of x and gamma rays with matter, absorbed dose, measurements of dose, principles of and practical use of ionization chambers and electrometers, Geiger counters and other survey meters, principles and practical use of TLDs, film, calorimetry, scintillation detectors, radiation protection and quality assurance.

Term:

Offered Fall Term

• **PHYS-L315 Radiation Physics I Lab**

Prerequisites:

PHYS 315 concurrently

Credits:

1.00

Description:

This lab will cover a broad range of experiments associated with the Department of Radiation Oncology at Massachusetts General Hospital. Topics include: Quality assurance measurements for radiation therapy, calibration of radiation teletherapy unit using ionization chambers, measurements of dose distribution via film, measurements of dose in a phantom via TLDs, radiation protection survey of therapy installation and brachytherapy sources, and radiation biology.

Term:

Offered Fall Term

Type:

Expanded Classroom Requirement

• **PHYS-301 Clinical Radiation I**

Prerequisites:

PHYS 206; Radiation Therapy & Medical Dosimetry Students Only

Credits:

3.00

Description:

Through a systems-based approach, this course will review anatomy and physiology while teaching medical terminology. This course will also discuss the major cancers associated with each anatomical system and introduce the student to radiation therapy treatment techniques and procedures.

Term:

Offered Spring Term

• **PHYS-L301 Radiation Therapy Rotation I**

Prerequisites:

Radiation Therapy Students Only

Credits:

1.00

Description:

Provides the necessary clinical experience to become a radiation therapist. All labs are conducted at our clinical affiliates. Under the supervision of licensed radiation therapists, the students will become increasingly proficient in the manipulation of treatment equipment, will gain a thorough understanding of radiation treatment plans, will deliver a prescribed radiation dose to cancer patients, and will acquire knowledge of all relevant aspects of patient care. These labs are available only to students enrolled in the clinical track.

Term:

Offered Spring Term

• **PHYS-317 Radiation Physics II**

Prerequisites:

PHYS 315; Radiation Science, Radiation Therapy and Medical Dosimetry Students Only

Credits:

4.00

Description:

This course is intended to expand on the concepts and theories presented in Radiation Physics I. It will provide a detailed analysis of the treatment units used in external beam radiation therapy, their beam geometry, basic dose calculations and dose distributions. This course will also cover the principles, theories, and uses of brachytherapy. This course was previously MS 412

Term:

Offered Spring Term

- **PHYS-302 Clinical Radiation II**

Prerequisites:

Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:

3.00

Description:

This course is a continuation of MS 301. Through the same didactic approach, the course will cover all of the anatomical systems and their related medical terminology NOT covered in MS 301.

Term:

Offered Fall Term

- **PHYS-L302 Radiation Therapy Rotation II**

Prerequisites:

Radiation Therapy (Major or Certificate) Students Only

Credits:

1.00

Description:

Provides the necessary clinical experience to become a radiation therapist. All labs are conducted at our clinical affiliates. Under the supervision of licensed radiation therapists, the students will become increasingly proficient in the manipulation of treatment equipment, will gain a thorough understanding of radiation treatment plans, will deliver a prescribed radiation dose to cancer patients, and will acquire knowledge of all relevant aspects of patient care. These labs are available only to students enrolled in the clinical track.

Term:

Offered Fall Term

• PHYS-L303 Radiation Therapy Rotation III

Prerequisites:

PHYS L302; Radiation Therapy Students Only

Credits:

1.00

Description:

Provides the necessary clinical experience to become a radiation therapist. All labs are conducted at our clinical affiliates. Under the supervision of licensed radiation therapists, the students will become increasingly proficient in the manipulation of treatment equipment, will gain a thorough understanding of radiation treatment plans, will deliver a prescribed radiation dose to cancer patients, and will acquire knowledge of all relevant aspects of patient care. These labs are available only to students enrolled in the clinical track.

Term:

Offered Spring Term

• PHYS-L304 Radiation Therapy Practicum

Prerequisites:

Take PHYS-301 PHYS-L301;*Course fulfills the following: Expanded Classroom Requirement.

Credits:

1.00

Description:

Student radiation therapists will spend 12 weeks (full-time, 40 hrs/wk) gaining hands on patient care experience in the department of radiation oncology at our clinical affiliates. Under constant supervision by licensed therapists, the student will be guided toward the application of theory in the real world of cancer treatment.

Term:

Summer

Type:

Expanded Classroom Requirement

- **PHYS-415 Dosimetry I**

Prerequisites:

PHYS 315; PHYS L415 concurrently; Radiation Therapy & Medical Dosimetry Students Only

Credits:

3.00

Description:

This course will discuss the factors that influence treatment planning and govern the clinical aspects of patient treatment. Topics to be covered include treatment planning with 3-D CT and MRI beams, isodose plan descriptions, clinical applications of treatment beams and advanced dosimetric calculations. This course will also contrast new emerging technologies with conventional radiation therapy techniques (SRT, SRS, IMRT, Image Guided Therapy, Respiratory Gating).

Term:

Offered Spring Term

- **PHYS-L415 Dosimetry I Lab**

Prerequisites:

PHYS 415 concurrently; Radiation Therapy & Medical Dosimetry Students Only

Credits:

1.00

Description:

This lab will provide the student with the opportunity to apply clinical dosimetry principles and theories learned in the classroom to actual treatment planning situations within the clinic. Through hands-on lab exercises the student will demonstrate the use of the treatment planning instruments and interpret information they compute.

Term:

Offered Spring Term

- **PHYS-416 Radiation Biology**

Prerequisites:

PHYS 315;

Credits:

4.00

Description:

Topics covered include: physio-chemical aspects of energy absorption, the sequence of events after irradiation occurring on the molecular, cellular and organized tissue levels, radiation response and repair of eukaryotic cells, effects of radiation quality, dose rate, environmental conditions, cell cycle kinetics, tumor and normal cell population dynamics, radiation-induced carcinogenesis and mutagenesis, tumor pathophysiology and radiobiology, and recent advances in experimental radiation oncology.

Term:

Offered Spring Term

- **PHYS-420 Radiation Oncology & Pathology**

Prerequisites:

Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:

4.00

Description:

This course, taught by Massachusetts General Hospital physicians will review cancer epidemiology, etiology, detection, diagnosis and prevention, lymphatic drainage, and treatment. The pathology(s) of each cancer will be presented in detail including the rationale for each preferred modality of treatment.

Term:

Offered Fall Term

- **PHYS-422 Radiology**

Prerequisites:

Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:

4.00

Description:

This course will begin with an introduction to radiology, reviewing x-ray production and discussing basic radiation physics, image formation (Kv, mA) and distortion (blur, magnification), conventional processing and digital imaging. The above-mentioned radiographic imaging concepts will be presented with conventional lectures as well as with several imaging laboratories. In addition, the basic principles of each imaging modality, including mammography, CT, MRI, Nuc Med, and Ultra Sound, will be presented. With the use of departmental tours and guest lecturers, the use, benefits and limitations of each will be discussed. Building upon the information previously presented, radiographic anatomy will also be covered with an emphasis on cross sectional anatomy. Students will review basic anatomy viewed in sectional planes (axial/transverse) of the body. Using CT and MRI images, the topographic relationship between internal organs and surface anatomy will be interpreted and discussed.

Term:

Offered Fall Term

- **PHYS-475 Senior Seminar for Radiation Therapy**

Prerequisites:

Senior status, Radiation Therapy & Medical Dosimetry Students Only

Credits:

4.00

Description:

This course will be available to senior students enrolled in the Radiation Therapy and Medical Dosimetry programs. This seminar style course will serve a number of purposes; one will be to prepare our graduating students for board certification in their respective disciplines (AART for Radiation Therapy and MDCB for Medical Dosimetry). Exam preparation will include the use of lectures, student teaching, online teaching tools, mini mock exams, and a full-length mock exam. The seminar will also assist students with the preparation of their professional resumes including discussions regarding the skills necessary to make job interviews successful.

Physics Requirement (2 courses and corresponding laboratories, 8 credits)

Choose one of the following sequences:

- **PHYS-111 College Physics I**

Prerequisites:

Take MATH-121 or MATH-134 or permission of Physics department chair;PHYS L111 taken concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

- **PHYS-L111 College Physics Lab I**

Prerequisites:

PHYS 111 concurrently

Credits:

1.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course. Error propagation, use of Excel, laboratory notebooks and formal reports required.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGR

- **PHYS-112 College Physics II**

Prerequisites:

PHYS-111 and PHYS-L11. Must be taken concurrently with PHYS-L112.

Credits:

3.00

Description:

Continuation of the fundamental principles of physics. Study of electric forces and fields, electric potential, DC circuits, electromagnetic induction, magnetic fields, AC circuits, introduction to optics, introduction to atomic, nuclear and particle physics.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **PHYS-L112 College Physics Lab II**

Prerequisites:

PHYS 111 and PHYS L111; PHYS 112 must be taken concurrently

Credits:

1.00

Description:

Continuation of the fundamental principles of physics. Study of electric forces and fields, electric potential, DC circuits, electromagnetic induction, magnetic fields, AC circuits, introduction to optics, introduction to atomic, nuclear and particle physics. The laboratory consists of experiments to illustrate the basic concepts studied in the course. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

or

- **PHYS-151 University Physics I**

Prerequisites:

Take MATH-121 or MATH 165. PHYS L151 concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• **PHYS-L151 University Physics Lab I**

Prerequisites:

PHYS 151 concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• **PHYS-152 University Physics II**

Prerequisites:

PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

Credits:

3.00

Description:

This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGR

• **PHYS-L152 University Physics Lab II**

Prerequisites:

PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

Mathematics Requirement (1 course, 4 credits)

Choose one of the following:

- **MATH-134 Calculus for Management & Social Sciences**

Prerequisites:

MATH-104, MATH-121 or MATH level 4

Credits:

4.00

Description:

A one-semester introduction to differential and integral calculus. Theory is presented informally and topics and techniques are limited to polynomials, rational functions, logarithmic and exponential functions. Topics include a review of precalculus, linear regression, limits and continuity, derivatives, differentiation rules, implicit differentiation, related rates, applications of derivatives to graphing, minima/maxima, applications of the derivative, marginal analysis, differential equations of growth and decay, anti-derivatives, the definite integral, the Fundamental Theorem of Calculus, area measurements. This course cannot be used to satisfy core or complementary requirements by students majoring in chemistry, computer science, engineering, mathematics, or physics. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

- **MATH-165 Calculus I**

Prerequisites:

MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

Credits:

4.00

Description:

Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications(curve sketching, limits at infinity, optimization,

differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

Note:

If planning to apply to the [Medical Dosimetry Certificate](#) program during senior year or after graduation, students must take both MATH-165 and MATH-166.

Biostatistics Requirement (1 course, 4 credits)

Choose one of the following:

- **BIO-273 Biostatistics**

Prerequisites:

BIO 111/L111

Credits:

4.00

Description:

Introduction to the statistical methods used to evaluate biological problems. Sampling, probability, confidence intervals, hypothesis tests, experimental design, analysis of variance, regression, and correlation are some of the topics offered. Software for data handling, graphics, and analysis will be used.

Term:

Offered Fall Term

Type:

Quantitative Reasoning

- **STATS-250 Applied Statistics**

Prerequisites:

MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

Credits:

4.00

Description:

Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

Type:

Quantitative Reasoning

- **PSYCH-215 Behavioral Statistics**

Prerequisites:

PSYCH 114; Restricted to majors only unless with permission of instructor.

Credits:

4.00

Description:

Introduces the use of statistics as tools for description and decision-making, including hypothesis testing. Prepares students for the analysis, interpretation, and evaluation of psychological research. Required for psychology majors; should be taken before the junior year. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Quantitative Reasoning

Required Clinical Hours:

14 hours per week; Semester 2, Junior Year
40 hours per week; 12 week Summer Session
24 hours per week; Senior Year

Note:

The department reserves the right to require the withdrawal of a student from the Radiation Therapy major if, in its estimation, the probability of the student's success is doubtful. Factors such as academic performance, interest, effort, and suitability for the field will be considered. Students who defer entry into the program, for any reason, will forfeit their space in the program and will be required to reapply for the following year. A student may be dismissed from the Radiation Therapy major if he/she fails to maintain the minimum GPA of 3.0 or if he/she achieves a final grade lower than "B" in any of the Radiation Therapy major courses listed above.

If admitted into the Radiation Therapy major, part-time and full-time students must complete clinical requirements within three years of being admitted. Radiation Therapy graduates may seek employment immediately following graduation and will also be eligible to apply for the American Registry of Radiologic Technologists (ARRT) Radiation Therapy Certification Exam.

2015-2016 Archived Catalog Information

Radiation Science & Therapy

The Physics & Engineering Department provides a rigorous and comprehensive education to students interested in pursuing careers in the medical field, research, and radiation therapy. Students receive instruction from a multifaceted faculty in diverse classroom and clinical settings while using the most advanced technologies to develop skills that will prepare them for entry level positions. Graduates of our program will think critically, communicate effectively, and appreciate the importance of continued education in maintaining their competence.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Radiation Science Major Requirements](#)
- [Radiation Therapy Major Requirements](#)
- [Minor Requirements](#)
- [Radiation Science & Therapy Courses](#)

Radiation Science Minor Requirements: 6 courses and corresponding laboratories, 24 credits

Core Requirements (5 courses and corresponding laboratories where applicable, 20 credits)

- **SCI-108 Introduction to Cancer Care**

Credits:

4.00

Description:

This course will introduce the students to the top ten U.S. adult cancers, as well as the most common pediatric cancers. Topics to be covered include cancer causes, detection, and prevention. Psychosocial aspects of being diagnosed with cancer and the role nutrition plays for cancer patients will be described. The course will also discuss the major treatment modalities for each cancer including radiation therapy, surgery, chemotherapy, and bone

marrow transplants. The goals and objectives of the course will be met through the use of various teaching tools including but not limited to: PowerPoint presentations, videos, guest lectures, and a poster project with a presentation component. Cognitive assessment of the students will be accomplished through homework, quizzes, exams, and a group poster and oral presentation. Students with any type of academic background are welcome.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGR,NATURAL SCIENCE FOR BS

- **BIO-111 Introduction to the Cell**

Prerequisites:

Must take BIO L111 concurrently

Credits:

3.00

Description:

Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **BIO-L111 Introduction to the Cell Laboratory**

Prerequisites:

Concurrently with BIO 111

Credits:

1.00

Description:

Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **BIO-203 Anatomy and Physiology I**

Prerequisites:

BIO L203 MUST BE TAKEN CONCURRENTLY BIO 111, BIO L111.

Credits:

3.00

Description:

First part of a systematic survey of the structural and functional interrelations of the organ systems of the human body. This course emphasizes histology and physiology in the understanding of the integumentary, skeletal, muscular, and nervous systems. Medical terminology will be used.

Term:

Offered Fall Term

- **BIO-L203 Anatomy & Physiology Lab I**

Prerequisites:

BIO 111/L111; Must take BIO-203 concurrently

Credits:

1.00

Description:

A study of the human skeletal system and a comparative look at other organ systems involving observation of anatomical models and dissection of mammalian specimens. Also includes microscopy and computer simulations of physiological processes.

Term:

Offered Fall Term

- **BIO-204 Anatomy and Physiology II**

Prerequisites:

BIO 203, BIO L203; BIO L204 must be taken concurrently;

Credits:

3.00

Description:

Conclusion of a systematic survey of the structural and functional interrelations of the organ systems of the human body. This course investigates the endocrine, circulatory, respiratory, digestive, urinary, and reproductive systems as well as the physiology of immune responses, nutrition, and acid-base balance. Medical terminology will be used.

Term:

Offered Spring Term

- **BIO-L204 Anatomy & Physiology Lab II**

Prerequisites:

BIO 203/L203 and BIO 204 must be taken concurrently;

Credits:

1.00

Description:

A study of the human viscera using anatomical models and dissection of mammalian specimens. Also includes microscopy of tissues and physiological experiments.

Term:

Offered Spring Term

- **PHYS-416 Radiation Biology**

Prerequisites:

PHYS 315;

Credits:

4.00

Description:

Topics covered include: physio-chemical aspects of energy absorption, the sequence of events after irradiation occurring on the molecular, cellular and organized tissue levels, radiation response and repair of eukaryotic cells, effects of radiation quality, dose rate, environmental conditions, cell cycle kinetics, tumor and normal cell population dynamics, radiation-induced carcinogenesis and mutagenesis, tumor pathophysiology and radiobiology, and recent advances in experimental radiation oncology.

Term:

Offered Spring Term

Radiation Science Elective (1 course and its corresponding laboratory where applicable, 4 credits)

Choose one of the following and corresponding laboratory where applicable:

- **BIO-114 Organismal Biology**

Prerequisites:

Must take BIO L114 concurrently.

Credits:

3.00

Description:

Rigorous introduction to organismal biology emphasizing evolution, phylogenetics, form, and function. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L114 Organismal Biology Laboratory**

Prerequisites:

Must take BIO 114 concurrently

Credits:

1.00

Description:

A series of laboratory experiences in evolution, diversity, anatomy and physiology.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-233 Human Nutrition**

Prerequisites:

BIO 111/L111 and BIO 114/L114;

Credits:

4.00

Description:

This interactive introduction to nutrition explores the science of human nutrition and further reviews concepts of how nutrition can promote health and well being. The course will review specific nutrient needs and functions, nutrient digestion, and the role of diet in well being and in the presence of chronic disease. Weekly course work encourages scientific literacy and fosters critical evaluation of nutrition in the news and in social media.

- **BIO-262 Principles of Cell Culture**

Prerequisites:

BIO 111, L111 and BIO 114, L114 and CHEM 111, L111

Credits:

4.00

Description:

The course is designed as an application base educational experience that will allow students to learn the standard techniques associated with successful cell culture. As such, students are responsible for the maintenance, propagation, isolation, and preservation of their cells. A number of cell types and experimental manipulations of the cultures are investigated throughout the semester.

Term:

Offered Spring Term

- **BIO-274 Genetics**

Prerequisites:

BIO 111/L111 and BIO 114/L114; BIO L274 concurrently;

Credits:

3.00

Description:

An examination of the basic principles of genetics in eukaryotes and prokaryotes at the level of molecules, cells, and multicellular organisms, including humans. Topics include Mendelian and non-Mendelian inheritance, structure and function of chromosomes and genomes, biological variation resulting from recombination, mutation, and selection, and population genetics.

Term:

Offered Fall Term

- **BIO-L274 Genetics Lab**

Prerequisites:

BIO-111, BIO-L111, BIO-114, and BIO-L114. Must be taken concurrently with BIO 274.

Credits:

1.00

Description:

Experiments designed to demonstrate principles presented in lecture, using a range of genetic model organisms that include *E. coli*, *B. subtilis*, *S. cerevisiae*, *D. melanogaster*, *S. fimicola*, and *C. elegans*.

Term:

Offered Fall Term

- **BIO-285 Microbiology**

Prerequisites:

BIO-111 and BIO-L111; BIO-L285 concurrently;

Credits:

3.00

Description:

Viruses and bacteria are surveyed in terms of their ecology, biochemistry, taxonomy, molecular biology and control.

Term:

Offered Spring Term

- **BIO-L285 Microbiology Laboratory**

Prerequisites:

BIO 111/L111; BIO 285 concurrently;

Credits:

1.00

Description:

Introduction to microbiological techniques and their applications to health, research and industry.

Term:

Offered Fall Term

- **BIO-304 Comparative Animal Physiology**

Prerequisites:

BIO-114 and BIO-L114. Must take BIO-L304 concurrently

Credits:

3.00

Description:

Mechanisms of physiological adaptations to environmental challenges are studied. Examples of gas exchange, osmoregulation, fluid transport, temperature regulation, nervous control, and movement are examined in various animal forms through class lecture and discussion, required readings, and external lectures. Spring semester.

Term:

Offered Spring Term

- **BIO-L304 Comp Animal Physiology Lab**

Prerequisites:

BIO-114 and BIO-L114. Must take BIO-304 concurrently.

Credits:

1.00

Description:

Selected physiological processes and mechanisms or adaptation in invertebrate and vertebrate animals are examined by observation and controlled experiments.

- **BIO-377 Immunology**

Prerequisites:

BIO-114/L114; CHEM-211/L211; BIO-L377 concurrently;

Credits:

3.00

Description:

The concept of immunity, response to infection, structure of the immune system, biochemistry of immunoglobins, antigen-antibody interactions, allergy, immunological injury, lymphocyte subpopulations and cellular immunity, tolerance suppression and enhancement. Taught alternate/even years.

Term:

Offered Spring Term

- **BIO-L377 Immunology Laboratory**

Prerequisites:

BIO-114 and BIO-L114 and CHEM-211 and CHEM-L211. Must take BIO-377 concurrently.

Credits:

1.00

Description:

Anatomy of the immune system , immunoglobulin purification, hemagglutination, enzyme immunoassay. Immuno-chemistry, immunoelectrophoresis, gel precipitation assay.

Term:

Occasional

- **BIO-385 Advanced Microbiology**

Prerequisites:

BIO-285 and BIO-L285 BIO L385 must be taken concurrently

Credits:

3.00

Description:

Pathogenesis and host-parasite relationships; epidemiology and public health aspects of pathogenic microorganisms are stressed; molecular biology, applied and industrial microbiology. Current literature reviews. Taught alternate/odd years.

Term:

Offered Spring Term

- **BIO-L385 Advanced Microbiology Lab**

Prerequisites:

BIO 285/L285; BIO 385 must be taken concurrently

Credits:

1.00

Description:

Isolation, quantization and cultivation of microorganisms, advanced general and applied microbiology and molecular biology. Experience in media, chemical and culture preparations.

Term:

Offered Spring Term

- **BIO-403 Cell Biology**

Prerequisites:

BIO 111/L111; CHEM-211/L211; BIO-L403 concurrently;

Credits:

3.00

Description:

The study of cells, approached through examinations of biochemical mechanisms, the relation between the structure and function of biological molecules and organelles, and the regulation of normal and diseased cells.

Term:

Offered Fall Term

- **BIO-L403 Cell Biology Lab**

Prerequisites:

BIO-111 and BIO-L11 and CHEM-211 and CHEM-L211. Must take BIO-403 concurrently.

Credits:

1.00

Description:

Examination of biological molecules and their role in cell function. Techniques used in these examinations will include enzymatic analyses, gel electrophoresis, immunologic identification, chromatography, and spectroscopy. Students are expected to develop their proficiency in the laboratory techniques used, to analyze their results in a quantitative manner, and to present their findings.

Term:

Offered Fall Term

- **BIO-474 Molecular Genetics**

Prerequisites:

CHEM-311 or BIO-274 and BIO-L274 and BIO-L474 concurrently

Credits:

3.00

Description:

An examination of concepts and techniques of modern molecular biology. Topics include the structure and function of DNA, RNA, and proteins, the regulation of gene expression in prokaryotes and eukaryotes at transcriptional and post-transcriptional levels, genetic modification of organisms, and genome analysis. This course will incorporate readings and discussions of primary scientific literature. Spring semester.

Term:

Occasional

- **BIO-L474 Molecular Genetics Lab**

Prerequisites:

Take CHEM-331 or BIO-274 and BIO-L274. BIO-474 must be taken concurrently.

Credits:

1.00

Description:

This upper level laboratory course will consist of a semester-long project in the form of a series of consecutive experiments involving the generation of a genetically modified organism and its subsequent molecular analysis. Techniques employed will include genetic screens, DNA isolation, restriction endonuclease analysis, transformation of bacteria, gel electrophoresis, gene reported assays, RNA isolation, reverse transcription, and quantitative PCR.

Term:

Occasional

- **BIO-475 Developmental Biology**

Prerequisites:

BIO-114, L114 and CHEM-211, L211, and BIO-L475 concurrently

Credits:

3.00

Description:

This course focuses on embryonic development in vertebrates. The conceptual focus on evolutionary developmental biology includes comparative developmental mechanisms and Epigenetic processes.

Term:

Offered Fall Term

- **BIO-L475 Developmental Biology Lab**

Prerequisites:

BIO 114/L114, CHEM 211/L211 BIO 475 must be taken concurrently

Credits:

1.00

Description:

This laboratory course complements the lecture course. Exercises include internet exercises, examination of embryos, biochemical tests, use of developmental models, and student presentations. A number of model organisms are examined.

Term:

Offered Fall Term

• **CHEM-314 Instrumental Analysis**

Prerequisites:

CHEM 211; CHEM L314 must be taken concurrently.

Credits:

3.00

Description:

Theory and application of analytical instruments: ultraviolet, visible, fluorescence, atomic and emission spectroscopy; chromatographic methods; electrochemical measurements. Prerequisites: CHEM 211; CHEM L314 must be taken concurrently. 3 hour lecture. 1 term - 3 credits. Normally offered Fall/Spring, days.

Term:

Alternates Fall & Spring

• **CHEM-L314 Instrumental Analysis Lab**

Prerequisites:

CHEM L211; CHEM 314 must be taken concurrently

Credits:

1.00

Description:

Laboratory experiments in chemical analysis using instrumental techniques, including spectroscopy and chromatography. Data collection and evaluation includes computer-based methods. Reports are prepared in professional style. Prerequisites: CHEM L112; CHEM 314 must be taken concurrently. 4-hour Laboratory. 1 term - 1 credit. Normally offered Fall/Spring.

Term:

Alternates Fall & Spring

• CHEM-331 Biochemistry I

Prerequisites:

CHEM 212/L212 or permission of instructor. CHEM L331 must be taken concurrently.

Credits:

3.00

Description:

Explores the foundations of biochemistry, including the structure, organization and behavior of proteins, carbohydrates, lipids, and nucleic acids. Topics include enzyme catalysis, kinetics, and inhibition as well as protein regulation and membrane structure. Introduces the use of biochemical literature and computer-based bioinformatics techniques. Offered every fall.

Term:

Offered Fall Term

• CHEM-L331 Biochemical Techniques I

Prerequisites:

Must be taken concurrently with CHEM 331. Take CHEM-212 and CHEM-L212 or permission of instructor.

Credits:

1.00

Description:

Laboratory course introducing biochemical techniques. Includes buffer preparation, PCR, purification of DNA and proteins, agarose and polyacrylamide gel electrophoresis, protein quantitation and detection, and enzyme kinetic assays. Offered every Fall.

Term:

Offered Fall Term

• CHEM-332 Biochemistry II

Prerequisites:

CHEM 331

Credits:

4.00

Description:

This course explores the principles of bioenergetics and metabolism of biological compounds. Coverage includes intermediary metabolism of carbohydrates, lipids, amino acids, oxidative phosphorylation, and synthesis of purines and pyrimidines. Additional topics include the regulation and integration of metabolism. Lectures will be supplemented with discussions of the biochemical literature. Prerequisites: CHEM 331. 3 hours of lecture and 1 hour of recitation per week. Offered every Spring, days only.

Term:

Offered Spring Term

• CHEM-390 Advanced Organic Chemistry

Prerequisites:

Prerequisite: CHEM 212.

Credits:

3.00

Description:

Expands on topics introduced in Organic Chemistry I and II; depending on student interest, may include in-depth discussions of carbonyl chemistry, industrial organic chemistry, organometallic chemistry and biomolecules. Prerequisite: CHEM 212, concurrent enrollment in CHEM L390 required. 3 hours of lecture per week. Normally offered alternate years.

Term:

Alternates Fall & Spring

- **HLTH-301 Introduction to the U.S. Healthcare Systems**

Prerequisites:

Junior standing

Credits:

3.00

Description:

This course presents an overview of the origins, components, organization, and operation of the health system in the United States. It is an introduction to the major health issues and institutions, including the settings in which health services are delivered, providers of these services, and the public and private payers for services.

- **HLTH-325 Legal Environment of Healthcare**

Credits:

3.00

Description:

Students investigate the structural and functional aspects of the legal, institutional, and political factors that condition the character of the US healthcare industry, the role of the healthcare manager, the legislative process, administrative policy-making, and national trends related to political parties and interest groups. Topics in healthcare law include medical malpractice, informed consent, confidentiality of patient information, healthcare liability, and administrative law.

- **PHYS-215 Nanomaterials and the Energy Problem**

Prerequisites:

CHEM 111-112 or PHYS 111-112 Or Permission of Instructor

Credits:

4.00

Description:

This course is designed as an introduction to nanotechnology and some of its important uses. It is aimed at science majors who have taken basic courses in physics or chemistry. The course will cover the properties and uses of carbon-nanotubes, nanocomposites, and other nanomaterials that are being fabricated in labs and industries around the world. It will serve as an introduction to the important role of nanomaterials in solving modern-day energy problems.

Term:

Occasional

- **MATH-130 Topics in Finite Mathematics**

Prerequisites:

MATH-104, or MATH-121, or MATH level 3

Credits:

4.00

Description:

Linear Modeling (for example, using linear functions to model supply/demand situations), graphing, linear programming, financial functions (compound interest, annuities, and amortization of loans) sets, Venn diagrams, counting and combinatorics, discrete probability, conditional probability, Bernoulli experiments, Bayes theorem. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

- **MATH-166 Calculus II**

Prerequisites:

MATH 165 with grade of C or better

Credits:

4.00

Description:

Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation, convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-255 Probability and Statistics**

Prerequisites:

MATH-165 with a grade of C or better

Credits:

4.00

Description:

Topics include: random variable and distribution; expectation and variance; special discrete/continuous distributions (uniform, binomial, negative binomial, geometric, hypergeometric, Poisson, normal, and exponential distributions); joint distribution, marginal distribution and conditional distribution; covariance; limit theorems (law of large numbers and central limit theorem); introduction to confidence interval and hypothesis testing; regression analysis. Offered as needed.

- **MATH-265 Calculus III**

Prerequisites:

MATH 166 with grade of C or better

Credits:

4.00

Description:

Parametric equations and polar coordinates (curves, areas, conic sections); vectors and the geometry of space (the dot product, vector arithmetic, lines and planes in 3-space, the cross product, cylinders and quadratic surfaces); vector functions (limits, derivatives and integrals, motion in space); partial derivatives (functions of several variables, limits and continuity, tangent planes and differentials, chain rule, directional derivatives, gradient, extrema, Lagrange multipliers); multiple integrals (double integrals, applications); vector calculus (vector fields, line integrals, fundamental theorem for line integrals, Green's Theorem, curl and divergence, parametric surfaces, surface integrals). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-285 Discrete Mathematics**

Prerequisites:

MATH-165 with a grade of C or better

Credits:

4.00

Description:

Topics mostly selected from the following list: Logic and set theory, elementary number theory, relations and functions and their properties (equivalence relations, partial order relations, recurrence relations and their solutions); computational complexity of algorithms (big O notation); graphs and their properties (isomorphisms of graphs, Euler and Hamilton paths, shortest path problem, graph coloring) trees (tree traversal, minimum spanning trees); finite state machines; methods of proof (proof by induction, proof by contradiction). Prerequisite: MATH 220 or permission of instructor. 1 term - 4 credits (4 lecture hours per week). Normally offered at least once each year.

- **MATH-331 Introduction to Abstract Math**

Prerequisites:

MATH-165 and MATH-166 with a grade of C or better

Credits:

4.00

Description:

this course is intended to provide a firm foundation for and a taste of the study of advanced mathematics. While the course content varies somewhat, it is designed to give students a deeper understanding of the algebraic and analytical structure of the integers, the rational numbers and the real numbers and how they act as a building block to a variety of fields of mathematics. Students are introduced to the process of mathematical discovery

and the language of mathematics. Exercises and projects are designed to illustrate the need for proof and to further refine the student's ability to analyze, conjecture and write mathematical proofs. This course is a prerequisite for most upper level mathematics courses and, after completing it a student will be in a position to determine realistically if he or she ought to major or minor in mathematics.

- **PHIL-363 Bio and Medical Ethics**

Prerequisites:

Prerequisite: Phil 119, or 123, or 127.

Credits:

4.00

Description:

An examination of the moral problems facing health-care practitioners, their patients, and others involved with the practice of medicine in today's society. Issues include euthanasia, the ethics of medical experimentation, the use of reproductive technologies, genetic counseling and genetic engineering, truth-telling and confidentiality in doctor-patient relationships, the cost and availability of medical care. Normally offered every third year.

Term:

Occasional

- **PSYCH-114 General Psychology**

Credits:

4.00

Description:

Surveys core theoretical concepts and contemporary empirical research from the major sub-fields of psychology: physiology; perception; cognition; learning; emotion; motivation; development; personality; psychopathology; psychotherapy; and social behavior. Required for psychology majors. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **PSYCH-233 Child Development**

Prerequisites:

PSYCH 114

Credits:

4.00

Description:

Examines physical, cognitive, emotional, and social development in youth (i.e., from conception through adolescence). Surveys major developmental approaches including biological, learning, and contextual/environmental theories. Major focus is on normal development. Normally offered every semester.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **PSYCH-236 Psychology of the Family**

Credits:

4.00

Description:

Focuses on the various forms and structures of families and family life over time and across cultures, with emphasis on the psychological impact of such forms. The complex relationship among individual psychology, family relationships, and the larger social context is addressed. Topics include marriage, parenting, and divorce. Normally offered every semester.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **PSYCH-321 Introduction to Counseling Skills**

Prerequisites:

PSYCH 114 and Sophomore standing

Credits:

4.00

Description:

Explores and examines basic models of helping and provides supervised practice of helping skills. Format includes lecture, discussion, role play, and video feedback. Normally offered yearly.

Term:

Offered Fall Term

Type:

Social Science

- **PSYCH-326 Abnormal Psychology**

Prerequisites:

PSYCH 114, and Sophomore standing or permission of the instructor

Credits:

4.00

Description:

Introduces the concepts of psychological disorder and focuses on description and etiology of various mental health problems from a variety of different theoretical perspectives. Students develop familiarity with the DSM classification system and major disorders described within it, including mood and

anxiety disorders, thought disorders, and personality disorders. Normally offered each semester.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **PSYCH-333 Adult Development & Aging**

Prerequisites:

PSYCH 114 and Sophomore Standing.

Credits:

4.00

Description:

Surveys theory and research about the physical, mental, and psychological aspects of life-span development. Age-related changes in mental health, personality, self-image, sexual relations, friendships, career development and spirituality are explored. Aging may also be explored as a global, demographic and cross-cultural issue. Research surrounding death and dying, bereavement, and hospice/nursing home care is also presented. Normally offered alternate years.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **PSYCH-336 Developmental Psychopathology**

Prerequisites:

PSYCH 114 and sophomore standing

Credits:

4.00

Description:

Examines the etiology and symptoms of disorders of childhood and adolescence, as well as current therapeutic approaches. Developmental changes in the incidence of externalizing disorders, such as conduct disorder and attention deficit disorder, and internalizing disorders, such as depression and eating disorders, are addressed. Disorders that affect both behavioral and mental functioning such as Fetal Alcohol Syndrome and autism may also be included. The role of development in the understanding and treatment of the childhood disorders is reviewed. Normally offered yearly.

Term:

Offered Fall Term

Type:

Social Science

- **SOC-113 Introduction to Sociology**

Credits:

4.00

Description:

An introduction to the sociological understanding of human interaction, group process and social structures. Students are introduced to basic concepts, theories and methods of sociological investigation. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **SOC-220 Childhood and Adolescence in Contemporary Society**

Credits:

4.00

Description:

This course examines the development of children and adolescents from biological, psychological, and sociological perspectives. Major themes and changes associated with each developmental stage are discussed. The course explores practical implications of theory and research (parenting, juvenile justice, etc.), and current topics in child and adolescent development. Class format includes lectures discussion, debates and direct observation of children.

Term:

Occasional

- **SOC-242 Law, Health & Human Rights**

Credits:

4.00

Description:

This course will look at the special opportunities and obligations of those in the health and legal professions to protect human rights. There will be an overview of human rights doctrine and key documents. Students will learn to apply human rights principles to particular occupations in the health and legal professions.

Term:

Occasional

- **SOC-253 Sociology of Health and Illness**

Credits:

4.00

Description:

This course provides students with an introduction to how social norms, structures, and practices shape experiences of illness and health. Among the topics that will be covered are: health and the environment, the reasons some groups of people are less healthy than others, living with chronic illness

and disabilities, and public debates surrounding issues such as performance enhancing drugs and sports, Attention Deficit Disorder and the HPV vaccine. Required for all students in the health, Medicine and the Body Concentration.

Term:

Occasional

- **SOC-254 U.S. Health Care Landscapes**

Prerequisites:

This course fulfills the ECR requirement.

Credits:

4.00

Description:

In this course, students will learn about how the U.S. health care system works. We will study the politics and economics of the health care system and discuss the key health care policy issues of this decade. Using the theoretical perspectives provided by sociology, we will look at issues of power, hierarchy, race, and gender vis-a-vis the health care system. Reading for this course centers on first person narratives by people working in the health care system. This course fulfills the ECR requirement.

Term:

Occasional

Type:

Expanded Classroom Requirement

- **SOC-256 Sociology of Aging**

Credits:

4.00

Description:

Consideration of the physiological, psychological and social factors associated with the aging process. Contemporary American values toward the elderly are compared and contrasted with historical and cross-cultural studies. Current opportunities and techniques enabling the elderly to enrich and expand their societal roles are explored.

Term:

Occasional

- **SOC-354 Death and Dying**

Credits:

4.00

Description:

An examination of changing definitions of life and death, social factors affecting causes and rates of death, care of the dying and their families, institutionalization, the funeral industry, suicide, crisis intervention, and the impact of technology on the dying process.

Term:

Occasional

Type:

Diverse Perspectives

- **SOC-355 Women and Health**

Credits:

4.00

Description:

An exploration of topics that relate particularly to women as providers and consumers in the health care system. The course will consider historical and current information on issues of reproduction, technology, health and illness.

Term:

Occasional

- **SOC-357 Global Health and Healing**

Credits:

4.00

Description:

An examination of how different cultures understand health and illness. Healing approaches from Asia, Africa and the Americas will be explored.

Term:

Occasional

Type:

Cultural Diversity Opt B,Diverse Perspectives

Please check with the program director for potential Radiation Science elective approval of other biology, chemistry, physics, math, psychology, or sociology courses.

Radiation Science & Therapy

The Physics & Engineering Department provides a rigorous and comprehensive education to students interested in pursuing careers in the medical field, research, and radiation therapy. Students receive instruction from a multifaceted faculty in diverse classroom and clinical settings while using the most advanced technologies to develop skills that will prepare them for entry level positions. Graduates of our program will think critically, communicate effectively, and appreciate the importance of continued education in maintaining their competence.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- **SCI-108 Introduction to Cancer Care**

Credits:

4.00

Description:

This course will introduce the students to the top ten U.S. adult cancers, as well as the most common pediatric cancers. Topics to be covered include cancer causes, detection, and prevention. Psychosocial aspects of being diagnosed with cancer and the role nutrition plays for cancer patients will be described. The course will also discuss the major treatment modalities for each cancer including radiation therapy, surgery, chemotherapy, and bone marrow transplants. The goals and objectives of the course will be met through the use of various teaching tools including but not limited to: PowerPoint presentations, videos, guest lectures, and a poster project with a presentation component. Cognitive assessment of the students will be accomplished through homework, quizzes, exams, and a group poster and oral presentation. Students with any type of academic background are welcome.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGR,NATURAL SCIENCE FOR BS

- **PHYS-206 Introduction to Radiation Oncology**

Prerequisites:

Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:

4.00

Description:

This course will serve as an introduction to the role of the radiation therapist and medical dosimetrist in a Radiation Oncology department. Through a combination of detailed lectures, discussions, role-playing, case studies, and hands-on laboratory exercises, students will be introduced to the professional and clinical aspects of their respective professions. Additional topics included radiation safety, patients rights, infection control, communication for the clinic, patient assessment, and psychosocial aspects of cancer including death and dying.

Term:

Offered Fall Term

- **PHYS-301 Clinical Radiation I**

Prerequisites:

PHYS 206; Radiation Therapy & Medical Dosimetry Students Only

Credits:

3.00

Description:

Through a systems-based approach, this course will review anatomy and physiology while teaching medical terminology. This course will also discuss the major cancers associated with each anatomical system and introduce the student to radiation therapy treatment techniques and procedures.

Term:

Offered Spring Term

- **PHYS-L301 Radiation Therapy Rotation I**

Prerequisites:

Radiation Therapy Students Only

Credits:

1.00

Description:

Provides the necessary clinical experience to become a radiation therapist. All labs are conducted at our clinical affiliates. Under the supervision of licensed radiation therapists, the students will become increasingly proficient in the manipulation of treatment equipment, will gain a thorough understanding of radiation treatment plans, will deliver a prescribed radiation dose to cancer patients, and will acquire knowledge of all relevant aspects of patient care. These labs are available only to students enrolled in the clinical track.

Term:

Offered Spring Term

- **PHYS-302 Clinical Radiation II**

Prerequisites:

Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:

3.00

Description:

This course is a continuation of MS 301. Through the same didactic approach, the course will cover all of the anatomical systems and their related medical terminology NOT covered in MS 301.

Term:

Offered Fall Term

• PHYS-L302 Radiation Therapy Rotation II

Prerequisites:

Radiation Therapy (Major or Certificate) Students Only

Credits:

1.00

Description:

Provides the necessary clinical experience to become a radiation therapist. All labs are conducted at our clinical affiliates. Under the supervision of licensed radiation therapists, the students will become increasingly proficient in the manipulation of treatment equipment, will gain a thorough understanding of radiation treatment plans, will deliver a prescribed radiation dose to cancer patients, and will acquire knowledge of all relevant aspects of patient care. These labs are available only to students enrolled in the clinical track.

Term:

Offered Fall Term

• PHYS-L303 Radiation Therapy Rotation III

Prerequisites:

PHYS L302; Radiation Therapy Students Only

Credits:

1.00

Description:

Provides the necessary clinical experience to become a radiation therapist. All labs are conducted at our clinical affiliates. Under the supervision of licensed radiation therapists, the students will become increasingly proficient in the manipulation of treatment equipment, will gain a thorough understanding of radiation treatment plans, will deliver a prescribed radiation dose to cancer patients, and will acquire knowledge of all relevant aspects of patient care. These labs are available only to students enrolled in the clinical track.

Term:

Offered Spring Term

• PHYS-L304 Radiation Therapy Practicum

Prerequisites:

Take PHYS-301 PHYS-L301;*Course fulfills the following: Expanded Classroom Requirement.

Credits:

1.00

Description:

Student radiation therapists will spend 12 weeks (full-time, 40 hrs/wk) gaining hands on patient care experience in the department of radiation oncology at our clinical affiliates. Under constant supervision by licensed therapists, the student will be guided toward the application of theory in the real world of cancer treatment.

Term:

Summer

Type:

Expanded Classroom Requirement

• PHYS-315 Radiation Physics I

Prerequisites:

PHYS L315 concurrently; Radiation Biology, Radiation Science, Radiation Therapy (Major or Certificate), or Medical Dosimetry Students Only

Credits:

3.00

Description:

Content is designed to establish a thorough knowledge of the radiation physics used in radiation therapy treatments. Topics to be covered in this course include a review of basic physics (energy, mass, matter, SI units), structure of matter, types of radiations, nuclear transformations, radioactive decay, the fundamentals of x-ray generators and x-ray production, interactions of x and gamma rays with matter, absorbed dose, measurements of dose, principles of and practical use of ionization chambers and electrometers, Geiger counters and other survey meters, principles and practical use of TLDs, film, calorimetry, scintillation detectors, radiation protection and quality assurance.

Term:

Offered Fall Term

- **PHYS-L315 Radiation Physics I Lab**

Prerequisites:

PHYS 315 concurrently

Credits:

1.00

Description:

This lab will cover a broad range of experiments associated with the Department of Radiation Oncology at Massachusetts General Hospital. Topics include: Quality assurance measurements for radiation therapy, calibration of radiation teletherapy unit using ionization chambers, measurements of dose distribution via film, measurements of dose in a phantom via TLDs, radiation protection survey of therapy installation and brachytherapy sources, and radiation biology.

Term:

Offered Fall Term

Type:

Expanded Classroom Requirement

- **PHYS-317 Radiation Physics II**

Prerequisites:

PHYS 315; Radiation Science, Radiation Therapy and Medical Dosimetry Students Only

Credits:

4.00

Description:

This course is intended to expand on the concepts and theories presented in Radiation Physics I. It will provide a detailed analysis of the treatment units used in external beam radiation therapy, their beam geometry, basic dose calculations and dose distributions. This course will also cover the principles, theories, and uses of brachytherapy. This course was previously MS 412

Term:

Offered Spring Term

• **PHYS-415 Dosimetry I**

Prerequisites:

PHYS 315; PHYS L415 concurrently; Radiation Therapy & Medical Dosimetry Students Only

Credits:

3.00

Description:

This course will discuss the factors that influence treatment planning and govern the clinical aspects of patient treatment. Topics to be covered include treatment planning with 3-D CT and MRI beams, isodose plan descriptions, clinical applications of treatment beams and advanced dosimetric calculations. This course will also contrast new emerging technologies with conventional radiation therapy techniques (SRT, SRS, IMRT, Image Guided Therapy, Respiratory Gating).

Term:

Offered Spring Term

• **PHYS-L415 Dosimetry I Lab**

Prerequisites:

PHYS 415 concurrently; Radiation Therapy & Medical Dosimetry Students Only

Credits:

1.00

Description:

This lab will provide the student with the opportunity to apply clinical dosimetry principles and theories learned in the classroom to actual treatment planning situations within the clinic. Through hands-on lab exercises the student will demonstrate the use of the treatment planning instruments and interpret information they compute.

Term:

Offered Spring Term

• **PHYS-416 Radiation Biology**

Prerequisites:

PHYS 315;

Credits:

4.00

Description:

Topics covered include: physio-chemical aspects of energy absorption, the sequence of events after irradiation occurring on the molecular, cellular and organized tissue levels, radiation response and repair of eukaryotic cells, effects of radiation quality, dose rate, environmental conditions, cell cycle kinetics, tumor and normal cell population dynamics, radiation-induced carcinogenesis and mutagenesis, tumor pathophysiology and radiobiology, and recent advances in experimental radiation oncology.

Term:

Offered Spring Term

• **PHYS-420 Radiation Oncology & Pathology**

Prerequisites:

Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:

4.00

Description:

This course, taught by Massachusetts General Hospital physicians will review cancer epidemiology, etiology, detection, diagnosis and prevention, lymphatic drainage, and treatment. The pathology(s) of each cancer will be presented in detail including the rationale for each preferred modality of treatment.

Term:

Offered Fall Term

• **PHYS-422 Radiology**

Prerequisites:

Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:

4.00

Description:

This course will begin with an introduction to radiology, reviewing x-ray production and discussing basic radiation physics, image formation (Kv, mA) and distortion (blur, magnification), conventional processing and digital imaging. The above-mentioned radiographic imaging concepts will be presented with conventional lectures as well as with several imaging laboratories. In addition, the basic principles of each imaging modality, including mammography, CT, MRI, Nuc Med, and Ultra Sound, will be presented. With the use of departmental tours and guest lecturers, the use, benefits and limitations of each will be discussed. Building upon the information previously presented, radiographic anatomy will also be covered with an emphasis on cross sectional anatomy. Students will review basic anatomy viewed in sectional planes (axial/transverse) of the body. Using CT and MRI images, the topographic relationship between internal organs and surface anatomy will be interpreted and discussed.

Term:

Offered Fall Term

• PHYS-475 Senior Seminar for Radiation Therapy

Prerequisites:

Senior status, Radiation Therapy & Medical Dosimetry Students Only

Credits:

4.00

Description:

This course will be available to senior students enrolled in the Radiation Therapy and Medical Dosimetry programs. This seminar style course will serve a number of purposes; one will be to prepare our graduating students for board certification in their respective disciplines (AART for Radiation Therapy and MDCB for Medical Dosimetry). Exam preparation will include the use of lectures, student teaching, online teaching tools, mini mock exams, and a full-length mock exam. The seminar will also assist students with the preparation of their professional resumes including discussions regarding the skills necessary to make job interviews successful.

PHYS 315;

Credits:

4.00

Description:

Topics covered include: physio-chemical aspects of energy absorption, the sequence of events after irradiation occurring on the molecular, cellular and organized tissue levels, radiation response and repair of eukaryotic cells, effects of radiation quality, dose rate, environmental conditions, cell cycle kinetics, tumor and normal cell population dynamics, radiation-induced carcinogenesis and mutagenesis, tumor pathophysiology and radiobiology, and recent advances in experimental radiation oncology.

Term:

Offered Spring Term

• **PHYS-420 Radiation Oncology & Pathology**

Prerequisites:

Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:

4.00

Description:

This course, taught by Massachusetts General Hospital physicians will review cancer epidemiology, etiology, detection, diagnosis and prevention, lymphatic drainage, and treatment. The pathology(s) of each cancer will be presented in detail including the rationale for each preferred modality of treatment.

Term:

Offered Fall Term

• **PHYS-422 Radiology**

Prerequisites:

Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:

4.00

Description:

This course will begin with an introduction to radiology, reviewing x-ray production and discussing basic radiation physics, image formation (Kv, mA) and distortion (blur, magnification), conventional processing and digital imaging. The above-mentioned radiographic imaging concepts will be presented with conventional lectures as well as with several imaging laboratories. In addition, the basic principles of each imaging modality, including mammography, CT, MRI, Nuc Med, and Ultra Sound, will be presented. With the use of departmental tours and guest lecturers, the use, benefits and limitations of each will be discussed. Building upon the information previously presented, radiographic anatomy will also be covered with an emphasis on cross sectional anatomy. Students will review basic anatomy viewed in sectional planes (axial/transverse) of the body. Using CT and MRI images, the topographic relationship between internal organs and surface anatomy will be interpreted and discussed.

Term:

Offered Fall Term

- **PHYS-475 Senior Seminar for Radiation Therapy**

Prerequisites:

Senior status, Radiation Therapy & Medical Dosimetry Students Only

Credits:

4.00

Description:

This course will be available to senior students enrolled in the Radiation Therapy and Medical Dosimetry programs. This seminar style course will serve a number of purposes; one will be to prepare our graduating students for board certification in their respective disciplines (AART for Radiation Therapy and MDCB for Medical Dosimetry). Exam preparation will include the use of lectures, student teaching, online teaching tools, mini mock exams, and a full-length mock exam. The seminar will also assist students with the preparation of their professional resumes including discussions regarding the skills necessary to make job interviews successful.

Mathematics Requirement (1 course, 4 credits)

Choose one of the following:

- **MATH-134 Calculus for Management & Social Sciences**

Prerequisites:

MATH-104, MATH-121 or MATH level 4

Credits:

4.00

Description:

A one-semester introduction to differential and integral calculus. Theory is presented informally and topics and techniques are limited to polynomials, rational functions, logarithmic and exponential functions. Topics include a review of precalculus, linear regression, limits and continuity, derivatives, differentiation rules, implicit differentiation, related rates, applications of derivatives to graphing, minima/maxima, applications of the derivative, marginal analysis, differential equations of growth and decay, anti-derivatives, the definite integral, the Fundamental Theorem of Calculus, area measurements. This course cannot be used to satisfy core or complementary requirements by students majoring in chemistry, computer science, engineering, mathematics, or physics. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

- **MATH-165 Calculus I**

Prerequisites:

MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

Credits:

4.00

Description:

Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

Note:

If planning to apply to the [Medical Dosimetry Certificate](#) program during year two or after graduation, students must take both MATH-165 and MATH-166.

Biostatistics Requirement (1 course, 4 credits)

Choose one of the following:

- **BIO-273 Biostatistics**

Prerequisites:

BIO 111/L111

Credits:

4.00

Description:

Introduction to the statistical methods used to evaluate biological problems. Sampling, probability, confidence intervals, hypothesis tests, experimental design, analysis of variance, regression, and correlation are some of the topics offered. Software for data handling, graphics, and analysis will be used.

Term:

Offered Fall Term

Type:

Quantitative Reasoning

- **STATS-250 Applied Statistics**

Prerequisites:

MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

Credits:

4.00

Description:

Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

Type:

Quantitative Reasoning

- **PSYCH-215 Behavioral Statistics**

Prerequisites:

PSYCH 114; Restricted to majors only unless with permission of instructor.

Credits:

4.00

Description:

Introduces the use of statistics as tools for description and decision-making, including hypothesis testing. Prepares students for the analysis, interpretation, and evaluation of psychological research. Required for psychology majors; should be taken before the junior year. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Quantitative Reasoning

Ethics Requirement (1 course, 4 credits)

Choose one of the following:

- **PHIL-119 Ethics**

Credits:

4.00

Description:

A systematic introduction to the major thinkers and their positions on the main issues of ethics, such as: What is morality? What are moral values? How should we live our lives? Are there objective, universal, absolute moral standards? If so, what are they, and what is their basis? 1 term - credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- **PHIL-123 Social Ethics: The Good Life**

Credits:

4.00

Description:

An examination of contemporary Western society, particularly in the United States, in relation to philosophical attempts to define the good life. Current books that exhibit a philosophical approach towards important contemporary social issues will be discussed, as well as classics in philosophy. Topics may include: civic virtue, consumerism, current events, economic justice, popular culture (film, music, television), religion and secularism, etc. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- **PHIL-127 Contemporary Moral Issues**

Credits:

4.00

Description:

A critical examination of a number of contemporary moral issues such as: abortion, affirmative action, animal rights, capital punishment, cloning, drug legalization, environmental ethics, euthanasia, genetic engineering, gun control, pornography, same-sex marriage, suicide, war and terrorism, etc. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- **PHIL-363 Bio and Medical Ethics**

Prerequisites:

Prerequisite: Phil 119, or 123, or 127.

Credits:

4.00

Description:

An examination of the moral problems facing health-care practitioners, their patients, and others involved with the practice of medicine in today's society. Issues include euthanasia, the ethics of medical experimentation, the use of reproductive technologies, genetic counseling and genetic engineering, truth-telling and confidentiality in doctor-patient relationships, the cost and availability of medical care. Normally offered every third year.

Term:

Occasional

Radiation Science Elective (1 course and its corresponding laboratory where applicable, 4 credits)

Choose one of the following:

- **BIO-114 Organismal Biology**

Prerequisites:

Must take BIO L114 concurrently.

Credits:

3.00

Description:

Rigorous introduction to organismal biology emphasizing evolution, phylogenetics, form, and function. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L114 Organismal Biology Laboratory**

Prerequisites:

Must take BIO 114 concurrently

Credits:

1.00

Description:

A series of laboratory experiences in evolution, diversity, anatomy and physiology.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **BIO-233 Human Nutrition**

Prerequisites:

BIO 111/L111 and BIO 114/L114;

Credits:

4.00

Description:

This interactive introduction to nutrition explores the science of human nutrition and further reviews concepts of how nutrition can promote health and well being. The course will review specific nutrient needs and functions, nutrient digestion, and the role of diet in well being and in the presence of chronic disease. Weekly course work encourages scientific literacy and fosters critical evaluation of nutrition in the news and in social media.

- **BIO-262 Principles of Cell Culture**

Prerequisites:

BIO 111, L111 and BIO 114, L114 and CHEM 111, L111

Credits:

4.00

Description:

The course is designed as an application base educational experience that will allow students to learn the standard techniques associated with successful cell culture. As such, students are responsible for the maintenance, propagation, isolation, and preservation of their cells. A number of cell types and experimental manipulations of the cultures are investigated throughout the semester.

Term:

Offered Spring Term

- **BIO-274 Genetics**

Prerequisites:

BIO 111/L111 and BIO 114/L114; BIO L274 concurrently;

Credits:

3.00

Description:

An examination of the basic principles of genetics in eukaryotes and prokaryotes at the level of molecules, cells, and multicellular organisms, including humans. Topics include Mendelian and non-Mendelian inheritance, structure and function of chromosomes and genomes, biological variation resulting from recombination, mutation, and selection, and population genetics.

Term:

Offered Fall Term

- **BIO-L274 Genetics Lab**

Prerequisites:

BIO-111, BIO-L111, BIO-114, and BIO-L114. Must be taken concurrently with BIO 274.

Credits:

1.00

Description:

Experiments designed to demonstrate principles presented in lecture, using a range of genetic model organisms that include *E. coli*, *B. subtilis*, *S. cerevisiae*, *D. melanogaster*, *S. fimicola*, and *C. elegans*.

Term:

Offered Fall Term

- **BIO-285 Microbiology**

Prerequisites:

BIO-111 and BIO-L111; BIO-L285 concurrently;

Credits:

3.00

Description:

Viruses and bacteria are surveyed in terms of their ecology, biochemistry, taxonomy, molecular biology and control.

Term:

Offered Spring Term

- **BIO-L285 Microbiology Laboratory**

Prerequisites:

BIO 111/L111; BIO 285 concurrently;

Credits:

1.00

Description:

Introduction to microbiological techniques and their applications to health, research and industry.

Term:

Offered Fall Term

- **BIO-304 Comparative Animal Physiology**

Prerequisites:

BIO-114 and BIO-L114. Must take BIO-L304 concurrently

Credits:

3.00

Description:

Mechanisms of physiological adaptations to environmental challenges are studied. Examples of gas exchange, osmoregulation, fluid transport, temperature regulation, nervous control, and movement are examined in various animal forms through class lecture and discussion, required readings, and external lectures. Spring semester.

Term:

Offered Spring Term

- **BIO-L304 Comp Animal Physiology Lab**

Prerequisites:

BIO-114 and BIO-L114. Must take BIO-304 concurrently.

Credits:

1.00

Description:

Selected physiological processes and mechanisms or adaptation in invertebrate and vertebrate animals are examined by observation and controlled experiments.

- **BIO-360 Cancer Biology**

Prerequisites:

BIO-111, BIO-L111, BIO-114, BIO-L114, BIO-274, and BIO-L274

Credits:

4.00

Description:

An examination of molecular and cellular mechanisms that lead to the development of cancer. Factors contributing to tumorigenesis, angiogenesis, and metastasis will be discussed; these factors, oncogenes, tumor suppressor genes, and signal transduction networks. In addition, an investigation of current strategies for cancer prevention and treatment will be considered.

- **BIO-377 Immunology**

Prerequisites:

BIO-114/L114; CHEM-211/L211; BIO-L377 concurrently;

Credits:

3.00

Description:

The concept of immunity, response to infection, structure of the immune system, biochemistry of immunoglobins, antigen-antibody interactions, allergy, immunological injury, lymphocyte subpopulations and cellular immunity, tolerance suppression and enhancement. Taught alternate/even years.

Term:

Offered Spring Term

- **BIO-L377 Immunology Laboratory**

Prerequisites:

BIO-114 and BIO-L114 and CHEM-211 and CHEM-L211. Must take BIO-377 concurrently.

Credits:

1.00

Description:

Anatomy of the immune system , immunoglobulin purification, hemagglutination, enzyme immunoassay. Immuno-chemistry, immunoelectrophoresis, gel precipitation assay.

Term:

Occasional

- **BIO-385 Advanced Microbiology**

Prerequisites:

BIO-285 and BIO-L285 BIO L385 must be taken concurrently

Credits:

3.00

Description:

Pathogenesis and host-parasite relationships; epidemiology and public health aspects of pathogenic microorganisms are stressed; molecular biology, applied and industrial microbiology. Current literature reviews. Taught alternate/odd years.

Term:

Offered Spring Term

- **BIO-L385 Advanced Microbiology Lab**

Prerequisites:

BIO 285/L285; BIO 385 must be taken concurrently

Credits:

1.00

Description:

Isolation, quantization and cultivation of microorganisms, advanced general and applied microbiology and molecular biology. Experience in media, chemical and culture preparations.

Term:

Offered Spring Term

- **BIO-403 Cell Biology**

Prerequisites:

BIO 111/L111; CHEM-211/L211; BIO-L403 concurrently;

Credits:

3.00

Description:

The study of cells, approached through examinations of biochemical mechanisms, the relation between the structure and function of biological molecules and organelles, and the regulation of normal and diseased cells.

Term:

Offered Fall Term

- **BIO-L403 Cell Biology Lab**

Prerequisites:

BIO-111 and BIO-L11 and CHEM-211 and CHEM-L211. Must take BIO-403 concurrently.

Credits:

1.00

Description:

Examination of biological molecules and their role in cell function. Techniques used in these examinations will include enzymatic analyses, gel electrophoresis, immunologic identification, chromatography, and spectroscopy. Students are expected to develop their proficiency in the laboratory techniques used, to analyze their results in a quantitative manner, and to present their findings.

Term:

Offered Fall Term

- **BIO-474 Molecular Genetics**

Prerequisites:

CHEM-311 or BIO-274 and BIO-L274 and BIO-L474 concurrently

Credits:

3.00

Description:

An examination of concepts and techniques of modern molecular biology. Topics include the structure and function of DNA, RNA, and proteins, the regulation of gene expression in prokaryotes and eukaryotes at transcriptional and post-transcriptional levels, genetic modification of organisms, and genome analysis. This course will incorporate readings and discussions of primary scientific literature. Spring semester.

Term:

Occasional

- **BIO-L474 Molecular Genetics Lab**

Prerequisites:

Take CHEM-331 or BIO-274 and BIO-L274. BIO-474 must be taken concurrently.

Credits:

1.00

Description:

This upper level laboratory course will consist of a semester-long project in the form of a series of consecutive experiments involving the generation of a genetically modified organism and its subsequent molecular analysis. Techniques employed will include genetic screens, DNA isolation, restriction endonuclease analysis, transformation of bacteria, gel electrophoresis, gene reported assays, RNA isolation, reverse transcription, and quantitative PCR.

Term:

Occasional

- **BIO-475 Developmental Biology**

Prerequisites:

BIO-114, L114 and CHEM-211, L211, and BIO-L475 concurrently

Credits:

3.00

Description:

This course focuses on embryonic development in vertebrates. The conceptual focus on evolutionary developmental biology includes comparative developmental mechanisms and Epigenetic processes.

Term:

Offered Fall Term

- **BIO-L475 Developmental Biology Lab**

Prerequisites:

BIO 114/L114, CHEM 211/L211 BIO 475 must be taken concurrently

Credits:

1.00

Description:

This laboratory course complements the lecture course. Exercises include internet exercises, examination of embryos, biochemical tests, use of developmental models, and student presentations. A number of model organisms are examined.

Term:

Offered Fall Term

• CHEM-314 Instrumental Analysis

Prerequisites:

CHEM 211; CHEM L314 must be taken concurrently.

Credits:

3.00

Description:

Theory and application of analytical instruments: ultraviolet, visible, fluorescence, atomic and emission spectroscopy; chromatographic methods; electrochemical measurements. Prerequisites: CHEM 211; CHEM L314 must be taken concurrently. 3 hour lecture. 1 term - 3 credits. Normally offered Fall/Spring, days.

Term:

Alternates Fall & Spring

• CHEM-L314 Instrumental Analysis Lab

Prerequisites:

CHEM L211; CHEM 314 must be taken concurrently

Credits:

1.00

Description:

Laboratory experiments in chemical analysis using instrumental techniques, including spectroscopy and chromatography. Data collection and evaluation includes computer-based methods. Reports are prepared in professional style. Prerequisites: CHEM L112; CHEM 314 must be taken concurrently. 4-hour Laboratory. 1 term - 1 credit. Normally offered Fall/Spring.

Term:

Alternates Fall & Spring

- **CHEM-331 Biochemistry I**

Prerequisites:

CHEM 212/L212 or permission of instructor. CHEM L331 must be taken concurrently.

Credits:

3.00

Description:

Explores the foundations of biochemistry, including the structure, organization and behavior of proteins, carbohydrates, lipids, and nucleic acids. Topics include enzyme catalysis, kinetics, and inhibition as well as protein regulation and membrane structure. Introduces the use of biochemical literature and computer-based bioinformatics techniques. Offered every fall.

Term:

Offered Fall Term

- **CHEM-L331 Biochemical Techniques I**

Prerequisites:

Must be taken concurrently with CHEM 331. Take CHEM-212 and CHEM-L212 or permission of instructor.

Credits:

1.00

Description:

Laboratory course introducing biochemical techniques. Includes buffer preparation, PCR, purification of DNA and proteins, agarose and polyacrylamide gel electrophoresis, protein quantitation and detection, and enzyme kinetic assays. Offered every Fall.

Term:

Offered Fall Term

- **CHEM-332 Biochemistry II**

Prerequisites:

CHEM 331

Credits:

4.00

Description:

This course explores the principles of bioenergetics and metabolism of biological compounds. Coverage includes intermediary metabolism of carbohydrates, lipids, amino acids, oxidative phosphorylation, and synthesis of purines and pyrimidines. Additional topics include the regulation and integration of metabolism. Lectures will be supplemented with discussions of the biochemical literature. Prerequisites: CHEM 331. 3 hours of lecture and 1 hour of recitation per week. Offered every Spring, days only.

Term:

Offered Spring Term

• **CHEM-390 Advanced Organic Chemistry**

Prerequisites:

Prerequisite: CHEM 212.

Credits:

3.00

Description:

Expands on topics introduced in Organic Chemistry I and II; depending on student interest, may include in-depth discussions of carbonyl chemistry, industrial organic chemistry, organometallic chemistry and biomolecules. Prerequisite: CHEM 212, concurrent enrollment in CHEM L390 required. 3 hours of lecture per week. Normally offered alternate years.

Term:

Alternates Fall & Spring

• **HLTH-301 Introduction to the U.S. Healthcare Systems**

Prerequisites:

Junior standing

Credits:

3.00

Description:

This course presents an overview of the origins, components, organization, and operation of the health system in the United States. It is an introduction to the major health issues and institutions, including the settings in which health services are delivered, providers of these services, and the public and private payers for services.

- **HLTH-325 Legal Environment of Healthcare**

Credits:

3.00

Description:

Students investigate the structural and functional aspects of the legal, institutional, and political factors that condition the character of the US healthcare industry, the role of the healthcare manager, the legislative process, administrative policy-making, and national trends related to political parties and interest groups. Topics in healthcare law include medical malpractice, informed consent, confidentiality of patient information, healthcare liability, and administrative law.

- **PHYS-215 Nanomaterials and the Energy Problem**

Prerequisites:

CHEM 111-112 or PHYS 111-112 Or Permission of Instructor

Credits:

4.00

Description:

This course is designed as an introduction to nanotechnology and some of its important uses. It is aimed at science majors who have taken basic courses in physics or chemistry. The course will cover the properties and uses of carbon-nanotubes, nanocomposites, and other nanomaterials that

are being fabricated in labs and industries around the world. It will serve as an introduction to the important role of nanomaterials in solving modern-day energy problems.

Term:

Occasional

- **MATH-130 Topics in Finite Mathematics**

Prerequisites:

MATH-104, or MATH-121, or MATH level 3

Credits:

4.00

Description:

Linear Modeling (for example, using linear functions to model supply/demand situations), graphing, linear programming, financial functions (compound interest, annuities, and amortization of loans) sets, Venn diagrams, counting and combinatorics, discrete probability, conditional probability, Bernoulli experiments, Bayes theorem. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

- **MATH-166 Calculus II**

Prerequisites:

MATH 165 with grade of C or better

Credits:

4.00

Description:

Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation,

convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-255 Probability and Statistics**

Prerequisites:

MATH-165 with a grade of C or better

Credits:

4.00

Description:

Topics include: random variable and distribution; expectation and variance; special discrete/continuous distributions (uniform, binomial, negative binomial, geometric, hypergeometric, Poisson, normal, and exponential distributions); joint distribution, marginal distribution and conditional distribution; covariance; limit theorems (law of large numbers and central limit theorem); introduction to confidence interval and hypothesis testing; regression analysis. Offered as needed.

- **MATH-265 Calculus III**

Prerequisites:

MATH 166 with grade of C or better

Credits:

4.00

Description:

Parametric equations and polar coordinates (curves, areas, conic sections); vectors and the geometry of space (the dot product, vector arithmetic, lines and planes in 3-space, the cross product, cylinders and quadratic surfaces); vector functions (limits, derivatives and integrals, motion in space); partial derivatives (functions of several variables, limits and continuity, tangent planes and differentials, chain rule, directional derivatives, gradient, extrema, Lagrange multipliers); multiple integrals (double integrals, applications); vector calculus (vector fields, line integrals, fundamental theorem for line integrals, Green's Theorem, curl and divergence, parametric surfaces, surface integrals). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-285 Discrete Mathematics**

Prerequisites:

MATH-165 with a grade of C or better

Credits:

4.00

Description:

Topics mostly selected from the following list: Logic and set theory, elementary number theory, relations and functions and their properties (equivalence relations, partial order relations, recurrence relations and their solutions); computational complexity of algorithms (big O notation); graphs and their properties (isomorphisms of graphs, Euler and Hamilton paths, shortest path problem, graph coloring) trees (tree traversal, minimum spanning trees); finite state machines; methods of proof (proof by induction, proof by contradiction). Prerequisite: MATH 220 or permission of instructor. 1 term - 4 credits (4 lecture hours per week). Normally offered at least once each year.

- **MATH-331 Introduction to Abstract Math**

Prerequisites:

MATH-165 and MATH-166 with a grade of C or better

Credits:

4.00

Description:

this course is intended to provide a firm foundation for and a taste of the study of advanced mathematics. While the course content varies somewhat, it is designed to give students a deeper understanding of the algebraic and analytical structure of the integers, the rational numbers and the real numbers and how they act as a building block to a variety of fields of mathematics. Students are introduced to the process of mathematical discovery and the language of mathematics. Exercises and projects are designed to illustrate the need for proof and to further refine the student's ability to analyze, conjecture and write mathematical proofs. This course is a prerequisite for most upper level mathematics courses and, after completing it a student will be in a position to determine realistically if he or she ought to major or minor in mathematics.

- **PHIL-363 Bio and Medical Ethics**

Prerequisites:

Prerequisite: Phil 119, or 123, or 127.

Credits:

4.00

Description:

An examination of the moral problems facing health-care practitioners, their patients, and others involved with the practice of medicine in today's society. Issues include euthanasia, the ethics of medical experimentation, the use of reproductive technologies, genetic counseling and genetic engineering, truth-telling and confidentiality in doctor-patient relationships, the cost and availability of medical care. Normally offered every third year.

Term:

Occasional

- **PSYCH-114 General Psychology**

Credits:

4.00

Description:

Surveys core theoretical concepts and contemporary empirical research from the major sub-fields of psychology: physiology; perception; cognition; learning; emotion; motivation; development; personality; psychopathology; psychotherapy; and social behavior. Required for psychology majors. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **PSYCH-233 Child Development**

Prerequisites:

PSYCH 114

Credits:

4.00

Description:

Examines physical, cognitive, emotional, and social development in youth (i.e., from conception through adolescence). Surveys major developmental approaches including biological, learning, and contextual/environmental theories. Major focus is on normal development. Normally offered every semester.

Term:

Offered Both Fall and Spring

Type:

Social Science

• **PSYCH-236 Psychology of the Family**

Credits:

4.00

Description:

Focuses on the various forms and structures of families and family life over time and across cultures, with emphasis on the psychological impact of such forms. The complex relationship among individual psychology, family relationships, and the larger social context is addressed. Topics include marriage, parenting, and divorce. Normally offered every semester.

Term:

Offered Both Fall and Spring

Type:

Social Science

• **PSYCH-321 Introduction to Counseling Skills**

Prerequisites:

PSYCH 114 and Sophomore standing

Credits:

4.00

Description:

Explores and examines basic models of helping and provides supervised practice of helping skills. Format includes lecture, discussion, role play, and video feedback. Normally offered yearly.

Term:

Offered Fall Term

Type:

Social Science

- **PSYCH-326 Abnormal Psychology**

Prerequisites:

PSYCH 114, and Sophomore standing or permission of the instructor

Credits:

4.00

Description:

Introduces the concepts of psychological disorder and focuses on description and etiology of various mental health problems from a variety of different theoretical perspectives. Students develop familiarity with the DSM classification system and major disorders described within it, including mood and anxiety disorders, thought disorders, and personality disorders. Normally offered each semester.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **PSYCH-333 Adult Development & Aging**

Prerequisites:

PSYCH 114 and Sophomore Standing.

Credits:

4.00

Description:

Surveys theory and research about the physical, mental, and psychological aspects of life-span development. Age-related changes in mental health, personality, self-image, sexual relations, friendships, career development and spirituality are explored. Aging may also be explored as a global, demographic and cross-cultural issue. Research surrounding death and dying, bereavement, and hospice/nursing home care is also presented. Normally offered alternate years.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **PSYCH-336 Developmental Psychopathology**

Prerequisites:

PSYCH 114 and sophomore standing

Credits:

4.00

Description:

Examines the etiology and symptoms of disorders of childhood and adolescence, as well as current therapeutic approaches. Developmental changes in the incidence of externalizing disorders, such as conduct disorder and attention deficit disorder, and internalizing disorders, such as depression and

eating disorders, are addressed. Disorders that affect both behavioral and mental functioning such as Fetal Alcohol Syndrome and autism may also be included. The role of development in the understanding and treatment of the childhood disorders is reviewed. Normally offered yearly.

Term:

Offered Fall Term

Type:

Social Science

- **SOC-113 Introduction to Sociology**

Credits:

4.00

Description:

An introduction to the sociological understanding of human interaction, group process and social structures. Students are introduced to basic concepts, theories and methods of sociological investigation. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **SOC-220 Childhood and Adolescence in Contemporary Society**

Credits:

4.00

Description:

This course examines the development of children and adolescents from biological, psychological, and sociological perspectives. Major themes and changes associated with each developmental stage are discussed. The course explores practical implications of theory and research (parenting,

juvenile justice, etc.), and current topics in child and adolescent development. Class format includes lectures discussion, debates and direct observation of children.

Term:

Occasional

- **SOC-242 Law, Health & Human Rights**

Credits:

4.00

Description:

This course will look at the special opportunities and obligations of those in the health and legal professions to protect human rights. There will be an overview of human rights doctrine and key documents. Students will learn to apply human rights principles to particular occupations in the health and legal professions.

Term:

Occasional

- **SOC-253 Sociology of Health and Illness**

Credits:

4.00

Description:

This course provides students with an introduction to how social norms, structures, and practices shape experiences of illness and health. Among the topics that will be covered are: health and the environment, the reasons some groups of people are less healthy than others, living with chronic illness and disabilities, and public debates surrounding issues such as performance enhancing drugs and sports, Attention Deficit Disorder and the HPV vaccine. Required for all students in the health, Medicine and the Body Concentration.

Term:

Occasional

- **SOC-254 U.S. Health Care Landscapes**

Prerequisites:

This course fulfills the ECR requirement.

Credits:

4.00

Description:

In this course, students will learn about how the U.S. health care system works. We will study the politics and economics of the health care system and discuss the key health care policy issues of this decade. Using the theoretical perspectives provided by sociology, we will look at issues of power, hierarchy, race, and gender vis-a-vis the health care system. Reading for this course centers on first person narratives by people working in the health care system. This course fulfills the ECR requirement.

Term:

Occasional

Type:

Expanded Classroom Requirement

- **SOC-256 Sociology of Aging**

Credits:

4.00

Description:

Consideration of the physiological, psychological and social factors associated with the aging process. Contemporary American values toward the elderly are compared and contrasted with historical and cross-cultural studies. Current opportunities and techniques enabling the elderly to enrich and expand their societal roles are explored.

Term:

Occasional

- **SOC-354 Death and Dying**

Credits:

4.00

Description:

An examination of changing definitions of life and death, social factors affecting causes and rates of death, care of the dying and their families, institutionalization, the funeral industry, suicide, crisis intervention, and the impact of technology on the dying process.

Term:

Occasional

Type:

Diverse Perspectives

- **SOC-355 Women and Health**

Credits:

4.00

Description:

An exploration of topics that relate particularly to women as providers and consumers in the health care system. The course will consider historical and current information on issues of reproduction, technology, health and illness.

Term:

Occasional

- **SOC-357 Global Health and Healing**

Credits:

4.00

Description:

An examination of how different cultures understand health and illness. Healing approaches from Asia, Africa and the Americas will be explored.

Term:

Occasional

Type:

Cultural Diversity Opt B, Diverse Perspectives

Please check with the program director for potential Radiation Science elective approval of other biology, chemistry, physics, math, psychology, or sociology courses.

Required Clinical Hours:

14 hours per week; Semester 2, Year 1

40 hours per week; 12 week Summer Session

24 hours per week, Year 2

Note:

The department reserves the right to require the withdrawal of a student from the Radiation Therapy Certificate program if, in its estimation, the probability of the student's success is doubtful. Factors such as academic performance, interest, effort, and suitability for the field will be considered. Students who defer entry into the program, for any reason, will forfeit their space in the program and will be required to reapply for the following year. A student may be dismissed from the Radiation Therapy major if he/she fails to maintain the minimum GPA of 3.0 or if he/she achieves a final grade lower than "B" in any of the Radiation Therapy Certificate courses listed above.

If admitted into the Radiation Therapy Certificate, part-time and full-time students must complete clinical requirements within three years of being admitted. Radiation Therapy graduates may seek employment immediately following graduation and will also be eligible to apply for the American Registry of Radiologic Technologists (ARRT) Radiation Therapy Certification Exam.

2015-2016 Archived Catalog Information

Radiation Therapy Certificate

The Physics & Engineering Department provides a rigorous and comprehensive education to students interested in pursuing careers in radiation therapy. Students receive instruction from a multifaceted faculty in diverse clinical settings while using the most advanced technologies to develop clinical skills that will prepare them for entry level positions. Graduates of our program will think critically, communicate effectively, and appreciate the importance of continued education in maintaining their competence.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Requirements](#)
- [Radiation Therapy Courses](#)

- **PHYS-206 Introduction to Radiation Oncology**

Prerequisites:

Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:

4.00

Description:

This course will serve as an introduction to the role of the radiation therapist and medical dosimetrist in a Radiation Oncology department. Through a combination of detailed lectures, discussions, role-playing, case studies, and hands-on laboratory exercises, students will be introduced to the professional and clinical aspects of their respective professions. Additional topics included radiation safety, patients rights, infection control, communication for the clinic, patient assessment, and psychosocial aspects of cancer including death and dying.

Term:

Offered Fall Term

- **PHYS-301 Clinical Radiation I**

Prerequisites:

PHYS 206; Radiation Therapy & Medical Dosimetry Students Only

Credits:

3.00

Description:

Through a systems-based approach, this course will review anatomy and physiology while teaching medical terminology. This course will also discuss the major cancers associated with each anatomical system and introduce the student to radiation therapy treatment techniques and procedures.

Term:

Offered Spring Term

- **PHYS-L301 Radiation Therapy Rotation I**

Prerequisites:

Radiation Therapy Students Only

Credits:

1.00

Description:

Provides the necessary clinical experience to become a radiation therapist. All labs are conducted at our clinical affiliates. Under the supervision of licensed radiation therapists, the students will become increasingly proficient in the manipulation of treatment equipment, will gain a thorough understanding of radiation treatment plans, will deliver a prescribed radiation dose to cancer patients, and will acquire knowledge of all relevant aspects of patient care. These labs are available only to students enrolled in the clinical track.

Term:

Offered Spring Term

- **PHYS-302 Clinical Radiation II**

Prerequisites:

Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:

3.00

Description:

This course is a continuation of MS 301. Through the same didactic approach, the course will cover all of the anatomical systems and their related medical terminology NOT covered in MS 301.

Term:

Offered Fall Term

- **PHYS-L302 Radiation Therapy Rotation II**

Prerequisites:

Radiation Therapy (Major or Certificate) Students Only

Credits:

1.00

Description:

Provides the necessary clinical experience to become a radiation therapist. All labs are conducted at our clinical affiliates. Under the supervision of licensed radiation therapists, the students will become increasingly proficient in the manipulation of treatment equipment, will gain a thorough understanding of radiation treatment plans, will deliver a prescribed radiation dose to cancer patients, and will acquire knowledge of all relevant aspects of patient care. These labs are available only to students enrolled in the clinical track.

Term:

Offered Fall Term

• PHYS-L303 Radiation Therapy Rotation III

Prerequisites:

PHYS L302; Radiation Therapy Students Only

Credits:

1.00

Description:

Provides the necessary clinical experience to become a radiation therapist. All labs are conducted at our clinical affiliates. Under the supervision of licensed radiation therapists, the students will become increasingly proficient in the manipulation of treatment equipment, will gain a thorough understanding of radiation treatment plans, will deliver a prescribed radiation dose to cancer patients, and will acquire knowledge of all relevant aspects of patient care. These labs are available only to students enrolled in the clinical track.

Term:

Offered Spring Term

• PHYS-L304 Radiation Therapy Practicum

Prerequisites:

Take PHYS-301 PHYS-L301;*Course fulfills the following: Expanded Classroom Requirement.

Credits:

1.00

Description:

Student radiation therapists will spend 12 weeks (full-time, 40 hrs/wk) gaining hands on patient care experience in the department of radiation oncology at our clinical affiliates. Under constant supervision by licensed therapists, the student will be guided toward the application of theory in the real world of cancer treatment.

Term:

Summer

Type:

Expanded Classroom Requirement

- **PHYS-315 Radiation Physics I**

Prerequisites:

PHYS L315 concurrently; Radiation Biology, Radiation Science, Radiation Therapy (Major or Certificate), or Medical Dosimetry Students Only

Credits:

3.00

Description:

Content is designed to establish a thorough knowledge of the radiation physics used in radiation therapy treatments. Topics to be covered in this course include a review of basic physics (energy, mass, matter, SI units), structure of matter, types of radiations, nuclear transformations, radioactive decay, the fundamentals of x-ray generators and x-ray production, interactions of x and gamma rays with matter, absorbed dose, measurements of dose, principles of and practical use of ionization chambers and electrometers, Geiger counters and other survey meters, principles and practical use of TLDs, film, calorimetry, scintillation detectors, radiation protection and quality assurance.

Term:

Offered Fall Term

- **PHYS-L315 Radiation Physics I Lab**

Prerequisites:

PHYS 315 concurrently

Credits:

1.00

Description:

This lab will cover a broad range of experiments associated with the Department of Radiation Oncology at Massachusetts General Hospital. Topics include: Quality assurance measurements for radiation therapy, calibration of radiation teletherapy unit using ionization chambers, measurements of

dose distribution via film, measurements of dose in a phantom via TLDs, radiation protection survey of therapy installation and brachytherapy sources, and radiation biology.

Term:

Offered Fall Term

Type:

Expanded Classroom Requirement

- **PHYS-317 Radiation Physics II**

Prerequisites:

PHYS 315; Radiation Science, Radiation Therapy and Medical Dosimetry Students Only

Credits:

4.00

Description:

This course is intended to expand on the concepts and theories presented in Radiation Physics I. It will provide a detailed analysis of the treatment units used in external beam radiation therapy, their beam geometry, basic dose calculations and dose distributions. This course will also cover the principles, theories, and uses of brachytherapy. This course was previously MS 412

Term:

Offered Spring Term

- **PHYS-415 Dosimetry I**

Prerequisites:

PHYS 315; PHYS L415 concurrently; Radiation Therapy & Medical Dosimetry Students Only

Credits:

3.00

Description:

This course will discuss the factors that influence treatment planning and govern the clinical aspects of patient treatment. Topics to be covered include treatment planning with 3-D CT and MRI beams, isodose plan descriptions, clinical applications of treatment beams and advanced dosimetric calculations. This course will also contrast new emerging technologies with conventional radiation therapy techniques (SRT, SRS, IMRT, Image Guided Therapy, Respiratory Gating).

Term:

Offered Spring Term

• PHYS-L415 Dosimetry I Lab

Prerequisites:

PHYS 415 concurrently; Radiation Therapy & Medical Dosimetry Students Only

Credits:

1.00

Description:

This lab will provide the student with the opportunity to apply clinical dosimetry principles and theories learned in the classroom to actual treatment planning situations within the clinic. Through hands-on lab exercises the student will demonstrate the use of the treatment planning instruments and interpret information they compute.

Term:

Offered Spring Term

• PHYS-416 Radiation Biology

Prerequisites:

PHYS 315;

Credits:

4.00

Description:

Topics covered include: physio-chemical aspects of energy absorption, the sequence of events after irradiation occurring on the molecular, cellular and organized tissue levels, radiation response and repair of eukaryotic cells, effects of radiation quality, dose rate, environmental conditions, cell cycle kinetics, tumor and normal cell population dynamics, radiation-induced carcinogenesis and mutagenesis, tumor pathophysiology and radiobiology, and recent advances in experimental radiation oncology.

Term:

Offered Spring Term

• PHYS-420 Radiation Oncology & Pathology

Prerequisites:

Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:

4.00

Description:

This course, taught by Massachusetts General Hospital physicians will review cancer epidemiology, etiology, detection, diagnosis and prevention, lymphatic drainage, and treatment. The pathology(s) of each cancer will be presented in detail including the rationale for each preferred modality of treatment.

Term:

Offered Fall Term

• PHYS-422 Radiology

Prerequisites:

Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:

4.00

Description:

This course will begin with an introduction to radiology, reviewing x-ray production and discussing basic radiation physics, image formation (Kv, mA) and distortion (blur, magnification), conventional processing and digital imaging. The above-mentioned radiographic imaging concepts will be presented with conventional lectures as well as with several imaging laboratories. In addition, the basic principles of each imaging modality, including mammography, CT, MRI, Nuc Med, and Ultra Sound, will be presented. With the use of departmental tours and guest lecturers, the use, benefits and limitations of each will be discussed. Building upon the information previously presented, radiographic anatomy will also be covered with an emphasis on cross sectional anatomy. Students will review basic anatomy viewed in sectional planes (axial/transverse) of the body. Using CT and MRI images, the topographic relationship between internal organs and surface anatomy will be interpreted and discussed.

Term:

Offered Fall Term

• PHYS-475 Senior Seminar for Radiation Therapy

Prerequisites:

Senior status, Radiation Therapy & Medical Dosimetry Students Only

Credits:

4.00

Description:

This course will be available to senior students enrolled in the Radiation Therapy and Medical Dosimetry programs. This seminar style course will serve a number of purposes; one will be to prepare our graduating students for board certification in their respective disciplines (AART for Radiation Therapy and MDCB for Medical Dosimetry). Exam preparation will include the use of lectures, student teaching, online teaching tools, mini mock exams, and a full-length mock exam. The seminar will also assist students with the preparation of their professional resumes including discussions regarding the skills necessary to make job interviews successful.

• SCI-108 Introduction to Cancer Care

Credits:

4.00

Description:

This course will introduce the students to the top ten U.S. adult cancers, as well as the most common pediatric cancers. Topics to be covered include cancer causes, detection, and prevention. Psychosocial aspects of being diagnosed with cancer and the role nutrition plays for cancer patients will be described. The course will also discuss the major treatment modalities for each cancer including radiation therapy, surgery, chemotherapy, and bone marrow transplants. The goals and objectives of the course will be met through the use of various teaching tools including but not limited to: PowerPoint presentations, videos, guest lectures, and a poster project with a presentation component. Cognitive assessment of the students will be accomplished through homework, quizzes, exams, and a group poster and oral presentation. Students with any type of academic background are welcome.

2015-2016 Archived Catalog Information

Religious Studies

The Religious Studies program is an interdisciplinary program designed to give students the opportunity to explore the various depths, dimensions, and meanings of world religions. Religious thought and doctrines--in both Western and non-western cultures from ancient civilizations to modern times--will be presented as a vehicle for expanding the various ways in which religious ideas and practices can be understood.

There is no major available in Religious Studies.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Minor Requirements](#)
- [Religious Studies Courses](#)

Minor Requirements: 5 courses, 20 credits

Core Requirement (1 Course, 4 Credits)

Choose one of the following:

- RS-111 Introduction to World Religions: Western Traditions

Credits:

4.00

Description:

This course will explore the comparative history and structure of Western religious traditions, broadly understood, and their impact on other world religions, while attempting to recognize the similarities and the differences among them. Traditions to be studied include Greek and Roman religion,

the monotheistic faiths (Judaism, Christianity, and Islam, as well as Zoroastrianism, Sikhism and Bahá'ism). We will also explore the impact of the Western religions on indigenous traditions, such as African religion, Native American religion, and Pacific Island religion. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. 1 term - 4 credits. Normally offered every year.

Type:

Diverse Perspectives

- **RS-112 Introduction to World Religions: Eastern Traditions**

Credits:

4.00

Description:

This course will examine a variety of Eastern religions, including Hinduism, Buddhism, Jainism, Confucianism, Taoism, and Shintoism. Possible connections to be explored will be the impact of these traditions on others, such as Pacific Islands and African religion, as well as the growing place of Eastern religion in the West. This course will explore the history and structure of each tradition, while attempting to recognize the similarities and the differences among them. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. Normally offered every year. Cultural Diversity B

Type:

Cultural Diversity Opt B,Asian Studies,Diverse Perspectives

Electives (4 Courses, 16 Credits)

Choose four of the following:

- **ENG-317 Classical Mythology**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

Ancient Greek and Roman myths, their motifs, themes and interpretations. Normally offered every third year.

• **GVT-208 Politics / Religion**

Credits:

4.00

Description:

This course explores what major religions say about the status and responsibilities of the state and how, in turn, selective states have, in theory and practice, structured the place of religions in political life. Particular attention is given to issues of politics and religion in the United States. Cultural Diversity A

Type:

Cultural Diversity Opt A, Social Science, BSJ SOCIAL SCIENCE, Diverse Perspectives

• **PHIL-260 Philosophy of Religion**

Credits:

4.00

Description:

This course analyzes and interprets fundamental religious concepts and beliefs, examines the rational support for religious faith, and addresses the relation between religion and society. Fundamental questions concerning the nature and existence of God, salvation, and immortality will be explored, and for this the primary focus will be Western religious conceptions but may broaden to include other world religions. Other topics may include: whether all religions can be equally valid and true; the relation of religion and the state; the status of miracles; the history and psychology of religion; the conflict between religion and science. 1 term - 4 credits. Normally offered alternate years.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **PHIL-261 Eastern Philosophy**

Credits:

4.00

Description:

The exposition and critical evaluation of Hinduism, Buddhism, Confucianism, Taoism, and Islam. Special attention is given to foundation principles as well as to the similarities and differences of each of these philosophies to basic ideas in Western philosophy. 1 term - 4 credits. Normally offered alternate years. C b

Term:

Occasional

Type:

Cultural Diversity Opt B,Cultural Diversity BFA,Humanities & History,Humanities Literature Requireme

- **PHIL-263 Native American Religion**

Credits:

4.00

Description:

This course is an examination of Native American (Indian) religious experience, both the similarities and differences among the myths and rituals of the major tribes which comprise the background of our nation's history of Western migration and settlement. The emphasis will be on understanding how life was experienced by these peoples through a close look at the philosophical meanings of their mythology and ethics. 1 term - 4 credits. Normally offered alternate years. C a

Term:

Occasional

Type:

Cultural Diversity Opt A

- PHIL-265 Women in Spirituality

Credits:

4.00

Description:

An exploration into the various dimensions and ideologies concerning the role of the feminine in relation to the Divine. Belief systems, myths and archetypes from ancient Goddess worship to 20th century feminist theology will be examined in terms of the philosophical content and psychological consequences. Special emphasis will be placed on feminist metaphysical structures for understanding consciousness and Reality. Classes will be conducted by means of lectures, primary and secondary texts and class discussions. Normally offered alternate years. Cultural Diversity A

Term:

Occasional

Type:

Cultural Diversity BFA,Cultural Diversity Opt A,Diverse Perspectives

- PHIL-267 Chinese Philosophy

Credits:

4.00

Description:

A survey of the main developments in Chinese Philosophy. The course begins with the early dynastic concept of humanism and then turns to Confucius and Mencius. Having developed the central Confucian doctrines, students next examine the Taoist response to Confucianism in the writings of Lao Tzu and Chuang Tzu. The course then considers Zen Buddhism, which is called Ch'an Buddhism in China, where it originated. In particular, students study the concept of sudden enlightenment before turning to the Neo-Confucian scholars.

Term:

Occasional

Type:

- **SOC-226 Religion in Contemporary Society**

Prerequisites:

This course fulfills the ECR requirement.

Credits:

4.00

Description:

An examination of the fundamental purpose and functions of religion in society. Major religious systems in America are analyzed in terms of basic values and structure. The impact of changes in religious organizations upon clergy, laity and society are discussed. This class fulfills the ECR requirement.

Term:

Occasional

Type:

Expanded Classroom Requirement

Special Topics

Some students may wish to include specialized research in their minor. They may do so by including as part of their program an independent study course of a field study project.

- **SCI-113 A Habitable Earth Within the Solar System**

Credits:

4.00

Description:

This course introduces non-science majors to concepts that are central to making our planet habitable. It presents Earth in context of the solar system with a broad view of global climate change and energy resources in a quest to better understand the workings our planet. This course on Earth and Planetary Science is suitable for students who may have taken their last science and math course several years ago, or are just curious about knowing facts on major issues that pertain to the future of our planet. Together with a reading component, this course aims to give students a flavor of how researchers think, investigate and develop conclusions that directly affect our political and economic future. Topics covered in this course range from the solar system to the study of search for other habitable Earth-like planets, search for extraterrestrial life, and evolution of life on Earth. Other

characteristics of this course are heavy use of audio-visual materials often including computer animations and simulations, in-class experiment demonstration, and intensive use of INTERNET-based resources.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGR

• SCI-161 Physical Science

Prerequisites:

One course from MATH 104 OR MATH 121 OR MATH 130 OR MATH 134 OR MATH 165 or permission of Dept. Chair. Students who have taken SCI 101/L101 or SCI 102/L102 are not eligible to take SCI 161.

Credits:

4.00

Description:

This is a one-semester, non-lab introduction to the physical sciences. The student will obtain a good understanding of a wide variety of topics covered in selected chapters of the text (measurements, Newton's laws, energy, heat and global warming, wave motion, electricity and magnetism, atomic physics, nuclear physics, chemical reactions, and astronomy) and will be able to solve problems illustrating the most important concepts. Students who have taken SCI 101/L101 or SCI 102/L102 are not eligible to take SCI 161.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ

• SCI-165 Inner Workings of Physics Universe

Credits:

4.00

Description:

About 15 billion years ago, (data indicate) the big bang occurred and the universe was born. With it came physical laws and a spectacular array of consequences that lead to the universe as we know it. This non-lab , 4 credit course explores the inner workings of the physical universe in terms of the scientific inquiry which lead to Newton's laws, an understanding of energy, waves, light, electricity, atomic structure, chemical reactions, nuclear physics, particle physics, relativity, and the big bang theory. During the course, students will learn to make use of modern resources to access scientific and technical literature to research a scientific topic. They will learn to distinguish between science and technology (e.g. quantum mechanics and nanotechnology, the discovery of the Higgs boson and the large hadron collider that made it possible, etc.) and to understand how the science, technology, and engineering disciplines play a crucial role in recognizing and solving problems of society and the world that we share.

Type:

- **SCI-171 The Built World: How Humans Engineer Environments**

Credits:

4.00

Description:

The most basic needs of humans have not changed - water, food, and shelter - but the means of meeting these needs has. In this course, we will examine how technology-driven societies operate by studying how cities are built and how they function. Topics will include water supply and distribution systems; transportation systems (including road and bridge design and construction); building design, construction, and operation (including skyscraper and sustainable building design), and waste removal systems (municipal and industrial wastewater removal and treatment, solid waste removal and treatment). This is not a course about little gadgets and widgets; this is a course about big engineering marvels; and it emphasizes applications of science - how things work - rather than scientific theory.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGNR

- **SCI-H171 The Built World: How Humans Engineer Environments- Honors**

Prerequisites:

Honors students or at least a 3.3 GPA only

Credits:

4.00

• SCI-173 Geographic Information Science (GIS) The Power of Digital Maps

Prerequisites:

SCI L173 Must be taken concurrently Knowledge of Windows type Application

Credits:

3.00

Description:

Geographic Information Science (GIS) link information (number of fire hydrants on a block) to features on a map (e.g., a point representing street address) that has a designated geographic location (as designated by global coordinates). Unlike paper maps, GIS software allows the production of interactive maps that allows the user to layer data, to indicate spatial patterns, to analyze trends, and to combine different features of the mapped area in novel ways. For example, a business person may wish to use GIS to determine the optimum location of retail outlet (based on the mapped demographics of a neighborhood), while an environmental engineer may use GIS to describe the location of outfalls to see how they correlate to areas of stream pollution. In this course, students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **SCI-L173 GIS Lab**

Prerequisites:

Must be taken concurrently with SCI-173

Credits:

1.00

Description:

This laboratory illustrates concepts and methods taught in SCI 173. In this lab students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **SCI-181 Science and Life in the 21st Century**

Credits:

4.00

Description:

This is a four credit, non-lab, science course that examines the central scientific problems confronting the 21st century. The course studies particular topics and teaches the necessary science around these topics to provide a good understanding of the issues. The topics currently are: Energy, Science and Economic Decisions, Sustainability of Life on Earth, Health and Science.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGNR

- **SCI-184 Contemporary Science and Innovation**

Credits:

4.00

Description:

This is a 4 credit, project based science course that examines the central scientific problems confronting the 21st century. The course consists of lectures, class discussions, field trips, and in-class hands-on activities designed to familiarize the student with different concepts of the lectures. The current focus is on sustainable energy production. A final team project related to the course topics will be given. This is the version of SCI 183 without a separate lab component. Students who have taken SCI 183, L183 are not allowed to take this course.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGNR,NATURAL SCIENCE FOR BS

- **SCI-201 Physics for Future Presidents**

Credits:

4.00

Description:

This course presents a topical introduction to the key principles and concepts of physics in the context of the world events and natural phenomena that confront world leaders and that require informed decisions and responses. Energy, health, counter-terrorism, remote sensing, space programs, nuclear proliferation, and a host of other modern challenges have technological and scientific dimensions, the understanding of which is essential to avoiding disastrous policy decisions. This course considers the application of physics to these societal challenges. The material is covered at a level

and pace that a future world leader should be able to handle; the emphasis is on the development of physical reasoning skills, and not on detailed, mathematical problem solving.

Type:

SCI TECH ENGR

- **SCI-210 Earth and Planetary Crystals**

Credits:

4.00

Description:

This course will provide undergraduate students of various disciplines with an introduction to gems and crystals using interactive, evidence-based teaching approaches. Crystalline forms of matter are critical to our existence. Using innovative teaching strategies of in-class hands-on demonstration, supplemented with visuals of crystal details, the course provides students insights into the formation, alteration and unique properties that make crystals invaluable. Topics range from the study of proteins and nucleic acids to the interior of planets. The in-class lectures will provide a basic guide that will serve as a platform for individually catered in-depth study. Therefore, the course is open to advanced students as well, who can pick up higher level of information for discussion and class projects.

Type:

NATURAL SCIENCE FOR BS,NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGR

- **SCI-251 Intro to Coastal Geology**

Prerequisites:

Intro Math and must take SCI-L251 concurrently

Credits:

3.00

Description:

Coastal environments will be analyzed with an emphasis on the important environmental characteristics of these areas. Management and environmental problems within the coastal and offshore areas such as beach erosion, beach access, and oil spills will be considered. One required

field trip.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **SCI-L251 Intro Coastal Geology I Lab**

Prerequisites:

SCI 251 must be taken concurrently

Credits:

1.00

Description:

An introduction to laboratory and field techniques used in the geological study of coastal environments. Field trips will be taken to local coastal areas.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

2015-2016 Archived Catalog Information

Sociology

The Sociology Department offers a challenging and stimulating curriculum that prepares students to engage as critical thinkers and active citizens within a diverse global society. The Sociology Department offers its students an integrated program of study that combines a broad curriculum within sociology with an option to specialize in specific concentrations within the major. Minors in General Sociology, Crime & Justice, Health & Society, and Education Studies are also available.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Crime & Justice Concentration](#)
- [General Sociology Concentration](#)
- [Health & Society Concentration](#)
- [Youth & Community Concentration](#)
- [Minor Requirements](#)
- [Accelerated Bachelor's/Master's Degree in Crime & Justice Studies](#)
- [Honors](#)
- [Societies](#)
- [Sociology Courses](#)

Major Requirements: 9 courses, 36 credits

The major in Sociology consists of 9 courses (36 credits). Students will select one of four concentrations:

1. Crime & Justice,
2. General Sociology,
3. Health & Society, or

4. Youth & Community.

All Sociology majors are exposed to the foundations of the discipline; the study of sociology beyond their concentration; and a focus within a selected concentration.

Due to the sequencing and prerequisites of some required courses, students should plan to take their introductory-level course during their first year at Suffolk. Students must complete at least 20 credits in the major in residence at Suffolk.

Students who successfully fulfill the requirements for programs in Crime & Justice; Health & Society; or Youth & Community may apply for certificates of completion. Students should consult with their advisors on proper procedures for certificate awards.

- [Sociology Courses](#)

The concentration in Crime & Justice gives students the knowledge and skills to enter, and be effective in, the various fields of adult and juvenile justice, youth development, community justice, criminal justice, victim advocacy, and human services.

Major Requirements with Crime & Justice Concentration: 9 courses, 36 credits

Core Requirements (4 courses, 16 credits)

- **SOC-214 Research Methods in Sociology**

Prerequisites:

SOC 113 or 116 with C or better & one other SOC course. Cannot be taken concurrently with SOC 310,315,or 333.

Credits:

4.00

Description:

How sociologists decide what to study, how they select a research design, sample and collect data, analyze results, interpret findings, and write up reports. Students are introduced to the techniques most frequently used by sociologists and undertake their own small research project. Required for all Sociology majors.

Term:

Offered Both Fall and Spring

- **SOC-333 Sociology of Crime**

Prerequisites:

SOC-113 or SOC-116 with a minimum grade of C and 1 additional SOC course. Cannot be taken concurrently with SOC-214

Credits:

4.00

Description:

The question Why is there crime? lies at the heart of this course. This class will address what we mean by crime, who gets to define what crime is, how crime can be explained and how it can be reduced. Making sense of crime is essential if we are to respond effectively to victims and offenders. This course offers an in-depth examination of the many different theories of crime. These include biological, psychological, and sociological theories of victimization and offending. The course will study these theories in the context of many different kinds of criminal offending. By the end of the course, students will have a deep understanding of where these theories came from; what their strengths and weaknesses are; whether they are supported by research findings; and what implications these theories have for stopping crime.

- **SOC-433 Senior Seminar**

Prerequisites:

SOC 113 or 116 (with a grade of C or better) SOC 214, and SOC 315 or 333. Seniors only. Required of all majors.

Credits:

4.00

Description:

This course explores contemporary topics in crime and justice, interrelating empirical and theoretical analyses. Topical areas vary by semester and by instructor. Students engage in a substantial research project to demonstrate mastery. Required for all students in the Crime and Justice Concentration.

Choose one of the following:

- **SOC-113 Introduction to Sociology**

Credits:

4.00

Description:

An introduction to the sociological understanding of human interaction, group process and social structures. Students are introduced to basic concepts, theories and methods of sociological investigation. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **SOC-116 Social Justice**

Credits:

4.00

Description:

An examination of traditional and contemporary problems associated with major social institutions such as the family, economics, government and education. Social forces related to ethnicity, social class, health and welfare, and urbanization are also included. Alternative remedial measures based on behavioral science theories are discussed. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

In addition to earning a minimum passing grade of “C” in an introductory (100-level) Sociology course, Sociology major students must take and pass one other Sociology course before taking Research Methods in Sociology (SOC-214) or Sociology of Crime (SOC-333).

Concentration Requirements (3 courses, 12 credits)

- **SOC-234 Crime and Justice in American Society**

Credits:

4.00

Description:

An overview of issues and social variables involved in the pre-arrest and arrest stages followed by a more in-depth analysis of pre-trial, trial, sentencing, and correctional phases. Sociological and criminal justice models are examined and compared with the actual processes and purported functions of criminal justice agencies. Required for all majors in the Crime and Justice Concentration.

Term:

Offered Both Fall and Spring

Choose two of the following Crime & Justice electives; at least one of these must be at the 300-level:

- **SOC-209 Youth in American Society**

Credits:

4.00

Description:

The goal of the course is to provide a broad overview of children and youth and their place in American society. Particular attention is paid to (1) the impact of geographical location, social class, gender, race, sexuality, popular culture, mass media, and technology; (2) the intersection of youth cultures and mainstream society; and (3) the contention that some youth cultures are deviant.

- **SOC-211 Corrections and Punishment**

Prerequisites:

Take SOC-234 or SOC-333;

Credits:

4.00

Description:

A sociological exploration of coercive and incapacitative responses to crime. Attention is given to the origins and patterning of segregative controls, the correctional claims of prison systems, alternatives to incarceration and relationships between types of crime, and criminals and varieties of punitive response.

Term:

Occasional

- **SOC-218 Crime and Law in Indian Country**

Credits:

4.00

Description:

What happens if you commit a crime on an Indian reservation? Who will prosecute you and how will they punish you? This course will explore the roots of tribal legal systems and criminal law, both the Native and American influences. You will gain an understanding of tribal government, legal systems, criminal law, and the role of tradition in contemporary tribal law. The course will also examine the conflict between Native and Non-Native perspectives on several cases: sovereignty, rights to cultural practices, women, freedom of religion, and land.

Term:

Occasional

Type:

Cultural Diversity Opt A,Diverse Perspectives

- **SOC-230 Bad Girls**

Credits:

4.00

Description:

This class explores the images of the traditional bad girl in films. The course examines the idea of moving beyond merely the delinquent, many images in film suggest that girls and women who break with the socially condoned role of femininity are somehow bad. Girls and women who have power or challenge authority are often portrayed in films as deviant and therefore bad. Girls and women who are frigid are just as bad as their sexually promiscuous silver-screen opposites. This course further focuses on the impact of these images on real life social roles for girls and women as well as the symbiotic relationship between fact and fiction.

Term:

Occasional

Type:

Cultural Diversity Opt A

- **SOC-232 Street Gangs**

Credits:

4.00

Description:

This course provides an overview of youth gangs and their sociological underpinnings, which are rooted in poverty and racism. Topical areas are discussed in relation to these key factors. Study topics include the history of gangs, theories about gang formation and individual membership, gangs

and criminal behavior, socio-cultural importance of gangs, and strategies to control gang behavior. The course will utilize current gang issues in the US generally and in Massachusetts in particular as a basis to better understand the nuances of youth gangs.

Type:

Cultural Diversity Opt A

- **SOC-236 Deviance and Social Control**

Credits:

4.00

Description:

Who and what is deviant? How shall the society respond? The course examines a range of deviance theories and associated social policies. A number of case studies will be used to evaluate these theories, such as body piercing, witchcraft, gay and lesbian sexuality, corporate crime, disability, prostitution, violence against women, racism, anti-Semitism, and gangs.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **SOC-238 Cops & Robbers: Crime on Film**

Credits:

4.00

Description:

An examination of images of crime and justice portrayed in the American cinema. Special attention is paid to the social and historical forces that have shaped popular representations of good and evil during the modern era.

Term:

Occasional

- **SOC-239 Men and Violence**

Credits:

4.00

Description:

An exploration of the nature of masculinity and its connection to interpersonal and collective violence in American society. The course focuses on the emotional, spiritual, social and cultural roots of the crisis of boyhood and masculinity as a context for and consequence of violence.

Term:

Occasional

Type:

Cultural Diversity Opt A

- **SOC-275 Women and Crime**

Credits:

4.00

Description:

This course examines the complex relationships between women and crime today. This focus will include women as criminal offenders; women as victims of crime; and women as both offenders and victims. Course materials draw from recent feminist scholarship on these issues in the social sciences. Topics include the causes of women's crime women, drugs, and crime; child abuse and trauma; prostitution and sex trafficking; race, gender and victimization; and feminist social movements against violence. Crimes of violence against women are a central focus in the course.

Term:

Occasional

Type:

Cultural Diversity Opt A

- **SOC-301 Sociology of Law**

Credits:

4.00

Description:

Law and legal systems are examined in contemporary society. Emphasis is placed on the manner in which legal structures and processes interact with other social arrangements and are transformed over time.

- **SOC-305 Crime and Mental Illness In Contemporary US**

Credits:

4.00

Description:

Incarcerated and criminalized Americans suffer from extraordinarily high rates of physical and mental illnesses ranging from Hepatitis C, tuberculosis and HIV/AIDS to bipolar disorder, PTSD, substance abuse, and schizophrenia. This course explores connections between illness and involvement with the correctional system from the perspective of the individual offender as well as in terms of broader American cultural and political patterns.

- **SOC-322 Tough Guise**

Credits:

4.00

Description:

Representations of masculinity in contemporary societies are examined in terms of their social sources and consequences. Images and scripts for doing masculinity are explored through case studies of film, television, sports, advertising, comic books, video games, music and other media that define what it means to be a man.

Term:

Occasional

Type:

- **SOC-332 Restorative Justice**

Credits:

4.00

Description:

The purpose of this course is to introduce students to the principles of restorative justice and to examine the programs, practices and policies within schools, juvenile justice and the adult criminal justice system which implement a restorative practices. Restorative justice is a different philosophy of responding to harm which provides new roles for the victim, offender, community and professionals . We will compare a restorative approach to crime with the traditional system of discipline and crime control and critique the shortcomings of an adversarial or retributive response to criminal behavior. We will explore the theoretical and historical origins of traditional justice systems and restorative approaches. We will also examine how these ideas are being applied in practical partnerships between the justice system and the community here in the United States and around the world.

Type:

Expanded Classroom Requirement

- **SOC-334 Sociology of Policing**

Prerequisites:

SOC 333 or SOC 234

Credits:

4.00

Description:

An investigation of the emergence, organization, and structure of police systems. The course focuses on the conditions surrounding the relationship between the police and policed in different historical, cultural, political, and economic contexts.

Term:

Occasional

- **SOC-336 Probation and Parole**

Prerequisites:

SOC-234 or SOC-333;

Credits:

4.00

Description:

Correctional theories are reviewed along with the historical development of probation and parole. Current research and analytical perspectives reflecting on administrative problems, innovative policies and the internal philosophical inconsistencies of these systems are examined.

- **SOC-337 Juvenile Justice and the Law**

Credits:

4.00

Description:

Considers the problems surrounding the legal definition and handling of juveniles who confront the law as offenders, clients and victims. Attention is devoted to the study of the special legal categories and procedures established for juveniles, the problems facing professionals providing juvenile services and the most significant directions of legal and social change affecting youth in our society. Normally offered every year. Fulfills the Sociology Department's Social Policy requirement.

- **SOC-338 White Collar Crime**

Credits:

4.00

Description:

An examination of the relationship between crime, business activity, and technology with special attention to the crimes of the powerful and the changing relationship between economic development and criminal activity.

Term:

Occasional

- **SOC-340 Licit/Lethal: America's Drug Problem**

Credits:

4.00

Description:

Most Americans think of prohibited substances such as marijuana, cocaine or heroin when they hear the word drug. This course will provide an in-depth examination of legal drug use in American society. A broad conceptual framework will be presented that illustrates how history, politics, society and economics all have played a key role in defining certain substances as permissible in America. Fulfills the Sociology Department Social Policy and Globalization requirements.

Term:

Offered Fall Term

- **SOC-341 International Drug Control Policy**

Credits:

4.00

Description:

Relying on a simplistic demand or supply explanation of why Americans use/abuse drugs obscures the reality of America's drug problem, is ineffective as a guide to public policy and has unforeseen, often negative consequences. Drug use is a complex and multi-faceted issue. There are no easy answers. To comprehend the complexity of America's drug problem one needs an understanding of the geography, history, religion, law, economics and international politics of the Middle and Far East, Eastern Europe, Africa, Mexico, and Central and South America. This class will provide this basic understanding without losing sight that the problem we seek to remedy is our own.

Term:

Offered Spring Term

Type:

Cultural Diversity Opt B

- **SOC-342 Law, Health & Human Rights**

Credits:

4.00

Description:

This course will look at the special opportunities and obligations of those in the health and legal professions to protect human rights. There will be an overview of human rights doctrine and key documents. Students will learn to apply human rights principles to particular occupations in the health and legal professions.

- **SOC-347 Immigration Law and Policy**

Prerequisites:

Prerequisite: SOC 113 or SOC 116 OR Instructor's consent

Credits:

4.00

Description:

This course examines U.S. Immigration legislation and policies, focusing on how and why various immigration laws and policies have been established and implemented throughout history. We will address the intersection between immigration policy and race, ethnicity, nationality and socioeconomic status, as well as explore the effects that immigration laws have had on various immigrant groups and society in general.

Term:

Occasional

Type:

Cultural Diversity Opt A

- **SOC-390 The Prison Experience, Literature and Film**

Credits:

4.00

Description:

An examination of prison writings, films, and the actual experience of prison life from literary and sociological perspectives. Students will have an opportunity to examine their own perspectives of the prison as a symbol and shadow in American Society and compare these impressions with the actual experience of inmates, correctional officers and others who have lived in the prison nation.

Term:

Occasional

Sociology Electives (2 courses, 8 credits)

Students must choose two courses in Sociology from outside the Crime & Justice concentration.

2015-2016 Archived Catalog Information

Sociology

The Sociology Department offers a challenging and stimulating curriculum that prepares students to engage as critical thinkers and active citizens within a diverse global society. The Sociology Department offers its students an integrated program of study that combines a broad curriculum within sociology with an option to specialize in specific concentrations within the major. Minors in General Sociology, Crime & Justice, Health & Society, and Education Studies are also available.

The concentration in General Sociology gives students broad sociological knowledge and skills that prepare them for graduate study or for a variety of careers.

Major Requirements with General Sociology Concentration: 9 courses, 36 credits

Core Requirements for General Sociology (4 courses, 16 Credits)

- **SOC-214 Research Methods in Sociology**

Prerequisites:

SOC 113 or 116 with C or better & one other SOC course. Cannot be taken concurrently with SOC 310,315,or 333.

Credits:

4.00

Description:

How sociologists decide what to study, how they select a research design, sample and collect data, analyze results, interpret findings, and write up reports. Students are introduced to the techniques most frequently used by sociologists and undertake their own small research project. Required for all Sociology majors.

Term:

Offered Both Fall and Spring

- **SOC-433 Senior Seminar**

Prerequisites:

SOC 113 or 116 (with a grade of C or better) SOC 214, and SOC 315 or 333. Seniors only. Required of all majors.

Credits:

4.00

Description:

This course explores contemporary topics in crime and justice, interrelating empirical and theoretical analyses. Topical areas vary by semester and by instructor. Students engage in a substantial research project to demonstrate mastery. Required for all students in the Crime and Justice Concentration.

Choose one of the following:

- **SOC-113 Introduction to Sociology**

Credits:

4.00

Description:

An introduction to the sociological understanding of human interaction, group process and social structures. Students are introduced to basic concepts, theories and methods of sociological investigation. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **SOC-116 Social Justice**

Credits:

4.00

Description:

An examination of traditional and contemporary problems associated with major social institutions such as the family, economics, government and education. Social forces related to ethnicity, social class, health and welfare, and urbanization are also included. Alternative remedial measures based on behavioral science theories are discussed. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

Choose one of the following:

- **SOC-315 Social Conflict and Social Change**

Prerequisites:

SOC 113 or 116 with a grade of C or better and one other SOC course; CANNOT be taken concurrently with SOC 214;

Credits:

4.00

Description:

An examination and comparison of the origin, development and structure of the major theoretical approaches in contemporary sociology. Contributions of different branches of sociology to theory are explored with special attention to the relevance of sociological explanations for society and the social process. Students must have taken SOC 113 or SOC 116 and passed with a C or better and one other course from the sociology department. Normally offered every semester.

Term:

Occasional

• SOC-333 Sociology of Crime

Prerequisites:

SOC-113 or SOC-116 with a minimum grade of C and 1 additional SOC course. Cannot be taken concurrently with SOC-214

Credits:

4.00

Description:

The question Why is there crime? lies at the heart of this course. This class will address what we mean by crime, who gets to define what crime is, how crime can be explained and how it can be reduced. Making sense of crime is essential if we are to respond effectively to victims and offenders. This course offers an in-depth examination of the many different theories of crime. These include biological, psychological, and sociological theories of victimization and offending. The course will study these theories in the context of many different kinds of criminal offending. By the end of the course, students will have a deep understanding of where these theories came from; what their strengths and weaknesses are; whether they are supported by research findings; and what implications these theories have for stopping crime.

General Sociology Elective Requirement (5 courses, 20 credits)

In addition to the 16 credits in the required core, students in General Sociology are required to take five additional Sociology electives (20 credits); at least one of these must be at the 200-level, and at least two must be at the 300-level. Students are strongly encouraged, in consultation with their advisors, to select courses that provide a broad and balanced knowledge of the discipline of sociology.

In addition to earning a minimum passing grade of “C” in an introductory (100-level) Sociology course, Sociology majors and minors must take and pass one other Sociology course before taking Research Methods in Sociology (SOC-214) or a sociological theory course (SOC-315 or SOC-333).

Health & Society Concentration

The Health & Society concentration prepares students for employment in the health care sector by providing students with an understanding of the ways in which cultural patterns influence bodies and health; a comprehensive overview of the social, economic, and political forces that shape the American health care system; an understanding of the global inequalities that give rise to disparities in health status; and an understanding of the health experiences of men, women, children, the elderly, and other populations.

Many Health & Society students seek jobs in the health care sector upon graduation. These jobs may be in hospitals, government agencies, insurance companies, and community organizations. Others will choose to continue their education at the graduate level. The Health & Society concentration is good preparation for graduate study in education, public health, social work, hospital, or public administration, as well as joint RN/MS programs that fast-track college graduates into the nursing profession.

Major Requirements with Health & Society Concentration: 9 courses, 36 credits

Core Requirements (4 courses, 16 credits)

- **SOC-113 Introduction to Sociology**

Credits:

4.00

Description:

An introduction to the sociological understanding of human interaction, group process and social structures. Students are introduced to basic concepts, theories and methods of sociological investigation. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **SOC-116 Social Justice**

Credits:

4.00

Description:

An examination of traditional and contemporary problems associated with major social institutions such as the family, economics, government and education. Social forces related to ethnicity, social class, health and welfare, and urbanization are also included. Alternative remedial measures based on behavioral science theories are discussed. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

Choose one of the following:

- **SOC-315 Social Conflict and Social Change**

Prerequisites:

SOC 113 or 116 with a grade of C or better and one other SOC course; CANNOT be taken concurrently with SOC 214;

Credits:

4.00

Description:

An examination and comparison of the origin, development and structure of the major theoretical approaches in contemporary sociology. Contributions of different branches of sociology to theory are explored with special attention to the relevance of sociological explanations for society and the social process. Students must have taken SOC 113 or SOC 116 and passed with a C or better and one other course from the sociology department. Normally offered every semester.

Term:

Occasional

- **SOC-333 Sociology of Crime**

Prerequisites:

SOC-113 or SOC-116 with a minimum grade of C and 1 additional SOC course. Cannot be taken concurrently with SOC-214

Credits:

4.00

Description:

The question Why is there crime? lies at the heart of this course. This class will address what we mean by crime, who gets to define what crime is, how crime can be explained and how it can be reduced. Making sense of crime is essential if we are to respond effectively to victims and offenders. This course offers an in-depth examination of the many different theories of crime. These include biological, psychological, and sociological theories of victimization and offending. The course will study these theories in the context of many different kinds of criminal offending. By the end of the course, students will have a deep understanding of where these theories came from; what their strengths and weaknesses are; whether they are supported by research findings; and what implications these theories have for stopping crime.

In addition to earning a minimum passing grade of “C” in an introductory (100-level) Sociology course, Sociology majors must take and pass one other Sociology course before taking Research Methods in Sociology (SOC-214) or a sociological theory course (SOC-315, SOC-333).

Concentration Requirements (3 courses, 12 credits)

- **SOC-253 Sociology of Health and Illness**

Credits:

4.00

Description:

This course provides students with an introduction to how social norms, structures, and practices shape experiences of illness and health. Among the topics that will be covered are: health and the environment, the reasons some groups of people are less healthy than others, living with chronic illness and disabilities, and public debates surrounding issues such as performance enhancing drugs and sports, Attention Deficit Disorder and the HPV vaccine. Required for all students in the health, Medicine and the Body Concentration.

Term:

Occasional

- **SOC-254 U.S. Health Care Landscapes**

Prerequisites:

This course fulfills the ECR requirement.

Credits:

4.00

Description:

In this course, students will learn about how the U.S. health care system works. We will study the politics and economics of the health care system and discuss the key health care policy issues of this decade. Using the theoretical perspectives provided by sociology, we will look at issues of power, hierarchy, race, and gender vis-a-vis the health care system. Reading for this course centers on first person narratives by people working in the health care system. This course fulfills the ECR requirement.

Term:

Occasional

Type:

Expanded Classroom Requirement

Choose one of the following Health & Society electives:

- **SOC-221 Environment and Society**

Credits:

4.00

Description:

The history of the American Environmental Movement and eco-feminism will be examined as well as issues of pollution and depletion. Sustainable technologies and other current progressive programs will be addressed.

- **SOC-256 Sociology of Aging**

Credits:

4.00

Description:

Consideration of the physiological, psychological and social factors associated with the aging process. Contemporary American values toward the elderly are compared and contrasted with historical and cross-cultural studies. Current opportunities and techniques enabling the elderly to enrich and expand their societal roles are explored.

Term:

Occasional

- **SOC-273 Women in Contemporary Society**

Credits:

4.00

Description:

A critical analysis of theory and research related to the socialization, roles and social participation of women in contemporary society.

Term:

Occasional

- **SOC-276 Sex and Society**

Credits:

4.00

Description:

An examination of human sexuality as experience and institution. Sexuality is considered in relationship to power, love, religion, family, race, gender, sexual orientation, violence and courtship.

Term:

Occasional

- **SOC-303 How Pocahontas Lives: the Health of Native American Women and Girls**

Credits:

4.00

Description:

Native American women and girls experience many threats to their well-being: polluted environments, violence, and the continuation of colonial practices mean that their lives are at risk. Dominant political, economic, and cultural norms do little to protect them. Yet Native American women and girls can and do assert their right to well-being as they choose to define it, achieving health and self-determination. This class will examine the indigenous women and girls of the United States, to consider the continued impact of colonialism on women's health and the role of self-determination in creating opportunities for the improvement of Native American women's health.

- **SOC-304 Hot, Polluted, and Hungry**

Credits:

4.00

Description:

In this course we will explore our natural environment and human interaction with it. We will study how the environment is impacting human life, exposure to environmental harms, and our foods which we may forget come from the earth. We will study the hidden ways that humans shape and are shaped by the environment. We will have an exciting and challenging time together trying to make sense of the ways our natural environment and our lives are evolving.

- **SOC-305 Crime and Mental Illness In Contemporary US**

Credits:

4.00

Description:

Incarcerated and criminalized Americans suffer from extraordinarily high rates of physical and mental illnesses ranging from Hepatitis C, tuberculosis and HIV/AIDS to bipolar disorder, PTSD, substance abuse, and schizophrenia. This course explores connections between illness and involvement with the correctional system from the perspective of the individual offender as well as in terms of broader American cultural and political patterns.

- **SOC-306 Population and Society**

Credits:

4.00

Description:

An introduction to demography or the study of population and its size, structure, and the ways it changes over time. Demographers study love, death and adventures, or the different patterns of fertility, mortality, and migration across the globe. The social causes and consequences of high mortality and fertility in sub-Saharan Africa, rapid fertility decline in China, and low fertility and mortality in western Europe are examined. Demographic approaches to social problems like world famine, teen pregnancy, HIV/AIDS pandemic, and social security system budget deficits are also considered.

- **SOC-340 Licit/Lethal: America's Drug Problem**

Credits:

4.00

Description:

Most Americans think of prohibited substances such as marijuana, cocaine or heroin when they hear the word drug. This course will provide an in-depth examination of legal drug use in American society. A broad conceptual framework will be presented that illustrates how history, politics, society and economics all have played a key role in defining certain substances as permissible in America. Fulfills the Sociology Department Social Policy and Globalization requirements.

Term:

Offered Fall Term

- **SOC-341 International Drug Control Policy**

Credits:

4.00

Description:

Relying on a simplistic demand or supply explanation of why Americans use/abuse drugs obscures the reality of America's drug problem, is ineffective as a guide to public policy and has unforeseen, often negative consequences. Drug use is a complex and multi-faceted issue. There are no easy answers. To comprehend the complexity of America's drug problem one needs an understanding of the geography, history, religion, law, economics and international politics of the Middle and Far East, Eastern Europe, Africa, Mexico, and Central and South America. This class will provide this basic understanding without losing sight that the problem we seek to remedy is our own.

Term:

Offered Spring Term

Type:

Cultural Diversity Opt B

- **SOC-342 Law, Health & Human Rights**

Credits:

4.00

Description:

This course will look at the special opportunities and obligations of those in the health and legal professions to protect human rights. There will be an overview of human rights doctrine and key documents. Students will learn to apply human rights principles to particular occupations in the health and legal professions.

- **SOC-354 Death and Dying**

Credits:

4.00

Description:

An examination of changing definitions of life and death, social factors affecting causes and rates of death, care of the dying and their families, institutionalization, the funeral industry, suicide, crisis intervention, and the impact of technology on the dying process.

Term:

Occasional

Type:

Diverse Perspectives

- **SOC-355 Women and Health**

Credits:

4.00

Description:

An exploration of topics that relate particularly to women as providers and consumers in the health care system. The course will consider historical and current information on issues of reproduction, technology, health and illness.

Term:

Occasional

• **SOC-357 Global Health and Healing**

Credits:

4.00

Description:

An examination of how different cultures understand health and illness. Healing approaches from Asia, Africa and the Americas will be explored.

Term:

Occasional

Type:

Cultural Diversity Opt B, Diverse Perspectives

Sociology Electives (2 courses, 8 credits)

Choose two additional Sociology electives from outside the Health & Society concentration.

2015-2016 Archived Catalog Information

Sociology

The Sociology Department offers a challenging and stimulating curriculum that prepares students to engage as critical thinkers and active citizens within a diverse global society. The Sociology Department offers its students an integrated program of study that combines a broad curriculum within sociology with an option to specialize in specific concentrations within the major. Minors in General Sociology, Crime & Justice, Health & Society, and Education Studies are also available.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

Youth & Community Concentration

The Youth & Community Concentration is designed for students preparing to work with children, teens, and young adults in a variety of settings that do not require teacher certification. The Youth & Community concentration explores a range of complex societal issues related to youth in local and global educational and community contexts. The concentration provides a strong theoretical framework needed to understand contemporary educational and community issues affecting youth. Students will explore the transformative power of education, relationship building, and effective programming to positively impact youth development. The concentration is grounded on foundational sociological and educational courses supplemented by an array of experiential

opportunities (service learning and internships). This concentration is designed to prepare students for various careers in education related fields, non-profit agencies, and religious, cultural, and community organizations that specialize in youth outreach and programming.

Majors Requirements with Youth & Community Concentration: 9 courses, 36 credits

Core Requirements (4 courses, 16 credits)

- **SOC-214 Research Methods in Sociology**

Prerequisites:

SOC 113 or 116 with C or better & one other SOC course. Cannot be taken concurrently with SOC 310,315,or 333.

Credits:

4.00

Description:

How sociologists decide what to study, how they select a research design, sample and collect data, analyze results, interpret findings, and write up reports. Students are introduced to the techniques most frequently used by sociologists and undertake their own small research project. Required for all Sociology majors.

Term:

Offered Both Fall and Spring

- **SOC-433 Senior Seminar**

Prerequisites:

SOC 113 or 116 (with a grade of C or better) SOC 214, and SOC 315 or 333. Seniors only. Required of all majors.

Credits:

4.00

Description:

This course explores contemporary topics in crime and justice, interrelating empirical and theoretical analyses. Topical areas vary by semester and by instructor. Students engage in a substantial research project to demonstrate mastery. Required for all students in the Crime and Justice Concentration.

Choose one of the following:

- **SOC-113 Introduction to Sociology**

Credits:

4.00

Description:

An introduction to the sociological understanding of human interaction, group process and social structures. Students are introduced to basic concepts, theories and methods of sociological investigation. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **SOC-116 Social Justice**

Credits:

4.00

Description:

An examination of traditional and contemporary problems associated with major social institutions such as the family, economics, government and education. Social forces related to ethnicity, social class, health and welfare, and urbanization are also included. Alternative remedial measures based on behavioral science theories are discussed. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

Choose one of the following:

- **SOC-315 Social Conflict and Social Change**

Prerequisites:

SOC 113 or 116 with a grade of C or better and one other SOC course; CANNOT be taken concurrently with SOC 214;

Credits:

4.00

Description:

An examination and comparison of the origin, development and structure of the major theoretical approaches in contemporary sociology. Contributions of different branches of sociology to theory are explored with special attention to the relevance of sociological explanations for society and the social process. Students must have taken SOC 113 or SOC 116 and passed with a C or better and one other course from the sociology department. Normally offered every semester.

Term:

Occasional

- **SOC-333 Sociology of Crime**

Prerequisites:

SOC-113 or SOC-116 with a minimum grade of C and 1 additional SOC course. Cannot be taken concurrently with SOC-214

Credits:

4.00

Description:

The question Why is there crime? lies at the heart of this course. This class will address what we mean by crime, who gets to define what crime is, how crime can be explained and how it can be reduced. Making sense of crime is essential if we are to respond effectively to victims and offenders. This course offers an in-depth examination of the many different theories of crime. These include biological, psychological, and sociological theories of victimization and offending. The course will study these theories in the context of many different kinds of criminal offending. By the end of the course, students will have a deep understanding of where these theories came from; what their strengths and weaknesses are; whether they are supported by research findings; and what implications these theories have for stopping crime.

In addition to earning a minimum passing grade of “C” in an introductory (100-level) Sociology course, Sociology major students must take and pass one other Sociology course before taking Research Methods in Sociology (SOC-214) or a sociological theory course (SOC-315, SOC-333).

Concentration Requirements (3 courses, 12 credits)

- **SOC-209 Youth in American Society**

Credits:

4.00

Description:

The goal of the course is to provide a broad overview of children and youth and their place in American society. Particular attention is paid to (1) the impact of geographical location, social class, gender, race, sexuality, popular culture, mass media, and technology; (2) the intersection of youth cultures and mainstream society; and (3) the contention that some youth cultures are deviant.

- **EDUC-310 Culturally Responsive Education**

Credits:

4.00

Description:

The relationship between cultural diversity and schooling is explored by examining impediments to academic achievement and advancement by minority students, non-native English speaking students, and other under-represented groups. Topics include: standardized testing, identification of inequities, legal and ethical responsibilities of teachers, and promoting equity. Ten pre-practicum observation hours required for teacher candidates.

Term:

Offered Fall Term

Type:

Cultural Diversity Opt A, Social Science, Diverse Perspectives

- **EDUC-414 Urban Schooling**

Credits:

4.00

Description:

This course is an in-depth investigation of policies effecting urban schools; topics include: demographic influence on education, influences of national and state regulations on urban schools, sociological factors unique to urban schools, and in-depth analysis of equity and achievement.

Term:

Occasional

Type:

Social Science

Concentration Electives (1 courses, 4 credits)

Choose one of the following:

- **EDUC-202 Educational Psychology**

Credits:

4.00

Description:

Examines the nature and development of human abilities and the teaching-learning process. Considers the facts and generalizations of child and adolescent growth and development, working with diverse cultures, and special needs children in school settings. Ten hours of field work.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **EDUC-203 Service Learning: Pre-K Outreach and Tutoring**

Credits:

4.00

Description:

Students complete a minimum of 35 hours of tutoring in an educational setting, or community organization, in conjunction with a weekly seminar on campus. Open to all majors. No previous experience required.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement, Social Science

- **EDUC-205 Service Learning: Community Tutoring Project**

Prerequisites:

This class fulfills the Expanded Classroom Requirement

Credits:

4.00- 8.00

Description:

Students complete 35 hours per semester of educational tutoring in a local school (K-5), in conjunction with a weekly seminar on campus. Open to all majors. No previous experience required.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement, Social Science, Local Engagement Experience

- **EDUC-215 Service Learning Jumpstart Community Literacies**

Credits:

4.00

Description:

This course is designed for Jumpstart Corps members to develop competencies in teaching strategies for reading and writing. The course introduces theoretical and instructional issues in the development of literacy skills. Students will be engaged in reflective, critical consideration of students' diverse needs in the acquisition of literacy.

- **EDUC-315 Strategies for Emerging English Learners**

Credits:

4.00

Description:

This course examines the specific needs and challenges of the various language and cultural groups in schools. Topics include: theories of 1st and 2nd language acquisition, strategies for teaching academic content, modifying instruction in the mainstream classroom, creating classroom cultures that invite all students into learning, the role of advocacy and professional collaboration in ESL, and analysis of policies related to assessment and placement of English Language Learners.

Type:

Diverse Perspectives, Social Science

- **EDUC-408 Youth Programming**

Credits:

4.00

Description:

This course focuses on the exploration and understanding of issues, strategies and frameworks related to developing and implementing youth programs. Students will be exposed to developmental theories, and various components of effective youth programmatic planning. Topics include: conducting needs assessments, developing goals and objectives, logistics planning, recruitment and training, and program evaluation.

Type:

Social Science

- **EDUC-415 Practicum: Middle School Teaching**

Prerequisites:

Coordinator of Student Teaching or Program Director's Consent

Credits:

8.00

Description:

A 12-week practicum experience as a student teacher in a middle school. See regulations regarding student teaching.

Term:

Offered Spring Term

Type:

Social Science

- **EDUC-424 Global Issues and Trends in American Education**

Credits:

4.00

Description:

Examines major current issues of educational policy against the background of demographic trends, technological innovations, standardized testing, and curricular shifts.

Term:

Occasional

Type:

Social Science

- **SOC-223 Families in Contemporary Society**

Credits:

4.00

Description:

An exploration of the diversity of contemporary families. Comparisons are made between the cultural myths of the ideal family and the lived realities. Challenges confronting contemporary families and their implications for social policy are examined in such areas as work/family conflicts, gay and lesbian families, welfare, family violence.

Term:

Occasional

Type:

Social Science

- **SOC-230 Bad Girls**

Credits:

4.00

Description:

This class explores the images of the traditional bad girl in films. The course examines the idea of moving beyond merely the delinquent, many images in film suggest that girls and women who break with the socially condoned role of femininity are somehow bad. Girls and women who have

power or challenge authority are often portrayed in films as deviant and therefore bad. Girls and women who are frigid are just as bad as their sexually promiscuous silver-screen opposites. This course further focuses on the impact of these images on real life social roles for girls and women as well as the symbiotic relationship between fact and fiction.

Term:

Occasional

Type:

Cultural Diversity Opt A

- **SOC-232 Street Gangs**

Credits:

4.00

Description:

This course provides an overview of youth gangs and their sociological underpinnings, which are rooted in poverty and racism. Topical areas are discussed in relation to these key factors. Study topics include the history of gangs, theories about gang formation and individual membership, gangs and criminal behavior, socio-cultural importance of gangs, and strategies to control gang behavior. The course will utilize current gang issues in the US generally and in Massachusetts in particular as a basis to better understand the nuances of youth gangs.

Type:

Cultural Diversity Opt A

- **SOC-276 Sex and Society**

Credits:

4.00

Description:

An examination of human sexuality as experience and institution. Sexuality is considered in relationship to power, love, religion, family, race, gender, sexual orientation, violence and courtship.

Term:

Occasional

- **SOC-308 Sociology of Education**

Credits:

4.00

Description:

Education is key in a democracy in which students need to develop themselves into knowledgeable people, with a strong sense of self, able to think critically with a developed ability to question others and to feel and act as empowered, active citizens. This is a tall order given the varieties of pressures on schools these days. But it is extremely important for these skills to be developed. With the shift in the economy, schools are going to be the critical factor in enabling students to compete in a globalized workplace and world.

- **SOC-322 Tough Guise**

Credits:

4.00

Description:

Representations of masculinity in contemporary societies are examined in terms of their social sources and consequences. Images and scripts for doing masculinity are explored through case studies of film, television, sports, advertising, comic books, video games, music and other media that define what it means to be a man.

Term:

Occasional

Type:

Cultural Diversity Opt A

- **SOC-332 Restorative Justice**

Credits:

4.00

Description:

The purpose of this course is to introduce students to the principles of restorative justice and to examine the programs, practices and policies within schools, juvenile justice and the adult criminal justice system which implement a restorative practices. Restorative justice is a different philosophy of responding to harm which provides new roles for the victim, offender, community and professionals . We will compare a restorative approach to crime with the traditional system of discipline and crime control and critique the shortcomings of an adversarial or retributive response to criminal behavior. We will explore the theoretical and historical origins of traditional justice systems and restorative approaches. We will also examine how these ideas are being applied in practical partnerships between the justice system and the community here in the United States and around the world.

Type:

Expanded Classroom Requirement

• SOC-337 Juvenile Justice and the Law

Credits:

4.00

Description:

Considers the problems surrounding the legal definition and handling of juveniles who confront the law as offenders, clients and victims. Attention is devoted to the study of the special legal categories and procedures established for juveniles, the problems facing professionals providing juvenile services and the most significant directions of legal and social change affecting youth in our society. Normally offered every year. Fulfills the Sociology Department's Social Policy requirement.

• SOC-340 Licit/Lethal: America's Drug Problem

Credits:

4.00

Description:

Most Americans think of prohibited substances such as marijuana, cocaine or heroin when they hear the word drug. This course will provide an in-depth examination of legal drug use in American society. A broad conceptual framework will be presented that illustrates how history, politics, society and economics all have played a key role in defining certain substances as permissible in America. Fulfills the Sociology Department Social Policy and Globalization requirements.

Term:

Offered Fall Term

- **SOC-341 International Drug Control Policy**

Credits:

4.00

Description:

Relying on a simplistic demand or supply explanation of why Americans use/abuse drugs obscures the reality of America's drug problem, is ineffective as a guide to public policy and has unforeseen, often negative consequences. Drug use is a complex and multi-faceted issue. There are no easy answers. To comprehend the complexity of America's drug problem one needs an understanding of the geography, history, religion, law, economics and international politics of the Middle and Far East, Eastern Europe, Africa, Mexico, and Central and South America. This class will provide this basic understanding without losing sight that the problem we seek to remedy is our own.

Term:

Offered Spring Term

Type:

Cultural Diversity Opt B

- **SOC-343 Child Welfare Services**

Credits:

4.00

Description:

A survey of the historical development and current composition of services for children, including income maintenance, daycare, foster and institutional care and the adoption process.

Term:

Occasional

- **SOC-344 Community Organization**

Credits:

4.00

Description:

A study of the different types and functions of communities. Through identifying community needs, resources, and structure, students learn effective ways to organize for change.

- **SOC-406 The Immigrant Experience**

Prerequisites:

SOC-113 or SOC-116 and 4 credits of a SOC course at the 200 level or above

Credits:

4.00

Description:

The United States of America: A land of immigrants; The Great Melting Pot. This country has indeed attracted immigrants from all over the world. However, not all have been welcomed or treated equally. This course will investigate the reasons various immigrant groups (past and present) have come to the United States. We will also examine their experiences and the impact race, ethnicity, gender, class and social structures have had on them. During Spring Break the class will visit Ellis Island and the Tenement Museum in New York and the Lowell National Historical Park in Lowell. The class will also visit various sites in Boston throughout the semester.

Type:

Cultural Diversity Opt A, Expanded Classroom Requirement, Local Engagement Experience

Experiential Requirement (1 course, 4 credits)

Choose one of the following:

- **EDUC-203 Service Learning: Pre-K Outreach and Tutoring**

Credits:

4.00

Description:

Students complete a minimum of 35 hours of tutoring in an educational setting, or community organization, in conjunction with a weekly seminar on campus. Open to all majors. No previous experience required.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement, Social Science

- **EDUC-205 Service Learning: Community Tutoring Project**

Prerequisites:

This class fulfills the Expanded Classroom Requirement

Credits:

4.00- 8.00

Description:

Students complete 35 hours per semester of educational tutoring in a local school (K-5), in conjunction with a weekly seminar on campus. Open to all majors. No previous experience required.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement, Social Science, Local Engagement Experience

- **EDUC-215 Service Learning Jumpstart Community Literacies**

Credits:

4.00

Description:

This course is designed for Jumpstart Corps members to develop competencies in teaching strategies for reading and writing. The course introduces theoretical and instructional issues in the development of literacy skills. Students will be engaged in reflective, critical consideration of students' diverse needs in the acquisition of literacy.

- **EDUC-315 Strategies for Emerging English Learners**

Credits:

4.00

Description:

This course examines the specific needs and challenges of the various language and cultural groups in schools. Topics include: theories of 1st and 2nd language acquisition, strategies for teaching academic content, modifying instruction in the mainstream classroom, creating classroom cultures that invite all students into learning, the role of advocacy and professional collaboration in ESL, and analysis of policies related to assessment and placement of English Language Learners.

Type:

Diverse Perspectives, Social Science

- **EDUC-408 Youth Programming**

Credits:

4.00

Description:

This course focuses on the exploration and understanding of issues, strategies and frameworks related to developing and implementing youth programs. Students will be exposed to developmental theories, and various components of effective youth programmatic planning. Topics include: conducting needs assessments, developing goals and objectives, logistics planning, recruitment and training, and program evaluation.

Type:

Social Science

- **EDUC-415 Practicum: Middle School Teaching**

Prerequisites:

Coordinator of Student Teaching or Program Director's Consent

Credits:

8.00

Description:

A 12-week practicum experience as a student teacher in a middle school. See regulations regarding student teaching.

4.00

Description:

An introduction to the sociological understanding of human interaction, group process and social structures. Students are introduced to basic concepts, theories and methods of sociological investigation. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **SOC-116 Social Justice**

Credits:

4.00

Description:

An examination of traditional and contemporary problems associated with major social institutions such as the family, economics, government and education. Social forces related to ethnicity, social class, health and welfare, and urbanization are also included. Alternative remedial measures based on behavioral science theories are discussed. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

Students must earn a grade of "C" or better in either of these classes in order to enroll in a research methods or sociological theory class.

Choose one of the following:

- **SOC-214 Research Methods in Sociology**

Prerequisites:

SOC 113 or 116 with C or better & one other SOC course. Cannot be taken concurrently with SOC 310,315,or 333.

Credits:

4.00

Description:

How sociologists decide what to study, how they select a research design, sample and collect data, analyze results, interpret findings, and write up reports. Students are introduced to the techniques most frequently used by sociologists and undertake their own small research project. Required for all Sociology majors.

Term:

Offered Both Fall and Spring

- **SOC-333 Sociology of Crime**

Prerequisites:

SOC-113 or SOC-116 with a minimum grade of C and 1 additional SOC course. Cannot be taken concurrently with SOC-214

Credits:

4.00

Description:

The question Why is there crime? lies at the heart of this course. This class will address what we mean by crime, who gets to define what crime is, how crime can be explained and how it can be reduced. Making sense of crime is essential if we are to respond effectively to victims and offenders. This course offers an in-depth examination of the many different theories of crime. These include biological, psychological, and sociological theories of victimization and offending. The course will study these theories in the context of many different kinds of criminal offending. By the end of the course, students will have a deep understanding of where these theories came from; what their strengths and weaknesses are; whether they are supported by research findings; and what implications these theories have for stopping crime.

Elective Courses (2 courses, 8 credits)

Students may choose any two courses from the Crime & Justice electives list; at least one of which must be at the 300-level.

Students majoring in Sociology and concentrating in areas other than Crime & Justice may only double count one Sociology course within the Crime & Justice minor. Students may not concentrate (within the major) and minor in the same area.

General Sociology Minor

Core Requirements (2 courses, 8 credits)

Choose one of the following:

- **SOC-113 Introduction to Sociology**

Credits:

4.00

Description:

An introduction to the sociological understanding of human interaction, group process and social structures. Students are introduced to basic concepts, theories and methods of sociological investigation. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **SOC-116 Social Justice**

Credits:

4.00

Description:

An examination of traditional and contemporary problems associated with major social institutions such as the family, economics, government and education. Social forces related to ethnicity, social class, health and welfare, and urbanization are also included. Alternative remedial measures based on behavioral science theories are discussed. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

Students must earn a grade of "C" or better in either of these classes in order to enroll in a research methods or sociological theory class.

Choose one of the following:

- **SOC-214 Research Methods in Sociology**

Prerequisites:

SOC 113 or 116 with C or better & one other SOC course. Cannot be taken concurrently with SOC 310,315,or 333.

Credits:

4.00

Description:

How sociologists decide what to study, how they select a research design, sample and collect data, analyze results, interpret findings, and write up reports. Students are introduced to the techniques most frequently used by sociologists and undertake their own small research project. Required for all Sociology majors.

Term:

Offered Both Fall and Spring

• SOC-315 Social Conflict and Social Change

Prerequisites:

SOC 113 or 116 with a grade of C or better and one other SOC course; CANNOT be taken concurrently with SOC 214;

Credits:

4.00

Description:

An examination and comparison of the origin, development and structure of the major theoretical approaches in contemporary sociology. Contributions of different branches of sociology to theory are explored with special attention to the relevance of sociological explanations for society and the social process. Students must have taken SOC 113 or SOC 116 and passed with a C or better and one other course from the sociology department. Normally offered every semester.

Term:

Occasional

• SOC-333 Sociology of Crime

Prerequisites:

SOC-113 or SOC-116 with a minimum grade of C and 1 additional SOC course. Cannot be taken concurrently with SOC-214

Credits:

4.00

Description:

The question Why is there crime? lies at the heart of this course. This class will address what we mean by crime, who gets to define what crime is, how crime can be explained and how it can be reduced. Making sense of crime is essential if we are to respond effectively to victims and offenders. This course offers an in-depth examination of the many different theories of crime. These include biological, psychological, and sociological theories of victimization and offending. The course will study these theories in the context of many different kinds of criminal offending. By the end of the course, students will have a deep understanding of where these theories came from; what their strengths and weaknesses are; whether they are supported by research findings; and what implications these theories have for stopping crime.

Elective Courses (3 courses, 12 credits)

Students may choose any three Sociology electives; at least one of which must be at the 300-level.

Students must complete at least eight credits in the minor in residence at Suffolk. Students majoring in Sociology cannot minor in General Sociology.

Health & Society Minor

Core Requirements (3 courses, 12 credits)

- **SOC-253 Sociology of Health and Illness**

Credits:

4.00

Description:

This course provides students with an introduction to how social norms, structures, and practices shape experiences of illness and health. Among the topics that will be covered are: health and the environment, the reasons some groups of people are less healthy than others, living with chronic illness and disabilities, and public debates surrounding issues such as performance enhancing drugs and sports, Attention Deficit Disorder and the HPV vaccine. Required for all students in the health, Medicine and the Body Concentration.

Term:

Occasional

- **SOC-254 U.S. Health Care Landscapes**

Prerequisites:

This course fulfills the ECR requirement.

Credits:

4.00

Description:

In this course, students will learn about how the U.S. health care system works. We will study the politics and economics of the health care system and discuss the key health care policy issues of this decade. Using the theoretical perspectives provided by sociology, we will look at issues of power, hierarchy, race, and gender vis-a-vis the health care system. Reading for this course centers on first person narratives by people working in the health care system. This course fulfills the ECR requirement.

Term:

Occasional

Type:

Expanded Classroom Requirement

Choose one of the following:

- **SOC-113 Introduction to Sociology**

Credits:

4.00

Description:

An introduction to the sociological understanding of human interaction, group process and social structures. Students are introduced to basic concepts, theories and methods of sociological investigation. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

- **SOC-116 Social Justice**

Credits:

4.00

Description:

An examination of traditional and contemporary problems associated with major social institutions such as the family, economics, government and education. Social forces related to ethnicity, social class, health and welfare, and urbanization are also included. Alternative remedial measures based on behavioral science theories are discussed. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

Students must earn a grade of "C" or better in either of these classes.

Elective Courses (2 courses, 8 credits)

Students may choose any two courses from the Health & Society electives list; at least one of which must be at the 300-level.

Students majoring in Sociology and concentrating in areas other than Health & Society may only double count one Sociology course within the Health & Society minor. Students may not concentrate (within the major) and minor in the same area.

2015-2016 Archived Catalog Information

Sociology

The Sociology Department offers a challenging and stimulating curriculum that prepares students to engage as critical thinkers and active citizens within a diverse global society. The Sociology Department offers its students an integrated program of study that combines a broad curriculum within sociology with an option to specialize in specific concentrations within the major. Minors in General Sociology, Crime & Justice, Health & Society, and Education Studies are also available.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Crime & Justice Concentration](#)
- [General Sociology Concentration](#)
- [Health & Society Concentration](#)
- [Youth & Community Concentration](#)
- [Minor Requirements](#)
- [Accelerated Bachelor's/Master's Degree in Crime & Justice Studies](#)
- [Honors](#)
- [Societies](#)
- [Sociology Courses](#)

This program provides an accelerated path for exceptional undergraduate Sociology majors in the Crime & Justice concentration to obtain a Master's degree in Crime & Justice Studies.

This program allows admitted students to complete two master's-level courses during their senior year, which will fulfill requirements for the completion of the dual Bachelor's/Master's degree.

Admission Requirements

- Nomination by a member of the Sociology Department Faculty
- Junior class standing
- An overall GPA of 3.0 or higher
- A major GPA of 3.5 or higher
- Completion of a minimum of four undergraduate Sociology courses at Suffolk
- Completion of the standard Suffolk University graduate application
- Priority application deadline is March 15 of the junior year (with enrollment in the first semester of the senior year); rolling admission thereafter, on a space available basis
- Approval of the MSCJS Graduate Admissions Committee

Degree Requirements

1. Students admitted to this dual degree program must meet all the requirements of an undergraduate Sociology, Crime & Justice concentration program.
2. Student must also meet all requirements for the Master of Science in Crime & Justice Studies.
3. The two graduate courses taken during the senior year will count toward BOTH the undergraduate and graduate degree requirements. Credit hours will be awarded based on the graduate course description.
4. Before enrolling in any Master's level courses, students must meet with the MSCJS graduate program director to obtain approval for classes.
5. Students are subject to the usual standards for academic standing, i.e., undergraduate standards for undergraduate courses and graduate standards for graduate courses.

Upon successful completion of all of the degree requirements, a student will receive a dual Bachelor's and Master's degree. The exact degree will be awarded based on the specific undergraduate program the student completes. A student may permanently exit the dual degree program and opt to graduate with a Bachelor's degree if all the requirements for a Bachelor's degree have been met. In this case, the graduate courses taken in the senior year will be counted as 4-credit courses applied toward the undergraduate degree requirements.

Alpha Kappa Delta

Alpha Kappa Delta is the National Honor Society for Sociology majors who have demonstrated excellence in sociology. Its purpose is to promote in each of the various chapters an interest in sociology, research in social problems, and activities leading to human welfare. The Suffolk Chapter has been designated Iota of Massachusetts. To be eligible for membership, candidates must be of junior or senior status, have a 3.3 average overall, and a 3.0 average in Sociology courses taken at the host institution. Students must have taken at least four courses in Sociology at Suffolk.

Alpha Phi Sigma

An affiliate organization of the Academy of Criminal Justice Sciences, Alpha Phi Sigma is the National Honor Society for students majoring in fields related to criminal justice sciences. To qualify for membership students must have

1. a cumulative grade point average of 3.2,
2. a 3.2 average in criminal justice courses,
3. completed at least three full-time semesters or the equivalent, and
4. successfully complete at least four courses in the crime and justice field at Suffolk.

The Suffolk University Chapter of Alpha Phi Sigma is Gamma Psi.

- CJ-481 Crime and Communities

Credits:

4.00

Description:

Core required course for Master of Science in Crime and Justice Program. This course will examine the relationship among crime, criminal justice and the community as well as the impact of crime on local neighborhoods and community institutions. The role of the community in the criminal justice system and processes of social control are also examined. Topics covered include: local measurement of crime statistics; community policing; prevention and early intervention strategies; community corrections and intermediate sanctions. Strategies for empowering local communities to address the quality of life in the urban environment are also explored.

Term:

Offered Spring Term

• EDUC-110 Introduction to Education

Credits:

4.00

Description:

Working with children and adolescents is a facet of many professions. This course will introduce students to the study of education occurring in formal and informal settings. This course focuses on the relationships among, and between, teachers, discourse, and community. Students will glean insight into the relationship of school and society as well as power and control in American Education. Required of all education minors. Five hours of field work required.

Term:

Offered Both Fall and Spring

Type:

Social Science

• EDUC-202 Educational Psychology

Credits:

4.00

Description:

Examines the nature and development of human abilities and the teaching-learning process. Considers the facts and generalizations of child and adolescent growth and development, working with diverse cultures, and special needs children in school settings. Ten hours of field work.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **EDUC-203 Service Learning: Pre-K Outreach and Tutoring**

Credits:

4.00

Description:

Students complete a minimum of 35 hours of tutoring in an educational setting, or community organization, in conjunction with a weekly seminar on campus. Open to all majors. No previous experience required.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement, Social Science

- **EDUC-205 Service Learning: Community Tutoring Project**

Prerequisites:

This class fulfills the Expanded Classroom Requirement

Credits:

4.00- 8.00

Description:

Students complete 35 hours per semester of educational tutoring in a local school (K-5), in conjunction with a weekly seminar on campus. Open to all majors. No previous experience required.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement, Social Science, Local Engagement Experience

- **EDUC-208 Service Learning: College Access**

Credits:

4.00

Description:

Students complete a minimum of 35 hours of tutoring and coaching in an educational setting, or a community organization in conjunction with a weekly seminar on campus. Programs include COACH, Connections to College, and others. Open to all majors. No previous experience required.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement, Social Science

- **EDUC-209 Reading and Writing in the Classroom**

Credits:

4.00

Description:

Students will become knowledgeable about the various approaches to teaching reading and writing in the content areas. This course is designed for teaching the necessary literacy skills in both Middle School and High School. Topics include: formal and informal assessment techniques, differentiation of instruction, diagnosing problems and integrating reading and writing into curriculum and instruction.

Type:

Social Science

- **EDUC-210 Service Learning: Alternative Spring Break**

Prerequisites:

Open to all majors, Instructor's signature required

Credits:

4.00

Description:

Students complete all research, travel, and reporting requirements in conjunction with Suffolk University's Alternative Spring Break. Open to all majors. No previous experience required.

Term:

Offered Spring Term

Type:

Social Science

- **EDUC-214 Introduction to Teaching**

Credits:

4.00

Description:

This course introduces students to the basic competencies of school teaching. Topics include: lesson planning, classroom management, grouping for instruction, effective pedagogical practices, assessment methods, requirements for licensure in Massachusetts, and discipline specific curriculum development using the curriculum frameworks/common core state standards. Field observations (25 hours) required.

- **EDUC-215 Service Learning Jumpstart Community Literacies**

Credits:

4.00

Description:

This course is designed for Jumpstart Corps members to develop competencies in teaching strategies for reading and writing. The course introduces theoretical and instructional issues in the development of literacy skills. Students will be engaged in reflective, critical consideration of students' diverse needs in the acquisition of literacy.

- **EDUC-310 Culturally Responsive Education**

Credits:

4.00

Description:

The relationship between cultural diversity and schooling is explored by examining impediments to academic achievement and advancement by minority students, non-native English speaking students, and other under-represented groups. Topics include: standardized testing, identification of inequities, legal and ethical responsibilities of teachers, and promoting equity. Ten pre-practicum observation hours required for teacher candidates.

Term:

Offered Fall Term

Type:

Cultural Diversity Opt A, Social Science, Diverse Perspectives

- **EDUC-312 Curriculum and Pedagogy: Middle and Secondary School**

Prerequisites:

This course fulfills the Expanded Classroom Requirement

Credits:

4.00

Description:

Introduces students to the basic competencies of Middle and Secondary school teaching. Topics include: behavioral problems, classroom management, grouping for instruction, motivation and reward systems, individualized instruction, IEP's, requirements for licensure in Massachusetts, and discipline specific curriculum development using the curriculum frameworks developed by the Massachusetts Department of Education. Field observations and experiences are grounded in theoretical discussion as students begin to develop their personal philosophies of education. Field observations (40 hours) required. Required prior to student teaching.

Term:

Offered Fall Term

Type:

Expanded Classroom Requirement, Social Science

- **EDUC-313 Classroom Communication**

Credits:

4.00

Description:

Examines communication between and among teachers and students in the classroom setting. Topics include: communication apprehension, building oral fluency, use of media technology to enhance student learning, cooperative learning, and related professional and legal responsibilities of teachers. Ten pre-practicum observation hours required for Teacher Candidates.

Term:

Offered Spring Term

Type:

Social Science

- **EDUC-315 Strategies for Emerging English Learners**

Credits:

4.00

Description:

This course examines the specific needs and challenges of the various language and cultural groups in schools. Topics include: theories of 1st and 2nd language acquisition, strategies for teaching academic content, modifying instruction in the mainstream classroom, creating classroom cultures that invite all students into learning, the role of advocacy and professional collaboration in ESL, and analysis of policies related to assessment and placement of English Language Learners.

Type:

Diverse Perspectives, Social Science

- **EDUC-402 History & Philosophy of American Education**

Credits:

4.00

Description:

Explores the evolution of schooling in the United States from The English High School to present. Theorists include: Mann, Franklin, Dewey,Sizer, and others.

Term:

Offered Spring Term

Type:

Social Science

- **EDUC-408 Youth Programming**

Credits:

4.00

Description:

This course focuses on the exploration and understanding of issues, strategies and frameworks related to developing and implementing youth programs. Students will be exposed to developmental theories, and various components of effective youth programmatic planning. Topics include: conducting needs assessments, developing goals and objectives, logistics planning, recruitment and training, and program evaluation.

Type:

Social Science

- **EDUC-414 Urban Schooling**

Credits:

4.00

Description:

This course is an in-depth investigation of policies effecting urban schools; topics include: demographic influence on education, influences of national and state regulations on urban schools, sociological factors unique to urban schools, and in-depth analysis of equity and achievement.

Term:

Occasional

Type:

Social Science

- **EDUC-415 Practicum: Middle School Teaching**

Prerequisites:

Coordinator of Student Teaching or Program Director's Consent

Credits:

8.00

Description:

A 12-week practicum experience as a student teacher in a middle school. See regulations regarding student teaching.

Term:

Offered Spring Term

Type:

Social Science

- **EDUC-416 Practicum: Secondary School Teaching**

Prerequisites:

Instructor's or Program Director's Consent

Credits:

8.00

Description:

A 12-week practicum experience as a student teacher in a secondary school. See regulations regarding student teaching.

Term:

Offered Spring Term

Type:

Social Science

- **EDUC-417 Assessment Theory and Practice**

Credits:

4.00

Description:

This course examines the development of formative, summative, authentic, and alternative assessment in education. Seminal works by Archbald, Baron, Bloom, Kleinsasser, Schwab, and others comprise the theoretical component. The second half of the course is dedicated to the selection, application, and integration of formal and informal assessment strategies and tools. A final project requires students to design an assessment tool

appropriate for their academic area and age level. Instructional strategies include case studies, class discussions, student presentations, and research reviews.

Term:

Offered Fall Term

Type:

Social Science

- **EDUC-424 Global Issues and Trends in American Education**

Credits:

4.00

Description:

Examines major current issues of educational policy against the background of demographic trends, technological innovations, standardized testing, and curricular shifts.

Term:

Occasional

Type:

Social Science

- **EDUC-510 Independent Study**

Prerequisites:

An independent study form must be submitted to the CAS Dean's Office.

Credits:

1.00- 4.00

Description:

Members of the Department will meet with students to direct their research in areas of special interest to them. Projects of this sort will be authorized only in unusual circumstances upon the recommendations of the Department Chairperson and with the approval of the Dean. Offered by arrangement only.

Type:

Social Science

- **SOC-113 Introduction to Sociology**

Credits:

4.00

Description:

An introduction to the sociological understanding of human interaction, group process and social structures. Students are introduced to basic concepts, theories and methods of sociological investigation. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **SOC-116 Social Justice**

Credits:

4.00

Description:

An examination of traditional and contemporary problems associated with major social institutions such as the family, economics, government and education. Social forces related to ethnicity, social class, health and welfare, and urbanization are also included. Alternative remedial measures based on behavioral science theories are discussed. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **SOC-209 Youth in American Society**

Credits:

4.00

Description:

The goal of the course is to provide a broad overview of children and youth and their place in American society. Particular attention is paid to (1) the impact of geographical location, social class, gender, race, sexuality, popular culture, mass media, and technology; (2) the intersection of youth cultures and mainstream society; and (3) the contention that some youth cultures are deviant.

- **SOC-210 Juvenile Justice and the Law**

Credits:

4.00

Description:

Considers the problems surrounding the legal definition and handling of juveniles who confront the law as offenders, clients and victims. Attention is devoted to the study of the special legal categories and procedures established for juveniles, the problems facing professionals providing juvenile services and the most significant directions of legal and social change affecting youth in our society. Normally offered every year. Fulfills the Sociology Department's Social Policy requirement.

- **SOC-211 Corrections and Punishment**

Prerequisites:

Take SOC-234 or SOC-333;

Credits:

4.00

Description:

A sociological exploration of coercive and incapacitative responses to crime. Attention is given to the origins and patterning of segregative controls, the correctional claims of prison systems, alternatives to incarceration and relationships between types of crime, and criminals and varieties of punitive response.

Term:

Occasional

- **SOC-212 Statistics for Sociology**

Prerequisites:

SOC-113 OR SOC-116 and MATH-128 or higher

Credits:

4.00

Description:

In this course, students will be introduced to descriptive and basic inferential statistical techniques. The course will provide information on the following topics: Description - measures of central tendency (mean, median, mode) and measures of dispersion (range, standard deviation); logic of statistical inference, including normal curve and sampling distribution; hypothesis testing with one sample and two samples; measures of association between two variables (bivariate analysis), including chi-square, regression, and correlation; and introduction to multivariate regression. Students will utilize SPSS (Statistical Package for the Social Sciences) software to input and analyze data. The goals of the course are for students to appreciate the need for statistical methods in the broad field of sociology and to gain basic statistical literacy.

Term:

Offered Both Fall and Spring

Type:

Quantitative Reasoning

- **SOC-214 Research Methods in Sociology**

Prerequisites:

SOC 113 or 116 with C or better & one other SOC course. Cannot be taken concurrently with SOC 310,315,or 333.

Credits:

4.00

Description:

How sociologists decide what to study, how they select a research design, sample and collect data, analyze results, interpret findings, and write up reports. Students are introduced to the techniques most frequently used by sociologists and undertake their own small research project. Required for all Sociology majors.

Term:

Offered Both Fall and Spring

• **SOC-217 Sociology of Urban Life**

Prerequisites:

Fulfills ECR requirement

Credits:

4.00

Description:

An examination of the effects of the city on human life in its broadest as well as its most specific aspects. Greater Boston and similar communities across the nation will be studied as ecological settings, as producers and shapers of change, and as special contexts for understanding sociological ideas. Comparisons will be made among urban places in the U.S. and in other countries.

Term:

Occasional

Type:

Social Science,Cultural Diversity Opt A,Expanded Classroom Requirement

- **SOC-218 Crime and Law in Indian Country**

Credits:

4.00

Description:

What happens if you commit a crime on an Indian reservation? Who will prosecute you and how will they punish you? This course will explore the roots of tribal legal systems and criminal law, both the Native and American influences. You will gain an understanding of tribal government, legal systems, criminal law, and the role of tradition in contemporary tribal law. The course will also examine the conflict between Native and Non-Native perspectives on several cases: sovereignty, rights to cultural practices, women, freedom of religion, and land.

Term:

Occasional

Type:

Cultural Diversity Opt A, Diverse Perspectives

- **SOC-220 Childhood and Adolescence in Contemporary Society**

Credits:

4.00

Description:

This course examines the development of children and adolescents from biological, psychological, and sociological perspectives. Major themes and changes associated with each developmental stage are discussed. The course explores practical implications of theory and research (parenting, juvenile justice, etc.), and current topics in child and adolescent development. Class format includes lectures discussion, debates and direct observation of children.

Term:

Occasional

- **SOC-221 Environment and Society**

Credits:

4.00

Description:

The history of the American Environmental Movement and eco-feminism will be examined as well as issues of pollution and depletion. Sustainable technologies and other current progressive programs will be addressed.

- **SOC-222 Women in Struggle on Film**

Credits:

4.00

Description:

Women's struggles in arenas from war to labor disputes will be examined through films and writings. Societal, historical and cultural contexts of women's roles in films are discussed drawing on film criticism and sociological analyses.

Term:

Occasional

- **SOC-223 Families in Contemporary Society**

Credits:

4.00

Description:

An exploration of the diversity of contemporary families. Comparisons are made between the cultural myths of the ideal family and the lived realities. Challenges confronting contemporary families and their implications for social policy are examined in such areas as work/family conflicts, gay and lesbian families, welfare, family violence.

Term:

Occasional

Type:

- **SOC-224 Families in Contemporary Society (Spain)**

Credits:

4.00

Description:

Spain has experienced major socio-demographic changes since the mid 1970s. These transformations mainly arise from the new role of women in society and, in particular, women's higher levels of education, work experience, and labor market attachment. The changes in women's labor force participation have occurred in conjunction with a progressive postponement of main family events, such as leaving the parental home, forming a partnership and having children, as well as with a reduction in the family size. Spain is, indeed, characterized as having one of the lowest low fertility levels within Western industrialized countries, a pattern that is exacerbating the ongoing process of population aging. This picture partly reflects the conflicting relationship that currently exists between women's labor force participation and the accommodation of family responsibilities: the so-called work/ family balance. Ongoing differences among countries have been accounted for by different explanatory factors that involve socio-economic, cultural and social policy dimensions. From a comparative perspective, the course is intended to cover recent debates, controversies, and research on family formation and family dilemmas in contemporary Spain.

Type:

Social Science

- **SOC-225 Sociology of Romance**

Credits:

4.00

Description:

The meaning of romance and courtship today and its social consequences in marriage, homogamy, stratification and divorce. The historical origins of romanticism and the sources of romance in socialization, books and magazines, television and movies, popular music and peer group membership are also considered.

Term:

Occasional

- **SOC-226 Religion in Contemporary Society**

Prerequisites:

This course fulfills the ECR requirement.

Credits:

4.00

Description:

An examination of the fundamental purpose and functions of religion in society. Major religious systems in America are analyzed in terms of basic values and structure. The impact of changes in religious organizations upon clergy, laity and society are discussed. This class fulfills the ECR requirement.

Term:

Occasional

Type:

Expanded Classroom Requirement

- **SOC-227 Race in American Society**

Credits:

4.00

Description:

Despite the election of Barack Obama as President of the United States, race remains one of the most divisive forces in U.S. society. While many of us struggle against racism, racial classification continues to affect where we live, where we work, and how we see ourselves. Racial classification affects our access to health care and our encounters with police officers. Distorted images of racial groups fill television and movie screens. Appeals to racism and fear of foreigners are dominant themes in elections to state and national offices. This course examines the formation and re-formation of racial classifications: how particular groups become racially identified, how these classifications change over time, and how conflicts over race have shaped American society. The meanings of race, as seen from a variety of perspectives, will be a consistent theme throughout the course.

Term:

Occasional

Type:

Cultural Diversity Opt A,Diverse Perspectives,Cultural Diversity Opt B

- **SOC-228 Cultural, Global and Social Perspectives**

Credits:

4.00

Description:

Enables students to examine, as well as develop an awareness and appreciation of, diversity within today's society. Providing an overview of the major racial, ethnic, and cultural groups in the U.S., the focus is on the ways in which cultural awareness enhances professional helping relationships and improves the operation of human services systems.

Term:

Occasional

Type:

Cultural Diversity Opt A,Diverse Perspectives

- **SOC-229 Social Class and Inequality**

Credits:

4.00

Description:

This course examines the difference between the life experience of those who are rich, poor and middle class. Topics include: the elite in Boston, theories of inequality; blue collar neighborhoods, the hard living poor, and ethnic and sexual stratification.

Term:

Occasional

- **SOC-230 Bad Girls**

Credits:

4.00

Description:

This class explores the images of the traditional bad girl in films. The course examines the idea of moving beyond merely the delinquent, many images in film suggest that girls and women who break with the socially condoned role of femininity are somehow bad. Girls and women who have power or challenge authority are often portrayed in films as deviant and therefore bad. Girls and women who are frigid are just as bad as their sexually promiscuous silver-screen opposites. This course further focuses on the impact of these images on real life social roles for girls and women as well as the symbiotic relationship between fact and fiction.

Term:

Occasional

Type:

Cultural Diversity Opt A

- **SOC-232 Street Gangs**

Credits:

4.00

Description:

This course provides an overview of youth gangs and their sociological underpinnings, which are rooted in poverty and racism. Topical areas are discussed in relation to these key factors. Study topics include the history of gangs, theories about gang formation and individual membership, gangs and criminal behavior, socio-cultural importance of gangs, and strategies to control gang behavior. The course will utilize current gang issues in the US generally and in Massachusetts in particular as a basis to better understand the nuances of youth gangs.

Type:

Cultural Diversity Opt A

- **SOC-234 Crime and Justice in American Society**

Credits:

4.00

Description:

An overview of issues and social variables involved in the pre-arrest and arrest stages followed by a more in-depth analysis of pre-trial, trial, sentencing, and correctional phases. Sociological and criminal justice models are examined and compared with the actual processes and purported functions of criminal justice agencies. Required for all majors in the Crime and Justice Concentration.

Term:

Offered Both Fall and Spring

- **SOC-236 Deviance and Social Control**

Credits:

4.00

Description:

Who and what is deviant? How shall the society respond? The course examines a range of deviance theories and associated social policies. A number of case studies will be used to evaluate these theories, such as body piercing, witchcraft, gay and lesbian sexuality, corporate crime, disability, prostitution, violence against women, racism, anti-Semitism, and gangs.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **SOC-237 School to Prison Pipeline**

Credits:

4.00

Description:

This course will examine the mechanisms through which U.S. social institutions, particularly schools, facilitate youth involvement in the juvenile and criminal justice systems. These mechanisms include: inequity, disability tracking, zero-tolerance policies, push-out, and the criminalization of adolescent behavior. Students will engage in activities aimed at analyzing these processes and developing methods to disrupt them at the social, political, educational, and instructional levels.

- **SOC-238 Cops & Robbers: Crime on Film**

Credits:

4.00

Description:

An examination of images of crime and justice portrayed in the American cinema. Special attention is paid to the social and historical forces that have shaped popular representations of good and evil during the modern era.

Term:

Occasional

- **SOC-239 Men and Violence**

Credits:

4.00

Description:

An exploration of the nature of masculinity and its connection to interpersonal and collective violence in American society. The course focuses on the emotional, spiritual, social and cultural roots of the crisis of boyhood and masculinity as a context for and consequence of violence.

Term:

Occasional

Type:

Cultural Diversity Opt A

- **SOC-242 Law, Health & Human Rights**

Credits:

4.00

Description:

This course will look at the special opportunities and obligations of those in the health and legal professions to protect human rights. There will be an overview of human rights doctrine and key documents. Students will learn to apply human rights principles to particular occupations in the health and legal professions.

Term:

Occasional

- **SOC-253 Sociology of Health and Illness**

Credits:

4.00

Description:

This course provides students with an introduction to how social norms, structures, and practices shape experiences of illness and health. Among the topics that will be covered are: health and the environment, the reasons some groups of people are less healthy than others, living with chronic illness and disabilities, and public debates surrounding issues such as performance enhancing drugs and sports, Attention Deficit Disorder and the HPV vaccine. Required for all students in the health, Medicine and the Body Concentration.

Term:

Occasional

- **SOC-254 U.S. Health Care Landscapes**

Prerequisites:

This course fulfills the ECR requirement.

Credits:

4.00

Description:

In this course, students will learn about how the U.S. health care system works. We will study the politics and economics of the health care system and discuss the key health care policy issues of this decade. Using the theoretical perspectives provided by sociology, we will look at issues of power, hierarchy, race, and gender vis-a-vis the health care system. Reading for this course centers on first person narratives by people working in the health care system. This course fulfills the ECR requirement.

Term:

Occasional

Type:

Expanded Classroom Requirement

- **SOC-256 Sociology of Aging**

Credits:

4.00

Description:

Consideration of the physiological, psychological and social factors associated with the aging process. Contemporary American values toward the elderly are compared and contrasted with historical and cross-cultural studies. Current opportunities and techniques enabling the elderly to enrich and expand their societal roles are explored.

Term:

Occasional

- **SOC-264 Social Media and Society**

Credits:

4.00

Description:

An examination of the ways in which social structures and processes influence and are affected by modern ideas, needs and social practice techniques in technologically advanced societies is considered in conjunction with changes in the way in which we understand the world, the nature of work and leisure, the processing of information and the character of social institutions. Normally offered alternate years. Fulfills the Social Science Option. Fulfills the Sociology Department's Social Policy requirement.

Type:

Social Science

- **SOC-273 Women in Contemporary Society**

Credits:

4.00

Description:

A critical analysis of theory and research related to the socialization, roles and social participation of women in contemporary society.

Term:

Occasional

- **SOC-275 Women and Crime**

Credits:

4.00

Description:

This course examines the complex relationships between women and crime today. This focus will include women as criminal offenders; women as victims of crime; and women as both offenders and victims. Course materials draw from recent feminist scholarship on these issues in the social sciences. Topics include the causes of women's crime women, drugs, and crime; child abuse and trauma; prostitution and sex trafficking; race, gender and victimization; and feminist social movements against violence. Crimes of violence against women are a central focus in the course.

Term:

Occasional

Type:

- **SOC-276 Sex and Society**

Credits:

4.00

Description:

An examination of human sexuality as experience and institution. Sexuality is considered in relationship to power, love, religion, family, race, gender, sexual orientation, violence and courtship.

Term:

Occasional

- **SOC-286 Women and Work**

Credits:

4.00

Description:

An exploration of the relationship between gender roles, work environments, and careers in American society. The problems and prospects faced by women in the world of work are considered with special attention to power and sexism in the workplace, domestic vs. organizational work, role conflicts for working women, and the relationship between changing images of women and changing patterns of female employment. Policy requirement.

Term:

Occasional

Type:

Cultural Diversity Opt A

- **SOC-301 Sociology of Law**

Credits:

4.00

Description:

Law and legal systems are examined in contemporary society. Emphasis is placed on the manner in which legal structures and processes interact with other social arrangements and are transformed over time.

- **SOC-303 How Pocahontas Lives: the Health of Native American Women and Girls**

Credits:

4.00

Description:

Native American women and girls experience many threats to their well-being: polluted environments, violence, and the continuation of colonial practices mean that their lives are at risk. Dominant political, economic, and cultural norms do little to protect them. Yet Native American women and girls can and do assert their right to well-being as they choose to define it, achieving health and self-determination. This class will examine the indigenous women and girls of the United States, to consider the continued impact of colonialism on women's health and the role of self determination in creating opportunities for the improvement of Native American women's health.

- **SOC-304 Hot, Polluted, and Hungry**

Credits:

4.00

Description:

In this course we will explore our natural environment and human interaction with it. We will study how the environment is impacting human life, exposure to environmental harms, and our foods which we may forget come from the earth. We will study the hidden ways that humans shape and are shaped by the environment. We will have an exciting and challenging time together trying to make sense of the ways our natural environment and our lives are evolving.

- **SOC-305 Crime and Mental Illness In Contemporary US**

Credits:

4.00

Description:

Incarcerated and criminalized Americans suffer from extraordinarily high rates of physical and mental illnesses ranging from Hepatitis C, tuberculosis and HIV/AIDS to bipolar disorder, PTSD, substance abuse, and schizophrenia. This course explores connections between illness and involvement with the correctional system from the perspective of the individual offender as well as in terms of broader American cultural and political patterns.

- **SOC-306 Population and Society**

Credits:

4.00

Description:

An introduction to demography or the study of population and its size, structure, and the ways it changes over time. Demographers study love, death and adventures, or the different patterns of fertility, mortality, and migration across the globe. The social causes and consequences of high mortality and fertility in sub-Saharan Africa, rapid fertility decline in China, and low fertility and mortality in western Europe are examined. Demographic approaches to social problems like world famine, teen pregnancy, HIV/AIDS pandemic, and social security system budget deficits are also considered.

- **SOC-308 Sociology of Education**

Credits:

4.00

Description:

Education is key in a democracy in which students need to develop themselves into knowledgeable people, with a strong sense of self, able to think critically with a developed ability to question others and to feel and act as empowered, active citizens. This is a tall order given the varieties of pressures on schools these days. But it is extremely important for these skills to be developed. With the shift in the economy, schools are going to be the critical factor in enabling students to compete in a globalized workplace and world.

- **SOC-312 Sex Offenders**

Credits:

4.00

Description:

This course presents an overview of the policy issues related to sex offenders. Focusing on the current scholastic research on sex offenders, students will discuss myths about sexual offenders as well as the consequences of myths on policy. The course will additionally cover the history of sex offender policies and moral panics, explanations, treatment and prevention of sex offending and victimization.

• SOC-315 Social Conflict and Social Change

Prerequisites:

SOC 113 or 116 with a grade of C or better and one other SOC course; CANNOT be taken concurrently with SOC 214;

Credits:

4.00

Description:

An examination and comparison of the origin, development and structure of the major theoretical approaches in contemporary sociology. Contributions of different branches of sociology to theory are explored with special attention to the relevance of sociological explanations for society and the social process. Students must have taken SOC 113 or SOC 116 and passed with a C or better and one other course from the sociology department. Normally offered every semester.

Term:

Occasional

• SOC-321 Identity, Self and Society

Credits:

4.00

Description:

This course explores the emergence of the self as an intersection of biography, history and social structure. Emphasis is on modern, Western societies. Conceptually, we will take a life course approach which emphasizes processes of psychosocial, moral, intellectual, and spiritual development for contemporary men and women. This course is designed in part as a workshop where students will develop the skills and insights essential for conducting life history research and biographical studies that are sociological in focus.

Term:

Occasional

- **SOC-322 Tough Guise**

Credits:

4.00

Description:

Representations of masculinity in contemporary societies are examined in terms of their social sources and consequences. Images and scripts for doing masculinity are explored through case studies of film, television, sports, advertising, comic books, video games, music and other media that define what it means to be a man.

Term:

Occasional

Type:

Cultural Diversity Opt A

- **SOC-325 Popular Culture in America**

Prerequisites:

Prerequisite: SOC 113 or SOC 116.

Credits:

4.00

Description:

An investigation of the images of life provided by mass communications, the educational system and official culture. Topics include: the growth of the youth culture since the 1950s; images of working people; women, minorities and advertising; changing ideas of success; consciousness-raising and contra-cultures.

Term:

Occasional

- **SOC-327 Special Topics: General Sociology**

Credits:

4.00

Description:

A course with special interest topics in sociology which changes depending on the professor.

Term:

Occasional

- **SOC-329 Sociology of Globalization**

Prerequisites:

Prerequisite: SOC 113 or SOC 116.

Credits:

4.00

Description:

Globalization is shrinking the world. How and why did this happen? This course will explore global change and the global processes which effect key social institutions: culture, the economy and politics. Students will study the processes of globalization and its impact on our lives and people around the globe.

Term:

Occasional

Type:

Cultural Diversity Opt B,Diverse Perspectives

- **SOC-331 Violence Against Women**

Credits:

4.00

Description:

This course focuses on the many forms of violence against women, with particular attention to child sexual abuse, rape, and violence and abuse in intimate relationships. These crimes have been the subject of intense political organizing, cultural controversy, and criminal-legal reform over the past 40 years. Together these issues account for a significant portion of the work of the police and the courts. They are also major issues in women's health over the life span. This course will address these issues from psychological, sociological, political, and criminal-legal perspectives.

- **SOC-332 Restorative Justice**

Credits:

4.00

Description:

The purpose of this course is to introduce students to the principles of restorative justice and to examine the programs, practices and policies within schools, juvenile justice and the adult criminal justice system which implement a restorative practices. Restorative justice is a different philosophy of responding to harm which provides new roles for the victim, offender, community and professionals . We will compare a restorative approach to crime with the traditional system of discipline and crime control and critique the shortcomings of an adversarial or retributive response to criminal behavior. We will explore the theoretical and historical origins of traditional justice systems and restorative approaches. We will also examine how these ideas are being applied in practical partnerships between the justice system and the community here in the United States and around the world.

Type:

Expanded Classroom Requirement

- **SOC-333 Sociology of Crime**

Prerequisites:

SOC-113 or SOC-116 with a minimum grade of C and 1 additional SOC course. Cannot be taken concurrently with SOC-214

Credits:

4.00

Description:

The question Why is there crime? lies at the heart of this course. This class will address what we mean by crime, who gets to define what crime is, how crime can be explained and how it can be reduced. Making sense of crime is essential if we are to respond effectively to victims and offenders. This course offers an in-depth examination of the many different theories of crime. These include biological, psychological, and sociological theories of victimization and offending. The course will study these theories in the context of many different kinds of criminal offending. By the end of the course, students will have a deep understanding of where these theories came from; what their strengths and weaknesses are; whether they are supported by research findings; and what implications these theories have for stopping crime.

• SOC-334 Sociology of Policing

Prerequisites:

SOC 333 or SOC 234

Credits:

4.00

Description:

An investigation of the emergence, organization, and structure of police systems. The course focuses on the conditions surrounding the relationship between the police and policed in different historical, cultural, political, and economic contexts.

Term:

Occasional

• SOC-336 Probation and Parole

Prerequisites:

SOC-234 or SOC-333;

Credits:

4.00

Description:

Correctional theories are reviewed along with the historical development of probation and parole. Current research and analytical perspectives reflecting on administrative problems, innovative policies and the internal philosophical inconsistencies of these systems are examined.

- **SOC-337 Juvenile Justice and the Law**

Credits:

4.00

Description:

Considers the problems surrounding the legal definition and handling of juveniles who confront the law as offenders, clients and victims. Attention is devoted to the study of the special legal categories and procedures established for juveniles, the problems facing professionals providing juvenile services and the most significant directions of legal and social change affecting youth in our society. Normally offered every year. Fulfills the Sociology Department's Social Policy requirement.

- **SOC-338 White Collar Crime**

Credits:

4.00

Description:

An examination of the relationship between crime, business activity, and technology with special attention to the crimes of the powerful and the changing relationship between economic development and criminal activity.

Term:

Occasional

- **SOC-340 Licit/Lethal: America's Drug Problem**

Credits:

4.00

Description:

Most Americans think of prohibited substances such as marijuana, cocaine or heroin when they hear the word drug. This course will provide an in-depth examination of legal drug use in American society. A broad conceptual framework will be presented that illustrates how history, politics, society and economics all have played a key role in defining certain substances as permissible in America. Fulfills the Sociology Department Social Policy and Globalization requirements.

Term:

Offered Fall Term

- **SOC-341 International Drug Control Policy**

Credits:

4.00

Description:

Relying on a simplistic demand or supply explanation of why Americans use/abuse drugs obscures the reality of America's drug problem, is ineffective as a guide to public policy and has unforeseen, often negative consequences. Drug use is a complex and multi-faceted issue. There are no easy answers. To comprehend the complexity of America's drug problem one needs an understanding of the geography, history, religion, law, economics and international politics of the Middle and Far East, Eastern Europe, Africa, Mexico, and Central and South America. This class will provide this basic understanding without losing sight that the problem we seek to remedy is our own.

Term:

Offered Spring Term

Type:

Cultural Diversity Opt B

- **SOC-342 Law, Health & Human Rights**

Credits:

4.00

Description:

This course will look at the special opportunities and obligations of those in the health and legal professions to protect human rights. There will be an overview of human rights doctrine and key documents. Students will learn to apply human rights principles to particular occupations in the health and legal professions.

- **SOC-343 Child Welfare Services**

Credits:

4.00

Description:

A survey of the historical development and current composition of services for children, including income maintenance, daycare, foster and institutional care and the adoption process.

Term:

Occasional

- **SOC-344 Community Organization**

Credits:

4.00

Description:

A study of the different types and functions of communities. Through identifying community needs, resources, and structure, students learn effective ways to organize for change.

- **SOC-347 Immigration Law and Policy**

Prerequisites:

Prerequisite: SOC 113 or SOC 116 OR Instructor's consent

Credits:

4.00

Description:

This course examines U.S. Immigration legislation and policies, focusing on how and why various immigration laws and policies have been established and implemented throughout history. We will address the intersection between immigration policy and race, ethnicity, nationality and socioeconomic status, as well as explore the effects that immigration laws have had on various immigrant groups and society in general.

Term:

Occasional

Type:

Cultural Diversity Opt A

- **SOC-354 Death and Dying**

Credits:

4.00

Description:

An examination of changing definitions of life and death, social factors affecting causes and rates of death, care of the dying and their families, institutionalization, the funeral industry, suicide, crisis intervention, and the impact of technology on the dying process.

Term:

Occasional

Type:

Diverse Perspectives

- **SOC-355 Women and Health**

Credits:

4.00

Description:

An exploration of topics that relate particularly to women as providers and consumers in the health care system. The course will consider historical and current information on issues of reproduction, technology, health and illness.

Term:

Occasional

- **SOC-357 Global Health and Healing**

Credits:

4.00

Description:

An examination of how different cultures understand health and illness. Healing approaches from Asia, Africa and the Americas will be explored.

Term:

Occasional

Type:

Cultural Diversity Opt B,Diverse Perspectives

- **SOC-379 Anthropological Perspectives in Spain**

Credits:

4.00

Description:

The recent changes in both Spain and Portugal are only the latest in a series of important transformations which these two countries have undergone over the past fifty years or so. In that time, they have both gone from being predominantly rural societies where the majority of the population live and work on the land to becoming industrial societies not unlike those of northern Europe and North America. Yet the underlying cultural heterogeneity of the peoples of the Iberian Peninsula has meant that different regions have often had very distinct actions to the various pressures toward political, economic, and social change. This seminar will examine the ethnographic diversity of the Iberian Peninsula in its regional manifestations, using a specifically anthropological approach in order to better comprehend present-day Spain and Portugal. Offered on Madrid Campus only. 1 term - 4 credits

Type:

Global Engagement Experience

- **SOC-H379 Honors Anthropological Perspectives in Spain**

Credits:

4.00

Description:

The recent changes in both Spain and Portugal are only the latest in a series of important transformations which these two countries have undergone over the past fifty years or so. In that time, they have both gone from being predominantly rural societies where the majority of the population live and work on the land to becoming industrial societies not unlike those of northern Europe and North America. Honors

- **SOC-380 Special Topics in Sociology: Peer Tutoring**

Prerequisites:

Instructor's consent; ECR

Credits:

4.00

Description:

Specialized topics based on peer tutoring research and development. Content, prerequisites and hours to be announced.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement

- **SOC-390 The Prison Experience, Literature and Film**

Credits:

4.00

Description:

An examination of prison writings, films, and the actual experience of prison life from literary and sociological perspectives. Students will have an opportunity to examine their own perspectives of the prison as a symbol and shadow in American Society and compare these impressions with the actual experience of inmates, correctional officers and others who have lived in the prison nation.

Term:

Occasional

- **SOC-406 The Immigrant Experience**

Prerequisites:

SOC-113 or SOC-116 and 4 credits of a SOC course at the 200 level or above

Credits:

4.00

Description:

The United States of America: A land of immigrants; The Great Melting Pot. This country has indeed attracted immigrants from all over the world. However, not all have been welcomed or treated equally. This course will investigate the reasons various immigrant groups (past and present) have come to the United States. We will also examine their experiences and the impact race, ethnicity, gender, class and social structures have had on them. During Spring Break the class will visit Ellis Island and the Tenement Museum in New York and the Lowell National Historical Park in Lowell. The class will also visit various sites in Boston throughout the semester.

Type:

Cultural Diversity Opt A,Expanded Classroom Requirement,Local Engagement Experience

- **SOC-433 Senior Seminar**

Prerequisites:

SOC 113 or 116 (with a grade of C or better) SOC 214, and SOC 315 or 333. Seniors only. Required of all majors.

Credits:

4.00

Description:

This course explores contemporary topics in crime and justice, interrelating empirical and theoretical analyses. Topical areas vary by semester and by instructor. Students engage in a substantial research project to demonstrate mastery. Required for all students in the Crime and Justice Concentration.

- **SOC-453 Seminar in Sociology**

Prerequisites:

SOC 113 or SOC 116 with a minimum grade of a C; SOC 214; SOC 310, SOC 315, or SOC 333; Seniors only.

Credits:

4.00

Description:

This course will explore topics in sociology, requiring students to synthesize their learning in sociology to analyze research and develop their own study plans. The purpose of this course is to summarize and refine accumulated knowledge in sociology. Students will demonstrate knowledge by engaging in a significant research project.

Term:

Occasional

- **SOC-483 Internship in Sociology I**

Prerequisites:

Students must be Sociology majors with at least a 3.0 GPA; must have at least sophomore status at the time of application; must have one full day free each week to work an internship. Applications for the Internship in Sociology I course must be approved by the Instructor.

Credits:

4.00

Description:

Students are provided with the opportunity to apply academic learning in a supervised internship consistent with their personal career goals or academic interest. The course covers such topics as career exploration and development, resume and cover letter writing, job fairs, and networking, and graduate school applications. In addition to the course assignments, students are required to complete a minimum full day internship each per week during the entire semester.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement

• SOC-484 Internship in Sociology II

Prerequisites:

SOC 483. Students must be Sociology majors with at least a 3.0 GPA; must have at least sophomore status at the time of application; must have one full day free each week to work an internship. Applications for the Internship in Sociology I course must be approved by the Instructor.

Credits:

4.00

Description:

Students are provided an opportunity to intensify or extend their internship experience. The course covers such topics as mock interviewing, informational interviewing, and job fairs.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement

- **SOC-510 Independent Study**

Credits:

4.00

Description:

Members of the department hold special meetings with students and direct them in investigating topics of interest in sociology. Arrangements for independent study must be approved by the supervising instructor and the Department Chairperson.

Term:

Offered Both Fall and Spring

2015-2016 Archived Catalog Information

Spanish

Suffolk students who decide to study Spanish have several choices. They can pursue a traditional BA, which involves a thorough study of language, literature, and civilization. Students may also choose to combine their degree in Spanish with international business or economics to prepare for the global economy. A minor in Spanish is also offered.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)

- [Spanish Courses](#)

Major Requirements: 10 courses, 40 credits

Core Requirements (2 courses, 8 credits)

- SPAN-201 Intermediate Spanish I

Prerequisites:

SPAN 102 or or Instructor's consent

Credits:

4.00

Description:

Reviews Spanish grammar and examines Spanish through authentic materials of cultural interest. Students develop written and oral skills through compositions and audio-visual materials. Weekly laboratory sessions required.

Term:

Offered Fall Term

Type:

BA FOREIGN

Choose one of the following:

- **SPAN-202 Intermediate Spanish II**

Prerequisites:

SPAN 201 or Instructor's consent.

Credits:

4.00

Description:

Continues skills development from 201. Students read a collection of short stories, write compositions, develop cultural insights through comparative and contrastive assignments, and practice listening and speaking skills in weekly conversation sessions.

Term:

Offered Spring Term

Type:

BA FOREIGN,Diverse Perspectives

- **SPAN-203 Intensive Intermediate Spanish**

Prerequisites:

SPAN 201 or or Instructor's consent

Credits:

4.00

Description:

A writing and reading intensive course for students who are thinking about minoring and possibly majoring in Spanish. There will be a brief review of grammar, but the primary materials will come from the textbook, LAZOS, with ancillary materials from the print media and audio-visual sources. A weekly tertulia will be required instead of language lab.

Term:

Alternates Fall & Spring

Type:

BA FOREIGN

Note:

To qualify for admittance to the major, a student must complete the core requirements with an average grade of "B."

Advanced Courses (8 courses, 32 credits)

Choose one of the following:

- **SPAN-290 Advanced Composition & Conversation**

Prerequisites:

Prerequisite: Spanish 202, 203 or 250 or Instructor's consent

Credits:

4.00

Description:

Develops written and oral skills in various contexts and registers. Emphasis on strengthening written skills and learning to speak clearly and persuasively in Spanish. Short texts and audio-visual materials provide the basis for classroom activities which include regularly assigned essays,

group discussions and debates.

Term:

Offered Fall Term

Type:

BA FOREIGN,Diverse Perspectives

- **SPAN-300 Intro to Cultural Texts**

Prerequisites:

Spanish 202, 203, 250 or Instructor's consent.

Credits:

4.00

Description:

Explores a selection of Peninsular and Latin American cultural materials. Primarily examines texts from different literary genres (narrative, drama, essay, and poetry). Develops critical skills required in more advanced Spanish courses, through close readings and textual analysis. Activities include regularly assigned essays, group discussions, and short scene work.

Term:

Offered Spring Term

Type:

Humanities Literature Requirement,BA FOREIGN

Choose two of the following:

- **SPAN-301 Spanish Culture and Civilization**

Prerequisites:

Spanish 202, 203 or 250. Spanish 290 or 300 are strongly recommended

Credits:

4.00

Description:

Examines the civilization and culture of Spain highlighting its historical development and cultural manifestations from pre-historic times to the nineteenth century. Students improve their four skills through activities that include discussions, oral presentations, and writing assignments based on reading and films.

Term:

Alternates Fall & Spring

Type:

• **SPAN-302 Indigenous and Colonial Latin America**

Prerequisites:

Spanish 202, 203 or 250 or Instructor's consent. Span 290 or 300 strongly recommended.

Credits:

4.00

Description:

Introduces students to the complexity Latin America by examining its roots in pre-Columbian America and the impact of Spanish exploration and colonization. Places emphasis on cultural, economic, historical, philosophical, political and religious patterns that define the region. Includes class discussions, oral presentations, and writing assignments based on reading and audio-visual material.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, BA FOREIGN, Diverse P

- **SPAN-303 Modern and Contemporary Latin America**

Prerequisites:

SPAN 202 or 203 or Instructor's consent. SPAN 290 or 300 strongly recommended.

Credits:

4.00

Description:

Examines the path taken by Latin American and Caribbean countries to build independent nations out of colonial territories highlighting the 19th, 20th, and 21st centuries, ethnic plurality, and cultural complexity in areas such as politics, religion, sociology, economics, customs, music & film. The cultural contributions of Spanish-speaking minorities in the United States are also addressed. Includes class discussions, oral presentations, and writing assignments based on readings and audio-visual material.

Type:

Diverse Perspectives

Choose five additional electives above SPAN-203

Note:

A maximum of two courses from the following list can count toward the major:

- **SPAN-408 Latin American Cinema**

Prerequisites:

Take ENG-102 or ENG-103 or Instructor's consent. Span 302 is strongly recommended for Spanish and Latin American & Caribbean Studies majors and minors.

Credits:

4.00

Description:

Begins with the Cuban revolution as a point of departure and examines films from Argentina, Chile, Colombia, Mexico, and other Latin American countries. Students explore the relationship between film & society and consider how knowledge of a culture and its history is influenced and shaped by what is seen on the screen. Films in Spanish with English subtitles.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement

• **SPAN-416 Border Crossings the Latino Experience in the USA**

Prerequisites:

ENG-102 or ENG-103 or Instructor's consent. Span 302 is strongly recommended for Spanish and Latin American & Caribbean Studies majors and minors.

Credits:

4.00

Description:

Examines the myth of a singular Latino experience in the United States through a variety of genres and authors. Issues relating to culture, language, family, and religion are among some of the topics explored. Authors include Sandra Cisneros, *House on Mango Street*, Junot Diaz, *The Brief Wondrous Life of Oscar Wao*, Julia Alvarez, *How the Garcia Girls Lost Their Accents*, Tato Laviera, and *American*.

Term:

Occasional

Type:

Cultural Diversity Opt A, Humanities Literature Requirement

A maximum of four courses taken at other institutions or as part of a department-approved study abroad program in a Spanish-speaking country may apply toward the major.

Any Seminar for Freshmen with a topic related to the Spanish-speaking world (e.g., culture, politics, society) counts toward the major.

Students who receive a score of "sem4+" on the Spanish online placement test have fulfilled the SPAN-201, SPAN-202/203 core requirements for the major.

AP Credit:

Incoming students who receive a score of "4" or "5" on the AP Spanish examination have fulfilled the SPAN-201, SPAN-202/203 core requirement for the major.

- [Spanish Courses](#)

In order to be considered for honors in Spanish, a student must satisfy the following criteria:

1. Students interested in honors should consult with the department chair during the spring semester of the junior year. Qualifying students must have a 3.2 overall GPA as well as a 3.5 or higher GPA in Spanish courses.
2. Honors candidates should register for SPAN-502 in the fall semester of the senior year. Under the guidance of a faculty member, they will use this course to complete a research paper. This paper will be evaluated by all professors in the student's field of study. If the evaluation is positive, the student will make an oral presentation of the paper in the spring.

- **SPAN-305 Living in Translation**

Prerequisites:

SPAN 250, 290, or 300 or Instructor's consent.

Credits:

4.00

Description:

Examines the process and theory of translation. Materials are drawn from the literary world, the mass media (i.e. advertising, marketing, news, entertainment), and professional sources. Students gain further insights about the linguistic, cultural, and ethical dimensions of the field. Additional grammar review provided as needed.

Term:

Occasional

- **SPAN-315 Business Spanish**

Prerequisites:

SPAN 290 or SPAN 300 or Instructor's consent.

Credits:

4.00

Description:

Integrates language learning with culture via business context of the Hispanic world. Spanish for banking and finance, marketing and advertising, and international commerce are highlighted. Students increase their cross-cultural understanding and written and oral proficiency in business Spanish through a wide range of assignments.

Type:

Diverse Perspectives

- **SPAN-340 Hispanic Culture Today: Trans-Atlantic Perspective**

Prerequisites:

Take SPAN 290 or SPAN 300 or Instructor's consent.

Credits:

4.00

Description:

An examination of key issues in Hispanic culture today through the study of literature, film, music and TV. The purpose of the course is twofold: To introduce the students to major themes in recent Hispanic society and culture and, to develop the necessary skills to read and analyze literary texts and other cultural forms. Topics to be discussed include dictatorship and democracy, women and representation, political and domestic violence, national identity, immigration, and mass culture. The selected materials will include texts by authors like Manuel Rivas, Mario Vargas Llosa, Carlos Fuentes, Cristina Peri Rossi, Rosa Montero, Carlos Monsivais, and Roberto Bolano among others. (Madrid campus only)

Type:

BA FOREIGN

- **SPAN-350 Spanish Cultural Studies**

Credits:

4.00

Description:

This is an interdisciplinary course that will examine the historical and socio-economic causes of contemporary Spanish culture. Material will be drawn from a variety of sources including: history, sociology, gender studies, literature and philosophy. Extensive reference will be made to the non-Western cultures which have made Spain what it is today. (Usually taught in English). (Madrid campus only)

- **SPAN-360 Madrid Cosmopolitan City**

Prerequisites:

SPAN-290 or SPAN-300 or Instructor's consent

Credits:

4.00

Description:

This course is designed to provide students with a basic knowledge of the city of Madrid in terms of its historical, cultural, and social development. Contemporary aspects of the city such as its rise to prominence amongst the capitals of Europe and the phenomenon of recent immigration patterns will also be discussed. All classes will be conducted in Spanish. Specific grammar points will be reviewed as needed. (Madrid campus only)

Type:

BA FOREIGN, Global Engagement Experience

- **SPAN-390 Introduction to Latin American and Caribbean Literature**

Prerequisites:

SPAN 300; SPAN 302 is strongly recommended

Credits:

4.00

Description:

Examines authors from Latin America and the Caribbean in their historical and cultural contexts. Reading and class discussions consider the relationship between the writer and society by covering such topics as colonialism, the oral tradition, modernism and the emergence of new narratives in the twentieth century. The Inca Garcilaso, Sor Juana, Carlos Fuentes, Rigoberta Menchu, and Pablo Neruda are among some writers studied.

- **STATS-240 Introduction to Statistics**

Prerequisites:

Math 128 or higher. REMINDER: STATS 240 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

Credits:

4.00

Description:

Topics include: data presentation, measures of central locations and dispersion, probability and probability distributions, estimation, hypothesis testing, simple and multiple regression models. The use of Excel and SPSS will be emphasized throughout the course. 1 term - 4 credits (4 hours per week). Normally offered each semester. STATS 240 satisfies the same requirements as STATS 250

Type:

Quantitative Reasoning

- **STATS-250 Applied Statistics**

Prerequisites:

MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

Credits:

4.00

Description:

Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

Type:

Quantitative Reasoning

• STATS-H250 Honors Applied Statistics

Prerequisites:

MATH-128, MATH 130, 134, 146, or 165 and Honors Course; GPA of 3.3

Credits:

4.00

Description:

Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analyses. The use of computers is emphasized throughout the course. Prerequisite: MATH 130, MATH 134, MATH 146, or MATH 165 Honors Course GPA of 3.2 or higher required. 1 term - 4 credits Normally offered every year.

Type:

Quantitative Reasoning,Honors

- **STATS-350 Applied Statistical Methods**

Prerequisites:

STATS 250

Credits:

4.00

Description:

This application-oriented course is designed to go beyond the topics covered in STATS 250. It includes topics like Analysis of Variance (ANOVA), special topics in regression analysis and index numbers. Further, time series data, which consist of values corresponding to different time intervals, are analyzed. The objective is to examine past time series values to forecast, or predict future values. Seasonal variations are also incorporated in the forecasts. The course will provide useful computer skills involving various statistical packages and is an excellent preparation for graduate work in business and social sciences.

Type:

Social Science

- **STATS-R240 Statistics Recitation**

Credits:

0.00

Description:

This course is taken as a co-requisite to Stats240. The recitation is a hybrid course. Once every two weeks students meet with an instructor to do work that enhances understanding of the course material. On alternate weeks students work on individual and group homework.

- [Major Requirements](#)
- [Minor Requirements](#)
- [Theatre Courses](#)

Major Requirements: 12 courses, 48 credits, plus 4 Practicum Courses

Core Requirements (6 courses, 24 credits)

- **THETR-129 Acting**

Credits:

4.00

Description:

This introduction to acting prepares students for work in production and develops skills in all forms of communication. The first part of the course uses improvisational exercises based on the Stanislavski method to teach fundamental acting techniques. The second half of the course applies those techniques to scene work from major 20th century plays. This course is a core requirement for all Theatre Majors.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

• THETR-187 Intro to Stage Management

Credits:

4.00

Description:

This course will teach both the methods and principles behind stage management demonstrating how to support a production while facilitating the work of directors, designers, and actors. In addition to teaching the specific technical skills necessary to each part of the production process, this course will also address the more subtle intellectual and managerial skills that make stage management an art. Satisfies a core requirement for Theatre majors.

Term:

Offered Fall Term

Type:

Arts Admin Minor Elective

• THETR-191 The Freshman Experience

Prerequisites:

Theatre Majors and minors only.

Credits:

1.00

Description:

This course helps orient Theatre Department Freshmen to university life while presenting them with practical information about the department. Topics will include production practicum, student showcases, auditioning, advising, capstone projects, internships and study abroad opportunities. Theatre

professors, staff, and visiting professionals come to classes to discuss their areas of expertise. Students are made aware of arts activities on campus and in the city of Boston for which weekly journals are required. A script and performance of at least one play in Boston will be studied.

- **THETR-291 Professional Development**

Prerequisites:

Theatre majors or minors only.

Credits:

1.00

Description:

This course is designed to give you the tools to plan for and support your career path after graduation. Activities include audition/resume/ cover-letter workshops; interviewing techniques; dressing for success; networking; identifying your personal brand; professional internships; and deciding whether graduate school is right for you. Master classes with professional theatre artists and field trips to professional theatres will also be included.

- **THETR-488 Professional Internships**

Prerequisites:

instructor's consent and internship availability required

Credits:

1.00- 4.00

Description:

This course provides students with the opportunity to receive credit for their work on an approved internship assignment in the professional performing and visual art world. At the successful completion of the internship, students will be required to submit a written analysis of their experience as well as a journal documenting the daily events of their project. Professional internships are difficult to secure. Interested students are advised to contact members of the Theatre Department faculty at least one semester in advance to facilitate this opportunity.

Term:

Offered Both Fall and Spring

- **THETR-508 Capstone Experience**

Credits:

0.00- 4.00

Description:

The capstone experience demonstrates a student's high level of practical and/or academic facility and prepares them for their transition into the world of professional theatre and graduate school. Upper Level production activities within the theatre department that may fulfill this requirement are directing, designing, stage managing, acting a major role, playwriting, or some special approved project. Students may also fulfill this requirement by completing a Senior Honors Thesis.

Electives (6 courses, 24 credits)

Choose three of the following:

- **THETR-260 Broadway Musicals**

Credits:

4.00

Description:

This course is a survey of American musical theatre from its roots in the mid-19th century to the present. It provides the analytical tools and historical insight to more fully appreciate Broadway's greatest musicals and musical theatre artists. Students will explore the ways in which American forms of popular entertainment helped to shape Broadway musicals from their infancy through their adulthood. The course also explores the ways in which musicals provided opportunities for African-Americans, women, immigrants, and the GLBT community.

Term:

Offered Fall Term

Type:

Cultural Diversity Opt A, Humanities Literature Requirement, Diverse Perspectives, Vis. & Perform Thry

- **THETR-265 Introduction to Theatre: Prehistory to Melodrama**

Credits:

4.00

Description:

This survey course provides students with an historical, philosophical, and aesthetic overview of theatre practices from the Golden Age of Greek drama to 19th-century melodrama and early experiments in realism. Through readings, lectures, and discussions, the class will explore the theatre's persistent capacity to mirror the societies that produce it. Satisfies a core requirement for Theatre majors and the Humanities requirement. Normally offered alternate years.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **THETR-266 Intro to Theatre: 20th Century**

Credits:

4.00

Description:

Picking up chronologically where THETR 225 leaves off, this survey course is designed to provide students with an understanding of modern Western theatre. Beginning with a melodrama, plays will include representative works of realism, naturalism, expressionism, epic theatre, theatre of cruelty, theatre of the absurd, and metatheatricality. Lectures and class discussions will explore how these concepts translate to acting and production techniques as well as what they imply as artistic responses to a modern and post-modern world. Satisfies a core requirement for Theatre Majors.

Term:

Offered Spring Term

Type:

Humanities & History, Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **THETR-267 Introduction to Theatre: Contemporary American**

Credits:

4.00

Description:

This course provides a formal introduction to the theories and practices strategically used by American theatre artists after the Second World War. Special emphasis is placed on theatre artists exploring issues of cultural identity including works by GLBT, African-American, Asian-American, and Latin American playwrights. These playwrights may include Tony Kushner, Paula Vogel, Suzan-Lori Parks, Adrienne Kennedy, August Wilson, David Henry Hwang, Philip Kan Gotanda, Eduardo Machado, and Melinda Lopez. The course will also provide an introduction to trends in post-modern theatre practices related to emerging work of the auteur director, solo performers, and interdisciplinary collectives. Satisfies a core requirement for Theatre majors. Normally offered alternate years.

Term:

Occasional

Type:

Humanities & History,Cultural Diversity Opt A,Humanities Literature Requirement,Diverse Perspectives

Choose one of the following:

- **THETR-151 Introduction to Design**

Credits:

4.00

Description:

This rigorous class will give students the fundamental concepts, vocabulary and skills used to design for the stage such as: color, line, composition, research and script analysis. The class has a written component and is intended to prepare students to design workshop productions in the Studio Theatre. Students will be expected to complete a minimum of ten hours of production work for Theatre Department productions.

Term:

Offered Spring Term

- **THETR-152 Introduction to Stagecraft**

Credits:

4.00

Description:

This rigorous survey class will give students the fundamental concepts, vocabulary, and skill to implement basic scenery, lighting, costuming, props and sound. The class is intended to prepare students as technical support for workshop productions in the Studio Theatre. There is a written component and students will be expected to complete a minimum of ten hours of technical work on Theatre Department productions.

Term:

Offered Fall Term

Choose one of the following:

- **THETR-351 Set Design**

Prerequisites:

Take THETR-237 THETR-250 or THETR-251; or instructor's consent

Credits:

4.00

Description:

This is a studio course exploring the process of interpreting dramatic scripts in visual, three-dimensional ways. Projects will include abstract visual responses, group installations, enacting texts, visual research and textual analyses as well as ground plans and models for sets. Students will need a variety of painting and drawing supplies and equipment. A willingness to think beyond the box set to discover vital ways to shape a production is essential.

Term:

Offered Spring Term

Type:

Humanities & History, Humanities Literature Requirement

• THETR-359 Lighting Design

Prerequisites:

Take THETR-187 THETR-152 or THETR-151; or instructor's consent

Credits:

4.00

Description:

Students will explore the basic process of lighting design for the theatre through hands-on, practical experience, conceptual work, and a study of the history of lighting design. The course will focus on common vocabularies, descriptions of imageries from text, physical forms of design expression and general approach. In addition, students will learn basic skills in electrics to support the design process. Sample assignments might include written critiques of local productions, design approach statements with lighting research, lighted one act plays in the Studio Theatre, and lighting set models. Normally offered alternate years.

Term:

Occasional

• THETR-433 Advanced Singing for the Stage: Broadway Musicals Today

Prerequisites:

Instructor's consent required

Credits:

4.00

Description:

Focusing on musicals written from the 1990-the present e.g. Next to Normal, The Last Five Years, and Spring Awakening, this advanced studio course provides students with an integrated approach to singing and stage performance. The fast-paced tempo of the class will encourage students to build on their previous training and experience and to become increasingly independent as they prepare for auditions and performance work beyond the university. Private vocal coaching and acting coaching will be scheduled outside of class. Students will be expected to prepare selected solos or duets and learn additional choreographed group numbers which will be presented at the end of the term for a public performance.

Term:

Occasional

- **THETR-461 Play Analysis**

Credits:

4.00

Description:

This seminar course examines Shakespeare's plays and their modern correlatives. (i.e. Hamlet and The Seagull, King Lear and Endgame) Students read the texts out loud in class examining the meaning, action, objective, and philosophical and historical contexts with the professor. The goal is to get closer to the original intentions of the author and determine not only the basic theme and character relationships, but the kind of mind that could create such a play. In analyzing a modern play students also examine the impact of Shakespeare's mind on future playwrights. There will be a midterm paper and a final exam.

Term:

Offered Fall Term

Type:

Arts Admin Minor Elective

- **THETR-475 Directing II**

Prerequisites:

THETR-375 or instructor's consent

Credits:

4.00

Description:

Directing II focuses on the development of an individual directorial point of view and explores a variety of theoretical and applied approaches to cultivating interpretive skills. The course also examines how the director reconciles traditional theatrical conventions and techniques with the ability to create fresh, innovative and personal results. Students will stage weekly theatrical responses to class readings in addition to creating a fully-realized final directing project.

Term:

Offered Spring Term

- **THETR-477 Playwriting II**

Prerequisites:

THETR-377 or instructor's consent

Credits:

4.00

Description:

Playwriting II is a continuation, deepening and thickening of the principles learned in Playwriting I. A course designed for dedicated writers, students are expected to explore a wide variety of playwriting challenges, skills and techniques. Student works will be regularly shared and discussed in class. Students will also be assigned plays by recognized playwrights to discuss and analyze in class. Playwriting II students are encouraged to participate in PlayDay!", an annual reading of new student-written plays. Normally offered alternate years.

Term:

Occasional

Choose one of the following:

- **THETR-233 Introduction to Singing for the Stage: Classic Musical Comedies**

Credits:

4.00

Description:

Focusing on classic musical comedies from 1910-1950 e.g. Anything Goes, Kiss Me Kate, and Guys and Dolls this skills-based studio course introduces students to an integrated approach to singing and stage performance. Students will learn the fundamentals of vocal technique which includes targeted vocal warm-ups and relaxation exercises in addition to the basics of breath support, placement, and phrasing. Students will also learn how to analyze musicals for their dramatic potential in order to make their performances more believable to an audience. Several classes will be

devoted to audition preparation. Private vocal coaching and acting coaching will be scheduled outside of class. Students will work on assigned songs, duets, and choreographed group numbers which will be presented at the end of the term for an invited audience.

Term:

Occasional

- **THETR-322 Acting for the Camera**

Prerequisites:

THETR-129 or instructor's consent

Credits:

4.00

Description:

This course gives students an understanding of the acting challenges unique to film, television, and commercial acting and helps them develop an effective process for on-camera performance. The material in this class is drawn from various media as well as from students' own research and writing. Class exercises and presentations are video taped, viewed, and critiqued by the students and the instructor as students grow and learn. Students also become familiar with the language and demands of professional production as well as how the technical process affects their performance.

Term:

Offered Fall Term

- **THETR-323 Audition Training**

Credits:

4.00

Description:

Learning how to prepare for effective auditions is essential training for anyone who wishes to be cast in theatre productions. This studio course will provide practical guidelines and useful strategies to help students be at their best during the always competitive audition process. Over the course of the term students will not only prepare to participate confidently in professional and non-professional auditions, but learn to enjoy the journey as well.

Term:

Offered Fall Term

- **THETR-329 Acting II**

Prerequisites:

THETR 229 or THETR-129 or instructor's consent

Credits:

4.00

Description:

A continuation of Acting I with special emphasis on verse and heightened language. Students will explore acting Shakespeare and other classical plays and will rehearse and perform short projects. Students will also learn to think, read and write about classical performance.

Term:

Offered Fall Term

- **THETR-333 Singing for the Stage: Rock, Pop, & Progressive**

Credits:

4.00

Description:

Focusing on classic rock, pop, and progressive musicals from the 1970s-1990s, e.g. A Chorus Line, Chicago, and Into the Woods this studio course provides students with an integrated approach to singing and stage performance. Students will learn the fundamentals of vocal technique which includes targeted vocal warm-ups and relaxation exercises in addition to the basics of breath support, placement, and phrasing. Students will learn how to analyze musicals for their dramatic potential in order to make their performances more believable to an audience. They will also be introduced to basic music theory and how to plunk out notes on a piano - skills that will make them more independent and confident performers. Several classes will be devoted to audition preparation. Private vocal coaching and acting coaching will be scheduled outside of class. Assigned solos and choreographed group numbers will be presented weekly in class and at the end of the term in a recital for an invited audience.

Term:

Occasional

- **THETR-334 Singing for the Stage: Musicals From the Golden Age**

Credits:

4.00

Description:

Focusing on classic musicals from 1950-1970 e.g., Pajama Game, Fiddler on the Roof, and Cabaret, this skills-based studio course exposes students to an integrated approach to singing and stage performance. Students will learn the fundamentals of vocal technique which includes targeted vocal warm-ups and relaxation exercises in addition to the basics of breath support, placement, and phrasing. Students will also learn how to analyze musicals for their dramatic potential in order to make their performances more believable to an audience. Several classes will be devoted to audition preparation. Private vocal coaching and acting coaching will be scheduled outside of class. All students will work on assigned songs and choreographed group numbers which will be presented at the end of the term for an invited audience.

Term:

Occasional

- **THETR-421 Combat, Clown and Characters**

Prerequisites:

THETR-201 OR THETR-229 or instructor's consent

Credits:

4.00

Description:

Students compliment their practical theatre training with a wide range of physical and vocal skills. This three part class focuses on the art of creating a clown, the ability to safely build and execute a stage fight, and special work on creating a three dimensional character for the stage. Normally offered alternate years.

Term:

Occasional

Production Practicum Requirement

All Theatre majors are required to have two Theatre department performance and two Theatre department production experiences.

A non-credit course to satisfy the Theatre practicum requirement for theatre majors and minors. Students should register for this course when participating in Theatre Department production activities such as design or assistant design, load-in or run crews, board operators, carpenters, electricians, stitchers and painters. May be taken more than once.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **THETR-120 Theatre Practicum**

Credits:

0.00

Description:

Non-credit course to satisfy the Theatre practicum requirement for theatre majors and minors. Students should register for section A for performance activities such as acting, directing, and writing, and section B for production related activities such as tech crew, design, and running shows. Stage management may fulfill either category. May be taken more than once.

Term:

Offered Both Fall and Spring

- **THETR-129 Acting**

Credits:

4.00

Description:

This introduction to acting prepares students for work in production and develops skills in all forms of communication. The first part of the course uses improvisational exercises based on the Stanislavski method to teach fundamental acting techniques. The second half of the course applies those techniques to scene work from major 20th century plays. This course is a core requirement for all Theatre Majors.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **THETR-139 Vocal Technique**

Credits:

4.00

Description:

Vocal Technique provides students with an essential foundation to help ensure the safe and effective use of the speaking and singing voice. Topics will include alignment, relaxation, breath support, placement, resonance, vocal anatomy, and the care and protection of the voice under normal and stressful situations. Students will do oral presentations and have the option of singing in a master class setting. This is a studio course with a written component.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **THETR-151 Introduction to Design**

Credits:

4.00

Description:

This rigorous class will give students the fundamental concepts, vocabulary and skills used to design for the stage such as: color, line, composition, research and script analysis. The class has a written component and is intended to prepare students to design workshop productions in the Studio Theatre. Students will be expected to complete a minimum of ten hours of production work for Theatre Department productions.

Term:

Offered Spring Term

- **THETR-152 Introduction to Stagecraft**

Credits:

4.00

Description:

This rigorous survey class will give students the fundamental concepts, vocabulary, and skill to implement basic scenery, lighting, costuming, props and sound. The class is intended to prepare students as technical support for workshop productions in the Studio Theatre. There is a written component and students will be expected to complete a minimum of ten hours of technical work on Theatre Department productions.

Term:

Offered Fall Term

- **THETR-187 Intro to Stage Management**

Credits:

4.00

Description:

This course will teach both the methods and principles behind stage management demonstrating how to support a production while facilitating the work of directors, designers, and actors. In addition to teaching the specific technical skills necessary to each part of the production process, this course will also address the more subtle intellectual and managerial skills that make stage management an art. Satisfies a core requirement for Theatre majors.

Term:

Offered Fall Term

Type:

Arts Admin Minor Elective

- **THETR-191 The Freshman Experience**

Prerequisites:

Theatre Majors and minors only.

Credits:

1.00

Description:

This course helps orient Theatre Department Freshmen to university life while presenting them with practical information about the department. Topics will include production practicum, student showcases, auditioning, advising, capstone projects, internships and study abroad opportunities. Theatre professors, staff, and visiting professionals come to classes to discuss their areas of expertise. Students are made aware of arts activities on campus and in the city of Boston for which weekly journals are required. A script and performance of at least one play in Boston will be studied.

- **THETR-200 Theatre Practicum: Performance**

Prerequisites:

Theatre majors or minors or instructor's consent

Credits:

1.00- 8.00

Description:

This course offers flexible credit for a wide range of production work in the Theatre Department determined by the challenge and time commitment of the assignment. Students should register for this course when participating in Theatre Department performance activities such as acting, directing, playwriting, dramaturgy, choreography, or stage management may. Written work includes a production log signed by the supervisor and a narrative journal. This course also satisfies the Theatre requirement for Theatre majors and minors. May be taken more than once. ECR

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement

• **THETR-202 Theatre Practicum: Production**

Prerequisites:

Theatre majors or minors or instructor's consent

Credits:

1.00- 8.00

Description:

This course offers flexible credit for a wide range of production work in the Theatre Department determined by the challenge and time commitment of the assignment. Students should register for this course when participating in Theatre Department production activities such as design or assistant design, load-in or run crews, board operators, carpenters, electricians, stitchers and painters. ECR

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement

- **THETR-220 Theatre Practicum**

Prerequisites:

Theatre majors or minors or instructor's consent

Credits:

1.00- 8.00

Description:

This course offers flexible credit for a wide range of production work in the Theatre Department determined by the challenge and time commitment of the assignment. Written work includes a production log signed by the supervisor and a narrative journal. Credits may be used to satisfy the Theatre practicum requirement for Theatre majors and minors. Students should register for section A for performance activities such as acting, directing, and writing, and section B for production related activities such as tech crew, design, and running shows. Stage management may fulfill either category. May be taken more than once.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement

- **THETR-221 Voice and Movement for Actors**

Credits:

4.00

Description:

Professional actors engage in rigorous voice and movement training throughout their careers. This course provides students with the theory and practical training to free and develop their natural voices for the stage. They will also explore physical acting through improvisation and a series of exercises that will expand their ability to respond reflexively and organically to their instincts. Wear comfortable clothing.

Term:

- **THETR-224 Intro to Improv**

Credits:

4.00

Description:

This course serves as an introduction to scenic improvisation and its application toward short-form, long-form and as a tool to develop written material. Students will begin classes with various improvisational exercises and transition to creating improvised scenes focusing on agreement, relationship, game and heightening concepts. Particular emphasis is placed on creative collaboration with scene partners and as part of an ensemble. This class will benefit anyone who wants to develop tools to think on their feet and participate in creative collaborations.

- **THETR-227 Introduction to Theatre Arts III**

Credits:

4.00

Description:

This course provides a formal introduction to the theories and practices strategically used by American theatre artists after the Second World War. Special emphasis is placed on theatre artists exploring issues of cultural identity including works by GLBT, African-American, Asian-American, and Latin American playwrights. These playwrights may include Tony Kushner, Paula Vogel, Suzan-Lori Parks, Adrienne Kennedy, August Wilson, David Henry Hwang, Philip Kan Gotanda, Eduardo Machado, and Melinda Lopez. The course will also provide an introduction to trends in post-modern theatre practices related to emerging work of the auteur director, solo performers, and interdisciplinary collectives. Satisfies a core requirement for Theatre majors. Normally offered alternate years.

Term:

Occasional

Type:

Humanities & History, Cultural Diversity Opt A, Humanities Literature Requirement

- **THETR-229 Acting I**

Credits:

4.00

Description:

This introduction to acting prepares students for work in production and develops skills in all forms of communication. The first part of the course uses improvisational exercises based on the Stanislavski method to teach fundamental acting techniques. The second half of the course applies those techniques to scene work from major 20th century plays. This course is a core requirement for all Theatre Majors.

Term:

Offered Both Fall and Spring

- **THETR-232 Acting for the Camera**

Prerequisites:

THETR-229 or instructor's consent

Credits:

4.00

Description:

This course gives students an understanding of the acting challenges unique to film, television, and commercial acting and helps them develop an effective process for on-camera performance. The material in this class is drawn from various media as well as from students' own research and writing. Class exercises and presentations are video taped, viewed, and critiqued by the students and the instructor as students grow and learn. Students also become familiar with the language and demands of professional production as well as how the technical process affects their performance.

Term:

Offered Fall Term

- **THETR-233 Introduction to Singing for the Stage: Classic Musical Comedies**

Credits:

4.00

Description:

Focusing on classic musical comedies from 1910-1950 e.g. Anything Goes, Kiss Me Kate, and Guys and Dolls this skills-based studio course introduces students to an integrated approach to singing and stage performance. Students will learn the fundamentals of vocal technique which includes targeted vocal warm-ups and relaxation exercises in addition to the basics of breath support, placement, and phrasing. Students will also learn how to analyze musicals for their dramatic potential in order to make their performances more believable to an audience. Several classes will be devoted to audition preparation. Private vocal coaching and acting coaching will be scheduled outside of class. Students will work on assigned songs, duets, and choreographed group numbers which will be presented at the end of the term for an invited audience.

Term:

Occasional

• THETR-234 Acting the Song

Credits:

4.00

Description:

This studio course will focus on techniques to develop fresh, organic interpretations of musical theatre songs that illuminate not only the nuances of the music and lyric but the character singing as well. Working with classic musicals from the 1920s - 1940s, students engage in musical and dramatic analysis of the libretto and score and the historical and theatrical contexts of the musical. They are provided regular in-class performance opportunities and private vocal coaching outside of class. At the end of the term students present scenes and songs in a recital for an invited audience. Normally offered alternate years.

Term:

Occasional

• THETR-240 Dance Essentials I

Credits:

4.00

Description:

This is a course for the student who always wanted to learn the basics of dance as well as the student returning to dance. Class work includes centering, attention to placement, and the development of strength, flexibility, and musicality. Students will learn to think and write critically about the form. Dance attire is required.

Term:

Occasional

- **THETR-241 Jazz**

Credits:

4.00

Description:

This largely experiential course with a written component introduces students to the fundamentals of jazz. Classes will consist of a warm-up followed by floor exercises and sequences. Students will choreograph their own dances individually or in groups to be performed at the end of the semester. Students are expected to dress in dance attire. No dance experience is required. Normally offered every year

- **THETR-243 Sabar: Music and Dance of Senegal**

Credits:

4.00

Description:

This course explores the history and practice of music and dance in Senegal, West Africa taught through lectures, readings, and studio classes which are accompanied by live African drumming. Proper dance attire is required.

Term:

Offered Spring Term

Type:

Cultural Diversity Opt B

- **THETR-249 Modern Dance I**

Credits:

4.00

Description:

This course explores the history and techniques of modern dance, a uniquely American form. Classes will be comprised of warm-ups, floor work, and choreographed combinations. Students will learn to think and write critically about the form. The course will culminate with a presentation of modern dance choreographed by the instructor for an invited audience. Dance attire is required.

Term:

Offered Fall Term

- **THETR-250 Introduction to Stagecraft**

Credits:

4.00

Description:

This rigorous survey class will give students the fundamental concepts, vocabulary, and skill to implement basic scenery, lighting, costuming, props and sound. - **THETR-281 Arts Administration I**

Credits:

4.00

Description:

The expansive world of arts administration provides a wealth of rewarding career opportunities. This course will provide a fundamental overview of the managing, marketing, fundraising, and financial management functions of the performing and visual arts organizations. Using Suffolk's Modern Theatre as a laboratory, as well as site visits to some of Boston's greatest arts and culture institutions, we will investigate real world successes and challenges and discover what special talents each individual student can bring to the management mix. This course is a core requirement for Suffolk's new interdisciplinary Arts Administration minor.

- **THETR-289 Managing the Start-Up Arts Organization**

Credits:

4.00

Description:

Managing a start-up arts organization requires not only the financial, programming, development and interpersonal skills of day-to-day arts management, but the additional creative and imaginative abilities to attract and manage stakeholders, brand the organization, and create governance and hierarchical structures. Using Suffolk's new Modern Theatre as a laboratory, we will investigate the process of starting-up, how it differs from organization to organization, and what special talents each individual student can bring to the management mix. Reading and writing are required for the course, as well as specific work projects either at the Modern or at a local start-up.

Offered Fall Term

- **THETR-323 Audition Training**

Credits:

4.00

Description:

Learning how to prepare for effective auditions is essential training for anyone who wishes to be cast in theatre productions. This studio course will provide practical guidelines and useful strategies to help students be at their best during the always competitive audition process. Over the course of the term students will not only prepare to participate confidently in professional and non-professional auditions, but learn to enjoy the journey as well.

Term:

Offered Fall Term

- **THETR-329 Acting II**

Prerequisites:

THETR 229 or THETR-129 or instructor's consent

Credits:

4.00

Description:

A continuation of Acting I with special emphasis on verse and heightened language. Students will explore acting Shakespeare and other classical plays and will rehearse and perform short projects. Students will also learn to think, read and write about classical performance.

Term:

Offered Fall Term

- **THETR-333 Singing for the Stage: Rock, Pop, & Progressive**

Credits:

4.00

Description:

Focusing on classic rock, pop, and progressive musicals from the 1970s-1990s, e.g. A Chorus Line, Chicago, and Into the Woods this studio course provides students with an integrated approach to singing and stage performance. Students will learn the fundamentals of vocal technique which includes targeted vocal warm-ups and relaxation exercises in addition to the basics of breath support, placement, and phrasing. Students will learn how to analyze musicals for their dramatic potential in order to make their performances more believable to an audience. They will also be introduced to basic music theory and how to plunk out notes on a piano - skills that will make them more independent and confident performers. Several classes will be devoted to audition preparation. Private vocal coaching and acting coaching will be scheduled outside of class. Assigned solos and choreographed group numbers will be presented weekly in class and at the end of the term in a recital for an invited audience.

Term:

Occasional

- **THETR-334 Singing for the Stage: Musicals From the Golden Age**

Credits:

4.00

Description:

Focusing on classic musicals from 1950-1970 e.g., Pajama Game, Fiddler on the Roof, and Cabaret, this skills-based studio course exposes students to an integrated approach to singing and stage performance. Students will learn the fundamentals of vocal technique which includes targeted vocal warm-ups and relaxation exercises in addition to the basics of breath support, placement, and phrasing. Students will also learn how to analyze musicals for their dramatic potential in order to make their performances more believable to an audience. Several classes will be devoted to audition preparation. Private vocal coaching and acting coaching will be scheduled outside of class. All students will work on assigned songs and choreographed group numbers which will be presented at the end of the term for an invited audience.

Term:

Occasional

- **THETR-345 Broadway Dance**

Credits:

4.00

Description:

Grounded in the fundamentals of dance, this course will focus on the rigors and vitality of dances created for the Broadway musical. Students will learn about the history of Broadway dance and will present choreography developed in class at the end of the semester for an invited audience. Students will learn to think and write critically about the form. Dance attire is required.

Term:

Occasional

- **THETR-347 The Art and Artistry of Calling a Show**

Prerequisites:

THETR-237 or instructor's consent

Credits:

4.00

Description:

In calling a show the stage manager cues all technicians to effect changes in lighting, sound, flying elements and special effects during performances. A well-called show is an artistic achievement no less than a well-acted, directed or designed show. Building on the ability to make a complete and accurate stage manager's book learned in Intro to Stage Management, this course will teach calling skills for theatre, opera, dance and performance art. The course will demonstrate the construction of cues and how they promote the artistic vision of the production. In-class work will utilize the Studio Theatre and give students real-time opportunities for calling cues, and will include play reading and analysis. Outside class work will include attending and writing analyses of professional performances.

Term:

Occasional

- **THETR-351 Set Design**

Prerequisites:

Take THETR-237 THETR-250 or THETR-251; or instructor's consent

Credits:

4.00

Description:

This is a studio course exploring the process of interpreting dramatic scripts in visual, three-dimensional ways. Projects will include abstract visual responses, group installations, enacting texts, visual research and textual analyses as well as ground plans and models for sets. Students will need a variety of painting and drawing supplies and equipment. A willingness to think beyond the box set to discover vital ways to shape a production is essential.

Term:

Offered Spring Term

Type:

Humanities & History, Humanities Literature Requirement

• **THETR-356 Introduction to Costume Design**

Prerequisites:

THETR 250 OR THETR 251 or by instructor's permission.

Credits:

4.00

Description:

This is a comprehensive studio course with a written component. The course explores many aspects of the design process including concept, research, collaboration, and full renderings. Normally offered alternate years.

• **THETR-359 Lighting Design**

Prerequisites:

Take THETR-187 THETR-152 or THETR-151; or instructor's consent

Credits:

4.00

Description:

Students will explore the basic process of lighting design for the theatre through hands-on, practical experience, conceptual work, and a study of the history of lighting design. The course will focus on common vocabularies, descriptions of imageries from text, physical forms of design expression and general approach. In addition, students will learn basic skills in electrics to support the design process. Sample assignments might include written critiques of local productions, design approach statements with lighting research, lighted one act plays in the Studio Theatre, and lighting set models. Normally offered alternate years.

Term:

Occasional

- **THETR-361 Combat, Clown and Characters**

Prerequisites:

THETR-201 OR THETR-229 or instructor's consent

Credits:

4.00

Description:

Students compliment their practical theatre training with a wide range of physical and vocal skills. This three part class focuses on the art of creating a clown, the ability to safely build and execute a stage fight, and special work on creating a three dimensional character for the stage. Normally offered alternate years.

Term:

Occasional

- **THETR-362 Women on Stage**

Credits:

4.00

Description:

How do playwrights of different backgrounds and genders interpret female-ness? This class explores some of the great heroines of dramatic literature, as well as female playwrights and performers. Students will be encouraged to indulge their taste for drama, as well as ask deeper questions about how women on stage are presented, perceived, and constructed. Students will read, write and discuss plays in terms of their structure, plot, theme, and characterizations. Class activities may include watching videos and attending live theatrical productions.

Term:

Occasional

Type:

Cultural Diversity Opt A

- **THETR-364 Dramaturgy**

Prerequisites:

THETR-225, THETR-226, THETR-227, THETR-310, THETR-307, THETR-405, THETR-450, THETR-455, THETR-460, THETR-489, THETR-507 or THETR-510 or instructor's consent

Credits:

4.00

Description:

This course will explore the fundamentals of dramatic structure and investigate the various roles of the contemporary dramaturg. Through the in-depth analysis of texts, students will follow Aristotle's example in *The Poetics* and attempt to figure out what makes great plays tick. Weekly reading and writing assignments will be supplemented by live theatrical performances.

Term:

Occasional

- **THETR-375 Directing I**

Credits:

4.00

Description:

This conservatory-style course provides students with fundamental directing skills through lectures, readings, and weekly projects that explore composition, staging, text analysis, and directorial communication skills. Students in this course become eligible to propose their own projects to the Theatre Department for production consideration. Directing students are also encouraged to stage manage and assistant direct faculty productions both in and outside of the Department.

Term:

Offered Fall Term

Type:

Arts Admin Minor Elective

- **THETR-377 Playwriting**

Credits:

4.00

Description:

An introduction to playwriting, students will be required to submit weekly assignments which explore and refine fundamental components of the dramatist's craft including plot, character, conflict, voice, dialogue, rhythm, point of view, surprise, structure, and style. Students are encouraged to participate in Play Day!", an annual reading of new student-written plays. Normally offered every year.

- **THETR-384 The Art and Artistry of Calling a Show**

Prerequisites:

THETR-237 or instructor's consent

Credits:

4.00

Description:

In calling a show the stage manager cues all technicians to effect changes in lighting, sound, flying elements and special effects during performances. A well-called show is an artistic achievement no less than a well-acted, directed or designed show. Building on the ability to make a complete and accurate stage manager's book learned in Intro to Stage Management, this course will teach calling skills for theatre, opera, dance and performance

art. The course will demonstrate the construction of cues and how they promote the artistic vision of the production. In-class work will utilize the Studio Theatre and give students real-time opportunities for calling cues, and will include play reading and analysis. Outside class work will include attending and writing analyses of professional performances.

Term:

Occasional

- **THETR-402 Vocal Coaching III**

Prerequisites:

Instructor's consent required

Credits:

4.00

Description:

A rigorous, fast-paced studio course for motivated students with demonstrated proficiency in musical theatre performance. Building on basic music and acting theory explored in Vocal Coaching I and II and Acting the Song I and II, students will be expected to analyze and perform challenging new and known songs representing a wide range of styles and periods. Students will also be expected to write and think critically about musical theatre performance and prepare for at least one professional musical theatre audition outside the university. The class will culminate in a recital for an invited audience.

Term:

Occasional

- **THETR-403 Solo Performance**

Prerequisites:

THETR-229 or THETR-425 or instructor's consent

Credits:

4.00

Description:

This advanced level acting course introduces students to the world of performance art utilizing research, writing and performance techniques. Source material may be fictional, historical, personal or contemporary figures of particular interest to the student. Students will research and create their own pieces to be performed at the end of the term for an invited audience.

Term:

Offered Spring Term

- **THETR-407 Playwriting II**

Prerequisites:

THETR-307 or instructor's consent

Credits:

4.00

Description:

Playwriting II is a continuation, deepening and thickening of the principles learned in Playwriting I. A course designed for dedicated writers, students are expected to explore a wide variety of playwriting challenges, skills and techniques. Student works will be regularly shared and discussed in class. Students will also be assigned plays by recognized playwrights to discuss and analyze in class. Playwriting II students are encouraged to participate in "PlayDay!", an annual reading of new student-written plays. Normally offered alternate years.

Term:

Occasional

- **THETR-421 Combat, Clown and Characters**

Prerequisites:

THETR-201 OR THETR-229 or instructor's consent

Credits:

4.00

Description:

Students compliment their practical theatre training with a wide range of physical and vocal skills. This three part class focuses on the art of creating a clown, the ability to safely build and execute a stage fight, and special work on creating a three dimensional character for the stage. Term:

Occasional

- **THETR-422 Acting for the Camera II**

Prerequisites:

Take THETR-232 or Instructor's consent

Credits:

4.00

Description:

Applying skills introduced in Acting for the Camera I, students produce and perform in a showcase video with more demanding material. Included in this course is a focus on the business of film and television work as it affects an acting career. From auditioning skills to on-set work ethics, students will work in class and on film locations to experience the realities of the film and television industries and learn to think and write critically about on camera performance. Each student will have the opportunity to put together a demo reel showcasing their acting work prepared for class.

Term:

Offered Spring Term

- **THETR-427 Acting Styles**

Prerequisites:

THETR 229 AND THETR 329

Credits:

4.00

Description:

This studio course offers an advanced study of classic and poetic texts. Each week students prepare and present monologues, scenes, and sonnets for class discussion. Normally offered alternate years.

- **THETR-429 Theatre on the Go: Site-Specific Theatre**

Prerequisites:

THETR-129

Credits:

4.00

Description:

This project-based performance class explores the unique, specially adapted acting experience found working in unusual and sometimes public settings. Through improvisation and socio-drama exploration, students will write, produce and direct their own interactive and non-interactive performance pieces. This innovative team-building class will challenge your ideas of what and where theatre lives through discussion and performance. The semester will conclude with a group project to be performed publicly.

- **THETR-433 Advanced Singing for the Stage: Broadway Musicals Today**

Prerequisites:

Instructor's consent required

Credits:

4.00

Description:

Focusing on musicals written from the 1990-the present e.g. Next to Normal, The Last Five Years, and Spring Awakening, this advanced studio course provides students with an integrated approach to singing and stage performance. The fast-paced tempo of the class will encourage students to build on their previous training and experience and to become increasingly independent as they prepare for auditions and performance work beyond the university. Private vocal coaching and acting coaching will be scheduled outside of class. Students will be expected to prepare selected solos or duets and learn additional choreographed group numbers which will be presented at the end of the term for a public performance.

Term:

Occasional

- **THETR-444 Choreography I**

Credits:

4.00

Description:

This course encourages students to develop a broad palette of choreographic tools drawn from the work of early modern choreographers and theorists and post-modern techniques. The process of the class will include structured improvisations, analysis of historical and contemporary dance works, the development of a critical response process, journaling, and the creation of original solo and group work. Additionally, students will attend two dance concerts throughout the semester and submit written critiques of each performance. The class will culminate in the performance of self-selected compositions for an invited audience. Proper dance attire is required.

- **THETR-451 Set Design II**

Prerequisites:

THETR 331 or Instructor's Consent

Credits:

4.00

Description:

Taking up where THETR 331 left off, Set Design II is a studio course exploring the process of interpreting dramatic scripts in visual, three-dimensional ways at a much higher level of project realization. In addition to class work, students will develop advanced skills in model building, drafting and painting through independent studio work and individual meetings with the professor outside of class. Students will need a variety of painting and drawing supplies and equipment. Meets concurrently with Set Design I.

Term:

Occasional

- **THETR-460 A House for Words to Live In**

Prerequisites:

Prerequisites: THETR225 or THETR226, or THETR227 and THETR250 or THETR251 or THETR237 (or permission of the instructor)

Credits:

4.00

Description:

An upper level course, of interest to directors and dramaturges as well as designers, about a remarkable period in American theatre history, explored within the context of four stage designers and the playwrights with whom they collaborated. Scripts by O'Neil, Williams, Miller, and Odets will be studied in conjunction with their revelatory original designs, which have become as iconic as the plays themselves. The designer's process, the collaborative nature of theatrical production, and the advances in theatre technology will also be explored. The course will have a seminar format, require independent reading and research, and be writing intensive, culminating with a final term paper presented to the class.

Term:

Occasional

• THETR-461 Play Analysis

Credits:

4.00

Description:

This seminar course examines Shakespeare's plays and their modern correlatives. (i.e. Hamlet and The Seagull, King Lear and Endgame) Students read the texts out loud in class examining the meaning, action, objective, and philosophical and historical contexts with the professor. The goal is to get closer to the original intentions of the author and determine not only the basic theme and character relationships, but the kind of mind that could create such a play. In analyzing a modern play students also examine the impact of Shakespeare's mind on future playwrights. There will be a midterm paper and a final exam.

Term:

Offered Fall Term

Type:

Arts Admin Minor Elective

- **THETR-465 The American Resident Theatre**

Credits:

4.00

Description:

This course will examine some of the principal art theatres in this country beginning with the early days of the Provincetown Players and continuing up to the present day. By examining material about their histories, often written by their founding directors, students will determine when these theatres fed off each other's ideas and ideals, and when they set off in entirely new directions. The course will also explore the viability of not-for-profit institutions in a corporate society.

Term:

Occasional

- **THETR-469 Performance Studies**

Credits:

4.00

Description:

This course provides an overview of the modern concept of performance and how it has evolved in a variety of interdisciplinary fields. Encompassing the areas of dance, music, theatre, installation work, 'happenings' and spectacles, students will explore the ways performance is understood by ethnographers, anthropologists, linguists, cultural theorists, social scientists, and artists Using the theoretical base covered during the semester, students will conceive, develop, and present a final performance piece appropriate to their chosen discipline.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **THETR-475 Directing II**

Prerequisites:

THETR-375 or instructor's consent

Credits:

4.00

Description:

Directing II focuses on the development of an individual directorial point of view and explores a variety of theoretical and applied approaches to cultivating interpretive skills. The course also examines how the director reconciles traditional theatrical conventions and techniques with the ability to create fresh, innovative and personal results. Students will stage weekly theatrical responses to class readings in addition to creating a fully-realized final directing project.

Term:

Offered Spring Term

• THETR-477 Playwriting II

Prerequisites:

THETR-377 or instructor's consent

Credits:

4.00

Description:

Playwriting II is a continuation, deepening and thickening of the principles learned in Playwriting I. A course designed for dedicated writers, students are expected to explore a wide variety of playwriting challenges, skills and techniques. Student works will be regularly shared and discussed in class. Students will also be assigned plays by recognized playwrights to discuss and analyze in class. Playwriting II students are encouraged to participate in "PlayDay!", an annual reading of new student-written plays. Normally offered alternate years.

Term:

Occasional

• THETR-481 Arts Administration II

Prerequisites:

THETR 491

Credits:

4.00

Description:

In this course, we will see how the administrative functions discussed in Arts Administration I work in different kinds of arts organizations. Using actual cases from the world of performing and visual arts, we will explore the operations for profit and non-profit arts producers and presenters, art service organizations, and many kinds of funding institutions. We will also discuss various approaches to arts administration in an international context. The course may include an internship with an arts organization in Boston.

• **THETR-487 Stage Management II**

Credits:

4.00

Description:

Building on the skills learned in Stage Management I, Stage Management II will provide an in-depth study of how to support and manage rehearsals and performances of diverse genres such as opera, dance, and theatre. Special attention will be paid to anticipating a wide range of needs from professional artists, union regulations, cueing and calling shows; and to further develop student's communication skills. Internships with professional arts organizations may be arranged. Normally offered every other year.

Term:

Occasional

• **THETR-488 Professional Internships**

Prerequisites:

instructor's consent and internship availability required

Credits:

1.00- 4.00

Description:

This course provides students with the opportunity to receive credit for their work on an approved internship assignment in the professional performing and visual art world. At the successful completion of the internship, students will be required to submit a written analysis of their experience as well as a journal documenting the daily events of their project. Professional internships are difficult to secure. Interested students are advised to contact members of the Theatre Department faculty at least one semester in advance to facilitate this opportunity.

Term:

Offered Both Fall and Spring

• THETR-489 Performance Studies

Credits:

4.00

Description:

This course provides an overview of the modern concept of performance and how it has evolved in a variety of interdisciplinary fields. Encompassing the areas of dance, music, theatre, installation work, 'happenings' and spectacles, students will explore the ways performance is understood by ethnographers, anthropologists, linguists, cultural theorists, social scientists, and artists Using the theoretical base covered during the semester, students will conceive, develop, and present a final performance piece appropriate to their chosen discipline.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

• THETR-507 Senior Thesis Project

Prerequisites:

Instructor's consent required

Credits:

4.00- 8.00

Description:

Theatre majors who have demonstrated academic excellence as well as involvement in department productions have the opportunity to work with a faculty advisor during their senior year to focus intensively on a specific area of interest. An extensive reading list will be determined early in the fall semester and regular meetings with the advisor will be scheduled to guide this course of study. The Senior Honors Project may also include a production project related to the topic. Successful completion of this course confers departmental honors to graduating Theatre majors.

Term:

Offered Both Fall and Spring

• THETR-508 Capstone Experience

Credits:

0.00- 4.00

Description:

The capstone experience demonstrates a student's high level of practical and/or academic facility and prepares them for their transition into the world of professional theatre and graduate school. Upper Level production activities within the theatre department that may fulfill this requirement are directing, designing, stage managing, acting a major role, playwriting, or some special approved project. Students may also fulfill this requirement by completing a Senior Honors Thesis.

• THETR-510 Independent Study

Prerequisites:

Instructor's consent required

Credits:

1.00- 8.00

Description:

Variable credits for approved projects outside the classroom. Since all independent studies must be approved by the Dean's Office, all interested students must be able to persuasively articulate their proposal in writing and include both an annotated reading list and a schedule of meetings with faculty supervisors.

Term:

Offered Both Fall and Spring

- **THETR-511 Professional Development**

Prerequisites:

Theatre majors or minors only.

Credits:

1.00

Description:

This course is designed to give you the tools to plan for and support your career path after graduation. Activities include audition/resume/ cover-letter workshops; interviewing techniques; dressing for success; networking; identifying your personal brand; professional internships; and deciding whether graduate school is right for you. Master classes with professional theatre artists and field trips to professional theatres will also be included.

2015-2016 Archived Catalog Information

Women's & Gender Studies

As an interdisciplinary program, the Women's & Gender Studies minor draws on insights and analytic tools from the arts, history, literature, media, and the social sciences. Students may enroll in Women's & Gender Studies courses for elective credit or as a minor.

There is no major available in Women's & Gender Studies.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Minor Requirements](#)
- [Women's & Gender Studies Courses](#)

Minor Requirements: 5 courses, 20 credits

Core Requirement (1 course, 4 credits)

Choose one of the following:

- WGS-111 Women, History, & Culture

Credits:

4.00

Description:

Explores the roles and images of women in Western culture and the realities of women's everyday lives through literature, film, history, art, psychology, and recent feminist scholarship. Analyzes gender inequalities and the influence of gender on social structure, human behavior, and artistic expression. Topics include: the social construction of gender and identity; domestic prescriptions for women; women and work; intersections of

gender, class, and race in American society; sexualities and identity; the politics of motherhood and reproductive rights; educating girls; negotiating male privilege and structural inequalities; representations of women in Western art and film; and women as artists and gendered models of creativity in art, film, fiction, and science.

Term:

• **CJN-217 Gay and Lesbian Studies**

Credits:

4.00

Description:

Examines the portrayal of homosexuality in political, social, and cultural discourse. Analyzes the role of media and symbolic construction in the shaping of public values, opinions, and social movements.

Term:

Alternates Fall & Spring

Type:

Cultural Diversity Opt A,Diverse Perspectives

• **ENG-356 Whitman and Dickinson**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

An investigation of the lives and works of two of nineteenth-century America's greatest and most original poets. Topics will include types of poetic language and formal structure, the work of the poetic imagination in transforming observations of the world into art, and the ways in which poets process the idea of death and the reality of war. Finally, this course examines Whitman and Dickinson's impact on American popular culture as well as on the writings of modern poets and literary critics.

Term:

Occasional

• **ENG-387 Writing Women**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course studies 19th and 20th century women writers and questions the type of women who write, what they write about, and why they write. Themes we examine include domesticity, assimilation, and madness. Authors studied in the past have included Edith Wharton, Willa Cather, Anzia Yezierska, Nella Larsen, and Sylvia Plath. Normally offered alternate years. Cultural Diversity A

Term:

Type:

Cultural Diversity Opt A

• **FR-314 Marie Antoinette, Fashion Revolutionary**

Credits:

4.00

Description:

Explores the French Enlightenment and its culture leading up to the French revolution through a focus on one significant figure: Marie-Antoinette. Examines the relationship of female image and the body politic of eighteenth-century France. Considers the legacy of Marie-Antoinette as martyr and fetish object in the nineteenth and twentieth centuries, and focuses on her continuing relevance today. Topics include: women and power; fashion and self-representation; motherhood and domesticity; and revolution and gender iconography. All work in French.

Term:

Occasional

- **FR-315 Mots Doux: Love, Lust and Literature**

Prerequisites:

Take FR-205 or Instructor's consent

Credits:

4.00

Description:

Explores the theme of love and its manifestation in representative works while being aware of the evolution of French Literature. Addresses various thematics that accompany a traditional survey of literature course such as critical discourse, aesthetic representation, literary movements, genre, construction of sexual identities, sexual politics as well as representations of ethnicity, class, and culture.

Term:

Type:

BA FOREIGN

- **FRST-319 Marie Antoinette: What Not to Wear**

Credits:

4.00

Description:

Explores the French Enlightenment and its culture leading up to the French revolution through a focus on one significant figure: Marie-Antoinette. Examines the relationship of female image and the body politic of eighteenth-century France. Considers the legacy of Marie-Antoinette as martyr and fetish object in the nineteenth and twentieth centuries, and focuses on her continuing relevance today. Topics include: women & power; fashion and self-representation; motherhood and domesticity; and revolution and gender iconography. All work in English.

• GVT-306 Women & Public Policy

Credits:

4.00

Description:

This hybrid course will examine the political leadership and influence of women within political institutions and on public policy. The course is divided into two parts: Part 1 will examine women in politics, with particular attention given to the intersectional realities of race, class, gender identity, and ideological orientation. Specific policy areas, including reproductive choice, housing, pay equity, and domestic relations, will be discussed in Part 2. Prerequisite: Open to non-majors; not open to freshmen. Normally offered alternate years. Cultural Diversity A

Type:

Social Science,Cultural Diversity Opt A,BSJ SOCIAL SCIENCE

• GVT-307 Globalization of Gender Politics

Prerequisites:

Not open to freshmen

Credits:

4.00

Description:

This course examines the interaction between gender and globalization. It discusses the centrality of gender in international development by focusing on gender as one of the most critical factors that affect the success or the failure of globalization. Critically reviewing general theories of globalization, the course presents a historical overview of gender and development. It then explores selected topics: global restructuring and feminization of the labor force, gender in multinational corporations, gender and international migration, sex-tourism, AIDS, and the impact of the state, religion, and culture in creating social dislocations and inequalities. Finally, we will consider strategies of change and diverse forms of resistance by women. Offered as needed. Cultural Diversity B

- **HST-471 Self, Body, & Sexuality- U.S. History**

Credits:

4.00

Description:

This course examines American debates over the natures, capacities, and responsibilities of men and women from settlement of the New World through the present. Emphasis is given to three elements of the self: social and civic personhood, the body, and sexuality. We will focus on representations of womanhood and masculinity - across racial, ethnic, and class lines - and their effects on men and women in society, politics, and at law. Course readings will also examine concepts of human nature and the interplay among mind, body, and sexuality.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **HST-484 History of the Emotions**

Credits:

4.00

Description:

Explores ideas about emotional life from the fields of history, anthropology, sociology, and psychology as well as the evolution of emotion rules and prescriptions, focusing on western Europe and the United States since 1700. In the eighteenth century, emotions were seen as a positive influence on politics and public life, especially during the French Revolution. After the fall of Robespierre, the emotions were banished to the private sphere - so we will read both primary sources and recent scholarship on 19th- and 20th- century ideas about masculinity and femininity, romantic love and marriage, childrearing, and about what parents and children are supposed feel toward each other, how ideas about these subjects have changed over time, and whether our feelings change with them.

Term:

• **PHIL-265 Women in Spirituality**

Credits:

4.00

Description:

An exploration into the various dimensions and ideologies concerning the role of the feminine in relation to the Divine. Belief systems, myths and archetypes from ancient Goddess worship to 20th century feminist theology will be examined in terms of the philosophical content and psychological consequences. Special emphasis will be placed on feminist metaphysical structures for understanding consciousness and Reality. Classes will be conducted by means of lectures, primary and secondary texts and class discussions. Normally offered alternate years. Cultural Diversity A

Term:

Occasional

Type:

Cultural Diversity BFA,Cultural Diversity Opt A,Diverse Perspectives

- **SF-1135 Women Warriors: Stories of Captivity, Conversion, and Confession**

Credits:

4.00

Description:

Since the beginning of time, women have been doing battle to themselves, while men have gone to battle against others. Whether it is through converting to Christ, yielding to captors in order to survive, or carrying a baby, this course introduces students to the many ways in which, whatever battles they face, women are warriors; they survive. Utilizing an array of captivity, conversion, and confession narratives by women, and pairing them across the centuries, students will make connections and draw conclusions between early-and mid-19th-century-American and contemporary women. Students will connect, for example, the trials of the 17th-century Puritan captive, Mary Rowlandson, and contemporary hostage, Elizabeth Smart, to explore how women (no matter how different they seem) draw upon unique inner resources to survive.

- **SOC-222 Women in Struggle on Film**

Credits:

4.00

Description:

Women's struggles in arenas from war to labor disputes will be examined through films and writings. Societal, historical and cultural contexts of women's roles in films are discussed drawing on film criticism and sociological analyses.

Term:

Occasional

- **SOC-230 Bad Girls**

Credits:

4.00

Description:

This class explores the images of the traditional bad girl in films. The course examines the idea of moving beyond merely the delinquent, many images in film suggest that girls and women who break with the socially condoned role of femininity are somehow bad. Girls and women who have power or challenge authority are often portrayed in films as deviant and therefore bad. Girls and women who are frigid are just as bad as their sexually promiscuous silver-screen opposites. This course further focuses on the impact of these images on real life social roles for girls and women as well as the symbiotic relationship between fact and fiction.

Term:

Occasional

Type:

Cultural Diversity Opt A

- **SOC-239 Men and Violence**

Credits:

4.00

Description:

An exploration of the nature of masculinity and its connection to interpersonal and collective violence in American society. The course focuses on the emotional, spiritual, social and cultural roots of the crisis of boyhood and masculinity as a context for and consequence of violence.

Term:

Occasional

Type:

Cultural Diversity Opt A

- **SOC-273 Women in Contemporary Society**

Credits:

4.00

Description:

A critical analysis of theory and research related to the socialization, roles and social participation of women in contemporary society.

Term:

Occasional

- **SOC-275 Women and Crime**

Credits:

4.00

Description:

This course examines the complex relationships between women and crime today. This focus will include women as criminal offenders; women as victims of crime; and women as both offenders and victims. Course materials draw from recent feminist scholarship on these issues in the social sciences. Topics include the causes of women's crime women, drugs, and crime; child abuse and trauma; prostitution and sex trafficking; race, gender and victimization; and feminist social movements against violence. Crimes of violence against women are a central focus in the course.

Term:

Occasional

Type:

- **SOC-276 Sex and Society**

Credits:

4.00

Description:

An examination of human sexuality as experience and institution. Sexuality is considered in relationship to power, love, religion, family, race, gender, sexual orientation, violence and courtship.

Term:

Occasional

- **SOC-303 How Pocahontas Lives: the Health of Native American Women and Girls**

Credits:

4.00

Description:

Native American women and girls experience many threats to their well-being: polluted environments, violence, and the continuation of colonial practices mean that their lives are at risk. Dominant political, economic, and cultural norms do little to protect them. Yet Native American women and girls can and do assert their right to well-being as they choose to define it, achieving health and self-determination. This class will examine the indigenous women and girls of the United States, to consider the continued impact of colonialism on women's health and the role of self determination in creating opportunities for the improvement of Native American women's health.

- **SOC-322 Tough Guise**

Credits:

4.00

Description:

Representations of masculinity in contemporary societies are examined in terms of their social sources and consequences. Images and scripts for doing masculinity are explored through case studies of film, television, sports, advertising, comic books, video games, music and other media that define what it means to be a man.

Term:

Occasional

Type:

Cultural Diversity Opt A

- **SOC-355 Women and Health**

Credits:

4.00

Description:

An exploration of topics that relate particularly to women as providers and consumers in the health care system. The course will consider historical and current information on issues of reproduction, technology, health and illness.

Term:

Occasional

- **SPAN-405 Women's Voices in Latin America**

Prerequisites:

SPAN-300; Spanish 302 or its equivalent is strongly recommended

Credits:

4.00

Description:

Examines the changing roles of women in Mexico, the Caribbean, Central and South America through fiction, non-fiction, drama, poetry and film. Special focus is placed on the impact that changes in social ideology and culture have had on their identity and writings. Texts available in English.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, BA FOREIGN

- **WGS-211 Heroines, Hotties & Hubris: Adolescent Girl's Books**

Credits:

4.00

Description:

Explores what we can learn from the books that teenage girls read. In addition to a wide array of interesting and complex Young Adult novels targeted to young female readers, students will be exposed to theories of adolescent development, literary criticism, and social theory. Topics include how the dilemmas of girlhood have changed or stayed constant and the urge, so common in books for children and teens, to teach kids how to think and behave.

Term:

Occasional

Type:

Cultural Diversity Opt A

- **WGS-311 Engendering Entertainment: Feminism and Popular Culture**

Credits:

4.00

Description:

Investigates the complex intersections between feminism and popular culture through several different lenses: by exploring, how feminists make arguments about popular culture; by looking at the complexities of public femininity in today's popular culture, including figures such as Lady Gaga and Katy Perry and television shows like The Bachelor and Grey's Anatomy; by focusing on a variety of articulations of feminism within mass media, blogs, social media, and popular books such as Ariel Levy's Female Chauvinist Pigs, and Caitlin Moran's How to Be a Woman. Along the way we will

ask questions about: what makes a work of art feminist; how modern media contributes to or distracts us from a variety of political debates in the realm of female equality and how can we, as individuals, use modern media to create and advance smart, feminist arguments.

Type:

Cultural Diversity Opt A

- **WGS-315 Feminist Thought**

Credits:

4.00

Description:

Investigates how feminists, both today and in history, have understood inequality and difference and looked for the best ways to address these issues and bring about social justice. Examines how feminist theorists help us to understand how gender and other social categories, such as race, class, sexuality, disability, age and nationality, are constructed within and through each other; and analyzes feminist engagements with liberalism, socialism, psychoanalysis, existentialism, post-colonialism, critical race theory, and queer theory, as well as consider anti-feminist arguments. Readings include classic critical texts by authors including Mary Wollstonecraft, Emma Goldman, Virginia Woolf, Chandra Mohanty, Gloria Anzaldua, and Judith Butler.

Type:

Cultural Diversity Opt A

- **WGS-325 Global Women's Fiction**

Credits:

4.00

Description:

Explores of various cultural worldviews in order to reveal and assess the voices of women from around the world as they respond to important global issues such as sexual violence and gendered oppression. Topics include: national citizenship, sexual politics, legal discourse, aesthetic representation, literary movements, genre, constructions of femininity, sexual identities, and representations of gender in relation to race and class and international cultures, and the relationship of self-image to the body politic.

Term:

Occasional

Type:

Humanities Literature Requirement,Cultural Diversity Opt B,Diverse Perspectives

- **WGS-335 Queer Narratives**

Credits:

4.00

Description:

Explores the stories that help us to understand communities, identities, and bodies that could be considered queer, and the ways that film, music, memoir and fiction have discussed queer as different, unusual, or other. Texts include the documentary, "Paris Is Burning", Frank Ocean's 2012 album, "Channel Orange", and Janet Mock's recent memoir, "Redefining Realness", as well as foundational queer theory from Judith Butler, Eve Kosofsky Sedgwick, and Lee Edelman, among others, to help build a framework for approaching and interpreting both fictional and non-fictional accounts of queer lives.

WGS Track Courses (1 course, no more than 4 credits)

Some CAS courses can be taken to fulfill the WGS minor by registering for the optional WGS track of that course. Students who register for this track and complete the required WGS readings and assignments may count a maximum number of one of these courses toward the minor in Women's & Gender Studies. In order to register for the WGS track of a listed course, students should consult the instructor and the director of the Women's & Gender Studies program no later than the first week of class.

- **CJN-255 Introduction to Media**

Credits:

4.00

Description:

An introduction to the role of media in contemporary society, focusing on media's influence on cultural, political, and ideological processes. An examination of the historical contexts within which newspapers, radio, television, and new media technologies develop, and how audiences interact with and influence the use of media.

Term:

Offered Both Fall and Spring

Type:

Social Science

- **CJN-385 Globalization of Media and Telecommunications**

Credits:

4.00

Description:

A critique of the circulation of media goods and ideologies from both a cultural and political/economic perspective. Topics include global Hollywood, the images of Muslim women in transnational media, the information society, and global social movements.

Term:

Offered Spring Term

Type:

Cultural Diversity Opt B,BSBA SOCIAL CHANGE,Diverse Perspectives

- **ENG-353 Dwelling in American Realism**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

In-depth exploration of American Realism from the post-Civil War era to the pre-WWI era (roughly 1875 to 1915). Particular emphasis is given to the role of houses and material and consumer culture in the forging of American identity. Authors may include Howells, Twain, James and Wharton among

others. Normally offered alternate years. Stds. will also visit authors' houses in the Boston area. This course requires prior approval in order to count towards the Women's and Gender Studies Minor. Students should consult with the instructor and the director of the WGS Minor no later than the first week of classes.

Term:

Occasional

- **ENG-392 Readings in Post-Colonial Literature**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

An Exploration of Post-colonial literature and how the empire writes back following the collapse of European colonialism. Special emphasis will be placed on the legacy of British Colonial rule and the contemporary use of literature and the English Language to both resist and problematize Eurocentric cultural assumptions. Authors studied will include E.M. Foster, Salman Rushdie, J.M. Coetzee, Anita Desai, Hanif Kureishi, and Zadie Smith, among others. Students will be introduced to Post-colonial critical theory and view film adaptations of literary texts.

Term:

Occasional

Type:

Cultural Diversity Opt B

- **ENG-409 Literary Bloomsbury: Woolf and Forster**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This class will engage with the major novels and selected literary writings of two of the twentieth century's most important modernist voices, Virginia Woolf and E.M. Forster. We will approach their writings within the intellectual framework of British modernism and the cultural context of the Bloomsbury Group out of which they emerged. Special attention will be paid to their theoretical writings on fiction as well as their respective contributions to feminism and queer theory. The class will also view cinematic adaptations of certain novels and discuss how these films have contributed to the enduring appeal and status of these texts as classics of twentieth-century fiction.

Term:

Occasional

- **HST-426 Politics and Culture in Europe 1919-1939**

Credits:

4.00

Description:

Explores the social and political development of European society between the two world wars, primarily through the literature, art, and films of the period. Topics include: the dissolution of pre-1914 middle class society; deviance and sexuality in the 1920s; the role of decadence in art and the Fascist response to deviance in life and art; women, workers, and the new technology; the rise of Fascism; political engagement and polarization throughout European society in the face of economic and social crisis.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **SOC-256 Sociology of Aging**

Credits:

4.00

Description:

Consideration of the physiological, psychological and social factors associated with the aging process. Contemporary American values toward the elderly are compared and contrasted with historical and cross-cultural studies. Current opportunities and techniques enabling the elderly to enrich and expand their societal roles are explored.

World Languages

Language is at the heart of all culture and as such expands one's world view by fostering an understanding of human nature and preparing the individual to participate more competently in the global community. Learning a second language involves the examination of one's own identity, while it also opens a window to the behavior patterns, emotions, and thoughts of human beings from different—sometimes radically different—backgrounds and cultural contexts.

The language division of the World Languages & Cultural Studies Department offers full degree programs and minors in several areas. Majors are available in French, French Studies, Latin American & Caribbean Studies, and Spanish. Minors are available in each of those programs, as well as German Studies. The department also offers instruction in American Sign Language, Arabic, Chinese, Ancient Greek, Italian, and Japanese. Language study is also an integral part of the majors in Global Business, Latin American & Caribbean Studies, and International Economics (BA).

Description:

Explores the French Enlightenment and its culture leading up to the French revolution through a focus on one significant figure: Marie-Antoinette. Examines the relationship of female image and the body politic of eighteenth-century France. Considers the legacy of Marie-Antoinette as martyr and fetish object in the nineteenth and twentieth centuries, and focuses on her continuing relevance today. Topics include: women and power; fashion and self-representation; motherhood and domesticity; and revolution and gender iconography. All work in French.

Term:

Occasional

- **FR-315 Mots Doux: Love, Lust and Literature**

Prerequisites:

Take FR-205 or Instructor's consent

Credits:

4.00

Description:

Explores the theme of love and its manifestation in representative works while being aware of the evolution of French Literature. Addresses various thematics that accompany a traditional survey of literature course such as critical discourse, aesthetic representation, literary movements, genre, construction of sexual identities, sexual politics as well as representations of ethnicity, class, and culture.

Term:

Occasional

Type:

BA FOREIGN

• FR-316 Masterpieces of Theatre

Prerequisites:

Take FR-205 and FR-305 or instructor's consent

Credits:

4.00

Description:

Studies the major plays written in French from the seventeenth through the twenty-first centuries, with a focus on the socio-historical contexts in which the plays emerged. Analyzes and produces scenes from the plays, and reads and performs select scenes at the end of the semester. Explores authors such as Anouilh, Beckett, Césaire, Genet, Ionesco, Marivaux, Molière, Pinter, Racine, Reza, Sartre, and Schwarz-Bart.

Type:

BA FOREIGN

• FR-318 Face in the Mirror: Writing & Reflecting the Self in French

Prerequisites:

FR-205 and FR-305 or Instructor's consent

World Languages

Language is at the heart of all culture and as such expands one's world view by fostering an understanding of human nature and preparing the individual to participate more competently in the global community. Learning a second language involves the examination of one's own identity, while it also opens a window to the behavior patterns, emotions, and thoughts of human beings from different—sometimes radically different—backgrounds and cultural contexts.

The language division of the World Languages & Cultural Studies Department offers full degree programs and minors in several areas. Majors are available in French, French Studies, Latin American & Caribbean Studies, and Spanish. Minors are available in each of those programs, as well as German Studies. The department also offers instruction in American Sign Language, Arabic, Chinese, Ancient Greek, Italian, and Japanese. Language study is also an integral part of the majors in Global Business, Latin American & Caribbean Studies, and International Economics (BA).

BA FOREIGN

• **GER-216 Masters of German Literature in English Translation Masterpieces**

Credits:

4.00

Description:

Discussion of works by major authors from the 18th century to the present. Drama, fiction, and poetry. The specifically German contributions as related to the European context. Lessing, Goethe, Schiller, Heine, Buchner, Schnitzler, Kafka, T. Mann, Hesse, Brecht, Seghers, Grass, Boll, Wolf and/or others.

Term:

Occasional

Type:

Humanities Literature Requirement

• **GER-301 German Civilization I**

Prerequisites:

GER 202 or instructor consent

Credits:

4.00

Description:

A survey of civilization in the German-speaking countries from the Reformation to German unification (1871). Major figures, movements, and periods. Art, literature, music, and philosophy in the context of political and economic developments. Normally offered alternate years.

Type:

Humanities & History, Humanities Literature Requirement, BA FOREIGN

• **GER-303 Advanced Conversation**

Prerequisites:

GER 202, or Instructors consent

Credits:

4.00

Description:

Further development of speaking ability in various contexts (e.g., informal conversation, debate, discussion of current events in the German-speaking countries). Short texts and audio-visual materials as a basis for classroom activities.

Term:

Occasional

Type:

BA FOREIGN

• GER-304 Advanced Composition

Prerequisites:

GER 202 or consent of the instructor

Credits:

4.00

Description:

Additional training in writing German. Practice in various modes (e.g., essay, poetry, dramas, short fiction). Some translation into English. Special attention paid to grammatical points where needed.

Term:

Occasional

Type:

BA FOREIGN

- **GER-306 German Cinema**

Credits:

4.00

Description:

A survey of films produced in the German speaking countries from the 1920's to the present. Includes the Weimar republic, the Nazi period, postwar production from both East and West Germany, and new trends since reunification. Film esthetics and socio-historical context. All films shown in German with English subtitles.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **GER-412 Contemporary Germany**

Credits:

4.00

Description:

A survey of German culture, politics, and society from the end of World War II to the present day. Discussion of such topics as the post-fascist mentality, economic efficiency, re-education, Americanization, division and it's legacy, high culture, entertainment for the masses, environmental movements, pacifism, and multiculturalism. Taught in English.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **GER-419 East Germany and the Cold War**

Credits:

4.00

Description:

When the German Democratic Republic was founded in 1949, observers in the West viewed it as an artificial construct created to serve the needs of the Soviet empire. The self-image of the GDR as created by its leadership revolved around the idea of an anti-fascist German state designed as a bulwark against any revival of National Socialism. Over a generation after the fall of the Berlin Wall, it is possible to undertake a dispassionate analysis of the forty-year history of the 'other' German state as manifested in its cultural identity and political role during the Cold War.

Term:

Occasional

Type:

Social Science

• **GER-420 The Greens and Environmentalism**

Credits:

4.00

Description:

The rise of the Green Party, from its grass-roots beginnings to participation in the federal government. Background on the development of green consciousness in Germany and Europe since the early 20th century. Present governmental policies and programs (e.g. alternative energy sources, organic farming, recycling, dismantling of nuclear power).

SPAN 250, 290, or 300 or Instructor's consent.

Credits:

4.00

Description:

Examines the process and theory of translation. Materials are drawn from the literary world, the mass media (i.e. advertising, marketing, news, entertainment), and professional sources. Students gain further insights about the linguistic, cultural, and ethical dimensions of the field. Additional grammar review provided as needed.

Term:

Occasional

- **SPAN-315 Business Spanish**

Prerequisites:

SPAN 290 or SPAN 300 or Instructor's consent.

Credits:

4.00

Description:

Integrates language learning with culture via business context of the Hispanic world. Spanish for banking and finance, marketing and advertising, and international commerce are highlighted. Students increase their cross-cultural understanding and written and oral proficiency in business Spanish through a wide range of assignments.

Type:

Diverse Perspectives

- **SPAN-340 Hispanic Culture Today: Trans-Atlantic Perspective**

Prerequisites:

Take SPAN 290 or SPAN 300 or Instructor's consent.

Credits:

4.00

Description:

An examination of key issues in Hispanic culture today through the study of literature, film, music and TV. The purpose of the course is twofold: To introduce the students to major themes in recent Hispanic society and culture and, to develop the necessary skills to read and analyze literary texts and other cultural forms. Topics to be discussed include dictatorship and democracy, women and representation, political and domestic violence, national identity, immigration, and mass culture. The selected materials will include texts by authors like Manuel Rivas, Mario Vargas Llosa, Carlos Fuentes, Cristina Peri Rossi, Rosa Montero, Carlos Monsivais, and Roberto Bolano among others. (Madrid campus only)

Type:

BA FOREIGN

- **SPAN-350 Spanish Cultural Studies**

Credits:

4.00

Description:

This is an interdisciplinary course that will examine the historical and socio-economic causes of contemporary Spanish culture. Material will be drawn from a variety of sources including: history, sociology, gender studies, literature and philosophy. Extensive reference will be made to the non-Western cultures which have made Spain what it is today. (Usually taught in English). (Madrid campus only)

- **SPAN-360 Madrid Cosmopolitan City**

Prerequisites:

SPAN-290 or SPAN-300 or Instructor's consent

Credits:

4.00

Description:

This course is designed to provide students with a basic knowledge of the city of Madrid in terms of its historical, cultural, and social development. Contemporary aspects of the city such as its rise to prominence amongst the capitals of Europe and the phenomenon of recent immigration patterns will also be discussed. All classes will be conducted in Spanish. Specific grammar points will be reviewed as needed. (Madrid campus only)

Type:

BA FOREIGN,Global Engagement Experience

- **SPAN-390 Introduction to Latin American and Caribbean Literature**

Prerequisites:

SPAN 300; SPAN 302 is strongly recommended

Credits:

4.00

Description:

Examines authors from Latin America and the Caribbean in their historical and cultural contexts. Reading and class discussions consider the relationship between the writer and society by covering such topics as colonialism, the oral tradition, modernism and the emergence of new narratives in the twentieth century. The Inca Garcilaso, Sor Juana, Carlos Fuentes, Rigoberta Menchu, and Pablo Neruda are among some writers studied.

- **SPAN-405 Women's Voices in Latin America**

Prerequisites:

SPAN-300; Spanish 302 or its equivalent is strongly recommended

Credits:

4.00

Description:

Examines the changing roles of women in Mexico, the Caribbean, Central and South America through fiction, non-fiction, drama, poetry and film. Special focus is placed on the impact that changes in social ideology and culture have had on their identity and writings. Texts available in English.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, BA FOREIGN

• SPAN-407 Latin American Short Narrative

Prerequisites:

Spanish 300; or Instructor's consent; Spanish 302 is strongly recommended

Credits:

4.00

Description:

Explores some of the major trends in the twentieth century Latin American story telling. Readings reflect the vast array of voices and styles, beginning with fantastic literature of the 1930's, the birth of magical realism and the more contemporary, socio-political narratives. Authors include Isabel Allende, Julio Cortazar, Rosario Castellanos, Gabriel Garcia Marquez, Juan Rulfo, Luisa Valenzuela, among others.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement, BA FOREIGN

• SPAN-408 Latin American Cinema

Prerequisites:

Take ENG-102 or ENG-103 or Instructor's consent. Span 302 is strongly recommended for Spanish and Latin American & Caribbean Studies majors and minors.

Credits:

4.00

Description:

Begins with the Cuban revolution as a point of departure and examines films from Argentina, Chile, Colombia, Mexico, and other Latin American countries. Students explore the relationship between film & society and consider how knowledge of a culture and its history is influenced and shaped by what is seen on the screen. Films in Spanish with English subtitles.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement

- **SPAN-410 Representation and Reality in Spanish Cinema**

Credits:

4.00

Description:

This course offers the students a panoramic view of the most representative Spanish films from the 1950's until today, with special emphasis on its social, political, artistic and cultural context. Films will be viewed in Spanish with English subtitles. Conducted in English, the course will be open to both non-majors in Spanish as well as to advanced-level Spanish majors and minors, with the latter carrying out their written work and individual meetings with the instructor in Spanish.

- **SPAN-416 Border Crossings the Latino Experience in the USA**

Prerequisites:

ENG-102 or ENG-103 or Instructor's consent. Span 302 is strongly recommended for Spanish and Latin American & Caribbean Studies majors and minors.

Credits:

4.00

Description:

Examines the myth of a singular Latino experience in the United States through a variety of genres and authors. Issues relating to culture, language, family, and religion are among some of the topics explored. Authors include Sandra Cisneros, *House on Mango Street*, Junot Diaz, *The Brief Wondrous Life of Oscar Wao*, Julia Alvarez, *How the Garcia Girls Lost Their Accents*, Tato Laviera, and *American*.

Term:

Occasional

Type:

Cultural Diversity Opt A, Humanities Literature Requirement

• **SPAN-417 Changes in Social Values in Spain 1975 - 2005**

Prerequisites:

Take SPAN 290 or SPAN 300 or Instructor's consent. SPAN 350 is strongly recommended.

Credits:

4.00

Description:

In this course we will study the transition of Spain from dictatorship to democracy from an interdisciplinary perspective based mostly on the analysis of literary works, film, visual arts and music besides relevant theoretical articles by major Spanish and international intellectuals. Youth culture (sex, drugs and rock and roll), the feminist movement, nationalistic demands, and Spain's subsequent incorporation into the European Union will be highlighted. (Madrid campus only)

Type:

BA FOREIGN

• **SPAN-427 U.S. Mexican Border in the New Millennium**

Prerequisites:

SPAN 290 or 300 or Instructor's consent

Credits:

4.00

Description:

Explores the literature, culture, and history of the United States-Mexico Border, and analyzes the profound changes that the gain/loss of territories created by the Treaty of Guadalupe Hidalgo caused for the citizens in the region. Emphasis is on contemporary border theatre and film. Students read works of Salcedo, Galindo, Mijares, Rascon Banda, among others, and examine contemporary films and documentaries such as *Senorita Extraviada*, *Victoria para Chino*, and *Crossing Arizona*.

Term:

Occasional

Type:

BA FOREIGN

• **SPAN-502 Honors Thesis**

Prerequisites:

Senior standing & permission of the Dept. Chair

Credits:

4.00

Description:

A major research project completed under the supervision of a regular faculty member.

Term:

Offered Fall Term

Type:

BA FOREIGN

- **SPAN-510 Independent Study**

Prerequisites:

Instructor consent required.

Credits:

1.00- 4.00

Description:

Students meet with a department member to pursue advanced studies in areas of particular interest to them.

Term:

Occasional

Type:

BA FOREIGN

- **SPAN-I295 Spanish in the Workplace Internship**

Credits:

4.00

Description:

Internship in Madrid, Spain. At least 12 hours a week working for an organization. Designed to give students an international professional learning opportunity. It takes place concurrently with SPAN 295.

- **SPAN-T301 Business Spanish Tutorial**

Prerequisites:

Instructor's consent.

Credits:

1.00

Description:

Tutorial studies of the terminology, organization and practice of business in the Spanish-speaking world.

2015-2016 Archived Catalog Information

Sawyer Business School

Undergraduate Programs

The BSBA curriculum is designed around four key learning goals, which help students:

- embrace diversity and span boundaries, including knowledge of diverse culture, multiple perspectives, and recognizing and working effectively across boundaries;
- harness and implement an innovative mindset, including understanding creative vision, opportunity assessment and implementation;
- identify, assess, and solve critical situations, including information literacy, analytical reasoning and decision making, and systems thinking and process thinking; and
- establish and leverage professional DNA, including communicating effectively across diverse contexts, leadership, collaboration, and personal branding.

Students learn contemporary management practices through a continually refined and updated curriculum, with hands-on experiences that help them apply concepts and skills in real-world settings. The Sawyer Business School maintains a culture of achievement for all students during their academic program and as successful graduates. In addition, the faculty strives to ensure that our graduates are socially responsible lifelong learners who understand how to add value in any organization or situation.

BSBA students are exposed to diverse viewpoints and to the environmental changes impacting business today. They become well-rounded through the foundational knowledge learned in general education courses such as writing, economics, creativity/innovation, and mathematics, as well as introductory business courses in business research, marketing, finance, management, globalization, and social/cultural/global perspectives. An integrated curriculum ensures that students build foundation communication, quantitative reasoning, interpersonal, ethical, and career skills before advancing in the program of study. The BSBA program embeds many opportunities for students to interact with alumni, executives, and other business leaders. Students with special areas of interest are further encouraged to include corresponding liberal arts and business electives in their programs of study.

Undergraduate students may also choose to study abroad or to take courses at Suffolk's campus in Madrid, Spain.

Undergraduate Requirements

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [BSBA Degree Requirements](#)
- [Internship/Practicum Requirement](#)

I. BSBA Degree Requirements

The completion of the Bachelor of Science in Business Administration (BSBA) degree includes:

- A minimum of 124 semester hours of coursework and satisfaction of all degree requirements;
- 2.0 overall cumulative average;
- 2.0 average in major and minor fields of study;
- A minimum of 30 semester hours of business coursework must be completed at Suffolk University; and,
- An overall minimum of 45 semester hours of coursework must be completed at Suffolk University to be eligible to be considered for degree.

Students are responsible for knowing and complying with specific degree requirements. Any exception to the Program of Study requires written approval from Michele Rosenthal, Director, Undergraduate Programs, Sawyer Business School.

Full-time students normally complete their degree requirements in four years. A student may shorten the time required by attending summer sessions. Part-time students normally take five to seven years to complete the requirements, depending on the course load carried.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

Recommended Four-Year Course Sequence

Below is an overview of the courses and experiential requirements that BSBA students must complete and the year they are required or suggested to do so. The Business School's curriculum is designed to enable students to acquire knowledge and skills cumulatively, building from introductory material to more

specialized or advanced study in areas of major concentration. Prerequisites have been established for courses that require preparation in order for students to benefit fully from the learning experience. Students should meet with their advisors to review their program of study.

Students are responsible for taking courses in the prescribed sequence as necessary. This means:

- All prerequisites must be satisfied.
- Students must have satisfactorily completed 54 credits in order to register for upper division courses in the Business School (Business School undergraduate courses numbered 300 or higher, unless otherwise stated).
- Students must have completed all freshman and sophomore required courses prior to registering in junior-level courses. In particular, students are expected to have completed required writing and quantitative courses before the junior year.

Note: Students who entered Suffolk prior to Fall 2014 are under a different program of study and should refer to their program evaluation and/or the catalog from that year for specific requirements. The Undergraduate Academic Advising Center can provide information about completing requirements where courses are no longer offered, or additional options now exist.

Freshman Year Requirements:

- **SBS-100 careerSTART**

Prerequisites:

Students must have completed less than 30 credits.

Credits:

1.00

Description:

SBS 100 engages students in a series of activities, discussions, and programs on campus to explore their interests and strengths and learn how courses and co-curricular experiences together help them achieve their goals. Students also develop innovation, team, and presentation skills, get involved on campus, and learn about campus resources and services that aid in a successful college experience. This is the first in a four-year sequence of career courses.

- **WRI-101 First Year Writing I**

Credits:

4.00

Description:

Study and practice of the writing process and revision in terms of expository writing modes for an academic audience.

- **WRI-102 First Year Writing II**

Prerequisites:

WRI 101.

Credits:

4.00

Description:

Study and practice of argumentative and research writing through further work with writing process and revision and the critical reading of a variety of texts.

- **ENT-101 Business Foundations**

Credits:

3.00

Description:

This course introduces students to foundational concepts in business, including functional areas, the life cycle, competition, stakeholders and ethical considerations. Students develop critical thinking by learning and using a problem solving process through a business situation analysis model to analyze various situations that confront managers and founders of small, medium, and large organizations. Students will also develop tools for analysis, allowing them to critically view business in a new and thoughtful way. The class culminates with student- teams presenting a detailed analysis and recommendations to a panel of executives and persuading them that the recommended strategy is not only feasible, but also practical for the stakeholders involved.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

Creativity and Innovation (3 cr.)

Numerous courses are offered to meet this requirement. Search for course options by using the course type "CI."

Math (4 cr.)

Choose one based on your Math placement score:

- **MATH-128 Math for the Modern World**

Prerequisites:

MATH level 2, or Mathshop, or MATH-104

Credits:

4.00

Description:

From the ISBN on a book, to buying a car, from the size of small chips in a cell phone, to the size of the national debt, or just reading a graph in the daily newspaper, mathematics plays an important and vital role in countless areas of life and your future career and courses included. Mathematics is both an art and a tool created by humans. The common bond is a way of thinking and a way of reasoning to describe and solve problems of many types. This course uses the context of modern real life problems to introduce math needed for literacy and problem solving in contemporary life and work. It uses a minimal amount of algebra and focuses on math models, concepts and basic math manipulations. It encourages students to move from anxiety about math, to using formulas well, to thinking critically in the math context to use math to solve problems and pose new problems. Topics include scientific notation, basic financial math, linear, exponential and polynomial models and an introduction to probability. (Formerly Math 132)

- **MATH-130 Topics in Finite Mathematics**

Prerequisites:

MATH-104, or MATH-121, or MATH level 3

Credits:

4.00

Description:

Linear Modeling (for example, using linear functions to model supply/demand situations), graphing, linear programming, financial functions (compound interest, annuities, and amortization of loans) sets, Venn diagrams, counting and combinatorics, discrete probability, conditional probability, Bernoulli

experiments, Bayes theorem. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

- **MATH-134 Calculus for Management & Social Sciences**

Prerequisites:

MATH-104, MATH-121 or MATH level 4

Credits:

4.00

Description:

A one-semester introduction to differential and integral calculus. Theory is presented informally and topics and techniques are limited to polynomials, rational functions, logarithmic and exponential functions. Topics include a review of precalculus, linear regression, limits and continuity, derivatives, differentiation rules, implicit differentiation, related rates, applications of derivatives to graphing, minima/maxima, applications of the derivative, marginal analysis, differential equations of growth and decay, anti-derivatives, the definite integral, the Fundamental Theorem of Calculus, area measurements. This course cannot be used to satisfy core or complementary requirements by students majoring in chemistry, computer science, engineering, mathematics, or physics. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

- **MATH-165 Calculus I**

Prerequisites:

MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

Credits:

4.00

Description:

Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

Requirements also recommended to be taken during the Freshman Year:

- **STATS-250 Applied Statistics**

Prerequisites:

MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

Credits:

4.00

Description:

Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

Type:

Quantitative Reasoning

Social, Cultural and Global Diverse Perspectives (one course)

Numerous courses are offered to meet this requirement. Search for course options by using the course type "PERSP."

Globalization Requirement (one course)

Choose one of the three courses offered to meet this requirement. However, Global Business majors must take SIB 101. All other BSBA students may choose from the following:

- **SIB-101 Globalization**

Credits:

3.00

Description:

This course introduces the nature and processes of globalization which define today's international business environment. The course employs a multidisciplinary perspective to explore the growing interdependence of nations in their trade, investment, technology flows, and business operations.

Topic include business, geographic, economic, social, cultural, political, and other issues related to globalization. The course is experiential in its approach. Students will undertake a team research project exploring globalization issues with reference to a particular country, region or industry.

Term:

Offered Both Fall and Spring

- **HST-149 Empires & Globalization in World History I**

Credits:

4.00

Description:

This is the first of the two-course series of Empires and Globalization in World History. Course discusses the origins and development of globalization and capitalism from the perspective of economic history. Major issues include the formation of the medieval trade system, the development of finance and capitalism in the early modern ages, and economic changes prior to the Industrial Revolution. The specific topics may change every year due to new academic developments and publications. Cultural Diversity B

Term:

Offered Fall Term

Type:

Sophomore Year Requirements

- **SBS-200 careerEXPLORE**

Prerequisites:

SBS 100. Prerequisite will be waived with 30 or more transfer credits from another institution.

Credits:

1.00

Description:

SBS 200 fosters active exploration of career interests, jobs and fields. Students build introductory career management, information seeking, and self-presentation skills. Students refine oral and written communication through class presentations, networking, research, and writing a resume and cover letter. This is the second in a four-year sequence of career courses.

- **SBS-220 Business Writing**

Prerequisites:

ENT 101 (formerly SBS 101); WRI 102 or WRI 103;

Credits:

3.00

Description:

The world is constantly changing and businesses as well as individual employees must adapt. In order to effectively leverage future communication technologies and media, you must be a critical reader and have strong foundational writing and editing skills. In this course, current business news will

be read for its content and to understand the interplay of language and purpose. You will learn to write effectively for business by focusing on your audience, purpose, tone, and the design of various business documents and by revising and refining your writing.

- **ACCT-201 Accounting for Decision Making I**

Prerequisites:

MATH-128 or higher and WRI-102 or WRI-H103 or SBS-220

Credits:

3.00

Description:

Introduces students to the accounting cycle, the financial statements, and the theory underlying accounting as information. Provides users of accounting information with a basic understanding of how to appraise and manage a business. Addresses current accounting topics, including relevant ethical and international issues found in the financial press.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **ACCT-202 Accounting for Decision Making II**

Prerequisites:

ACCT-201

Credits:

3.00

Description:

Enables students to apply the concepts and skills from ACCT 201. They learn how to analyze the financial condition and performance of a firm, and how to use accounting information in business planning, decision-making, and control. Topics include cost-volume-profit analysis, costing systems,

variance analysis, and the budget process. Discusses relevant current ethical and competitive issues found in the financial press.

Term:

Offered Both Fall and Spring

- **MKT-220 Business Research Methods**

Prerequisites:

STATS 240 or STATS 250

Credits:

3.00

Description:

Business Research Methods is a general introduction to both quantitative and qualitative business research methods. Topics covered include the purpose of research, defining research and research problems, defining an hypothesis, problem solving and knowledge discovery, methods of quantitative and qualitative research, conducting literature reviews, designing appropriate methodologies, evaluating outcomes, analysis and communicating the results. Students will use Excel and SPSS to support research analysis, implementing what was learned in statistics and going beyond as they learn new data analysis techniques. Students will discuss and present research ideas and processes orally both informally and formally.

Requirements also recommended to be taken during the Sophomore Year:

- **EC-102 Global Macroeconomics**

Prerequisites:

Non-CAS majors need to have completed at least 15 credits

Credits:

3.00

Description:

This course examines the workings of the national and the global economy. It will describe the determination of Gross Domestic Product, the problems of unemployment, inflation, and the determination of economic growth. It will also describe and analyze the determination of the country's exchange

rate, the balance of payments, and international borrowing and lending. A particular focus will be on understanding economic fluctuations (booms, busts, and recessions) in the domestic economy and its effects on other economies. It will analyze the role of the government and the effects of government spending and taxation on the economy. Furthermore, it will describe and analyze the determination of the quantity of money and interest rates in the economy and the role of the country's central bank. It examines the basis and pattern of international trade and the effects of a country's trade policy on the economy.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **BLE-215 Business Ethics and Law**

Credits:

3.00

Description:

Business ethics is applied ethics. Explores the roles and responsibilities of business in a global society. Teaches models of ethical decision-making that incorporate multiple points of view, including diverse cultural worldviews and legal perspectives. Addresses factors that contribute to and constrain ethical behavior in and by organizations. Students apply concepts to current business problems, such as anti-trust, accounting fraud, deceptive advertising, and environmental dumping.

Term:

Offered Both Fall and Spring

- **ISOM-201 Data and Decisions Analysis**

Prerequisites:

MATH-128 or higher and STATS-240 or STATS 250.

Credits:

3.00

Description:

Introduces fundamental quantitative methods of using data to make informed management decisions. Topics include: decision modeling, decision analysis, regression, forecasting, optimization, and simulation, as it applies to the study and analysis of business problems for decision support in finance, marketing, service, and manufacturing operations. Practical business cases and examples drawn from finance, marketing, operations management, and other management areas are used to provide students with a perspective on how management science is used in practice. Excel spreadsheets are used extensively to implement decision models.

Term:

Offered Both Fall and Spring

- **MGT-217 Organizational Behavior**

Prerequisites:

At least 30 credit hours and WRI-102 or WRI-H103

Credits:

3.00

Description:

This course explores the application of sociological, psychological and anthropological concepts in domestic and international business settings. Attention is given to the study of human behavior in organizational settings, the organization itself, human interaction, and small group process.

Term:

Offered Both Fall and Spring

- **MKT-210 Principles of Marketing**

Prerequisites:

WRI-101, WRI-102 or WRI-H103

Credits:

3.00

Description:

As part of the core curriculum for the BSBA, this course provides a comprehensive, innovative, managerial, and practical introduction to marketing. Students will learn and apply basic concepts and practices of modern marketing as used in a wide variety of settings. Technological advances, rapid globalization, economic shifts and cultural and environmental developments are causing profound changes in the marketplace. As the marketplace changes, so must the marketers who serve it. These new developments signify a brand new world of opportunities for forward thinking marketers. In response to these new developments, the focus of this course is on four major themes that go to the heart of modern marketing theory and practice: 1. Building and managing profitable customer relationships; 2. Building and managing strong brands; 3. Harnessing new marketing technologies in this digital age; and 4. Marketing in a socially responsible way around the globe.

• ISOM-210 Management Information Systems

Prerequisites:

WRI-101 and ENT-101 and at least 24 completed credits

Credits:

3.00

Description:

Examines the rise of information-enabled enterprises and the role of information technologies/information systems (IT/IS) and e-commerce as key enablers of businesses and social changes globally. Topics include: the effective application of IT/IS to support strategic planning, managerial control, operations and business process integration in the digital economy, IT/IS related issues of ethics, and piracy and security in the information society.

Term:

Offered Both Fall and Spring

• FIN-200 Business Finance

Prerequisites:

MATH 128 or higher; ACCT 201; STATS 240 or STATS 250 (can take concurrently with FIN 200); Sophomore standing

Credits:

3.00

Description:

This course is a study of the functions of business finance and focuses on basic financial principles such as time value of money, risk and return tradeoffs, and asset valuation. Formally FIN 310.

Term:

Offered Both Fall and Spring

Requirements to be completed by the end of the junior year

- **SBS-300 careerBUILD**

Prerequisites:

SBS 200. Prerequisite will be waived with 45 or more transfer credits from another institution.

Credits:

1.00

Description:

SBS 300 deepens students' career information and skills with a focus on professionalism. Students refine career documents based on personal branding with a focus on articulating the experiences, learning, and skills gained in previous internships, volunteer and work experiences, courses, and club or performance roles. Students use technology, personal networks and professional organizations to develop job search skills. This is the third in a four-year sequence of career courses.

- **EC-101 Applied Microeconomics**

Prerequisites:

Non CAS majors need to have completed at least 15 credits.

Credits:

3.00

Description:

This course introduces students to foundational principles of microeconomic theory, with an emphasis on applications of concepts to management decision-making in specific industry and market settings. It describes and analyzes the interaction of supply and demand and the behavior of the prices of goods, services. It explains the determinations of costs, output, strategic pricing, and governance by firms under conditions of perfect and

imperfect competition in a global economy. In addition, it describes the supply demand for factors of production and the impact of taxes and government regulation and intervention on firms and consumers.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **MGT-360 Leadership 360 Practicum**

Prerequisites:

MGT 217 (formerly MGT 317); does not count toward the Management Major, nor the minor for BSBA students

Credits:

3.00

Description:

Leadership 360 Practicum provides a fundamental understanding of the principles of leadership and the core competencies, traits and behaviors that enable effective leadership. Students will conduct an in-depth self-examination of skills, abilities, personality, attitudes, values, and behaviors to increase self-awareness of their leadership competencies. Students will learn relevant leadership theories and introductory project management principles and techniques. They will apply leadership and project management skills in a mini-team project with a not-for-profit organization that seeks solutions to a specific challenge, leading to a project implementation plan. Students will present formally to the client; feedback to the presenters will reinforce their oral communication skills. This course is a requirement for all BSBA majors.

- **BLE-214 Principles of Business Law**

Credits:

3.00

Description:

Introduces the field of business law. Provides an overview of the organization and operation of the American legal system, court system and legal procedure. Examines selected business law topics such as contracts, torts, criminal law,agency, and business organizations. Attention is given to the ways in which business law manifests important social and ethical precepts.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **ISOM-319 Operations Management**

Prerequisites:

ENT-101(formerly SBS 101) and ISOM-201 and at least 54 credits

Credits:

3.00

Description:

Introduces concepts and tools for managing operations in service/ manufacturing organizations where inputs such as raw material, labor, or other resources into finished services and/or goods. Strategic and tactical issues of operations management (OM), including: operations strategy, product and process design, capacity planning, quality management, inventory management, queueing theory and work force management are addressed. Quantitative models, analytical tools and case studies are used to analyze operational problems that business managers face in both local and global settings.

Term:

Offered Both Fall and Spring

Requirements to be completed by the end of senior year

- **SBS-400 careerLAUNCH**

Prerequisites:

90 credit hours required.

Credits:

1.00

Description:

SBS 400 is the culminating career and professional experience for seniors. It focuses on career entry and transition, networking for career and job success, impression management, and related life-long learning skills. Students articulate and reflect on academic, work, and co-curricular experiences from the perspective of professionals entering or advancing their careers. This is the final course in a four-year sequence of career courses.

- **SIB-429 Strategic Management**

Prerequisites:

MKT 210; ISOM 319; MGT 217 (formerly MGT 317); FIN 200 (formerly FIN 310); Senior standing

Credits:

3.00

Description:

This course covers and integrates administrative processes and decision making under uncertainty in business areas of marketing, accounting, management, finance, personnel, and production. It also focuses on strategic and policy issues from the viewpoint of senior management in both domestic and international corporations. Case discussions help develop the conceptual framework for analysis and implementation of strategy and policy decisions.

Term:

Offered Both Fall and Spring

Science, Technology and Engineering (4 cr.)

Choose 1 STE (Science, Technology, and Engineering) science course. In the case of a course that is a lecture plus a lab, the student must complete both components to earn credit for the STE requirement. Numerous courses are offered to meet this requirement. Search for course options by using the course type "STE."

Experiential Components to be done anytime:

Global Engagement Experience

The Global Engagement requirement has a range of options including courses, study or work abroad, and certain service learning or engagement projects. Students choose one that best matches their personal and career interests. *This requirement is explained in detail on the [BSBA website](#).*

Choose one:

Approved Suffolk courses can be found by using the course search system and entering course type “GLOBL.” Students should review the course details and note prerequisites; the location of the course (Boston or Madrid campus); and if the course involves a travel fee, off-campus activities, or other requirements. [Note: SBS-160, SBS-170, and SBS-180 have special purposes as described below. These carry no academic credit, do not require any tuition, and will be graded pass/fail.]

Study Abroad: When you register for study abroad through Suffolk's Center for International Education, you will be concurrently registered for SBS 160 Global Engagement – Study Abroad. This zero-credit, co-requisite requires several reflective writing assignments. Madrid students who take a course that is tagged as ‘course type’ GLOBL may request to waive the reflective writing assignments in SBS 160.

Other courses: Students may submit a *Global Engagement Petition* to have another course count toward this requirement if it involves travel outside the US or an out-of-class research or service-learning project involving extensive interaction with others whose country of origin differs from their own and the course meets the Diverse Perspectives learning objectives. *Exceptions: SIB 101, MKT 220 and MGT 360 do NOT count toward this requirement.* Some courses that meet the Creativity & Innovation requirement or the Diverse Perspectives requirement may double count for Global Engagement. These will be found by following the search procedure outlined above.

Global Leadership Exchange trip: Students may submit a *Global Engagement Petition* to count participation in the Global Leadership Exchange trip through the Student Leadership and Involvement Office toward the Global Engagement Requirement. This request will be approved for students who demonstrate professional and appropriate behavior in all interactions within the host country and participate in the group discussions and reflections while on the trip. Students will then be registered for and noted as completing the zero-credit course: SBS 180 Global Engagement – general.

Global Internship or volunteer job: Students may submit a *Global Engagement Petition* to propose that the requirement be met through a relevant internship or volunteer position in a country other than their own. This can be done on the Madrid campus, through organizations that find placements for students (e.g., AIESEC), or by setting up the experience on their own. Students may submit a *Global Engagement Petition* to propose that the experience counts toward the Global Engagement Requirement. If approved, they register for SBS 170 Global Engagement – Work Abroad. This zero-credit co-requisite requires several reflective writing assignments.

Other Options: Students may submit a *Global Engagement Petition* to propose an alternative experience that meets the learning goals for the Global Engagement Requirement, which is not covered by the other options above. These may include extensive interaction via academic research projects, independent studies, volunteer or service projects with others whose culture, ethnicity or country of origin is different from their own in ways that meet the learning goals of this requirement. Students may be required to submit additional documentation about the experience, contact information for site supervisors, and/or proof of involvement. If approved, students would then register for SBS 180 Global Engagement– general. This zero-credit co-requisite requires several reflective writing assignments related to the experience.

Local Engagement Experience

The Local Engagement requirement has a range of options, including courses, co-curricular projects, tutoring, community service, and other engagement projects. Students choose one that best matches their personal and career interests. *This requirement is explained in detail on the [BSBA website](#).*

Choose one:

Approved Suffolk course: Options can be found by using the course search system and entering course type “LOCAL.” Students should review the course details and note prerequisites and other requirements. [Note: SBS-120, SBS-121, SBS-122, SBS-125, SBS-126, SBS-127 and SBS-130 have special

purposes, carry no academic credit, do not require any tuition, and are graded pass/fail.

Other courses: Students may submit a *Petition Form for Local or Global Engagement* to have another course count toward this requirement if it involves an out of class research or service-learning component that meets the learning objectives. Exceptions: MGT 419, MGT 200, and courses required for the BSBA business core may not count toward this requirement. Some courses that meet the Creativity & Innovation requirement or the Diverse Perspectives requirement may double count for Local Engagement. These will be found by following the search procedure outlined above.

Alternative Spring Break: Students participating in an Alternative Spring Break trip may register for SBS 121 Local Engagement – ASB. This zero-credit, co-requisite is coordinated by the Center for Community Engagement and is used to confirm that you completed the requirement.

Pre-approved community service programs: Students who volunteer 20 hours in one semester in a program as noted below register for the appropriate zero-credit, co-requisite course:

- Students participating in programs offered by **Suffolk University’s Center for Community Engagement (CCE, formerly S.O.U.L.S.)** may concurrently register for *SBS 120 Local Engagement – CCE*, which is a zero-credit, co-requisite that requires several reflective writing assignments related to the experience. The CCE will monitor volunteer hours.
- Students who volunteer through the **Center for Entrepreneurship** may concurrently register for *SBS 125 Local Engagement – Entrepreneurship*, which is a zero-credit, co-requisite that requires several reflective writing assignments related to the experience. The Center for Entrepreneurship will monitor volunteer hours.
- **Honors students** who volunteer through the Honors Program may concurrently register for *SBS 126 Local Engagement – Honors*, which is a zero-credit, co-requisite that requires several reflective writing assignments related to the experience. The Director of the Honors Program will monitor volunteer hours.
- **Beta Alpha Psi** members who volunteer through that program may concurrently register for *SBS 127 Local Engagement – Beta Alpha Psi*, which is a zero credit co-requisite that requires several reflective writing assignments related to the experience. The faculty advisor will monitor volunteer hours.
- **Jumpstart:** Students who volunteer at Jumpstart for the full academic year may register for *SBS 122 Local Engagement – Jumpstart*. This zero credit co-requisite is used to confirm that you completed the requirement. Registration is only during the spring semester and is overseen by the Jumpstart coordinator.

Other Options: Students may submit a *Petition Form for Local or Global Engagement* to propose an alternative experience that meets the learning goals for the Local Engagement Requirement, which is not covered by the other options above. These include, but are not limited to: internships in not-for-profits; practicum or fieldwork assignments, academic research projects or independent studies working directly with a local population; and volunteer or service projects sponsored by professional, religious or other organizations. BEFORE beginning the experience, students are encouraged to review the petition form and inquire about their proposed option to confirm if the experience will count. Students may be required to submit additional documentation about the experience, contact information for site supervisors, and/or proof of involvement. If approved, students would then register for *SBS 130 Local Engagement – general*. This zero-credit, co-requisite requires several reflective writing assignments related to the experience.

II. Major Requirements Minimum (18-24 HRS)

III. Other credits and Free Electives (Credit varies)

In addition to completing all degree program and major requirements, students have free elective (“other”) credits that they may use to complete a minor, explore topics of interest by taking courses in the College of Arts & Sciences or the Business School, take honors challenge courses, or use toward a second major. Many transfer students bring in credits that are applied as free electives when there is no program equivalent. The number of free elective credits to be completed varies by major, number of transfer credits, and other factors. Note: BSBA students must complete a total of 124 credits to graduate. Students should refer to their program evaluation for credit counts, and discuss free elective options with their advisors.

Academic Catalogs

[Academic Catalogs](#) > [Undergraduate Catalog](#) > [Sawyer Business School](#) > Undergraduate Requirements

2015-2016 Archived Catalog Information

Undergraduate Requirements

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [BSBA Degree Requirements](#)
- [Internship/Practicum Requirement](#)

All Accounting, Finance and Information Systems majors complete a required non-credit practicum (formerly called the experiential component). Entrepreneurship, Management, Marketing and Global Business majors have no required internship. However, we encourage these students to take advantage of the major elective option if they wish to receive academic credit for an internship experience. Refer to your specific major's web pages or catalog page for details. Students who wish to receive credit for a subsequent internship should ask an advisor for details.

2015-2016 Archived Catalog Information

Majors & Minors

Degree Offerings

The Bachelor of Science in Business Administration (BSBA) degree is offered in a full-time or part-time format. Students may select from the following majors:

- [Accounting](#)
- [Entrepreneurship](#)
- [Finance](#)
- [Global Business](#)
- [Information Systems](#)
- [Management](#)
- [Marketing](#)

Non-Degree Offering

[Certificate in Financial Planning](#)

Double Majors

You may double major in any combination of the Business School majors. Double majors often earn more than the 124 credits required for graduation, particularly if they already completed some of their free electives prior to starting the second major.

Each course may only be used to fill one degree requirement. It may be possible for double majors to double count one course across both majors, if approved by both departments.

Double major example: For a student double majoring in accounting and management, the accounting program of study should be used as the primary

because accounting is more complex, with eight major courses and an experiential component, whereas management has only six required courses.

In order to add a second major in management, you would look up the required courses for that major and then plan to take all six using the free elective slots on the accounting program of study. You should meet with the “primary” major advisor for all program requirements and the “secondary” major advisor for advising on the second major’s requirements. We recommend that you also meet with the Undergraduate Academic Advising Center during the semester to develop a multi-year academic plan to ensure you’re on track.

Minors

Minors for BSBA Students

The Sawyer Business School offers minor fields of study in the following: accounting, big data and business analytics, electronic commerce, entrepreneurship, finance, information systems, international business, leadership, legal studies, management, marketing, public service, real estate, social impact, and arts administration. Students are encouraged to speak to advisors to be aware of new minors that may be established. In making choices about minors, students should consider their intellectual interests and the academic requirements of particular programs. It is expected that students will consult with their academic advisors in selecting a minor.

Focused Business Minors for CAS Students

College of Arts & Sciences students may choose from the following focused business minors, which require 4-5 business courses (12-15 credits) depending on whether ENT-101 Business Foundations is required as a prerequisite: accounting, big data and business analytics, electronic commerce, entrepreneurship, finance, information systems, international business, leadership, legal studies, management, marketing, public service, real estate, and social impact. Many business courses require prerequisites. Please review the appropriate business academic department section for functional minor requirements.

CAS students interested in pursuing an MBA or MPA should consult with the Undergraduate Academic Advising Center for custom advising on the selection of minor business courses.

General Business Minor Requirements (for CAS)

In addition to functional minors, a general business minor is also offered to CAS students and can be tailored to the student’s interests. This typically comprises 5 courses for a total of 15 credits. It requires completion of ENT 101 Business Foundations (formerly SBS 101) and four additional business courses. Many business courses require prerequisites. Higher-level business courses are allowed if prerequisites have been satisfied. Most 300-level Business School courses require junior status (54 credit hours).

Courses listed as ‘general education’ options do not count toward a General Business Minor, including: SIB101 Globalization; SBS 220 Business Writing; PAD 201 Social Change; SBS 100 careerSTART; SBS 200 careerEXPLORE; SBS 300 careerBUILD; SBS400 careerLAUNCH (formerly called careerLINKS) and others approved to meet general education requirements.

*An interdisciplinary business studies major may be considered under special circumstances.

2015-2016 Archived Catalog Information

Accounting

Mission and Objectives

The Accounting Department provides quality accounting education in contemporary subject matter in a supportive environment. Dedicated and qualified faculty ensure that our undergraduate and graduate programs develop competent and confident graduates, prepared for the challenges of a global business environment. Our graduates compete for entry-level and higher positions and advance successfully as financial professionals in public accounting in a broad range of industries and government. The Department also offers courses to support other programs offered by the Sawyer Business School.

Our goals include earning an excellent reputation because of the quality of our graduates, improving the quality and relevance of our intellectual contributions, advancing constructive relationships with professional and other relevant communities, and enhancing our collegiality within the department, the Business School and the university.

Accounting Major Description

The Accounting Department prepares students for professional careers in public accounting, accounting and financial management in business and industry, not-for-profit organizations, and government agencies. The only school in Boston to achieve separate AACSB International Accreditation for accounting and taxation programs in addition to our business school accreditation.

Professional Requirements

The Commonwealth of Massachusetts mandates a minimum of 120 semester hours, with specific course requirements, to sit for the Uniform CPA exam. 150 semester hours are required; earned as part of a bachelor's degree, master's degree, or both to become a licensed CPA. The 4+1 program enables students to satisfy the Massachusetts licensure requirements and prepares students for the successful completion of the CPA Exam and careers in accounting. Students who plan to qualify as CPAs other than in Massachusetts should ascertain from the respective states or jurisdictions the specific requirements with which they must comply.

Additional professional accrediting bodies in accounting and auditing, in particular the Institute of Management Accountants (which supports the CMA qualification) and the Institute of Certified Internal Auditors (which supports the CIA qualification), have not enacted a 150-hour educational requirement. Nevertheless, Suffolk's 4+1 program prepares you for a professional career as an accountant. These options provide electives that are designed to prepare

you for rewarding careers in various fields in addition to public accounting such as corporate accounting, international accounting, tax advising, financial planning, not-for-profit accounting, and governmental accounting.

Accounting course offerings are designed to allow completion of the accounting major through part- or full-time study, in day and evening courses (including some online course offerings).

- [Major Requirements](#)
- [Minor Requirements](#)
- [4 + 1 Degree Program](#)
- [Undergraduate Courses](#)

Accounting Major Requirements

The BSBA in Accounting requires completion of 24 credit hours in accounting beyond the completion of ACCT 201, Accounting for Decision Making I and ACCT 202, Accounting for Decision Making II. A cumulative grade point average of at least 2.0 in the accounting major and a cumulative grade point average of 2.0 overall must be maintained to graduate.

Accounting majors must complete 150 hours of pre-professional or professional accounting experience prior to graduating.

Accounting majors are assigned a faculty advisor from the Accounting Department to assist them in planning their program of studies and advise them on academic and career matters.

Accounting Major Required Courses, 7 Courses, 21 Credits

- **ACCT-320 Federal Taxation I**

Prerequisites:

ACCT 202

Credits:

3.00

Description:

Focuses on the federal income taxation of individuals with some discussion of business taxation. Explores the basic structure of individual income taxation, including the individual tax formula, income, deductions, and credits, and provides an introduction to property transactions. Emphasizes how tax laws affect everyday personal and business decisions.

Term:

Offered Both Fall and Spring

- **ACCT-321 Intermediate Accounting I**

Prerequisites:

ACCT-201 and ACCT-202 and Junior standing

Credits:

3.00

Description:

Reviews basic financial accounting concepts and examines selected balance sheet and income statement items. The focus of this communication intensive course is on the valuation and reporting of current and non-current assets and liabilities and the income determination aspects of these items.

Term:

Offered Both Fall and Spring

- **ACCT-322 Intermediate Accounting II**

Prerequisites:

ACCT-321 with a minimum grade of C

Credits:

3.00

Description:

Continues to examine selected balance sheet and income statement items. The focus of this communication intensive course is on the valuation and reporting of investments and stockholders' equity and the income determination aspects of these items. Also considers special topics such as pensions, leases, deferred taxes, and cash flows.

Term:

Offered Both Fall and Spring

- **ACCT-331 Cost Accounting**

Prerequisites:

ACCT 202

Credits:

3.00

Description:

Explores concepts and procedures underlying the development of a cost accounting system for managerial decisions, control, and performance reporting. Introduces the basic ideas of responsibility accounting.

Term:

Offered Both Fall and Spring

- **ACCT-430 Accounting Information Systems**

Prerequisites:

ACCT 322; ISOM 310 or ISOM 423

Credits:

3.00

Description:

Introduces the design, operation, and use of accounting information systems. Examines the functional relationships of the AIS within an organization. Provides a background in automated data processing, along with the important human and organizational considerations in system design and implementation.

Term:

Offered Both Fall and Spring

- **ACCT-431 Auditing and Assurance Services**

Prerequisites:

ACCT 321 AND ACCT 331

Credits:

3.00

Description:

Provides an introduction to the field of auditing, with a concentration in auditing historical financial statements in accordance with generally accepted auditing standards, and some exposure to auditing the internal control over financial reporting of large public companies. Covers the environment, standards, regulation, and law of auditing in the US, with some exposure to the international environment. Covers audit planning, risk, and material assessments, audit evidence, evaluation of internal control, documentation, and audit reports.

Term:

Offered Both Fall and Spring

- **ACCT-450 Accounting Theory and Practice**

Prerequisites:

ACCT 431 (may be taken Concurrently) and Senior Status

Credits:

3.00

Description:

Addresses the non-technical foundations of accounting for CFOs, Audit Partners, FASB and SEC members and other leadership roles in accounting and finance. Core elements include enhancing critical thinking skills, understanding the grey areas of accounting, and analytical thinking. Subject matter combines current financial issues with traditional and radical concepts. However, the primary objective is to provide practice in forming and expressing opinions and taking a stand, using communication for impact, anticipating and managing ethical conflicts, and clarifying one's own guiding principles.

Term:

Offered Both Fall and Spring

Accounting Elective Courses, 1 Course, 3 Credits

Select one from the following:

- **ACCT-310 International Business Accounting**

Prerequisites:

FIN-200 (formerly FIN 310); ACCT-331

Credits:

3.00

Description:

Explores economic, political and cultural variables that shape accounting and disclosure in various countries. Students gain an understanding of international financial reporting standards and the forces for convergence between IFRS and US GAAP. Presents financial analysis in a multi-financial context.

Term:

Offered Fall Term

- **ACCT-415 Not-For-Profit Accounting and Control**

Prerequisites:

ACCT 331

Credits:

3.00

Description:

Studies accounting principles, unique financial reporting (such as fund accounting), and budgetary control in government agencies and charitable, healthcare, educational, and other not-for-profit organizations.

Term:

Offered Spring Term

- **ACCT-422 Federal Taxation II**

Prerequisites:

ACCT 320

Credits:

3.00

Description:

Covers advanced individual tax topics such as cost recovery, itemized deductions, passive activity losses, AMT, complex basis rules, and the operation and formation of C corporations.

Term:

Offered Spring Term

- **ACCT-432 Advanced Accounting**

Prerequisites:

ACCT-322 and junior standing

Credits:

3.00

Description:

Covers accounting procedures involved in business combinations and consolidated financial statements. Topics also include accounting for partnerships, various foreign currency issues, corporations in financial distress, and the role of regulatory authorities in financial reporting.

Term:

Offered Fall Term

- **ACCT-560 Accounting Practicum**

Prerequisites:

Instructor's consent required

Credits:

0.00

Description:

Fulfills the requirement that accounting majors must complete 150 hours of pre-professional or professional accounting experience prior to graduating. Experience may be acquired through an internship, part- or full-time employment, or a cooperative education position. Students register for ACCT 560 Accounting Internship during the semester in which they complete the required 150 hours. This experiential component carries no academic credit, does not require any tuition, and will be graded pass/fail. Approval of this experience must be obtained from the Accounting Department.

Term:

Offered Both Fall and Spring

Prerequisites:

ACCT 202

Credits:

3.00

Description:

Explores concepts and procedures underlying the development of a cost accounting system for managerial decisions, control, and performance reporting. Introduces the basic ideas of responsibility accounting.

Term:

Offered Both Fall and Spring

Accounting Minor for College of Arts and Sciences Students, 6 courses, 18 credits

College of Arts & Sciences students who wish to undertake a functional business minor in accounting must first complete ENT 101 Business Foundations, formerly SBS 101. ACCT 201 and 202 may be completed in the sophomore year, while the other accounting courses are taken junior or senior year.

After ENT 101, College students are required to take all of the following:

- **ACCT-201 Accounting for Decision Making I**

Prerequisites:

MATH-128 or higher and WRI-102 or WRI-H103 or SBS-220

Credits:

3.00

Description:

Introduces students to the accounting cycle, the financial statements, and the theory underlying accounting as information. Provides users of accounting information with a basic understanding of how to appraise and manage a business. Addresses current accounting topics, including relevant ethical and international issues found in the financial press.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **ACCT-202 Accounting for Decision Making II**

Prerequisites:

ACCT-201

Credits:

3.00

Description:

Enables students to apply the concepts and skills from ACCT 201. They learn how to analyze the financial condition and performance of a firm, and how to use accounting information in business planning, decision-making, and control. Topics include cost-volume-profit analysis, costing systems, variance analysis, and the budget process. Discusses relevant current ethical and competitive issues found in the financial press.

Term:

Offered Both Fall and Spring

- **ACCT-321 Intermediate Accounting I**

Prerequisites:

ACCT-201 and ACCT-202 and Junior standing

Credits:

3.00

Description:

Reviews basic financial accounting concepts and examines selected balance sheet and income statement items. The focus of this communication intensive course is on the valuation and reporting of current and non-current assets and liabilities and the income determination aspects of these items.

Term:

Offered Both Fall and Spring

- **ACCT-322 Intermediate Accounting II**

Prerequisites:

ACCT-321 with a minimum grade of C

Credits:

3.00

Description:

Continues to examine selected balance sheet and income statement items. The focus of this communication intensive course is on the valuation and reporting of investments and stockholders' equity and the income determination aspects of these items. Also considers special topics such as pensions, leases, deferred taxes, and cash flows.

- [Major Requirements](#)
- [Minor Requirements](#)
- [4 + 1 Degree Program](#)
- [Undergraduate Courses](#)

Suffolk's 4+1 Programs were developed for those wanting a deeper and more comprehensive preparation for their careers as accountants. Our programs emphasize deep accounting and/or tax knowledge, analytical skills and information technology and a broad perspective on the professional and institutional aspects of the practice of accounting. These programs are also designed to prepare students for successful completion of the Uniform CPA Examination (when supplemented by a review course or self-study).

Students who earn their undergraduate business degree from a U.S. institution may qualify to earn an MSA, MST, MSF, or MSFSB in as few as 10 months, or an MSA/MST or MSA/MSF in as few as 16 months.

How to Apply

- You must officially apply to the MSA, MST, MSF, MSFSB, joint MSA/MST, or joint MSA/MSF program during the final semester of your senior year of undergraduate study. (Applications from recent graduates will also be considered.)
- If you have at least a 3.5 cumulative GPA in your final semester of your senior year, you can waive the GMAT or GRE requirement.
- Top students will be automatically considered for merit-based fellowship awards (no separate application required).

Prerequisites:

MATH-128 or higher and WRI-102, WRI-103 or SBS-220, and at least a 3.3 GPA

Credits:

3.00

Description:

Introduces students to the accounting cycle, the financial statements, and the theory underlying accounting as information. Provides users of accounting information with a basic understanding of how to appraise and manage a business. Addresses current accounting topics, including relevant ethical and international issues found in the financial press.

Term:

Offered Both Fall and Spring

Type:

Honors

• **ACCT-202 Accounting for Decision Making II**

Prerequisites:

ACCT-201

Credits:

3.00

Description:

Enables students to apply the concepts and skills from ACCT 201. They learn how to analyze the financial condition and performance of a firm, and how to use accounting information in business planning, decision-making, and control. Topics include cost-volume-profit analysis, costing systems, variance analysis, and the budget process. Discusses relevant current ethical and competitive issues found in the financial press.

Term:

Offered Both Fall and Spring

• **ACCT-H202 Honors Accounting for Decision Making II**

Prerequisites:

ACCT 201; 3.3 GPA

Credits:

3.00

Description:

Enables students to apply the concepts and skills from ACCT 201. They learn how to analyze the financial condition and performance of a firm, and how to use accounting information in business planning, decision-making, and control. Topics include cost-volume-profit analysis, costing systems, variance analysis, and the budget process. Discusses relevant current ethical and competitive issues found in the financial press.

Term:

Offered Both Fall and Spring

Type:

Honors

- **ACCT-310 International Business Accounting**

Prerequisites:

FIN-200 (formerly FIN 310); ACCT-331

Credits:

3.00

Description:

Explores economic, political and cultural variables that shape accounting and disclosure in various countries. Students gain an understanding of international financial reporting standards and the forces for convergence between IFRS and US GAAP. Presents financial analysis in a multi-financial context.

Term:

Offered Fall Term

- **ACCT-320 Federal Taxation I**

Prerequisites:

ACCT 202

Credits:

3.00

Description:

Focuses on the federal income taxation of individuals with some discussion of business taxation. Explores the basic structure of individual income taxation, including the individual tax formula, income, deductions, and credits, and provides an introduction to property transactions. Emphasizes how tax laws affect everyday personal and business decisions.

Term:

Offered Both Fall and Spring

• **ACCT-321 Intermediate Accounting I**

Prerequisites:

ACCT-201 and ACCT-202 and Junior standing

Credits:

3.00

Description:

Reviews basic financial accounting concepts and examines selected balance sheet and income statement items. The focus of this communication intensive course is on the valuation and reporting of current and non-current assets and liabilities and the income determination aspects of these items.

Term:

Offered Both Fall and Spring

• **ACCT-H321 Intermediate Accounting I**

Prerequisites:

ACCT-201 and ACCT-202 and Junior standing and GPA at least 3.3

Credits:

3.00

Description:

Reviews basic financial accounting concepts and examines selected balance sheet and income statement items. The focus of this communication intensive course is on the valuation and reporting of current and non-current assets and liabilities and the income determination aspects of these items.

Term:

Offered Both Fall and Spring

- **ACCT-322 Intermediate Accounting II**

Prerequisites:

ACCT-321 with a minimum grade of C

Credits:

3.00

Description:

Continues to examine selected balance sheet and income statement items. The focus of this communication intensive course is on the valuation and reporting of investments and stockholders' equity and the income determination aspects of these items. Also considers special topics such as pensions, leases, deferred taxes, and cash flows.

Term:

Offered Both Fall and Spring

- **ACCT-331 Cost Accounting**

Prerequisites:

ACCT 202

Credits:

3.00

Description:

Explores concepts and procedures underlying the development of a cost accounting system for managerial decisions, control, and performance reporting. Introduces the basic ideas of responsibility accounting.

Term:

Offered Both Fall and Spring

- **ACCT-415 Not-For-Profit Accounting and Control**

Prerequisites:

ACCT 331

Credits:

3.00

Description:

Studies accounting principles, unique financial reporting (such as fund accounting), and budgetary control in government agencies and charitable, healthcare, educational, and other not-for-profit organizations.

Term:

Offered Spring Term

- **ACCT-422 Federal Taxation II**

Prerequisites:

ACCT 320

Credits:

3.00

Description:

Covers advanced individual tax topics such as cost recovery, itemized deductions, passive activity losses, AMT, complex basis rules, and the operation and formation of C corporations.

Term:

Offered Spring Term

- **ACCT-430 Accounting Information Systems**

Prerequisites:

ACCT 322; ISOM 310 or ISOM 423

Credits:

3.00

Description:

Introduces the design, operation, and use of accounting information systems. Examines the functional relationships of the AIS within an organization. Provides a background in automated data processing, along with the important human and organizational considerations in system design and implementation.

Term:

Offered Both Fall and Spring

- **ACCT-431 Auditing and Assurance Services**

Prerequisites:

ACCT 321 AND ACCT 331

Credits:

3.00

Description:

Provides an introduction to the field of auditing, with a concentration in auditing historical financial statements in accordance with generally accepted auditing standards, and some exposure to auditing the internal control over financial reporting of large public companies. Covers the environment, standards, regulation, and law of auditing in the US, with some exposure to the international environment. Covers audit planning, risk, and material assessments, audit evidence, evaluation of internal control, documentation, and audit reports.

Term:

Offered Both Fall and Spring

- **ACCT-432 Advanced Accounting**

Prerequisites:

ACCT-322 and junior standing

Credits:

3.00

Description:

Covers accounting procedures involved in business combinations and consolidated financial statements. Topics also include accounting for partnerships, various foreign currency issues, corporations in financial distress, and the role of regulatory authorities in financial reporting.

Term:

Offered Fall Term

- **ACCT-450 Accounting Theory and Practice**

Prerequisites:

ACCT 431 (may be taken Concurrently) and Senior Status

Credits:

3.00

Description:

Addresses the non-technical foundations of accounting for CFOs, Audit Partners, FASB and SEC members and other leadership roles in accounting and finance. Core elements include enhancing critical thinking skills, understanding the grey areas of accounting, and analytical thinking. Subject matter combines current financial issues with traditional and radical concepts. However, the primary objective is to provide practice in forming and expressing opinions and taking a stand, using communication for impact, anticipating and managing ethical conflicts, and clarifying one's own guiding principles.

Term:

Offered Both Fall and Spring

- **ACCT-510 Independent Study**

Prerequisites:

ACCT 322, ACCT 331 or approval from dept. chair

Credits:

3.00

Description:

Independent study allows students to expand their classroom experience by completing research in an area of interest not already covered by Suffolk courses. The student designs a unique project and finds a full-time faculty member with expertise in that topic who agrees to sponsor it and provide feedback as the proposal is refined. A well designed and executed research project broadens and/or deepens learning in a major or minor area of study and may also enhance a student's marketability to potential future employers. Students cannot register for an Independent Study until a full proposal is approved by the faculty sponsor, department chair, and academic dean. Many Independent study proposals require revisions before approval is granted; even with revisions independent study approval is NOT guaranteed. Students are strongly encouraged to submit a proposal in enough time to register for a different course if the proposal is not accepted. For complete instructions, see the SBS Independent/Directed Study Agreement and Proposal form available online.

- **ACCT-560 Accounting Practicum**

Prerequisites:

Instructor's consent required

Credits:

0.00

Description:

Fulfills the requirement that accounting majors must complete 150 hours of pre-professional or professional accounting experience prior to graduating. Experience may be acquired through an internship, part- or full-time employment, or a cooperative education position. Students register for ACCT 560 Accounting Internship during the semester in which they complete the required 150 hours. This experiential component carries no academic credit, does not require any tuition, and will be graded pass/fail. Approval of this experience must be obtained from the Accounting Department.

Term:

Offered Both Fall and Spring

2015-2016 Archived Catalog Information

Big Data and Business Analytics

- [Big Data and Business Analytics Minor Requirements](#)
- [Undergraduate Courses](#)

Big Data and Business Analytics Minor, 3 courses, 9 credits

Students are required to take the following:

- ISOM-130 Data Science and Analytics

Prerequisites:

ENT-101(formerly SBS-101)

Credits:

3.00

Description:

Provides students with a comprehensive introduction to the core concepts, applications and tools of data acquisition, preparation, querying, analytics, and data management. Students gain hands-on experience using real data to perform these functions. Topics include: data life cycle, big data, analytics, data collection, preparation, organization and storage, aggregation and summary, and presentation/visualization. Students use tools such as MS Excel, MS Access, SQL, and SAS Visual Analytics.

Term:

Offered Both Fall and Spring

- **ISOM-230 Big Data, Business Intelligence and Analytics**

Prerequisites:

STATS-240 or STATS-250 or Instructor Permission

Credits:

3.00

Description:

Provides an understanding of the business potential of big data; how to build and maintain data warehouses, and how to analyze and use this data as a source for business intelligence and competitive advantage. Students study data mining concepts and the use of analytics tools and methods for producing business knowledge. Topics include: extraction, transformation and loading; decision support systems; analytics , text, web and data mining models as well as data presentation/visualization including dashboards, cockpits and scorecards. Students build a data warehouse and practice the extraction and filtering process used to produce high quality data warehouses. Students will use tools such as MS Excel, MicroStrategy (Salesforce), SQL and SAP Business Warehouse.

Term:

Offered Both Fall and Spring

- **ISOM-330 Applied Predictive Analytics**

Prerequisites:

ISOM-130, ISOM-230, and STATS-240 or STATS-250 or Instructor Permission

Credits:

3.00

Description:

When companies make decisions, they do so with the future in mind and essentially are predicting that their decisions will achieve desired results. Predictive analytics allow people to ask and answer questions that can predict demand and/or outcomes and obtain results that lead to reasoned action. This course develops students' capability in applying the core concepts and techniques of predictive analytics for opportunity identification and risk assessment within the context of organizational decision-making. Students will use data-driven approaches to develop predictive analytical models. Students will create and use data models and techniques, apply trendlines to fit models to data, perform what-if analysis, construct data tables, evaluate scenarios, apply forecasting techniques, simulation and risk analysis. Students will learn to use various presentation and visualization

tools to communicate results. Topics include: predictive analytics life cycle, opportunity/issue identification, data preparation, modeling, analysis, forecasting, simulation, risk assessment, and operationalization of predictive analytics. Students will use tools such as MS Excel, SPSS and SAS Visual Analytics.

Term:

Offered Both Fall and Spring

Big Data and Decision Analysis minor for CAS students, 5 courses, 16 credits

- **ENT-101 Business Foundations**

Credits:

3.00

Description:

This course introduces students to foundational concepts in business, including functional areas, the life cycle, competition, stakeholders and ethical considerations. Students develop critical thinking by learning and using a problem solving process through a business situation analysis model to analyze various situations that confront managers and founders of small, medium, and large organizations. Students will also develop tools for analysis, allowing them to critically view business in a new and thoughtful way. The class culminates with student- teams presenting a detailed analysis and recommendations to a panel of executives and persuading them that the recommended strategy is not only feasible, but also practical for the stakeholders involved.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **ISOM-130 Data Science and Analytics**

Prerequisites:

ENT-101(formerly SBS-101)

Credits:

3.00

Description:

Provides students with a comprehensive introduction to the core concepts, applications and tools of data acquisition, preparation, querying, analytics, and data management. Students gain hands-on experience using real data to perform these functions. Topics include: data life cycle, big data, analytics, data collection, preparation, organization and storage, aggregation and summary, and presentation/visualization. Students use tools such as MS Excel, MS Access, SQL, and SAS Visual Analytics.

Term:

Big Data and Business Analytics

- [Big Data and Business Analytics Minor Requirements](#)
- [Undergraduate Courses](#)
- CI-108 Designing the Next Best Thing

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Demystifies the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking.

Term:

Offered Both Fall and Spring

Type:

Creativity and Innovation

- **ISOM-120 Information Technology and Productivity**

Credits:

3.00

Description:

This course provides a comprehensive introduction to information technology and information systems concepts. Students learn the importance of modern information technologies in the workplace. The course covers technology resources of the digital age, such as computer software, hardware, communication, database and telecommunication systems. Students also learn to increase productivity through the integration and use of productivity software applications, such as spreadsheets, presentation software and databases. In addition, students learn the fundamental concepts of database design and relational database management systems (DBMS) such as Microsoft access.

Term:

Offered Both Fall and Spring

- **ISOM-H120 Honors Information Technology and Productivity**

Prerequisites:

Griffin Fellows Honors Students Only; GPA of 3.2

Credits:

3.00

Description:

OPEN TO GRIFFIN FELLOWS AND HONOR STUDENTS ONLY GPA of 3.2 or above required.

Term:

Offered Fall Term

Type:

Honors

- **ISOM-130 Data Science and Analytics**

Prerequisites:

ENT-101(formerly SBS-101)

Credits:

3.00

Description:

Provides students with a comprehensive introduction to the core concepts, applications and tools of data acquisition, preparation, querying, analytics, and data management. Students gain hands-on experience using real data to perform these functions. Topics include: data life cycle, big data, analytics, data collection, preparation, organization and storage, aggregation and summary, and presentation/visualization. • **ISOM-H130 Honors Data Science and Analytics**

Prerequisites:

ENT-101(formerly SBS-101) and at least 3.3 GPA

Credits:

3.00

Description:

Provides students with a comprehensive introduction to the core concepts, applications and tools of data acquisition, preparation, querying, analytics, and data management. Students gain hands-on experience using real data to perform these functions. Topics include: data life cycle, big data, analytics, data collection, preparation, organization and storage, aggregation and summary, and presentation/visualization. Students use tools such as MS Excel, MS Access, SQL, and SAS Visual Analytics.

Term:

Offered Both Fall and Spring

Type:

- **ISOM-201 Data and Decisions Analysis**

Prerequisites:

MATH-128 or higher and STATS-240 or STATS 250.

Credits:

3.00

Description:

Introduces fundamental quantitative methods of using data to make informed management decisions. Topics include: decision modeling, decision analysis, regression, forecasting, optimization, and simulation, as it applies to the study and analysis of business problems for decision support in finance, marketing, service, and manufacturing operations. Practical business cases and examples drawn from finance, marketing, operations management, and other management areas are used to provide students with a perspective on how management science is used in practice. Excel spreadsheets are used extensively to implement decision models.

Term:

Offered Both Fall and Spring

- **ISOM-H201 Honors Data & Decisions Analysis**

Prerequisites:

MATH-128 or higher and STATS-240 or STATS-250 and at least a 3.3 GPA

Credits:

3.00

management, and other management areas are used to provide students with a perspective on how management science is used in practice. Excel spreadsheets are used extensively to implement decision models.

Term:

Offered Fall Term

Type:

Honors

- **ISOM-210 Management Information Systems**

Prerequisites:

WRI-101 and ENT-101 and at least 24 completed credits

Credits:

3.00

Description:

Examines the rise of information-enabled enterprises and the role of information technologies/information systems (IT/IS) and e-commerce as key enablers of businesses and social changes globally. Topics include: the effective application of IT/IS to support strategic planning, managerial control, operations and business process integration in the digital economy, IT/IS related issues of ethics, and piracy and security in the information society.

Term:

Offered Both Fall and Spring

- **ISOM-H210 Honors Management Info System**

Prerequisites:

WRI-101 or WRI-103 and ENT-101 and at least a 3.3 GPA

Credits:

3.00

Description:

Examines the rise of information-enabled enterprises and the role of information technologies/information systems (IT/IS) and e-commerce as key enablers of businesses and social changes globally. Topics include: the effective application of IT/IS to support strategic planning, managerial control, operations and business process integration in the digital economy, IT/IS related issues of ethics, and piracy and security in the information society.

Term:

Offered Fall Term

Type:

Honors

- **ISOM-212 Web Design**

Credits:

3.00

Description:

Introduces the concepts, vocabulary, and procedures associated with website and mobile application design. Includes modules on website evaluation, information architecture, customer and task analysis, usability testing, typography, color composition, screen layout, and navigation design, and digital content editing. Also covers important web design themes such as accessibility, globalization, personalization and trust. Students gain hands-on design experience using an assortment of readily available development tools such as Wix, Yapp, and Microsoft's Expression Web software.

Term:

Offered Fall Term

- **ISOM-215 Mobile App Development**

Credits:

3.00

Description:

Provides a comprehensive introduction to mobile app technology and design concepts. This is an introductory course and assumes no prior programming experience. Students learn how to design, build, and optimize cross-platform mobile app using HTML5 standards. Students will also

learn how to convert HTML5 apps into native apps for various mobile platforms. Students use CSS3, JavaScript and several JavaScript frameworks and techniques such as jQuery, jQuery Mobile, and AJAX. In addition, students will use Web services, such as Google Maps, and Web Application Programming Interfaces (Web APIs) to integrate content into their apps.

Term:

Offered Fall Term

- **ISOM-230 Big Data, Business Intelligence and Analytics**

Prerequisites:

STATS-240 or STATS-250 or Instructor Permission

Credits:

3.00

Description:

Provides an understanding of the business potential of big data; how to build and maintain data warehouses, and how to analyze and use this data as a source for business intelligence and competitive advantage. Students study data mining concepts and the use of analytics tools and methods for producing business knowledge. Topics include: extraction, transformation and loading; decision support systems; analytics , text, web and data mining models as well as data presentation/visualization including dashboards, cockpits and scorecards. Students build a data warehouse and practice the extraction and filtering process used to produce high quality data warehouses. Students will use tools such as MS Excel, MicroStrategy (Salesforce), SQL and SAP Business Warehouse.

Term:

Offered Both Fall and Spring

- **ISOM-231 Automatic for the People: Turn Data Into Insight/W R~python**

Prerequisites:

STATS-240 or STATS-250

Credits:

3.00

Description:

Introduces a detailed overview of statistical learning for data mining, inference, and prediction in order to tackle modern-day data analysis problems. This course is appropriate for students who wish to learn and apply statistical learning tools to analyze data and gain valuable hands-on experience with R. Statistical learning refers to a vast set of tools for modeling and understanding complex datasets. Exciting topics include: Regression, Logistic Regression, Linear Discriminant Analysis, Cross-Validation, Bootstrap, Linear/Non-Linear Model Selection and Regularization, Support Vector Methodology, and Unsupervised Learning via Principal Components Analysis and Clustering Methods. Students learn how to implement each of the statistical learning methods using the popular statistical software package R via hands-on lab sessions.

Term:

Offered Fall Term

• ISOM-244 Web Application Development

Credits:

3.00

Description:

Equips students with the principles, methodology and skills required to define, develop and deploy a fully functional dynamic web application. Students learn to customize the content, appearance, and delivery of their website using industry-standard web development tools. Class discussion will focus on web development issues for organizations as well as the role played by development tools such as HTML5, CSS3, and PHP scripting. Each class will include hands-on lab work. A term project is used to wrap the course content together.

Term:

Offered Spring Term

• ISOM-301 Business Analysis for Management

Prerequisites:

Take MGT-317 and junior status

Credits:

3.00

Description:

This course provides students with exposure to the business analysis models and techniques generally applicable to common business problems. Using the case study method, the course will emphasize analytical models including forecasting, optimization and simulation within the context of team-based work. Students will understand the process of Business Analysis (BA), the role of assumptions and elicitation, the critical value of hard analytical skills as the foundation of BA as well as the importance of interpretation, communication and implementation to the effective use of BA.

• ISOM-310 Management Information Systems

Prerequisites:

WRI 102 or SBS 220; and at least 45 completed credits

Credits:

3.00

Description:

This course examines the rise of information-enabled enterprises and the role of information technologies/information systems (IT/IS) and e-commerce as key enablers of businesses and social changes globally. The effective application of IT/IS to support strategic planning, managerial control, operations and business process integration in the digital economy is covered. The course also examines the IT/IS related issues of ethics, privacy, piracy and security in the information society.

Term:

Offered Both Fall and Spring

• ISOM-H310 Honors Management Info System

Prerequisites:

WRI 102; Junior standing; 3.3 GPA

Credits:

3.00

Description:

OPEN TO GRIFFIN FELLOWS AND HONOR STUDENTS ONLY GPA of 3.2 or above required.

Term:

Offered Fall Term

Type:

Honors

- **ISOM-313 Systems Analysis & Design**

Prerequisites:

ISOM-210(formerly ISOM-310)

Credits:

3.00

Description:

Covers the concepts, techniques and tools used in the analysis and design of business information systems. Topics include: the system development cycle, modeling, prototyping and project management. Additionally, the course focuses upon using Object Oriented analysis and design techniques including the UML. Emphasizes the analysis of business operations as well as the interaction between information systems professionals and end-users. A term project applying these concepts and techniques is required.

Term:

Offered Both Fall and Spring

- **ISOM-314 Object Oriented Programming**

Credits:

3.00

Description:

Develops problem solving and basic programming skills through a variety of business application assignments. Introduces fundamental control and data structures using the Java programming language. Students learn about the concepts of object-oriented / event-driven programming principles. The course builds skills in the areas of programming logic, Class and Object concepts, and system development. Testing and debugging techniques and the writing of well-structured code are emphasized.

Term:

Offered Both Fall and Spring

- **ISOM-315 Mobile App Development**

Credits:

3.00

Description:

This course provides a comprehensive introduction to mobile app technology and design concepts. Students learn how to design, build, and optimize cross-platform mobile app using HTML5 standards. Students use CSS3, JavaScript and several JavaScript frameworks and techniques such as jQuery, jQuery Mobile, and AJAX. In addition, students will use Web services, such as Google Maps, and Web Application Programming Interfaces (Web APIs) to integrate content into their apps. Students will learn how to convert HTML5 apps into native apps for various mobile platforms. This is an introductory course and assumes no prior programming experience.

Term:

Offered Spring Term

- **ISOM-319 Operations Management**

Prerequisites:

ENT-101(formerly SBS 101) and ISOM-201 and at least 54 credits

Credits:

3.00

Description:

Introduces concepts and tools for managing operations in service/ manufacturing organizations where inputs such as raw material, labor, or other resources into finished services and/or goods. Strategic and tactical issues of operations management (OM), including: operations strategy, product and process design, capacity planning, quality management, inventory management, queueing theory and work force management are addressed. Quantitative models, analytical tools and case studies are used to analyze operational problems that business managers face in both local and global settings.

Term:

Offered Both Fall and Spring

- **ISOM-H319 Honors Operations Management**

Prerequisites:

ENT-101(formerly SBS-101), ISOM-201, at least a 3.3 GPA, and at least 54 credits

Credits:

3.00

Description:

Introduces concepts and tools for managing operations in service/ manufacturing organizations where inputs such as raw material, labor, or other resources into finished services and/or goods. Strategic and tactical issues of operations management (OM), including: operations strategy, product and process design, capacity planning, quality management, inventory management, queueing theory and work force management are addressed. Term:

Offered Spring Term

Type:

Honors

- **ISOM-330 Applied Predictive Analytics**

Prerequisites:

ISOM-130, ISOM-230, and STATS-240 or STATS-250 or Instructor Permission

Credits:

3.00

Description:

When companies make decisions, they do so with the future in mind and essentially are predicting that their decisions will achieve desired results. Predictive analytics allow people to ask and answer questions that can predict demand and/or outcomes and obtain results that lead to reasoned action. This course develops students' capability in applying the core concepts and techniques of predictive analytics for opportunity identification and risk assessment within the context of organizational decision-making. Students will use data-driven approaches to develop predictive analytical models. Students will create and use data models and techniques, apply trendlines to fit models to data, perform what-if analysis, construct data tables, evaluate scenarios, apply forecasting techniques, simulation and risk analysis. Students will learn to use various presentation and visualization tools to communicate results. Topics include: predictive analytics life cycle, opportunity/issue identification, data preparation, modeling, analysis, forecasting, simulation, risk assessment, and operationalization of predictive analytics. Students will use tools such as MS Excel, SPSS and SAS Visual Analytics.

Term:

Offered Both Fall and Spring

- **ISOM-331 Global Electronic Commerce**

Prerequisites:

ISOM-210(formerly ISOM-310)

Credits:

3.00

Description:

Examines the role of e-commerce and e-business in the global business environment. Considers user, technological, strategic, economic, social, and cultural factors in the development and deployment of effective websites and mobile applications. Students discuss readings and cases to examine current e-commerce situations, opportunities, and challenges. Students develop websites to simulate collaboration and competition among online businesses.

Term:

Offered Fall Term

- **ISOM-340 Security & Privacy**

Prerequisites:

ISOM-210(formerly ISOM-310) and at least 54 credits

Credits:

3.00

Description:

Introduces the basics of information security & privacy including the legal and ethical issues. Common types of computer attacks and counter-attacks are addressed. Security technologies such as biometrics, firewalls, intrusion detection systems and cryptography systems will be analyzed and several lab exercises on the same are used to connect theory to practice. Best practices for planning and auditing security and privacy will also be covered.

Term:

Offered Fall Term

• **ISOM-341 Project Management**

Credits:

3.00

Description:

Provides a comprehensive introduction to project management. Projects provide businesses a time-delimited tool for improving, expanding, and innovating - the primary means for converting strategy into action. Project management success differentiates top performing firms. The course will focus on discussion and analysis of business situations that convey core project management skills. In particular, this course focuses on the challenge of managing projects in today's complex, high-pressure work environments. This course can be credited toward PMI Project Management Professional (PMP) certification.

Term:

Offered Spring Term

• **ISOM-414 Object-Oriented Programming Development with Java**

Prerequisites:

ISOM-314 and at least 54 credits or Instructor Permission

Credits:

3.00

Description:

This course introduces object-oriented programming (OOP) and development using the Java programming language. It covers the basics of OOP including class hierarchies, inheritance, objects, streams, constructors, and GUI components. The course also covers the design, development, and deployment of applets, web applications, and applications that are not deployed via the Internet. Several programming projects, which strengthen the understanding of object based and event driven programming, are required. By the end of the course, students will possess a strong working competency in object oriented programming using Java.

Term:

Offered Spring Term

- **ISOM-423 Database Management**

Prerequisites:

ISOM-210(formerly ISOM-310)

Credits:

3.00

Description:

Provides an understanding of the role of information and databases in information systems and their role as an organizational resource. Students learn to design databases using normalization and entity-relationship diagrams, develop data models and to build applications with database management systems such as MS Access and SQL. Techniques are examined and applied to realistic business problems through hands-on exercises and projects.

Term:

Offered Both Fall and Spring

- **ISOM-424 IS Strategy, Management and Acquisition**

Prerequisites:

ISOM-313, ISOM-314, and ISOM-423 and at least 84 credits

Credits:

3.00

Description:

Explores the issues and approaches in managing the information systems function in organizations and how the IS function integrates/supports/enables various types of organizational capabilities. It takes a management perspective in exploring the acquisition, development, and implementation of plans and policies to achieve efficient and effective information systems. The course addresses issues relating to defining the high level IS infrastructure and the systems that support the operational, administrative, and strategic needs of the organization. The remainder of the course is focused on developing an intellectual framework that will allow leaders of organizations to critically assess existing IS infrastructures and emerging technologies as well as how these enabling technologies might affect organizational strategy. The ideas developed and cultivated in this course are intended to provide an enduring perspective that can help leaders make sense of an increasingly globalized and technology intensive business environment.

Term:

Offered Both Fall and Spring

• ISOM-440 ERP System & Process Reengineering

Prerequisites:

ISOM-210(formerly ISOM-310) and at least 54 credits

Credits:

3.00

Description:

Provides a conceptual, as well as, a mechanical understanding of enterprise integration and enterprise software, business process reengineering and strategies for maximizing benefits from enterprise systems. Students learn to examine complex issues in organizational changes including implementation challenge; risks, costs, and benefits; learning and knowledge management. Hands-on lab projects on the ERP System (provided by SAP) are utilized to reinforce understanding of important enterprise systems and business process concepts. This course is part of the SAP Student Recognition Certificate Program.

Term:

Offered Spring Term

- **ISOM-445 Big Data and Analytics**

Prerequisites:

ISOM 201; ISOM 310; ISOM 423 is recommended; Junior standing

Credits:

3.00

Description:

This course provides an understanding of the business potential of big data and analytics, data warehousing, how to build and maintain data warehouses, and how to use data warehouses for business advantage and as a source for business intelligence. Business intelligence refers to the use of analytical software tools to analyze big data or complex information about an organization and its competitors for use in business planning and decision-making. In building data warehouses, students will learn the inter-relationships between operation, decision support systems, strategy and the extraction and filtering process used to produce a high quality data warehouse. Data mining concepts and the use of data mining tools and methods for decision-making and for producing business intelligence is presented. Additionally, the concept of building dashboards and other visualization techniques to present data will be covered.

Term:

Offered Fall Term

- **ISOM-510 Independent Study in IS & OM**

Prerequisites:

ISOM-210(formerly ISOM-310) or ISOM-201 and Instructor Permission

Credits:

1.00- 3.00

Description:

Independent study allows students to expand their classroom experience by completing research in an area of interest not already covered by Suffolk courses. The student designs a unique project and finds a full-time faculty member with expertise in that topic who agrees to sponsor it and provide feedback as the proposal is refined. A well designed and executed research project broadens and/or deepens learning in a major or minor area of study and may also enhance a student's marketability to potential future employers. Students cannot register for an Independent Study until a full proposal is approved by the faculty sponsor, department chair, and academic dean. Many Independent study proposals require revisions before

approval is granted; even with revisions independent study approval is NOT guaranteed. Students are strongly encouraged to submit a proposal in enough time to register for a different course if the proposal is not accepted. For complete instructions, see the SBS Independent/Directed Study Agreement and Proposal form available online.

- **ISOM-520 Information Systems Internship**

Prerequisites:

ISOM-210(formerly ISOM-310), 1 required ISOM major course, at least a 3.0 GPA, and Instructor Permission

Credits:

3.00

Description:

An internship may be used to satisfy the IS major practical experience requirement of a minimum of 150 hours of information systems/information technology experience. Most internships will exceed 150 hours and may be paid or unpaid. Prior approval of your position by the IS Practical Experience Coordinator is required. This is accomplished by completing the IS Practicum Approval Form with an internship description. The internship description includes the job description, the number of hours of work, the number of credits, grading criteria and any other requirements. Students should enroll in ISOM 520 prior to starting their internship. This is a graded course and cannot be used as a major elective. Students may decide to register for this free elective course as pass fail (see <http://www.suffolk.edu/business/departments/11704.php>). Prerequisites: Practical Experience Coordinator's Approval Required and Junior Standing, minimum ISOM GPA of 3.0, and minimum overall GPA of 2.5.

- **ISOM-560 Information Systems Practicum**

Prerequisites:

ISOM-210(formerly ISOM-310), 1 required ISOM major course, at least a 3.0 GPA, at least 54 credits, and Instructor Permission

Credits:

0.00

Description:

All Information Systems majors are required to complete 150 hours of information systems/information technology experience. The 150 hours of work experience may be obtained in one or more positions as an intern, part- or full-time employee or volunteer. Prior approval of your position by the IS Practical Experience Coordinator is required. This is accomplished by completing the IS Practicum Approval Form. Students should enroll in ISOM

560 no earlier than the semester when they expect to complete the 150 hours. Student should log their work tasks and accomplishments.

Prerequisites: Practical Experience Coordinator's Approval Required

Term:

Offered Both Fall and Spring

2015-2016 Archived Catalog Information

Electronic Commerce

- [Electronic Commerce Minor Requirements](#)
- [Undergraduate Courses](#)

Electronic Commerce Minor, 3 courses, 9 credits

The minor in Electronic Commerce is more focused than the general IS minor. Students may minor in both IS and Electronic Commerce, but three distinct courses are required for each minor. These three courses are beyond the completion of ISOM 210, Management Information Systems. One of the three minor courses must be ISOM 212, Web Design, or ISOM 331, Electronic Commerce.

Select one:

- ISOM-212 Web Design

Credits:

3.00

Description:

Introduces the concepts, vocabulary, and procedures associated with website and mobile application design. Includes modules on website evaluation, information architecture, customer and task analysis, usability testing, typography, color composition, screen layout, and navigation design, and digital content editing. Also covers important web design themes such as accessibility, globalization, personalization and trust. Students gain hands-on design experience using an assortment of readily available development tools such as Wix, Yapp, and Microsoft's Expression Web software.

Term:

Offered Fall Term

- **ISOM-331 Global Electronic Commerce**

Prerequisites:

ISOM-210(formerly ISOM-310)

Credits:

3.00

Description:

Examines the role of e-commerce and e-business in the global business environment. Considers user, technological, strategic, economic, social, and cultural factors in the development and deployment of effective websites and mobile applications. Students discuss readings and cases to examine current e-commerce situations, opportunities, and challenges. Students develop websites to simulate collaboration and competition among online businesses.

Term:

Offered Fall Term

Select two:

- **ISOM-212 Web Design**

Credits:

3.00

Description:

Introduces the concepts, vocabulary, and procedures associated with website and mobile application design. Includes modules on website evaluation, information architecture, customer and task analysis, usability testing, typography, color composition, screen layout, and navigation design, and digital content editing. Also covers important web design themes such as accessibility, globalization, personalization and trust. Students gain hands-on design experience using an assortment of readily available development tools such as Wix, Yapp, and Microsoft's Expression Web software.

Term:

Offered Fall Term

- **ISOM-215 Mobile App Development**

Credits:

3.00

Description:

Provides a comprehensive introduction to mobile app technology and design concepts. This is an introductory course and assumes no prior programming experience. Students learn how to design, build, and optimize cross-platform mobile app using HTML5 standards. Students will also learn how to convert HTML5 apps into native apps for various mobile platforms. Students use CSS3, JavaScript and several JavaScript frameworks and techniques such as jQuery, jQuery Mobile, and AJAX. In addition, students will use Web services, such as Google Maps, and Web Application Programming Interfaces (Web APIs) to integrate content into their apps.

Term:

Offered Fall Term

• ISOM-244 Web Application Development

Credits:

3.00

Description:

Equips students with the principles, methodology and skills required to define, develop and deploy a fully functional dynamic web application. Students learn to customize the content, appearance, and delivery of their website using industry-standard web development tools. Class discussion will focus on web development issues for organizations as well as the role played by development tools such as HTML5, CSS3, and PHP scripting. Each class will include hands-on lab work. A term project is used to wrap the course content together.

Term:

Offered Spring Term

• ISOM-331 Global Electronic Commerce

Prerequisites:

ISOM-210(formerly ISOM-310)

Credits:

3.00

Description:

Examines the role of e-commerce and e-business in the global business environment. Considers user, technological, strategic, economic, social, and cultural factors in the development and deployment of effective websites and mobile applications. Students discuss readings and cases to examine current e-commerce situations, opportunities, and challenges. Students develop websites to simulate collaboration and competition among online businesses.

Term:

Offered Fall Term

- **ADG-S219 Computer Applications in Design**

Credits:

3.00

Description:

In this course students will learn the major software applications used by graphic designers, such as Adobe Creative Suite: InDesign, Illustrator, and Photoshop. Through a series of problems, students will learn how and when to use specific software to produce their solutions and prepare portfolio-quality design.

Term:

Offered Fall Term

- **MKT-477 eMarketing**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

This course explores how we can use the principles of web marketing as effective marketing tools. The course will have the following learning components: lectures, guest lectures, web site analyses, and student project presentations.

Type:

Arts Admin Minor Elective

For more information, please contact Information Systems and Operations Management Department, ISOM@suffolk.edu or 617-573-8331.

2015-2016 Archived Catalog Information

Electronic Commerce

- [Electronic Commerce Minor Requirements](#)
- [Undergraduate Courses](#)
- CI-108 Designing the Next Best Thing

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Demystifies the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking.

Term:

Offered Both Fall and Spring

Type:

Creativity and Innovation

- **ISOM-120 Information Technology and Productivity**

Credits:

3.00

Description:

This course provides a comprehensive introduction to information technology and information systems concepts. Students learn the importance of modern information technologies in the workplace. The course covers technology resources of the digital age, such as computer software, hardware, communication, database and telecommunication systems. Students also learn to increase productivity through the integration and use of productivity software applications, such as spreadsheets, presentation software and databases. In addition, students learn the fundamental concepts of database design and relational database management systems (DBMS) such as Microsoft access.

Term:

Offered Both Fall and Spring

- **ISOM-H120 Honors Information Technology and Productivity**

Prerequisites:

Griffin Fellows Honors Students Only; GPA of 3.2

Credits:

3.00

Description:

OPEN TO GRIFFIN FELLOWS AND HONOR STUDENTS ONLY GPA of 3.2 or above required.

Term:

Offered Fall Term

Type:

Honors

- **ISOM-130 Data Science and Analytics**

Prerequisites:

ENT-101(formerly SBS-101)

Credits:

3.00

Description:

Provides students with a comprehensive introduction to the core concepts, applications and tools of data acquisition, preparation, querying, analytics, and data management. Students gain hands-on experience using real data to perform these functions. Topics include: data life cycle, big data, analytics, data collection, preparation, organization and storage, aggregation and summary, and presentation/visualization. Students use tools such as MS Excel, MS Access, SQL, and SAS Visual Analytics.

Term:

Offered Both Fall and Spring

• **ISOM-H130 Honors Data Science and Analytics**

Prerequisites:

ENT-101(formerly SBS-101) and at least 3.3 GPA

Credits:

3.00

Description:

Provides students with a comprehensive introduction to the core concepts, applications and tools of data acquisition, preparation, querying, analytics, and data management. Students gain hands-on experience using real data to perform these functions. Topics include: data life cycle, big data, analytics, data collection, preparation, organization and storage, aggregation and summary, and presentation/visualization. Students use tools such as MS Excel, MS Access, SQL, and SAS Visual Analytics.

Term:

Offered Both Fall and Spring

Type:

- **ISOM-201 Data and Decisions Analysis**

Prerequisites:

MATH-128 or higher and STATS-240 or STATS 250.

Credits:

3.00

Description:

Introduces fundamental quantitative methods of using data to make informed management decisions. Topics include: decision modeling, decision analysis, regression, forecasting, optimization, and simulation, as it applies to the study and analysis of business problems for decision support in finance, marketing, service, and manufacturing operations. Practical business cases and examples drawn from finance, marketing, operations management, and other management areas are used to provide students with a perspective on how management science is used in practice. Excel spreadsheets are used extensively to implement decision models.

Term:

Offered Both Fall and Spring

- **ISOM-H201 Honors Data & Decisions Analysis**

Prerequisites:

MATH-128 or higher and STATS-240 or STATS-250 and at least a 3.3 GPA

Credits:

3.00

Description:

Introduces fundamental quantitative methods of using data to make informed management decisions. Topics include: decision modeling, decision analysis, regression, forecasting, optimization, and simulation, as it applies to the study and analysis of business problems for decision support in finance, marketing, service, and manufacturing operations. Practical business cases and examples drawn from finance, marketing, operations

management, and other management areas are used to provide students with a perspective on how management science is used in practice. Excel spreadsheets are used extensively to implement decision models.

Term:

Offered Fall Term

Type:

Honors

- **ISOM-210 Management Information Systems**

Prerequisites:

WRI-101 and ENT-101 and at least 24 completed credits

Credits:

3.00

Description:

Examines the rise of information-enabled enterprises and the role of information technologies/information systems (IT/IS) and e-commerce as key enablers of businesses and social changes globally. Topics include: the effective application of IT/IS to support strategic planning, managerial control, operations and business process integration in the digital economy, IT/IS related issues of ethics, and piracy and security in the information society.

Term:

Offered Both Fall and Spring

- **ISOM-H210 Honors Management Info System**

Prerequisites:

WRI-101 or WRI-103 and ENT-101 and at least a 3.3 GPA

Credits:

3.00

Description:

Examines the rise of information-enabled enterprises and the role of information technologies/information systems (IT/IS) and e-commerce as key enablers of businesses and social changes globally. Topics include: the effective application of IT/IS to support strategic planning, managerial control, operations and business process integration in the digital economy, IT/IS related issues of ethics, and piracy and security in the information society.

Term:

Offered Fall Term

Type:

Honors

- **ISOM-212 Web Design**

Credits:

3.00

Description:

Introduces the concepts, vocabulary, and procedures associated with website and mobile application design. Includes modules on website evaluation, information architecture, customer and task analysis, usability testing, typography, color composition, screen layout, and navigation design, and digital content editing. Also covers important web design themes such as accessibility, globalization, personalization and trust. Students gain hands-on design experience using an assortment of readily available development tools such as Wix, Yapp, and Microsoft's Expression Web software.

Term:

Offered Fall Term

- **ISOM-215 Mobile App Development**

Credits:

3.00

Description:

Provides a comprehensive introduction to mobile app technology and design concepts. This is an introductory course and assumes no prior programming experience. Students learn how to design, build, and optimize cross-platform mobile app using HTML5 standards. Students will also

learn how to convert HTML5 apps into native apps for various mobile platforms. Students use CSS3, JavaScript and several JavaScript frameworks and techniques such as jQuery, jQuery Mobile, and AJAX. In addition, students will use Web services, such as Google Maps, and Web Application Programming Interfaces (Web APIs) to integrate content into their apps.

Term:

Offered Fall Term

- **ISOM-230 Big Data, Business Intelligence and Analytics**

Prerequisites:

STATS-240 or STATS-250 or Instructor Permission

Credits:

3.00

Description:

Provides an understanding of the business potential of big data; how to build and maintain data warehouses, and how to analyze and use this data as a source for business intelligence and competitive advantage. Students study data mining concepts and the use of analytics tools and methods for producing business knowledge. Topics include: extraction, transformation and loading; decision support systems; analytics , text, web and data mining models as well as data presentation/visualization including dashboards, cockpits and scorecards. Students build a data warehouse and practice the extraction and filtering process used to produce high quality data warehouses. Students will use tools such as MS Excel, MicroStrategy (Salesforce), SQL and SAP Business Warehouse.

Term:

Offered Both Fall and Spring

- **ISOM-231 Automatic for the People: Turn Data Into Insight/W R~python**

Prerequisites:

STATS-240 or STATS-250

Credits:

3.00

Description:

Introduces a detailed overview of statistical learning for data mining, inference, and prediction in order to tackle modern-day data analysis problems. This course is appropriate for students who wish to learn and apply statistical learning tools to analyze data and gain valuable hands-on experience with R. Statistical learning refers to a vast set of tools for modeling and understanding complex datasets. Exciting topics include: Regression, Logistic Regression, Linear Discriminant Analysis, Cross-Validation, Bootstrap, Linear/Non-Linear Model Selection and Regularization, Support Vector Methodology, and Unsupervised Learning via Principal Components Analysis and Clustering Methods. Students learn how to implement each of the statistical learning methods using the popular statistical software package R via hands-on lab sessions.

Term:

Offered Fall Term

• ISOM-244 Web Application Development

Credits:

3.00

Description:

Equips students with the principles, methodology and skills required to define, develop and deploy a fully functional dynamic web application. Students learn to customize the content, appearance, and delivery of their website using industry-standard web development tools. Class discussion will focus on web development issues for organizations as well as the role played by development tools such as HTML5, CSS3, and PHP scripting. Each class will include hands-on lab work. A term project is used to wrap the course content together.

Term:

Offered Spring Term

• ISOM-301 Business Analysis for Management

Prerequisites:

Take MGT-317 and junior status

Credits:

3.00

Description:

This course provides students with exposure to the business analysis models and techniques generally applicable to common business problems. Using the case study method, the course will emphasize analytical models including forecasting, optimization and simulation within the context of team-based work. Students will understand the process of Business Analysis (BA), the role of assumptions and elicitation, the critical value of hard analytical skills as the foundation of BA as well as the importance of interpretation, communication and implementation to the effective use of BA.

• ISOM-310 Management Information Systems

Prerequisites:

WRI 102 or SBS 220; and at least 45 completed credits

Credits:

3.00

Description:

This course examines the rise of information-enabled enterprises and the role of information technologies/information systems (IT/IS) and e-commerce as key enablers of businesses and social changes globally. The effective application of IT/IS to support strategic planning, managerial control, operations and business process integration in the digital economy is covered. The course also examines the IT/IS related issues of ethics, privacy, piracy and security in the information society.

Term:

Offered Both Fall and Spring

• ISOM-H310 Honors Management Info System

Prerequisites:

WRI 102; Junior standing; 3.3 GPA

Credits:

3.00

Description:

OPEN TO GRIFFIN FELLOWS AND HONOR STUDENTS ONLY GPA of 3.2 or above required.

Term:

Offered Fall Term

Type:

Honors

- **ISOM-313 Systems Analysis & Design**

Prerequisites:

ISOM-210(formerly ISOM-310)

Credits:

3.00

Description:

Covers the concepts, techniques and tools used in the analysis and design of business information systems. Topics include: the system development cycle, modeling, prototyping and project management. Additionally, the course focuses upon using Object Oriented analysis and design techniques including the UML. Emphasizes the analysis of business operations as well as the interaction between information systems professionals and end-users. A term project applying these concepts and techniques is required.

Term:

Offered Both Fall and Spring

- **ISOM-314 Object Oriented Programming**

Credits:

3.00

Description:

Develops problem solving and basic programming skills through a variety of business application assignments. Introduces fundamental control and data structures using the Java programming language. Students learn about the concepts of object-oriented / event-driven programming principles. The course builds skills in the areas of programming logic, Class and Object concepts, and system development. Testing and debugging techniques and the writing of well-structured code are emphasized.

Term:

Offered Both Fall and Spring

- **ISOM-315 Mobile App Development**

Credits:

3.00

Description:

This course provides a comprehensive introduction to mobile app technology and design concepts. Students learn how to design, build, and optimize cross-platform mobile app using HTML5 standards. Students use CSS3, JavaScript and several JavaScript frameworks and techniques such as jQuery, jQuery Mobile, and AJAX. In addition, students will use Web services, such as Google Maps, and Web Application Programming Interfaces (Web APIs) to integrate content into their apps. Students will learn how to convert HTML5 apps into native apps for various mobile platforms. This is an introductory course and assumes no prior programming experience.

Term:

Offered Spring Term

- **ISOM-319 Operations Management**

Prerequisites:

ENT-101(formerly SBS 101) and ISOM-201 and at least 54 credits

Credits:

3.00

Description:

Introduces concepts and tools for managing operations in service/ manufacturing organizations where inputs such as raw material, labor, or other resources into finished services and/or goods. Strategic and tactical issues of operations management (OM), including: operations strategy, product and process design, capacity planning, quality management, inventory management, queueing theory and work force management are addressed. Quantitative models, analytical tools and case studies are used to analyze operational problems that business managers face in both local and global settings.

Term:

Offered Both Fall and Spring

- **ISOM-H319 Honors Operations Management**

Prerequisites:

ENT-101(formerly SBS-101), ISOM-201, at least a 3.3 GPA, and at least 54 credits

Credits:

3.00

Description:

Introduces concepts and tools for managing operations in service/ manufacturing organizations where inputs such as raw material, labor, or other resources into finished services and/or goods. Strategic and tactical issues of operations management (OM), including: operations strategy, product and process design, capacity planning, quality management, inventory management, queueing theory and work force management are addressed. Quantitative models, analytical tools and case studies are used to analyze operational problems that business managers face in both local and global settings.

Term:

Offered Spring Term

Type:

Honors

- **ISOM-330 Applied Predictive Analytics**

Prerequisites:

ISOM-130, ISOM-230, and STATS-240 or STATS-250 or Instructor Permission

Credits:

3.00

Description:

When companies make decisions, they do so with the future in mind and essentially are predicting that their decisions will achieve desired results. Predictive analytics allow people to ask and answer questions that can predict demand and/or outcomes and obtain results that lead to reasoned action. This course develops students' capability in applying the core concepts and techniques of predictive analytics for opportunity identification and risk assessment within the context of organizational decision-making. Students will use data-driven approaches to develop predictive analytical models. Students will create and use data models and techniques, apply trendlines to fit models to data, perform what-if analysis, construct data tables, evaluate scenarios, apply forecasting techniques, simulation and risk analysis. Students will learn to use various presentation and visualization tools to communicate results. Topics include: predictive analytics life cycle, opportunity/issue identification, data preparation, modeling, analysis, forecasting, simulation, risk assessment, and operationalization of predictive analytics. Students will use tools such as MS Excel, SPSS and SAS Visual Analytics.

Term:

Offered Both Fall and Spring

- **ISOM-331 Global Electronic Commerce**

Prerequisites:

ISOM-210(formerly ISOM-310)

Credits:

3.00

Description:

Examines the role of e-commerce and e-business in the global business environment. Considers user, technological, strategic, economic, social, and cultural factors in the development and deployment of effective websites and mobile applications. Students discuss readings and cases to examine current e-commerce situations, opportunities, and challenges. Students develop websites to simulate collaboration and competition among online businesses.

Term:

Offered Fall Term

- **ISOM-340 Security & Privacy**

Prerequisites:

ISOM-210(formerly ISOM-310) and at least 54 credits

Credits:

3.00

Description:

Introduces the basics of information security & privacy including the legal and ethical issues. Common types of computer attacks and counter-attacks are addressed. Security technologies such as biometrics, firewalls, intrusion detection systems and cryptography systems will be analyzed and several lab exercises on the same are used to connect theory to practice. Best practices for planning and auditing security and privacy will also be covered.

Term:

Offered Fall Term

- **ISOM-341 Project Management**

Credits:

3.00

Description:

Provides a comprehensive introduction to project management. Projects provide businesses a time-delimited tool for improving, expanding, and innovating - the primary means for converting strategy into action. Project management success differentiates top performing firms. The course will focus on discussion and analysis of business situations that convey core project management skills. In particular, this course focuses on the challenge of managing projects in today's complex, high-pressure work environments. This course can be credited toward PMI Project Management Professional (PMP) certification.

Term:

Offered Spring Term

- **ISOM-414 Object-Oriented Programming Development with Java**

Prerequisites:

ISOM-314 and at least 54 credits or Instructor Permission

Credits:

3.00

Description:

This course introduces object-oriented programming (OOP) and development using the Java programming language. It covers the basics of OOP including class hierarchies, inheritance, objects, streams, constructors, and GUI components. The course also covers the design, development, and deployment of applets, web applications, and applications that are not deployed via the Internet. Several programming projects, which strengthen the understanding of object based and event driven programming, are required. By the end of the course, students will possess a strong working competency in object oriented programming using Java.

Term:

Offered Spring Term

- **ISOM-423 Database Management**

Prerequisites:

ISOM-210(formerly ISOM-310)

Credits:

3.00

Description:

Provides an understanding of the role of information and databases in information systems and their role as an organizational resource. Students learn to design databases using normalization and entity-relationship diagrams, develop data models and to build applications with database management systems such as MS Access and SQL. Techniques are examined and applied to realistic business problems through hands-on exercises and projects.

Term:

Offered Both Fall and Spring

- **ISOM-424 IS Strategy, Management and Acquisition**

Prerequisites:

ISOM-313, ISOM-314, and ISOM-423 and at least 84 credits

Credits:

3.00

Description:

Explores the issues and approaches in managing the information systems function in organizations and how the IS function integrates/supports/enables various types of organizational capabilities. It takes a management perspective in exploring the acquisition, development, and implementation of plans and policies to achieve efficient and effective information systems. The course addresses issues relating to defining the high level IS infrastructure and the systems that support the operational, administrative, and strategic needs of the organization. The remainder of the course is focused on developing an intellectual framework that will allow leaders of organizations to critically assess existing IS infrastructures and emerging technologies as well as how these enabling technologies might affect organizational strategy. The ideas developed and cultivated in this course are intended to provide an enduring perspective that can help leaders make sense of an increasingly globalized and technology intensive business environment.

Term:

Offered Both Fall and Spring

• ISOM-440 ERP System & Process Reengineering

Prerequisites:

ISOM-210(formerly ISOM-310) and at least 54 credits

Credits:

3.00

Description:

Provides a conceptual, as well as, a mechanical understanding of enterprise integration and enterprise software, business process reengineering and strategies for maximizing benefits from enterprise systems. Students learn to examine complex issues in organizational changes including implementation challenge; risks, costs, and benefits; learning and knowledge management. Hands-on lab projects on the ERP System (provided by SAP) are utilized to reinforce understanding of important enterprise systems and business process concepts. This course is part of the SAP Student Recognition Certificate Program.

Term:

Offered Spring Term

- **ISOM-445 Big Data and Analytics**

Prerequisites:

ISOM 201; ISOM 310; ISOM 423 is recommended; Junior standing

Credits:

3.00

Description:

This course provides an understanding of the business potential of big data and analytics, data warehousing, how to build and maintain data warehouses, and how to use data warehouses for business advantage and as a source for business intelligence. Business intelligence refers to the use of analytical software tools to analyze big data or complex information about an organization and its competitors for use in business planning and decision-making. In building data warehouses, students will learn the inter-relationships between operation, decision support systems, strategy and the extraction and filtering process used to produce a high quality data warehouse. Data mining concepts and the use of data mining tools and methods for decision-making and for producing business intelligence is presented. Additionally, the concept of building dashboards and other visualization techniques to present data will be covered.

Term:

Offered Fall Term

- **ISOM-510 Independent Study in IS & OM**

Prerequisites:

ISOM-210(formerly ISOM-310) or ISOM-201 and Instructor Permission

Credits:

1.00- 3.00

Description:

Independent study allows students to expand their classroom experience by completing research in an area of interest not already covered by Suffolk courses. The student designs a unique project and finds a full-time faculty member with expertise in that topic who agrees to sponsor it and provide feedback as the proposal is refined. A well designed and executed research project broadens and/or deepens learning in a major or minor area of study and may also enhance a student's marketability to potential future employers. Students cannot register for an Independent Study until a full proposal is approved by the faculty sponsor, department chair, and academic dean. Many Independent study proposals require revisions before

approval is granted; even with revisions independent study approval is NOT guaranteed. Students are strongly encouraged to submit a proposal in enough time to register for a different course if the proposal is not accepted. For complete instructions, see the SBS Independent/Directed Study Agreement and Proposal form available online.

- **ISOM-520 Information Systems Internship**

Prerequisites:

ISOM-210(formerly ISOM-310), 1 required ISOM major course, at least a 3.0 GPA, and Instructor Permission

Credits:

3.00

Description:

An internship may be used to satisfy the IS major practical experience requirement of a minimum of 150 hours of information systems/information technology experience. Most internships will exceed 150 hours and may be paid or unpaid. Prior approval of your position by the IS Practical Experience Coordinator is required. This is accomplished by completing the IS Practicum Approval Form with an internship description. The internship description includes the job description, the number of hours of work, the number of credits, grading criteria and any other requirements. Students should enroll in ISOM 520 prior to starting their internship. This is a graded course and cannot be used as a major elective. Students may decide to register for this free elective course as pass fail (see <http://www.suffolk.edu/business/departments/11704.php>). Prerequisites: Practical Experience Coordinator's Approval Required and Junior Standing, minimum ISOM GPA of 3.0, and minimum overall GPA of 2.5.

- **ISOM-560 Information Systems Practicum**

Prerequisites:

ISOM-210(formerly ISOM-310), 1 required ISOM major course, at least a 3.0 GPA, at least 54 credits, and Instructor Permission

Credits:

0.00

Description:

All Information Systems majors are required to complete 150 hours of information systems/information technology experience. The 150 hours of work experience may be obtained in one or more positions as an intern, part- or full-time employee or volunteer. Prior approval of your position by the IS Practical Experience Coordinator is required. This is accomplished by completing the IS Practicum Approval Form. Students should enroll in ISOM

560 no earlier than the semester when they expect to complete the 150 hours. Student should log their work tasks and accomplishments.

Prerequisites: Practical Experience Coordinator's Approval Required

Term:

Offered Both Fall and Spring

2015-2016 Archived Catalog Information

Entrepreneurship

Offered by the Management and Entrepreneurship department, the entrepreneurship major is for students who are highly motivated, innovative, and impactful in the global entrepreneurial community. Through our practical, coordinated, hands-on curriculum; entrepreneurship faculty; and the Center for Entrepreneurship, you will learn how to create, measure, protect and deliver value within existing organizations and new ventures.

Our core major courses and electives teach entrepreneurs to drive value creation through action, including experiential opportunities, local and global engagement.

The entrepreneurship major has five optional concentrations: Launching the New Venture, Corporate Entrepreneurship, Family Entrepreneurship, Design Entrepreneurship and Social Entrepreneurship.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Minor Requirements](#)
- [Concentrations](#)
- [Courses](#)

Entrepreneurship Major Requirements

The entrepreneurship major consists of a minimum of twenty-one (21) semester hours, which includes four (4) required courses, one (1) and two (2) elective courses taken at Suffolk University.

The core entrepreneurship courses occur in a four (4) semester sequence starting in your first semester of your junior year (you may begin in your second semester of your sophomore year, but no later than the second semester of your junior year).

Required Courses, 4 Courses, 12 Credits

- **ENT-309 Entrepreneurship I - Creating Value**

Prerequisites:

ENT-101

Credits:

3.00

Description:

How do you create value within a new venture or existing firm? Entrepreneurs will explore their innovative mindset, action orientation, and willingness to assume the responsibility necessary to bring new products, services and businesses to the market. Methods of detecting pain or gaps in the market place (idea generation), pursuing dreams, and utilizing design thinking, as well as business models around leveraging new opportunities will be explored. Students will gain the knowledge necessary for generating and vetting opportunities.

- **ENT-319 Measuring Value (Entrepreneurship II) And Family Business**

Prerequisites:

ENT-280 or ENT-309 and Junior Standing

Credits:

3.00

Description:

How do you measure the value-added by a new business opportunity? In this course, you will start developing a financial toolkit and skill set to assess the value of a new product, service, or business. Financial implications of different business models and characteristics of various industries will be discussed. Major topics covered will include 1) forecasting (generating pro-forma financial statements), 2) financial analysis (liquidity, profitability, break-even, and feasibility analyses), 3) sources of funding (bootstrapping, family & friends, crowdfunding, angel investors, venture capital funds, and loans) and 4) basics of valuation.

- **ENT-329 Protecting Value (Entrepreneurship III) Value**

Prerequisites:

ENT-280 or ENT-309 and Junior standing

Credits:

3.00

Description:

How does protection of intellectual property, and human, physical, and financial capital add value to the new or existing organization? Entrepreneurs will learn appropriate legal protections related to people and property associated with the firm. Major topics covered will include 1) legal protection (patents, copyrights, trademarks, service marks, trade secrets, business organizations, confidentiality and non-disclosure agreements, employment agreements, stock/ownership restrictions), 2) human resources (creating and managing teams, hiring, firing, organizational structure, employment/independent contractor issues, and compensation strategies), and 3) growing business value (merger, acquisition, and other expansion techniques).

• ENT-419 Entrepreneurship IV - Delivering Value (E-Clinic)

Prerequisites:

ENT-280 - OR - ENT-309, AND ENT-300 - OR - ENT-319, AND ENT-326 - OR - ENT-329 and Senior Standing

Credits:

3.00

Description:

Before you launch your venture, our capstone course gives you an opportunity to assess and consult with other startups through the eyes of their founders. This course is held in an experiential setting to help entrepreneurial majors develop and practice their business skills working with real startups and small business under pro bono consulting arrangements. This course is a transition from student to professional under the supervision of a faculty member who serves as a coach and advisor. Students will learn to interview client organizations, assess the current business, negotiate a statement of work, and develop a project management plan that leads to the consultant-client negotiated deliverable(s). Depending on the client organization, this course will most likely include visiting the client location.

Term:

Offered Both Fall and Spring

Theme Courses, 1 Course, 3 Credits (Choose 1)

• ENT-320 Growing and Managing the Firm

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

How do you manage the day-to-day challenges of starting a new venture or working on a small business? This course is designed around problem-solving techniques that help you research the facts of a given situation, identify the problem, develop alternative solutions and defending the best solution. This course utilizes case analysis, role-plays, simulations, and other experiential lessons to help provide you with the knowledge and skills necessary to build and lead a new or innovative organization.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

• ENT-324 Leading the Entrepreneurial Firm

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

Are you interested in leading, growing and troubleshooting the entrepreneurial small business? This course provides a detailed analysis of and hands-on experience with the competencies required to lead and grow startups and small businesses. Competencies include the utilization of teams, understanding of the team, organizational characteristics, and level of entrepreneurial thinking that will be accomplished through assessment and practical analysis. Students will complete the course with an understanding of 1) small business leadership skills, 2) team effectiveness skills, 3) decision-making in times of economic growth and stress.

Term:

Occasional

- **ENT-350 Social Entrepreneurship**

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

Social entrepreneurs are people who harness their energy, talent and commitment to make the world a more humane, safe and just place. This is accomplished by applying vision, passion, persistence and leadership to the creation of businesses that are focused on a mission of social responsibility. While the social mission is important, so is the fact that the business funding the mission must be sustainable via revenue generation, market need, and operational efficiency. Creating balance between business effectiveness and serving the needs of the community the business is dedicate to helping, provides a unique challenge to social entrepreneurship to stay entrepreneurial in terms of the business model, thus providing the necessary resources to the social mission.

Term:

Offered Fall Term

- **ENT-352 Green and Sustainable Business**

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

Over the past decade, the world of business and the environment has exploded. Beginning as an engineering-driven movement among a handful of companies during the 1980's, many firms have learned that improved environment performance can save money and create a competitive advantage. In this course, we will cover how businesses of all sizes are more attentive to environmental issues and the realization that a green business:

improves employee morale and health in the workplace, holds a marketing edge over the competition, strengthens the bottom line through operating efficiencies, is recognized as an environmental leader, can have a strong impact in the community and beyond, and can improve public relations.

Term:

Offered Spring Term

- **ENT-361 Sell It!**

Prerequisites:

ENT-101 and Junior standing

Credits:

3.00

Description:

How do you sell new products and services? Revenue is key to business survival, and this isn't by accident and a strong marketing strategy is not enough. Sales is a process, as well as an attitude. Strong organizations drive revenue through sound sales processes that are effectively designed, implemented, and scaled. In this course, you will learn how to sell new products and services through selling techniques, as well as create a value statement, identify a target market, create an effective approach, develop a sales activity and pipeline tracking system, design and effective sales management and coaching program.

Elective Courses*, 2 Courses, 6 Credits (Choose 2)

- **ENT-320 Growing and Managing the Firm**

Prerequisites:

Arts Admin Minor Elective

- **ENT-322 Entrepreneurship & the European Union**

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

95% of the world's consumers are outside of the United States, and yet, only one-quarter of small businesses are engaged in global commerce. Yet, small businesses represent more than 95% of all exporters from the U.S. Globalization is critical, but are there some regions in the world that are more attractive than others? The European Union (EU) has a population of more than 500 million people, yet, there is a lesser tolerance for risk, thus failure is viewed more negatively than the U.S. The United States takes greater risks, experiences a higher degree of failure, and yet, the number of new startups remain consistently around 600,000 every year for a country with a population of more than 300 million people. Is the EU a viable option for U.S. startup growth or opportunities? What are the issues of a union that consists of nearly 30 countries with economic constraints and political forces that appear more restrictive than the United States? How can United States startups leverage a stable economic structure in a region that is more than 7% and nearly twice the size of U.S. consumers? In this course, you will learn the opportunities and challenges between two economically strong regions of the world that encompasses nearly one billion potential consumers. Prerequisites: Junior Standing. This course counts as an ENT major elective.

- **ENT-324 Leading the Entrepreneurial Firm**

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

Students will complete the course with an understanding of 1) small business leadership skills, 2) team effectiveness skills, 3) decision-making in times of economic growth and stress.

Term:

Occasional

• ENT-337 Family Business II

Prerequisites:

ENT-101 and at least 54 credits

Credits:

3.00

Description:

The business of the family business is just as critical as the family dynamics. This course focuses on issues related to adapting corporate-type managerial skills to family-owned and operated enterprises that typically reject such practices. The goals of this course include the development of a working knowledge of managing the family business, reinterpretation of corporate management concepts for the family business, and personal reflection on the roles and conditions of operating a family business.

• ENT-350 Social Entrepreneurship

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

Term:

Offered Spring Term

- **ENT-353 Corporate Entrepreneurship**

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

Corporate entrepreneurship refers to alternative approaches that existing firms use to innovatively generate new products, new services, new businesses and new business models. This course emphasizes the cultivation of each student's ability to evaluate innovations and business models for development in a corporate setting. It emphasizes various kinds of internal corporate ventures and multiple external collaborative approaches that include corporate venture capital investments, licensing and different types of alliances and formal joint ventures. Special emphasis will be placed on skills needed to promote and manage corporate entrepreneurship. Students will also learn to identify the elements of an organization's culture, structure and reward and control systems that either inhibit or support the corporate entrepreneurship, and analyze how corporate entrepreneurial activities relate to a company's ability to drive innovation throughout the organization.

- **ENT-354 Global Entrepreneurship**

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

Do you want to know how to take advantage of our global economy? This course will leverage the knowledge acquired from other entrepreneurship and global courses coupled with an overview of the global economy every entrepreneur must compete in and how to transition your business models into real world opportunities. This course will discuss the entrepreneurial process from concept to product feasibility to venture launch answering the following question: How and when should an entrepreneur plan on competing in a global market?

Term:

Offered Both Fall and Spring

- **ENT-355 Design Thinking & Biomimicry**

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

Ever wonder what great breakthroughs are on the horizon to improve business thinking, processes, products, and services? If you have, this course is for you. We will learn about how businesses are using principles of design thinking and biomimicry to create entirely new ways of meeting the challenges of modern business: those are, needs to reduce costs, increase revenues, minimize waste & energy use, maximize novel approaches, & meet consumer and business needs. You may recognize the term design thinking if you are a follower of Apple, Inc. which has used this process in the development of all of their products and services over the past 15 years. Biomimicry principles are those that seek their inspiration from nature; after all, nature has been problem-solving for 3.8 billion years -- surely there is something to learn from this to be adapted to solving modern challenges. The course will be both conceptual and practical with various experiential learning opportunities.

- **ENT-356 Bootstrapping the Firm With Social Media**

Prerequisites:

ACCT 201 and Junior Standing.

Credits:

3.00

Description:

Did you ever wonder how you are going to start a business or run an existing small business without enough capital? This is a very common phenomenon where startups and small businesses are typically undercapitalized and need to maximize internally-generated cash flow to not only start of run the business, but to also grow. Centered around an experiential process, this course will identify how to internally generate cash flow with the realization that more than 90% of all ventures operate in a bootstrapping environment. This course will identify a strong understanding of cash inflows, outflows, and maximizing both components to generate additional capital necessary for the business's requirements.

Term:

Occasional

- **ENT-358 Designing New Products**

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

This course will focus on the steps that innovators/entrepreneurs need to follow that will take ideas and launch them into new products. This is accomplished by taking the concept directly to the prospective customers. This course will cover: creating specifications, product sell sheets, prototype development, drafting an executive summary, intellectual property protection, manufacturing and quality control considerations, identifying vendors, customers, and funding sources, and developing a marketing and sales plan for launching the product. During the semester, students will be required to interact with their potential customers, vendors and other key players for the launch.

Term:

Offered Both Fall and Spring

• ENT-360 Launching the E-Business

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

This experiential course is an entrepreneurial approach towards developing a real e-commerce business. Students will build off their marketing skills and entrepreneurial ambitions by a) advancing e-commerce ideas to opportunities, b) understanding the product, logistical, marketing, and managerial challenges associated with e-commerce startups, and c) developing financial models to predict and measure performance. This will be accomplished by students developing a launch plan for the opportunity, as well as executing portions of the launch plan.

Term:

Occasional

- **ENT-361 Sell It!**

Prerequisites:

ENT-101 and Junior standing

Credits:

3.00

Description:

How do you sell new products and services? Revenue is key to business survival, and this isn't by accident and a strong marketing strategy is not enough. Sales is a process, as well as an attitude. Strong organizations drive revenue through sound sales processes that are effectively designed, implemented, and scaled. In this course, you will learn how to sell new products and services through selling techniques, as well as create a value statement, identify a target market, create an effective approach, develop a sales activity and pipeline tracking system, design and effective sales management and coaching program.

- **ENT-366 Managing the Restaurant**

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

Do you want to start or manage a restaurant? The restaurant industry is highly competitive with high turnover. The challenges are tough enough when you understand the business, however, too many entrepreneurs who start or many restaurants lack the necessary experience. This course will help you understand the crucial elements of launching or managing a restaurant, including: business organization, funding, location, market analysis, lease v. buy, facility layout, professional resources, licensing, human resources, technology, purchasing, advertising, insurance, record-keeping, and expansion.

- **ENT-510 Entrepreneurship Independent Study**

Prerequisites:

Senior Standing

Credits:

3.00

Description:

Are you looking for an ENT major elective to help you continue with research associated with your opportunity of venture? This independent study is available to students who are looking to expand on their classroom experience by doing additional research related to their prospective opportunity or venture. Students must draft the statement of work related to the independent study, with a primary focus on solving a problem or problems through extensive research, as well as have an ENT faculty member supervise the student during the study. The statement of work must provide evidence sufficient to support the number of credits being requested. Once the statement of work is completed, the student must attach the statement of work to the Independent Study request form and obtain the required approvals before the course will be opened. Maximum of 3 credits allowed.

Term:

Occasional

- **ENT-521 Entrepreneurship Internship**

Prerequisites:

Junior standing and instructor approval

Credits:

3.00

Description:

This experiential class is recommended for students who plan to innovate in an existing firm or to join their family business. Recommended for first or second semester senior year.

- **SIB-550 Global Travel Seminar**

Credits:

3.00

Description:

An in-depth analysis of timely special issues in international business. Specific topics are announced when the course is scheduled.

Type:

Diverse Perspectives, Global Engagement Experience

*All ENT courses listed above require junior standing.

2015-2016 Archived Catalog Information

Entrepreneurship

Offered by the Management and Entrepreneurship department, the entrepreneurship major is for students who are highly motivated, innovative, and impactful in the global entrepreneurial community. Through our practical, coordinated, hands-on curriculum; entrepreneurship faculty; and the Center for Entrepreneurship, you will learn how to create, measure, protect and deliver value within existing organizations and new ventures.

Our core major courses and electives teach entrepreneurs to drive value creation through action, including experiential opportunities, local and global engagement.

The entrepreneurship major has five optional concentrations: Launching the New Venture, Corporate Entrepreneurship, Family Entrepreneurship, Design Entrepreneurship and Social Entrepreneurship.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Minor Requirements](#)
- [Concentrations](#)
- [Courses](#)

The Entrepreneurship minor consists of a minimum of nine (9) semester hours.

The required entrepreneurship courses occur in a three (3) semester sequence starting in your first or second semester of your junior year (but no later than the first semester of your senior year).

Entrepreneurship Minor

Required Courses

- ENT-309 Entrepreneurship I - Creating Value

Prerequisites:

ENT-101

Credits:

3.00

Description:

How do you create value within a new venture or existing firm? Entrepreneurs will explore their innovative mindset, action orientation, and willingness to assume the responsibility necessary to bring new products, services and businesses to the market. Methods of detecting pain or gaps in the market place (idea generation), pursuing dreams, and utilizing design thinking, as well as business models around leveraging new opportunities will be explored. Students will gain the knowledge necessary for generating and vetting opportunities.

- **ENT-319 Measuring Value (Entrepreneurship II) And Family Business**

Prerequisites:

ENT-280 or ENT-309 and Junior Standing

Credits:

3.00

Description:

How do you measure the value-added by a new business opportunity? In this course, you will start developing a financial toolkit and skill set to assess the value of a new product, service, or business. Financial implications of different business models and characteristics of various industries will be discussed. Major topics covered will include 1) forecasting (generating pro-forma financial statements), 2) financial analysis (liquidity, profitability, break-even, and feasibility analyses), 3) sources of funding (bootstrapping, family & friends, crowdfunding, angel investors, venture capital funds, and loans) and 4) basics of valuation.

- **ENT-329 Protecting Value (Entrepreneurship III) Value**

Prerequisites:

ENT-280 or ENT-309 and Junior standing

Credits:

3.00

Description:

How does protection of intellectual property, and human, physical, and financial capital add value to the new or existing organization? Entrepreneurs will learn appropriate legal protections related to people and property associated with the firm. Major topics covered will include 1)legal protection (patents, copyrights, trademarks, service marks, trade secrets, business organizations, confidentiality and non-disclosure agreements, employment agreements, stock/ownership restrictions), 2)human resources(creating and managing teams, hiring, firing, organizational structure, employment/independent contractor issues, and compensation strategies), and 3)growing business value(merger, acquisition, and other expansion techniques).

Note for College of Arts & Sciences Students

In addition to the above four (4) courses, students from the College of Arts & Sciences are required to take ENT 101 Business Foundations (formerly SBS 101) before starting the entrepreneurship minor.

Ever wonder what great breakthroughs are on the horizon to improve business thinking, processes, products, and services? If you have, this course is for you. We will learn about how businesses are using principles of design thinking and biomimicry to create entirely new ways of meeting the challenges of modern business: those are, needs to reduce costs, increase revenues, minimize waste & energy use, maximize novel approaches, & meet consumer and business needs. You may recognize the term design thinking if you are a follower of Apple, Inc. which has used this process in the development of all of their products and services over the past 15 years. Biomimicry principles are those that seek their inspiration from nature; after all, nature has been problem-solving for 3.8 billion years -- surely there is something to learn from this to be adapted to solving modern challenges. The course will be both conceptual and practical with various experiential learning opportunities.

- **ENT-358 Designing New Products**

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

This course will focus on the steps that innovators/entrepreneurs need to follow that will take ideas and launch them into new products. This is accomplished by taking the concept directly to the prospective customers. This course will cover: creating specifications, product sell sheets, prototype development, drafting an executive summary, intellectual property protection, manufacturing and quality control considerations, identifying vendors, customers, and funding sources, and developing a marketing and sales plan for launching the product. During the semester, students will be required to interact with their potential customers, vendors and other key players for the launch.

Term:

Offered Both Fall and Spring

- **ENT-361 Sell It!**

Prerequisites:

ENT-101 and Junior standing

Credits:

3.00

Description:

How do you sell new products and services? Revenue is key to business survival, and this isn't by accident and a strong marketing strategy is not enough. Sales is a process, as well as an attitude. Strong organizations drive revenue through sound sales processes that are effectively designed, implemented, and scaled. In this course, you will learn how to sell new products and services through selling techniques, as well as create a value statement, identify a target market, create an effective approach, develop a sales activity and pipeline tracking system, design and effective sales management and coaching program.

Social Entrepreneurship

- **ENT-350 Social Entrepreneurship**

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

Social entrepreneurs are people who harness their energy, talent and commitment to make the world a more humane, safe and just place. This is accomplished by applying vision, passion, persistence and leadership to the creation of businesses that are focused on a mission of social responsibility. While the social mission is important, so is the fact that the business funding the mission must be sustainable via revenue generation, market need, and operational efficiency. Creating balance between business effectiveness and serving the needs of the community the business is dedicate to helping, provides a unique challenge to social entrepreneurship to stay entrepreneurial in terms of the business model, thus providing the necessary resources to the social mission.

Term:

Offered Fall Term

- **ENT-352 Green and Sustainable Business**

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

Over the past decade, the world of business and the environment has exploded. Beginning as an engineering-driven movement among a handful of companies during the 1980's, many firms have learned that improved environment performance can save money and create a competitive advantage. In this course, we will cover how businesses of all sizes are more attentive to environmental issues and the realization that a green business: improves employee morale and health in the workplace, holds a marketing edge over the competition, strengthens the bottom line through operating efficiencies, is recognized as an environmental leader, can have a strong impact in the community and beyond, and can improve public relations.

Term:

Offered Spring Term

- **ENT-521 Entrepreneurship Internship**

Prerequisites:

Junior standing and instructor approval

Credits:

3.00

Description:

This experiential class is recommended for students who plan to innovate in an existing firm or to join their family business. Recommended for first or second semester senior year.

2015-2016 Archived Catalog Information

Entrepreneurship

Offered by the Management and Entrepreneurship department, the entrepreneurship major is for students who are highly motivated, innovative, and impactful in the global entrepreneurial community. Through our practical, coordinated, hands-on curriculum; entrepreneurship faculty; and the Center for Entrepreneurship, you will learn how to create, measure, protect and deliver value within existing organizations and new ventures.

Our core major courses and electives teach entrepreneurs to drive value creation through action, including experiential opportunities, local and global engagement.

The entrepreneurship major has five optional concentrations: Launching the New Venture, Corporate Entrepreneurship, Family Entrepreneurship, Design Entrepreneurship and Social Entrepreneurship.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- ENT-101 Business Foundations

Credits:

3.00

Description:

This course introduces students to foundational concepts in business, including functional areas, the life cycle, competition, stakeholders and ethical considerations. Students develop critical thinking by learning and using a problem solving process through a business situation analysis model to

analyze various situations that confront managers and founders of small, medium, and large organizations. Students will also develop tools for analysis, allowing them to critically view business in a new and thoughtful way. The class culminates with student- teams presenting a detailed analysis and recommendations to a panel of executives and persuading them that the recommended strategy is not only feasible, but also practical for the stakeholders involved.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

• ENT-H101 Business Foundations

Prerequisites:

GPA of 3.3 or above required.

• ENT-110 Do You Want to Start a Business?

Credits:

3.00

Description:

Courses in the 550s are new offerings in Entrepreneurship. Special topics are announced when the courses are scheduled. Prerequisites vary from course to course. Do You Want to Start a Business? This introductory survey course is designed to help students learn about starting a business and assess their personal interest in pursuing such activity. Topics cover the range of business start-up activities from personal assessment to opportunity recognition, market assessment, feasibility determination, financial planning, legal, human resources, and business planning.

Term:

Offered Both Fall and Spring

- **ENT-210 Do You Want to Start a Business?**

Prerequisites:

Must have completed at least 15 credits

Credits:

3.00

Description:

Do you want to start a business? This survey course is designed to help students learn about starting a business and assess their personal interest in pursuing such activity. Topics cover the range of business start-up activities from personal evaluation to opportunity recognition, market assessment, feasibility determination, financial planning, legal, human resources, and business planning.

- **ENT-280 Opportunity Recognition and Discovery**

Prerequisites:

MGT 101 and Sophomore Standing. For sections designated for ENT majors and minors only, only ENT majors and minors may enroll in those sections. For sections designated for Non-ENT majors and minors, ENT majors and minors are not allowed.

Credits:

3.00

Description:

Ever wonder how entrepreneurs get their ideas? In this course, you will learn a deliberate process of opportunity recognition and discovery. You will learn how to generate ideas taking into consideration rarity, value, and your entrepreneurial fit. Through this process, you will gain an understanding of your knowledge, skills and abilities intended to improve the likelihood of success. Once your opportunity is identified, you will determine the feasibility of its feasibility from concept to an industry and competitive analysis.

Term:

Offered Both Fall and Spring

• ENT-300 Legal and Financial Risk With Startups

Prerequisites:

ACCT 201 AND ENT 280.

Credits:

3.00

Description:

Expand upon your feasibility plan from ENT 280, or identify a new opportunity, and learn about the financial and legal considerations that need to be addressed to determine whether or not your opportunity is a go or no go with respect to moving your opportunity forward towards business plan development. Legal topics include: business organization, employment practices, taxation and independent contractors, intellectual property, contracts and governance. Financial topics include: verifying the business model and related cost structure, making credible assumptions, preparing forecast financial statements, all leading to a final presentation pitching the feasibility of your opportunity.

Term:

Offered Both Fall and Spring

• ENT-309 Entrepreneurship I - Creating Value

Prerequisites:

ENT-101

Credits:

3.00

Description:

How do you create value within a new venture or existing firm? Entrepreneurs will explore their innovative mindset, action orientation, and willingness to assume the responsibility necessary to bring new products, services and businesses to the market. Methods of detecting pain or gaps in the market place (idea generation), pursuing dreams, and utilizing design thinking, as well as business models around leveraging new opportunities will be explored. Students will gain the knowledge necessary for generating and vetting opportunities.

• ENT-315 Entrepreneurial Skills

Prerequisites:

ENT 280 and Junior standing

Credits:

3.00

Description:

Knowledge of business alone, or having an idea, is not sufficient for the entrepreneur. You must also learn how to manage yourself and others as you prepare for your first day of business. This course is designed to provide you with the knowledge and skills to build and lead a startup or growing organization through lessons and experiential team projects. Skills covered in this course include: self management, negotiations, networking, sales, conflict/collaboration, and teams.

Term:

Offered Both Fall and Spring

• ENT-H315 Honors Entrepreneurial Skills

Prerequisites:

Take ENT-280 or ENT-H280; GPA of 3.3 or higher

Credits:

3.00

Description:

Type:

Honors

- **ENT-319 Measuring Value (Entrepreneurship II) And Family Business**

Prerequisites:

ENT-280 or ENT-309 and Junior Standing

Credits:

3.00

Description:

How do you measure the value-added by a new business opportunity? In this course, you will start developing a financial toolkit and skill set to assess the value of a new product, service, or business. Financial implications of different business models and characteristics of various industries will be discussed. Major topics covered will include 1) forecasting (generating pro-forma financial statements), 2) financial analysis (liquidity, profitability, break-even, and feasibility analyses), 3) sources of funding (bootstrapping, family & friends, crowdfunding, angel investors, venture capital funds, and loans) and 4) basics of valuation.

- **ENT-320 Growing and Managing the Firm**

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

How do you manage the day-to-day challenges of starting a new venture or working on a small business? This course is designed around problem-solving techniques that help you research the facts of a given situation, identify the problem, develop alternative solutions and defending the best solution. This course utilizes case analysis, role-plays, simulations, and other experiential lessons to help provide you with the knowledge and skills necessary to build and lead a new or innovative organization.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **ENT-H320 Honors- Small Business Management**

Prerequisites:

Junior Standing; 3.3 GPA

Credits:

3.00

Description:

How do you manage the day-to-day challenges of working in a small business or starting a new venture? This case-driven course covers the role and importance of small business in the U.S. economy, including the application of all management functions to the operation of a small business; human resources, operations, financial, risk and growth. This course is designed around problem-solving techniques that help you research the facts of a given situation, identify the problem, develop alternative solutions and defending the best solution.

Term:

Offered Both Fall and Spring

Type:

Honors

- **ENT-322 Entrepreneurship & the European Union**

Prerequisites:

Credits:

3.00

Description:

95% of the world's consumers are outside of the United States, and yet, only one-quarter of small businesses are engaged in global commerce. Yet, small businesses represent more than 95% of all exporters from the U.S. Globalization is critical, but are there some regions in the world that are more attractive than others? The European Union (EU) has a population of more than 500 million people, yet, there is a lesser tolerance for risk, thus failure is viewed more negatively than the U.S. The United States takes greater risks, experiences a higher degree of failure, and yet, the number of new startups remain consistently around 600,000 every year for a country with a population of more than 300 million people. Is the EU a viable option for U.S. startup growth or opportunities? What are the issues of a union that consists of nearly 30 countries with economic constraints and political forces that appear more restrictive than the United States? How can United States startups leverage a stable economic structure in a region that is more than 7% and nearly twice the size of U.S. consumers? In this course, you will learn the opportunities and challenges between two economically strong regions of the world that encompasses nearly one billion potential consumers. Prerequisites: Junior Standing. This course counts as an ENT major elective.

- **ENT-H322 Entrepreneurship & the European Union**

Prerequisites:

Over 54 credits earned.

Credits:

3.00

Type:

Global Engagement Experience, Honors

- **ENT-324 Leading the Entrepreneurial Firm**

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

Are you interested in leading, growing and troubleshooting the entrepreneurial small business? This course provides a detailed analysis of and hands-on experience with the competencies required to lead and grow startups and small businesses. Competencies include the utilization of teams, understanding of the team, organizational characteristics, and level of entrepreneurial thinking that will be accomplished through assessment and practical analysis. Students will complete the course with an understanding of 1) small business leadership skills, 2) team effectiveness skills, 3) decision-making in times of economic growth and stress.

Term:

Occasional

- **ENT-326 Writing the Business Plan**

Prerequisites:

ENT 300, ACCT 201, ACCT 202 and Junior Standing.

Credits:

3.00

Description:

Use your knowledge from your entrepreneurship courses and experience up to this point to create a viable business plan that will lend credibility to the viability of your potential audience, which may include investors, financial institutions, suppliers, family or friends. In this course, you will write a business plan that shapes your opportunity into a model that resembles a venture. You will then defend the plan addressing the venture's business

model, management team, organization, customers, markets, competitors, operations and risk, all leading to financials that will determine the amount of capital you will need, as well as financing alternatives.

Term:

Offered Both Fall and Spring

- **ENT-329 Protecting Value (Entrepreneurship III) Value**

Prerequisites:

ENT-280 or ENT-309 and Junior standing

Credits:

3.00

Description:

How does protection of intellectual property, and human, physical, and financial capital add value to the new or existing organization? Entrepreneurs will learn appropriate legal protections related to people and property associated with the firm. Major topics covered will include 1)legal protection (patents, copyrights, trademarks, service marks, trade secrets, business organizations, confidentiality and non-disclosure agreements, employment agreements, stock/ownership restrictions), 2)human resources(creating and managing teams, hiring, firing, organizational structure, employment/independent contractor issues, and compensation strategies), and 3)growing business value(merger, acquisition, and other expansion techniques).

- **ENT-337 Family Business II**

Prerequisites:

ENT-101 and at least 54 credits

Credits:

3.00

Description:

The business of the family business is just as critical as the family dynamics. This course focuses on issues related to adapting corporate-type managerial skills to family-owned and operated enterprises that typically reject such practices. The goals of this course include the development of a

working knowledge of managing the family business, reinterpretation of corporate management concepts for the family business, and personal reflection on the roles and conditions of operating a family business.

- **ENT-340 Crowdfunding the Venture**

Prerequisites:

ENT-101 and Instructor Approval

Credits:

3.00

Description:

As nascent entrepreneurs how can you start or grow your business when you are undercapitalized while at the same time building brand awareness? One potential source of capital that allows for additional value creation (i.e., building a customer base and brand ambassadors) is crowdfunding. This course will examine, factors that lead to crowdfunding success during the creation (e.g., the idea, the pitch, the prototype, etc.) and maintenance (e.g., social presence) of a crowdfunding campaign as well as the execution of any promised deliverable. Focusing on an experiential process this course will guide student teams through the creation and execution of their own live crowdfunding campaign.

- **ENT-350 Social Entrepreneurship**

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

Social entrepreneurs are people who harness their energy, talent and commitment to make the world a more humane, safe and just place. This is accomplished by applying vision, passion, persistence and leadership to the creation of businesses that are focused on a mission of social responsibility. While the social mission is important, so is the fact that the business funding the mission must be sustainable via revenue generation, market need, and operational efficiency. Creating balance between business effectiveness and serving the needs of the community the business is dedicate to helping, provides a unique challenge to social entrepreneurship to stay entrepreneurial in terms of the business model, thus providing the necessary resources to the social mission.

- **ENT-352 Green and Sustainable Business**

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

Over the past decade, the world of business and the environment has exploded. Beginning as an engineering-driven movement among a handful of companies during the 1980's, many firms have learned that improved environment performance can save money and create a competitive advantage. In this course, we will cover how businesses of all sizes are more attentive to environmental issues and the realization that a green business: improves employee morale and health in the workplace, holds a marketing edge over the competition, strengthens the bottom line through operating efficiencies, is recognized as an environmental leader, can have a strong impact in the community and beyond, and can improve public relations.

Term:

Offered Spring Term

- **ENT-353 Corporate Entrepreneurship**

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

Corporate entrepreneurship refers to alternative approaches that existing firms use to innovatively generate new products, new services, new businesses and new business models. This course emphasizes the cultivation of each student's ability to evaluate innovations and business models for development in a corporate setting. It emphasizes various kinds of internal corporate ventures and multiple external collaborative approaches that

include corporate venture capital investments, licensing and different types of alliances and formal joint ventures. Special emphasis will be placed on skills needed to promote and manage corporate entrepreneurship. Students will also learn to identify the elements of an organization's culture, structure and reward and control systems that either inhibit or support the corporate entrepreneurship, and analyze how corporate entrepreneurial activities relate to a company's ability to drive innovation throughout the organization.

- **ENT-354 Global Entrepreneurship**

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

Do you want to know how to take advantage of our global economy? This course will leverage the knowledge acquired from other entrepreneurship and global courses coupled with an overview of the global economy every entrepreneur must compete in and how to transition your business models into real world opportunities. This course will discuss the entrepreneurial process from concept to product feasibility to venture launch answering the following question: How and when should an entrepreneur plan on competing in a global market?

Term:

Offered Both Fall and Spring

- **ENT-355 Design Thinking & Biomimicry**

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

Ever wonder what great breakthroughs are on the horizon to improve business thinking, processes, products, and services? If you have, this course is for you. We will learn about how businesses are using principles of design thinking and biomimicry to create entirely new ways of meeting the

challenges of modern business: those are, needs to reduce costs, increase revenues, minimize waste & energy use, maximize novel approaches, & meet consumer and business needs. The course will be both conceptual and practical with various experiential learning opportunities.

- **ENT-356 Bootstrapping the Firm With Social Media**

Prerequisites:

ACCT 201 and Junior Standing.

Credits:

3.00

Description:

Did you ever wonder how you are going to start a business or run an existing small business without enough capital? This is a very common phenomenon where startups and small businesses are typically undercapitalized and need to maximize internally-generated cash flow to not only start of run the business, but to also grow. Centered around an experiential process, this course will identify how to internally generate cash flow with the realization that more than 90% of all ventures operate in a bootstrapping environment. This course will identify a strong understanding of cash inflows, outflows, and maximizing both components to generate additional capital necessary for the business's requirements.

Term:

Occasional

- **ENT-358 Designing New Products**

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

This course will focus on the steps that innovators/entrepreneurs need to follow that will take ideas and launch them into new products. This is accomplished by taking the concept directly to the prospective customers. This course will cover: creating specifications, product sell sheets, prototype development, drafting an executive summary, intellectual property protection, manufacturing and quality control considerations, identifying vendors, customers, and funding sources, and developing a marketing and sales plan for launching the product. During the semester, students will be required to interact with their potential customers, vendors and other key players for the launch.

Term:

Offered Both Fall and Spring

- **ENT-360 Launching the E-Business**

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

This experiential course is an entrepreneurial approach towards developing a real e-commerce business. Students will build off their marketing skills and entrepreneurial ambitions by a) advancing e-commerce ideas to opportunities, b) understanding the product, logistical, marketing, and managerial challenges associated with e-commerce startups, and c) developing financial models to predict and measure performance. This will be accomplished by students developing a launch plan for the opportunity, as well as executing portions of the launch plan.

Term:

Occasional

- **ENT-361 Sell It!**

Prerequisites:

ENT-101 and Junior standing

Credits:

3.00

Description:

How do you sell new products and services? Revenue is key to business survival, and this isn't by accident and a strong marketing strategy is not enough. Sales is a process, as well as an attitude. Strong organizations drive revenue through sound sales processes that are effectively designed, implemented, and scaled. In this course, you will learn how to sell new products and services through selling techniques, as well as create a value statement, identify a target market, create an effective approach, develop a sales activity and pipeline tracking system, design and effective sales management and coaching program.

- **ENT-363 New Product Manufacturing**

Prerequisites:

ENT-101 and at least 54 credits

Credits:

3.00

Description:

This course will show how to convert your new product idea into a real physical product and the manufacturing steps it takes to get there. It will take you through product design drawings, making 3D prototypes models, feasibility of manufacturing, creating a bill of materials, identifying raw materials and their suppliers, importance of incoming raw material and finished product quality tests, inventory control (inventory on the shelf is actually your cash on the shelf), identification of appropriate equipment, product specifications and packaging and making the product at the least cost while meeting product performance criteria. This helps getting the product in the hands of the customers at the most economical price while making good margins for the business. Understanding of these steps is essential for a business whether the manufacturing is done in-house or is outsourced (domestically/offshore).

- **ENT-366 Managing the Restaurant**

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

Do you want to start or manage a restaurant? The restaurant industry is highly competitive with high turnover. The challenges are tough enough when you understand the business, however, too many entrepreneurs who start or many restaurants lack the necessary experience. This course will help you understand the crucial elements of launching or managing a restaurant, including: business organization, funding, location, market analysis, lease v. buy, facility layout, professional resources, licensing, human resources, technology, purchasing, advertising, insurance, record-keeping, and expansion.

- **ENT-419 Entrepreneurship IV - Delivering Value (E-Clinic)**

Prerequisites:

ENT-280 - OR - ENT-309, AND ENT-300 - OR - ENT-319, AND ENT-326 - OR - ENT-329 and Senior Standing

Credits:

3.00

Description:

Before you launch your venture, our capstone course gives you an opportunity to assess and consult with other startups through the eyes of their founders. This course is held in an experiential setting to help entrepreneurial majors develop and practice their business skills working with real startups and small business under pro bono consulting arrangements. This course is a transition from student to professional under the supervision of a faculty member who serves as a coach and advisor. Students will learn to interview client organizations, assess the current business, negotiate a statement of work, and develop a project management plan that leads to the consultant-client negotiated deliverable(s). Depending on the client organization, this course will most likely include visiting the client location.

Term:

Offered Both Fall and Spring

- **ENT-H419 Delivering Value (Entrepreneurship V)**

Prerequisites:

ENT-309, ENT-319, ENT-326, ENT-329 and Senior Standing, and at least a 3.3 GPA

Credits:

3.00

Description:

This capstone course is held in an experiential setting to help entrepreneurial majors develop and practice their business skills working with real startups or small business under pro bono consulting arrangements. This course is a transition from student to professional under the supervision of a faculty member, coach and advisor. Students will learn to assess client situations, develop alternatives and identify and defend solutions, at times within the client organization. Prerequisites: SOM 101 or MGT 101, MKT 210 or MKT 310, FIN 310, MGT 317, ISOM 319, ENT 315, ENT 326 and Senior standing. 1 term - 3 credits.

Type:

Honors

- **ENT-420 Launching a New Venture**

Prerequisites:

ENT-309, ENT-319, ENT-326, and ENT-329, and Senior standing

Credits:

3.00

Description:

Are you looking for the nuts and bolts of launching a new venture? If so, this course will allow you to earn credits working with our Center for Entrepreneurship. Students will draft a launch plan, with specific executables, necessary to launch a new venture. Students will use knowledge from major core courses to determine business organization, capitalization, hiring employees, building the team, establishing benefits, selecting facilities, etc.

- **ENT-436 Managing the Family Business**

Prerequisites:

MGT-217(MGT 317), Junior standing,

Credits:

3.00

Description:

Are you interested in managing the family business and the challenges of succession between generations? If so, this course focuses on the challenges of adapting corporate-type managerial skills to family-owned and operated enterprises that typically reject such practices. The goals of this course include development of a working knowledge of managing the family business, reinterpretation of corporate management concepts for the family business, and personal reflection on the roles and conditions of operating a family business.

Term:

Offered Spring Term

- **ENT-510 Entrepreneurship Independent Study**

Prerequisites:

Senior Standing

Credits:

3.00

Description:

Are you looking for an ENT major elective to help you continue with research associated with your opportunity of venture? This independent study is available to students who are looking to expand on their classroom experience by doing additional research related to their prospective opportunity or venture. Students must draft the statement of work related to the independent study, with a primary focus on solving a problem or problems through extensive research, as well as have an ENT faculty member supervise the student during the study. The statement of work must provide evidence sufficient to support the number of credits being requested. Once the statement of work is completed, the student must attach the statement of work to the Independent Study request form and obtain the required approvals before the course will be opened. Maximum of 3 credits allowed.

Term:

Occasional

- **ENT-520 Launching the New Venture**

Prerequisites:

ENT 326 and Senior Standing This course may be used as an ENT major elective or taken instead of ENT 419.

Credits:

3.00

Description:

Are you looking for guidance to launch your venture? If so, this course will allow you to earn credits through an independent study working with faculty and alumni through our Center for Entrepreneurial Studies. Students must draft a launch plan based on their business plan prepared in ENT 326, modified based on feedback received from faculty and judges during the ENT 326 presentations. Students must demonstrate enough evidence to support that the venture will be launched, as well as completing all tasks identified in the launch plan by the end of the semester to receive credit for the course. An ENT faculty member must supervise the student during the launch. The launch plan must provide evidence sufficient to support the number of credits being requested. Once the launch plan is completed, the student must attach the plan to the Independent Study request form and obtain the required approvals before the course will be opened. Maximum of 3 credits allowed.

Term:

Occasional

- **ENT-521 Entrepreneurship Internship**

Prerequisites:

Junior standing and instructor approval

Credits:

3.00

Description:

This experiential class is recommended for students who plan to innovate in an existing firm or to join their family business. Recommended for first or second semester senior year.

- **CI-102 The End of Global Poverty**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course is designed to demystify the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking. More than one-third of our global population lives in poverty, earning less than two dollars a day. Governments, businesses, social enterprises, and charitable organizations have tried to solve the global poverty issue with mixed results. What is the solution? Is entrepreneurship the solution, part of the solution, or has no impact whatsoever? In this course, you will gain an understanding of the power of entrepreneurship (in the context of creativity and innovation), the definition and depth of global poverty (in the context of constraints, such as human, financial and physical resources embedded in local, regional, national and global cultures), and successes and failures of past initiatives to reduce poverty. This is not a course about politics or business, but rather finding a solution to a problem that has eluded mankind since the beginning of time.

Type:

Creativity and Innovation

• CI-106 Failing Successfully

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course is designed to demystify the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking. Did you know Netscape was the internet browser? What about MySpace, arguably the Facebook of the last decade? What led Apple from being innovative pioneers of the 70's to the verge of extinction in the 80's to the technological giant they are today? Technologies come and go, but what leads to organizations lasting more than 100 years such as IBM, General Electric, etc.? What role does failure play in successful innovation, decision-making, and business viability? In this course, you will learn about innovation that may have been successful and well-executed. You will also learn about innovation that was a viable business opportunity, but poorly executed: one phase of failure. In addition, you will learn about innovation that had no real market viability, but was launched anyway: another phase of failure. Can failure lead to success? If so, how?

Type:

Creativity and Innovation

- **SBS-HC225 Nuts and Bolts of Starting a Business**

Credits:

1.00

Description:

What are the steps necessary for starting a new business? What happens after you have an idea that you think solves a problem in the marketplace? Is starting a new business easy, difficult, or both? In this course, you will learn the step-by-step process of starting a new business ranging from ownership, business organization choices and process, filing for a tax identification number, setting up payroll and withholding, unemployment, and other related taxes, understanding tax filing requirements and collection of sales taxes, choosing an accounting system and setting up a chart of accounts, researching a bank and keeping track of business transactions, integrating automated best practices such as linking bank accounts and credit/debit card accounts to your accounting system, selecting customer resource management and sales systems, and more.

2015-2016 Archived Catalog Information

Finance

The finance department prepares students for professional careers in global financial services industries. Teaching is oriented towards both theoretical concepts and practical knowledge.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Minor Requirements](#)
- [Concentrations](#)
- [4+1 Programs](#)
- [Certificate Program in Financial Planning](#)
- [Gainful Employment Disclosure](#)
- [Courses](#)

Finance majors study financial management and emerging trends in the finance field. Students are exposed to the theory and practice in corporate finance, financial institutions, investments, international finance, speculative markets, insurance, real estate and other related areas. The finance major introduces students to the important concepts necessary to gain the managerial skills and analytical tools necessary for managing portfolios, analyzing security investments, providing funds for a business, and controlling and planning the flow of funds within an enterprise.

The BSBA in Finance requires completion of a minimum of 21 credit hours in finance. A cumulative grade point average of at least 2.0 in the finance major and a cumulative grade point average of 2.0 overall must be maintained to graduate. Students may choose to specialize in one of four concentration areas; Investments, Corporate Finance, Financial Institutions, or Financial Planning.

Choosing a concentration is optional.

Finance Major Required Courses, 4 Courses, 12 Credits

- **FIN-311 Intermediate Finance**

Prerequisites:

FIN 200 (formerly FIN 310)

Credits:

3.00

Credits:

3.00

Description:

This course focuses primarily on real estate investment and many different approaches are discussed. The course examines related areas of law, finance, insurance, taxation, appraisal and brokerage.

Term:

Offered Both Fall and Spring

- **FIN-319 Money and Capital Markets**

Prerequisites:

EC 101; EC 102; Junior standing

Credits:

3.00

Description:

This course covers characteristics, structure and function of money and capital markets with a focus on the recent events relating to financial markets and their impact on the corporate financing behavior and the interrelationship among the various financial markets. Also, each type of financial institution and its internationalization are discussed.

Term:

Offered Both Fall and Spring

- **FIN-401 Practical Financial Planning**

Prerequisites:

FIN 200 (formerly FIN 310), Junior standing

Credits:

3.00

Description:

This course is designed to expose the student to the wide range of financial planning tools and techniques available today to the professional financial planner as well as to the individual. By the end of the course the student should be able to construct a sensible and workable financial plan for a client.

Term:

Offered Spring Term

- **FIN-409 Securities Analysis**

Prerequisites:

FIN 315

Credits:

3.00

Description:

This course is focused on the security analysis of stocks with the goal of managing the Suffolk University student-run portfolio. The material is pertinent to the security analyst - particularly the equity analyst who must issue a buy, hold or sell recommendations on stocks. By the end of the course, the student should feel competent in writing a thorough, credible equity research report or investment analysis that meets the highest standards of professionalism.

- **FIN-410 Analysis of Financial Statements**

Prerequisites:

FIN 200 (formerly FIN 310), Junior standing

Credits:

3.00

Description:

This course covers the analysis and interpretation of financial statements. It is designed to help investors and managers in their assessment of a business entity. It also covers comparative financial statements and trend and ratio analysis.

Term:

Offered Fall Term

- **FIN-411 Futures and Options**

Prerequisites:

FIN 315; Junior standing;

Credits:

3.00

Description:

This course is an in-depth analysis of derivatives: futures, options, and swaps. The course explains why these securities exist, where and how they are traded, how to employ them in managing risk, and how to accurately price them. It also covers the use of these derivatives in the context hedging or speculation.

Term:

Offered Spring Term

- **FIN-413 Investment Analysis and Portfolio Management**

Prerequisites:

FIN 315, Junior standing

Credits:

3.00

Description:

This course is an advanced course in investment analysis stressing efficient frontier and diversification. Also studies portfolio construction and management, and the tradeoff of risk versus return.

Term:

Offered Fall Term

- **FIN-415 Capital Budgeting**

Prerequisites:

FIN 311 or permission of instructor, Junior standing

Credits:

3.00

Description:

This course develops the practical techniques and decision rules in the evaluation and selection of long-term investment projects. Teaching is oriented towards discussion of readings and case studies. Readings should provide students with understanding of capital budgeting techniques, and case

studies should allow them to apply the techniques to real-world problems with the help of the computer.

Term:

Offered Fall Term

- **FIN-422 Estate Planning**

Credits:

3.00

Description:

This course provides an introduction to estate planning, including a discussion of wills, intestacy, and tax consequences of estate planning techniques. The course will prepare students to discuss the necessity, objectives and techniques of estate planning with clients. It will introduce students to the consequences of intestacy and the uses of wills. Additionally, students will learn the basic concepts of the federal estate, gift and income tax rules that apply to certain estate plans and how to use them for the benefit of clients.

Term:

Offered Fall Term

- **FIN-423 Retirement Planning**

Prerequisites:

FIN 200 (formerly FIN 310)

Credits:

3.00

Description:

This course examines financial planning for retirement and presents a comprehensive process for doing such a planning. Among the main topics covered are setting financial objectives for retirement, planning for adequate retirement income, social security and other governmental benefits, understanding qualified and non-qualified plans, pre- and post-retirement investment planning, planning for long-term care, and planning for incapacity.

Term:

Offered Spring Term

- **FIN-432 Financial Institutions**

Prerequisites:

FIN 200(formerly FIN 310); FIN 319

Credits:

3.00

Description:

This course analyzes the role of financial institutions, such as commercial banks, savings and loans, and mutual savings banks in the economy. Topics covered also include dynamic changes in functions of financial institutions and increasing influence of alternative institutions like hedge fund, private equity fund, and venture capitalist.

Term:

Offered Spring Term

- **FIN-H435 Honors The Global Financial Crisis: Causes, Economics, and Solutions**

Prerequisites:

FIN 200(formerly FIN 310); Junior standing; 3.3 GPA

Credits:

3.00

Description:

This course analyzes the origins and consequences of the current financial situation from a variety of different economic and political perspectives. It offers students the opportunity to explore the chain of events that preceded the global financial crisis, monitor markets on a real-time basis (using Bloomberg) and provides a forum to discuss solutions and independently generate ideas. Among the main topics covered are asset pricing, derivative securities, financial engineering, risk management and the role of financial institutions, central banks and government agencies in global markets.

Term:

Offered Spring Term

Type:

Honors

- **FIN-H445 Honors Quantitative Analysis and Trading of Financial Instruments**

Prerequisites:

FIN-315 and Junior standing and at least a 3.3 GPA

Credits:

3.00

Description:

The course will augment and extend students' finance skills, tools and concepts learned in core finance and investment courses and blend the theory with real world application. The course utilizes the Chartered Financial Analyst Institute Investment Series textbook to facilitate the mastery of quantitative methods, data analytics and their application in today's investment process for stocks, bonds, futures and options. In addition to review of time value of money, discounted cash flow and statistical/probability analysis, the course will cover advanced concepts such as correlation and regression and their real world application in finance and investments. An important part of the course will be the ability to distinguish useful information from the overwhelming quantity of available data. Additional topics will include valuation methods/models, quantitative investment strategies, technical analysis, trading strategies & execution of transactions, quantitative/algorithmic & high frequency trading. Material will be reinforced with hands-on application of utilizing real time trading and market data platforms. Microsoft Excel, applications utilized in the financial industry, statistical/mathematical and programming platforms will be used extensively throughout the course. Guest speakers will be scheduled to speak about certain topics and their experiences.

Term:

Offered Fall Term

Type:

Honors

- **FIN-450 Mutual Funds**

Prerequisites:

FIN 200(formerly FIN 310);

Credits:

3.00

Description:

This course introduces students to the mutual fund industry and its evolution into the brokerage business. The course focuses on developing this foundation knowledge through classroom discussions and case analysis with guest experts in the various aspects of mutual funds.

- **FIN-475 Case Studies in Financial Planning**

Prerequisites:

senior standing required as well as instructor's approval

Credits:

3.00

Description:

This course examines professional issues in financial planning, including ethical considerations, regulation and certification requirements, written communication skills, and professional responsibility. Students are expected to utilize skills obtained in other courses and work experiences in the completion of a comprehensive personal finance case, other mini-case studies, and calculation templates.

- **FIN-510 Independent Study in Finance**

Prerequisites:

instructor's (full time), chair's, dean's approval

Credits:

1.00- 6.00

Description:

Independent study allows students to expand their classroom experience by completing research in an area of interest not already covered by Suffolk courses. The student designs a unique project and finds a full-time faculty member with expertise in that topic who agrees to sponsor it and provide

feedback as the proposal is refined. A well designed and executed research project broadens and/or deepens learning in a major or minor area of study and may also enhance a student's marketability to potential future employers. Students cannot register for an Independent Study until a full proposal is approved by the faculty sponsor, department chair, and academic dean. Many Independent study proposals require revisions before approval is granted; even with revisions independent study approval is NOT guaranteed. Students are strongly encouraged to submit a proposal in enough time to register for a different course if the proposal is not accepted. For complete instructions, see the SBS Independent/Directed Study Agreement and Proposal form available online.

Term:

Offered Both Fall and Spring

- **FIN-550 Special Topics Finance**

Prerequisites:

FIN-315; see department for course topic

Credits:

3.00

Description:

This course is an in-depth analysis of timely special issues in finance. Specific topics are announced when the course is scheduled. Additional prerequisites are based upon the individual topic.

Required Experiential Component, 1 Course, 0 Credit

Finance majors must complete 150 hours of preprofessional finance experience prior to graduating. Experience may be acquired through an internship, part- or full-time employment, or cooperative education. Students must register for FIN 560, Finance Practicum, during or immediately before the semester in which they complete the required 150 hours. The experiential component carries no academic credit, nor requires any tuition, and will be graded pass/fail. Approval of this experience must be obtained from the Finance Department.

- **FIN-560 Finance Practicum**

Prerequisites:

Must obtain approval from FIN dept

Credits:

0.00

Description:

Required of all Finance majors. Majors will have an approved 150 hours of finance experience. Experience may be acquired through internship, part- or full-time employment or cooperative education. Zero Credit

Term:

Offered Both Fall and Spring

- **FIN-422 Estate Planning**

Credits:

3.00

Description:

This course provides an introduction to estate planning, including a discussion of wills, intestacy, and tax consequences of estate planning techniques. The course will prepare students to discuss the necessity, objectives and techniques of estate planning with clients. It will introduce students to the consequences of intestacy and the uses of wills. Additionally, students will learn the basic concepts of the federal estate, gift and income tax rules that apply to certain estate plans and how to use them for the benefit of clients.

Term:

Offered Fall Term

- **FIN-423 Retirement Planning**

Prerequisites:

FIN 200 (formerly FIN 310)

Credits:

3.00

Description:

This course examines financial planning for retirement and presents a comprehensive process for doing such a planning. Among the main topics covered are setting financial objectives for retirement, planning for adequate retirement income, social security and other governmental benefits, understanding qualified and non-qualified plans, pre- and post-retirement investment planning, planning for long-term care, and planning for incapacity.

Term:

Offered Spring Term

- **FIN-432 Financial Institutions**

Prerequisites:

FIN 200(formerly FIN 310); FIN 319

Credits:

3.00

Description:

This course analyzes the role of financial institutions, such as commercial banks, savings and loans, and mutual savings banks in the economy. Topics covered also include dynamic changes in functions of financial institutions and increasing influence of alternative institutions like hedge fund, private equity fund, and venture capitalist.

Term:

Offered Spring Term

- **FIN-H435 Honors The Global Financial Crisis: Causes, Economics, and Solutions**

Prerequisites:

FIN 200(formerly FIN 310); Junior standing; 3.3 GPA

Credits:

3.00

Description:

This course analyzes the origins and consequences of the current financial situation from a variety of different economic and political perspectives. It offers students the opportunity to explore the chain of events that preceded the global financial crisis, monitor markets on a real-time basis (using Bloomberg) and provides a forum to discuss solutions and independently generate ideas. Among the main topics covered are asset pricing, derivative securities, financial engineering, risk management and the role of financial institutions, central banks and government agencies in global markets.

Term:

Offered Spring Term

Type:

Honors

- **FIN-H445 Honors Quantitative Analysis and Trading of Financial Instruments**

Prerequisites:

FIN-315 and Junior standing and at least a 3.3 GPA

Credits:

3.00

Description:

The course will augment and extend students' finance skills, tools and concepts learned in core finance and investment courses and blend the theory with real world application. The course utilizes the Chartered Financial Analyst Institute Investment Series textbook to facilitate the mastery of quantitative methods, data analytics and their application in today's investment process for stocks, bonds, futures and options. In addition to review of time value of money, discounted cash flow and statistical/probability analysis, the course will cover advanced concepts such as correlation and regression and their real world application in finance and investments. An important part of the course will be the ability to distinguish useful information from the overwhelming quantity of available data. Additional topics will include valuation methods/models, quantitative investment strategies, technical analysis, trading strategies & execution of transactions, quantitative/algorithmic & high frequency trading. Material will be reinforced with hands-on application of utilizing real time trading and market data platforms. Microsoft Excel, applications utilized in the financial industry, statistical/mathematical and programming platforms will be used extensively throughout the course. Guest speakers will be scheduled to speak about certain topics and their experiences.

Term:

Offered Fall Term

Type:

Honors

- **FIN-450 Mutual Funds**

Prerequisites:

FIN 200(formerly FIN 310);

Credits:

3.00

Description:

This course introduces students to the mutual fund industry and its evolution into the brokerage business. The course focuses on developing this foundation knowledge through classroom discussions and case analysis with guest experts in the various aspects of mutual funds.

- **FIN-475 Case Studies in Financial Planning**

Prerequisites:

senior standing required as well as instructor's approval

Credits:

3.00

Description:

This course examines professional issues in financial planning, including ethical considerations, regulation and certification requirements, written communication skills, and professional responsibility. Students are expected to utilize skills obtained in other courses and work experiences in the completion of a comprehensive personal finance case, other mini-case studies, and calculation templates.

Finance Concentrations

Finance majors may choose to specialize in one of four areas. All majors complete the 4 required core courses (FIN 311, FIN 315, FIN 417 and FIN 419) as well as the required Finance Practicum, FIN 560. In addition to these requirements, finance majors who choose to specialize follow the instructions for their area of interest.

1. Investments

Required courses:

- FIN-411 Futures and Options

Prerequisites:

FIN 315; Junior standing;

Credits:

3.00

Description:

This course is an in-depth analysis of derivatives: futures, options, and swaps. The course explains why these securities exist, where and how they are traded, how to employ them in managing risk, and how to accurately price them. It also covers the use of these derivatives in the context hedging or speculation.

Term:

Offered Spring Term

- **FIN-413 Investment Analysis and Portfolio Management**

Prerequisites:

FIN 315, Junior standing

Credits:

3.00

Description:

This course is an advanced course in investment analysis stressing efficient frontier and diversification. Also studies portfolio construction and management, and the tradeoff of risk versus return.

Term:

Offered Fall Term

Choose ONE

- **FIN-317 Real Estate**

Prerequisites:

FIN 200 (formerly FIN 310)

Credits:

3.00

Description:

This course focuses primarily on real estate investment and many different approaches are discussed. The course examines related areas of law, finance, insurance, taxation, appraisal and brokerage.

Term:

Offered Both Fall and Spring

- **FIN-319 Money and Capital Markets**

Prerequisites:

EC 101; EC 102; Junior standing

Credits:

3.00

Description:

This course covers characteristics, structure and function of money and capital markets with a focus on the recent events relating to financial markets and their impact on the corporate financing behavior and the interrelationship among the various financial markets. Also, each type of financial institution and its internationalization are discussed.

Term:

Offered Both Fall and Spring

- **FIN-409 Securities Analysis**

Prerequisites:

FIN 315

Credits:

3.00

Description:

This course is focused on the security analysis of stocks with the goal of managing the Suffolk University student-run portfolio. The material is pertinent to the security analyst - particularly the equity analyst who must issue a buy, hold or sell recommendations on stocks. By the end of the course, the student should feel competent in writing a thorough, credible equity research report or investment analysis that meets the highest standards of professionalism.

- **FIN-410 Analysis of Financial Statements**

Prerequisites:

FIN 200 (formerly FIN 310), Junior standing

Credits:

3.00

Description:

This course covers the analysis and interpretation of financial statements. It is designed to help investors and managers in their assessment of a business entity. It also covers comparative financial statements and trend and ratio analysis.

Term:

Offered Fall Term

- **FIN-450 Mutual Funds**

Prerequisites:

FIN 200(formerly FIN 310);

Credits:

3.00

Description:

This course introduces students to the mutual fund industry and its evolution into the brokerage business. The course focuses on developing this foundation knowledge through classroom discussions and case analysis with guest experts in the various aspects of mutual funds.

2. Corporate Finance

Required courses:

- **FIN-415 Capital Budgeting**

Prerequisites:

FIN 311 or permission of instructor, Junior standing

Credits:

3.00

Description:

This course develops the practical techniques and decision rules in the evaluation and selection of long-term investment projects. Teaching is oriented towards discussion of readings and case studies. Readings should provide students with understanding of capital budgeting techniques, and case studies should allow them to apply the techniques to real-world problems with the help of the computer.

Term:

Offered Fall Term

- **FIN-410 Analysis of Financial Statements**

Prerequisites:

EC 101; EC 102; Junior standing

Credits:

3.00

Description:

This course covers characteristics, structure and function of money and capital markets with a focus on the recent events relating to financial markets and their impact on the corporate financing behavior and the interrelationship among the various financial markets. Also, each type of financial institution and its internationalization are discussed.

Term:

Offered Both Fall and Spring

Choose ONE:

- **FIN-313 General Insurance**

Prerequisites:

FIN 200 (formerly FIN 310); Junior standing

Credits:

3.00

Description:

This course includes the theory, practice and problems of risk bearing in business and personal pursuits including life, property and casualty insurance and dealing with contract analysis and investments as well as corporate risk management.

Term:

Offered Fall Term

- **FIN-450 Mutual Funds**

Prerequisites:

FIN 200(formerly FIN 310);

Credits:

3.00

Description:

This course introduces students to the mutual fund industry and its evolution into the brokerage business. The course focuses on developing this foundation knowledge through classroom discussions and case analysis with guest experts in the various aspects of mutual funds.

4. Financial Planning

Financial Planning (FP) offers a valuable opportunity for students to pursue a career in financial planning. Financial planners analyze and provide advice on all areas of a person's financial life: investment management, retirement planning, estate planning, income tax management and insurance. In most cases, financial planners' analyses and recommendations are provided to clients in a written financial plan. The planner may then coordinate the implementation of the plan and periodically review it to account for changes in the client's life and current economic conditions.

Finance majors who choose to specialize in Financial Planning complete all of the following requirements:

- **ACCT-320 Federal Taxation I**

Prerequisites:

ACCT 202

Credits:

3.00

Description:

Focuses on the federal income taxation of individuals with some discussion of business taxation. Explores the basic structure of individual income taxation, including the individual tax formula, income, deductions, and credits, and provides an introduction to property transactions. Emphasizes how tax laws affect everyday personal and business decisions.

Term:

Offered Both Fall and Spring

- **FIN-200 Business Finance**

Prerequisites:

MATH 128 or higher; ACCT 201; STATS 240 or STATS 250 (can take concurrently with FIN 200); Sophomore standing

Credits:

3.00

Description:

This course is a study of the functions of business finance and focuses on basic financial principles such as time value of money, risk and return tradeoffs, and asset valuation. Formally FIN 310.

Term:

Offered Both Fall and Spring

- **FIN-313 General Insurance**

Prerequisites:

FIN 200 (formerly FIN 310); Junior standing

Credits:

3.00

Description:

This course includes the theory, practice and problems of risk bearing in business and personal pursuits including life, property and casualty insurance and dealing with contract analysis and investments as well as corporate risk management.

Term:

Offered Fall Term

- **FIN-315 Principles of Investments**

Prerequisites:

FIN 200 (formerly FIN 310); Junior standing

Credits:

3.00

Description:

This course covers the investment of funds by individuals and institutions. Focuses on analysis of investments and security markets, and the mechanics of trading and investing. A variety of investment vehicles are discussed, including stocks, bonds, futures, and options.

Term:

Offered Both Fall and Spring

- **FIN-401 Practical Financial Planning**

Prerequisites:

FIN 200 (formerly FIN 310), Junior standing

Credits:

3.00

Description:

This course is designed to expose the student to the wide range of financial planning tools and techniques available today to the professional financial planner as well as to the individual. By the end of the course the student should be able to construct a sensible and workable financial plan for a client.

Term:

Offered Spring Term

- **FIN-422 Estate Planning**

Credits:

3.00

Description:

This course provides an introduction to estate planning, including a discussion of wills, intestacy, and tax consequences of estate planning techniques. The course will prepare students to discuss the necessity, objectives and techniques of estate planning with clients. It will introduce students to the consequences of intestacy and the uses of wills. This non-degree program is offered as a flexible and affordable program for working professionals whose responsibilities are currently or expected to be related to financial planning. This certificate program requires the completion of the following eight courses (provided that the students demonstrate proficiency in prerequisites) with a “pass” grade:

- **FPP-200 Business Finance**

Prerequisites:

MATH 128 or higher; ACCT 201; STATS 240 or 250 (can take concurrently with FPP 200)

Description:

This course is a study of the functions of business finance and focuses on basic financial principles such as time value of money, risk and return tradeoffs, and asset valuation.

Term:

Offered Both Fall and Spring

• FPP-313 General Insurance

Prerequisites:

FIN 200(formerly FIN 310) or FPP 200(formerly FPP 310);

Description:

This course includes the theory, practice and problems of risk-bearing in business and personal pursuit including life, property and casualty insurance and dealing with contract analysis and investments as well as corporate risk management.

Term:

Offered Fall Term

• FPP-315 Principles of Investment

Prerequisites:

FIN 200(formerly FIN 310) or FPP 200(formerly FPP 310);

Description:

This course covers the investment of funds by individuals and institutions. Focuses on analysis of investments and security markets, and the mechanics of trading and investing. A variety of investment vehicles are discussed including stocks, bonds, futures and options.

Term:

Offered Both Fall and Spring

- **FPP-320 Taxation**

Prerequisites:

ACCT 202; take either FIN 200(formerly FIN 310) or FPP 200(formerly FPP 310);

Description:

A study of basic federal taxation as it applies to individuals, partnerships and corporations. Expertise in the preparation of tax returns is developed.
Prerequisite: ACCT 202 MATH 134 OR MATH 161 OR MATH 165.

Term:

Offered Both Fall and Spring

- **FPP-401 Practical Financial Planning**

Prerequisites:

FIN 200(formerly FIN 310) or FPP 200(formerly FPP 310);

Description:

This course is designed to expose the student to the wide range of financial planning tools and techniques available today to the professional financial planner as well as to the individual. By the end of the course the student should be able to construct a sensible and workable financial plan for a client.

- **FPP-422 Estate Planning**

Prerequisites:

FIN 200(formerly FIN 310) or FPP 200(formerly FPP 310);

Description:

This course provides an introduction to estate planning, including a discussion of wills, intestacy, and tax consequences of estate planning techniques. The course will prepare students to discuss the necessity, objectives, and techniques of estate planning with clients. It will introduce students to the consequences of intestacy and the uses of wills. Additionally, students will learn the basic concepts of the federal estate, gift, and income tax rules that apply to certain estate plans and how to use them for the benefit of clients.

Term:

- **FPP-423 Retirement Planning**

Prerequisites:

FIN 200(formerly FIN 310) or FPP 200(formerly FPP 310);

Description:

This course examines financial planning for retirement and presents a comprehensive process for doing such a planning. Among the main topics covered are setting financial objectives for retirement, planning for adequate retirement income, social security and other governmental benefits, understanding qualified and non-qualified plans, pre- and post-retirement investment planning, planning for long-term care, and planning for incapacity.

- **FPP-475 Case Studies in Financial Planning**

Prerequisites:

FPP 200(formerly FPP 310);

Credits:

3.00

Description:

This course examines professional issues in financial planning, including ethical considerations, regulation and certification requirements, written communication skills, and professional responsibility. Students are expected to utilize skills obtained in other courses and work experiences in the completion of a comprehensive personal finance case, other mini-case studies, and calculation templates.

It should be noted that FPP 200 is an introduction to finance. Its prerequisites are:

- **ACCT-201 Accounting for Decision Making I**

Prerequisites:

MATH-128 or higher and WRI-102 or WRI-H103 or SBS-220

Credits:

3.00

Description:

Introduces students to the accounting cycle, the financial statements, and the theory underlying accounting as information. Provides users of accounting information with a basic understanding of how to appraise and manage a business. Addresses current accounting topics, including relevant ethical and international issues found in the financial press.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

• **STATS-240 Introduction to Statistics**

Prerequisites:

Math 128 or higher. REMINDER: STATS 240 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

Credits:

4.00

Description:

Topics include: data presentation, measures of central locations and dispersion, probability and probability distributions, estimation, hypothesis testing, simple and multiple regression models. The use of Excel and SPSS will be emphasized throughout the course. 1 term - 4 credits (4 hours per week). Normally offered each semester. STATS 240 satisfies the same requirements as STATS 250

Type:

Quantitative Reasoning

or

• **STATS-250 Applied Statistics**

Prerequisites:

MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

Credits:

4.00

Description:

Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

Type:

Quantitative Reasoning

• MATH-128 Math for the Modern World

Prerequisites:

MATH level 2, or Mathshop, or MATH-104

Credits:

4.00

Description:

From the ISBN on a book, to buying a car, from the size of small chips in a cell phone, to the size of the national debt, or just reading a graph in the daily newspaper, mathematics plays an important and vital role in countless areas of life and your future career and courses included. Mathematics is both an art and a tool created by humans. The common bond is a way of thinking and a way of reasoning to describe and solve problems of many types. This course uses the context of modern real life problems to introduce math needed for literacy and problem solving in contemporary life and work. It uses a minimal amount of algebra and focuses on math models, concepts and basic math manipulations. It encourages students to move from anxiety about math, to using formulas well, to thinking critically in the math context to use math to solve problems and pose new problems. Topics include scientific notation, basic financial math, linear, exponential and polynomial models and an introduction to probability. (Formerly Math 132)

Or higher

*STATS-240 or STATS-250 can be taken concurrently with FPP-200.

These eight FPP courses cover the foundation topics required by the Certified Financial Planner (CFP) Board. Students may apply for admission in fall, spring, or summer sessions. Upon completion of this certificate program, the students are eligible to take the CFP exam administered by the CFP Board, which is an integral part of the prestigious CFP certification process. For more information about the CFP exam, please refer to www.cfp.net.

Admission to the Certificate Program requires a Bachelor's degree from an accredited institution. Students applying for admission should contact the Undergraduate Admissions Office (617-573-8460) for more information. Those who have already taken the above courses from an accredited institution may waive a maximum of three courses.

- **FIN-410 Analysis of Financial Statements**

Prerequisites:

FIN 200 (formerly FIN 310), Junior standing

Credits:

3.00

Description:

This course covers the analysis and interpretation of financial statements. It is designed to help investors and managers in their assessment of a business entity. It also covers comparative financial statements and trend and ratio analysis.

Term:

Offered Fall Term

- **FIN-411 Futures and Options**

Prerequisites:

FIN 315; Junior standing;

Credits:

3.00

Description:

This course is an in-depth analysis of derivatives: futures, options, and swaps. The course explains why these securities exist, where and how they are traded, how to employ them in managing risk, and how to accurately price them. It also covers the use of these derivatives in the context hedging or speculation.

Term:

Offered Spring Term

- **FIN-413 Investment Analysis and Portfolio Management**

Prerequisites:

FIN 315, Junior standing

Credits:

3.00

Description:

This course is an advanced course in investment analysis stressing efficient frontier and diversification. Also studies portfolio construction and management, and the tradeoff of risk versus return.

Term:

Offered Fall Term

- **FIN-415 Capital Budgeting**

Prerequisites:

FIN 311 or permission of instructor, Junior standing

Credits:

3.00

Description:

This course develops the practical techniques and decision rules in the evaluation and selection of long-term investment projects. Teaching is oriented towards discussion of readings and case studies. Readings should provide students with understanding of capital budgeting techniques, and case studies should allow them to apply the techniques to real-world problems with the help of the computer.

Term:

Offered Fall Term

- **FIN-417 Multinational Financial Management**

Prerequisites:

FIN 200 (formerly FIN 310); Junior standing

Credits:

3.00

Description:

This course covers the financing, investment and working capital management process of multinational corporations, considering such variables as exchange risk, political risk, accounting regulations and tax laws.

Term:

Offered Both Fall and Spring

- **FIN-419 Problems of Managerial Finance**

Prerequisites:

FIN 311; Two FIN major required or elective courses; Senior standing

Credits:

3.00

Description:

This course is an in-depth study of current finance theory and methodology applicable to the firm through case analyses, computer work and recent publications. It is a capstone course where students learn how to integrate financial theories and principles to reach optimal financial decisions in practice.

Term:

Offered Both Fall and Spring

- **FIN-422 Estate Planning**

Credits:

3.00

Description:

This course provides an introduction to estate planning, including a discussion of wills, intestacy, and tax consequences of estate planning techniques. The course will prepare students to discuss the necessity, objectives and techniques of estate planning with clients. It will introduce students to the consequences of intestacy and the uses of wills. Additionally, students will learn the basic concepts of the federal estate, gift and income tax rules that apply to certain estate plans and how to use them for the benefit of clients.

Term:

Offered Fall Term

- **FIN-423 Retirement Planning**

Prerequisites:

FIN 200 (formerly FIN 310)

Credits:

3.00

Description:

This course examines financial planning for retirement and presents a comprehensive process for doing such a planning. Among the main topics covered are setting financial objectives for retirement, planning for adequate retirement income, social security and other governmental benefits,

understanding qualified and non-qualified plans, pre- and post-retirement investment planning, planning for long-term care, and planning for incapacity.

Term:

Offered Spring Term

- **FIN-432 Financial Institutions**

Prerequisites:

FIN 200(formerly FIN 310); FIN 319

Credits:

3.00

Description:

This course analyzes the role of financial institutions, such as commercial banks, savings and loans, and mutual savings banks in the economy. Topics covered also include dynamic changes in functions of financial institutions and increasing influence of alternative institutions like hedge fund, private equity fund, and venture capitalist.

Term:

Offered Spring Term

- **FIN-H435 Honors The Global Financial Crisis: Causes, Economics, and Solutions**

Prerequisites:

FIN 200(formerly FIN 310); Junior standing; 3.3 GPA

Credits:

3.00

Description:

This course analyzes the origins and consequences of the current financial situation from a variety of different economic and political perspectives. It offers students the opportunity to explore the chain of events that preceded the global financial crisis, monitor markets on a real-time basis (using

Bloomberg) and provides a forum to discuss solutions and independently generate ideas. Among the main topics covered are asset pricing, derivative securities, financial engineering, risk management and the role of financial institutions, central banks and government agencies in global markets.

Term:

Offered Spring Term

Type:

Honors

- **FIN-H445 Honors Quantitative Analysis and Trading of Financial Instruments**

Prerequisites:

FIN-315 and Junior standing and at least a 3.3 GPA

Credits:

3.00

Description:

The course will augment and extend students' finance skills, tools and concepts learned in core finance and investment courses and blend the theory with real world application. The course utilizes the Chartered Financial Analyst Institute Investment Series textbook to facilitate the mastery of quantitative methods, data analytics and their application in today's investment process for stocks, bonds, futures and options. In addition to review of time value of money, discounted cash flow and statistical/probability analysis, the course will cover advanced concepts such as correlation and regression and their real world application in finance and investments. An important part of the course will be the ability to distinguish useful information from the overwhelming quantity of available data. Additional topics will include valuation methods/models, quantitative investment strategies, technical analysis, trading strategies & execution of transactions, quantitative/algorithmic & high frequency trading. Material will be reinforced with hands-on application of utilizing real time trading and market data platforms. Microsoft Excel, applications utilized in the financial industry, statistical/mathematical and programming platforms will be used extensively throughout the course. Guest speakers will be scheduled to speak about certain topics and their experiences.

Term:

Offered Fall Term

Type:

Honors

- **FIN-450 Mutual Funds**

Prerequisites:

FIN 200(formerly FIN 310);

Credits:

3.00

Description:

This course introduces students to the mutual fund industry and its evolution into the brokerage business. The course focuses on developing this foundation knowledge through classroom discussions and case analysis with guest experts in the various aspects of mutual funds.

- **FIN-475 Case Studies in Financial Planning**

Prerequisites:

senior standing required as well as instructor's approval

Credits:

3.00

Description:

This course examines professional issues in financial planning, including ethical considerations, regulation and certification requirements, written communication skills, and professional responsibility. Students are expected to utilize skills obtained in other courses and work experiences in the completion of a comprehensive personal finance case, other mini-case studies, and calculation templates.

- **FIN-510 Independent Study in Finance**

Prerequisites:

instructor's (full time), chair's, dean's approval

Credits:

1.00- 6.00

Description:

Independent study allows students to expand their classroom experience by completing research in an area of interest not already covered by Suffolk courses. The student designs a unique project and finds a full-time faculty member with expertise in that topic who agrees to sponsor it and provide feedback as the proposal is refined. A well designed and executed research project broadens and/or deepens learning in a major or minor area of study and may also enhance a student's marketability to potential future employers. Students cannot register for an Independent Study until a full proposal is approved by the faculty sponsor, department chair, and academic dean. Many Independent study proposals require revisions before approval is granted; even with revisions independent study approval is NOT guaranteed. Students are strongly encouraged to submit a proposal in enough time to register for a different course if the proposal is not accepted. For complete instructions, see the SBS Independent/Directed Study Agreement and Proposal form available online.

Term:

Offered Both Fall and Spring

• FIN-550 Special Topics Finance

Prerequisites:

FIN-315; see department for course topic

Credits:

3.00

Description:

This course is an in-depth analysis of timely special issues in finance. Specific topics are announced when the course is scheduled. Additional prerequisites are based upon the individual topic.

• FIN-560 Finance Practicum

Prerequisites:

Must obtain approval from FIN dept

Credits:

0.00

Description:

Required of all Finance majors. Majors will have an approved 150 hours of finance experience. Experience may be acquired through internship, part- or full-time employment or cooperative education. Zero Credit

Term:

Offered Both Fall and Spring

• FPP-200 Business Finance

Prerequisites:

MATH 128 or higher; ACCT 201; STATS 240 or 250 (can take concurrently with FPP 200)

Description:

This course is a study of the functions of business finance and focuses on basis financial principles such as time value of money, risk and return tradeoffs, and asset valuation.

Term:

Offered Both Fall and Spring

• FPP-310 Business Finance

Prerequisites:

MATH 130 or above; EC 101; ACCT 201; STATS 240 or 250 (can take concurrently with FIN 310)

Description:

This course is a study of the functions of business finance and focuses on basis financial principles such as time value of money, risk and return tradeoffs, and asset valuation.

Term:

Offered Both Fall and Spring

• FPP-313 General Insurance

Prerequisites:

FIN 200(formerly FIN 310) or FPP 200(formerly FPP 310);

Description:

This course includes the theory, practice and problems of risk-bearing in business and personal pursuit including life, property and casualty insurance and dealing with contract analysis and investments as well as corporate risk management.

Term:

Offered Fall Term

• FPP-315 Principles of Investment

Prerequisites:

FIN 200(formerly FIN 310) or FPP 200(formerly FPP 310);

Description:

This course covers the investment of funds by individuals and institutions. Focuses on analysis of investments and security markets, and the mechanics of trading and investing. A variety of investment vehicles are discussed including stocks, bonds, futures and options.

Term:

Offered Both Fall and Spring

• FPP-320 Taxation

Prerequisites:

ACCT 202; take either FIN 200(formerly FIN 310) or FPP 200(formerly FPP 310);

Description:

A study of basic federal taxation as it applies to individuals, partnerships and corporations. Expertise in the preparation of tax returns is developed.
Prerequisite: ACCT 202 MATH 134 OR MATH 161 OR MATH 165.

Term:

Offered Both Fall and Spring

- **FPP-401 Practical Financial Planning**

Prerequisites:

FIN 200(formerly FIN 310) or FPP 200(formerly FPP 310);

Description:

This course is designed to expose the student to the wide range of financial planning tools and techniques available today to the professional financial planner as well as to the individual. By the end of the course the student should be able to construct a sensible and workable financial plan for a client.

- **FPP-422 Estate Planning**

Prerequisites:

FIN 200(formerly FIN 310) or FPP 200(formerly FPP 310);

Description:

This course provides an introduction to estate planning, including a discussion of wills, intestacy, and tax consequences of estate planning techniques. The course will prepare students to discuss the necessity, objectives, and techniques of estate planning with clients. It will introduce students to the consequences of intestacy and the uses of wills. Additionally, students will learn the basic concepts of the federal estate, gift, and income tax rules that apply to certain estate plans and how to use them for the benefit of clients.

Term:

Offered Fall Term

- **FPP-423 Retirement Planning**

Prerequisites:

FIN 200(formerly FIN 310) or FPP 200(formerly FPP 310);

Description:

This course examines financial planning for retirement and presents a comprehensive process for doing such a planning. Among the main topics covered are setting financial objectives for retirement, planning for adequate retirement income, social security and other governmental benefits, understanding qualified and non-qualified plans, pre- and post-retirement investment planning, planning for long-term care, and planning for incapacity.

- **FPP-475 Case Studies in Financial Planning**

Prerequisites:

FPP 200(formerly FPP 310);

Credits:

3.00

Description:

This course examines professional issues in financial planning, including ethical considerations, regulation and certification requirements, written communication skills, and professional responsibility. Students are expected to utilize skills obtained in other courses and work experiences in the completion of a comprehensive personal finance case, other mini-case studies, and calculation templates.

- **SBS-HC320 Utilizing Real Time Data, News, Analytics and Research**

Prerequisites:

FIN 200 (formerly FIN 310); 3.3 GPA

Credits:

2.00

Description:

Students will gain hands-on and real-world experience using information and technology utilized by leading decision makers in business. Expose students to real-time platforms for financial and global business news, data, analytical tools and research. Students can deepen both their research and classwork, while learning how to analyze markets, assess economic scenarios and interpret the key news developments that impact the global economy. Bring the pace and excitement of real-time business and macro/micro econometrics into the classroom. Real-time trading applications will be introduced and utilized extensively throughout the course. Students will have multiple opportunities to participate in local and national virtual trading and analysis competitions. Integrate theoretical curriculum from prior courses and teach practical applications that can also be helpful in later courses.

Examples drawn from ongoing economic and financial issues will be used to illustrate topics and concepts throughout the course. Guest speakers will be scheduled to speak about certain topics and their experiences.

2015-2016 Archived Catalog Information

Global Business

You can combine a major in Global Business with one functional area of business, such as accounting, finance, marketing, management, or information systems. Thus, the program gives you a double major.

The Global Business major is offered through the Strategy and International Business Department. The Global Business major is an intensive program for highly focused and motivated students looking for a career in international business through an entry-level position in a functional area of business.

Included in the requirements are courses in international business and a second major in a functional area of business. The Global Business program immerses the student in theory and practice of international business by integrating academic knowledge, language, and overseas travel seminars/semester study abroad.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Minor Requirements](#)
- [Courses](#)

The BSBA in Global Business requires the completion of 18 credits of global business courses, plus 18–24 credits of the functional major. Global Business majors are assigned a faculty advisor to assist them in planning their program of study and advise them on academic and career matters. Students in this major must have the approval of their faculty advisor to register. All changes to the Global Business Program of Study must be approved by the director of the Global Business Program. Please note that Global Business freshman and sophomore courses as part of the General Education requirements in this program differ from the other Business majors.

Global Business Required Courses, 3 Courses, 9 Credits

Students are required to complete:

- **SIB-101 Globalization**

Credits:

3.00

Description:

This course introduces the nature and processes of globalization which define today's international business environment. The course employs a multidisciplinary perspective to explore the growing interdependence of nations in their trade, investment, technology flows, and business operations. Topics include business, geographic, economic, social, cultural, political, and other issues related to globalization. The course is experiential in its approach. Students will undertake a team research project exploring globalization issues with reference to a particular country, region or industry.

Term:

Offered Both Fall and Spring

• **SIB-321 Introduction to International Business**

Prerequisites:

SIB 101 or HST 149 or HST 150 and sophomore standing or higher

Credits:

3.00

Description:

To provide students with an understanding of problems and opportunities associated with doing business across country and cultural boundaries and to encourage global business thinking and strategy formulation. Topics include the forms of international business involvement, economic, social, cultural and political conditions; national and multinational regulations of international transactions and investments; and global strategies for business operations.

Term:

Offered Both Fall and Spring

• **SIB-419 Global Business Theory & Practice**

Prerequisites:

MKT 210; ISOM 319; MGT 217 (formerly MGT 317); FIN 200 (formerly FIN 310); SIB 321

Credits:

3.00

Description:

This course will integrate global business theories and concepts with practice. Topics include: Transnational strategy, foreign direct investment, regional development clusters, role and operation of the WTO, outsourcing and supply chain management, and international ethics. Students integrate discipline-specific knowledge, practice investigation and decision-making around global business issues, improve business communication skills, and practice teamwork for global business decision-making.

Term:

Offered Both Fall and Spring

Global Business Elective Courses, 3 Courses

Select three courses from the following:

- **SIB-510 Direct Study in Strategy and International Business**

Prerequisites:

instructor's consent

Credits:

1.00- 6.00

Description:

Independent study allows students to expand their classroom experience by completing research in an area of interest not already covered by Suffolk courses. The student designs a unique project and finds a full-time faculty member with expertise in that topic who agrees to sponsor it and provide feedback as the proposal is refined. A well designed and executed research project broadens and/or deepens learning in a major or minor area of study and may also enhance a student's marketability to potential future employers. Students cannot register for an Independent Study until a full proposal is approved by the faculty sponsor, department chair, and academic dean. Many Independent study proposals require revisions before approval is granted; even with revisions independent study approval is NOT guaranteed. Students are strongly encouraged to submit a proposal in enough time to register for a different course if the proposal is not accepted. For complete instructions, see the SBS Independent/Directed Study Agreement and Proposal form available online.

Term:

Offered Both Fall and Spring

- **SIB-520 Strategy and International Business Internship**

Prerequisites:

SIB-321, Global Business Director approval required before registration

Credits:

3.00

Description:

A project-based course that entails a work experience component for juniors and seniors, and allows the student to apply international business theory in a practical context, thereby bridging the gap between education and practice. The internship must involve at least 100 hours of work. Students are responsible for identifying and securing acceptance to an internship. Prior to registering for SIB 520, a student must submit to the Global Business Director a Sponsor Agreement form signed by a representative of the internship organization prior to starting the internship. A maximum of one SIB 520 internship course may also be used as a Global Business major elective. The work time required for a Global Business internship cannot also be used to fulfill the requirement for an internship course in another department. The company offering the internship must agree to evaluate the student's performance by completing an Internship Evaluation Form. Students must successfully complete both the internship and all of the academic requirements of SIB 520 in order to earn a passing grade. IF SIB 520 is taken to also fulfill the global travel requirement, the internship must take place outside the student's country of residence. Therefore international students who are not permanent residents of the US can pursue their internships in the US. If a student intends to fulfill the global travel requirement with SIB 520, the student should simultaneously register for SIB 560. SIB 520 can be taken for credit without fulfilling the global travel requirement if the internship's tasks involve business activities targeted to countries outside the student's country of residence. Note that it is not sufficient for the company providing the internship to be an international company, but the student's job position must entail the international business activities specified by the student's manager in a letter to the Global Business Director.

Term:

Offered Both Fall and Spring

- **SIB-550 Global Travel Seminar**

Credits:

3.00

Description:

An in-depth analysis of timely special issues in international business. Specific topics are announced when the course is scheduled.

Type:

Diverse Perspectives, Global Engagement Experience

- **ACCT-310 International Business Accounting**

Prerequisites:

FIN-200 (formerly FIN 310); ACCT-331

Credits:

3.00

Description:

Explores economic, political and cultural variables that shape accounting and disclosure in various countries. Students gain an understanding of international financial reporting standards and the forces for convergence between IFRS and US GAAP. Presents financial analysis in a multi-financial context.

Term:

Offered Fall Term

- **BLE-317 Managing in the Global Legal Environment**

Prerequisites:

BLE 214

Credits:

3.00

Description:

Surveys the global legal environment of business. Emphasizes case analysis of topics such as: sovereignty, extraterritoriality, treaties, international contracts, arbitration, and the European Union. Explores the managerial and economic significance of these topics.

Term:

Offered Both Fall and Spring

- **BLE-325 Global Business Ethics**

Prerequisites:

BLE-215, PHIL-119, PHIL-120, PHIL-123 or PHIL-127

Credits:

3.00

Description:

Surveys business ethics as they transcend the diverse perspectives of global business. Explores current global ethics standards and values, ethical challenges, controversies, convergence and trends. Students explore famous global business cases through films, websites and independent research. Emphasizes identification and resolution of global business ethical issues within the context of ethical decision-making and sustainability. Analyzes corporate social responsibility ; hence, transforming global business ethics through business.

Type:

Diverse Perspectives

Credits:

3.00

Description:

Examines the role of e-commerce and e-business in the global business environment. Considers user, technological, strategic, economic, social, and cultural factors in the development and deployment of effective websites and mobile applications. Students discuss readings and cases to examine current e-commerce situations, opportunities, and challenges. Students develop websites to simulate collaboration and competition among online businesses.

Term:

Offered Fall Term

- **MGT-335 Managing Across Cultures**

Prerequisites:

MGT 217 (formerly MGT 317)

Credits:

3.00

Description:

To what extent are our identities, ways of thinking, and behaving the products of our cultural environments? How do conceptions of motivation, leadership, decision making, negotiation, and ethics differ across cultures? How do expatriates settle abroad, and how do they re-enter the American life they are once so familiar? The purpose of this course is to examine the international context of management, specifically, the cross-cultural environment and how it shapes managers' and work organization members' experiences, roles and responsibilities.

Term:

Offered Both Fall and Spring

- **MKT-421 Global Marketing**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Topics examined in this course include the variations in economic, social-cultural, legal-political, and business environments among different nations and how these variations affect the marketing practices across national boundaries. The goal is to provide students with the necessary skills to compete successfully in national and international markets. Particular attention is given to the formulation of marketing plans and programs and policies to integrate and coordinate such activities on a global basis.

Type:

Global Engagement Experience

- **P.AD-362 Global Health, Poverty & Warming**

Prerequisites:

SIB 101 or HST 149 or HST 150 or Instructor permission

Credits:

3.00

Description:

Global health, global poverty, and global warming are three interrelated issues that are creating a perfect storm of crises worldwide with major impacts on the United States. This course is an overview of the problems - the needs, systems, programs, and financing. We will look critically at policies in these areas and discuss what needs to be done to address them. Students will write a major paper on an issue of their choice.

Functional Major Courses, 6–8 Courses, 18–24 Credits

Students are required to specialize in one business discipline (Accounting, Finance, Information Systems, Management, or Marketing). Students will take the major required and major elective courses as specified by the academic department concerned, which may include experiential components.

Only one of the Global Business elective courses listed above may be double counted toward the Global Business major and the functional major, as long as it was also available as a course for the functional major.

Language Courses, 2 Courses, 8 Credits

Students must demonstrate competence beyond the second semester level of college instruction in French, Spanish, Portuguese, German, Mandarin Chinese, Russian, Japanese, or Arabic. Other global languages will be considered on a case-by-case basis by the director of the Global Business Program. Students can also demonstrate competence by taking a placement test or through an interview with a language instructor. For this purpose, students should contact the Director of the Global Business Program. In this case, students do not get credit for waiving the language requirement but can take Free Electives instead of the language courses if the student will not have the total number of credits required to graduate. A suggested list of Free Electives relevant for the Global Business Program is given below.

Travel Requirement SIB 560 (formerly IB 560), Non-Credit

(No credits can be specifically assigned. It is a pre-professional experience.)

All Global Business majors are required to participate in overseas travel as part of their major. This requirement may be satisfied by completing a minimum of one travel seminar, a semester study abroad, or, with prior permission from the Director of the Global Business Program, a Global Business Internship abroad. Students must register for the zero-credit course SIB 560 - Global Travel Requirement, in the semester in which they plan to complete their travel.

- A minimum 2.5 GPA is required for travel seminars and study abroad experience.
- A maximum of one travel seminar may be used as a Global Business major elective while also fulfilling the SIB 560 requirement. Additional travel seminars will not count towards GB major electives but may be used as free elective credit.
- Study abroad involves enrollment in semester-long or summer session courses at either Suffolk's Madrid campus or at one of the programs open to Suffolk students at other institutions. All study abroad must be preapproved by the Undergraduate Academic Advising Center. If a student plans to substitute a course taken at another university for a Suffolk requirement, it must be approved by the Program Director or Department Chair for the required course. Students may participate in more than one study abroad opportunity. Students interested in study abroad should plan to do so during their sophomore year or the fall of their junior year.
- With prior permission from the director of the Global Business Program, students may also fulfill the travel requirement through a Global Business Internship. Two options are available: the three-credit course SIB 520 - Global Business Internship, and an internship without academic credit. The internship must take place outside the student's primary country of residence—so students who are not permanent residents of the U.S. can pursue their internships in the U.S.. Students are responsible for identifying and securing acceptance to the internship, which must be a minimum of 100 hours. For both SIB 560 and SIB 520, a student must submit to the Global Business Director a Sponsor Agreement form signed by a representative of the internship organization prior to starting the internship. A maximum of one SIB 520 internship course may also be used as a Global Business major elective. The work time required for a Global Business internship cannot also be used to fulfill the requirement for an internship course in another department. Students who register for SIB 520 should simultaneously register for SIB 560.

Recommended Free Electives

- **GVT-367 Politics of Spain**

Credits:

4.00

Description:

This course is designed to provide students with a basic grounding in political institutions and processes in contemporary Spain. Political developments are presented in their socio-economic context, with special emphasis on the Spanish transition from a dictatorship to a democracy. Attention is also given to the issue of the Basque and Catalan nationalism, as well as the process of European integration. Prerequisite: GVT 281 or instructor's consent. 1 term - 4 credits. Normally offered alternate years at the Madrid Campus.

Type:

Social Science

- **GVT-384 The U.S. and the International Relations of the Middle East**

Credits:

4.00

Description:

This course will explore the role played by the United States in the Middle East in the twentieth century, with emphasis on the period since World War II. Our study will begin with a decision-making approach to understanding the domestic and institutional context of America's policy toward the region, followed by an examination of that policy as it confronted radical nationalist, socialist, and Islamic movements, Soviet influence, and specific contemporary problems - the Arab-Israeli conflict, the Lebanese civil war, the Iranian revolution, the Iran-Iraq War, and the Gulf War. Open to non-majors, not open to freshmen. Normally offered alternate years.

Type:

Social Science,BSJ SOCIAL SCIENCE

- **GVT-385 South Asian Politics**

Prerequisites:

Not open to freshmen.

Credits:

4.00

Description:

The main goal of the course is to provide an overview of the main political, economic, and social processes taking place in this region. This course explains the strategies that the eight South Asian countries are implementing in order to deal with the globalization process. The primary focus of the course will be to provide students with the understanding of the main regional trends, but it also has case studies of some of the political systems in the region. Students will analyze and evaluate the concepts learned in basic courses in international relations, political science, and other disciplines in social sciences as they apply to South Asia. Normally offered alternate years.

Type:

Social Science

- **GVT-387 Conflict & Development in Asia Service Abroad**

Prerequisites:

GVT 281 or instructor's consent. Junior status or above

Credits:

4.00

Description:

current political trends in the Caribbean and in selected Central American nations. Emphasis will be placed on comparative analysis of public policies in the region, as well as on external factors which impact on politics in the Caribbean and Central America. Students will use academic sources in their analysis, as well as novels and other literary sources for the background of their analysis. Not open to freshmen. Normally offered every third year.
Cultural Diversity B

2015-2016 Archived Catalog Information

Global Business

You can combine a major in Global Business with one functional area of business, such as accounting, finance, marketing, management, or information systems. Thus, the program gives you a double major.

The Global Business major is offered through the Strategy and International Business Department. The Global Business major is an intensive program for highly focused and motivated students looking for a career in international business through an entry-level position in a functional area of business.

Included in the requirements are courses in international business and a second major in a functional area of business. The Global Business program immerses the student in theory and practice of international business by integrating academic knowledge, language, and overseas travel seminars/semester study abroad.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

International Business Minor for Business Students

Students will complete three courses (9 credits) to qualify for this minor.

Required course:

- **SIB-321 Introduction to International Business**

Prerequisites:

SIB 101 or HST 149 or HST 150 and sophomore standing or higher

Credits:

3.00

Description:

To provide students with an understanding of problems and opportunities associated with doing business across country and cultural boundaries and to encourage global business thinking and strategy formulation. Topics include the forms of international business involvement, economic, social, cultural and political conditions; national and multinational regulations of international transactions and investments; and global strategies for business operations.

Term:

Offered Both Fall and Spring

And any two of the following:

- **SIB-510 Direct Study in Strategy and International Business**

Prerequisites:

instructor's consent

Credits:

1.00- 6.00

Description:

Independent study allows students to expand their classroom experience by completing research in an area of interest not already covered by Suffolk courses. The student designs a unique project and finds a full-time faculty member with expertise in that topic who agrees to sponsor it and provide feedback as the proposal is refined. A well designed and executed research project broadens and/or deepens learning in a major or minor area of study and may also enhance a student's marketability to potential future employers. Students cannot register for an Independent Study until a full proposal is approved by the faculty sponsor, department chair, and academic dean. Many Independent study proposals require revisions before approval is granted; even with revisions independent study approval is NOT guaranteed. Students are strongly encouraged to submit a proposal in enough time to register for a different course if the proposal is not accepted. For complete instructions, see the SBS Independent/Directed Study Agreement and Proposal form available online.

Term:

Offered Both Fall and Spring

- **SIB-520 Strategy and International Business Internship**

Prerequisites:

SIB-321, Global Business Director approval required before registration

Credits:

3.00

Description:

A project-based course that entails a work experience component for juniors and seniors, and allows the student to apply international business theory in a practical context, thereby bridging the gap between education and practice. The internship must involve at least 100 hours of work. Students are responsible for identifying and securing acceptance to an internship. Prior to registering for SIB 520, a student must submit to the Global Business Director a Sponsor Agreement form signed by a representative of the internship organization prior to starting the internship. A maximum of one SIB 520 internship course may also be used as a Global Business major elective. The work time required for a Global Business internship cannot also be used to fulfill the requirement for an internship course in another department. The company offering the internship must agree to evaluate the student's performance by completing an Internship Evaluation Form. Students must successfully complete both the internship and all of the academic requirements of SIB 520 in order to earn a passing grade. IF SIB 520 is taken to also fulfill the global travel requirement, the internship must take place outside the student's country of residence. Therefore international students who are not permanent residents of the US can pursue their internships in the US. If a student intends to fulfill the global travel requirement with SIB 520, the student should simultaneously register for SIB 560. SIB 520 can be taken for credit without fulfilling the global travel requirement if the internship's tasks involve business activities targeted to countries outside the student's country of residence. Note that it is not sufficient for the company providing the internship to be an international company, but the student's job position must entail the international business activities specified by the student's manager in a letter to the Global Business Director.

Term:

Offered Both Fall and Spring

- **SIB-550 Global Travel Seminar**

Credits:

3.00

Description:

An in-depth analysis of timely special issues in international business. Specific topics are announced when the course is scheduled.

Type:

- **ACCT-310 International Business Accounting**

Prerequisites:

FIN-200 (formerly FIN 310); ACCT-331

Credits:

3.00

Description:

Explores economic, political and cultural variables that shape accounting and disclosure in various countries. Students gain an understanding of international financial reporting standards and the forces for convergence between IFRS and US GAAP. Presents financial analysis in a multi-financial context.

Term:

Offered Fall Term

- **BLE-317 Managing in the Global Legal Environment**

Prerequisites:

BLE 214

Credits:

3.00

Description:

Surveys the global legal environment of business. Emphasizes case analysis of topics such as: sovereignty, extraterritoriality, treaties, international contracts, arbitration, and the European Union. Explores the managerial and economic significance of these topics.

Term:

Offered Both Fall and Spring

- **BLE-325 Global Business Ethics**

Prerequisites:

BLE-215, PHIL-119, PHIL-120, PHIL-123 or PHIL-127

Credits:

3.00

Description:

Surveys business ethics as they transcend the diverse perspectives of global business. Explores current global ethics standards and values, ethical challenges, controversies, convergence and trends. Students explore famous global business cases through films, websites and independent research. Emphasizes identification and resolution of global business ethical issues within the context of ethical decision-making and sustainability. Analyzes corporate social responsibility ; hence, transforming global business ethics through business.

Type:

Diverse Perspectives

- **ENT-354 Global Entrepreneurship**

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

Do you want to know how to take advantage of our global economy? This course will leverage the knowledge acquired from other entrepreneurship and global courses coupled with an overview of the global economy every entrepreneur must compete in and how to transition your business models into real world opportunities. This course will discuss the entrepreneurial process from concept to product feasibility to venture launch answering the following question: How and when should an entrepreneur plan on competing in a global market?

Term:

Offered Both Fall and Spring

- **FIN-417 Multinational Financial Management**

Prerequisites:

FIN 200 (formerly FIN 310); Junior standing

Credits:

3.00

Description:

This course covers the financing, investment and working capital management process of multinational corporations, considering such variables as exchange risk, political risk, accounting regulations and tax laws.

Term:

Offered Both Fall and Spring

- **ISOM-331 Global Electronic Commerce**

Prerequisites:

ISOM-210(formerly ISOM-310)

Credits:

3.00

Description:

Examines the role of e-commerce and e-business in the global business environment. Considers user, technological, strategic, economic, social, and cultural factors in the development and deployment of effective websites and mobile applications. Students discuss readings and cases to examine current e-commerce situations, opportunities, and challenges. Students develop websites to simulate collaboration and competition among online businesses.

Term:

Offered Fall Term

- **MKT-421 Global Marketing**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Topics examined in this course include the variations in economic, social-cultural, legal-political, and business environments among different nations and how these variations affect the marketing practices across national boundaries. The goal is to provide students with the necessary skills to compete successfully in national and international markets. Particular attention is given to the formulation of marketing plans and programs and policies to integrate and coordinate such activities on a global basis.

Type:

Global Engagement Experience

• **MGT-335 Managing Across Cultures**

Prerequisites:

MGT 217 (formerly MGT 317)

Credits:

3.00

Description:

To what extent are our identities, ways of thinking, and behaving the products of our cultural environments? How do conceptions of motivation, leadership, decision making, negotiation, and ethics differ across cultures? How do expatriates settle abroad, and how do they re-enter the American life they are once so familiar? The purpose of this course is to examine the international context of management, specifically, the cross-cultural environment and how it shapes managers' and work organization members' experiences, roles and responsibilities.

Term:

Offered Both Fall and Spring

Each course may count towards only one requirement. Students may not double count a course from the International Business Minor toward ANY other requirement.

International Business Minor for College of Arts & Sciences Students

IB will be introduced as part of the Functional Business Minor available for CAS students and require 5 courses (15 credits).

Required courses:

- **ENT-101 Business Foundations**

Credits:

3.00

Description:

This course introduces students to foundational concepts in business, including functional areas, the life cycle, competition, stakeholders and ethical considerations. Students develop critical thinking by learning and using a problem solving process through a business situation analysis model to analyze various situations that confront managers and founders of small, medium, and large organizations. Students will also develop tools for analysis, allowing them to critically view business in a new and thoughtful way. The class culminates with student- teams presenting a detailed analysis and recommendations to a panel of executives and persuading them that the recommended strategy is not only feasible, but also practical for the stakeholders involved.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **SIB-101 Globalization**

Credits:

3.00

Description:

This course introduces the nature and processes of globalization which define today's international business environment. The course employs a multidisciplinary perspective to explore the growing interdependence of nations in their trade, investment, technology flows, and business operations.

Topic include business, geographic, economic, social, cultural, political, and other issues related to globalization. The course is experiential in its approach. Students will undertake a team research project exploring globalization issues with reference to a particular country, region or industry.

Term:

Offered Both Fall and Spring

- **SIB-321 Introduction to International Business**

Prerequisites:

SIB 101 or HST 149 or HST 150 and sophomore standing or higher

Credits:

3.00

Description:

To provide students with an understanding of problems and opportunities associated with doing business across country and cultural boundaries and to encourage global business thinking and strategy formulation. Topics include the forms of international business involvement, economic, social, cultural and political conditions; national and multinational regulations of international transactions and investments; and global strategies for business operations.

Term:

Offered Both Fall and Spring

*ENT-101 is formerly SBS-101.

And any two of the following:

- **SIB-510 Direct Study in Strategy and International Business**

Prerequisites:

instructor's consent

Credits:

1.00- 6.00

Description:

- **SIB-437 Strategic Context of International Business**

Prerequisites:

Senior standing and instructor's consent required

Credits:

3.00

Description:

Business firms around the world regularly engage in strategic interactions with stakeholders and particularly with governments. These interactions allow firms not only to manage risks from adverse policies and stakeholder positions, but also to shape governmental behavior and relations with other stakeholders to enhance the creation and capture of value. At the same time, the complexity of the nonmarket environment and controversies regarding the ethics of firm behavior in this space has limited attention to this crucial element of strategy. This course will provide a framework for the analysis of the nonmarket environment across countries and the development of integrated strategies combining market and nonmarket action, from the perspective of multinational firms.

- **SIB-510 Direct Study in Strategy and International Business**

Prerequisites:

instructor's consent

2015-2016 Archived Catalog Information

Information Systems

In a global economy where firms are more interconnected, they are also more exposed to rapid changing market conditions globally. Providing timely and accurate information to the appropriate personnel to enable responsive business decision making becomes the key to the future.

Increasingly, firms are leveraging advanced technologies to manage sophisticated operations in supply chains and to manage the flood of information from around the world. However, to gain a sustainable competitive advantage, firms must also rely on professionals who can manage these complex systems of information and operations worldwide to make innovative and prudent business decisions.

Demand for skilled professionals with information systems and operations management knowledge is growing fast. These professionals utilize their business background and technical skills to research innovative ways for value-creation opportunities in business operations, assessing risks and benefits of these options, and manage systems of technological tools to enable the changes needed to realize these values.

The Information Systems and Operations Management Department prepares you with the foundation knowledge and analytical skills needed to launch your career. You will be able to manage the efficient flows of information, materials, and services in matching supply with demand to create value for businesses as well as their customers.

- [Concentrations](#)
- [Undergraduate Courses](#)

The Information Systems (IS) major consists of a minimum of 21 credit hours, including four (4) required and three (3) elective ISOM courses.

Major Required Courses, 4 Courses, 12 Credits

- ISOM-313 Systems Analysis & Design

Prerequisites:

ISOM-210(formerly ISOM-310)

Credits:

3.00

Description:

Covers the concepts, techniques and tools used in the analysis and design of business information systems. Topics include: the system development cycle, modeling, prototyping and project management. Additionally, the course focuses upon using Object Oriented analysis and design techniques including the UML. Emphasizes the analysis of business operations as well as the interaction between information systems professionals and end-users. A term project applying these concepts and techniques is required.

Term:

Offered Both Fall and Spring

- **ISOM-314 Object Oriented Programming**

Credits:

3.00

Description:

Develops problem solving and basic programming skills through a variety of business application assignments. Introduces fundamental control and data structures using the Java programming language. Students learn about the concepts of object-oriented / event-driven programming principles. The course builds skills in the areas of programming logic, Class and Object concepts, and system development. Testing and debugging techniques and the writing of well-structured code are emphasized.

Term:

Offered Both Fall and Spring

- **ISOM-423 Database Management**

Prerequisites:

ISOM-210(formerly ISOM-310)

Credits:

3.00

Description:

Provides an understanding of the role of information and databases in information systems and their role as an organizational resource. Students learn to design databases using normalization and entity-relationship diagrams, develop data models and to build applications with database management systems such as MS Access and SQL. Techniques are examined and applied to realistic business problems through hands-on exercises and projects.

Term:

Offered Both Fall and Spring

• ISOM-424 IS Strategy, Management and Acquisition

Prerequisites:

ISOM-313, ISOM-314, and ISOM-423 and at least 84 credits

Credits:

3.00

Description:

Explores the issues and approaches in managing the information systems function in organizations and how the IS function integrates/supports/enables various types of organizational capabilities. It takes a management perspective in exploring the acquisition, development, and implementation of plans and policies to achieve efficient and effective information systems. The course addresses issues relating to defining the high level IS infrastructure and the systems that support the operational, administrative, and strategic needs of the organization. The remainder of the course is focused on developing an intellectual framework that will allow leaders of organizations to critically assess existing IS infrastructures and emerging technologies as well as how these enabling technologies might affect organizational strategy. The ideas developed and cultivated in this course are intended to provide an enduring perspective that can help leaders make sense of an increasingly globalized and technology intensive business environment.

Term:

Offered Both Fall and Spring

- **ISOM-130 Data Science and Analytics**

Prerequisites:

ENT-101(formerly SBS-101)

Credits:

3.00

Description:

Provides students with a comprehensive introduction to the core concepts, applications and tools of data acquisition, preparation, querying, analytics, and data management. Students gain hands-on experience using real data to perform these functions. Topics include: data life cycle, big data, analytics, data collection, preparation, organization and storage, aggregation and summary, and presentation/visualization. Students use tools such as MS Excel, MS Access, SQL, and SAS Visual Analytics.

Term:

Offered Both Fall and Spring

- **ISOM-212 Web Design**

Credits:

3.00

Description:

Introduces the concepts, vocabulary, and procedures associated with website and mobile application design. Includes modules on website evaluation, information architecture, customer and task analysis, usability testing, typography, color composition, screen layout, and navigation design, and digital content editing. Also covers important web design themes such as accessibility, globalization, personalization and trust. Students gain hands-on design experience using an assortment of readily available development tools such as Wix, Yapp, and Microsoft's Expression Web software.

Term:

Offered Fall Term

- **ISOM-215 Mobile App Development**

Credits:

3.00

Description:

Provides a comprehensive introduction to mobile app technology and design concepts. This is an introductory course and assumes no prior programming experience. Students learn how to design, build, and optimize cross-platform mobile app using HTML5 standards. Students will also learn how to convert HTML5 apps into native apps for various mobile platforms. Students use CSS3, JavaScript and several JavaScript frameworks and techniques such as jQuery, jQuery Mobile, and AJAX. In addition, students will use Web services, such as Google Maps, and Web Application Programming Interfaces (Web APIs) to integrate content into their apps.

Term:

Offered Fall Term

- **ISOM-230 Big Data, Business Intelligence and Analytics**

Prerequisites:

STATS-240 or STATS-250 or Instructor Permission

Credits:

3.00

Description:

Provides an understanding of the business potential of big data; how to build and maintain data warehouses, and how to analyze and use this data as a source for business intelligence and competitive advantage. Students study data mining concepts and the use of analytics tools and methods for producing business knowledge. Topics include: extraction, transformation and loading; decision support systems; analytics , text, web and data mining models as well as data presentation/visualization including dashboards, cockpits and scorecards. Students build a data warehouse and practice the extraction and filtering process used to produce high quality data warehouses. Students will use tools such as MS Excel, MicroStrategy (Salesforce), SQL and SAP Business Warehouse.

Term:

Offered Both Fall and Spring

- **ISOM-231 Automatic for the People: Turn Data Into Insight/W R~python**

Prerequisites:

STATS-240 or STATS-250

Credits:

3.00

Description:

Introduces a detailed overview of statistical learning for data mining, inference, and prediction in order to tackle modern-day data analysis problems. This course is appropriate for students who wish to learn and apply statistical learning tools to analyze data and gain valuable hands-on experience with R. Statistical learning refers to a vast set of tools for modeling and understanding complex datasets. Exciting topics include: Regression, Logistic Regression, Linear Discriminant Analysis, Cross-Validation, Bootstrap, Linear/Non-Linear Model Selection and Regularization, Support Vector Methodology, and Unsupervised Learning via Principal Components Analysis and Clustering Methods. Students learn how to implement each of the statistical learning methods using the popular statistical software package R via hands-on lab sessions.

Term:

Offered Fall Term

• ISOM-244 Web Application Development

Credits:

3.00

Description:

Equips students with the principles, methodology and skills required to define, develop and deploy a fully functional dynamic web application. Students learn to customize the content, appearance, and delivery of their website using industry-standard web development tools. Class discussion will focus on web development issues for organizations as well as the role played by development tools such as HTML5, CSS3, and PHP scripting. Each class will include hands-on lab work. A term project is used to wrap the course content together.

Term:

Offered Spring Term

• ISOM-330 Applied Predictive Analytics

Prerequisites:

ISOM-130, ISOM-230, and STATS-240 or STATS-250 or Instructor Permission

Credits:

3.00

Description:

When companies make decisions, they do so with the future in mind and essentially are predicting that their decisions will achieve desired results. Predictive analytics allow people to ask and answer questions that can predict demand and/or outcomes and obtain results that lead to reasoned action. This course develops students' capability in applying the core concepts and techniques of predictive analytics for opportunity identification and risk assessment within the context of organizational decision-making. Students will use data-driven approaches to develop predictive analytical models. Students will create and use data models and techniques, apply trendlines to fit models to data, perform what-if analysis, construct data tables, evaluate scenarios, apply forecasting techniques, simulation and risk analysis. Students will learn to use various presentation and visualization tools to communicate results. Topics include: predictive analytics life cycle, opportunity/issue identification, data preparation, modeling, analysis, forecasting, simulation, risk assessment, and operationalization of predictive analytics. Students will use tools such as MS Excel, SPSS and SAS Visual Analytics.

Term:

Offered Both Fall and Spring

• ISOM-331 Global Electronic Commerce

Prerequisites:

ISOM-210(formerly ISOM-310)

Credits:

3.00

Description:

Examines the role of e-commerce and e-business in the global business environment. Considers user, technological, strategic, economic, social, and cultural factors in the development and deployment of effective websites and mobile applications. Students discuss readings and cases to examine current e-commerce situations, opportunities, and challenges. Students develop websites to simulate collaboration and competition among online businesses.

Term:

Offered Fall Term

- **ISOM-340 Security & Privacy**

Prerequisites:

ISOM-210(formerly ISOM-310) and at least 54 credits

Credits:

3.00

Description:

Introduces the basics of information security & privacy including the legal and ethical issues. Common types of computer attacks and counter-attacks are addressed. Security technologies such as biometrics, firewalls, intrusion detection systems and cryptography systems will be analyzed and several lab exercises on the same are used to connect theory to practice. Best practices for planning and auditing security and privacy will also be covered.

Term:

Offered Fall Term

- **ISOM-341 Project Management**

Credits:

3.00

Description:

Provides a comprehensive introduction to project management. Projects provide businesses a time-delimited tool for improving, expanding, and innovating - the primary means for converting strategy into action. Project management success differentiates top performing firms. The course will focus on discussion and analysis of business situations that convey core project management skills. In particular, this course focuses on the challenge of managing projects in today's complex, high-pressure work environments. This course can be credited toward PMI Project Management Professional (PMP) certification.

Term:

Offered Spring Term

- **ISOM-414 Object-Oriented Programming Development with Java**

Prerequisites:

ISOM-314 and at least 54 credits or Instructor Permission

Credits:

3.00

Description:

This course introduces object-oriented programming (OOP) and development using the Java programming language. It covers the basics of OOP including class hierarchies, inheritance, objects, streams, constructors, and GUI components. The course also covers the design, development, and deployment of applets, web applications, and applications that are not deployed via the Internet. Several programming projects, which strengthen the understanding of object based and event driven programming, are required. By the end of the course, students will possess a strong working competency in object oriented programming using Java.

Term:

Offered Spring Term

- **ISOM-440 ERP System & Process Reengineering**

Prerequisites:

ISOM-210(formerly ISOM-310) and at least 54 credits

Credits:

3.00

Description:

Provides a conceptual, as well as, a mechanical understanding of enterprise integration and enterprise software, business process reengineering and strategies for maximizing benefits from enterprise systems. Students learn to examine complex issues in organizational changes including implementation challenge; risks, costs, and benefits; learning and knowledge management. Hands-on lab projects on the ERP System (provided by SAP) are utilized to reinforce understanding of important enterprise systems and business process concepts. This course is part of the SAP Student Recognition Certificate Program.

Term:

- **ISOM-510 Independent Study in IS & OM**

Prerequisites:

ISOM-210(formerly ISOM-310) or ISOM-201 and Instructor Permission

Credits:

1.00- 3.00

Description:

Independent study allows students to expand their classroom experience by completing research in an area of interest not already covered by Suffolk courses. The student designs a unique project and finds a full-time faculty member with expertise in that topic who agrees to sponsor it and provide feedback as the proposal is refined. A well designed and executed research project broadens and/or deepens learning in a major or minor area of study and may also enhance a student's marketability to potential future employers. Students cannot register for an Independent Study until a full proposal is approved by the faculty sponsor, department chair, and academic dean. Many Independent study proposals require revisions before approval is granted; even with revisions independent study approval is NOT guaranteed. Students are strongly encouraged to submit a proposal in enough time to register for a different course if the proposal is not accepted. For complete instructions, see the SBS Independent/Directed Study Agreement and Proposal form available online.

Additional Major Information

Some major courses are offered only once during an academic year. It is the students' responsibility to work with their academic advisor to develop a program of study that ensures courses are taken in the proper sequence and all prerequisites are satisfied. The IS major consists of 4 required and 3 elective courses. Six of the seven major courses must be ISOM department courses. Students may transfer a maximum of two courses towards their IS major of which no more than one is a major required course. Prior approval is required for using a non-ISOM course as a major elective.

Information Systems/Information Technology Practicum

Practical information systems experience prepares students for real-world challenges in the workplace. All IS majors must complete 150 hours of approved professional information systems experience before graduation. The 150 hours of work experience may be obtained in one or more positions as an intern, part- or full-time employee or volunteer. Prior approval of your position by the IS Practical Experience Coordinator is required. This is accomplished by completing the IS Practicum Approval Form.

Most students satisfy this graduation requirement by completing ISOM 560: IS Practicum, a noncredit, tuition-free, pass/fail course. Students should enroll in ISOM 560 the semester when they expect to complete their 150 hours or the subsequent semester. Students may also satisfy this practicum requirement

by enrolling in ISOM 520: IS Internship (1 to 3 credits based on the number of hours worked). ISOM 520 requires junior standing and is a graded course that can only be used as a free elective (cannot be used as a major elective).

2015-2016 Archived Catalog Information

Information Systems

In a global economy where firms are more interconnected, they are also more exposed to rapid changing market conditions globally. Providing timely and accurate information to the appropriate personnel to enable responsive business decision making becomes the key to the future.

Increasingly, firms are leveraging advanced technologies to manage sophisticated operations in supply chains and to manage the flood of information from around the world. However, to gain a sustainable competitive advantage, firms must also rely on professionals who can manage these complex systems of information and operations worldwide to make innovative and prudent business decisions.

Demand for skilled professionals with information systems and operations management knowledge is growing fast. These professionals utilize their business background and technical skills to research innovative ways for value-creation opportunities in business operations, assessing risks and benefits of these options, and manage systems of technological tools to enable the changes needed to realize these values.

The Information Systems and Operations Management Department prepares you with the foundation knowledge and analytical skills needed to launch your career. You will be able to manage the efficient flows of information, materials, and services in matching supply with demand to create value for businesses as well as their customers.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

Information Systems Minor, 3 courses, 9 credits

A business student may choose to minor in Information Systems by completing any three of the following courses.

- ISOM-130 Data Science and Analytics

Prerequisites:

ENT-101(formerly SBS-101)

Credits:

3.00

Description:

Provides students with a comprehensive introduction to the core concepts, applications and tools of data acquisition, preparation, querying, analytics, and data management. Students gain hands-on experience using real data to perform these functions. Topics include: data life cycle, big data, analytics, data collection, preparation, organization and storage, aggregation and summary, and presentation/visualization. Students use tools such as MS Excel, MS Access, SQL, and SAS Visual Analytics.

Term:

Offered Both Fall and Spring

• **ISOM-212 Web Design**

Credits:

3.00

Description:

Introduces the concepts, vocabulary, and procedures associated with website and mobile application design. Includes modules on website evaluation, information architecture, customer and task analysis, usability testing, typography, color composition, screen layout, and navigation design, and digital content editing. Also covers important web design themes such as accessibility, globalization, personalization and trust. Students gain hands-on design experience using an assortment of readily available development tools such as Wix, Yapp, and Microsoft's Expression Web software.

Term:

Offered Fall Term

• **ISOM-215 Mobile App Development**

Credits:

3.00

Description:

Provides a comprehensive introduction to mobile app technology and design concepts. This is an introductory course and assumes no prior programming experience. Students learn how to design, build, and optimize cross-platform mobile app using HTML5 standards. Students will also learn how to convert HTML5 apps into native apps for various mobile platforms. Students use CSS3, JavaScript and several JavaScript frameworks and techniques such as jQuery, jQuery Mobile, and AJAX. In addition, students will use Web services, such as Google Maps, and Web Application Programming Interfaces (Web APIs) to integrate content into their apps.

Term:

Offered Fall Term

• ISOM-230 Big Data, Business Intelligence and Analytics

Prerequisites:

STATS-240 or STATS-250 or Instructor Permission

Credits:

3.00

Description:

Provides an understanding of the business potential of big data; how to build and maintain data warehouses, and how to analyze and use this data as a source for business intelligence and competitive advantage. Students study data mining concepts and the use of analytics tools and methods for producing business knowledge. Topics include: extraction, transformation and loading; decision support systems; analytics , text, web and data mining models as well as data presentation/visualization including dashboards, cockpits and scorecards. Students build a data warehouse and practice the extraction and filtering process used to produce high quality data warehouses. Students will use tools such as MS Excel, MicroStrategy (Salesforce), SQL and SAP Business Warehouse.

Term:

Offered Both Fall and Spring

• ISOM-231 Automatic for the People: Turn Data Into Insight/W R~python

Prerequisites:

STATS-240 or STATS-250

Credits:

3.00

Description:

Introduces a detailed overview of statistical learning for data mining, inference, and prediction in order to tackle modern-day data analysis problems. This course is appropriate for students who wish to learn and apply statistical learning tools to analyze data and gain valuable hands-on experience with R. Statistical learning refers to a vast set of tools for modeling and understanding complex datasets. Exciting topics include: Regression, Logistic Regression, Linear Discriminant Analysis, Cross-Validation, Bootstrap, Linear/Non-Linear Model Selection and Regularization, Support Vector Methodology, and Unsupervised Learning via Principal Components Analysis and Clustering Methods. Students learn how to implement each of the statistical learning methods using the popular statistical software package R via hands-on lab sessions.

Term:

Offered Fall Term

- **ISOM-244 Web Application Development**

Credits:

3.00

Description:

Equips students with the principles, methodology and skills required to define, develop and deploy a fully functional dynamic web application. Students learn to customize the content, appearance, and delivery of their website using industry-standard web development tools. Class discussion will focus on web development issues for organizations as well as the role played by development tools such as HTML5, CSS3, and PHP scripting. Each class will include hands-on lab work. A term project is used to wrap the course content together.

Term:

Offered Spring Term

- **ISOM-313 Systems Analysis & Design**

Prerequisites:

ISOM-210(formerly ISOM-310)

Credits:

3.00

Description:

Covers the concepts, techniques and tools used in the analysis and design of business information systems. Topics include: the system development cycle, modeling, prototyping and project management. Additionally, the course focuses upon using Object Oriented analysis and design techniques including the UML. Emphasizes the analysis of business operations as well as the interaction between information systems professionals and end-users. A term project applying these concepts and techniques is required.

Term:

Offered Both Fall and Spring

• **ISOM-314 Object Oriented Programming**

Credits:

3.00

Description:

Develops problem solving and basic programming skills through a variety of business application assignments. Introduces fundamental control and data structures using the Java programming language. Students learn about the concepts of object-oriented / event-driven programming principles. The course builds skills in the areas of programming logic, Class and Object concepts, and system development. Testing and debugging techniques and the writing of well-structured code are emphasized.

Term:

Offered Both Fall and Spring

• **ISOM-330 Applied Predictive Analytics**

Prerequisites:

ISOM-130, ISOM-230, and STATS-240 or STATS-250 or Instructor Permission

Credits:

3.00

Description:

When companies make decisions, they do so with the future in mind and essentially are predicting that their decisions will achieve desired results. Predictive analytics allow people to ask and answer questions that can predict demand and/or outcomes and obtain results that lead to reasoned action. This course develops students' capability in applying the core concepts and techniques of predictive analytics for opportunity identification and risk assessment within the context of organizational decision-making. Students will use data-driven approaches to develop predictive analytical models. Students will create and use data models and techniques, apply trendlines to fit models to data, perform what-if analysis, construct data tables, evaluate scenarios, apply forecasting techniques, simulation and risk analysis. Students will learn to use various presentation and visualization tools to communicate results. Topics include: predictive analytics life cycle, opportunity/issue identification, data preparation, modeling, analysis, forecasting, simulation, risk assessment, and operationalization of predictive analytics. Students will use tools such as MS Excel, SPSS and SAS Visual Analytics.

Term:

Offered Both Fall and Spring

• ISOM-331 Global Electronic Commerce

Prerequisites:

ISOM-210(formerly ISOM-310)

Credits:

3.00

Description:

Examines the role of e-commerce and e-business in the global business environment. Considers user, technological, strategic, economic, social, and cultural factors in the development and deployment of effective websites and mobile applications. Students discuss readings and cases to examine current e-commerce situations, opportunities, and challenges. Students develop websites to simulate collaboration and competition among online businesses.

Term:

Offered Fall Term

• ISOM-340 Security & Privacy

Prerequisites:

ISOM-210(formerly ISOM-310) and at least 54 credits

Credits:

3.00

Description:

Introduces the basics of information security & privacy including the legal and ethical issues. Common types of computer attacks and counter-attacks are addressed. Security technologies such as biometrics, firewalls, intrusion detection systems and cryptography systems will be analyzed and several lab exercises on the same are used to connect theory to practice. Best practices for planning and auditing security and privacy will also be covered.

Term:

Offered Fall Term

- **ISOM-341 Project Management**

Credits:

3.00

Description:

Provides a comprehensive introduction to project management. Projects provide businesses a time-delimited tool for improving, expanding, and innovating - the primary means for converting strategy into action. Project management success differentiates top performing firms. The course will focus on discussion and analysis of business situations that convey core project management skills. In particular, this course focuses on the challenge of managing projects in today's complex, high-pressure work environments. This course can be credited toward PMI Project Management Professional (PMP) certification.

Term:

Offered Spring Term

- **ISOM-414 Object-Oriented Programming Development with Java**

Prerequisites:

ISOM-314 and at least 54 credits or Instructor Permission

Credits:

3.00

Description:

This course introduces object-oriented programming (OOP) and development using the Java programming language. It covers the basics of OOP including class hierarchies, inheritance, objects, streams, constructors, and GUI components. The course also covers the design, development, and deployment of applets, web applications, and applications that are not deployed via the Internet. Several programming projects, which strengthen the understanding of object based and event driven programming, are required. By the end of the course, students will possess a strong working competency in object oriented programming using Java.

Term:

Offered Spring Term

- **ISOM-423 Database Management**

Prerequisites:

ISOM-210(formerly ISOM-310)

Credits:

3.00

Description:

Provides an understanding of the role of information and databases in information systems and their role as an organizational resource. Students learn to design databases using normalization and entity-relationship diagrams, develop data models and to build applications with database management systems such as MS Access and SQL. Techniques are examined and applied to realistic business problems through hands-on exercises and projects.

Term:

Offered Both Fall and Spring

- **ISOM-424 IS Strategy, Management and Acquisition**

Prerequisites:

ISOM-313, ISOM-314, and ISOM-423 and at least 84 credits

Credits:

3.00

Description:

Explores the issues and approaches in managing the information systems function in organizations and how the IS function integrates/supports/enables various types of organizational capabilities. It takes a management perspective in exploring the acquisition, development, and implementation of plans and policies to achieve efficient and effective information systems. The course addresses issues relating to defining the high level IS infrastructure and the systems that support the operational, administrative, and strategic needs of the organization. The remainder of the course is focused on developing an intellectual framework that will allow leaders of organizations to critically assess existing IS infrastructures and emerging technologies as well as how these enabling technologies might affect organizational strategy. The ideas developed and cultivated in this course are intended to provide an enduring perspective that can help leaders make sense of an increasingly globalized and technology intensive business environment.

Term:

Offered Both Fall and Spring

• ISOM-440 ERP System & Process Reengineering

Prerequisites:

ISOM-210(formerly ISOM-310) and at least 54 credits

Credits:

3.00

Description:

Provides a conceptual, as well as, a mechanical understanding of enterprise integration and enterprise software, business process reengineering and strategies for maximizing benefits from enterprise systems. Students learn to examine complex issues in organizational changes including implementation challenge; risks, costs, and benefits; learning and knowledge management. Hands-on lab projects on the ERP System (provided by SAP) are utilized to reinforce understanding of important enterprise systems and business process concepts. This course is part of the SAP Student Recognition Certificate Program.

Term:

Offered Spring Term

- **ISOM-510 Independent Study in IS & OM**

Prerequisites:

ISOM-210(formerly ISOM-310) or ISOM-201 and Instructor Permission

Credits:

1.00- 3.00

Description:

Independent study allows students to expand their classroom experience by completing research in an area of interest not already covered by Suffolk courses. The student designs a unique project and finds a full-time faculty member with expertise in that topic who agrees to sponsor it and provide feedback as the proposal is refined. A well designed and executed research project broadens and/or deepens learning in a major or minor area of study and may also enhance a student's marketability to potential future employers. Students cannot register for an Independent Study until a full proposal is approved by the faculty sponsor, department chair, and academic dean. Many Independent study proposals require revisions before approval is granted; even with revisions independent study approval is NOT guaranteed. Students are strongly encouraged to submit a proposal in enough time to register for a different course if the proposal is not accepted. For complete instructions, see the SBS Independent/Directed Study Agreement and Proposal form available online.

Information Systems Minor for College of Arts & Sciences Students, 5 courses, 15 credits

After ENT 101 Business Foundations (formerly SBS 101), CAS students are required to take ISOM 210 (formerly ISOM 310) and 3 of the following:

- **ISOM-130 Data Science and Analytics**

Prerequisites:

ENT-101(formerly SBS-101)

Credits:

3.00

Description:

Provides students with a comprehensive introduction to the core concepts, applications and tools of data acquisition, preparation, querying, analytics, and data management. Students gain hands-on experience using real data to perform these functions. Topics include: data life cycle, big data,

analytics, data collection, preparation, organization and storage, aggregation and summary, and presentation/visualization. Students use tools such as MS Excel, MS Access, SQL, and SAS Visual Analytics.

Term:

Offered Both Fall and Spring

- **ISOM-212 Web Design**

Credits:

3.00

Description:

Introduces the concepts, vocabulary, and procedures associated with website and mobile application design. Includes modules on website evaluation, information architecture, customer and task analysis, usability testing, typography, color composition, screen layout, and navigation design, and digital content editing. Also covers important web design themes such as accessibility, globalization, personalization and trust. Students gain hands-on design experience using an assortment of readily available development tools such as Wix, Yapp, and Microsoft's Expression Web software.

Term:

Offered Fall Term

- **ISOM-215 Mobile App Development**

Credits:

3.00

Description:

Provides a comprehensive introduction to mobile app technology and design concepts. This is an introductory course and assumes no prior programming experience. Students learn how to design, build, and optimize cross-platform mobile app using HTML5 standards. Students will also learn how to convert HTML5 apps into native apps for various mobile platforms. Students use CSS3, JavaScript and several JavaScript frameworks and techniques such as jQuery, jQuery Mobile, and AJAX. In addition, students will use Web services, such as Google Maps, and Web Application Programming Interfaces (Web APIs) to integrate content into their apps.

Term:

Offered Fall Term

- **ISOM-230 Big Data, Business Intelligence and Analytics**

Prerequisites:

STATS-240 or STATS-250 or Instructor Permission

Credits:

3.00

Description:

Provides an understanding of the business potential of big data; how to build and maintain data warehouses, and how to analyze and use this data as a source for business intelligence and competitive advantage. Students study data mining concepts and the use of analytics tools and methods for producing business knowledge. Topics include: extraction, transformation and loading; decision support systems; analytics , text, web and data mining models as well as data presentation/visualization including dashboards, cockpits and scorecards. Students build a data warehouse and practice the extraction and filtering process used to produce high quality data warehouses. Students will use tools such as MS Excel, MicroStrategy (Salesforce), SQL and SAP Business Warehouse.

Term:

Offered Both Fall and Spring

- **ISOM-244 Web Application Development**

Credits:

3.00

Description:

Equips students with the principles, methodology and skills required to define, develop and deploy a fully functional dynamic web application. Students learn to customize the content, appearance, and delivery of their website using industry-standard web development tools. Class discussion will focus on web development issues for organizations as well as the role played by development tools such as HTML5, CSS3, and PHP scripting. Each class will include hands-on lab work. A term project is used to wrap the course content together.

Term:

Offered Spring Term

- **ISOM-313 Systems Analysis & Design**

Prerequisites:

ISOM-210(formerly ISOM-310)

Credits:

3.00

Description:

Covers the concepts, techniques and tools used in the analysis and design of business information systems. Topics include: the system development cycle, modeling, prototyping and project management. Additionally, the course focuses upon using Object Oriented analysis and design techniques including the UML. Emphasizes the analysis of business operations as well as the interaction between information systems professionals and end-users. A term project applying these concepts and techniques is required.

Term:

Offered Both Fall and Spring

- **ISOM-314 Object Oriented Programming**

Credits:

3.00

Description:

Develops problem solving and basic programming skills through a variety of business application assignments. Introduces fundamental control and data structures using the Java programming language. Students learn about the concepts of object-oriented / event-driven programming principles. The course builds skills in the areas of programming logic, Class and Object concepts, and system development. Testing and debugging techniques and the writing of well-structured code are emphasized.

Term:

Offered Both Fall and Spring

• ISOM-330 Applied Predictive Analytics

Prerequisites:

ISOM-130, ISOM-230, and STATS-240 or STATS-250 or Instructor Permission

Credits:

3.00

Description:

When companies make decisions, they do so with the future in mind and essentially are predicting that their decisions will achieve desired results. Predictive analytics allow people to ask and answer questions that can predict demand and/or outcomes and obtain results that lead to reasoned action. This course develops students' capability in applying the core concepts and techniques of predictive analytics for opportunity identification and risk assessment within the context of organizational decision-making. Students will use data-driven approaches to develop predictive analytical models. Students will create and use data models and techniques, apply trendlines to fit models to data, perform what-if analysis, construct data tables, evaluate scenarios, apply forecasting techniques, simulation and risk analysis. Students will learn to use various presentation and visualization tools to communicate results. Topics include: predictive analytics life cycle, opportunity/issue identification, data preparation, modeling, analysis, forecasting, simulation, risk assessment, and operationalization of predictive analytics. Students will use tools such as MS Excel, SPSS and SAS Visual Analytics.

Term:

Offered Both Fall and Spring

• ISOM-331 Global Electronic Commerce

Prerequisites:

ISOM-210(formerly ISOM-310)

Credits:

3.00

Description:

Examines the role of e-commerce and e-business in the global business environment. Considers user, technological, strategic, economic, social, and cultural factors in the development and deployment of effective websites and mobile applications. Students discuss readings and cases to examine

current e-commerce situations, opportunities, and challenges. Students develop websites to simulate collaboration and competition among online businesses.

Term:

Offered Fall Term

- **ISOM-341 Project Management**

Credits:

3.00

Description:

Provides a comprehensive introduction to project management. Projects provide businesses a time-delimited tool for improving, expanding, and innovating - the primary means for converting strategy into action. Project management success differentiates top performing firms. The course will focus on discussion and analysis of business situations that convey core project management skills. In particular, this course focuses on the challenge of managing projects in today's complex, high-pressure work environments. This course can be credited toward PMI Project Management Professional (PMP) certification.

Term:

Offered Spring Term

- **ISOM-414 Object-Oriented Programming Development with Java**

Prerequisites:

ISOM-314 and at least 54 credits or Instructor Permission

Credits:

3.00

Description:

This course introduces object-oriented programming (OOP) and development using the Java programming language. It covers the basics of OOP including class hierarchies, inheritance, objects, streams, constructors, and GUI components. The course also covers the design, development, and deployment of applets, web applications, and applications that are not deployed via the Internet. Several programming projects, which strengthen the

understanding of object based and event driven programming, are required. By the end of the course, students will possess a strong working competency in object oriented programming using Java.

Term:

Offered Spring Term

- **ISOM-423 Database Management**

Prerequisites:

ISOM-210(formerly ISOM-310)

Credits:

3.00

Description:

Provides an understanding of the role of information and databases in information systems and their role as an organizational resource. Students learn to design databases using normalization and entity-relationship diagrams, develop data models and to build applications with database management systems such as MS Access and SQL. Techniques are examined and applied to realistic business problems through hands-on exercises and projects.

Term:

Offered Both Fall and Spring

- **ISOM-424 IS Strategy, Management and Acquisition**

Prerequisites:

ISOM-313, ISOM-314, and ISOM-423 and at least 84 credits

Credits:

3.00

Description:

Explores the issues and approaches in managing the information systems function in organizations and how the IS function integrates/supports/enables various types of organizational capabilities. It takes a management perspective in exploring the acquisition, development, and implementation of plans and policies to achieve efficient and effective information systems. The course addresses issues relating to defining the high level IS infrastructure and the systems that support the operational, administrative, and strategic needs of the organization. The remainder of the course is focused on developing an intellectual framework that will allow leaders of organizations to critically assess existing IS infrastructures and emerging technologies as well as how these enabling technologies might affect organizational strategy. The ideas developed and cultivated in this course are intended to provide an enduring perspective that can help leaders make sense of an increasingly globalized and technology intensive business environment.

Term:

Offered Both Fall and Spring

- **ISOM-440 ERP System & Process Reengineering**

Prerequisites:

ISOM-210(formerly ISOM-310) and at least 54 credits

Credits:

3.00

Description:

Provides a conceptual, as well as, a mechanical understanding of enterprise integration and enterprise software, business process reengineering and strategies for maximizing benefits from enterprise systems. Students learn to examine complex issues in organizational changes including implementation challenge; risks, costs, and benefits; learning and knowledge management. Hands-on lab projects on the ERP System (provided by SAP) are utilized to reinforce understanding of important enterprise systems and business process concepts. This course is part of the SAP Student Recognition Certificate Program.

Term:

Offered Spring Term

- **ISOM-510 Independent Study in IS & OM**

Prerequisites:

ISOM-210(formerly ISOM-310) or ISOM-201 and Instructor Permission

Credits:

1.00- 3.00

Description:

Independent study allows students to expand their classroom experience by completing research in an area of interest not already covered by Suffolk courses. The student designs a unique project and finds a full-time faculty member with expertise in that topic who agrees to sponsor it and provide feedback as the proposal is refined. A well designed and executed research project broadens and/or deepens learning in a major or minor area of study and may also enhance a student's marketability to potential future employers. Students cannot register for an Independent Study until a full proposal is approved by the faculty sponsor, department chair, and academic dean. Many Independent study proposals require revisions before approval is granted; even with revisions independent study approval is NOT guaranteed. Students are strongly encouraged to submit a proposal in enough time to register for a different course if the proposal is not accepted. For complete instructions, see the SBS Independent/Directed Study Agreement and Proposal form available online.

For more information, please contact Information Systems and Operations Management Department, ISOM@suffolk.edu or 617-573-8331

2015-2016 Archived Catalog Information

Information Systems

In a global economy where firms are more interconnected, they are also more exposed to rapid changing market conditions globally. Providing timely and accurate information to the appropriate personnel to enable responsive business decision making becomes the key to the future.

Increasingly, firms are leveraging advanced technologies to manage sophisticated operations in supply chains and to manage the flood of information from around the world. However, to gain a sustainable competitive advantage, firms must also rely on professionals who can manage these complex systems of information and operations worldwide to make innovative and prudent business decisions.

Demand for skilled professionals with information systems and operations management knowledge is growing fast. These professionals utilize their business background and technical skills to research innovative ways for value-creation opportunities in business operations, assessing risks and benefits of these options, and manage systems of technological tools to enable the changes needed to realize these values.

The Information Systems and Operations Management Department prepares you with the foundation knowledge and analytical skills needed to launch your career. You will be able to manage the efficient flows of information, materials, and services in matching supply with demand to create value for businesses as well as their customers.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

Big Data and Business Analytics Concentration

For students in IS Major only. To receive this concentration, an IS major must take the following three courses as their major electives

- **ISOM-130 Data Science and Analytics**

Prerequisites:

ENT-101(formerly SBS-101)

Credits:

3.00

Description:

Provides students with a comprehensive introduction to the core concepts, applications and tools of data acquisition, preparation, querying, analytics, and data management. Students gain hands-on experience using real data to perform these functions. Topics include: data life cycle, big data, analytics, data collection, preparation, organization and storage, aggregation and summary, and presentation/visualization. Students use tools such as MS Excel, MS Access, SQL, and SAS Visual Analytics.

Term:

Offered Both Fall and Spring

- **ISOM-230 Big Data, Business Intelligence and Analytics**

Prerequisites:

STATS-240 or STATS-250 or Instructor Permission

Credits:

3.00

Description:

Provides an understanding of the business potential of big data; how to build and maintain data warehouses, and how to analyze and use this data as a source for business intelligence and competitive advantage. Students study data mining concepts and the use of analytics tools and methods for producing business knowledge. Topics include: extraction, transformation and loading; decision support systems; analytics , text, web and data mining models as well as data presentation/visualization including dashboards, cockpits and scorecards. Students build a data warehouse and practice the extraction and filtering process used to produce high quality data warehouses. Students will use tools such as MS Excel, MicroStrategy (Salesforce), SQL and SAP Business Warehouse.

Term:

Offered Both Fall and Spring

- **ISOM-330 Applied Predictive Analytics**

Prerequisites:

ISOM-130, ISOM-230, and STATS-240 or STATS-250 or Instructor Permission

Credits:

3.00

Description:

When companies make decisions, they do so with the future in mind and essentially are predicting that their decisions will achieve desired results. Predictive analytics allow people to ask and answer questions that can predict demand and/or outcomes and obtain results that lead to reasoned action. This course develops students' capability in applying the core concepts and techniques of predictive analytics for opportunity identification and risk assessment within the context of organizational decision-making. Students will use data-driven approaches to develop predictive analytical models. Students will create and use data models and techniques, apply trendlines to fit models to data, perform what-if analysis, construct data tables, evaluate scenarios, apply forecasting techniques, simulation and risk analysis. Students will learn to use various presentation and visualization tools to communicate results. Topics include: predictive analytics life cycle, opportunity/issue identification, data preparation, modeling, analysis, forecasting, simulation, risk assessment, and operationalization of predictive analytics. Students will use tools such as MS Excel, SPSS and SAS Visual Analytics.

Term:

Offered Both Fall and Spring

Web Design Concentration

This concentration is for College of Arts & Sciences students who want an educational foundation and skills to design, develop, and implement Web-based media applications.

College of Arts & Sciences Students (3 courses, 9 credits)

Two introductory classes (6 credits):

- **ISOM-212 Web Design**

Credits:

3.00

Description:

Introduces the concepts, vocabulary, and procedures associated with website and mobile application design. Includes modules on website evaluation, information architecture, customer and task analysis, usability testing, typography, color composition, screen layout, and navigation design, and digital content editing. Also covers important web design themes such as accessibility, globalization, personalization and trust. Students gain hands-on design experience using an assortment of readily available development tools such as Wix, Yapp, and Microsoft's Expression Web software.

Term:

Offered Fall Term

- **ISOM-244 Web Application Development**

Credits:

3.00

Description:

Equips students with the principles, methodology and skills required to define, develop and deploy a fully functional dynamic web application. Students learn to customize the content, appearance, and delivery of their website using industry-standard web development tools. Class discussion will focus on web development issues for organizations as well as the role played by development tools such as HTML5, CSS3, and PHP scripting. Each class will include hands-on lab work. A term project is used to wrap the course content together.

Term:

Offered Spring Term

Select one advanced class (3 credits):

- **ISOM-215 Mobile App Development**

Credits:

3.00

Description:

Provides a comprehensive introduction to mobile app technology and design concepts. This is an introductory course and assumes no prior programming experience. Students learn how to design, build, and optimize cross-platform mobile app using HTML5 standards. Students will also learn how to convert HTML5 apps into native apps for various mobile platforms. Students use CSS3, JavaScript and several JavaScript frameworks and techniques such as jQuery, jQuery Mobile, and AJAX. In addition, students will use Web services, such as Google Maps, and Web Application Programming Interfaces (Web APIs) to integrate content into their apps.

Term:

Offered Fall Term

- **ISOM-313 Systems Analysis & Design**

Prerequisites:

ISOM-210(formerly ISOM-310)

Credits:

3.00

Description:

Covers the concepts, techniques and tools used in the analysis and design of business information systems. Topics include: the system development cycle, modeling, prototyping and project management. Additionally, the course focuses upon using Object Oriented analysis and design techniques including the UML. Emphasizes the analysis of business operations as well as the interaction between information systems professionals and end-users. A term project applying these concepts and techniques is required.

Term:

Offered Both Fall and Spring

- **ISOM-314 Object Oriented Programming**

Credits:

3.00

Description:

Develops problem solving and basic programming skills through a variety of business application assignments. Introduces fundamental control and data structures using the Java programming language. Students learn about the concepts of object-oriented / event-driven programming principles. The course builds skills in the areas of programming logic, Class and Object concepts, and system development. Testing and debugging techniques and the writing of well-structured code are emphasized.

Term:

Offered Both Fall and Spring

- **ISOM-331 Global Electronic Commerce**

Prerequisites:

ISOM-210(formerly ISOM-310)

Credits:

3.00

Description:

Examines the role of e-commerce and e-business in the global business environment. Considers user, technological, strategic, economic, social, and cultural factors in the development and deployment of effective websites and mobile applications. Students discuss readings and cases to examine current e-commerce situations, opportunities, and challenges. Students develop websites to simulate collaboration and competition among online businesses.

Term:

Offered Fall Term

- **ISOM-340 Security & Privacy**

Prerequisites:

ISOM-210(formerly ISOM-310) and at least 54 credits

Credits:

3.00

Description:

Introduces the basics of information security & privacy including the legal and ethical issues. Common types of computer attacks and counter-attacks are addressed. Security technologies such as biometrics, firewalls, intrusion detection systems and cryptography systems will be analyzed and several lab exercises on the same are used to connect theory to practice. Best practices for planning and auditing security and privacy will also be covered.

Term:

Offered Fall Term

For more information, please contact Information Systems and Operations Management Department, ISOM@suffolk.edu or 617-573-8331.

- CI-108 Designing the Next Best Thing

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Demystifies the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking.

Term:

Offered Both Fall and Spring

Type:

Creativity and Innovation

- **ISOM-120 Information Technology and Productivity**

Credits:

3.00

Description:

This course provides a comprehensive introduction to information technology and information systems concepts. Students learn the importance of modern information technologies in the workplace. The course covers technology resources of the digital age, such as computer software, hardware, communication, database and telecommunication systems. Students also learn to increase productivity through the integration and use of productivity software applications, such spreadsheets, presentation software and databases. In addition, students learn the fundamental concepts of database design and relational database management systems (DBMS) such as Microsoft access.

Term:

Offered Both Fall and Spring

- **ISOM-H120 Honors Information Technology and Productivity**

Prerequisites:

Griffin Fellows Honors Students Only; GPA of 3.2

Credits:

3.00

Description:

OPEN TO GRIFFIN FELLOWS AND HONOR STUDENTS ONLY GPA of 3.2 or above required.

Term:

Offered Fall Term

Type:

Honors

• **ISOM-130 Data Science and Analytics**

Prerequisites:

ENT-101(formerly SBS-101)

Credits:

3.00

Description:

Provides students with a comprehensive introduction to the core concepts, applications and tools of data acquisition, preparation, querying, analytics, and data management. Students gain hands-on experience using real data to perform these functions. Topics include: data life cycle, big data, analytics, data collection, preparation, organization and storage, aggregation and summary, and presentation/visualization. Students use tools such as MS Excel, MS Access, SQL, and SAS Visual Analytics.

Term:

Offered Both Fall and Spring

- **ISOM-H130 Honors Data Science and Analytics**

Prerequisites:

ENT-101(formerly SBS-101) and at least 3.3 GPA

Credits:

3.00

Description:

Provides students with a comprehensive introduction to the core concepts, applications and tools of data acquisition, preparation, querying, analytics, and data management. Students gain hands-on experience using real data to perform these functions. Topics include: data life cycle, big data, analytics, data collection, preparation, organization and storage, aggregation and summary, and presentation/visualization. Students use tools such as MS Excel, MS Access, SQL, and SAS Visual Analytics.

Term:

Offered Both Fall and Spring

Type:

Honors

- **ISOM-201 Data and Decisions Analysis**

Prerequisites:

MATH-128 or higher and STATS-240 or STATS 250.

Credits:

3.00

Description:

Introduces fundamental quantitative methods of using data to make informed management decisions. Topics include: decision modeling, decision analysis, regression, forecasting, optimization, and simulation, as it applies to the study and analysis of business problems for decision support in finance, marketing, service, and manufacturing operations. Practical business cases and examples drawn from finance, marketing, operations management, and other management areas are used to provide students with a perspective on how management science is used in practice. Excel spreadsheets are used extensively to implement decision models.

Term:

Offered Both Fall and Spring

- **ISOM-H201 Honors Data & Decisions Analysis**

Prerequisites:

MATH-128 or higher and STATS-240 or STATS-250 and at least a 3.3 GPA

Credits:

3.00

Term:

Offered Fall Term

Type:

Honors

- **ISOM-210 Management Information Systems**

Prerequisites:

WRI-101 and ENT-101 and at least 24 completed credits

Credits:

3.00

Description:

Examines the rise of information-enabled enterprises and the role of information technologies/information systems (IT/IS) and e-commerce as key enablers of businesses and social changes globally. Topics include: the effective application of IT/IS to support strategic planning, managerial control, operations and business process integration in the digital economy, IT/IS related issues of ethics, and piracy and security in the information society.

Term:

Offered Both Fall and Spring

- **ISOM-H210 Honors Management Info System**

Prerequisites:

WRI-101 or WRI-103 and ENT-101 and at least a 3.3 GPA

Credits:

3.00

Description:

Examines the rise of information-enabled enterprises and the role of information technologies/information systems (IT/IS) and e-commerce as key enablers of businesses and social changes globally. Topics include: the effective application of IT/IS to support strategic planning, managerial control, operations and business process integration in the digital economy, IT/IS related issues of ethics, and piracy and security in the information society.

Term:

Offered Fall Term

- **ISOM-230 Big Data, Business Intelligence and Analytics**

Prerequisites:

STATS-240 or STATS-250 or Instructor Permission

Credits:

3.00

Description:

Provides an understanding of the business potential of big data; how to build and maintain data warehouses, and how to analyze and use this data as a source for business intelligence and competitive advantage. Students study data mining concepts and the use of analytics tools and methods for producing business knowledge. Topics include: extraction, transformation and loading; decision support systems; analytics , text, web and data mining models as well as data presentation/visualization including dashboards, cockpits and scorecards. Students build a data warehouse and practice the extraction and filtering process used to produce high quality data warehouses. Students will use tools such as MS Excel, MicroStrategy (Salesforce), SQL and SAP Business Warehouse.

Term:

Offered Both Fall and Spring

- **ISOM-231 Automatic for the People: Turn Data Into Insight/W R~python**

Prerequisites:

STATS-240 or STATS-250

Credits:

3.00

Description:

Introduces a detailed overview of statistical learning for data mining, inference, and prediction in order to tackle modern-day data analysis problems. This course is appropriate for students who wish to learn and apply statistical learning tools to analyze data and gain valuable hands-on experience with R. Statistical learning refers to a vast set of tools for modeling and understanding complex datasets. Exciting topics include: Regression, Logistic Regression, Linear Discriminant Analysis, Cross-Validation, Bootstrap, Linear/Non-Linear Model Selection and Regularization, Support Vector Methodology, and Unsupervised Learning via Principal Components Analysis and Clustering Methods. Students learn how to implement each of the statistical learning methods using the popular statistical software package R via hands-on lab sessions.

Term:

Offered Fall Term

- **ISOM-244 Web Application Development**

Credits:

3.00

Description:

Equips students with the principles, methodology and skills required to define, develop and deploy a fully functional dynamic web application. Students learn to customize the content, appearance, and delivery of their website using industry-standard web development tools. Class discussion will focus on web development issues for organizations as well as the role played by development tools such as HTML5, CSS3, and PHP scripting. Each class will include hands-on lab work. A term project is used to wrap the course content together.

Term:

Offered Spring Term

• ISOM-301 Business Analysis for Management

Prerequisites:

Take MGT-317 and junior status

Credits:

3.00

Description:

This course provides students with exposure to the business analysis models and techniques generally applicable to common business problems. Using the case study method, the course will emphasize analytical models including forecasting, optimization and simulation within the context of team-based work. Students will understand the process of Business Analysis (BA), the role of assumptions and elicitation, the critical value of hard analytical skills as the foundation of BA as well as the importance of interpretation, communication and implementation to the effective use of BA.

• ISOM-310 Management Information Systems

Prerequisites:

WRI 102 or SBS 220; and at least 45 completed credits

Credits:

3.00

Description:

This course examines the rise of information-enabled enterprises and the role of information technologies/information systems (IT/IS) and e-commerce as key enablers of businesses and social changes globally. The effective application of IT/IS to support strategic planning, managerial control, operations and business process integration in the digital economy is covered. The course also examines the IT/IS related issues of ethics, privacy, piracy and security in the information society.

Term:

Offered Both Fall and Spring

- **ISOM-H310 Honors Management Info System**

Prerequisites:

WRI 102; Junior standing; 3.3 GPA

Credits:

3.00

Description:

OPEN TO GRIFFIN FELLOWS AND HONOR STUDENTS ONLY GPA of 3.2 or above required.

Term:

Offered Fall Term

Type:

Honors

- **ISOM-313 Systems Analysis & Design**

Prerequisites:

ISOM-210(formerly ISOM-310)

Credits:

3.00

Description:

Covers the concepts, techniques and tools used in the analysis and design of business information systems. Topics include: the system development cycle, modeling, prototyping and project management. Additionally, the course focuses upon using Object Oriented analysis and design techniques including the UML. Emphasizes the analysis of business operations as well as the interaction between information systems professionals and end-users. A term project applying these concepts and techniques is required.

Term:

Offered Both Fall and Spring

• ISOM-314 Object Oriented Programming

Credits:

3.00

Description:

Develops problem solving and basic programming skills through a variety of business application assignments. Introduces fundamental control and data structures using the Java programming language. Students learn about the concepts of object-oriented / event-driven programming principles. The course builds skills in the areas of programming logic, Class and Object concepts, and system development. Testing and debugging techniques and the writing of well-structured code are emphasized.

Term:

Offered Both Fall and Spring

• ISOM-315 Mobile App Development

Credits:

3.00

Description:

This course provides a comprehensive introduction to mobile app technology and design concepts. Students learn how to design, build, and optimize cross-platform mobile app using HTML5 standards. Students use CSS3, JavaScript and several JavaScript frameworks and techniques such as jQuery, jQuery Mobile, and AJAX. In addition, students will use Web services, such as Google Maps, and Web Application Programming Interfaces

(Web APIs) to integrate content into their apps. Students will learn how to convert HTML5 apps into native apps for various mobile platforms. This is an introductory course and assumes no prior programming experience.

Term:

Offered Spring Term

• ISOM-319 Operations Management

Prerequisites:

ENT-101(formerly SBS 101) and ISOM-201 and at least 54 credits

Credits:

3.00

Description:

Introduces concepts and tools for managing operations in service/ manufacturing organizations where inputs such as raw material, labor, or other resources into finished services and/or goods. Strategic and tactical issues of operations management (OM), including: operations strategy, product and process design, capacity planning, quality management, inventory management, queueing theory and work force management are addressed. Quantitative models, analytical tools and case studies are used to analyze operational problems that business managers face in both local and global settings.

Term:

Offered Both Fall and Spring

• ISOM-H319 Honors Operations Management

Prerequisites:

ENT-101(formerly SBS-101), ISOM-201, at least a 3.3 GPA, and at least 54 credits

Credits:

3.00

Description:

Introduces concepts and tools for managing operations in service/ manufacturing organizations where inputs such as raw material, labor, or other resources into finished services and/or goods. Strategic and tactical issues of operations management (OM), including: operations strategy, product and process design, capacity planning, quality management, inventory management, queueing theory and work force management are addressed. Quantitative models, analytical tools and case studies are used to analyze operational problems that business managers face in both local and global settings.

Term:

Offered Spring Term

Type:

Honors

- **ISOM-330 Applied Predictive Analytics**

Prerequisites:

ISOM-130, ISOM-230, and STATS-240 or STATS-250 or Instructor Permission

Credits:

3.00

Description:

When companies make decisions, they do so with the future in mind and essentially are predicting that their decisions will achieve desired results. Predictive analytics allow people to ask and answer questions that can predict demand and/or outcomes and obtain results that lead to reasoned action. This course develops students' capability in applying the core concepts and techniques of predictive analytics for opportunity identification and risk assessment within the context of organizational decision-making. Students will use data-driven approaches to develop predictive analytical models. Students will create and use data models and techniques, apply trendlines to fit models to data, perform what-if analysis, construct data tables, evaluate scenarios, apply forecasting techniques, simulation and risk analysis. Students will learn to use various presentation and visualization tools to communicate results. Topics include: predictive analytics life cycle, opportunity/issue identification, data preparation, modeling, analysis, forecasting, simulation, risk assessment, and operationalization of predictive analytics. Students will use tools such as MS Excel, SPSS and SAS Visual Analytics.

Term:

Offered Both Fall and Spring

• ISOM-331 Global Electronic Commerce

Prerequisites:

ISOM-210(formerly ISOM-310)

Credits:

3.00

Description:

Examines the role of e-commerce and e-business in the global business environment. Considers user, technological, strategic, economic, social, and cultural factors in the development and deployment of effective websites and mobile applications. Students discuss readings and cases to examine current e-commerce situations, opportunities, and challenges. Students develop websites to simulate collaboration and competition among online businesses.

Term:

Offered Fall Term

• ISOM-340 Security & Privacy

Prerequisites:

ISOM-210(formerly ISOM-310) and at least 54 credits

Credits:

3.00

Description:

Introduces the basics of information security & privacy including the legal and ethical issues. Common types of computer attacks and counter-attacks are addressed. Security technologies such as biometrics, firewalls, intrusion detection systems and cryptography systems will be analyzed and several lab exercises on the same are used to connect theory to practice. Best practices for planning and auditing security and privacy will also be covered.

Term:

Offered Fall Term

- **ISOM-341 Project Management**

Credits:

3.00

Description:

Provides a comprehensive introduction to project management. Projects provide businesses a time-delimited tool for improving, expanding, and innovating - the primary means for converting strategy into action. Project management success differentiates top performing firms. The course will focus on discussion and analysis of business situations that convey core project management skills. In particular, this course focuses on the challenge of managing projects in today's complex, high-pressure work environments. This course can be credited toward PMI Project Management Professional (PMP) certification.

Term:

Offered Spring Term

- **ISOM-414 Object-Oriented Programming Development with Java**

Prerequisites:

ISOM-314 and at least 54 credits or Instructor Permission

Credits:

3.00

Description:

This course introduces object-oriented programming (OOP) and development using the Java programming language. It covers the basics of OOP including class hierarchies, inheritance, objects, streams, constructors, and GUI components. The course also covers the design, development, and deployment of applets, web applications, and applications that are not deployed via the Internet. Several programming projects, which strengthen the understanding of object based and event driven programming, are required. By the end of the course, students will possess a strong working competency in object oriented programming using Java.

Term:

Offered Spring Term

- **ISOM-423 Database Management**

Prerequisites:

ISOM-210(formerly ISOM-310)

Credits:

3.00

Description:

Provides an understanding of the role of information and databases in information systems and their role as an organizational resource. Students learn to design databases using normalization and entity-relationship diagrams, develop data models and to build applications with database management systems such as MS Access and SQL. Techniques are examined and applied to realistic business problems through hands-on exercises and projects.

Term:

Offered Both Fall and Spring

- **ISOM-424 IS Strategy, Management and Acquisition**

Prerequisites:

ISOM-313, ISOM-314, and ISOM-423 and at least 84 credits

Credits:

3.00

Description:

Explores the issues and approaches in managing the information systems function in organizations and how the IS function integrates/supports/enables various types of organizational capabilities. It takes a management perspective in exploring the acquisition, development, and implementation of plans and policies to achieve efficient and effective information systems. The course addresses issues relating to defining the high level IS infrastructure and the systems that support the operational, administrative, and strategic needs of the organization. The remainder of the course is focused on developing an intellectual framework that will allow leaders of organizations to critically assess existing IS infrastructures and emerging technologies as well as how these enabling technologies might affect organizational strategy. The ideas developed and cultivated in this course are intended to provide an enduring perspective that can help leaders make sense of an increasingly globalized and technology intensive business environment.

Term:

Offered Both Fall and Spring

- **ISOM-440 ERP System & Process Reengineering**

Prerequisites:

ISOM-210(formerly ISOM-310) and at least 54 credits

Credits:

3.00

Description:

Provides a conceptual, as well as, a mechanical understanding of enterprise integration and enterprise software, business process reengineering and strategies for maximizing benefits from enterprise systems. Students learn to examine complex issues in organizational changes including implementation challenge; risks, costs, and benefits; learning and knowledge management. Hands-on lab projects on the ERP System (provided by SAP) are utilized to reinforce understanding of important enterprise systems and business process concepts. This course is part of the SAP Student Recognition Certificate Program.

Term:

Offered Spring Term

- **ISOM-445 Big Data and Analytics**

Prerequisites:

ISOM 201; ISOM 310; ISOM 423 is recommended; Junior standing

Credits:

3.00

Description:

This course provides an understanding of the business potential of big data and analytics, data warehousing, how to build and maintain data warehouses, and how to use data warehouses for business advantage and as a source for business intelligence. Business intelligence refers to the use of analytical software tools to analyze big data or complex information about an organization and its competitors for use in business planning and

decision-making. In building data warehouses, students will learn the inter-relationships between operation, decision support systems, strategy and the extraction and filtering process used to produce a high quality data warehouse. Data mining concepts and the use of data mining tools and methods for decision-making and for producing business intelligence is presented. Additionally, the concept of building dashboards and other visualization techniques to present data will be covered.

Term:

Offered Fall Term

- **ISOM-510 Independent Study in IS & OM**

Prerequisites:

ISOM-210(formerly ISOM-310) or ISOM-201 and Instructor Permission

Credits:

1.00- 3.00

Description:

Independent study allows students to expand their classroom experience by completing research in an area of interest not already covered by Suffolk courses. The student designs a unique project and finds a full-time faculty member with expertise in that topic who agrees to sponsor it and provide feedback as the proposal is refined. A well designed and executed research project broadens and/or deepens learning in a major or minor area of study and may also enhance a student's marketability to potential future employers. Students cannot register for an Independent Study until a full proposal is approved by the faculty sponsor, department chair, and academic dean. Many Independent study proposals require revisions before approval is granted; even with revisions independent study approval is NOT guaranteed. Students are strongly encouraged to submit a proposal in enough time to register for a different course if the proposal is not accepted. For complete instructions, see the SBS Independent/Directed Study Agreement and Proposal form available online.

- **ISOM-520 Information Systems Internship**

Prerequisites:

ISOM-210(formerly ISOM-310), 1 required ISOM major course, at least a 3.0 GPA, and Instructor Permission

Credits:

3.00

Description:

An internship may be used to satisfy the IS major practical experience requirement of a minimum of 150 hours of information systems/information technology experience. Most internships will exceed 150 hours and may be paid or unpaid. Prior approval of your position by the IS Practical Experience Coordinator is required. This is accomplished by completing the IS Practicum Approval Form with an internship description. The internship description includes the job description, the number of hours of work, the number of credits, grading criteria and any other requirements. Students should enroll in ISOM 520 prior to starting their internship. This is a graded course and cannot be used as a major elective. Students may decide to register for this free elective course as pass fail (see <http://www.suffolk.edu/business/departments/11704.php>). Prerequisites: Practical Experience Coordinator's Approval Required and Junior Standing, minimum ISOM GPA of 3.0, and minimum overall GPA of 2.5.

• ISOM-560 Information Systems Practicum

Prerequisites:

ISOM-210(formerly ISOM-310), 1 required ISOM major course, at least a 3.0 GPA, at least 54 credits, and Instructor Permission

Credits:

0.00

Description:

All Information Systems majors are required to complete 150 hours of information systems/information technology experience. The 150 hours of work experience may be obtained in one or more positions as an intern, part- or full-time employee or volunteer. Prior approval of your position by the IS Practical Experience Coordinator is required. This is accomplished by completing the IS Practicum Approval Form. Students should enroll in ISOM 560 no earlier than the semester when they expect to complete the 150 hours. Student should log their work tasks and accomplishments.

Prerequisites: Practical Experience Coordinator's Approval Required

Term:

Offered Both Fall and Spring

Leadership Minor for Business Students

The leadership minor blends leadership theories with experiential learning. In the classroom, students learn, as a leader, ways to create a positive culture and an engaged workforce, create and lead changes, and lead diverse multicultural teams. Outside the classroom, students will participate in leadership experiences provided by the Leadership Journey Program which can be completed over multiple years. Our leadership minor distinguishes itself from other programs in that the leadership theories taught in the classroom and the experiential learning with the Leadership Journey Program are highly integrated to maximize your leadership development.

Choose three of the following:*

- **MGT-301 Leading Change**

Prerequisites:

MGT 217 (formerly MGT 317)

Credits:

3.00

Description:

Change is constant in all industries and work settings. Accordingly there is constant demand for people who can understand the need for change, make complex, strategic and realistic change plans, and lead others through a successful implementation of a planned change. This lively case-based course will focus on managerial and leadership skill-building in the areas of change management through the careful and thorough analysis of

change-focused case studies. Students will be expected to conduct both individual and group-based analyses of complex business cases; including the preparation of written case analyses, active participation in case discussions, and delivery of case analyses through oral presentation.

Term:

Offered Both Fall and Spring

- **MGT-322 Managing Diversity in the Workplace**

Prerequisites:

MGT 217 (formerly MGT 317) or Instructor's consent required; Junior standing

Credits:

3.00

Description:

This course explores multicultural diversity in business organizations. In order to learn to effectively manage diversity in the workplace, it is first necessary to become familiar with the concepts and dynamics that underlie many of the organizational issues associated with increased diversity in the workplace. Thus, this course is structured to first study topics such as identity, perception, socialization, stereotyping, and prejudice. With these concepts as a foundation, we will explore the opportunities and challenges created by diversity in the workplace. We will consider issues and dynamics that arise in the workplace as a result of diversity in terms of gender, race, national origin, sexual orientation, and religion. After developing a rich understanding of workplace diversity dynamics, we will consider actions that individuals and organizations can take to address the opportunities and challenges inherent in a diverse workforce to gain competitive advantage. .

Term:

Offered Both Fall and Spring

- **MGT-333 Bldg. a Positive Organization**

Prerequisites:

MGT 217 (formerly MGT 317)

Credits:

3.00

Description:

From store or restaurant managers to regional directors to executives of large corporations, you as a leader must learn how to create a positive work environment for your employees so that they can flourish, become resilient in the face of adversity, and achieve extraordinary performance. In this course, you will learn concepts fundamental to building a positive culture, such as social learning, reciprocity, supportive communication, and forgiveness, gratitude and compassion. These concepts will then be applied to a variety of management issues, such as building core values and mission statements, designing a standardized hiring process, creating a sustainable training and staff development program, developing onboarding experiences, enhancing organizational communication, conducting performance evaluations and critical conversations, and managing organizational change.

• MGT-520 Management Internship

Prerequisites:

MGT 217 (formerly MGT 317); Management Major; Junior or Senior standing; 3.0 GPA; Instructor consent required; Cannot take this course concurrent with any other internship course

Credits:

3.00

Description:

MGT 520 is an internship course which offers students the opportunity to apply knowledge and skills acquired in management courses to a valuable work experience outside the University. Interns practice using management principles in a carefully selected real world work situation under the direction of a faculty member, while completing academic requirements intended to integrate theory and practice. Students can also use the internship to explore career interests. Sometimes building a relationship with an employer during an internship can lead to a job offer during school or after graduation.

Term:

Offered Both Fall and Spring

Required Courses:

• MGT-560 Leadership Journey Experience

Prerequisites:

Instructor consent required

Credits:

0.00

Description:

Suffolk University Student Leadership and Involvement Office oversees The Leadership Journey Program. The program is designed to develop student's leadership skills throughout their collegiate career at Suffolk University. Students are expected to experience all aspects of the cornerstones as they begin the Journey. After this exposure, students are encouraged to focus on the leadership activities in which they are more passionate. The Leadership Journey focuses on providing students with experiences in leadership, campus involvement and service. Students completing the Leadership Journey will have complemented their leadership course material with experiences in actual leadership situations.

- **MGT-360 Leadership 360 Practicum**

Prerequisites:

MGT 217 (formerly MGT 317); does not count toward the Management Major, nor the minor for BSBA students

Credits:

3.00

Description:

Leadership 360 Practicum provides a fundamental understanding of the principles of leadership and the core competencies, traits and behaviors that enable effective leadership. Students will conduct an in-depth self-examination of skills, abilities, personality, attitudes, values, and behaviors to increase self-awareness of their leadership competencies. Students will learn relevant leadership theories and introductory project management principles and techniques. They will apply leadership and project management skills in a mini-team project with a not-for-profit organization that seeks solutions to a specific challenge, leading to a project implementation plan. Students will present formally to the client; feedback to the presenters will reinforce their oral communication skills. This course is a requirement for all BSBA majors.

- **MGT-302 Developing Innovation Skills**

Credits:

3.00

Description:

This highly interactive and experiential course will help you to develop your creative skills for business and life success. Corporate leaders consider creativity [1] to be an essential skill. However, according to a recent Conference Board study [2], college graduates lack the creativity and innovation skills needed to succeed in the workplace. The Council on Competitiveness warns that companies that do not embrace innovation (and creativity) as a core business value will fall to global competition.[3] We will discuss meaning of life issues that will serve to clarify your thinking and help you align your values and belief-systems with what you do on a daily basis at work and throughout your life. A substantial body of evidence indicates that people tend to be more creative when working on projects that interest them, and most creative when passionately immersed in their endeavors. We will focus on enhancing creativity in the workplace to achieve defined organizational needs, to add economic value to the organization, and to create social value as well. We will also focus on helping you to understand and apply a wide array of creative processes and tools to develop your creative competencies and skills. We will use breakout groups, role plays, experiential exercises, and discussions to facilitate your learning. This course is an invitation to you to explore and define what you want to create in your life. [1] The Conference Board defines creativity/innovation as the ability to demonstrate originality, inventiveness in work, communicate new ideas to others, and integrate knowledge across disciplines. [2] Are They Ready To Work: Employers' Perspectives on the Basic Knowledge and Applied Skills of New Entrants to the 21st Century Workforce. 2006. [3] Innovate America: Thriving in a World of Challenge and Change. July, 2004. National Innovation Initiative, Council on Competitiveness.

Type:

Honors

- **MGT-334 Introduction to Business Analysis**

Prerequisites:

MGT 217 (formerly MGT 317)

Credits:

3.00

Description:

This course introduces students to the core functions and skills required to be a Business Analyst, an agent of change using a systematic approach to add value within an organization. Students will learn how to understand business needs and perspectives in order to develop effective and focused solutions to problems across the Business Solutions Life Cycle, from strategy through to operational results. Using case studies and exercises, this course provides an overview of business analysis, introduces key skills such as project definition, the role of assumptions, critical analytical skills, interpretation of information, communication and implementation.

• MGT-335 Managing Across Cultures

Prerequisites:

MGT 217 (formerly MGT 317)

Credits:

3.00

Description:

To what extent are our identities, ways of thinking, and behaving the products of our cultural environments? How do conceptions of motivation, leadership, decision making, negotiation, and ethics differ across cultures? How do expatriates settle abroad, and how do they re-enter the American life they are once so familiar? The purpose of this course is to examine the international context of management, specifically, the cross-cultural environment and how it shapes managers' and work organization members' experiences, roles and responsibilities.

Term:

Offered Both Fall and Spring

• MGT-360 Leadership 360 Practicum

Prerequisites:

MGT 217 (formerly MGT 317); does not count toward the Management Major, nor the minor for BSBA students

Credits:

3.00

Description:

Leadership 360 Practicum provides a fundamental understanding of the principles of leadership and the core competencies, traits and behaviors that enable effective leadership. Students will conduct an in-depth self-examination of skills, abilities, personality, attitudes, values, and behaviors to increase self-awareness of their leadership competencies. Students will learn relevant leadership theories and introductory project management principles and techniques. They will apply leadership and project management skills in a mini-team project with a not-for-profit organization that seeks solutions to a specific challenge, leading to a project implementation plan. Students will present formally to the client; feedback to the presenters will reinforce their oral communication skills. This course is a requirement for all BSBA majors.

• MGT-401 Negotiations

Prerequisites:

MGT 217 (formerly MGT 317); Junior standing

Credits:

3.00

Description:

This course is premised on the fact that whereas a manager needs analytical skills to discover optimal solutions to business problems, a broad array of negotiation skills is needed to implement these solutions. This experiential course is designed to improve your skills in all phases of negotiation: understanding prescriptive and descriptive negotiation theory as it applies to dyadic and multiparty negotiations, to buyer-seller transactions and the resolution of disputes, to the development of negotiation strategy, and to the management of integrative and distributive aspects of the negotiation process. The course is based on a series of simulated negotiations in a variety of contexts including one-on-one, multi-party, cross-cultural, third-party and team negotiations. Please note that given the experiential nature of the course, attendance is mandatory and will be strictly enforced beginning from the first class session.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

• MGT-419 Senior Capstone Project Course

Prerequisites:

ENT 101 (formerly SBS 101); MKT 210; MGT 217 (formerly MGT 317); ISOM 319; Management Majors and Minors only with 90 or more credits

Credits:

3.00

Description:

This capstone course allows students to integrate and apply their acquired knowledge in pro bono consulting projects under the supervision of a faculty mentor, coach and advisor. Course skills to be developed include project management, business communication, and action-oriented analysis. Students analyze real-world problems using primary and secondary research methods, identify feasible options for action, and make professional written and oral presentations to their client organization. An occasional Friday class may be required.

Term:

Offered Both Fall and Spring

• MGT-520 Management Internship

Prerequisites:

MGT 217 (formerly MGT 317); Management Major; Junior or Senior standing; 3.0 GPA; Instructor consent required; Cannot take this course concurrent with any other internship course

Credits:

3.00

Description:

MGT 520 is an internship course which offers students the opportunity to apply knowledge and skills acquired in management courses to a valuable work experience outside the University. Interns practice using management principles in a carefully selected real world work situation under the direction of a faculty member, while completing academic requirements intended to integrate theory and practice. Students can also use the internship to explore career interests. Sometimes building a relationship with an employer during an internship can lead to a job offer during school or after graduation.

Term:

Offered Both Fall and Spring

• MGT-H520 Honors Management Internship

Credits:

3.00

Description:

This course provides students an opportunity to apply management concepts and skills to problem solving in an organizational workplace setting. Students identify and organize their internship position and particular project (depending on area of interest) with assistance from faculty, as needed. Projects will vary in scope and content. Students are expected to be on the job for approximately 8 hours per week during the course of the semester.

Type:

Honors

- **MGT-560 Leadership Journey Experience**

Prerequisites:

Instructor consent required

Credits:

0.00

Description:

Suffolk University Student Leadership and Involvement Office oversees The Leadership Journey Program. The program is designed to develop student's leadership skills throughout their collegiate career at Suffolk University. Students are expected to experience all aspects of the cornerstones as they begin the Journey. After this exposure, students are encouraged to focus on the leadership activities in which they are more passionate. The Leadership Journey focuses on providing students with experiences in leadership, campus involvement and service. Students completing the Leadership Journey will have complemented their leadership course material with experiences in actual leadership situations. Legal Studies Minor for Business Students, 3 courses, 9 credits

Select three of the following courses in addition to completion of BLE 214 Principles of Business Law:

- BLE-315 Legal Lessons for Business Startups Organizations

Prerequisites:

BLE-215

Credits:

3.00

Description:

Examines the formation, strategic use, and financial implications of alternative forms of business organization, namely partnerships, corporations, trusts, subchapter corporations, and the new limited liability hybrids.

- **BLE-316 How to Insulate Your Business Against Lawsuits**

Prerequisites:

BLE 214

Credits:

3.00

Description:

One of the greatest threats to business is the potential for litigation. Lawsuits can seriously hurt profits and even lead to bankruptcy. Even when businesses win in court, they still lose, what with the cost of the legal defense and the possibility of adverse publicity and decreased consumer confidence. Managers need to know how to avoid the potential for litigation and be aware of the areas of their business that provide the greatest risks to their enterprise. This course covers common ways in which businesses can protect themselves from common lawsuits ranging from product defects to environmental and worker safety to employee discrimination and harassment. Students will learn how to establish systems that will put their companies ahead legally.

Term:

Offered Fall Term

- **BLE-317 Managing in the Global Legal Environment**

Prerequisites:

BLE 214

Credits:

3.00

Description:

Surveys the global legal environment of business. Emphasizes case analysis of topics such as: sovereignty, extraterritoriality, treaties, international contracts, arbitration, and the European Union. Explores the managerial and economic significance of these topics.

Term:

Offered Both Fall and Spring

- **BLE-318 Intro to Real Estate Principles**

Prerequisites:

BLE 214

Credits:

3.00

Description:

Introduces students to the concepts and principles of real estate. Enables students to understand the key components of each major real estate asset class including: residential, retail, commercial, industrial, hospitality, and properties. Students learn the range of professional players in the industry and what roles they play. Teaches basic elements of a Development Pro-forma Budget; Operating Pro-forma Budget; Sources and Uses Statement; and financial schedules. Utilizes textbook, case work, web based data sources, selected readings and field trips. Emphasizes practical application of the concepts taught, the use of current examples from the industry, and today's marketplace.

Term:

Offered Fall Term

- **BLE-319 Real Estate Development and Public Policy**

Prerequisites:

BLE 214

Credits:

3.00

Description:

This class builds on BLE-318 and explores the process of responding to the public procurement process, large shopping malls, the hospitality industry and office and retail mixed use projects. We also explore the phases of the real estate development process by investigating, Zoning and Variances, Project Review Committees, Community Benefit Packages, Historic Preservation issues and Environmental issues. Students will understand the complete development process and the role of all the stakeholders from this class. No changes to 318 summary.

Term:

Offered Spring Term

- **BLE-325 Global Business Ethics**

Prerequisites:

BLE-215, PHIL-119, PHIL-120, PHIL-123 or PHIL-127

Credits:

3.00

Description:

Surveys business ethics as they transcend the diverse perspectives of global business. Explores current global ethics standards and values, ethical challenges, controversies, convergence and trends. Students explore famous global business cases through films, websites and independent research. Emphasizes identification and resolution of global business ethical issues within the context of ethical decision-making and sustainability. Analyzes corporate social responsibility ; hence, transforming global business ethics through business.

Type:

Diverse Perspectives

- **BLE-510 Independent Study in Business**

Prerequisites:

Approval of Dept Chair or Dean

Credits:

3.00

Description:

Involves a student initiated written proposal to a willing and appropriate full-time faculty member for a directed study project. Normally this is for three credits and completed during one semester. Prior to registration, the faculty member and student must concur on a written proposal, which includes a reading list and description of requirements for grading of the final project.

Select three of the following courses in addition to completion of ENT 101 Business Foundations (formerly SBS 101) and BLE-214 Principles of Business Law:

- **BLE-215 Business Ethics and Law**

Credits:

3.00

Description:

Business ethics is applied ethics. Explores the roles and responsibilities of business in a global society. Teaches models of ethical decision-making that incorporate multiple points of view, including diverse cultural worldviews and legal perspectives. Addresses factors that contribute to and constrain ethical behavior in and by organizations. Students apply concepts to current business problems, such as anti-trust, accounting fraud, deceptive advertising, and environmental dumping.

Term:

- **BLE-321 Corporate Crime and Financial Fraud**

Credits:

3.00

Description:

Presents an in-depth study of corporate crime and financial fraud. Examines accounting devices and schemes employed to defraud stakeholders, failure of industry watchdogs, and the regulatory and legislative environment. Topics include: corporate governance, corporate finance, corporate compliance programs, ethical misconduct by outside legal, accounting, investment and banking professionals, Sarbanes Oxley Act, Foreign Corrupt Practices Act, Organizational Sentencing guidelines, mail fraud, wire fraud, money laundering, conspiracy, securities violations, qui tam litigation (whistleblowers) and financial accounting crimes.

- **BLE-322 Getting Government to Say 'yes!' to Business**

Prerequisites:

BLE-214

Credits:

3.00

Description:

Government can be a vital ally to business, as much as it can be a roadblock. Government sets the minimum standards for how society expects companies to deal with customers and each other. Businesses that do not recognize why government needs to be an integral part of their decision-making as opposed to an afterthought-- are doomed to fail. This course teaches students how to get government on their side.

- **BLE-323 Protect Your Brand: Using Intellectual Property Law to Win**

Prerequisites:

BLE-214

Credits:

3.00

Description:

As a growing number of firms choose to produce goods abroad, piracy, counterfeiting, and other acts that dilute their brands are becoming increasingly common. This course focuses on the legal and practical tools that entrepreneurs, start-ups, and existing business can use to protect their intellectual property (IP). It offers best practices on the strategic use of copyright, patent, trademark, and trade secrets to enhance corporate value in different industries and regions. The course provides a legal foundation in IP and demonstrates how to apply that knowledge to business through case analysis.

- **BLE-325 Global Business Ethics**

Prerequisites:

BLE-215, PHIL-119, PHIL-120, PHIL-123 or PHIL-127

Credits:

3.00

Description:

Surveys business ethics as they transcend the diverse perspectives of global business. Explores current global ethics standards and values, ethical challenges, controversies, convergence and trends. Students explore famous global business cases through films, websites and independent research. Emphasizes identification and resolution of global business ethical issues within the context of ethical decision-making and sustainability. Prior to registration, the faculty member and student must concur on a written proposal, which includes a reading list and description of requirements for grading of the final project.

2015-2016 Archived Catalog Information

Management

The management major is offered by the Management and Entrepreneurship Department. An important goal of the management curriculum is to develop the student's awareness of the types of general problems faced by managers and to promote an understanding of the concepts and tools available for solving them. The curriculum focuses on the principles and practices of planning, organizing, evaluating and decision making as they are currently being applied in profit and non-profit organizations, in the U.S. and around the world.

The highly competitive nature of business places a premium on effective communication, teamwork, leadership, and effectively managing in an international context. Our graduates pursue successful management careers in a variety of organizations; many further their studies by enrolling in MBA programs at Suffolk University or other institutions.

The management major focuses on broad managerial issues in established corporations, whether large or small. Its goal is to provide students with a flexible background that will allow them to operate effectively within this environment.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

Management Major Requirements

The management major consists of a minimum of 18 credits, which include three required courses and at least three elective courses, all taken at Suffolk University.

Required Courses, 3 Courses, 9 Credits

- MGT-335 Managing Across Cultures

Prerequisites:

MGT 217 (formerly MGT 317)

Credits:

3.00

Description:

To what extent are our identities, ways of thinking, and behaving the products of our cultural environments? How do conceptions of motivation, leadership, decision making, negotiation, and ethics differ across cultures? How do expatriates settle abroad, and how do they re-enter the American life they are once so familiar? The purpose of this course is to examine the international context of management, specifically, the cross-cultural environment and how it shapes managers' and work organization members' experiences, roles and responsibilities.

Term:

Offered Both Fall and Spring

• MGT-401 Negotiations

Prerequisites:

MGT 217 (formerly MGT 317); Junior standing

Credits:

3.00

Description:

This course is premised on the fact that whereas a manager needs analytical skills to discover optimal solutions to business problems, a broad array of negotiation skills is needed to implement these solutions. This experiential course is designed to improve your skills in all phases of negotiation: understanding prescriptive and descriptive negotiation theory as it applies to dyadic and multiparty negotiations, to buyer-seller transactions and the resolution of disputes, to the development of negotiation strategy, and to the management of integrative and distributive aspects of the negotiation process. The course is based on a series of simulated negotiations in a variety of contexts including one-on-one, multi-party, cross-cultural, third-party and team negotiations. Please note that given the experiential nature of the course, attendance is mandatory and will be strictly enforced beginning from the first class session.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **MGT-419 Senior Capstone Project Course**

Prerequisites:

ENT 101 (formerly SBS 101); MKT 210; MGT 217 (formerly MGT 317); ISOM 319; Management Majors and Minors only with 90 or more credits

Credits:

3.00

Description:

This capstone course allows students to integrate and apply their acquired knowledge in pro bono consulting projects under the supervision of a faculty mentor, coach and advisor. Course skills to be developed include project management, business communication, and action-oriented analysis. Students analyze real-world problems using primary and secondary research methods, identify feasible options for action, and make professional written and oral presentations to their client organization. An occasional Friday class may be required.

Term:

Offered Both Fall and Spring

Elective Courses, 3 Courses, 9 Credits

- **MGT-301 Leading Change**

Prerequisites:

MGT 217 (formerly MGT 317)

Credits:

3.00

Description:

Change is constant in all industries and work settings. Accordingly there is constant demand for people who can understand the need for change, make complex, strategic and realistic change plans, and lead others through a successful implementation of a planned change. This lively case-based

course will focus on managerial and leadership skill-building in the areas of change management through the careful and thorough analysis of change-focused case studies. Students will be expected to conduct both individual and group-based analyses of complex business cases; including the preparation of written case analyses, active participation in case discussions, and delivery of case analyses through oral presentation.

Term:

Offered Both Fall and Spring

- **MGT-302 Developing Innovation Skills**

Credits:

3.00

Description:

This highly interactive and experiential course will help you to develop your creative skills for business and life success. Corporate leaders consider creativity [1] to be an essential skill. However, according to a recent Conference Board study [2], college graduates lack the creativity and innovation skills needed to succeed in the workplace. The Council on Competitiveness warns that companies that do not embrace innovation (and creativity) as a core business value will fall to global competition.[3] We will discuss meaning of life issues that will serve to clarify your thinking and help you align your values and belief-systems with what you do on a daily basis at work and throughout your life. A substantial body of evidence indicates that people tend to be more creative when working on projects that interest them, and most creative when passionately immersed in their endeavors. We will focus on enhancing creativity in the workplace to achieve defined organizational needs, to add economic value to the organization, and to create social value as well. We will also focus on helping you to understand and apply a wide array of creative processes and tools to develop your creative competencies and skills. We will use breakout groups, role plays, experiential exercises, and discussions to facilitate your learning. This course is an invitation to you to explore and define what you want to create in your life. [1] The Conference Board defines creativity/innovation as the ability to demonstrate originality, inventiveness in work, communicate new ideas to others, and integrate knowledge across disciplines. [2] Are They Ready To Work: Employers' Perspectives on the Basic Knowledge and Applied Skills of New Entrants to the 21st Century Workforce. 2006. [3] Innovate America: Thriving in a World of Challenge and Change. July, 2004. National Innovation Initiative, Council on Competitiveness.

Term:

Summer

Type:

Creativity and Innovation

- **MGT-313 Global Human Resource Management**

Prerequisites:

ENT 101 (formerly SBS 101); Junior standing

Credits:

3.00

Description:

This course includes a study of the modern human resources department in industry with special emphasis on the techniques and methods of management, utilization of people, and contemporary human resource issues and problems.

Term:

Offered Fall Term

- **MGT-333 Bldg. a Positive Organization**

Prerequisites:

MGT 217 (formerly MGT 317)

Credits:

3.00

Description:

From store or restaurant managers to regional directors to executives of large corporations, you as a leader must learn how to create a positive work environment for your employees so that they can flourish, become resilient in the face of adversity, and achieve extraordinary performance. In this course, you will learn concepts fundamental to building a positive culture, such as social learning, reciprocity, supportive communication, and forgiveness, gratitude and compassion. These concepts will then be applied to a variety of management issues, such as building core values and mission statements, designing a standardized hiring process, creating a sustainable training and staff development program, developing onboarding experiences, enhancing organizational communication, conducting performance evaluations and critical conversations, and managing organizational change.

- **MGT-334 Introduction to Business Analysis**

Prerequisites:

MGT 217 (formerly MGT 317)

Credits:

3.00

Description:

This course introduces students to the core functions and skills required to be a Business Analyst, an agent of change using a systematic approach to add value within an organization. Students will learn how to understand business needs and perspectives in order to develop effective and focused solutions to problems across the Business Solutions Life Cycle, from strategy through to operational results. Using case studies and exercises, this course provides an overview of business analysis, introduces key skills such as project definition, the role of assumptions, critical analytical skills, interpretation of information, communication and implementation.

- **MGT-322 Managing Diversity in the Workplace**

Prerequisites:

MGT 217 (formerly MGT 317) or Instructor's consent required; Junior standing

Credits:

3.00

Description:

This course explores multicultural diversity in business organizations. In order to learn to effectively manage diversity in the workplace, it is first necessary to become familiar with the concepts and dynamics that underlie many of the organizational issues associated with increased diversity in the workplace. Thus, this course is structured to first study topics such as identity, perception, socialization, stereotyping, and prejudice. With these concepts as a foundation, we will explore the opportunities and challenges created by diversity in the workplace. We will consider issues and dynamics that arise in the workplace as a result of diversity in terms of gender, race, national origin, sexual orientation, and religion. After developing a rich understanding of workplace diversity dynamics, we will consider actions that individuals and organizations can take to address the opportunities and challenges inherent in a diverse workforce to gain competitive advantage. .

Term:

Offered Both Fall and Spring

- **MGT-330 Interpersonal Effectiveness**

Prerequisites:

ENT 101 (SBS 101) and Junior standing

Credits:

3.00

Description:

This course provides students with knowledge of and skills in interpersonal effectiveness. The course is designed to convey the importance of interpersonal skills in today's business climate. Students learn and develop interpersonal skills commonly required of supervisors/managers.

Term:

Offered Both Fall and Spring

- **MGT-520 Management Internship**

Prerequisites:

MGT 217 (formerly MGT 317); Management Major; Junior or Senior standing; 3.0 GPA; Instructor consent required; Cannot take this course concurrent with any other internship course

Credits:

3.00

Description:

MGT 520 is an internship course which offers students the opportunity to apply knowledge and skills acquired in management courses to a valuable work experience outside the University. Interns practice using management principles in a carefully selected real world work situation under the direction of a faculty member, while completing academic requirements intended to integrate theory and practice. Students can also use the internship to explore career interests. Sometimes building a relationship with an employer during an internship can lead to a job offer during school or after graduation.

Term:

Offered Both Fall and Spring

- **ENT-320 Growing and Managing the Firm**

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

How do you manage the day-to-day challenges of starting a new venture or working on a small business? This course is designed around problem-solving techniques that help you research the facts of a given situation, identify the problem, develop alternative solutions and defending the best solution. This course utilizes case analysis, role-plays, simulations, and other experiential lessons to help provide you with the knowledge and skills necessary to build and lead a new or innovative organization.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

• **ENT-337 Family Business II**

Prerequisites:

ENT-101 and at least 54 credits

Credits:

3.00

Description:

The business of the family business is just as critical as the family dynamics. This course focuses on issues related to adapting corporate-type managerial skills to family-owned and operated enterprises that typically reject such practices. The goals of this course include the development of a working knowledge of managing the family business, reinterpretation of corporate management concepts for the family business, and personal reflection on the roles and conditions of operating a family business.

• **ENT-352 Green and Sustainable Business**

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

Over the past decade, the world of business and the environment has exploded. Beginning as an engineering-driven movement among a handful of companies during the 1980's, many firms have learned that improved environment performance can save money and create a competitive advantage. In this course, we will cover how businesses of all sizes are more attentive to environmental issues and the realization that a green business: improves employee morale and health in the workplace, holds a marketing edge over the competition, strengthens the bottom line through operating efficiencies, is recognized as an environmental leader, can have a strong impact in the community and beyond, and can improve public relations.

Term:

Offered Spring Term

• ENT-354 Global Entrepreneurship

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

Do you want to know how to take advantage of our global economy? This course will leverage the knowledge acquired from other entrepreneurship and global courses coupled with an overview of the global economy every entrepreneur must compete in and how to transition your business models into real world opportunities. This course will discuss the entrepreneurial process from concept to product feasibility to venture launch answering the following question: How and when should an entrepreneur plan on competing in a global market?

Term:

Offered Both Fall and Spring

- **ENT-358 Designing New Products**

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

This course will focus on the steps that innovators/entrepreneurs need to follow that will take ideas and launch them into new products. This is accomplished by taking the concept directly to the prospective customers. This course will cover: creating specifications, product sell sheets, prototype development, drafting an executive summary, intellectual property protection, manufacturing and quality control considerations, identifying vendors, customers, and funding sources, and developing a marketing and sales plan for launching the product. During the semester, students will be required to interact with their potential customers, vendors and other key players for the launch.

Term:

Offered Both Fall and Spring

- **ENT-360 Launching the E-Business**

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

This experiential course is an entrepreneurial approach towards developing a real e-commerce business. Students will build off their marketing skills and entrepreneurial ambitions by a) advancing e-commerce ideas to opportunities, b) understanding the product, logistical, marketing, and managerial challenges associated with e-commerce startups, and c) developing financial models to predict and measure performance. This will be accomplished by students developing a launch plan for the opportunity, as well as executing portions of the launch plan.

Term:

Occasional

- **ENT-436 Managing the Family Business**

Prerequisites:

MGT-217(MGT 317), Junior standing,

Credits:

3.00

Description:

Are you interested in managing the family business and the challenges of succession between generations? If so, this course focuses on the challenges of adapting corporate-type managerial skills to family-owned and operated enterprises that typically reject such practices. The goals of this course include development of a working knowledge of managing the family business, reinterpretation of corporate management concepts for the family business, and personal reflection on the roles and conditions of operating a family business.

Term:

Offered Spring Term

- **ISOM-341 Project Management**

Credits:

3.00

Description:

Provides a comprehensive introduction to project management. Projects provide businesses a time-delimited tool for improving, expanding, and innovating - the primary means for converting strategy into action. Project management success differentiates top performing firms. The course will focus on discussion and analysis of business situations that convey core project management skills. In particular, this course focuses on the challenge of managing projects in today's complex, high-pressure work environments. This course can be credited toward PMI Project Management Professional (PMP) certification.

Term:

Offered Spring Term

*Students who receive a 77% or better in MGT-334 will receive an Academic Certificate in Business Analysis by IIBA.

Management

The management major is offered by the Management and Entrepreneurship Department. An important goal of the management curriculum is to develop the student's awareness of the types of general problems faced by managers and to promote an understanding of the concepts and tools available for solving them. The curriculum focuses on the principles and practices of planning, organizing, evaluating and decision making as they are currently being applied in profit and non-profit organizations, in the U.S. and around the world.

The highly competitive nature of business places a premium on effective communication, teamwork, leadership, and effectively managing in an international context. Our graduates pursue successful management careers in a variety of organizations; many further their studies by enrolling in MBA programs at Suffolk University or other institutions.

The management major focuses on broad managerial issues in established corporations, whether large or small. Its goal is to provide students with a flexible background that will allow them to operate effectively within this environment.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

Management Minor for Business Students

3 courses, 9 credits

Business students may choose to minor in general management by completing any three of the following:

- MGT-301 Leading Change

Prerequisites:

MGT 217 (formerly MGT 317)

Credits:

3.00

Description:

Change is constant in all industries and work settings. Accordingly there is constant demand for people who can understand the need for change, make complex, strategic and realistic change plans, and lead others through a successful implementation of a planned change. This lively case-based course will focus on managerial and leadership skill-building in the areas of change management through the careful and thorough analysis of change-focused case studies. Students will be expected to conduct both individual and group-based analyses of complex business cases; including the preparation of written case analyses, active participation in case discussions, and delivery of case analyses through oral presentation.

Term:

Offered Both Fall and Spring

• MGT-302 Developing Innovation Skills

Credits:

3.00

Description:

This highly interactive and experiential course will help you to develop your creative skills for business and life success. Corporate leaders consider creativity [1] to be an essential skill. However, according to a recent Conference Board study [2], college graduates lack the creativity and innovation skills needed to succeed in the workplace. The Council on Competitiveness warns that companies that do not embrace innovation (and creativity) as a core business value will fall to global competition.[3] We will discuss meaning of life issues that will serve to clarify your thinking and help you align your values and belief-systems with what you do on a daily basis at work and throughout your life. A substantial body of evidence indicates that people tend to be more creative when working on projects that interest them, and most creative when passionately immersed in their endeavors. We will focus on enhancing creativity in the workplace to achieve defined organizational needs, to add economic value to the organization, and to create social value as well. We will also focus on helping you to understand and apply a wide array of creative processes and tools to develop your creative competencies and skills. We will use breakout groups, role plays, experiential exercises, and discussions to facilitate your learning. This course is an invitation to you to explore and define what you want to create in your life. [1] The Conference Board defines creativity/innovation as the ability to demonstrate originality, inventiveness in work, communicate new ideas to others, and integrate knowledge across disciplines. [2] Are They Ready To Work: Employers' Perspectives on the Basic Knowledge and Applied Skills of New Entrants to the 21st Century Workforce. 2006. [3] Innovate America: Thriving in a World of Challenge and Change. July, 2004. National Innovation Initiative, Council on Competitiveness.

Term:

Summer

Type:

Creativity and Innovation

- **MGT-313 Global Human Resource Management**

Prerequisites:

ENT 101 (formerly SBS 101); Junior standing

Credits:

3.00

Description:

This course includes a study of the modern human resources department in industry with special emphasis on the techniques and methods of management, utilization of people, and contemporary human resource issues and problems.

Term:

Offered Fall Term

- **MGT-322 Managing Diversity in the Workplace**

Prerequisites:

MGT 217 (formerly MGT 317) or Instructor's consent required; Junior standing

Credits:

3.00

Description:

This course explores multicultural diversity in business organizations. In order to learn to effectively manage diversity in the workplace, it is first necessary to become familiar with the concepts and dynamics that underlie many of the organizational issues associated with increased diversity in

the workplace. Thus, this course is structured to first study topics such as identity, perception, socialization, stereotyping, and prejudice. With these concepts as a foundation, we will explore the opportunities and challenges created by diversity in the workplace. We will consider issues and dynamics that arise in the workplace as a result of diversity in terms of gender, race, national origin, sexual orientation, and religion. After developing a rich understanding of workplace diversity dynamics, we will consider actions that individuals and organizations can take to address the opportunities and challenges inherent in a diverse workforce to gain competitive advantage. .

Term:

Offered Both Fall and Spring

- **MGT-330 Interpersonal Effectiveness**

Prerequisites:

ENT 101 (SBS 101) and Junior standing

Credits:

3.00

Description:

This course provides students with knowledge of and skills in interpersonal effectiveness. The course is designed to convey the importance of interpersonal skills in today's business climate. Students learn and develop interpersonal skills commonly required of supervisors/managers.

Term:

Offered Both Fall and Spring

- **MGT-333 Bldg. a Positive Organization**

Prerequisites:

MGT 217 (formerly MGT 317)

Credits:

3.00

Description:

From store or restaurant managers to regional directors to executives of large corporations, you as a leader must learn how to create a positive work environment for your employees so that they can flourish, become resilient in the face of adversity, and achieve extraordinary performance. In this course, you will learn concepts fundamental to building a positive culture, such as social learning, reciprocity, supportive communication, and forgiveness, gratitude and compassion. These concepts will then be applied to a variety of management issues, such as building core values and mission statements, designing a standardized hiring process, creating a sustainable training and staff development program, developing onboarding experiences, enhancing organizational communication, conducting performance evaluations and critical conversations, and managing organizational change.

- **MGT-334 Introduction to Business Analysis**

Prerequisites:

MGT 217 (formerly MGT 317)

Credits:

3.00

Description:

This course introduces students to the core functions and skills required to be a Business Analyst, an agent of change using a systematic approach to add value within an organization. Students will learn how to understand business needs and perspectives in order to develop effective and focused solutions to problems across the Business Solutions Life Cycle, from strategy through to operational results. Using case studies and exercises, this course provides an overview of business analysis, introduces key skills such as project definition, the role of assumptions, critical analytical skills, interpretation of information, communication and implementation.

- **MGT-335 Managing Across Cultures**

Prerequisites:

MGT 217 (formerly MGT 317)

Credits:

3.00

Description:

To what extent are our identities, ways of thinking, and behaving the products of our cultural environments? How do conceptions of motivation, leadership, decision making, negotiation, and ethics differ across cultures? How do expatriates settle abroad, and how do they re-enter the American

life they are once so familiar? The purpose of this course is to examine the international context of management, specifically, the cross-cultural environment and how it shapes managers' and work organization members' experiences, roles and responsibilities.

Term:

Offered Both Fall and Spring

• MGT-401 Negotiations

Prerequisites:

MGT 217 (formerly MGT 317); Junior standing

Credits:

3.00

Description:

This course is premised on the fact that whereas a manager needs analytical skills to discover optimal solutions to business problems, a broad array of negotiation skills is needed to implement these solutions. This experiential course is designed to improve your skills in all phases of negotiation: understanding prescriptive and descriptive negotiation theory as it applies to dyadic and multiparty negotiations, to buyer-seller transactions and the resolution of disputes, to the development of negotiation strategy, and to the management of integrative and distributive aspects of the negotiation process. The course is based on a series of simulated negotiations in a variety of contexts including one-on-one, multi-party, cross-cultural, third-party and team negotiations. Please note that given the experiential nature of the course, attendance is mandatory and will be strictly enforced beginning from the first class session.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

• ENT-320 Growing and Managing the Firm

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

How do you manage the day-to-day challenges of starting a new venture or working on a small business? This course is designed around problem-solving techniques that help you research the facts of a given situation, identify the problem, develop alternative solutions and defending the best solution. This course utilizes case analysis, role-plays, simulations, and other experiential lessons to help provide you with the knowledge and skills necessary to build and lead a new or innovative organization.

Term:

Offered Both Fall and Spring

- **MGT-360 Leadership 360 Practicum**

Prerequisites:

MGT 217 (formerly MGT 317); does not count toward the Management Major, nor the minor for BSBA students

Credits:

3.00

Description:

Leadership 360 Practicum provides a fundamental understanding of the principles of leadership and the core competencies, traits and behaviors that enable effective leadership. Students will conduct an in-depth self-examination of skills, abilities, personality, attitudes, values, and behaviors to increase self-awareness of their leadership competencies. Students will learn relevant leadership theories and introductory project management principles and techniques. They will apply leadership and project management skills in a mini-team project with a not-for-profit organization that seeks solutions to a specific challenge, leading to a project implementation plan. Students will present formally to the client; feedback to the presenters will reinforce their oral communication skills. This course is a requirement for all BSBA majors.

• MGT-401 Negotiations

Leadership Concentration for Management Majors

The leadership concentration blends leadership theories with experiential learning. In the classroom, students learn, as a leader, ways to create a positive culture and an engaged workforce, create and lead changes, and lead diverse multi-cultural teams. Outside the classroom, students will participate in leadership experiences provided by the Leadership Journey Program which can be completed over multiple years. Our leadership concentration distinguishes itself from other programs in that the leadership theories taught in the classroom and the experiential learning with the Leadership Journey Program are highly integrated to maximize your leadership development.

- **MGT-302 Developing Innovation Skills**

Credits:

3.00

Description:

This highly interactive and experiential course will help you to develop your creative skills for business and life success. Corporate leaders consider creativity [1] to be an essential skill. However, according to a recent Conference Board study [2], college graduates lack the creativity and innovation skills needed to succeed in the workplace. The Council on Competitiveness warns that companies that do not embrace innovation (and creativity) as a core business value will fall to global competition.[3] We will discuss meaning of life issues that will serve to clarify your thinking and help you align your values and belief-systems with what you do on a daily basis at work and throughout your life. A substantial body of evidence indicates that people tend to be more creative when working on projects that interest them, and most creative when passionately immersed in their endeavors. We will focus on enhancing creativity in the workplace to achieve defined organizational needs, to add economic value to the organization, and to create social value as well. We will also focus on helping you to understand and apply a wide array of creative processes and tools to develop your creative competencies and skills. We will use breakout groups, role plays, experiential exercises, and discussions to facilitate your learning. This course is an invitation to you to explore and define what you want to create in your life. [1] The Conference Board defines creativity/innovation as the ability to demonstrate originality, inventiveness in work, communicate new ideas to others, and integrate knowledge across disciplines. [2] Are They Ready To Work: Employers' Perspectives on the Basic Knowledge and Applied Skills of New Entrants to the 21st Century Workforce. 2006. [3] Innovate America: Thriving in a World of Challenge and Change. July, 2004. National Innovation Initiative, Council on Competitiveness.

Term:

Summer

Type:

Creativity and Innovation

• MGT-313 Global Human Resource Management

Prerequisites:

ENT 101 (formerly SBS 101); Junior standing

Credits:

3.00

Description:

This course includes a study of the modern human resources department in industry with special emphasis on the techniques and methods of management, utilization of people, and contemporary human resource issues and problems.

Term:

Offered Fall Term

- **MGT-317 Organizational Behavior**

Prerequisites:

WRI-102 or WRI-103 or SBS-220 and ENT-101 and at least 45 credits

Credits:

3.00

Description:

This course explores the application of sociological, psychological and anthropological concepts in domestic and international business settings. Attention is given to the study of human behavior in organizational settings, the organization itself, human interaction, and small group process.

Term:

Offered Both Fall and Spring

- **MGT-H317 Honors in Organizational Behavior**

Prerequisites:

ENG 102,SOM 101 or MGT 101, must have completed 45 credits Honors section, GPA of 3.2 or higher

Credits:

3.00

Description:

This course explores the application of sociological, psychological and anthropological concepts in domestic and international business settings. Attention is given to the study of human behavior in organizational settings, the organization itself, human interaction, and small group process.

Term:

Occasional

Type:

- **MGT-320 Small Business Management**

Prerequisites:

ENT 101 (formerly SBS 101); Junior standing

Credits:

3.00

Description:

How do you manage the day-to-day challenges of working in a small business or starting a new venture? This case-driven course covers the role and importance of small business in the U.S. economy, including the application of all management functions to the operation of a small business; human resources, operations, financial, risk and growth. This course is designed around problem-solving techniques that help you research the facts of a given situation, identify the problem, develop alternative solutions and defending the best solution.

Term:

Offered Both Fall and Spring

- **MGT-322 Managing Diversity in the Workplace**

Prerequisites:

MGT 217 (formerly MGT 317) or Instructor's consent required; Junior standing

Credits:

3.00

Description:

This course explores multicultural diversity in business organizations. In order to learn to effectively manage diversity in the workplace, it is first necessary to become familiar with the concepts and dynamics that underlie many of the organizational issues associated with increased diversity in the workplace. Thus, this course is structured to first study topics such as identity, perception, socialization, stereotyping, and prejudice. With these concepts as a foundation, we will explore the opportunities and challenges created by diversity in the workplace. We will consider issues and dynamics that arise in the workplace as a result of diversity in terms of gender, race, national origin, sexual orientation, and religion. After developing a

rich understanding of workplace diversity dynamics, we will consider actions that individuals and organizations can take to address the opportunities and challenges inherent in a diverse workforce to gain competitive advantage. .

Term:

Offered Both Fall and Spring

• **MGT-330 Interpersonal Effectiveness**

Prerequisites:

ENT 101 (SBS 101) and Junior standing

Credits:

3.00

Description:

This course provides students with knowledge of and skills in interpersonal effectiveness. The course is designed to convey the importance of interpersonal skills in today's business climate. Students learn and develop interpersonal skills commonly required of supervisors/managers.

Term:

Offered Both Fall and Spring

• **MGT-331 Leadership**

Prerequisites:

MGT 217 (formerly MGT 317); Junior standing

Credits:

3.00

Description:

This course is designed to provide a fundamental understanding of the principles of leadership and the core competencies, traits and behaviors that enable effective leadership. It is an interactive, event-driven program to develop, refine and refresh leadership qualities through activities, individual assessments, coaching, research and dynamic group discussion to practice and develop individual skills. Students will examine various leadership

theories, identify styles and preferences, practice conflict management and team building, feedback and expectation setting by applying class room/real world situations to their own learning.

Term:

Offered Both Fall and Spring

- **MGT-333 Bldg. a Positive Organization**

Prerequisites:

MGT 217 (formerly MGT 317)

Credits:

3.00

Description:

From store or restaurant managers to regional directors to executives of large corporations, you as a leader must learn how to create a positive work environment for your employees so that they can flourish, become resilient in the face of adversity, and achieve extraordinary performance. In this course, you will learn concepts fundamental to building a positive culture, such as social learning, reciprocity, supportive communication, and forgiveness, gratitude and compassion. These concepts will then be applied to a variety of management issues, such as building core values and mission statements, designing a standardized hiring process, creating a sustainable training and staff development program, developing onboarding experiences, enhancing organizational communication, conducting performance evaluations and critical conversations, and managing organizational change.

- **MGT-H333 Building a Positive Organization**

Prerequisites:

MGT 217 (formerly MGT 317); 3.3 GPA

Credits:

3.00

Type:

Honors

- **MGT-334 Introduction to Business Analysis**

Prerequisites:

MGT 217 (formerly MGT 317)

Credits:

3.00

Description:

This course introduces students to the core functions and skills required to be a Business Analyst, an agent of change using a systematic approach to add value within an organization. Students will learn how to understand business needs and perspectives in order to develop effective and focused solutions to problems across the Business Solutions Life Cycle, from strategy through to operational results. Using case studies and exercises, this course provides an overview of business analysis, introduces key skills such as project definition, the role of assumptions, critical analytical skills, interpretation of information, communication and implementation.

- **MGT-335 Managing Across Cultures**

Prerequisites:

MGT 217 (formerly MGT 317)

Credits:

3.00

Description:

To what extent are our identities, ways of thinking, and behaving the products of our cultural environments? How do conceptions of motivation, leadership, decision making, negotiation, and ethics differ across cultures? How do expatriates settle abroad, and how do they re-enter the American life they are once so familiar? The purpose of this course is to examine the international context of management, specifically, the cross-cultural environment and how it shapes managers' and work organization members' experiences, roles and responsibilities.

Term:

Offered Both Fall and Spring

• MGT-360 Leadership 360 Practicum

Prerequisites:

MGT 217 (formerly MGT 317); does not count toward the Management Major, nor the minor for BSBA students

Credits:

3.00

Description:

Leadership 360 Practicum provides a fundamental understanding of the principles of leadership and the core competencies, traits and behaviors that enable effective leadership. Students will conduct an in-depth self-examination of skills, abilities, personality, attitudes, values, and behaviors to increase self-awareness of their leadership competencies. Students will learn relevant leadership theories and introductory project management principles and techniques. They will apply leadership and project management skills in a mini-team project with a not-for-profit organization that seeks solutions to a specific challenge, leading to a project implementation plan. Students will present formally to the client; feedback to the presenters will reinforce their oral communication skills. This course is a requirement for all BSBA majors.

• MGT-401 Negotiations

Prerequisites:

MGT 217 (formerly MGT 317); Junior standing

Credits:

3.00

Description:

This course is premised on the fact that whereas a manager needs analytical skills to discover optimal solutions to business problems, a broad array of negotiation skills is needed to implement these solutions. This experiential course is designed to improve your skills in all phases of negotiation: understanding prescriptive and descriptive negotiation theory as it applies to dyadic and multiparty negotiations, to buyer-seller transactions and the resolution of disputes, to the development of negotiation strategy, and to the management of integrative and distributive aspects of the negotiation process. The course is based on a series of simulated negotiations in a variety of contexts including one-on-one, multi-party, cross-cultural, third-party and team negotiations. Please note that given the experiential nature of the course, attendance is mandatory and will be strictly enforced beginning from the first class session.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

• MGT-419 Senior Capstone Project Course

Prerequisites:

ENT 101 (formerly SBS 101); MKT 210; MGT 217 (formerly MGT 317); ISOM 319; Management Majors and Minors only with 90 or more credits

Credits:

3.00

Description:

This capstone course allows students to integrate and apply their acquired knowledge in pro bono consulting projects under the supervision of a faculty mentor, coach and advisor. Course skills to be developed include project management, business communication, and action-oriented analysis. Students analyze real-world problems using primary and secondary research methods, identify feasible options for action, and make professional written and oral presentations to their client organization. An occasional Friday class may be required.

Term:

Offered Both Fall and Spring

• MGT-520 Management Internship

Prerequisites:

MGT 217 (formerly MGT 317); Management Major; Junior or Senior standing; 3.0 GPA; Instructor consent required; Cannot take this course concurrent with any other internship course

Credits:

3.00

Description:

MGT 520 is an internship course which offers students the opportunity to apply knowledge and skills acquired in management courses to a valuable work experience outside the University. Interns practice using management principles in a carefully selected real world work situation under the direction of a faculty member, while completing academic requirements intended to integrate theory and practice. Students can also use the internship to explore career interests. Sometimes building a relationship with an employer during an internship can lead to a job offer during school or after graduation.

Term:

Offered Both Fall and Spring

- **MGT-H520 Honors Management Internship**

Credits:

3.00

Description:

This course provides students an opportunity to apply management concepts and skills to problem solving in an organizational workplace setting. Students identify and organize their internship position and particular project (depending on area of interest) with assistance from faculty, as needed. Projects will vary in scope and content. Students are expected to be on the job for approximately 8 hours per week during the course of the semester.

Type:

Honors

- **MGT-560 Leadership Journey Experience**

Prerequisites:

Instructor consent required

Credits:

0.00

Description:

Suffolk University Student Leadership and Involvement Office oversees The Leadership Journey Program. The program is designed to develop student's leadership skills throughout their collegiate career at Suffolk University. Students are expected to experience all aspects of the cornerstones as they begin the Journey. After this exposure, students are encouraged to focus on the leadership activities in which they are more passionate. The Leadership Journey focuses on providing students with experiences in leadership, campus involvement and service. Students completing the Leadership Journey will have complemented their leadership course material with experiences in actual leadership situations.

2015-2016 Archived Catalog Information

Marketing

Marketing, a critical element of business, is about developing, sustaining, and delivering value to the consumer in a socially responsible manner. In short, marketing is meeting customer needs profitably. As globalization, rapid changes in technology, and evolving lifestyles continuously alter the specifics of marketing tasks, business strategies and tactics that worked yesterday may not work tomorrow. Consequently, our emphasis is not only to prepare students for the marketing environment of today, but also to anticipate the critical knowledge base and skills that will be effective tomorrow. Our curriculum is designed to give students a solid foundation in effective marketing thought and practices. In addition to providing knowledge about fundamental concepts and frameworks, the curriculum emphasizes written and oral communication, teamwork, leadership, and problem-solving skills to prepare students for a successful transition into a marketing career.

The Marketing Department prepares students to enter a wide variety of careers including, but not limited to, entry-level positions in client management, marketing communications, advertising, professional selling, and marketing research. We offer courses in all fundamental aspects of marketing, including consumer behavior, supply chain management, entrepreneurial marketing, sports marketing, services marketing, brand marketing, digital marketing, and global marketing. In addition, to enhance and complement classroom learning, our majors have an opportunity to earn course credit while working as an intern in a company or nonprofit organization and by working on consulting projects with actual business clients. We also allow students to specialize in a particular area of marketing by declaring a concentration in one of five cutting-edge fields, including sports marketing, marketing innovation and new media, brand marketing, marketing consulting, or global marketing.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Concentrations](#)
- [Undergraduate Courses](#)

Marketing Major Requirements

The BSBA in marketing major requires completion of 21 credit hours in marketing beyond the completion of MKT 210 (or MKT H210), to be completed at Suffolk University. Students may choose to specialize in one of five concentration areas: sports marketing, marketing innovation and new media, brand

marketing, global marketing, or marketing consulting. Additionally, qualifying students may elect to participate in an honors marketing track.

Choosing a concentration is not required to be a marketing major.

Required Courses, 4 Courses, 12 Credits

- **MKT-317 Consumer Behavior**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

In this course we focus on people as consumers of products, services, and experiences. We do so by drawing upon theories of consumption in fields as diverse as psychology, sociology, economics, and anthropology. Students engage in projects that link theory to insights on consumer buying, using, and disposing behavior and the application of these insights in marketing programs. In the process they become more critical consumers. The classes are discussion based and active participation from students is expected.

- **MKT-322 Marketing Analytics**

Prerequisites:

MKT 210 and MKT 220 (or MKT 318 or MKT 319)

Credits:

3.00

Description:

In this course, students will learn a digitally driven approach to marketing analytics, an exciting field undergoing explosive growth and high demand. An emphasis will be placed on the practical methods used to measure, manage and analyze consumer information. Topics covered will include making sense of the digital media landscape, demand forecasting and predictive analytics, performance evaluation, and Google Analytics. Upon graduation of this course, students will have gained a set of skills and certification that directly translates to modern marketing practices.

- **MKT-419 Marketing Policies & Strategies**

Prerequisites:

Prerequisites - MKT 317, MKT 220 (or MKT 318 or MKT 319), and 54 credits

Credits:

3.00

Description:

In this capstone course, marketing majors apply lessons learned across the curricula of the Marketing Department and Sawyer School. Students test their level of marketing knowledge by working to solve challenging integrated cases for developing marketing strategy and programs. In particular, students analyze both qualitative and quantitative information, evaluate alternative courses of action, and then make strategic recommendations for resolving the issues in each case. Prerequisites: MKT 210 or MKT H210, MKT 317, MKT 318, MKT 319, and Senior Standing.

• MKT-499 Integrated Marketing Research and Planning

Prerequisites:

MKT 210 and MKT 318 or MKT 319 or MKT 220 and at least 84 credits completed.

Credits:

3.00

Description:

This course is designed to provide students with an opportunity to learn the role of research in marketing strategies. Working with client organization, the students will demonstrate the fundamental marketing research skills as they implement the steps included in the marketing research process to create a marketing plan that will provide recommended strategies for the organization. Real-life case studies on the role of marketing research in organizational decision making will also be discussed throughout the course.

Elective Courses, 3 Courses, 9 Credits

• MKT-313 Professional Selling

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Students in professional selling learn many of the skills needed to prosper in a sales position. Particularly, the stages of the professional selling process are examined, as well as the role of sales in today's marketing environment. Emphasis is placed on adaptive selling techniques and developing effective interpersonal communication skills. A detailed examination of sales careers is provided.

- **MKT-315 Integrated Marketing Communication**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Integrated Marketing Communications (IMC) is a cross-functional process for managing customer relationships that drive brand value. This course examines the strategic foundations of IMC, the factors and processes necessary for creating, sending, and receiving successful brand messages. Furthermore, the social, ethical and legal issues as well as measurement and evaluation of marketing communication will be examined.

Type:

Arts Admin Minor Elective

- **MKT-420 Marketing for Entrepreneurs**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

This course covers the critical role of marketing for entrepreneurs and start-up companies as they attempt to define and carve out a market for a new company, product or service. We will examine through both class discussion and case study how marketing must infiltrate the entire organization beginning with the concept, the business plan and through the early stage development phase. Moreover, we will discuss the creation of the new venture marketing plan, the budgeting and human resource allocation process and its integration into the business plan. We will also look at tactics from guerrilla marketing through mass media executions, the potential ROI for both and their influence on the ultimate success of the enterprise.

- **MKT-421 Global Marketing**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Topics examined in this course include the variations in economic, social-cultural, legal-political, and business environments among different nations and how these variations affect the marketing practices across national boundaries. The goal is to provide students with the necessary skills to compete successfully in national and international markets. Particular attention is given to the formulation of marketing plans and programs and policies to integrate and coordinate such activities on a global basis.

Type:

Global Engagement Experience

- **MKT-423 Retail Strategy**

Prerequisites:

MKT-210 or MKT-H210

Credits:

3.00

Description:

Retail Strategy provides students with an introduction to the field of retailing. The course focuses on the retail environment, structure and strategy, the development and implementation of the retailing mix, and financial and managerial considerations. Topics include information systems for retailing, the internationalization of retailing and the growth of non-store retailing activities.

- **MKT-426 Sports Marketing**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

The purpose of the course is to develop an understanding of strategic marketing concepts and activities as they apply to the sports context. Marketing concepts and activities are examined as they relate to the marketing of sports and marketing through sports. An emphasis is placed on the international arena and issues relevant to the sports industry.

- **MKT-427 Supply Chain Management**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

The purpose of this course is to explain the function and value of marketing channels and define the major channel types. This course will also explain the elementary legal aspects of channel promotion, pricing, delivery and integration systems as well as identify channel strategies. Prerequisite: MKT 210 or MKT H210 (Formerly MKT 310) and Junior Standing. 1 term - 3 credits.

- **MKT-428 The Business of Sports and the Media**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

The Business of Sport focuses on the multibillion-dollar global sport industry and the challenges facing today's sport business leaders. Because the business of sport is interdisciplinary in nature, insights from a variety of stakeholders in the sport industry, along with perspectives from the major business disciplines including marketing, management, finance, information technology, and ethics are integrated throughout the course. This course provides an in-depth analysis of issues specific to the business of sport. The course is designed for future sport business leaders as well as those interested in the inner-workings of the industry. Students will apply knowledge and skills learned in core business courses to the unique issues found in the sport industry.

- **MKT-430 Sports Marketing Consulting**

Prerequisites:

MKT 210 or H210, MKT 220 or H220, and junior standing

Credits:

3.00

Description:

This course presents an in-depth and innovative framework for implementing relationship marketing within the sport industry. This framework includes network-and market-oriented methods and tools that enable sport organizations to design and develop products that provide targeted stakeholders with greater functional and experiential value. Sport organizations provide a wide variety of services from leadership, governance, management, development, entertainment and control to educational materials and other retail products, all of which benefit from relationship marketing principles. Because many sport organizations have adopted a relationship-marketing approach, they are necessarily network-based, operating in a system formed by numerous stakeholders. Their goals may be economic, social or environmental with the foundation of the system being the sport itself, with various bodies involved in the development of the sport. Through a consulting project with a sport organization, students will develop an understanding of the dynamics of the relationships between the different stakeholders who make up the network of the sport industry. Specifically, students will learn how sport organizations carry out their strategic actions within a network of stakeholders.

- **MKT-H432 Honors Marketing in Emerging Markets**

Prerequisites:

MKT 317 or MKT-H317 and at least 3.2 GPA

Credits:

3.00

Description:

This course focuses on cultural consumption trends both at home and abroad. In particular it compares and contrasts the emerging markets of India and China with more established Western markets. The course is organized in two self-contained modules around a theme. The first module focuses at the market level and examines what happens to the culture when East meets West. The second module analyzes the challenges companies face in staying competitive in rapidly evolving economies. Each class in a module advances your understanding of the theme through an engaging and challenging mix of readings, assignments, and case studies. This is an intensive Honors level course and requires students to be self directed and motivated. Every class is important- there is no mid-term or final.

Type:

Honors

- **MKT-434 Services Marketing**

Prerequisites:

MKT-210 or MKT-H210 and 54 credits and at least a 3.0 GPA

Credits:

3.00

Description:

The course focuses on the unique challenges of managing services and delivering quality service to customers. The attrition, retention, and building of strong customer relationships through quality service (and services) are at the heart of the course content. The course is equally applicable to an organizations whose core product is service (e.g., banks, transportation companies, hotels, hospitals, educational institutions, professional services, telecommunications, sporting industry, etc.) and to organizations that depend on service excellence for competitive advantage (e.g., high technology manufacturers, automotive, industrial products, etc.).

- **MKT-442 Brand Marketing**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Brand marketing has become an increasingly important function in organizations. The purpose of this course is to provide a thorough understanding of brand marketing principles and practices. The role of brands and branding will be examined both from a managerial and a consumer perspective. More specifically the course will present current frameworks that guide marketing managers in how to build strong brands in the marketplace. In order to build brands successfully, it is of key importance to have a profound understanding of the roles brands play in consumer culture. The course will examine how consumers make use of brands and develop brand meaning through everyday consumption practices.

- **MKT-444 Social Media Marketing**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Social media has altered the landscape of business, communications, marketing, and society as a whole. While some social media like Wikipedia and Facebook have become part of the fabric of many consumers' lives, new media like Snapchat and Tumblr are emerging. This constantly evolving landscape offers businesses innovative ways for generating awareness, demand and revenue. In this course students will take away a social media vocabulary, a set of social media skills and tools, and analytical frameworks for analyzing effective social media business practices. Naturally, student projects, assignments, and other activities will use social media tools.

Type:

Arts Admin Minor Elective

- **MKT-446 High Tech Marketing**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Marketing of high-tech technology products and innovations occur in turbulent environments, and requires rapid decision making with incomplete information and risky prospect. The fast pace of change defines the momentum of evolution in the high-technology markets. Marketing in such an environment commands knowledge about the idiosyncratic features of high-tech products, innovations, and the industries. Marketing success in high-tech industries also calls for capabilities and skills of analyzing decision problems and designing solutions. To achieve these objectives, this course is built on extensive analysis of Harvard Business School cases, class discussions of intriguing phenomena in high-tech industries, and learning-by-doing student projects that focus on real-life companies and technologies. The topics covered in this course include the following: - Characteristics of high-technology industries - Different types and characteristics of high-tech products and innovations, and their marketing implications - Organizational culture and management strategies for high-tech products and innovations - Strategic alliances in developing and marketing high-tech products and innovations - Acquisition and understanding of market information for high-tech products and innovations - Customer adoption and diffusion of high-tech products and innovations -Market introduction strategies for high-tech products and innovations

• MKT-H455 Honors Digital Marketing Challenges

Prerequisites:

MKT 210 or MKT-H210 and at least 3.2 GPA

Credits:

3.00

Description:

The foundational course in the digital marketing track this course focuses on the consumer of digital media and five big picture marketing strategy challenges confronting marketers in the new digital (mobile +social) marketing era. Challenge 1: Marketing to a smarter, more engaged, empowered consumer; Challenge 2: Marketing to a networked, collaborative, and more social consumer; Challenge 3: Marketing to a more distracted and fickle consumer; Challenge 4: Marketing to a unique, individual consumer; and Challenge 5: Marketing to prosumers or producer-consumers. The course takes on these big picture challenges thorough a deep engagement with and critical analysis of readings and cases. Given this focus the course demands thorough preparation for class and active engagement in the class discussion. The evaluation is assignment and project based.

Type:

Honors

- **MKT-466 Mobile Marketing: Reaching the Multi-Screen Consumer**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

This new course in the digital marketing track focuses on how mobile device usage has completely changed the paradigm for companies in every industry. It will focus on the following four major areas: 1. consumer usage of mobile devices; 2. mobile-only companies and applications, 3. mobile hybrids - companies making a huge shift to mobile; and 4. mobile marketing and advertising. The course will rely heavily on discussion of real mobile business cases with lectures from leaders from inside the mobile industry. Evaluation will be based on assignments, class participation, and a group project.

- **MKT-477 eMarketing**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

This course explores how we can use the principles of web marketing as effective marketing tools. The course will have the following learning components: lectures, guest lectures, web site analyses, and student project presentations.

Type:

Arts Admin Minor Elective

- **MKT-510 Directed Study**

Prerequisites:

MKT 210 or MKT-H210 and Instructor's consent required

Credits:

1.00- 3.00

Description:

Independent study allows students to expand their classroom experience by completing research in an area of interest not already covered by Suffolk courses. The student designs a unique project and finds a full-time faculty member with expertise in that topic who agrees to sponsor it and provide feedback as the proposal is refined. A well designed and executed research project broadens and/or deepens learning in a major or minor area of study and may also enhance a student's marketability to potential future employers. Students cannot register for an Independent Study until a full proposal is approved by the faculty sponsor, department chair, and academic dean. Many Independent study proposals require revisions before approval is granted; even with revisions independent study approval is NOT guaranteed. Students are strongly encouraged to submit a proposal in enough time to register for a different course if the proposal is not accepted. For complete instructions, see the SBS Independent/Directed Study Agreement and Proposal form available online.

• MKT-520 Marketing Internship

Prerequisites:

MKT-210 or MKT-H210 and 54 credits and at least a 3.0 GPA

Credits:

3.00

Description:

This course provides marketing majors or minors (junior status or higher) to apply marketing and business knowledge for problem solving in an organizational workplace setting. Students identify and organize their own internship position and particular project (depending on area of interest) with assistance from department staff, as needed. Projects will vary in scope and content and may include topics such as buyer behavior, customer satisfaction, service quality, e-marketing, and others. Students are expected to be on the job for approximately 8 hours per week during the course of the semester. Prerequisites: Minimum of 3.0 GPA; MKT 210 or MKT H210 (formerly MKT 310) AND JUNIOR STANDING and permission from instructor. 1 term - 3 credits.

• MKT-H524 Global Marketing Consulting

Prerequisites:

MKT 210 or MKT-H210 and at least a 3.2 GPA

Credits:

3.00

Description:

This course offers global consulting experience with international corporate partners. Teams of Suffolk Business students work on strategic consulting projects that feature global marketing challenges (e.g., market entry decisions, consumer research, distribution channel analysis and other marketing strategy issues). At the end of the semester, students will finalize the projects and report to the business clients.

Type:

Global Engagement Experience, Honors

• **MKT-H525 Honors Professional Marketing Consulting**

Prerequisites:

MKT 319; 3.2 GPA

Credits:

3.00

Description:

This course provides qualified students with a unique opportunity to work either individually or with other qualified students, on a marketing consulting project for a professional client. Projects could include, but are not limited to the development of strategic marketing plans and marketing research projects. Students will create and deliver a professional report and presentation to the client upon completion of the semester project.

Type:

Honors

Marketing honors courses offer high-achieving students a challenging, yet rewarding, curriculum and class experience. Each semester, honors marketing elective courses are offered in addition to the required courses.

- **MKT-H317 Honors Consumer Behavior**

Prerequisites:

MKT 210 or MKT-H210 and at least a 3.2 GPA

Credits:

3.00

Description:

This course is open to students with a GPA of 3.2 or higher. This honors course is a focused and challenging learning experience. As a result, you will be introduced to advanced concepts, ideas, and project experiences that will place you in a highly desirable position for internships, future career opportunities, and graduate school. In this course we focus on people as consumers of products, services, and experiences. We do so by drawing upon theories of consumption in fields as diverse as psychology, sociology, economics, and anthropology. Students engage in projects that link theory to insights on consumer buying, using and disposing behavior and the application of these insights in marketing programs. In the process they become more critical consumers. The classes are discussion based and active participation from students is expected.

Type:

Honors

- **MKT-H318 Honors Marketing Tools and Analysis**

Prerequisites:

MKT 210; STATS 250; 3.2 GPA

Credits:

3.00

Description:

This course is open to students with a GPA of 3.2 or higher. This honors course is a focused and challenging learning experience. As a result, you will be introduced to advanced concepts, ideas, and project experiences that will place you in a highly desirable position for internships, future career opportunities, and graduate school. The objective of this course is to provide students with a solid and user-friendly foundation for making better

marketing and business decisions. Hands-on training with tools such as Excel and SPSS provides a meaningful learning experience and reinforces concepts learned in other courses in the Business School. Topics include marketing math and statistical analysis for marketing research. After taking Marketing Tools, students are well prepared to integrate analytical skills in business consulting projects used in upper level courses (MKT 319 and MKT 419)

Type:

Honors

- **MKT-H419 Honors Marketing Policies & Strategies**

Prerequisites:

MKT-317 (or MKT H317) and MKT-220 (or MKT H220, may be taken concurrently) at least 54 credits, and 3.2 GPA

Credits:

3.00

Description:

This course is open to students with a GPA of 3.2 or higher. This honors course is a focused and challenging learning experience. As a result, you will be introduced to advanced concepts, ideas, and project experiences that will place you in a highly desirable position for internships, future career opportunities, and graduate school. In this capstone course, marketing majors apply lessons learned across the curricula of the Marketing Department and Sawyer School. Students test their level of marketing knowledge by working to solve challenging integrated cases for developing marketing strategy and programs. In particular, students analyze both qualitative and quantitative information, evaluate alternative courses of action, and then make strategic recommendations for resolving the issues in each case.

Type:

Honors

- **MKT-H432 Honors Marketing in Emerging Markets**

Prerequisites:

MKT 317 or MKT-H317 and at least 3.2 GPA

Credits:

3.00

Description:

This course focuses on cultural consumption trends both at home and abroad. In particular it compares and contrasts the emerging markets of India and China with more established Western markets. The course is organized in two self-contained modules around a theme. The first module focuses at the market level and examines what happens to the culture when East meets West. The second module analyzes the challenges companies face in staying competitive in rapidly evolving economies. Each class in a module advances your understanding of the theme through an engaging and challenging mix of readings, assignments, and case studies. This is an intensive Honors level course and requires students to be self directed and motivated. Every class is important- there is no mid-term or final.

Type:

Honors

- **MKT-H455 Honors Digital Marketing Challenges**

Prerequisites:

MKT 210 or MKT-H210 and at least 3.2 GPA

Credits:

3.00

Description:

The foundational course in the digital marketing track this course focuses on the consumer of digital media and five big picture marketing strategy challenges confronting marketers in the new digital (mobile +social) marketing era. Challenge 1: Marketing to a smarter, more engaged, empowered consumer; Challenge 2: Marketing to a networked, collaborative, and more social consumer; Challenge 3: Marketing to a more distracted and fickle consumer; Challenge 4: Marketing to a unique, individual consumer; and Challenge 5: Marketing to prosumers or producer-consumers. The course takes on these big picture challenges thorough a deep engagement with and critical analysis of readings and cases. Given this focus the course demands thorough preparation for class and active engagement in the class discussion. The evaluation is assignment and project based.

Type:

Honors

- **MKT-H499 Honors Integrated Marketing Research and Planning**

Prerequisites:

MKT-210 and MKT-318(or MKT-H318) or MKT 319(or MKT-H319) or MKT-220(or MKT-H220) and 3.2 GPA and at least 84 credits completed.

Credits:

3.00

Description:

This course is designed to provide students with an opportunity to learn the role of research in marketing strategies. Working with client organization, the students will demonstrate the fundamental marketing research skills as they implement the steps included in the marketing research process to create a marketing plan that will provide recommended strategies for the organization. Real-life case studies on the role of marketing research in organizational decision making will also be discussed throughout the course.

Type:

Honors

• MKT-H524 Global Marketing Consulting

Prerequisites:

MKT 210 or MKT-H210 and at least a 3.2 GPA

Credits:

3.00

Description:

This course offers global consulting experience with international corporate partners. Teams of Suffolk Business students work on strategic consulting projects that feature global marketing challenges (e.g., market entry decisions, consumer research, distribution channel analysis and other marketing strategy issues). At the end of the semester, students will finalize the projects and report to the business clients.

Type:

Global Engagement Experience, Honors

• MKT-H525 Honors Professional Marketing Consulting

Prerequisites:

MKT 319; 3.2 GPA

Credits:

3.00

Description:

This course provides qualified students with a unique opportunity to work either individually or with other qualified students, on a marketing consulting project for a professional client. Projects could include, but are not limited to the development of strategic marketing plans and marketing research projects. Students will create and deliver a professional report and presentation to the client upon completion of the semester project.

Type:

Marketing Honors Track

The marketing honors track requires a GPA of 3.2 or higher, and the completion of either option 1 or 2. The marketing honors track has two options.

OPTION 1 Required: H317, H322, H419, & H499

Recommended: Take additional marketing honors electives to enhance the honors experience.

OPTION 2 Required: Take any five marketing honors courses

2015-2016 Archived Catalog Information

Marketing

Marketing, a critical element of business, is about developing, sustaining, and delivering value to the consumer in a socially responsible manner. In short, marketing is meeting customer needs profitably. As globalization, rapid changes in technology, and evolving lifestyles continuously alter the specifics of marketing tasks, business strategies and tactics that worked yesterday may not work tomorrow. Consequently, our emphasis is not only to prepare students for the marketing environment of today, but also to anticipate the critical knowledge base and skills that will be effective tomorrow. Our curriculum is designed to give students a solid foundation in effective marketing thought and practices. In addition to providing knowledge about fundamental concepts and frameworks, the curriculum emphasizes written and oral communication, teamwork, leadership, and problem-solving skills to prepare students for a successful transition into a marketing career.

The Marketing Department prepares students to enter a wide variety of careers including, but not limited to, entry-level positions in client management, marketing communications, advertising, professional selling, and marketing research. We offer courses in all fundamental aspects of marketing, including consumer behavior, supply chain management, entrepreneurial marketing, sports marketing, services marketing, brand marketing, digital marketing, and global marketing. In addition, to enhance and complement classroom learning, our majors have an opportunity to earn course credit while working as an intern in a company or nonprofit organization and by working on consulting projects with actual business clients. We also allow students to specialize in a particular area of marketing by declaring a concentration in one of five cutting-edge fields, including sports marketing, marketing innovation and new media, brand marketing, marketing consulting, or global marketing.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

Marketing Minor for Business Students, 3 courses, 9 credits

A student may choose to minor in marketing by completing any three of the following courses, beyond the completion of MKT 210 or MKT H210:

- **MKT-313 Professional Selling**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Students in professional selling learn many of the skills needed to prosper in a sales position. Particularly, the stages of the professional selling process are examined, as well as the role of sales in today's marketing environment. Emphasis is placed on adaptive selling techniques and developing effective interpersonal communication skills. A detailed examination of sales careers is provided.

- **MKT-315 Integrated Marketing Communication**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Integrated Marketing Communications (IMC) is a cross-functional process for managing customer relationships that drive brand value. This course examines the strategic foundations of IMC, the factors and processes necessary for creating, sending, and receiving successful brand messages. Furthermore, the social, ethical and legal issues as well as measurement and evaluation of marketing communication will be examined.

Type:

Arts Admin Minor Elective

- **MKT-317 Consumer Behavior**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

In this course we focus on people as consumers of products, services, and experiences. We do so by drawing upon theories of consumption in fields as diverse as psychology, sociology, economics, and anthropology. Students engage in projects that link theory to insights on consumer buying, using, and disposing behavior and the application of these insights in marketing programs. In the process they become more critical consumers. The classes are discussion based and active participation from students is expected.

- **MKT-H317 Honors Consumer Behavior**

Prerequisites:

Type:

Honors

- **MKT-322 Marketing Analytics**

Prerequisites:

MKT 210 and MKT 220 (or MKT 318 or MKT 319)

Credits:

3.00

Description:

In this course, students will learn a digitally driven approach to marketing analytics, an exciting field undergoing explosive growth and high demand. An emphasis will be placed on the practical methods used to measure, manage and analyze consumer information. Topics covered will include making sense of the digital media landscape, demand forecasting and predictive analytics, performance evaluation, and Google Analytics. Upon graduation of this course, students will have gained a set of skills and certification that directly translates to modern marketing practices.

- **MKT-H322 Honors Marketing Analytics**

Prerequisites:

MKT-210 or MKT-H210 and MKT-220 or MKT-H220 and at least a 3.2 GPA

Credits:

3.00

Type:

Honors

- **MKT-420 Marketing for Entrepreneurs**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

This course covers the critical role of marketing for entrepreneurs and start-up companies as they attempt to define and carve out a market for a new company, product or service. We will examine through both class discussion and case study how marketing must infiltrate the entire organization beginning with the concept, the business plan and through the early stage development phase. Moreover, we will discuss the creation of the new venture marketing plan, the budgeting and human resource allocation process and its integration into the business plan. We will also look at tactics from guerrilla marketing through mass media executions, the potential ROI for both and their influence on the ultimate success of the enterprise.

• MKT-421 Global Marketing

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Topics examined in this course include the variations in economic, social-cultural, legal-political, and business environments among different nations and how these variations affect the marketing practices across national boundaries. The goal is to provide students with the necessary skills to compete successfully in national and international markets. Particular attention is given to the formulation of marketing plans and programs and policies to integrate and coordinate such activities on a global basis.

Type:

Global Engagement Experience

• MKT-423 Retail Strategy

Prerequisites:

MKT-210 or MKT-H210

Credits:

3.00

Description:

Retail Strategy provides students with an introduction to the field of retailing. The course focuses on the retail environment, structure and strategy, the development and implementation of the retailing mix, and financial and managerial considerations. Topics include information systems for retailing, the internationalization of retailing and the growth of non-store retailing activities.

- **MKT-426 Sports Marketing**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

The purpose of the course is to develop an understanding of strategic marketing concepts and activities as they apply to the sports context. Marketing concepts and activities are examined as they relate to the marketing of sports and marketing through sports. An emphasis is placed on the international arena and issues relevant to the sports industry.

- **MKT-427 Supply Chain Management**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

The purpose of this course is to explain the function and value of marketing channels and define the major channel types. This course will also explain the elementary legal aspects of channel promotion, pricing, delivery and integration systems as well as identify channel strategies. Prerequisite: MKT 210 or MKT H210 (Formerly MKT 310) and Junior Standing. 1 term - 3 credits.

- **MKT-428 The Business of Sports and the Media**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

The Business of Sport focuses on the multibillion-dollar global sport industry and the challenges facing today's sport business leaders. Because the business of sport is interdisciplinary in nature, insights from a variety of stakeholders in the sport industry, along with perspectives from the major business disciplines including marketing, management, finance, information technology, and ethics are integrated throughout the course. This course provides an in-depth analysis of issues specific to the business of sport. The course is designed for future sport business leaders as well as those interested in the inner-workings of the industry. Students will apply knowledge and skills learned in core business courses to the unique issues found in the sport industry.

• MKT-430 Sports Marketing Consulting

Prerequisites:

MKT 210 or H210, MKT 220 or H220, and junior standing

Credits:

3.00

Description:

This course presents an in-depth and innovative framework for implementing relationship marketing within the sport industry. This framework includes network-and market-oriented methods and tools that enable sport organizations to design and develop products that provide targeted stakeholders with greater functional and experiential value. Sport organizations provide a wide variety of services from leadership, governance, management, development, entertainment and control to educational materials and other retail products, all of which benefit from relationship marketing principles. Because many sport organizations have adopted a relationship-marketing approach, they are necessarily network-based, operating in a system formed by numerous stakeholders. Their goals may be economic, social or environmental with the foundation of the system being the sport itself, with various bodies involved in the development of the sport. Through a consulting project with a sport organization, students will develop an understanding of the dynamics of the relationships between the different stakeholders who make up the network of the sport industry. Specifically, students will learn how sport organizations carry out their strategic actions within a network of stakeholders.

• MKT-H432 Honors Marketing in Emerging Markets

Prerequisites:

MKT 317 or MKT-H317 and at least 3.2 GPA

Credits:

3.00

Description:

This course focuses on cultural consumption trends both at home and abroad. In particular it compares and contrasts the emerging markets of India and China with more established Western markets. The course is organized in two self-contained modules around a theme. The first module focuses at the market level and examines what happens to the culture when East meets West. Each class in a module advances your understanding of the theme through an engaging and challenging mix of readings, assignments, and case studies. This is an intensive Honors level course and requires students to be self directed and motivated. Every class is important- there is no mid-term or final.

Type:

Honors

• MKT-434 Services Marketing

Prerequisites:

MKT-210 or MKT-H210 and 54 credits and at least a 3.0 GPA

Credits:

3.00

Description:

The course focuses on the unique challenges of managing services and delivering quality service to customers. The attrition, retention, and building of strong customer relationships through quality service (and services) are at the heart of the course content. The course is equally applicable to an organizations whose core product is service (e.g., banks, transportation companies, hotels, hospitals, educational institutions, professional services, telecommunications, sporting industry, etc.) and to organizations that depend on service excellence for competitive advantage (e.g., high technology manufacturers, automotive, industrial products, etc.).

• MKT-442 Brand Marketing

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Brand marketing has become an increasingly important function in organizations. The purpose of this course is to provide a thorough understanding of brand marketing principles and practices. The role of brands and branding will be examined both from a managerial and a consumer perspective. More specifically the course will present current frameworks that guide marketing managers in how to build strong brands in the marketplace. In order to build brands successfully, it is of key importance to have a profound understanding of the roles brands play in consumer culture. The course will examine how consumers make use of brands and develop brand meaning through everyday consumption practices.

- **MKT-444 Social Media Marketing**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Social media has altered the landscape of business, communications, marketing, and society as a whole. While some social media like Wikipedia and Facebook have become part of the fabric of many consumers' lives, new media like Snapchat and Tumblr are emerging. This constantly evolving landscape offers businesses innovative ways for generating awareness, demand and revenue. In this course students will take away a social media vocabulary, a set of social media skills and tools, and analytical frameworks for analyzing effective social media business practices. Naturally, student projects, assignments, and other activities will use social media tools.

Type:

Arts Admin Minor Elective

- **MKT-H444 Honors the Business of Digital Media**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Social media is transforming the way consumers work, play, and live and no one knows this better than you- the Millennial generation. But, what does this mean for business? The focus of this course is to understand the transformation of marketing practices as new social media challenge traditional media. How do businesses use the new media to create deeper and more profitable relationships with consumers? What are the new measures and metrics for assessing marketing programs in this new environment? From this course students will take away a social media vocabulary, a set of social media skills and tools, and analytical frameworks for analyzing effective social media business practices. The course is constructed on the principle of the student as an active learner where the student takes the responsibility for their own learning and works collaboratively with peers assisting in their learning. Naturally, student projects, assignments, and other activities will use social media tools including wikis and blogs.

Type:

Honors

• MKT-446 High Tech Marketing

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Marketing of high-tech technology products and innovations occur in turbulent environments, and requires rapid decision making with incomplete information and risky prospect. The fast pace of change defines the momentum of evolution in the high-technology markets. Marketing in such an environment commands knowledge about the idiosyncratic features of high-tech products, innovations, and the industries. Marketing success in high-tech industries also calls for capabilities and skills of analyzing decision problems and designing solutions. To achieve these objectives, this course is built on extensive analysis of Harvard Business School cases, class discussions of intriguing phenomena in high-tech industries, and learning-by-doing student projects that focus on real-life companies and technologies. The topics covered in this course include the following: - Characteristics of high-technology industries - Different types and characteristics of high-tech products and innovations, and their marketing implications - Organizational culture and management strategies for high-tech products and innovations - Strategic alliances in developing and marketing high-tech products and

innovations - Acquisition and understanding of market information for high-tech products and innovations - Customer adoption and diffusion of high-tech products and innovations -Market introduction strategies for high-tech products and innovations

- **MKT-H455 Honors Digital Marketing Challenges**

Prerequisites:

MKT 210 or MKT-H210 and at least 3.2 GPA

Credits:

3.00

Description:

The foundational course in the digital marketing track this course focuses on the consumer of digital media and five big picture marketing strategy challenges confronting marketers in the new digital (mobile +social) marketing era. Challenge 1: Marketing to a smarter, more engaged, empowered consumer; Challenge 2: Marketing to a networked, collaborative, and more social consumer; Challenge 3: Marketing to a more distracted and fickle consumer; Challenge 4: Marketing to a unique, individual consumer; and Challenge 5: Marketing to prosumers or producer-consumers. The course takes on these big picture challenges thorough a deep engagement with and critical analysis of readings and cases. Given this focus the course demands thorough preparation for class and active engagement in the class discussion. The evaluation is assignment and project based.

Type:

Honors

- **MKT-466 Mobile Marketing: Reaching the Multi-Screen Consumer**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

This new course in the digital marketing track focuses on how mobile device usage has completely changed the paradigm for companies in every industry. It will focus on the following four major areas: 1. consumer usage of mobile devices; 2. mobile-only companies and applications, 3. mobile

hybrids - companies making a huge shift to mobile; and 4. mobile marketing and advertising. The course will rely heavily on discussion of real mobile business cases with lectures from leaders from inside the mobile industry. Evaluation will be based on assignments, class participation, and a group project.

- **MKT-477 eMarketing**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

This course explores how we can use the principles of web marketing as effective marketing tools. The course will have the following learning components: lectures, guest lectures, web site analyses, and student project presentations.

Type:

Arts Admin Minor Elective

- **MKT-499 Integrated Marketing Research and Planning**

Prerequisites:

MKT 210 and MKT 318 or MKT 319 or MKT 220 and at least 84 credits completed.

Credits:

3.00

Description:

This course is designed to provide students with an opportunity to learn the role of research in marketing strategies. Working with client organization, the students will demonstrate the fundamental marketing research skills as they implement the steps included in the marketing research process to create a marketing plan that will provide recommended strategies for the organization. Real-life case studies on the role of marketing research in organizational decision making will also be discussed throughout the course.

• MKT-H499 Honors Integrated Marketing Research and Planning

Prerequisites:

MKT-210 and MKT-318(or MKT-H318) or MKT 319(or MKT-H319) or MKT-220(or MKT-H220) and 3.2 GPA and at least 84 credits completed.

Credits:

3.00

• MKT-520 Marketing Internship

Prerequisites:

MKT-210 or MKT-H210 and 54 credits and at least a 3.0 GPA

Credits:

3.00

Description:

This course provides marketing majors or minors (junior status or higher) to apply marketing and business knowledge for problem solving in an organizational workplace setting. Students identify and organize their own internship position and particular project (depending on area of interest) with assistance from department staff, as needed. Projects will vary in scope and content and may include topics such as buyer behavior, customer satisfaction, service quality, e-marketing, and others. Students are expected to be on the job for approximately 8 hours per week during the course of the semester. Prerequisites: Minimum of 3.0 GPA; MKT 210 or MKT H210 (formerly MKT 310) AND JUNIOR STANDING and permission from instructor. 1 term - 3 credits.

- **MKT-H524 Global Marketing Consulting**

Prerequisites:

MKT 210 or MKT-H210 and at least a 3.2 GPA

Credits:

3.00

Description:

This course offers global consulting experience with international corporate partners. Teams of Suffolk Business students work on strategic consulting projects that feature global marketing challenges (e.g., market entry decisions, consumer research, distribution channel analysis and other marketing strategy issues). At the end of the semester, students will finalize the projects and report to the business clients.

Type:

Global Engagement Experience, Honors

- **MKT-H525 Honors Professional Marketing Consulting**

Prerequisites:

MKT 319; 3.2 GPA

Credits:

3.00

Description:

This course provides qualified students with a unique opportunity to work either individually or with other qualified students, on a marketing consulting project for a professional client. Projects could include, but are not limited to the development of strategic marketing plans and marketing research projects. Students will create and deliver a professional report and presentation to the client upon completion of the semester project.

Honors

Marketing Minor for College of Arts & Sciences Students, 4 courses, 12 credits

College of Arts & Sciences students are required to take MKT 210 or MKT H210 and three additional marketing courses:

- **MKT-313 Professional Selling**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Students in professional selling learn many of the skills needed to prosper in a sales position. Particularly, the stages of the professional selling process are examined, as well as the role of sales in today's marketing environment. Emphasis is placed on adaptive selling techniques and developing effective interpersonal communication skills. A detailed examination of sales careers is provided.

- **MKT-315 Integrated Marketing Communication**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Integrated Marketing Communications (IMC) is a cross-functional process for managing customer relationships that drive brand value. This course examines the strategic foundations of IMC, the factors and processes necessary for creating, sending, and receiving successful brand messages. Furthermore, the social, ethical and legal issues as well as measurement and evaluation of marketing communication will be examined.

Type:

Arts Admin Minor Elective

- **MKT-317 Consumer Behavior**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

In this course we focus on people as consumers of products, services, and experiences. We do so by drawing upon theories of consumption in fields as diverse as psychology, sociology, economics, and anthropology. Students engage in projects that link theory to insights on consumer buying, using, and disposing behavior and the application of these insights in marketing programs. In the process they become more critical consumers. The classes are discussion based and active participation from students is expected.

- **MKT-H317 Honors Consumer Behavior**

Prerequisites:

MKT 210 or MKT-H210 and at least a 3.2 GPA

Credits:

3.00

Description:

This course is open to students with a GPA of 3.2 or higher. This honors course is a focused and challenging learning experience. As a result, you will be introduced to advanced concepts, ideas, and project experiences that will place you in a highly desirable position for internships, future career opportunities, and graduate school. In this course we focus on people as consumers of products, services, and experiences. We do so by drawing upon theories of consumption in fields as diverse as psychology, sociology, economics, and anthropology. Students engage in projects that link theory to insights on consumer buying, using and disposing behavior and the application of these insights in marketing programs. Topics covered will include making sense of the digital media landscape, demand forecasting and predictive analytics, performance evaluation, and Google Analytics. Upon graduation of this course, students will have gained a set of skills and certification that directly translates to modern marketing practices.

Type:

Honors

- **MKT-420 Marketing for Entrepreneurs**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

This course covers the critical role of marketing for entrepreneurs and start-up companies as they attempt to define and carve out a market for a new company, product or service. We will examine through both class discussion and case study how marketing must infiltrate the entire organization beginning with the concept, the business plan and through the early stage development phase. Moreover, we will discuss the creation of the new venture marketing plan, the budgeting and human resource allocation process and its integration into the business plan. We will also look at tactics from guerrilla marketing through mass media executions, the potential ROI for both and their influence on the ultimate success of the enterprise.

- **MKT-421 Global Marketing**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Topics examined in this course include the variations in economic, social-cultural, legal-political, and business environments among different nations and how these variations affect the marketing practices across national boundaries. The goal is to provide students with the necessary skills to compete successfully in national and international markets. Particular attention is given to the formulation of marketing plans and programs and policies to integrate and coordinate such activities on a global basis.

Type:

Global Engagement Experience

- **MKT-423 Retail Strategy**

Prerequisites:

MKT-210 or MKT-H210

Credits:

3.00

Description:

Retail Strategy provides students with an introduction to the field of retailing. The course focuses on the retail environment, structure and strategy, the development and implementation of the retailing mix, and financial and managerial considerations. Topics include information systems for retailing, the internationalization of retailing and the growth of non-store retailing activities.

- **MKT-426 Sports Marketing**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

The purpose of the course is to develop an understanding of strategic marketing concepts and activities as they apply to the sports context. Marketing concepts and activities are examined as they relate to the marketing of sports and marketing through sports. An emphasis is placed on the international arena and issues relevant to the sports industry.

- **MKT-427 Supply Chain Management**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

The purpose of this course is to explain the function and value of marketing channels and define the major channel types. This course will also explain the elementary legal aspects of channel promotion, pricing, delivery and integration systems as well as identify channel strategies. Prerequisite: MKT 210 or MKT H210 (Formerly MKT 310) and Junior Standing. 1 term - 3 credits.

- **MKT-428 The Business of Sports and the Media**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

The Business of Sport focuses on the multibillion-dollar global sport industry and the challenges facing today's sport business leaders. Because the business of sport is interdisciplinary in nature, insights from a variety of stakeholders in the sport industry, along with perspectives from the major business disciplines including marketing, management, finance, information technology, and ethics are integrated throughout the course. This course provides an in-depth analysis of issues specific to the business of sport. The course is designed for future sport business leaders as well as those interested in the inner-workings of the industry. Students will apply knowledge and skills learned in core business courses to the unique issues found in the sport industry.

- **MKT-430 Sports Marketing Consulting**

Prerequisites:

MKT 210 or H210, MKT 220 or H220, and junior standing

Credits:

3.00

Description:

This course presents an in-depth and innovative framework for implementing relationship marketing within the sport industry. This framework includes network-and market-oriented methods and tools that enable sport organizations to design and develop products that provide targeted stakeholders with greater functional and experiential value. Sport organizations provide a wide variety of services from leadership, governance, management, development, entertainment and control to educational materials and other retail products, all of which benefit from relationship marketing principles. Because many sport organizations have adopted a relationship-marketing approach, they are necessarily network-based, operating in a system

formed by numerous stakeholders. Their goals may be economic, social or environmental with the foundation of the system being the sport itself, with various bodies involved in the development of the sport. Through a consulting project with a sport organization, students will develop an understanding of the dynamics of the relationships between the different stakeholders who make up the network of the sport industry. Specifically, students will learn how sport organizations carry out their strategic actions within a network of stakeholders.

- **MKT-H432 Honors Marketing in Emerging Markets**

Prerequisites:

MKT 317 or MKT-H317 and at least 3.2 GPA

Credits:

3.00

Description:

This course focuses on cultural consumption trends both at home and abroad. In particular it compares and contrasts the emerging markets of India and China with more established Western markets. The course is organized in two self-contained modules around a theme. The first module focuses at the market level and examines what happens to the culture when East meets West. The second module analyzes the challenges companies face in staying competitive in rapidly evolving economies. Each class in a module advances your understanding of the theme through an engaging and challenging mix of readings, assignments, and case studies. This is an intensive Honors level course and requires students to be self directed and motivated. Every class is important- there is no mid-term or final.

Type:

Honors

- **MKT-434 Services Marketing**

Prerequisites:

MKT-210 or MKT-H210 and 54 credits and at least a 3.0 GPA

Credits:

3.00

Description:

The course focuses on the unique challenges of managing services and delivering quality service to customers. The attrition, retention, and building of strong customer relationships through quality service (and services) are at the heart of the course content. The course is equally applicable to an organizations whose core product is service (e.g., banks, transportation companies, hotels, hospitals, educational institutions, professional services, telecommunications, sporting industry, etc.) and to organizations that depend on service excellence for competitive advantage (e.g., high technology manufacturers, automotive, industrial products, etc.).

- **MKT-442 Brand Marketing**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Brand marketing has become an increasingly important function in organizations. The purpose of this course is to provide a thorough understanding of brand marketing principles and practices. The role of brands and branding will be examined both from a managerial and a consumer perspective. More specifically the course will present current frameworks that guide marketing managers in how to build strong brands in the marketplace. In order to build brands successfully, it is of key importance to have a profound understanding of the roles brands play in consumer culture. The course will examine how consumers make use of brands and develop brand meaning through everyday consumption practices.

- **MKT-444 Social Media Marketing**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Social media has altered the landscape of business, communications, marketing, and society as a whole. While some social media like Wikipedia and Facebook have become part of the fabric of many consumers' lives, new media like Snapchat and Tumblr are emerging. This constantly evolving landscape offers businesses innovative ways for generating awareness, demand and revenue. In this course students will take away a social media

vocabulary, a set of social media skills and tools, and analytical frameworks for analyzing effective social media business practices. Naturally, student projects, assignments, and other activities will use social media tools.

Type:

Arts Admin Minor Elective

- **MKT-H444 Honors the Business of Digital Media**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Social media is transforming the way consumers work, play, and live and no one knows this better than you- the Millennial generation. But, what does this mean for business? The focus of this course is to understand the transformation of marketing practices as new social media challenge traditional media. How do businesses use the new media to create deeper and more profitable relationships with consumers? What are the new measures and metrics for assessing marketing programs in this new environment? From this course students will take away a social media vocabulary, a set of social media skills and tools, and analytical frameworks for analyzing effective social media business practices. The course is constructed on the principle of the student as an active learner where the student takes the responsibility for their own learning and works collaboratively with peers assisting in their learning. Naturally, student projects, assignments, and other activities will use social media tools including wikis and blogs.

Type:

Honors

- **MKT-446 High Tech Marketing**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Marketing of high-tech technology products and innovations occur in turbulent environments, and requires rapid decision making with incomplete information and risky prospect. The fast pace of change defines the momentum of evolution in the high-technology markets. Marketing in such an environment commands knowledge about the idiosyncratic features of high-tech products, innovations, and the industries. Marketing success in high-tech industries also calls for capabilities and skills of analyzing decision problems and designing solutions. To achieve these objectives, this course is built on extensive analysis of Harvard Business School cases, class discussions of intriguing phenomena in high-tech industries, and learning-by-doing student projects that focus on real-life companies and technologies. The topics covered in this course include the following: - Characteristics of high-technology industries - Different types and characteristics of high-tech products and innovations, and their marketing implications - Organizational culture and management strategies for high-tech products and innovations - Strategic alliances in developing and marketing high-tech products and innovations - Acquisition and understanding of market information for high-tech products and innovations - Customer adoption and diffusion of high-tech products and innovations -Market introduction strategies for high-tech products and innovations

• MKT-H455 Honors Digital Marketing Challenges

Prerequisites:

MKT 210 or MKT-H210 and at least 3.2 GPA

Credits:

3.00

Description:

The foundational course in the digital marketing track this course focuses on the consumer of digital media and five big picture marketing strategy challenges confronting marketers in the new digital (mobile +social) marketing era. Challenge 1: Marketing to a smarter, more engaged, empowered consumer; Challenge 2: Marketing to a networked, collaborative, and more social consumer; Challenge 3: Marketing to a more distracted and fickle consumer; Challenge 4: Marketing to a unique, individual consumer; and Challenge 5: Marketing to prosumers or producer-consumers. The course takes on these big picture challenges thorough a deep engagement with and critical analysis of readings and cases. Given this focus the course demands thorough preparation for class and active engagement in the class discussion. The evaluation is assignment and project based.

Type:

Honors

• MKT-466 Mobile Marketing: Reaching the Multi-Screen Consumer

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

This new course in the digital marketing track focuses on how mobile device usage has completely changed the paradigm for companies in every industry. It will focus on the following four major areas: 1. consumer usage of mobile devices; 2. mobile-only companies and applications, 3. mobile hybrids - companies making a huge shift to mobile; and 4. mobile marketing and advertising. The course will rely heavily on discussion of real mobile business cases with lectures from leaders from inside the mobile industry. Evaluation will be based on assignments, class participation, and a group project.

- **MKT-477 eMarketing**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

This course explores how we can use the principles of web marketing as effective marketing tools. The course will have the following learning components: lectures, guest lectures, web site analyses, and student project presentations.

Type:

Arts Admin Minor Elective

- **MKT-499 Integrated Marketing Research and Planning**

Prerequisites:

MKT 210 and MKT 318 or MKT 319 or MKT 220 and at least 84 credits completed.

Credits:

3.00

Description:

This course is designed to provide students with an opportunity to learn the role of research in marketing strategies. Working with client organization, the students will demonstrate the fundamental marketing research skills as they implement the steps included in the marketing research process to create a marketing plan that will provide recommended strategies for the organization. Real-life case studies on the role of marketing research in organizational decision making will also be discussed throughout the course.

- **MKT-H499 Honors Integrated Marketing Research and Planning**

Prerequisites:

MKT-210 and MKT-318(or MKT-H318) or MKT 319(or MKT-H319) or MKT-220(or MKT-H220) and 3.2 GPA and at least 84 credits completed.

Credits:

3.00

- **MKT-520 Marketing Internship**

Prerequisites:

MKT-210 or MKT-H210 and 54 credits and at least a 3.0 GPA

Credits:

3.00

Description:

This course provides marketing majors or minors (junior status or higher) to apply marketing and business knowledge for problem solving in an organizational workplace setting. Students identify and organize their own internship position and particular project (depending on area of interest) with assistance from department staff, as needed. Projects will vary in scope and content and may include topics such as buyer behavior, customer satisfaction, service quality, e-marketing, and others. Students are expected to be on the job for approximately 8 hours per week during the course of the semester. Prerequisites: Minimum of 3.0 GPA; MKT 210 or MKT H210 (formerly MKT 310) AND JUNIOR STANDING and permission from instructor. 1 term - 3 credits.

- **MKT-H524 Global Marketing Consulting**

Prerequisites:

MKT 210 or MKT-H210 and at least a 3.2 GPA

Credits:

3.00

Description:

This course offers global consulting experience with international corporate partners. Teams of Suffolk Business students work on strategic consulting projects that feature global marketing challenges (e.g., market entry decisions, consumer research, distribution channel analysis and other marketing strategy issues). At the end of the semester, students will finalize the projects and report to the business clients.

Type:

Global Engagement Experience, Honors

- **MKT-H525 Honors Professional Marketing Consulting**

Prerequisites:

MKT 319; 3.2 GPA

Credits:

3.00

Description:

This course provides qualified students with a unique opportunity to work either individually or with other qualified students, on a marketing consulting project for a professional client. Projects could include, but are not limited to the development of strategic marketing plans and marketing research projects. Students will create and deliver a professional report and presentation to the client upon completion of the semester project.

Type:

Honors

To focus your minor in a specific area within marketing, see "Marketing Major Concentrations" for specialized elective combinations.

2015-2016 Archived Catalog Information

Marketing

Marketing, a critical element of business, is about developing, sustaining, and delivering value to the consumer in a socially responsible manner. In short, marketing is meeting customer needs profitably. As globalization, rapid changes in technology, and evolving lifestyles continuously alter the specifics of marketing tasks, business strategies and tactics that worked yesterday may not work tomorrow. Consequently, our emphasis is not only to prepare students for the marketing environment of today, but also to anticipate the critical knowledge base and skills that will be effective tomorrow. Our curriculum is designed to give students a solid foundation in effective marketing thought and practices. In addition to providing knowledge about fundamental concepts and frameworks, the curriculum emphasizes written and oral communication, teamwork, leadership, and problem-solving skills to prepare students for a successful transition into a marketing career.

The Marketing Department prepares students to enter a wide variety of careers including, but not limited to, entry-level positions in client management, marketing communications, advertising, professional selling, and marketing research. We offer courses in all fundamental aspects of marketing, including consumer behavior, supply chain management, entrepreneurial marketing, sports marketing, services marketing, brand marketing, digital marketing, and global marketing. In addition, to enhance and complement classroom learning, our majors have an opportunity to earn course credit while working as an intern in a company or nonprofit organization and by working on consulting projects with actual business clients. We also allow students to specialize in a particular area of marketing by declaring a concentration in one of five cutting-edge fields, including sports marketing, marketing innovation and new media, brand marketing, marketing consulting, or global marketing.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Minor Requirements](#)

Marketing, a critical element of business, is about developing, sustaining, and delivering value to the consumer in a socially responsible manner. In short, marketing is meeting customer needs profitably. As globalization, rapid changes in technology, and evolving lifestyles continuously alter the specifics of marketing tasks, business strategies and tactics that worked yesterday may not work tomorrow. Consequently, our emphasis is not only to prepare students for the marketing environment of today, but also to anticipate the critical knowledge base and skills that will be effective tomorrow. Our curriculum is designed to give students a solid foundation in effective marketing thought and practices. In addition to providing knowledge about fundamental concepts and frameworks, the curriculum emphasizes written and oral communication, teamwork, leadership, and problem-solving skills to prepare students for a successful transition into a marketing career.

The Marketing Department prepares students to enter a wide variety of careers including, but not limited to, entry-level positions in client management, marketing communications, advertising, professional selling, and marketing research. We offer courses in all fundamental aspects of marketing, including consumer behavior, supply chain management, entrepreneurial marketing, sports marketing, services marketing, brand marketing, digital marketing, and global marketing. In addition, to enhance and complement classroom learning, our majors have an opportunity to earn course credit while working as an intern in a company or nonprofit organization and by working on consulting projects with actual business clients. We also allow students to specialize in a particular area of marketing by declaring a concentration in one of five cutting-edge fields, including sports marketing, marketing innovation and new media, brand marketing, marketing consulting, or global marketing.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- MKT-210 Principles of Marketing

Prerequisites:

WRI-101, WRI-102 or WRI-H103

Credits:

3.00

Description:

As part of the core curriculum for the BSBA, this course provides a comprehensive, innovative, managerial, and practical introduction to marketing. Students will learn and apply basic concepts and practices of modern marketing as used in a wide variety of settings. Technological advances, rapid globalization, economic shifts and cultural and environmental developments are causing profound changes in the marketplace. As the marketplace changes, so must the marketers who serve it. These new developments signify a brand new world of opportunities for forward thinking marketers. In response to these new developments, the focus of this course is on four major themes that go to the heart of modern marketing theory and practice: 1. Building and managing profitable customer relationships; 2. Building and managing strong brands; 3. Harnessing new marketing technologies in this digital age; and 4. Marketing in a socially responsible way around the globe.

• MKT-H210 Honors- Principles of Marketing

Prerequisites:

WRI-101 or WRI-103 and at least a 3.2 GPA, or SBS Honors

Credits:

3.00

Description:

This course addresses the topics that remain relevant and important, while simultaneously emphasizing new thinking and approaches to marketing practices. Students need to be prepared to operate in the complex and dynamic marketing world of the future, they need to develop the capacity to think and act like marketers in a difficult and uncertain environment. This requires the ability to assess complex and changing marketing situations, to determine the best marketing strategies for these situations, and to execute the strategies effectively. This course serves two purposes: as a foundation for those intending to major/minor in marketing, and potentially as the sole background in marketing for other majors/minors.

Type:

Honors

- **MKT-220 Business Research Methods**

Prerequisites:

STATS 240 or STATS 250

Credits:

3.00

Description:

Business Research Methods is a general introduction to both quantitative and qualitative business research methods. Topics covered include the purpose of research, defining research and research problems, defining an hypothesis, problem solving and knowledge discovery, methods of quantitative and qualitative research, conducting literature reviews, designing appropriate methodologies, evaluating outcomes, analysis and communicating the results. Students will use Excel and SPSS to support research analysis, implementing what was learned in statistics and going beyond as they learn new data analysis techniques. Students will discuss and present research ideas and processes orally both informally and formally.

- **MKT-H220 Honors Business Research Methods**

Prerequisites:

STATS 240 or STATS 250

Credits:

3.00

Type:

Honors

- **MKT-313 Professional Selling**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Students in professional selling learn many of the skills needed to prosper in a sales position. Particularly, the stages of the professional selling process are examined, as well as the role of sales in today's marketing environment. Emphasis is placed on adaptive selling techniques and developing effective interpersonal communication skills. A detailed examination of sales careers is provided.

- **MKT-315 Integrated Marketing Communication**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Integrated Marketing Communications (IMC) is a cross-functional process for managing customer relationships that drive brand value. This course examines the strategic foundations of IMC, the factors and processes necessary for creating, sending, and receiving successful brand messages. Furthermore, the social, ethical and legal issues as well as measurement and evaluation of marketing communication will be examined.

Type:

Arts Admin Minor Elective

- **MKT-H315 Honors Integrated Marketing Communication**

Prerequisites:

MKT-H210 or MKT-210 and at least a 3.2 GPA

Credits:

- **MKT-317 Consumer Behavior**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

In this course we focus on people as consumers of products, services, and experiences. We do so by drawing upon theories of consumption in fields as diverse as psychology, sociology, economics, and anthropology. Students engage in projects that link theory to insights on consumer buying, using, and disposing behavior and the application of these insights in marketing programs. In the process they become more critical consumers. The classes are discussion based and active participation from students is expected.

- **MKT-H317 Honors Consumer Behavior**

Prerequisites:

MKT 210 or MKT-H210 and at least a 3.2 GPA

Credits:

3.00

Description:

This course is open to students with a GPA of 3.2 or higher. This honors course is a focused and challenging learning experience. As a result, you will be introduced to advanced concepts, ideas, and project experiences that will place you in a highly desirable position for internships, future career opportunities, and graduate school. Honors

- **MKT-318 Marketing Tools and Analysis**

Prerequisites:

MKT 210; STATS 250

Credits:

3.00

Description:

The objective of this course is to provide students with a solid and user-friendly foundation for making better marketing and business decisions. Hands-on training with tools such as Excel and SPSS provides a meaningful learning experience and reinforces concepts learned in other courses in the Business School. Topics include marketing math and statistical analysis for marketing research. After taking Marketing Tools, students are well prepared to integrate analytical skills in business consulting projects used in upper level courses (MKT 319 and MKT 419). Prerequisites: MKT 210 (formerly MKT 310) and STATS 250 or STATS 240.

- **MKT-H318 Honors Marketing Tools and Analysis**

Prerequisites:

MKT 210; STATS 250; 3.2 GPA

Credits:

- **MKT-319 Marketing Research**

Prerequisites:

MKT 210; STATS 250 or STATS-240; MKT-318 or MKT-320;

Credits:

3.00

Description:

In this course, students explore the process and practice of research in a marketing context. The impact of research as it affects and shapes managerial decision making for organizations is a central focus. Specifically, we examine the process of designing and conducting qualitative and quantitative marketing research studies. We cover specific method-related practices that facilitate unbiased data collection, data analysis (via SPSS), interpretation of marketing research results, and presentation of such results for use by marketing managers.

- **MKT-H319 Honors Marketing Research**

Prerequisites:

MKT 210; STATS 250; MKT 318; 3.2 GPA

Credits:

3.00

Description:

This honors course extends the learning in other MKT courses, in particular MKT 318. You will learn advanced concepts and ideas pertaining to scientific research methodology in the context of marketing applications. Topics include planning and designing research studies, qualitative inquiry, survey design, principles of measurement, sample design, and statistical data analysis. The course is heavily project based with extensive use of SPSS for statistical data analysis. The objective of this course is to provide students with a solid and user-friendly foundation for making better marketing and business decisions. After taking Marketing Research, students are well prepared to design and carry out research to address business questions regarding problems and opportunities in upper level courses (MKT 419 and MGT 429)

Type:

Honors

• MKT-320 Survey Design and Analysis

Prerequisites:

MKT 210 or MKT-H210 and STATS 250

Credits:

3.00

Description:

Surveys are ubiquitous in today's society. Almost weekly, we are asked to complete a survey, and the popular press continually reports results from surveys. To what extent are these surveys and the reporting of survey results flawed because of errors in survey methods? If you want to become a player in the survey game, how can you design and implement a survey that has the least amount of error? This course seeks to answer these questions. The field of survey methodology draws on theories and practices developed in several academic disciplines, including mathematics, statistics, psychology, sociology, computer science, and economics. To become an accomplished survey research professional, one must acquire a mastery of research literatures as well as experience in designing, conducting, and analyzing surveys. This course introduces students to a set of principles of survey design that are the basis of standard practices in the field. The course exposes the student to research literatures that use both observational and experimental methods to test key hypotheses about the nature of human behavior that affect the quality of survey data. In general, the major objectives of this course are to introduce students to the skills and resources needed to design and conduct a survey. The skills include identifying and developing specific survey objectives; designing survey studies, sampling respondents, developing reliable and valid self-administered questionnaires, and administering surveys. Specifically, students will learn via class readings, presentations, and group projects.

• MKT-322 Marketing Analytics

Prerequisites:

MKT 210 and MKT 220 (or MKT 318 or MKT 319)

Credits:

3.00

Description:

In this course, students will learn a digitally driven approach to marketing analytics, an exciting field undergoing explosive growth and high demand. An emphasis will be placed on the practical methods used to measure, manage and analyze consumer information. Topics covered will include making sense of the digital media landscape, demand forecasting and predictive analytics, performance evaluation, and Google Analytics. Upon graduation of this course, students will have gained a set of skills and certification that directly translates to modern marketing practices.

- **MKT-H322 Honors Marketing Analytics**

Prerequisites:

MKT-210 or MKT-H210 and MKT-220 or MKT-H220 and at least a 3.2 GPA

Credits:

Honors

- **MKT-324 Sports Marketing Research**

Prerequisites:

MKT-220 or MKT-H220

Credits:

3.00

Description:

This course uses the context of Sports Marketing to provide students with an opportunity to learn and demonstrate the fundamental market research skills necessary to implement the steps included in the market research process. Students will be given the opportunity to enhance both written and oral marketing communication skills as well develop an understanding of statistical analysis software (SPSS).

- **MKT-333 Global Social Innovation**

Prerequisites:

MKT-210 or MKT-H210

Credits:

3.00

Description:

Recent work has begun to provide broad insight into the role and nature of innovation targeted at the 4 billion living in poverty in the global marketplace, also referred to as the bottom of the pyramid. These subsistence marketplaces have been described in terms of their size and accessibility, with brand conscious, connected customers willing to accept new technology. What is new here is a course that focuses on developing new ideas to improve the welfare of society, find new solutions of addressing old issues or set existing technology and knowledge into a new framework to deal with social objectives. Cases and a course project will be selected that cover different contexts across the globe covering advanced and developing economies, and covering markets that span the range of income levels. The course will address a number of issues, a few of which are listed as exemplars. provide students with an understanding of the relationship between societal welfare, marketing strategies and innovation. an understanding of marketing and business practices that are sustainable and work in harmony with, rather than in competition with societal development. an understanding of the leadership role marketing must play in creating sustainable innovation for of the future. An understanding of global issues of social innovation relating to products, processes, services, ideas, strategies. An opportunity to demonstrate how each element of the marketing mix can be adapted to implement global social innovation in the broader context of a firm's corporate strategy.

- **MKT-419 Marketing Policies & Strategies**

Prerequisites:

Prerequisites - MKT 317, MKT 220 (or MKT 318 or MKT 319), and 54 credits

Credits:

3.00

Description:

In this capstone course, marketing majors apply lessons learned across the curricula of the Marketing Department and Sawyer School. Students test their level of marketing knowledge by working to solve challenging integrated cases for developing marketing strategy and programs. In particular, students analyze both qualitative and quantitative information, evaluate alternative courses of action, and then make strategic recommendations for resolving the issues in each case. Prerequisites: MKT 210 or MKT H210, MKT 317, MKT 318, MKT 319, and Senior Standing.

- **MKT-H419 Honors Marketing Policies & Strategies**

Prerequisites:

MKT-317 (or MKT H317) and MKT-220 (or MKT H220, may be taken concurrently) at least 54 credits, and 3.2 GPA

Credits:

3.00

Description:

- **MKT-420 Marketing for Entrepreneurs**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

This course covers the critical role of marketing for entrepreneurs and start-up companies as they attempt to define and carve out a market for a new company, product or service. We will examine through both class discussion and case study how marketing must infiltrate the entire organization beginning with the concept, the business plan and through the early stage development phase. Moreover, we will discuss the creation of the new venture marketing plan, the budgeting and human resource allocation process and its integration into the business plan. We will also look at tactics from guerrilla marketing through mass media executions, the potential ROI for both and their influence on the ultimate success of the enterprise.

- **MKT-421 Global Marketing**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Topics examined in this course include the variations in economic, social-cultural, legal-political, and business environments among different nations and how these variations affect the marketing practices across national boundaries. The goal is to provide students with the necessary skills to compete successfully in national and international markets. Particular attention is given to the formulation of marketing plans and programs and policies to integrate and coordinate such activities on a global basis.

Type:

- **MKT-422 Sales Management**

Prerequisites:

MKT-210

Credits:

3.00

Description:

This course addresses the role of the sales manager in today's challenging business environment. As such, the course includes an understanding of direct sales, as well as all facets of sales management such as recruitment, compensation, and management of a sales force. The core of activity is lecture and case study.

- **MKT-H422 Sales Management**

Prerequisites:

MKT-210 and at least 3.2 GPA

Credits:

3.00

Description:

This course addresses the role of the sales manager in today's challenging business environment. As such, the course includes an understanding of direct sales, as well as all facets of sales management such as recruitment, compensation, and management of a sales force. The core of activity is lecture and case study.

- **MKT-423 Retail Strategy**

Prerequisites:

MKT-210 or MKT-H210

Credits:

3.00

Description:

Retail Strategy provides students with an introduction to the field of retailing. The course focuses on the retail environment, structure and strategy, the development and implementation of the retailing mix, and financial and managerial considerations. Topics include information systems for retailing, the internationalization of retailing and the growth of non-store retailing activities.

- **MKT-426 Sports Marketing**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

The purpose of the course is to develop an understanding of strategic marketing concepts and activities as they apply to the sports context. Marketing concepts and activities are examined as they relate to the marketing of sports and marketing through sports. An emphasis is placed on the international arena and issues relevant to the sports industry.

- **MKT-427 Supply Chain Management**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

The purpose of this course is to explain the function and value of marketing channels and define the major channel types. This course will also explain the elementary legal aspects of channel promotion, pricing, delivery and integration systems as well as identify channel strategies. Prerequisite: MKT 210 or MKT H210 (Formerly MKT 310) and Junior Standing. 1 term - 3 credits.

- **MKT-428 The Business of Sports and the Media**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

The Business of Sport focuses on the multibillion-dollar global sport industry and the challenges facing today's sport business leaders. Because the business of sport is interdisciplinary in nature, insights from a variety of stakeholders in the sport industry, along with perspectives from the major business disciplines including marketing, management, finance, information technology, and ethics are integrated throughout the course. This course provides an in-depth analysis of issues specific to the business of sport. The course is designed for future sport business leaders as well as those interested in the inner-workings of the industry. Students will apply knowledge and skills learned in core business courses to the unique issues found in the sport industry.

- **MKT-430 Sports Marketing Consulting**

Prerequisites:

MKT 210 or H210, MKT 220 or H220, and junior standing

Credits:

3.00

Description:

This course presents an in-depth and innovative framework for implementing relationship marketing within the sport industry. This framework includes network-and market-oriented methods and tools that enable sport organizations to design and develop products that provide targeted stakeholders with greater functional and experiential value. Sport organizations provide a wide variety of services from leadership, governance, management, development, entertainment and control to educational materials and other retail products, all of which benefit from relationship marketing principles. Because many sport organizations have adopted a relationship-marketing approach, they are necessarily network-based, operating in a system formed by numerous stakeholders. Their goals may be economic, social or environmental with the foundation of the system being the sport itself, with various bodies involved in the development of the sport. Through a consulting project with a sport organization, students will develop an understanding of the dynamics of the relationships between the different stakeholders who make up the network of the sport industry. Specifically, students will learn how sport organizations carry out their strategic actions within a network of stakeholders.

- **MKT-H432 Honors Marketing in Emerging Markets**

Prerequisites:

MKT 317 or MKT-H317 and at least 3.2 GPA

Credits:

3.00

Description:

This course focuses on cultural consumption trends both at home and abroad. In particular it compares and contrasts the emerging markets of India and China with more established Western markets. The course is organized in two self-contained modules around a theme. The first module focuses at the market level and examines what happens to the culture when East meets West. The second module analyzes the challenges companies face in staying competitive in rapidly evolving economies. Each class in a module advances your understanding of the theme through an engaging and challenging mix of readings, assignments, and case studies. This is an intensive Honors level course and requires students to be self directed and motivated. Every class is important- there is no mid-term or final.

Type:

Honors

- **MKT-434 Services Marketing**

Prerequisites:

MKT-210 or MKT-H210 and 54 credits and at least a 3.0 GPA

Credits:

3.00

Description:

The course focuses on the unique challenges of managing services and delivering quality service to customers. The attrition, retention, and building of strong customer relationships through quality service (and services) are at the heart of the course content. The course is equally applicable to an organizations whose core product is service (e.g., banks, transportation companies, hotels, hospitals, educational institutions, professional services, telecommunications, sporting industry, etc.) and to organizations that depend on service excellence for competitive advantage (e.g., high technology manufacturers, automotive, industrial products, etc.).

- **MKT-436 Marketing for Nonprofit Organizations: Insights and Innovation**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

This course presents the principles of marketing, marketing strategy, and the marketing mix as applicable in a nonprofit settings. This course is directed toward specific Customer Service Marketing applications that have focused relevance to non-profit organizations. Special attention is given to marketing of services, customer service, development of marketing strategies, and sales to targeted markets. This course is designed to provide students with insight into the nuances associated with marketing activities design to support the efforts of Nonprofit Organizations' attempts to influence clients, constituents, volunteers, Board members and donors.

- **MKT-442 Brand Marketing**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Brand marketing has become an increasingly important function in organizations. The purpose of this course is to provide a thorough understanding of brand marketing principles and practices. The role of brands and branding will be examined both from a managerial and a consumer perspective. More specifically the course will present current frameworks that guide marketing managers in how to build strong brands in the marketplace. In order to build brands successfully, it is of key importance to have a profound understanding of the roles brands play in consumer culture. The course will examine how consumers make use of brands and develop brand meaning through everyday consumption practices.

- **MKT-444 Social Media Marketing**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Social media has altered the landscape of business, communications, marketing, and society as a whole. While some social media like Wikipedia and Facebook have become part of the fabric of many consumers' lives, new media like Snapchat and Tumblr are emerging. This constantly evolving landscape offers businesses innovative ways for generating awareness, demand and revenue. In this course students will take away a social media vocabulary, a set of social media skills and tools, and analytical frameworks for analyzing effective social media business practices. Naturally, student projects, assignments, and other activities will use social media tools.

Type:

Arts Admin Minor Elective

- **MKT-H444 Honors the Business of Digital Media**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Social media is transforming the way consumers work, play, and live and no one knows this better than you- the Millennial generation. But, what does this mean for business? The focus of this course is to understand the transformation of marketing practices as new social media challenge traditional media. How do businesses use the new media to create deeper and more profitable relationships with consumers? What are the new measures and metrics for assessing marketing programs in this new environment? From this course students will take away a social media vocabulary, a set of social media skills and tools, and analytical frameworks for analyzing effective social media business practices. The course is constructed on the principle of the student as an active learner where the student takes the responsibility for their own learning and works collaboratively with peers assisting in their learning. Naturally, student projects, assignments, and other activities will use social media tools including wikis and blogs.

Type:

Honors

- **MKT-446 High Tech Marketing**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Marketing of high-tech technology products and innovations occur in turbulent environments, and requires rapid decision making with incomplete information and risky prospect. The fast pace of change defines the momentum of evolution in the high-technology markets. Marketing in such an environment commands knowledge about the idiosyncratic features of high-tech products, innovations, and the industries. Marketing success in high-tech industries also calls for capabilities and skills of analyzing decision problems and designing solutions. To achieve these objectives, this course is built on extensive analysis of Harvard Business School cases, class discussions of intriguing phenomena in high-tech industries, and learning-by-doing student projects that focus on real-life companies and technologies. The topics covered in this course include the following: - Characteristics of high-technology industries - Different types and characteristics of high-tech products and innovations, and their marketing implications - Organizational culture and management strategies for high-tech products and innovations - Strategic alliances in developing and marketing high-tech products and innovations - Acquisition and understanding of market information for high-tech products and innovations - Customer adoption and diffusion of high-tech products and innovations -Market introduction strategies for high-tech products and innovations

- **MKT-H455 Honors Digital Marketing Challenges**

Prerequisites:

MKT 210 or MKT-H210 and at least 3.2 GPA

Credits:

3.00

Description:

The foundational course in the digital marketing track this course focuses on the consumer of digital media and five big picture marketing strategy challenges confronting marketers in the new digital (mobile +social) marketing era. Challenge 1: Marketing to a smarter, more engaged, empowered consumer; Challenge 2: Marketing to a networked, collaborative, and more social consumer; Challenge 3: Marketing to a more distracted and fickle consumer; Challenge 4: Marketing to a unique, individual consumer; and Challenge 5: Marketing to prosumers or producer-consumers. The course takes on these big picture challenges through a deep engagement with and critical analysis of readings and cases. Given this focus the course demands thorough preparation for class and active engagement in the class discussion. The evaluation is assignment and project based.

Type:

Honors

- **MKT-466 Mobile Marketing: Reaching the Multi-Screen Consumer**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

This new course in the digital marketing track focuses on how mobile device usage has completely changed the paradigm for companies in every industry. It will focus on the following four major areas: 1. consumer usage of mobile devices; 2. mobile-only companies and applications, 3. mobile hybrids - companies making a huge shift to mobile; and 4. mobile marketing and advertising. The course will rely heavily on discussion of real mobile business cases with lectures from leaders from inside the mobile industry. Evaluation will be based on assignments, class participation, and a group project.

- **MKT-477 eMarketing**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

This course explores how we can use the principles of web marketing as effective marketing tools. The course will have the following learning components: lectures, guest lectures, web site analyses, and student project presentations.

Type:

Arts Admin Minor Elective

- **MKT-499 Integrated Marketing Research and Planning**

Prerequisites:

MKT 210 and MKT 318 or MKT 319 or MKT 220 and at least 84 credits completed.

Credits:

3.00

Description:

This course is designed to provide students with an opportunity to learn the role of research in marketing strategies. Working with client organization, the students will demonstrate the fundamental marketing research skills as they implement the steps included in the marketing research process to create a marketing plan that will provide recommended strategies for the organization. Real-life case studies on the role of marketing research in organizational decision making will also be discussed throughout the course.

- **MKT-H499 Honors Integrated Marketing Research and Planning**

Prerequisites:

MKT-210 and MKT-318(or MKT-H318) or MKT 319(or MKT-H319) or MKT-220(or MKT-H220) and 3.2 GPA and at least 84 credits completed.

Credits:

• MKT-510 Directed Study

Prerequisites:

MKT 210 or MKT-H210 and Instructor's consent required

Credits:

1.00- 3.00

Description:

Independent study allows students to expand their classroom experience by completing research in an area of interest not already covered by Suffolk courses. The student designs a unique project and finds a full-time faculty member with expertise in that topic who agrees to sponsor it and provide feedback as the proposal is refined. A well designed and executed research project broadens and/or deepens learning in a major or minor area of study and may also enhance a student's marketability to potential future employers. Students cannot register for an Independent Study until a full proposal is approved by the faculty sponsor, department chair, and academic dean. Many Independent study proposals require revisions before approval is granted; even with revisions independent study approval is NOT guaranteed. Students are strongly encouraged to submit a proposal in enough time to register for a different course if the proposal is not accepted. For complete instructions, see the SBS Independent/Directed Study Agreement and Proposal form available online.

• MKT-H510 Honors Directed Study

Prerequisites:

MKT 210 or MKT-H210 and at least a 3.2 GPA and Instructor's Consent

Credits:

1.00- 3.00

Description:

This elective course option involves a student initiated written proposal to a willing and appropriate full-time faculty member for a directed study project. Normally this is for three credits and completed during one semester. The faculty member and student must concur on a written proposal and final project. Approval by the Department Chair and the Dean is necessary prior to registration.

Honors

• MKT-H518 Global Product Innovation (GPI): From Concept to Commercialization

Prerequisites:

Honor standing with a GPA of 3.2 or higher is required. Students are required to take MKT210 (Principles of Marketing) and MKT220 (Business Research Methods). Taking MKT317 (Consumer Behaviors) is highly recommended, but not required. Knowledge and skills obtained in these courses will be critical for the success in the innovation course.

Credits:

3.00

Description:

SBS Honor Global Product Innovation (GMC) offers exciting, valuable, and practical global product innovation experience with international educational and/or corporate partners. This project-based course is organized by the Suffolk Marketing Department and an overseas partner school (e.g., Shanghai University of International Business and Economics for Fall 2016). Teams, consisting of Suffolk Business students and students from the partner school, work on new product or service development and marketing projects targeting one or multiple international markets. The focus will be on the marketing function's input to the innovation process during the pre-launch and launch stages, covering a wide range of issues (such as global market selection, concept generation and evaluation, design and positioning, test marketing, and product launch and tracking). Students will collaborate via virtual teaming technology throughout the semester and report product or service design and marketing plan to the business clients or entering the SBS New Product Competition in the end of the semester. Through a hands-on product innovation project in the global context, students will develop an understanding of the global market dynamism, the diversity of global consumer needs and business practices, and the challenges and advantages of cross-cultural team collaboration.

Honors

- **MKT-519 Red Sox Marketing Practicum**

Prerequisites:

MKT210 (H210) and ONE of the following: MKT 318/318 or MKT 319/H319 or MKT 220/H220) and at least a 2.8 GPA

Credits:

3.00

Description:

The Red Sox marketing practicum takes a dynamic educational approach that requires student immersion in the sports marketing experience. This practicum is designed to complement marketing coursework by providing students with the opportunity to apply marketing skills and concepts learned in business and marketing courses. It is intended to contribute meaningfully to student's overall educational and professional preparation.

- **MKT-520 Marketing Internship**

Prerequisites:

MKT-210 or MKT-H210 and 54 credits and at least a 3.0 GPA

Credits:

3.00

Description:

This course provides marketing majors or minors (junior status or higher) to apply marketing and business knowledge for problem solving in an organizational workplace setting. Students identify and organize their own internship position and particular project (depending on area of interest) with assistance from department staff, as needed. Projects will vary in scope and content and may include topics such as buyer behavior, customer satisfaction, service quality, e-marketing, and others. Students are expected to be on the job for approximately 8 hours per week during the course of the semester. Prerequisites: Minimum of 3.0 GPA; MKT 210 or MKT H210 (formerly MKT 310) AND JUNIOR STANDING and permission from instructor. 1 term - 3 credits.

- **MKT-524 Global Marketing Consulting**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

This course offers global consulting experience with international corporate partners. Teams of Suffolk Business students work on strategic consulting projects that feature global marketing challenges (e.g., market entry decisions, consumer research, distribution channel analysis and other marketing strategy issues). At the end of the semester, students will finalize the projects and report to the business clients.

Type:

Global Engagement Experience

- **MKT-H524 Global Marketing Consulting**

Prerequisites:

MKT 210 or MKT-H210 and at least a 3.2 GPA

Credits:

3.00

Description:

This course offers global consulting experience with international corporate partners. Teams of Suffolk Business students work on strategic consulting projects that feature global marketing challenges (e.g., market entry decisions, consumer research, distribution channel analysis and other marketing strategy issues). At the end of the semester, students will finalize the projects and report to the business clients.

Type:

Global Engagement Experience, Honors

- **MKT-H525 Honors Professional Marketing Consulting**

Prerequisites:

MKT 319; 3.2 GPA

Credits:

3.00

Description:

This course provides qualified students with a unique opportunity to work either individually or with other qualified students, on a marketing consulting project for a professional client. Projects could include, but are not limited to the development of strategic marketing plans and marketing research projects. Students will create and deliver a professional report and presentation to the client upon completion of the semester project.

2015-2016 Archived Catalog Information

Public Service

The minor in Public Service prepares students for professional careers in all levels of government and the nonprofit sector.

The minor focuses on the knowledge and skills needed to become an effective manager and leader in the challenging environment of public service. A minor in public service is interdisciplinary, drawing upon the behavioral, social science, quantitative, administrative/management science, and related liberal arts disciplines. A close relationship exists between the undergraduate minor in public service and the Master of Public Administration offered by the Sawyer Business School. Thus, the minor provides a strong foundation for pursuing graduate education in public service.

The Suffolk University Institute for Public Service advances the public service mission of the Sawyer Business School. We support social responsibility and collaboration for the common good and seek to foster a public service spirit. For future leaders in government, health, nonprofit, and business organizations, we offer curriculum options designed to enhance the responsiveness, efficiency, and effectiveness of the operations and interactions of all the public service sectors. We adhere to the democratic values of inclusion, egalitarianism, and respect for diversity.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

Public Service Minor for Business Students, 3 courses, 9 credits

A student may choose to minor in Public Administration by completing 3 courses (9 credits)

Required Course:

- P.AD-310 Introduction to Public Service

Prerequisites:

Junior Standing

Credits:

3.00

Description:

This course introduces students to the field of public management; including government, non-profit, and health. Topics for discussion include the role of managers in publicly controlled bureaucracies, techniques for analyzing and participating in public policy making including decision making, policy formulation, strategic planning, and implementation.

Choose two courses from the following:

- **P.AD-201 Social Change**

Credits:

3.00

Description:

This course will examine social change in the U.S. and abroad. The course will also examine the role of business, nonprofits, and the public sector in addressing social problems. Topics studied may include the Industrial Revolution, the civil rights movement, the women's movement, environmentalism, and the gay and lesbian movement.

Type:

Diverse Perspectives,BSBA SOCIAL CHANGE

- **P.AD-312 Managing Public Service Financial Resources**

Prerequisites:

ACCT 201; ACCT 202; Junior standing

Credits:

3.00

Description:

This course introduces the fundamentals of budgeting, financial management, and revenue systems in the public sector. Course goals include: A heightened awareness of the democratic ideals and value that must inform budgeting and financial management decisions, including a commitment to ethics, transparency and accountability; an understanding of the budget process and the distinctive features of budgetary decision making in the public sector; an understanding of the critical linkage between budgeting and financial management systems and the capacity of an organization to achieve its strategic goals; the ability to use the budget and financial reports as planning and management tools; knowledge of the basic principles of taxation as well as the structure and functions of federal, state, and local revenue systems. The course emphasizes knowledge and skills essential to the full range of public service careers.

- **P.AD-322 Organizational Change**

Prerequisites:

Junior standing

Credits:

3.00

Description:

Students explore small groups and organizational operations, practices, behaviors, and structure. They develop techniques for maximizing efficiency and/or effectiveness; evaluations analysis; concepts and applications of the Classicists; leadership; organizational development; and results-oriented management; as well as elements of reorganization, innovation, and change.

- **P.AD-325 Nonprofit Management**

Prerequisites:

Junior Standing

Credits:

3.00

Description:

The primary focus will be on understanding the operational and strategic leadership aspects of managing mission driven, public service organizations. Specific emphasis will be placed on nonprofit corporations, including coursework that explores the legal, structural, and operational issues that are particular to such organizations.

Type:

Arts Admin Minor Elective

- **P.AD-326 Public Service Information Based Management**

Prerequisites:

Junior Standing

Credits:

3.00

Description:

This course demonstrates how issues, problems and questions surrounding public policies, program operations, and administrative systems can be structured as hypotheses and made amendable to resolution through the application of social science research techniques. The elements of research design such as surveys, true experiments, quasi-experiments, case studies and non-experimental studies are described, as well as sampling techniques and descriptive statistics. Ethical issues related to employment of these methods in the policy making process are also explored. The course content is presented as a way to reduce managerial uncertainty regarding alternative courses of action.

- **P.AD-361 Public Service Human Resource Management**

Prerequisites:

Junior Standing

Credits:

3.00

Description:

This course will explore complex issues in public and non-profit human resource management (HRM) by examining policies and practices that support and enhance the value and contribution of individuals in these organizations.

Students may use PAD 201 Social Change as a minor requirement if it has not been counted toward any other BSBA requirement.

Public Service Minor for College of Arts & Sciences Students, 3 courses, 9 credits

Accelerated BSBA and MPA (full-time study)

Public service minor students may waive up to four courses (12 credits) if accepted into the Suffolk Master of Public Administration program. This enables a student to complete both the undergraduate and graduate degrees in only five years of full-time study. In order to waive courses, undergraduates must register for sections cross-listed with graduate level courses and earn a B grade or better.

They develop techniques for maximizing efficiency and/or effectiveness; evaluations analysis; concepts and applications of the Classicists; leadership; organizational development; and results-oriented management; as well as elements of reorganization, innovation, and change.

- **P.AD-323 Quantitative Analysis**

Prerequisites:

MATH 128 or higher; STATS 240 or STATS 250; Junior standing

Credits:

3.00

Description:

Quantitative analysis introduces basic statistical techniques used to analyze and draw conclusions from citizen and client surveys; program and policy evaluations; and performance and operations data. These techniques include chi square, lambda, gamma, correlations, analysis of variance, t test correlation, and multivariate regression. Knowledge of these statistical techniques empowers managers by giving them the ability to evaluate the work of consultants, access the policy and management of literature, and analyze data using the analytical tools available in commonly used statistical software, such as Microsoft Excel and the Statistical Package for the Social Sciences (SPSS).

- **P.AD-324 Public Sector Administrative Law**

Prerequisites:

BLE 214 or GVT 110; Junior Standing

Credits:

3.00

Description:

Students review the basis for administrative practice. They learn legal interpretation of statutes, regulations, and proposed legislation that impact public administration and public policy.

- **P.AD-325 Nonprofit Management**

Prerequisites:

Junior Standing

Credits:

3.00

Description:

The primary focus will be on understanding the operational and strategic leadership aspects of managing mission driven, public service organizations. Specific emphasis will be placed on nonprofit corporations, including coursework that explores the legal, structural, and operational issues that are particular to such organizations.

Description:

This course will explore complex issues in public and non-profit human resource management (HRM) by examining policies and practices that support and enhance the value and contribution of individuals in these organizations.

- **P.AD-362 Global Health, Poverty & Warming**

Prerequisites:

SIB 101 or HST 149 or HST 150 or Instructor permission

Credits:

3.00

Description:

Global health, global poverty, and global warming are three interrelated issues that are creating a perfect storm of crises worldwide with major impacts on the United States. This course is an overview of the problems - the needs, systems, programs, and financing. We will look critically at policies in these areas and discuss what needs to be done to address them. Students will write a major paper on an issue of their choice.

- **P.AD-410 Public Service Internship**

Prerequisites:

Junior standing

Credits:

3.00

Description:

The Public Service Internship provides work experience for minors; allowing them to bridge the gap between education and practice. It includes approximately 150 hours of work in a government, non-profit, or health care organization on a specific project of importance to the host organization.

- **P.AD-553 Climbing the Corporate Ladder: Serving On Nonprofit Boards**

Credits:

1.00

Description:

Business leaders who wish to climb to the top of their companies need to have developed a philanthropic resume along the way. Serving on nonprofit Boards of Directors is one way to develop that resume. Learn about what nonprofit organizations do, what role the Board of Directors plays in their operation, and what your responsibilities would be as a member of their Board.

Real Estate Minor for Business Students, 3 courses, 9 credits

Complete these three courses after completing BLE-214 Principles of Business Law:

- BLE-318 Intro to Real Estate Principles

Prerequisites:

BLE 214

Credits:

3.00

Description:

Introduces students to the concepts and principles of real estate. Enables students to understand the key components of each major real estate asset class including: residential, retail, commercial, industrial, hospitality, and properties. Students learn the range of professional players in the industry and what roles they play. Teaches basic elements of a Development Pro-forma Budget; Operating Pro-forma Budget; Sources and Uses Statement; and financial schedules. Utilizes textbook, case work, web based data sources, selected readings and field trips. Emphasizes practical application of the concepts taught, the use of current examples from the industry, and today's marketplace.

Term:

Offered Fall Term

- **BLE-319 Real Estate Development and Public Policy**

Prerequisites:

BLE 214

Credits:

3.00

Description:

This class builds on BLE-318 and explores the process of responding to the public procurement process, large shopping malls, the hospitality industry and office and retail mixed use projects. We also explore the phases of the real estate development process by investigating, Zoning and Variances, Project Review Committees, Community Benefit Packages, Historic Preservation issues and Environmental issues. Students will understand the complete development process and the role of all the stakeholders from this class. No changes to 318 summary.

Term:

Offered Spring Term

- **FIN-317 Real Estate**

Prerequisites:

FIN 200 (formerly FIN 310)

Credits:

3.00

Description:

This course focuses primarily on real estate investment and many different approaches are discussed. The course examines related areas of law, finance, insurance, taxation, appraisal and brokerage.

Term:

Offered Both Fall and Spring

Any real estate special topics or independent study course may also count. Students should speak to their real estate minor advisor in the department for further information.

Real Estate Minor for College of Arts & Sciences Students, 5 courses, 15 credits

See individual course descriptions for prerequisites.

Required courses for CAS students:

- **ENT-101 Business Foundations**

Credits:

3.00

Description:

This course introduces students to foundational concepts in business, including functional areas, the life cycle, competition, stakeholders and ethical considerations. Students develop critical thinking by learning and using a problem solving process through a business situation analysis model to analyze various situations that confront managers and founders of small, medium, and large organizations. Students will also develop tools for analysis, allowing them to critically view business in a new and thoughtful way. The class culminates with student- teams presenting a detailed analysis and recommendations to a panel of executives and persuading them that the recommended strategy is not only feasible, but also practical for the stakeholders involved.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **BLE-214 Principles of Business Law**

Credits:

3.00

Description:

Introduces the field of business law. Provides an overview of the organization and operation of the American legal system, court system and legal procedure. Examines selected business law topics such as contracts, torts, criminal law, agency, and business organizations. Attention is given to the ways in which business law manifests important social and ethical precepts.

Take one elective course from the following list:

- **MKT-210 Principles of Marketing**

Prerequisites:

WRI-101, WRI-102 or WRI-H103

Credits:

3.00

Description:

As part of the core curriculum for the BSBA, this course provides a comprehensive, innovative, managerial, and practical introduction to marketing. Students will learn and apply basic concepts and practices of modern marketing as used in a wide variety of settings. Technological advances, rapid globalization, economic shifts and cultural and environmental developments are causing profound changes in the marketplace. As the marketplace changes, so must the marketers who serve it. These new developments signify a brand new world of opportunities for forward thinking marketers. In response to these new developments, the focus of this course is on four major themes that go to the heart of modern marketing theory and practice: 1. Building and managing profitable customer relationships; 2. Building and managing strong brands; 3. Harnessing new marketing technologies in this digital age; and 4. Marketing in a socially responsible way around the globe.

- **MGT-401 Negotiations**

Prerequisites:

MGT 217 (formerly MGT 317); Junior standing

Credits:

3.00

Description:

This course is premised on the fact that whereas a manager needs analytical skills to discover optimal solutions to business problems, a broad array of negotiation skills is needed to implement these solutions. This experiential course is designed to improve your skills in all phases of negotiation: understanding prescriptive and descriptive negotiation theory as it applies to dyadic and multiparty negotiations, to buyer-seller transactions and the resolution of disputes, to the development of negotiation strategy, and to the management of integrative and distributive aspects of the negotiation process. The course is based on a series of simulated negotiations in a variety of contexts including one-on-one, multi-party, cross-cultural, third-party and team negotiations. Please note that given the experiential nature of the course, attendance is mandatory and will be strictly enforced beginning from the first class session.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **MGT-302 Developing Innovation Skills**

Credits:

3.00

Description:

This highly interactive and experiential course will help you to develop your creative skills for business and life success. Corporate leaders consider creativity [1] to be an essential skill. However, according to a recent Conference Board study [2], college graduates lack the creativity and innovation skills needed to succeed in the workplace. The Council on Competitiveness warns that companies that do not embrace innovation (and creativity) as a core business value will fall to global competition.[3] We will discuss meaning of life issues that will serve to clarify your thinking and help you align

your values and belief-systems with what you do on a daily basis at work and throughout your life. A substantial body of evidence indicates that people tend to be more creative when working on projects that interest them, and most creative when passionately immersed in their endeavors. We will focus on enhancing creativity in the workplace to achieve defined organizational needs, to add economic value to the organization, and to create social value as well. We will also focus on helping you to understand and apply a wide array of creative processes and tools to develop your creative competencies and skills. We will use breakout groups, role plays, experiential exercises, and discussions to facilitate your learning. This course is an invitation to you to explore and define what you want to create in your life. [1] The Conference Board defines creativity/innovation as the ability to demonstrate originality, inventiveness in work, communicate new ideas to others, and integrate knowledge across disciplines. [2] Are They Ready To Work: Employers' Perspectives on the Basic Knowledge and Applied Skills of New Entrants to the 21st Century Workforce. 2006. [3] Innovate America: Thriving in a World of Challenge and Change. July, 2004. National Innovation Initiative, Council on Competitiveness.

Honors

- **BLE-310 I Want to Buy a Home**

Prerequisites:

Junior standing or above needed.

Credits:

1.00

Description:

Teaches students all they have to know about purchasing a residence, starting with finding a home to financing, inspections, documents, and final ownership conveyance.

Term:

Offered Both Fall and Spring

- **BLE-315 Legal Lessons for Business Startups Organizations**

Prerequisites:

BLE-215

Credits:

3.00

Description:

Examines the formation, strategic use, and financial implications of alternative forms of business organization, namely partnerships, corporations, trusts, subchapter corporations, and the new limited liability hybrids.

- **BLE-316 How to Insulate Your Business Against Lawsuits**

Prerequisites:

BLE 214

Credits:

3.00

Description:

One of the greatest threats to business is the potential for litigation. Lawsuits can seriously hurt profits and even lead to bankruptcy. Even when businesses win in court, they still lose, what with the cost of the legal defense and the possibility of adverse publicity and decreased consumer confidence. Managers need to know how to avoid the potential for litigation and be aware of the areas of their business that provide the greatest risks to their enterprise. This course covers common ways in which businesses can protect themselves from common lawsuits ranging from product defects to environmental and worker safety to employee discrimination and harassment. Students will learn how to establish systems that will put their companies ahead legally.

Term:

Offered Fall Term

- **BLE-317 Managing in the Global Legal Environment**

Prerequisites:

BLE 214

Credits:

3.00

Description:

Surveys the global legal environment of business. Emphasizes case analysis of topics such as: sovereignty, extraterritoriality, treaties, international contracts, arbitration, and the European Union. Explores the managerial and economic significance of these topics.

Term:

Offered Both Fall and Spring

- **BLE-318 Intro to Real Estate Principles**

Prerequisites:

BLE 214

Credits:

3.00

Description:

Introduces students to the concepts and principles of real estate. Enables students to understand the key components of each major real estate asset class including: residential, retail, commercial, industrial, hospitality, and properties. Students learn the range of professional players in the industry and what roles they play. Teaches basic elements of a Development Pro-forma Budget; Operating Pro-forma Budget; Sources and Uses Statement; and financial schedules. Utilizes textbook, case work, web based data sources, selected readings and field trips. Emphasizes practical application of the concepts taught, the use of current examples from the industry, and today's marketplace.

Term:

Offered Fall Term

- **BLE-319 Real Estate Development and Public Policy**

Prerequisites:

BLE 214

Credits:

3.00

Description:

This class builds on BLE-318 and explores the process of responding to the public procurement process, large shopping malls, the hospitality industry and office and retail mixed use projects. We also explore the phases of the real estate development process by investigating, Zoning and Variances, Project Review Committees, Community Benefit Packages, Historic Preservation issues and Environmental issues. Students will understand the complete development process and the role of all the stakeholders from this class. No changes to 318 summary.

Term:

Offered Spring Term

- **BLE-321 Corporate Crime and Financial Fraud**

Credits:

3.00

Description:

Presents an in-depth study of corporate crime and financial fraud. Examines accounting devices and schemes employed to defraud stakeholders, failure of industry watchdogs, and the regulatory and legislative environment. Topics include: corporate governance, corporate finance, corporate compliance programs, ethical misconduct by outside legal, accounting, investment and banking professionals, Sarbanes Oxley Act, Foreign Corrupt Practices Act, Organizational Sentencing guidelines, mail fraud, wire fraud, money laundering, conspiracy, securities violations, qui tam litigation (whistleblowers) and financial accounting crimes.

- **BLE-322 Getting Government to Say 'yes!' to Business**

Prerequisites:

BLE-214

Credits:

3.00

Description:

Government can be a vital ally to business, as much as it can be a roadblock. Government sets the minimum standards for how society expects companies to deal with customers and each other. Businesses that do not recognize why government needs to be an integral part of their decision-making as opposed to an afterthought-- are doomed to fail. This course teaches students how to get government on their side.

- **BLE-323 Protect Your Brand: Using Intellectual Property Law to Win**

Prerequisites:

BLE-214

Credits:

3.00

Description:

As a growing number of firms choose to produce goods abroad, piracy, counterfeiting, and other acts that dilute their brands are becoming increasingly common. This course focuses on the legal and practical tools that entrepreneurs, start-ups, and existing business can use to protect their intellectual property (IP). It offers best practices on the strategic use of copyright, patent, trademark, and trade secrets to enhance corporate value in different industries and regions. The course provides a legal foundation in IP and demonstrates how to apply that knowledge to business through case analysis.

- **BLE-325 Global Business Ethics**

Prerequisites:

BLE-215, PHIL-119, PHIL-120, PHIL-123 or PHIL-127

Credits:

3.00

Description:

Surveys business ethics as they transcend the diverse perspectives of global business. Explores current global ethics standards and values, ethical challenges, controversies, convergence and trends. Students explore famous global business cases through films, websites and independent research. Emphasizes identification and resolution of global business ethical issues within the context of ethical decision-making and sustainability. Analyzes corporate social responsibility ; hence, transforming global business ethics through business.

Type:

Diverse Perspectives

- **BLE-510 Independent Study in Business**

Prerequisites:

Approval of Dept Chair or Dean

Credits:

3.00

Description:

Involves a student initiated written proposal to a willing and appropriate full-time faculty member for a directed study project. Normally this is for three credits and completed during one semester. Prior to registration, the faculty member and student must concur on a written proposal, which includes a reading list and description of requirements for grading of the final project.

Social Impact

- [Social Impact Minor Requirements](#)
- [Courses](#)

Social Impact Minor

The social impact minor provides students with a multidisciplinary approach to understanding the theory and practice of enacting social change. The minor is very hands-on. All required classes expect students to initiate, launch, and evaluate a social change effort.

Social Impact Minor for Business Students

Juniors who have completed MGT-217 Organizational Behavior (formerly MGT-317) take two required courses and one elective to complete the social impact minor. Management majors or minors cannot count these courses toward both the social impact minor and their management major or minor.

Required Courses:

- **ENT-350 Social Entrepreneurship**

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

Social entrepreneurs are people who harness their energy, talent and commitment to make the world a more humane, safe and just place. This is accomplished by applying vision, passion, persistence and leadership to the creation of businesses that are focused on a mission of social responsibility. While the social mission is important, so is the fact that the business funding the mission must be sustainable via revenue generation, market need, and operational efficiency. Creating balance between business effectiveness and serving the needs of the community the business is dedicate to helping, provides a unique challenge to social entrepreneurship to stay entrepreneurial in terms of the business model, thus providing the necessary resources to the social mission.

Term:

Offered Fall Term

- **MGT-301 Leading Change**

Prerequisites:

MGT 217 (formerly MGT 317)

Credits:

3.00

Description:

Change is constant in all industries and work settings. Accordingly there is constant demand for people who can understand the need for change, make complex, strategic and realistic change plans, and lead others through a successful implementation of a planned change. This lively case-based course will focus on managerial and leadership skill-building in the areas of change management through the careful and thorough analysis of change-focused case studies. Students will be expected to conduct both individual and group-based analyses of complex business cases; including the preparation of written case analyses, active participation in case discussions, and delivery of case analyses through oral presentation.

Term:

Offered Both Fall and Spring

Choose one of the following*:

- **ENT-352 Green and Sustainable Business**

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

Over the past decade, the world of business and the environment has exploded. Beginning as an engineering-driven movement among a handful of companies during the 1980's, many firms have learned that improved environment performance can save money and create a competitive advantage. In this course, we will cover how businesses of all sizes are more attentive to environmental issues and the realization that a green business: improves employee morale and health in the workplace, holds a marketing edge over the competition, strengthens the bottom line through operating efficiencies, is recognized as an environmental leader, can have a strong impact in the community and beyond, and can improve public relations.

Term:

Offered Spring Term

• ENT-520 Launching the New Venture

Prerequisites:

ENT 326 and Senior Standing This course may be used as an ENT major elective or taken instead of ENT 419.

Credits:

3.00

Description:

Are you looking for guidance to launch your venture? If so, this course will allow you to earn credits through an independent study working with faculty and alumni through our Center for Entrepreneurial Studies. Students must draft a launch plan based on their business plan prepared in ENT 326, modified based on feedback received from faculty and judges during the ENT 326 presentations. Students must demonstrate enough evidence to support that the venture will be launched, as well as completing all tasks identified in the launch plan by the end of the semester to receive credit for the course. An ENT faculty member must supervise the student during the launch. The launch plan must provide evidence sufficient to support the number of credits being requested. Once the launch plan is completed, the student must attach the plan to the Independent Study request form and obtain the required approvals before the course will be opened. Maximum of 3 credits allowed.

Term:

Occasional

- **MGT-322 Managing Diversity in the Workplace**

Prerequisites:

MGT 217 (formerly MGT 317) or Instructor's consent required; Junior standing

Credits:

3.00

Description:

This course explores multicultural diversity in business organizations. In order to learn to effectively manage diversity in the workplace, it is first necessary to become familiar with the concepts and dynamics that underlie many of the organizational issues associated with increased diversity in the workplace. Thus, this course is structured to first study topics such as identity, perception, socialization, stereotyping, and prejudice. With these concepts as a foundation, we will explore the opportunities and challenges created by diversity in the workplace. We will consider issues and dynamics that arise in the workplace as a result of diversity in terms of gender, race, national origin, sexual orientation, and religion. After developing a rich understanding of workplace diversity dynamics, we will consider actions that individuals and organizations can take to address the opportunities and challenges inherent in a diverse workforce to gain competitive advantage. .

Term:

Offered Both Fall and Spring

- **MGT-331 Leadership**

Prerequisites:

MGT 217 (formerly MGT 317); Junior standing

Credits:

3.00

Description:

This course is designed to provide a fundamental understanding of the principles of leadership and the core competencies, traits and behaviors that enable effective leadership. It is an interactive, event-driven program to develop, refine and refresh leadership qualities through activities, individual assessments, coaching, research and dynamic group discussion to practice and develop individual skills. Students will examine various leadership theories, identify styles and preferences, practice conflict management and team building, feedback and expectation setting by applying class room/real world situations to their own learning.

Term:

Offered Both Fall and Spring

- **MGT-335 Managing Across Cultures**

Prerequisites:

MGT 217 (formerly MGT 317)

Credits:

3.00

Description:

To what extent are our identities, ways of thinking, and behaving the products of our cultural environments? How do conceptions of motivation, leadership, decision making, negotiation, and ethics differ across cultures? How do expatriates settle abroad, and how do they re-enter the American life they are once so familiar? The purpose of this course is to examine the international context of management, specifically, the cross-cultural environment and how it shapes managers' and work organization members' experiences, roles and responsibilities.

Term:

Offered Both Fall and Spring

- **MGT-401 Negotiations**

Prerequisites:

MGT 217 (formerly MGT 317); Junior standing

Credits:

3.00

Description:

This course is premised on the fact that whereas a manager needs analytical skills to discover optimal solutions to business problems, a broad array of negotiation skills is needed to implement these solutions. This experiential course is designed to improve your skills in all phases of negotiation: understanding prescriptive and descriptive negotiation theory as it applies to dyadic and multiparty negotiations, to buyer-seller transactions and the resolution of disputes, to the development of negotiation strategy, and to the management of integrative and distributive aspects of the negotiation

process. The course is based on a series of simulated negotiations in a variety of contexts including one-on-one, multi-party, cross-cultural, third-party and team negotiations. Please note that given the experiential nature of the course, attendance is mandatory and will be strictly enforced beginning from the first class session.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

• MGT-520 Management Internship

Prerequisites:

MGT 217 (formerly MGT 317); Management Major; Junior or Senior standing; 3.0 GPA; Instructor consent required; Cannot take this course concurrent with any other internship course

Credits:

3.00

Description:

MGT 520 is an internship course which offers students the opportunity to apply knowledge and skills acquired in management courses to a valuable work experience outside the University. Interns practice using management principles in a carefully selected real world work situation under the direction of a faculty member, while completing academic requirements intended to integrate theory and practice. Students can also use the internship to explore career interests. Sometimes building a relationship with an employer during an internship can lead to a job offer during school or after graduation.

Term:

Offered Both Fall and Spring

• P.AD-362 Global Health, Poverty & Warming

Prerequisites:

SIB 101 or HST 149 or HST 150 or Instructor permission

Credits:

3.00

Description:

Global health, global poverty, and global warming are three interrelated issues that are creating a perfect storm of crises worldwide with major impacts on the United States. This course is an overview of the problems - the needs, systems, programs, and financing. We will look critically at policies in these areas and discuss what needs to be done to address them. Students will write a major paper on an issue of their choice.

- **SIB-550 Global Travel Seminar**

Credits:

3.00

Description:

An in-depth analysis of timely special issues in international business. Specific topics are announced when the course is scheduled.

Type:

Diverse Perspectives, Global Engagement Experience

*Or students can petition to count a Center for Community Engagement (formerly SOULS Office) sponsored travel seminar if it is done for credit (e.g., Alternate Winter Break).

Social Impact Minor for College of Arts & Sciences Students

The social impact minor provides students with a multidisciplinary approach to understanding the theory and practice of enacting social change. The minor is very hands-on. All required classes expect students to initiate, launch, and evaluate a social change effort.

Required Courses:

- **ENT-101 Business Foundations**

Credits:

3.00

Description:

This course introduces students to foundational concepts in business, including functional areas, the life cycle, competition, stakeholders and ethical considerations. Students develop critical thinking by learning and using a problem solving process through a business situation analysis model to analyze various situations that confront managers and founders of small, medium, and large organizations. Students will also develop tools for analysis, allowing them to critically view business in a new and thoughtful way. The class culminates with student- teams presenting a detailed analysis and recommendations to a panel of executives and persuading them that the recommended strategy is not only feasible, but also practical for the stakeholders involved.

• MGT-302 Developing Innovation Skills

Credits:

3.00

Description:

This highly interactive and experiential course will help you to develop your creative skills for business and life success. Corporate leaders consider creativity [1] to be an essential skill. However, according to a recent Conference Board study [2], college graduates lack the creativity and innovation skills needed to succeed in the workplace. The Council on Competitiveness warns that companies that do not embrace innovation (and creativity) as a core business value will fall to global competition.[3] We will discuss meaning of life issues that will serve to clarify your thinking and help you align your values and belief-systems with what you do on a daily basis at work and throughout your life. A substantial body of evidence indicates that people tend to be more creative when working on projects that interest them, and most creative when passionately immersed in their endeavors. We will focus on enhancing creativity in the workplace to achieve defined organizational needs, to add economic value to the organization, and to create social value as well. We will also focus on helping you to understand and apply a wide array of creative processes and tools to develop your creative competencies and skills. We will use breakout groups, role plays, experiential exercises, and discussions to facilitate your learning. This course is an invitation to you to explore and define what you want to create in your life. [1] The Conference Board defines creativity/innovation as the ability to demonstrate originality, inventiveness in work, communicate new ideas to others, and integrate knowledge across disciplines. [2] Are They Ready To Work: Employers' Perspectives on the Basic Knowledge and Applied Skills of New Entrants to the 21st Century Workforce. 2006. [3] Innovate America: Thriving in a World of Challenge and Change. July, 2004. National Innovation Initiative, Council on Competitiveness.

Description:

How do you manage the day-to-day challenges or working in a small business or starting a new venture? This case-driven course covers the role and importance of small business in the U.S. economy, including the application of all management functions to the operation of a small business; human resources, operations, financial, risk and growth. This course is designed around problem-solving techniques that help you research the facts of a given situation, identify the problem, develop alternative solutions and defending the best solution.

Term:

Offered Both Fall and Spring

- **MGT-322 Managing Diversity in the Workplace**

Prerequisites:

MGT 217 (formerly MGT 317) or Instructor's consent required; Junior standing

Credits:

3.00

Description:

This course explores multicultural diversity in business organizations. In order to learn to effectively manage diversity in the workplace, it is first necessary to become familiar with the concepts and dynamics that underlie many of the organizational issues associated with increased diversity in the workplace. Thus, this course is structured to first study topics such as identity, perception, socialization, stereotyping, and prejudice. With these concepts as a foundation, we will explore the opportunities and challenges created by diversity in the workplace. We will consider issues and dynamics that arise in the workplace as a result of diversity in terms of gender, race, national origin, sexual orientation, and religion. After developing a rich understanding of workplace diversity dynamics, we will consider actions that individuals and organizations can take to address the opportunities and challenges inherent in a diverse workforce to gain competitive advantage. .

Term:

Offered Both Fall and Spring

- **MGT-330 Interpersonal Effectiveness**

Prerequisites:

ENT 101 (SBS 101) and Junior standing

Credits:

3.00

Description:

This course provides students with knowledge of and skills in interpersonal effectiveness. The course is designed to convey the importance of interpersonal skills in today's business climate. Students learn and develop interpersonal skills commonly required of supervisors/managers.

Term:

Offered Both Fall and Spring

- **MGT-331 Leadership**

Prerequisites:

MGT 217 (formerly MGT 317); Junior standing

Credits:

3.00

Description:

This course is designed to provide a fundamental understanding of the principles of leadership and the core competencies, traits and behaviors that enable effective leadership. It is an interactive, event-driven program to develop, refine and refresh leadership qualities through activities, individual assessments, coaching, research and dynamic group discussion to practice and develop individual skills. Students will examine various leadership theories, identify styles and preferences, practice conflict management and team building, feedback and expectation setting by applying class room/real world situations to their own learning.

Term:

Offered Both Fall and Spring

- **MGT-333 Bldg. a Positive Organization**

Prerequisites:

MGT 217 (formerly MGT 317)

Credits:

3.00

Description:

From store or restaurant managers to regional directors to executives of large corporations, you as a leader must learn how to create a positive work environment for your employees so that they can flourish, become resilient in the face of adversity, and achieve extraordinary performance. In this course, you will learn concepts fundamental to building a positive culture, such as social learning, reciprocity, supportive communication, and forgiveness, gratitude and compassion. These concepts will then be applied to a variety of management issues, such as building core values and mission statements, designing a standardized hiring process, creating a sustainable training and staff development program, developing onboarding experiences, enhancing organizational communication, conducting performance evaluations and critical conversations, and managing organizational change.

- **MGT-H333 Building a Positive Organization**

Prerequisites:

MGT 217 (formerly MGT 317); 3.3 GPA

Credits:

3.00

Type:

Honors

- **MGT-334 Introduction to Business Analysis**

Prerequisites:

MGT 217 (formerly MGT 317)

Credits:

3.00

Description:

This course introduces students to the core functions and skills required to be a Business Analyst, an agent of change using a systematic approach to add value within an organization. Students will learn how to understand business needs and perspectives in order to develop effective and focused solutions to problems across the Business Solutions Life Cycle, from strategy through to operational results. Using case studies and exercises, this course provides an overview of business analysis, introduces key skills such as project definition, the role of assumptions, critical analytical skills, interpretation of information, communication and implementation.

- **MGT-335 Managing Across Cultures**

Prerequisites:

MGT 217 (formerly MGT 317)

Credits:

3.00

Description:

To what extent are our identities, ways of thinking, and behaving the products of our cultural environments? How do conceptions of motivation, leadership, decision making, negotiation, and ethics differ across cultures? How do expatriates settle abroad, and how do they re-enter the American life they are once so familiar? The purpose of this course is to examine the international context of management, specifically, the cross-cultural environment and how it shapes managers' and work organization members' experiences, roles and responsibilities.

Term:

Offered Both Fall and Spring

- **MGT-360 Leadership 360 Practicum**

Prerequisites:

MGT 217 (formerly MGT 317); does not count toward the Management Major, nor the minor for BSBA students

Credits:

3.00

Description:

Leadership 360 Practicum provides a fundamental understanding of the principles of leadership and the core competencies, traits and behaviors that enable effective leadership. Students will conduct an in-depth self-examination of skills, abilities, personality, attitudes, values, and behaviors to increase self-awareness of their leadership competencies. Students will learn relevant leadership theories and introductory project management principles and techniques. They will apply leadership and project management skills in a mini-team project with a not-for-profit organization that seeks solutions to a specific challenge, leading to a project implementation plan. Students will present formally to the client; feedback to the presenters will reinforce their oral communication skills. This course is a requirement for all BSBA majors.

• MGT-401 Negotiations

Prerequisites:

MGT 217 (formerly MGT 317); Junior standing

Credits:

3.00

Description:

This course is premised on the fact that whereas a manager needs analytical skills to discover optimal solutions to business problems, a broad array of negotiation skills is needed to implement these solutions. This experiential course is designed to improve your skills in all phases of negotiation: understanding prescriptive and descriptive negotiation theory as it applies to dyadic and multiparty negotiations, to buyer-seller transactions and the resolution of disputes, to the development of negotiation strategy, and to the management of integrative and distributive aspects of the negotiation process. The course is based on a series of simulated negotiations in a variety of contexts including one-on-one, multi-party, cross-cultural, third-party and team negotiations. Please note that given the experiential nature of the course, attendance is mandatory and will be strictly enforced beginning from the first class session.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

• MGT-419 Senior Capstone Project Course

Prerequisites:

ENT 101 (formerly SBS 101); MKT 210; MGT 217 (formerly MGT 317); ISOM 319; Management Majors and Minors only with 90 or more credits

Credits:

3.00

Description:

This capstone course allows students to integrate and apply their acquired knowledge in pro bono consulting projects under the supervision of a faculty mentor, coach and advisor. Course skills to be developed include project management, business communication, and action-oriented analysis. Students analyze real-world problems using primary and secondary research methods, identify feasible options for action, and make professional written and oral presentations to their client organization. An occasional Friday class may be required.

Term:

Offered Both Fall and Spring

• MGT-520 Management Internship

Prerequisites:

MGT 217 (formerly MGT 317); Management Major; Junior or Senior standing; 3.0 GPA; Instructor consent required; Cannot take this course concurrent with any other internship course

Credits:

3.00

Description:

MGT 520 is an internship course which offers students the opportunity to apply knowledge and skills acquired in management courses to a valuable work experience outside the University. Interns practice using management principles in a carefully selected real world work situation under the direction of a faculty member, while completing academic requirements intended to integrate theory and practice. Students can also use the internship to explore career interests. Sometimes building a relationship with an employer during an internship can lead to a job offer during school or after graduation.

Term:

Offered Both Fall and Spring

• MGT-H520 Honors Management Internship

Credits:

3.00

Description:

This course provides students an opportunity to apply management concepts and skills to problem solving in an organizational workplace setting. Students identify and organize their internship position and particular project (depending on area of interest) with assistance from faculty, as needed. Projects will vary in scope and content. Students are expected to be on the job for approximately 8 hours per week during the course of the semester.

Type:

Honors

- **MGT-560 Leadership Journey Experience**

Prerequisites:

Instructor consent required

Credits:

0.00

Description:

Suffolk University Student Leadership and Involvement Office oversees The Leadership Journey Program. The program is designed to develop student's leadership skills throughout their collegiate career at Suffolk University. Students are expected to experience all aspects of the cornerstones as they begin the Journey. After this exposure, students are encouraged to focus on the leadership activities in which they are more passionate. The Leadership Journey focuses on providing students with experiences in leadership, campus involvement and service. Students completing the Leadership Journey will have complemented their leadership course material with experiences in actual leadership situations. Honors Program

Sawyer Business School Honors Program

The Sawyer Business School Honors Program offers BSBA students with exceptional academic promise and motivation a unique program that provides innovative challenges.

Honors curricula include honors sections of required courses in the business core and certain general education requirements. These and other honors courses allow students to customize their academic experience, and include:

- Business Core requirements
- Major electives (varies)
- General Education requirements (varies)
- Special topics courses
- Honors track within marketing major
- Challenge courses
- Internships
- Independent study

A host of co-curricular experiences are offered each year. Academic and social events promote leadership and involvement while rounding out a strong educational foundation. Honors students participate in case competitions, service projects, career development programs, and social events as well as plan and lead such initiatives to meet their own needs. Students are also encouraged to consider Suffolk's Alternative Spring Break, and study abroad programs. Juniors and seniors are encouraged to take a global travel seminar. Incoming freshmen planning to live on campus may also apply through Residential Life and Housing to be a part of the Honors Living Learning Community (LLC). The Honors LLC provides new honors students an opportunity to ease their transition to the university by residing in a community of their peers where they have access to out-of-class learning, peer mentoring, study groups, and social events.

The Honors Program also features outstanding mentoring and recognition events from orientation through graduation. The annual Alumni Networking Event connects students to our very active alumni group. Students develop robust networks both within and outside of the Business School through interaction with local executives and alumni, gain career advice, internship leads and even job offers. Other benefits of the Honors Program include early registration, priority consideration for campus housing, and social and career programs each semester.

Numerous honors scholarships and other merit-and need-based funding are available through the Office of Student Financial Services. Incoming freshmen who are invited into the Honors Program in the fall receive this information along with their Honors Program offer letter. Spring semester admission typically comes with limited financial aid resources due to the timing in the financial aid cycle. Students entering in the spring semester or continuing students who are invited into the Honors Program should discuss scholarships and financial aid with their assigned financial aid counselor.

Entry requirements for new students:

To be considered for the Business School Honors Program, entering new freshmen and new transfer students must meet two of the following criteria. For more information on the application materials and process, please contact the Office of Undergraduate Admission at 617-573-8460.

- Academic GPA minimum of 3.75
- High school class rank within upper 15%
- SAT scores of 1850
- ACT scores of 28
- TOEFL scores of 100 if Internet based or 600 if Paper based

Entry requirements for continuing students:

Continuing students with a college GPA of 3.5 who have completed 30 credits of coursework at Suffolk (but not more than 44 credits) may submit an application to the Honors Program available through the Business School's Honors Program Office. Students will be considered on a case-by-case basis.

Program requirements:

Academic requirements for Honors Students in Sawyer Business School include:

- completing a minimum of 25% of coursework in honors sections
- completing ENT H101 Honors Business Foundations
- completing SIB H429 Honors Strategic Management (the BSBA capstone)
- taking a minimum of 3 credits of challenge courses*
- maintaining a minimum cumulative GPA of 3.5

Freshmen who enroll at Suffolk's Madrid campus will have options for honors courses and/or faculty who will work with students to create honors alternatives that meet the program requirements.

*Note: a total of six credits of Challenge Courses may be used to fulfill a maximum of two free elective courses in the program of study.

Honors students must be in good standing at the university with no disciplinary actions against them.

The failure of one course will result in program dismissal.

The above requirements must be met for students to graduate with the Honors Program designation on their transcript. Students who do not maintain the minimum required GPA will be placed on program probation for a semester and be required to meet with their advisor and program director. In extreme cases students will no longer be eligible to participate in the program. The subsequent semesters' GPA of honors students on program probation must be 3.5 or greater to remain in the program while working to regain the overall program GPA. If this is not mathematically possible within two semesters, the student will no longer be eligible to participate in the program.

Honors Courses

Any student who meets the GPA minimum for a course may sign up for that course through the normal registration system. Most honors courses have a 3.3 GPA requirement.

Honor Societies

Beta Alpha Psi

Beta Alpha Psi is a national honor society and professional accounting fraternity that recognizes outstanding academic achievements in the field of accounting, promotes the study and practice of accounting, and provides leadership and social/networking opportunities for members and practicing accountants. The activities of this Chapter strongly emphasize the Business School's mission and role in developing student leaders who will excel in the accounting profession.

Active leadership by the Accounting Faculty in Beta Alpha Psi has strengthened students' professional experience and reputation in the community. Student members of Beta Alpha Psi participate in professional meetings, career presentations and field trips to learn real-world, current accounting practices, and to prepare for on-campus recruiting and job interviews.

The Suffolk Chapter of Beta Alpha Psi has received national awards (Distinguished Chapter in 1999) and has been recognized as a Superior Chapter for the last five years. Our substantial community service contribution is recognized in chapter awards. Students have participated in National Case Study Competitions since 1998. Ongoing participation by faculty and other interested parties has resulted in increased on-campus recruiting by the major accounting firms, several large regional and local accounting firms as well as major consulting firms.

Beta Gamma Sigma

This national honor society recognizes business and management undergraduate and graduate students in the top 5 percent of the junior class, upper 10 percent of the senior class, or upper 20 percent of the master's class. Beta Gamma Sigma is the national honor society for business and management, and this recognition is only given to students who attend AACSB International-accredited schools.

The purpose of Beta Gamma Sigma is to encourage and reward scholarship, to promote the advancement of high quality education in business, to provide networking opportunities for members and to foster integrity in the conduct of business operations.

Financial Management Association

The Financial Management Association is a national organization that rewards scholarship and achievement by undergraduate and graduate students majoring in finance through its National Honor Society. Undergraduate finance majors must have earned 61 credit hours and achieved an overall cumulative grade point average of 3.3 or higher, and completed at least three designated finance courses. Selection for this Honor Society is during the first month of the fall and spring semesters each year.

Sigma Nu Tau

This national honor society promotes, recognizes, and rewards academic excellence in entrepreneurship. It encourages the practice of principled entrepreneurship, expecting high ethical standards, honor, and integrity of its members. It offers networking opportunities for entrepreneurship students with peers and successful entrepreneurs.

To be eligible, entrepreneurship majors must have a 3.2 GPA and junior or senior standing. Graduate students who have completed 50% of their graduate coursework and have a 3.5 GPA are also eligible. Candidates must demonstrate honor, integrity, and a strong entrepreneurial spirit and model principled entrepreneurship.

Global Travel Seminars

Led by Sawyer Business School faculty, the Global Travel Seminars take students for short-term visits to business centers around the world. These courses provide students with an opportunity to connect classroom learning with real-world experiences through international business exposure. Each seminar is uniquely crafted by the faculty leader of the course. While no two seminars are exactly alike, each consists of a similar structure in terms of the academic, travel, and cost components:

Academic Component

- 3 credit international business elective
- 3 pre-travel classes, designed to provide a foundation of knowledge about the destination
- 1 post-travel class: final assignments vary, depending on faculty leader and location
- Offered each academic year
- Sophomore standing or higher

Travel Component

- 7-10 days of travel
- 4-6 businesses provide an overview of the business culture. The trip includes visits ranging from large multinationals to small, entrepreneurial firms
- 3-4 cultural activities ranging from city tours, group dinners to theater performances

Cost Component

- Tuition for 3 credits (for full-time students, this can be part of the 12-17 semester credits)
- Flight
- Seminar fee, includes:
 - Hotel accommodations

- Ground transportation
- Some meals
- English speaking tour guide
- Cultural activities
- Business programming
