Policies

- [Academic Honors](#)
- [Academic Standing](#)
- [Credits](#)
- [Grading](#)
- [Graduation](#)
- [Registration & Attendance](#)
- [Student Record](#)
- [Visiting or Non-Degree Students \(CAPS\)](#)

Students are awarded honors for outstanding academic achievement.

• Dean's List

A student shall be eligible for the Dean's List in any semester in which his or her grade point average is 3.50 or above, and provided he or she receives no grade of "D," "F," or "I," and has earned a minimum of 12 semester-hour credits.

• Graduation Honors

Latin Honors

To be eligible to graduate with Latin Honors, an undergraduate student must have completed at least 60 semester hours of work at Suffolk University. (Courses for which a student receives credit through CLEP examinations may not be counted toward this minimum of 60 semester hours.)

- Summa Cum Laude: You must have a cumulative GPA of 3.85, and have no grades of F or I.
- Magna Cum Laude: You must have a cumulative GPA of 3.7, and have no grades of F or I.
- Cum Laude: You must have a cumulative GPA of at least 3.3, and have no more than one grade of F or I.

• Recognition Day Awards

Highest Class Honors

In the spring of each year, both the College of Arts & Sciences and the Sawyer Business School present Outstanding Student Awards to the individuals (in their respective schools) with the highest cumulative grade point average in the sophomore, junior and senior classes. To be eligible for consideration, a student must have accrued the following minimum credit hours while in attendance at Suffolk University. A grade of "D," "F," or "I" disqualifies a student, regardless of GPA.

Class Minimum Earned Credit Hours at Suffolk University:

- Sophomore 42
- Junior 70
- Senior 106

Major Honors and Awards

In the spring of each year, both the College of Arts & Sciences and the Sawyer Business School present students awards of achievement in their major. Each award is defined and determined by the individual academic departments upon review of their junior and senior majors each spring semester.

- [Student Record](#)
- [Visiting or Non-Degree Students \(CAPS\)](#)

At the conclusion of each semester, students failing to make satisfactory progress are reviewed by the Academic Standing Committee of their respective school.

Suffolk University expects students to maintain an overall grade point average of 2.0 and a grade point average of 2.0 in the major field of study, as well as a 2.0 grade point average in the minor. Failure to maintain these degree requirements may result in academic probation or dismissal.

Students are notified in writing of any actions taken by the Academic Standing Committees.

Actions may include the following:

- **Warning**

Students will receive a warning when their overall GPA is above 2.0, but fail to achieve a semester GPA of 2.0.

Students who earn a GPA below 2.0 in their major, even if only one course has been completed, are alerted to minimum GPA requirements and referred to their major for advising.

Students who earn excess grades of "I" and/or "W" are sent a warning and may have their records frozen for advising.

Students are sent a warning if any single grade of "F" is earned.

• Academic Probation

Students who fail to achieve a cumulative GPA of 2.0 are placed on probation and informed of conditions (to be met in the next semester enrolled) for continued matriculation.

In the semester following the first probationary period:

- If conditions are met and the cumulative GPA is at least 2.0, then the student is removed from probationary status.
- If conditions are met and the cumulative GPA is less than 2.0, then the student is placed on a probation extension.
- If conditions are not met, the student may be dismissed from the University.

Typically, students placed on probation are put on a reduced course load and are instructed to improve their grade point average by the next committee review. Students who are demonstrating academic improvement may have their probation extended until they return to good academic standing. Those failing to demonstrate improvement are in imminent danger of dismissal.

Extracurricular: No student on academic probation shall be eligible to participate in athletics, hold elected or appointed office, or represent the University in extracurricular or intercollegiate activities. However, a student on academic probation may continue membership in extracurricular activities such as clubs or fraternities, and may write for, but not be a member of, the staff of campus publications. In the event a student's average does not improve, the Academic Standing Committee may require further curtailment of extracurricular activities as a condition of continued academic probation at Suffolk University.

Financial Aid: Academic standing review is an academic process independent of federal guidelines managing access to student aid. It is possible to be allowed to continue at the University academically but be denied financial aid eligibility. ALL students who have financial aid and find themselves in academic difficulty should meet with their financial aid advisor to understand their personal situation.

• Academic Dismissal

Continued failure to make satisfactory progress toward a degree will inevitably result in dismissal from the University. Low grade point average, unexplained semester absences, refusal to complete prescribed remedial coursework, unwillingness to honor the recommendations of the Academic Standing Committee and/or other specific conditions are but a few of the situations that can undermine satisfactory progress and constitute legitimate grounds for dismissal.

Once dismissed for scholastic failure, a student is ineligible to enroll in further courses at the University until s/he is readmitted by the Academic Standing Committee. Dismissal does not suspend a student's responsibility to meet prior course commitments. Consequently, all Incomplete "I" grades will convert to "F" grades unless attended to within one academic year.

• Applying to Return to the University

Returning from Academic Dismissal

Students who have been academically dismissed may apply for readmission after one semester by providing the appropriate committee with a written letter of petition. The filing deadline for petitioning is August 1 for fall re-admission and December 1 for spring re-admission. Please address the letter to: "The Academic Standing Committee."

This letter should contain three main sections:

1. Address the difficulties you had while you were enrolled at Suffolk University.
2. Describe what steps you have taken while away from Suffolk University to improve your personal situation (such as academic performance, personal issues, medical conditions, financial hardship). Be sure to attach any supporting documentation (such as transcripts from other institutions, letters from a doctor or current faculty member).
3. Create an action plan for your return (if reinstated) and describe what you would do to succeed in the future.

Letters should include your personal contact information for mail, email and phone.

If dismissed from the College of Arts & Sciences, send letters to:

Sharon Lenzie, Assistant Dean
College of Arts & Sciences
73 Tremont Street
Boston, MA 02108-2770
Phone: 617-573-8268
slenzie@suffolk.edu

If dismissed from the Sawyer Business School, send letters to:

Michele Rosenthal, Director
Undergraduate Programs
Sawyer Business School
73 Tremont Street
Boston, MA 02108-2770
Phone: 617-994-6429
mjrosenthal@suffolk.edu

Fresh Start

A student dismissed for academic reasons, who is seeking readmission after an absence of five or more years from the University, may petition the Academic Standing Committee to grant him/her grade amnesty for all grades below C under the Fresh Start Program.

If approved, all Suffolk work completed prior to readmission will be reevaluated for relevance and currency, as all students readmitted under this policy are subject to the academic requirements for graduation at the time of readmission. Only coursework with a C or better earned prior to reinstatement and coursework attempted after reinstatement is calculated into the GPA and applied to the degree.

Normally, a student readmitted through the Fresh Start Program is not eligible for scholastic honors. All prior grades are used to compute the student's academic progress for financial aid evaluation.

Returning after Being Administratively Withdrawn for Non-Attendance

Students who have been administratively withdrawn for non-attendance or are attempting to return after an unauthorized absence may apply for reentry to Suffolk through the Office of Undergraduate Admission. If approved, all students readmitted under this policy are subject to the academic requirements for graduation at the time of readmission.

Applicable courses taken eight or more years prior to readmission, whether taken at Suffolk or elsewhere, will be reviewed by the Dean's Office for relevance and currency. If a course is deemed ineligible, students may be required to complete the current course designed to satisfy that particular academic requirement.

- ### Satisfactory Progress

Federal regulations require students to [demonstrate satisfactory academic progress](#) (SAP) in their educational program in order to maintain eligibility for financial aid. SAP is established and reviewed by the Office of Student Financial Services for the College of Arts & Sciences and Sawyer Business School. While it is possible to continue at the University but be denied financial aid eligibility, all students who seek financial aid and find themselves in academic difficulty should meet with their financial aid advisor to understand their personal situation.

• Credit Hour Definition

Suffolk University Follows the Federal Government's Definition of a Credit Hour:

"...as an amount of work represented in intended learning outcomes and verified by evidence of student achievement that is an institutional established equivalence that reasonably approximates not less than -

(1) One hour of classroom or direct faculty instruction and a minimum of two hours of out of class student work each week for approximately fifteen weeks for one semester or trimester hour of credit, or ten to twelve weeks for one quarter hour of credit, or the equivalent amount of work over a different amount of time; or

(2) At least an equivalent amount of work as required in paragraph (1) of this definition for other academic activities as established by the institution including laboratory work, internships, practica, studio work, and other academic work leading to the award of credit hours."

• Class Hours

Classes typically meet during several standard course times: Monday, Wednesday, and Friday for 50 minutes, twice a week Monday and Wednesday or Tuesday and Thursday for 75 minutes, and for 2 hours, 40 minutes once a week. The period between 12:05PM and 01:15PM on Tuesday and Thursday is reserved for student activities, faculty meetings, guest lectures, and cultural events. No undergraduate classes are held during this time period.

• CLEP

[CLEP](#) examinations provide undergraduate students the opportunity to gain college credit in specific areas of study. The Suffolk University [Center for Learning and Academic Success](#) administers the CLEP program.

• Class Standing

The classification of students is determined by the number of credit hours completed. Freshman standing is assigned to students with 1 through 23 completed credit hours; sophomore standing, to those with 24 through 53 completed credit hours; junior standing, to those with 54 through 83 completed credit hours; senior standing, to those with 84 completed credit hours or more.

• Course Loads

Federal financial aid regulations stipulate a student must be enrolled in at least 12 credits per semester to be considered full-time, between 9-11 credits per semester to be considered three-quarter time, and at least 6 credits per semester to be considered half-time. During the summer semester, which is subdivided into modules, full-time, three-quarter time, and half-time status is determined based on the number of credits enrolled throughout the entirety of the term. Graduating students in their last semester are considered full-time (except for financial aid purposes) if they are registered for all remaining degree requirements, even if they are registered for less than full-time status.

All international students are required to complete at least 12 credits each fall and spring semester.

Enrollment statuses for fall, spring, and summer terms are listed in the table below:

Full-Time	Three-Quarter Time	Half-Time	Less than Half-Time
12-17 credits	9-11 credits	6-8 credits	<6 credits

Restrictions: English Language Institute (ELI) students can only take 0 credit courses.

• Courses at Other Institutions

Once matriculated into a degree program at Suffolk, students are expected to complete all of their coursework at the University. Exceptions are made for international study or where academic hardship merits consideration. A student must be in good academic standing (2.0 GPA or better with no Incomplete grades) and have transferred fewer than 63 outside credit hours into Suffolk. If approved for a course at another institution, a student must attain a grade of "C" or higher in order to receive transfer credit. It is expected that students will complete their final 30 credit hours at Suffolk University.

New students in their first semester without final grades may not be approved for outside courses. Courses taken at other institutions may affect student eligibility for graduation honors.

Students who feel their situation warrants an exception must apply through the Undergraduate Academic Advising Center.

• Excess Courses

Twelve to 17 credits constitutes a normal full-time schedule. Students who meet the following criteria can register for 18 credits (fall and spring term):

- Student has been in attendance at Suffolk University for two full semesters excluding summer sessions
- Student has a minimum GPA of 3.0 or higher

Students who do not meet the above criteria or who wish to enroll in more than 18 credits in either the fall or spring term or more than 8 credits per summer module must [petition](#) the Undergraduate Academic Advising Center.

Students registered for more than 17 credits will be charged an [excess credit rate](#) during the fall and spring terms. Students are charged per credit hour during the summer sessions. Students should NOT assume financial aid will cover excess course charges.

• Independent Study

The purpose of an independent study is to provide students with unique study opportunities with an individual faculty member. The guidelines with respect to independent studies are as follows:

- Students must gain authorization prior to registration by developing a robust and rigorous proposal. A description of the independent study project must be approved by the individual faculty member, by the department chair, and the dean's office of the respective school.

[CAS: Independent Study form](#)

[SBS: Independent Study form](#)

- Adjunct faculty are not eligible to supervise an independent study.
- Independent studies may be taken for variable credit; a single independent study cannot be taken for more than 4 credits in CAS and 3 credits in SBS.

Additional guidelines for BSBA students:

- Only juniors and seniors with a GPA of 3.0 or higher are eligible.
- Independent Studies cannot replace a required course or duplicate an existing course. They allow students to research and study an area of interest not covered by Suffolk courses.
- The deadline to turn in a proposal to the Dean's Office is the first three days of the semester in which you plan to complete an Independent Study. If the proposal is denied, this leaves

sufficient time for students to revise and resubmit to the faculty, department chair, and Dean's Office.

• Transfer Credit

Transfer applicants are considered for admission based on work completed at a regionally accredited two- or four-year college or at international institutions approved by the Ministry of Education in the country where the institution resides. In some cases, transfer applicants with less than one year of college completion are also considered based on the results of the high school transcript and test scores. Credit is generally transferable provided that such coursework is successfully completed and equivalent to that offered at Suffolk University.

In the Sawyer Business School, transfer credit is awarded only for courses equivalent to freshman/sophomore years. Courses not required at Suffolk University until the junior/senior years may qualify for validation credit. Students admitted to the Sawyer Business School are required to complete at least 50 percent of business credit hours at Suffolk University.

A minimum of 45 hours in any bachelor degree program must be earned at Suffolk University, including all major and general education requirements. Requirements for specific degrees are listed by major in the undergraduate degree section. In all cases, students must complete all major and University requirements to qualify for a bachelor degree. This may necessitate completing more than the required hours for graduation. In addition, the final 30 credits of any degree must be completed at Suffolk University.

Part-time degree applicants are expected to meet the same requirements as full-time degree students.

In the College of Arts & Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.

In the Sawyer Business School not more than two courses may be transferred in toward any major and no more than one course may be transferred in toward any minor. Capstone requirements may never be transferred into the Business School. All upper level business courses being considered for transfer must be approved by the Sawyer Business School Dean's Office.

• Transcripts

A transcript is an academic document or electronic image maintained by the Office of the Registrar reflecting the unabridged student academic history at Suffolk University. Transcripts include course work from other institutions whose credits are awarded at the time of entrance or approved transfer credit after the student enrolls at the University.

The University reserves the right to refuse to issue a transcript of any student who has not fulfilled all financial obligations due to the University. A financial hold will be placed on a student record if the student is either delinquent or has defaulted on loans and/or has not completed required financial exit interviews or counseling.

[Transcript requests](#) must be submitted online or in writing to the [Office of the Registrar](#).

• Validation Credit: Sawyer Business School

Selected business courses taken elsewhere at the freshman or sophomore level, but offered by Suffolk University at the junior or senior level, require validation in order to be eligible for transfer of credit. In order to validate a course, students must have:

- Earned a grade of "C" or better in the course to be validated; and
- Successfully completed, with a grade of "C" or better at Suffolk University, an advanced course in the subject field for which the transfer course is a foundation.

Upon completion of the advanced course, a student must complete a Validation of Transfer Credit Form in the Registrar's Office. The course(s) which may be validated will be listed on the student's Suffolk University transcript and Credit Evaluation. The Credit Evaluation is the student's original document of transfer credit provided by the Undergraduate Admission Office when the student was first admitted to the University. If a student has taken a junior/senior level course that is not required at Suffolk University, it cannot be validated.

Students May Validate: By Successful Completion (minimum grade of "C") of:

ACCT 321	ACCT 322
FIN 315	FIN 413
ISOM 310	ISOM 313
ISOM 313	ISOM 423
ISOM 423	ISOM 424

When validating, no more than two transfer courses may be applied toward your major requirements.

Questions regarding transfer credit and validation procedures should be referred to the Undergraduate Academic Advising Center, 617-573-8345.

Academic Catalogs

[Academic Catalogs](#) > [Undergraduate Catalog](#) > Policies

2017-2018 Archived Catalog Information

Policies

- [Academic Honors](#)
- [Academic Standing](#)
- [Credits](#)
- [Grading](#)
- [Graduation](#)
- [Registration & Attendance](#)
- [Student Record](#)
- [Visiting or Non-Degree Students \(CAPS\)](#)

- **Grading System**

The following grading system applies to all undergraduate students.

Letter Grade	Honor Point Equivalent per Credit
A	4.0
A-	3.7
B+	3.3
B	3.0
B-	2.7
C+	2.3
C	2.0
C-	1.7
D+	1.3
D	1.0
D-	0.7
F	0.0

"A," "A – ," "B+," and "B" are honor grades.

"B – ," "C+," and "C" represent satisfactory work.

"C – ," "D+," "D," and "D – " represent passing but unsatisfactory work.

"F" is a failing grade. It indicates that the student has not completed all course requirements in a satisfactory manner. Students who stop attending a course without having complied with the official withdrawal procedure can anticipate receiving a grade of "F." The "F" grade becomes a permanent part of a student's record and cannot be expunged even if the course is successfully retaken. An undergraduate student who violates the academic honesty policy is subject to an automatic grade of "F".

"I" (Incomplete) indicates a student has done passing work in a course but has not yet submitted all the outstanding work required for a formal evaluation. The "I" is awarded at the instructor's discretion, only if the student has completed at least half of the course requirements satisfactorily at the end of the semester, and there is a reasonable expectation that all course requirements can be completed in one academic year. An "I" must be formally re-evaluated by the instructor within one academic year, resulting in an evaluation grade or an extension of the "I," or it automatically converts to an "F*."

Students must complete coursework with the original instructor. The change in the "I" grade must be made by the original instructor, and in his or her absence, by the department chair. If this is not possible, arrangements must be made through the department chair in concurrence with an assigned instructor.

"IP" (In Progress) can be issued where by nature of the course content the course may not be complete by the end of the term. IP grades automatically convert to an "F*" after one academic year.

"W" signifies official withdrawal from a course. A "W" is assigned administratively if a student:

1. Drops a course, following proper university procedure, between the end of the drop/add period and the withdrawal deadline of the semester, or
2. Drops a course or withdraws from school after the deadline of the semester with the written approval of the Students Affairs office. Permission is given only for valid cause such as debilitating illness, relocation, serious family crisis or other circumstances beyond the student's control.

"AU" (Audit): In an audited course, a student will not receive credit or honor points; however, a student must pay the same tuition as if taking the course for credit. Under no circumstances may a student change from the evaluative letter grade system to audit or vice versa after the first two weeks of classes.

A student who audits a course is responsible for attending classes and completing required coursework.

"P" (Pass): A Pass-Fail option is available to students in lieu of a traditional letter grade subject to the following limitations and regulations:

Eligibility is restricted to students in good academic standing who have completed a minimum of 15 semester hours of coursework at Suffolk University. This option is limited to 12 credits per student. The

pass/fail option is only applicable to electives and cannot be used for courses that fulfill specific degree, core, major or minor requirements. Students who are unsure as to whether a course is an elective for their specific program should check with the Undergraduate Academic Advising Center.

Students will designate courses as Pass-Fail after registration, but before the end of the course change period, by completing a [Pass/Fail Declaration Request form](#). No changes from the designation of Pass-Fail to the letter grade system or vice versa are permitted after the course change period has elapsed at the opening of any semester or summer session. A Pass may be applied toward fulfilling degree credits, but may not be applied toward the quality point average.

Students planning to attend law school or other graduate schools should be aware that many professional and graduate schools prefer students to submit traditional letter grades.

"PC" (Pass/Credit) is awarded in courses successfully completed with a grade of "C" or better at an affiliated study abroad program or approved course work at a consortium institution after matriculation at Suffolk University. "PC" grades may be applied toward fulfilling degree credits, but they may not be applied toward the quality point average.

"NP" (No Pass) is awarded in courses unsuccessfully completed at an affiliated study abroad program or approved course work at a consortium institution after matriculation at Suffolk University. "NP" grades do not earn academic credit and are not applied toward the quality grade point average.

Courses officially dropped during the add/drop period will not appear on the student's record.

• Grievances - Academic

Academic Complaints

A student who has a complaint about a grade on a single assignment or exam or concerning the faculty member teaching a course should first speak with or email the faculty member. If the complaint is not resolved, then the student should bring the matter to the attention of the department chair or program director. If the complaint remains unresolved, then the matter should be brought to the attention of the academic dean's office of the school in which the course is offered.

Grade Grievances

There is a formal process for grieving a final course grade.

Within two weeks of the grade being assigned, the student should speak with or email the faculty member.

If, after communicating with the faculty member, the student believes that the grade had no basis in fact or was arbitrary, the student may then petition the department chair or program director in writing (or by email).

Students should keep copies of correspondence for their own records.

If the grievance is not addressed or resolved equitably after meeting with the department chair or program director, the student has 10 business days to file a formal grievance with the academic dean (or dean's designee) of the school in which the course is offered.

The academic dean (or dean's designee) will inform the student of a decision within 15 business days of receiving the formal grievance. The student may appeal this decision to the provost (or provost's designee), whose decision shall be final. It is the responsibility of the provost (or provost's designee) to come to a resolution of the grade dispute within 15 business days of receiving the formal grievance from the student.

A graduating student must initiate the grade grievance process no later than three days prior to commencement by emailing the faculty member and copying the department chair or program director.

Graduating students should be mindful that the grade grievance process may impact the awarding of Latin honors and may delay the date of degree conferral.

Grievances Related to Academic Accommodations for Students Registered with Disability Services

Students with disabilities who believe they have received inappropriate treatment or inadequate service from the University pertaining to their granted accommodations have the right to file a grievance with Director of Disability Services. The grievance must be submitted in writing to disabilityservices@suffolk.edu and should include a detailed description of the inappropriate or inadequate service and supporting documentation (when appropriate). Students with disabilities must indicate the resolution they are seeking.

Students with disabilities who are unsatisfied with the response from the Director of Disability Services may submit an appeal within 5 business days to the ADA Coordinator, Dr. Ann Coyne, Dean of Students, Student Affairs Office, 12th floor 73 Tremont Street, Boston, MA 02108, 617-573-8239, TDD: 617-557-4875 or acoyne@suffolk.edu. Students with disabilities must state the resolution they are seeking. The decision of the appeal by the Dean of Students is final.

• Academic Misconduct

Academic Misconduct

Suffolk University expects all students to be responsible individuals with high standards of conduct. Students are expected to practice ethical behavior in all learning environments and scenarios, including classrooms and laboratories, internships and practica, and study groups and academic teams. Cheating, plagiarism, unauthorized collaboration, use of unauthorized electronic devices, self-plagiarism, fabrication or falsification of data, and other types of academic misconduct are treated as serious offenses that initiate a formal process of inquiry, one that may lead to disciplinary sanctions.

Resolving Incidents of Academic Misconduct

A faculty member suspecting academic misconduct will contact the student using the Suffolk email address to schedule a meeting and will make all effort to do so within five business days of detecting

the incident. During the meeting, the faculty member will present the documentation that led to suspected academic misconduct. If the faculty member reaches the conclusion that academic misconduct has occurred, he or she may impose limited sanctions that are meant to acknowledge the behavior in the context of providing remediation and addressing skill development. These sanctions involve grade reductions to student work that constitutes up to 25% of the course grade (e.g., homework; short papers; quizzes) and frequently include some form of remediation.

When the suspected academic misconduct involves student work that constitutes more than 25% of the course grade, or if an F grade (0 credit) on the assignment is recommended as a sanction, the faculty member will consult with the department chair (or program director) prior to imposing the sanction. If the faculty member and chair agree on a determination of academic misconduct, the sanction may be imposed.

If a determination of academic misconduct is made and a sanction is imposed, the faculty member must complete the Academic Misconduct Incident Form (available online) and submit it electronically to the AMC coordinator who will document the incident, along with the written documentation of misconduct, in the AMC internal record. A student may appeal the determination of academic misconduct, but not the sanction, by requesting a hearing before the full AMC. Appeals should be filed with the AMC coordinator within ten business days of receiving the sanction.

If the suspected academic misconduct involves actions that the faculty member and chair believe warrant an F grade in the course, or if there is disagreement between the faculty member and chair on the appropriate sanction, then the incident must be forwarded directly to the AMC for committee review. Examples include, but are not limited to, the following: cheating on exams; group cheating; submitting purchased term papers or term papers with extensive copying or use of external sources without citation; and fabrication or falsification of research data. If the faculty member and chair suspect an incident of this type, they must file an incident report form with the AMC coordinator to initiate a full committee review. The AMC coordinator will schedule a hearing at the next standing meeting of the AMC, generally within ten business days of receipt of the incident form. The faculty member will submit all documentation to the AMC coordinator who will email the student (using Suffolk email) a notice to appear for a hearing. At the hearing, a determination is made by the committee, regardless of whether or not the student is in attendance; imposition of sanctions is made by committee vote. A determination letter is then sent to the student, the faculty member, and the chair.

A full review by the AMC, as described above, will also occur if multiple incident reports for a single student are detected in the AMC internal record.

AMC hearings are not open to the public. Therefore, members of the Suffolk University community who are not directly involved in the allegation and friends, parents, partners, siblings, legal counsel, and others are not permitted in the room where the AMC hearing takes place but may wait nearby for support purposes. Formal rules of process, procedure, or evidence such as those applied in civil or criminal courts are not used in the AMC. Members of the AMC will recuse themselves from a case when appropriate. Student conduct that warrants sanctions may result in forfeiture of all Suffolk scholarships, financial aid, or monies paid.

Sanctions imposed by the AMC may include but are not limited to a reprimand; a remediation plan; a grade of F in a course; probation; and/or dismissal. A sanction grade of F in a course will be factored into the overall grade point average regardless of whether or not the course is successfully repeated. A student found responsible for academic misconduct and sanctioned by the AMC may file one appeal to the provost (or designee) by sending a written letter of appeal within ten business days. (A

graduating student must initiate the appeal process no later than three days prior to commencement.) Appeals are considered only if there is additional information not available at the time of the hearing or a procedural error that calls into question the determination of academic misconduct. Students must include a statement of why the additional information should be considered and why it was not presented at the time of the original hearing. The decision of the provost is final.

Grading Students under Review for Academic Misconduct

Faculty, department chairs, program directors, and the AMC will work diligently to ensure timely review and closure of cases of academic misconduct. In some cases, however, it may not be possible to reach a determination or impose a sanction prior to the deadline for submitting course grades. In this case, the faculty member will not submit a grade for the student, but will leave the grade field blank. Once a determination has been made, the faculty member will complete a change of grade form, with an explanation of the grade change that includes a brief statement of how the sanction impacted the final course grade.

Membership of the Academic Misconduct Committee

The AMC hears cases of alleged academic misconduct involving students in the College of Arts and Sciences (CAS) and the Sawyer Business School (SBS). The committee consists of two CAS faculty members, appointed by the CAS dean; two SBS faculty members, appointed by the SBS dean; the CAS and SBS assistant deans who convene the Academic Standing Committees in their respective schools; and a non-voting dean from Student Affairs. At the start of the academic year, AMC members elect a committee chair; the chair casts the deciding vote in the case of a tie.

All full-time CAS and SBS faculty are eligible to serve on the committee with the exception of non-tenured, tenure-track faculty. Associate deans from the two schools may be asked to attend as ex officio members when particular background or expertise is requested by the committee.

• Early Alert

The [Early Alert](#) process identifies students who may be academically at risk, before week five of the semester. The Faculty alert students who are at risk of failing a course if they are struggling with course content, not completing assignments, not attending classes regularly, or if they have second language issues or deficiencies. University staff outreach to all alerted students and connect them with the appropriate support services to help them achieve success.

• Final Examinations

Final exam dates are posted in the [academic calendar](#). Individual course final exams display in the [online course search](#).

• Grades

Grades are available [online](#) soon after the conclusion of each semester.

Students are solely responsible for their academic progress and should confer immediately with their academic advisor in the event their performance becomes substandard. Failure to maintain satisfactory progress can lead to loss of financial aid, academic probation, or dismissal, or other equally serious consequences.

• Honor Points

Scholastic averages are computed by multiplying the credit hours by the honor point equivalent. For example, a 4 credit course evaluated as "A" will be counted as 16 honor points (4 credits multiplied by 4.0 = 16). Grades of "I," "W," "P," "IP," "AU," "NC," and "PC" are not computed in determining Honor Points, and have no impact on a student's scholastic average.

A cumulative average of 2.0 (C) and an average of 2.0 (C) or better in one's major, minor, and/or certificate program are required for graduation. Students are required to monitor their average in their major and minor. If students are at risk of falling below the required average, the Academic Standing Committee will notify the academic department of their major.

• Repeating a Course

Students may retake any course for credit by paying the appropriate tuition. When a student repeats a course, all grades will appear on a student's transcript; however, only the most recent evaluative course grade will be used to compute the cumulative grade point average. Grades of "P," "I," "W," "NC," and "PC" issued in repeat courses are excluded in calculating the new GPA. When repeating courses, only one course may be used for credit to fulfill degree requirements. A student may repeat a course a maximum of two times. Students receiving federal financial aid should refer to [Satisfactory Academic Progress](#) regulations for financial aid eligibility when repeating a course.

- [Grading](#)
- [Graduation](#)
- [Registration & Attendance](#)
- [Student Record](#)
- [Visiting or Non-Degree Students \(CAPS\)](#)

Eligibility for Degree

In order to be eligible to receive a bachelor's degree from the University, a student must:

- Earn at least 126 semester hours in the College of Arts & Sciences; 124 semester hours in the Sawyer Business School; or 124 semester hours in the New England School of Art and Design
- Achieve not less than a 2.0 cumulative grade point average and earn a minimum 2.0 grade point average or higher in the major
- Achieve a minimum 2.0 grade point average or higher in the minor, if applicable
- Meet all the academic requirements for his/her particular degree (eight years is the normal limit for completion of a part-time or an interrupted degree program)
- Complete a minimum of 45 semester hours at Suffolk
- Complete major residency requirement
- Complete minor residency requirement, if applicable
- Complete the final 30 semester hours at Suffolk
- Complete at least 30 semester hours of business coursework at Suffolk (Sawyer Business School students only)
- Complete at least 60 semester hours of coursework at Suffolk in order to be considered for scholastic honors

• Application for Degree

Students are required to submit an application for degree to the Registrar's Office by the published deadline. It is expected that all obligations to the University, both academic and financial, will be completed at the close of that semester. Failure to comply with this requirement will delay graduation and participation in commencement to some future time.

• Commencement Exercise Eligibility

In addition to those students who have completed in quality and quantity the requirements for their respective degrees, students may participate in commencement if they have officially applied as a September candidate, are enrolled in their remaining requirements in the subsequent summer sessions, have satisfied all other degree requirements, and have fulfilled all financial obligations to the University.

September degree candidates petitioning to participate in the May commencement ceremony must apply and be enrolled in all outstanding requirements in the subsequent summer sessions by the dates established by the [Office of the Registrar](#). Approval of the petition is contingent upon satisfying the conditions listed above.

• Graduating with Honors

See [Academic Honors](#).

• Substitutions & Waivers

Major & Minor:

Students may file a petition for a major or minor requirement substitution with their academic advisor and major department chair. The academic department chair and appropriate Dean's Office must approve major and minor requirement substitutions.

Core & Degree Requirement:

Students may file a petition for core and/or Degree requirement substitutions and waivers only with the appropriate Dean's Office for their degree.

2017-2018 Archived Catalog Information

Policies

- [Academic Honors](#)
- [Academic Standing](#)
- [Credits](#)
- [Grading](#)
- [Graduation](#)
- [Registration & Attendance](#)
- [Student Record](#)
- [Visiting or Non-Degree Students \(CAPS\)](#)

Registration

Registration materials (program evaluations, transcripts, course schedules, etc.) are available to all students [online](#) prior to faculty advising at the beginning of each term's pre-registration.

Newly accepted and re-entry students will receive information regarding orientation and/or registration from the [Office of Undergraduate Admission](#).

Late Registration

Registration is closed after the first full week of classes in any semester.

Add/Drop or Change of Course

Students may add, drop, or change courses online based upon availability and eligibility during the first week of the term. Refer to the [academic calendar](#) for add and drop dates.

Pass/Fail

See [grading](#) page.

Auditing a Course

In an audited course, a student will not receive credit or honor points; however, a student must pay the same tuition as if taking the course for credit. Under no circumstances may a student change from the evaluative

letter grade system to audit or vice versa after the first two weeks of classes.

A student who audits a course is responsible for attending classes and completing required coursework.

• Attendance

Federal regulations require universities receiving federal funding to implement a policy monitoring student attendance in class.

Instructors are responsible for establishing the requirements for attendance and participation in each of their classes and for informing students of these requirements at the beginning of each course.

The Office of Health & Wellness Services does not excuse student absences. The student, when absent from class, has the responsibility of obtaining knowledge of materials covered in classes missed, including information about announced tests, papers, or other assignments.

• Leave of Absence and Withdrawal from the University

There may be times due to personal, medical or other reasons when a student may need to take a leave of absence or withdraw from the university. A leave of absence is taken when a student is away from the university for a portion of a term, a term or longer but intends to return to Suffolk to take classes in the future. A student may withdraw from the University when he/she no longer wishes to take courses for the current term or at any time in the future. Before a student decides to take a leave of absence or withdraw from the University, he/she is encouraged to speak with the Student Affairs Office to discuss options. Students should contact the Student Affairs Office at 617.573.8239 to schedule an in person or telephone appointment or email the office at studentaffairs@suffolk.edu.

Leave of Absence

Students who are temporarily unable to continue their education at Suffolk University may [apply for a leave of absence](#) by submitting a leave of absence form to the Student Affairs Office. A leave of absence may be granted for two consecutive or two non-consecutive semesters (excluding summers). A student applying for a leave of absence must provide an expected date for return. Students on leave will be required to meet the degree requirements under which they were admitted. A leave of absence may not be used for the purpose of taking academic courses at another institution with the intent of transferring the credits to Suffolk University. Students requesting a leave of absence for military duty are permitted to extend their leaves of absence beyond two non-consecutive terms.

A matriculated student who does not return for reregistering at the specified semester will be classified as an official withdrawal and must apply for readmission through the Office of Undergraduate Admission.

Current/Returning Students Wishing to Withdraw from the University

Students who are transferring to another institution or students who do not plan to return to Suffolk University in the future must submit a [Withdrawal Form](#) to the Student Affairs Office. The University's refund policy will determine refunds.

Change of Address/Name

Students are required to notify the Registrar of any change of home or local address within 48 hours of the effective change date, parent or guardian, or any change of legal name. Suffolk University requires a student's legal name be used on academic records and other official University documents.

All Suffolk University students are required to submit (or confirm) current [emergency contact information](#) each semester and when such information changes.

Academic Record Status

Student academic records are sealed at the time the degree is conferred. After this date, changes cannot be made to majors and minors, academic honors, removal of incompletes, grade changes, or other changes to an academic record.

College of Arts & Sciences

College of Arts & Sciences Undergraduate Programs

Mission Statement

The College of Arts and Sciences has as its credo that liberal learning prepares students of all ages and backgrounds to live more fulfilling lives, to appreciate and contribute to the communities of which they are members and to reach their ethical, personal, intellectual and financial goals. To help its students maximize their potential, the College emphasizes critical and analytical thinking through a rigorous “success skills” undergraduate core program in written and oral communication, computing, analyzing and integrating. Faculty scholarship supports diversified liberal arts concentrations available in the humanities, the natural sciences and the social sciences, along with graduate programs in several fields, most offering career-related professional program tracks and practical experience on or off campus.

BOSTON

Academic Catalogs

[Academic Catalogs](#) > [Undergraduate Catalog](#) > [College of Arts & Sciences](#) > Fall 2017 Degree Requirements

2017-2018 Archived Catalog Information

Fall 2017 Degree Requirements

2017-2018 Undergraduate Degree Requirements

The College of Arts & Sciences offers the following undergraduate degrees:

- [Bachelor of Arts \(BA\)](#)
- [Bachelor of Fine Arts \(BFA\)](#)
- [Bachelor of Science \(BS\)](#)
- [Bachelor of Science in Journalism \(BSJ\)](#)
- [Bachelor of General Studies \(BGS\)](#)
- [Associate of Arts \(AA\)](#)
- [Associate of Science \(AS\)](#)
- [Associate of Science in Paralegal Studies \(ASPS\)](#)

Please reference the [archived catalogs](#) for degree requirements for students matriculating prior to fall, 2017.

Each academic department specifies whether students majoring in that department may earn the BA, the BS, or have a choice of the BA or BS. All degree programs provide a broad liberal arts background and specialization within a single major field or divisional concentration.

A minimum of 126 semester hours is required for the bachelor's degree (124-hour requirement for the BFA) and 64 for the associate's degree.

See all [Majors and Minors](#) offered by the College of Arts & Sciences (CAS).

• Degree Requirements

Within the semester-hour requirements for bachelors' and associates' degrees, certain courses and options must be taken as requisites to the degrees. Core Requirements provide the basic knowledge and skills necessary for successful academic work at higher levels, and the breadth of knowledge in many fields that is fundamental to liberal education. Courses that fulfill the Creativity and Innovation, Social and Intellectual History, Modern Language, Studies in Literature, Quantitative Analysis, Seminar for Freshmen, Human Behavior and Societies, or VPATH requirements may double count to fulfill the Social, Cultural, and Global Perspectives (SCGP) requirement. Courses that fulfill the Modern

Language Requirement at the level of 202 or above may double count to fulfill one (1) additional core requirement. Within the core, triple counting of requirements is not permitted.

To complete any major in CAS, students are required to take a minimum of 12 semester hours of courses in the major department at Suffolk University. Students must achieve a minimum 2.0 grade point average in their major. Courses that are taken as part of a student's Major or Complementary Major Requirements, which are also listed under the College Requirements, can be used to satisfy both Major and Core Requirements.

Any course may count only once toward the 126-hour requirement for bachelors' degrees (124-hour requirement for the BFA) and the 64-hour requirement for associates' degrees. Individual exemptions from Core Requirements, based on examination and recommendation of the appropriate departments, may be granted by the dean of the College of Arts & Sciences. Semester-hour credit is not granted for such exemptions.

Students should have finished WRI-101 and WRI-102 or authorized equivalents by the time they have reached 64 credits. Delaying the first-year writing requirement may impair performance in upper-division courses and make it difficult to graduate on schedule. Upper-division students who have not completed all writing requirements should do so before they achieve senior status.

• Declaring a Major

An academic major program enables a student to concentrate a portion of his or her studies in a specific subject area. Although many students come to the University with a specific major in mind, many other students decide to postpone the declaration of a major until they find out more about certain fields and concentrations of study. These latter students leave open their choice of a major, and are thus referred to as "open" majors. In general, students do not have to select their major until the second semester of their sophomore year.

Students wishing to declare or change a major need to obtain a Change of Major Form at either the [Office of the Registrar](#) or the [Undergraduate Academic Advising Center](#). This form should be brought to the new major department for advisor assignment. The form is then submitted either by the new department or by the student to the Office of the Registrar.

• Double Majors

Double majors are permitted in most content areas. The following double major pairs are not permitted because of significant content overlap:

- Advertising and Public Relations
- Biology and Biochemistry
- Biology and Radiation Science
- Chemistry and Biochemistry
- Environmental Science and Environmental Studies
- Media & Film and Global & Cultural Communication
- Media & Film and Journalism

A student must complete the major requirements and the complementary major requirements for each major field. Advisors for each of the two proposed major departments advise the candidate concerning the proposed double major and help the candidate to plan, coordinate, and implement a program that interrelates (where possible) the two proposed major disciplines. At some point after the first year, but not later than the end of the junior year, the student should declare the double major. The double major approval form, signed by both advisors, must be submitted to the CAS Dean's Office for approval. A student declaring a double major must have a GPA of 2.0 or higher and must maintain a minimum 2.0 GPA in both majors.

To qualify for a double major, a student may use no more than four courses from a given major toward the second major.

These restrictions on the number of courses that may be counted toward two majors do not apply to prerequisite, co-requisite, or complementary major requirements of the majors.

CAS students wishing to double major with the Sawyer Business School must consult with the SBS double major coordinator during the initial application process and must adhere to the CAS Double Major criteria.

• Dual Degrees

A student may earn two different undergraduate degrees (e.g., BFA/BA) when the requirements of both degrees, plus a minimum of an additional 30 credit hours of academic work, have been completed. A student seeking a dual degree must have a GPA of 2.0 or higher and must maintain a minimum 2.0 GPA in both majors and degrees. The dual degree approval form, signed by both advisors, must be submitted to the CAS Dean's Office for approval.

• Minor Programs

A student declaring a minor may use no more than two courses from a major to fulfill the requirements for the minor. No more than one course from one minor may count toward the fulfillment of a second minor. Students may not minor in a subject in which they are also completing a major.

A minor program is optional for any student and is not required for graduation. A student should consult as early as possible with his or her advisor, and with a member of the department in which he or she intends to minor, regarding minor requirements. Students must achieve a minimum GPA of 2.0 in their minor.

The departments of Mathematics & Computer Science, and World Languages & Cultural Studies should each be considered to be two separate departments when considering major/minor combinations. Similarly, the Fine Arts, Foundation, Graphic Design, Illustration, and Interior Design programs should be considered as separate departments for the purposes of minors. Please note that, while Interior Design BFA candidates may minor in another NESAD major program, there is no Interior Design minor. Students majoring in Sociology may complete the minor in Education Studies (administered by the Sociology Department), and students majoring in Government may complete the minor or the certificate in Law (administered by the Government Department).

These restrictions on the number of courses that may be counted toward the minor do not apply to prerequisite, co-requisite, or complementary requirements of other declared majors or minors.

Students must complete a minimum of eight credits within their minor department at Suffolk University.

• Business Minors for CAS Students

A College of Arts & Sciences student seeking a Business Minor should consult with the [Undergraduate Academic Advising Center](#). Additionally, students may be advised to meet with specific faculty specialists in their area of interest. Please refer to the [Sawyer Business School section](#) of this catalog for program details.

The Sawyer Business School offers two types of business minors to College of Arts & Sciences students:

The **General Business Minor** appeals to students who choose to develop a basic understanding and appreciation of business administration.

The **Functional Business Minor** is for CAS students who would like to minor in a specific business discipline.

• Second Baccalaureate Degree

Students with an earned baccalaureate degree from an accredited four-year institution may apply for admission to an accelerated second bachelor's degree program in the College of Arts & Sciences. By transferring prior coursework to satisfy the Core Requirements and by completing all departmental requirements for the new major, a student could earn a second baccalaureate in as little as one academic year.

All applications must be initiated in the [Office of Undergraduate Admission](#). A candidate will be referred to the appropriate department chair for advising. The Office of Undergraduate Admission will then accept and evaluate all outstanding college requirements.

If accepted, a candidate would be required to successfully complete a minimum of 45 credit hours of new coursework and satisfy any outstanding general Core Requirements. Candidates deemed under-prepared to begin a second baccalaureate degree by the department chair could be required to complete prerequisite studies as a condition of admission to the program.

• Associate Degrees

An associate degree is designed as a two-year program. Credits earned toward the associate degree may be transferred to a four-year program at another institution; may be used to allow the student to re-enter college after an absence; or may be converted to a four-year degree program at Suffolk University if the student's educational objectives change. The College of Arts & Sciences offers an Associate of Arts (AA) degree, an Associate of Science (AS) degree, and an Associate of Science in Paralegal Studies (ASPS) degree.

2017-2018 Archived Catalog Information

Associate of Arts Degree

Please note that these requirements are for students matriculating in or after fall, 2017. Students matriculating prior to fall, 2017 must reference the [Pre-Fall 2017 Degree Requirements \(Archives\)](#).

The AA degree program requires the successful completion of the following courses:

Core Requirements: 13-15 courses, 47-56 credits

- [First-Year Experience](#)
- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Studies in Literature](#)
- [Ethical & Philosophical Inquiry](#)
- [Human Behavior and Societies](#)
- [Social & Intellectual History/Visual & Performing Arts Theory & History](#)
- [Modern Language](#)

First Year Experience: 1 course, 1 credit

Students with 15+ transfer credits of college or university work are exempt.

Choose one of the following to be completed during the first semester of matriculation:

- **CAS-101 Strategies of Success**

Prerequisites:

CAS students only. SBS students by special permission.

Credits:

1.00

Description:

CAS 101 is a one-credit course that meets once a week and is designed to help you have a successful transition to Suffolk University and our unique urban community. It is also designed to introduce you to the principles and concepts of Oral Communication and Presentation Skills. Through interactive exercises and engaging assignments, you will explore the campus environment and learn about strategies for success as a student. You will present speeches about your research and activities to improve your abilities as a speaker.

- **ADPR-102 Professional Development**

Prerequisites:

ADPR-101 must be taken concurrently

Credits:

1.00

Description:

In this hands-on experiential course, students examine potential career paths in Advertising, Public Relations, and Social Media, become oriented to the university and the surrounding Boston area, and identify professional resources in Boston that foster career development.

Free Electives: credit varies

Minimum Total Credits Required for Degree Conferral: 64 credits

2017-2018 Archived Catalog Information

Associate of Arts Degree

Please note that these requirements are for students matriculating in or after fall, 2017. Students matriculating prior to fall, 2017 must reference the [Pre-Fall 2017 Degree Requirements \(Archives\)](#).

The AA degree program requires the successful completion of the following courses:

Core Requirements: 13-15 courses, 47-56 credits

- [First-Year Experience](#)
- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)

- [Ethical & Philosophical Inquiry](#)
- [Human Behavior and Societies](#)
- [Social & Intellectual History/Visual & Performing Arts Theory & History](#)
- [Modern Language](#)

Seminar for Freshmen: 1 course, 4 credits

Students with 15+ transfer credits of college or university work are exempt.

Please note that not all courses are offered each semester. Students should contact their advisor to learn about current course offerings.

Choose one Seminar for Freshmen course from those listed below:

- **SF-101 Fixing the World- Energy and Water: The Science of Solutions**

Credits:

4.00

Description:

Two of the most daunting challenges the world faces (or will face) is how to provide for both its growing energy needs and potable drinking water. Regular news events include climate change, droughts, flooding, and petroleum struggles. Human nature often requires a severe crisis before it responds. This course will investigate the historical science driving the use of energy since the Industrial Revolution to convert energy resources into work, including the steam engine, the electric motor, and the internal combustion engine. It will also consider alternative energy options to fossil fuels, such as solar, wind, geothermal, and ocean power. Along the way we will consider the evidence for Global Warming and Climate Change. We will look into human nature, simple life styles, conspiracy theories, and the influence of those in power to shape human opinion. We will also consider how our water supply is provided and where it goes after being used. What options do developing countries or drought racked areas have to remedy their water needs? Although the course pursues a scientific understanding of these issues, the mathematics used will be gentle, and a larger emphasis will be placed on the intuitive appreciation of these concerns.

- **SF-116 Enlightened Insanity**

Credits:

4.00

Description:

Rain or shine, the great 18th century Enlightenment philosophers would meet at the famous cafes of Paris to discuss their ideas, and to observe and criticize society. From these informal debates emerged ideas that are at the core of our modern understanding of the nature of society, marginality, human nature, civil rights, the essence of creativity and genius. Come join us in the quest to understand, define, observe, and analyze the key ideas and concepts of these great thinkers, such as Rousseau, Diderot, and Voltaire, still so relevant in our time. We will read key works of these creative thinkers and philosophers. We will enrich our experience and understanding through the use of film, theatre performances, museum visits, as well as the occasional cafe debate.

- **SF-126 The Boston Theatre Scene: the Inside Experience**

Credits:

4.00

Description:

Using the current Boston theatre season as its syllabus, this writing- and analysis-intensive course will explore several plays in production at some of Boston's many professional theatres. We will study the script of four to five plays before attending performances of those works. Students will gain insights on the world of theatre through backstage tours and conversations with theatre professionals such as producers, directors, actors, designers, playwrights, and critics. Students must be available for evening (usually Wednesday) performances. A fee for student-rate tickets will be assessed.

- **SF-132 The Beatles: Here, There & Everywhere**

Credits:

4.00

Description:

This seminar will investigate the impact and legacy of the Beatles. The Fab Four deserve our scholarly attention as musical innovators and as cultural avatars of the 1960s, an era that still exerts influence today. We will examine the many ways in which the Beatles rocked the establishment and became defining figures in post-war youth culture. We will also discuss other media (the visual arts, film, fashion, style) and fields of study (mass media, marketing, recording technology, copyright law, English history) using the Beatles as our guides.

- **SF-151 Getting Over It: Dealing With the Aftermath of Group Conflict/Mass Atrocity**

Credits:

4.00

Description:

Once violent conflict between two groups has ended, what is the best way to transition back to normality coming to terms with the past or simply moving on? To answer these questions we will examine the debates surrounding war crime tribunals, truth commissions, lustration policies, and reparations in the second half of the 20th century. Case studies will include post-apartheid South Africa, post-WWII Germany, and the Israeli/Palestinian conflict. We will discuss the philosophical problems raised by each of these instruments, as well as on the political, legal, and practical difficulties their implementation present. Cultural Diversity B

- **SF-156 The Mask Behind the Face: Personas, Personalities, and Perception. Acting in /Out Life**

Credits:

4.00

Description:

The theatre has always been a metaphor for life. In modern times life has become theatre. This seminar will confront the idea of real life and the eroding boundary between performers and audience. Students will study the roots of the contemporary obsession with stars and stardom, a mania that began in the 18th century and flourished in the 19th century. We will look at performance studies, performers memoirs, plays, and films that dramatize this dilemma.

- **SF-173 Crime in American Society**

Credits:

4.00

Description:

Popular beliefs about crime are often inspired by the media and by specific criminological theories. These theories about and media images of crime will be examined in detail, including the hits and misses.

- **SF-174 Tragedy and Literature**

Credits:

4.00

Description:

This course will focus on classic works of ancient and modern literature that examine the human condition from a tragic perspective. We will concentrate on close readings from the following texts: Homer's Iliad, Sophocles' Antigone, The Bhagavad-Gita, Shakespeare's Othello, Chekhov's short stories, and Joyce's Dubliners.

Type:

Classics Minor

- **SF-175 War and Apocalypse in Science Fiction**

Credits:

4.00

- **SF-178 Sacred Hoops & Sneaker Pimps: Understanding the American Hoop Dream**

Credits:

4.00

Description:

This course is about the basketball hoop dream played out at the high school and college levels. We will study a wide variety of materials - novels, films, websites, reference works - to understand both the construction, and destruction, of the hoop dream in such diverse places as New York City, Seattle, rural Indiana, suburban Georgia, and the Wind River Reservation in Wyoming. Issues of race and culture will serve as guiding themes as we develop critical theory explaining why the hoop dream has persisted, and adapted, over time, to fit the needs of its believers and supporters.

- **SF-182 Heroes, Antiheroes and Outsiders: Reading the Graphic Novel**

Credits:

4.00

Description:

How is it that comics", a genre often viewed as entertainment for children and adolescents, has become one of the most exciting forms of narrative and visual art? To answer this question, this seminar will examine a range of graphic novels, from those that celebrate their origins in superhero comics, such as Alan Moore's Watchmen, to those that treat subjects not usually considered proper to the comics genre, such as Art Spiegelman's Maus, about the Holocaust, and Alison Bechdel's Fun Home, about the complexities of sexual identity. As we read these works, we will look at how the combination of words and still images makes the graphic novel a unique storytelling form, as well as how artists and writers push the envelope to create new styles and challenge our expectations. In addition to class discussions and writing assignments, we will take a field trip to the Museum of Fine Arts and create a collaborative group graphic novel step-by-step over the course of the semester (all abilities welcome).

- **SF-183 Politics, Power and the Media**

Credits:

4.00

Description:

Is there a relationship between accumulated political power and mass media representations? Is news content impacted by existing political power relations? It is the object of this course to critically analyze the role of the mass media within the framework of existing political power relations in the United States. In particular, the course will focus on the role the mass media plays in promoting and reinforcing dominant political practices and ideologies. The course will begin by exploring various theories of the press, notably its function in a democratic society, as well as the concepts of power and propaganda. We will continue with a series of case studies, complemented by secondary sources that highlight how media representations affect the contemporary distribution of political power in the US. Topics of discussion will include the current US war on terrorism, the ongoing health care debate, the public disavowal of big government", and the concept of a liberal media.

- **SF-189 American Gothic: Edgar Allan Poe, Flannery O'Connor and Annie Proulx**

Credits:

4.00

Description:

This literature seminar will study and compare the short stories of Edgar Allan Poe, Flannery O'Connor, and Annie Proulx. Beginning with Poe as the father of the short story genre in America and exploring his critical theory of the grotesque and arabesque", the class will examine the emergence of the gothic literary idiom as a classic American genre. Critical essays on the gothic aesthetic will be analyzed and film adaptations and documentaries will be viewed.

- **SF-190 Asia in America Fiction and Fact**

Credits:

4.00

Description:

With a focus on some selected ethnic groups from Asia, Asia in America studies the history and current status of Asian Americans in Boston and other parts of the country. We will examine the major reasons why these immigrants chose to leave their home country as well as their expectations and experiences here in America. We will also discuss the issues Asian immigrants have faced in this adopted home as well as the connections and conflicts among different ethnic groups or even within the same ethnic group due to political and socio-economic reasons. The course will include some level of community engagement, through Chinatown tour and service, which may enable us to have a direct contact with the Asian American population and reflect on what is being discussed in class. Through this course, we hope to gain a better understanding of the racial and cultural history of the country and arrive at a deep appreciation of the dynamics of cultural interactions in the twenty-first century. The course fulfills the SCGP requirement.

Type:

- **SF-191 Film Adaptation Film Adaptation**

Credits:

4.00

Description:

Why did they change the ending of the book? The novel is so much better! We will explore the concept and industry of film adaptation. Students will read novels and watch respective film adaptations to explore how the written word is adapted to the screen; both fiction and non-fiction works will be considered. Also, field trips to past film locations in Boston will be taken to explore why specific settings were chosen for respective situations. Additionally, students will create their own written adaptations of source materials, putting into practice the concepts studied in class.

- **SF-197 Sustainability, Energy, and Technology At Suffolk University**

Credits:

4.00

Description:

In this project and team-based course, students study a sustainability problem at Suffolk University and spend the semester developing proposals to address the problem. At the end of the course students will present their proposals to Suffolk University's sustainability committee, and will exhibit their websites and visual aids in the Donahue lobby to educate the Suffolk community about sustainability. If their proposals are well-researched and well-communicated, students can see their ideas actualized while they are still undergraduates.

- **SF-198 Music and the Brain**

Credits:

4.00

Description:

What accounts for the power of music to move us so profoundly? This course explores how our brains and music evolved together: What music can teach us about the brain, what the brain can teach us about music, and what both can teach us about ourselves.

- **SF-199 Unfolding the European Union**

Credits:

4.00

Description:

The EU is a powerful political, economic and cultural block that is meant to play a major role, together with the USA and China, in the creation of a new post-crisis world order. The seminar is intended to cover, at a basic but reachable level, the history, the politics, the culture and the functions of the EU in the beginning of the Twentieth Century. An extraordinary experiment of sociopolitical engineering, comparable to that of the United States of America, the EU has been changing the life of an increasing number of Europeans for over 50 years. No American student could afford to ignore the inner structure as well as the particular peculiarities of such inclusive supranational organization in today's world. Issues as institutional functioning, problems derived from individual state sovereignty, economic coordination to face common challenges, cultural integration, future enlargement, etc. are all indispensable to understand the way in which Europe is changing. But also much more day-to-day issues, such as travel mobility, education exchange programs, citizen's participation, supranational networks of people in the arts or in business, unified labor market, gender participation, human rights, consumer's protection, etc. are all in the process of developing a more robust and functional European Citizenship.

- **SF-1110 Decoding Boston: Signs and the City**

Credits:

4.00

Description:

This interdisciplinary seminar will explore the buildings, monuments, sites, and signs around Boston from the point of view of Visual and Culture Studies. In addition to providing a compelling introduction to the history, major landmarks, and culture of the city, the seminar is specifically intended to improve students' visual literacy: that is, their awareness of their visual environment and their ability to critically analyze the rhetoric of the spaces, buildings, and images with which they are surrounded.

Type:

Local Engagement Experience

- **SF-1122 The Ethics of Peace and War: From The Ancient World to the Present**

Credits:

4.00

Description:

This course will explore historical, ethical and political issues concerned with matters of peace and war. We will examine a variety of different texts: religious, historical, philosophical and literary, but the main emphasis will be philosophical justifications for war and philosophical visions of just peace, with an eye to contemporary questions in the War on Terror. To the extent that we use non-philosophical texts, this will be in the service of focusing the imagination on the philosophical issues and applying theoretical frameworks to historical events.

- **SF-1127 The Vietnam and Iraq Wars: Polarized Perspectives**

Credits:

4.00

Description:

This class will examine some of the many controversies surrounding the Vietnam and Iraq Wars, two conflicts that have been profoundly polarizing for the American people. There are widely divergent perspectives regarding the fundamental questions surrounding each war. Were the reasons for American involvement just? To what extent were the methods used by the United States military during each war just? To what extent did the media play an appropriate role before, during, and after each war? Did opposition to these wars serve primarily to benefit the enemies of the United States or did it constitute a form of patriotism and love of country? This interdisciplinary course will address these and other complex questions by examining the histories, literature, and films (both documentaries and dramatic) that have been produced in response to these wars.

- **SF-1128 Sustainable Media**

Credits:

4.00

Description:

Contrary to a popular perception that information, communication and entertainment technologies are clean, ecologically benign and paperless, the reality of an increasingly digital life is that our fascination with the next best thing in mobile phones, video game consoles, personal computers, digital cameras, tablets, etc., has devastating impacts on our environment. These media devices are manufactured using toxic ingredients in poisonous working condition, require an abundance of energy to operate, and create hazardous waste when disposed. Media technology companies and the advertising industry that markets their wares have successfully persuaded consumers to accept rapid obsolescence and to highly anticipate the latest upgrade. But some consumers, electronics manufacturers, policy makers, and environmental groups are working to change the culture of consumption in favor of sustainable media practices that lessen the environmental footprint of the digital devices we use everyday. The purpose of this course is to understand the problem of unsustainable media, and the possible solutions for a sustainable media system.

- **SF-1129 Beacon Hill: Fact, Fiction, and Fantasy**

Credits:

4.00

Description:

The course will explore the physical geography, history, and image in literature, film, and pop culture of Suffolk University's Beacon Hill neighborhood. The purpose and objective of the course is to provide students with a deep knowledge, understanding, and appreciation of Beacon Hill through examination of written and visual sources, and feet-on and eyes-on experience of the public parts of the Hill.

Type:

Local Engagement Experience

- **SF-1133 Problems and Solutions in Early American History**

Credits:

4.00

Description:

This course will examine four major problems in the early American republic: forming a government; bridging vast distances on the American continent; slavery; international relations. We will explore the various proposed solutions to these problems. Some of the solutions worked well, others were more disastrous than the initial problem. We will read primary documents pertaining to these issues, and try to imagine how men and women considering the problems might have responded to them. What solutions could be proposed? What solutions would work? What were the political, economic, or social difficulties generated by the problem and by the proposed solutions? In considering the problems, we will also learn how to use the various archives close at hand: the Sawyer Library, the Boston Public Library, the Massachusetts Historical Society, and the Massachusetts State Archives. Students will also post their findings on a class blog, and present their work to one another in class.

- **SF-1134 The Meaning of Life**

Credits:

4.00

Description:

What do we live for? Which beliefs, values, and experiences sustain meaningful, fulfilling existence? Are we authors of our destinies or powerless pawns in an unfathomable cosmic game? Does death render all our efforts superfluous? This award-winning course offers a cross-cultural, interdisciplinary exploration of these questions through philosophical and religious texts, art, fiction, autobiography, and psychological studies. The course opens with the Old Testament's book of Ecclesiastes, followed by three units: 1) A Life Worth Living: Humanity's Ideals focuses on the ancient and modern visions of human flourishing; 2) Threats to Meaning: Humanity's Discontents, discusses the disillusionments leading to the loss of meaning; and 3) Recovery of Meaning: Crises and Hopes, explores the post-crisis possibilities of self-discovery and growth. Please visit <http://meaningoflife.cherkasova.org/>

- **SF-1135 Women Warriors: Stories of Captivity, Conversion, and Confession**

Credits:

4.00

Description:

Since the beginning of time, women have been doing battle to themselves, while men have gone to battle against others. Whether it is through converting to Christ, yielding to captors in order to survive, or carrying a baby, this course introduces students to the many ways in which, whatever battles they face, women are warriors; they survive. Utilizing an array of captivity, conversion, and confession narratives by women, and pairing them across the centuries, students will make connections and draw conclusions between early-and mid-19th-century-American and contemporary women. Students will connect, for example, the trials of the 17th-century Puritan captive, Mary Rowlandson, and contemporary hostage, Elizabeth Smart, to explore how women (no matter how different they seem) draw upon unique inner resources to survive.

- **SF-1141 Classical Civilizations: Pathways to Wisdom**

Credits:

4.00

Description:

How is it that the knowledge, intelligence, wisdom and values of the Greeks and Romans still educate and edify the world by providing venues towards leading fulfilling and dignified lives? The guiding principles of their respective civilizations rested upon eight pillars: - Humanism: It was recognized that humans have the potential to master their world and live life to the fullest. -The Pursuit of Excellence: To imagine the highest good and strive to attain it. - Self Knowledge: It is imperative to know oneself before seeking to know the world. - Rationalism: Always question, reason and discern truth from falsehood and never consider any matter superficially. - Restless Curiosity: Often the resolution of one issue leads to the revelations of others mysteries and pursuits which compels further investigation. The wise individual makes this a lifelong endeavor. -Love of Freedom: As long as one brings no harm to others, one must be free to live and discover as much as possible. - Individualism: All are unique and, therefore, must recognize individual strengths and identity. -The Practice of Moderation: The prudence of avoiding extremes in personal and social conduct. In this

course, students will read two (brief) texts on the Greek and Roman contributions to the world and then will proceed with specific readings which illuminate the eight principles above for achieving the good life.

- **SF-1143 In the First-Person: Storytelling in the 21st Century**

Credits:

4.00

Description:

This section of the Seminar for Freshmen will consider the forms, venues, and impacts of narrative nonfiction in contemporary culture. From the exploding popularity of personal essays in the digital age to the living, evolving essays we create on social media, we are constantly narrating and archiving our lives, shaping their content for specific audiences. In doing so, we shape what our experiences mean and represent. In order to analyze the power of narrative nonfiction, we will look at a variety of multimodal texts: essays, podcasts, Instagram and Twitter feeds, stand-up comedy, and storytelling slams, as well historical texts such as the essays of Michel de Montaigne and historical artifacts at the National Archives in Boston. We will also write our own narrative nonfiction, and adapt our first-person stories for listening and viewing audiences, such as the MassMouth story slam and podcasts like This American Life. Additionally, we will practice narrative nonfiction for professional audiences, using storytelling as a way to showcase personal strengths to employers, internship coordinators, and the like.

- **SF-1144 Native Americans: Walking in Two Worlds?**

Credits:

4.00

Description:

Native Americans are often described as walking in two worlds, as they attempt to navigate the process of maintaining their tribal identity and heritage while living in mainstream America. In recent years there has been a shift towards tradition and heritage, and a rejection of Western values and norms in both the US and Canada. In this course we will look at how Native people live in the US and Canada today, and examine the extent to which they are either trying to walk in two worlds or perhaps rejecting the two worlds model. To help us answer this question, we will read about reservation life, the Idle No More Movement, Indigenous History, and current events. We will also watch videos and explore indigenous culture.

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

- **SF-1146 Fido the Friendly Wolf: A Natural History of Dogs**

Credits:

4.00

Description:

This course explores the evolution of dogs from wolves and the ways in which dogs have adapted to their niche in human society. The ecology, behavior, genetics, and adaptations of dogs will be explored in relation to both their wolf ancestry and artificial selection by humans. The course includes 2 mandatory field trips to a wolf sanctuary and an animal shelter.

- **SF-1147 Global (In) Security: From ISIS to Ebola**

Credits:

4.00

Description:

This course reviews the principal features of global and national security as it is currently practiced by tracing the evolution of theories, policies and circumstances whereby current international security is developed. Students will evaluate the nature and origins of war, arms proliferation, military instability, terrorism, genocide, health threats and natural resources depletion.

- **SF-1148 Brave New Worlds**

Credits:

4.00

Description:

Explores themes of adventure, self-discovery, exile, and culture shock in classic and contemporary travel writing (including fiction, poetry, and non-fiction) as well as film. Students will experiment with creative writing of their own, develop theories of cosmopolitan world citizenship, travel through the city of Boston on field trips, and team up to learn about different countries in Suffolk's global network of study abroad programs.

- **SF-1150 Religion in Contemporary Society**

Credits:

4.00

Description:

This course is design to provide students with an overview of the social settings and cultural meanings of religion in the contemporary world. Topics that will be covered in reading and discussions include the rise of religious fundamentalism, religion and violence, women's and men's religious experiences, new religions, and portrayals of religion in popular films. In addition to the readings, students will observe and experience religious expressions and activities through fieldwork assignments. The emphasis on films and fieldwork reflects my belief that religion is made up of lived experiences of actual individuals and communities. In order to understand religion in contemporary society we will make every effort to see (in person or in film) a wide range of religious activities. The films we will see include some of the following: Leap of Faith, Devil's Playground, Kadosh, Women of Hizballah, Singing Stream, A Still Small Voice.

- **SF-1151 Reproduction and Society**

Credits:

4.00

Description:

This course explores relationships between reproductive health and rights both nationally and internationally. Many of our topics fit into two broad areas: conflicts over the control of childbearing (sterilization abuse, birth control, and abortion) and conflicts over who deserves to be a mother, especially when the mothers in question face social stigma and lack political power. Other topics include safe birth and maternal mortality, breastfeeding, infertility and reproductive technology. We also examine the politics of women's sexual and reproductive autonomy, including the policies that shape women's choices to prevent, achieve, abort, or carry to term a pregnancy. Throughout, we are guided by the following questions: Why is reproduction an important site through which to understand society? How do statuses such as race, class, gender, sexuality and ability influence people's reproductive possibilities? What is the role of the state in shaping these experiences? How have communities supported or resisted efforts at reproductive control? Why is reproductive justice central to these answers?

- **SF-1152 The Idea of America: Past, Present, Future**

Credits:

4.00

Description:

A systematic exploration of thinking of and about America, from the founding of the republic to American issues and traditions of thought that reflect upon the founding principles and the unfolding American experiment. The Declaration of Independence and the Constitution will be studied with an eye to their philosophical content and sources. The course will also examine works of philosophers and other thinkers who address conflicts over the meaning of founding principles in the course of the nation's history, from the struggle over slavery to America's contemporary role in the world. Because this course intends to apply theoretical understanding to real life, students will be expected to read contemporary journalism on a regular basis and assess the controversies of today in the light of the nation's philosophical and historical currents.

- **SF-1153 Law, Disease, and Public Health**

Credits:

4.00

Description:

This course is about public health law, which is the study of the legal powers and duties of the various systems of government in the United States (federal, state, and local) in collaboration with their partners (e.g., health care, business, the community, the media, and academe), to ensure the conditions for people to be healthy (to identify, prevent, and ameliorate risks to health in the population), and of the limitations on the power of these systems of government to constrain for the common good the autonomy, privacy, liberty, proprietary, and other legally protected interests of individuals. The prime objective of public health law is to pursue the highest possible level of physical and mental health in the population, consistent with the values of social justice. The course will focus especially on public health law in the area of epidemic disease. Case studies will be made of the Great Influenza of 1918 and the origins and spread of the Ebola virus, culminating in an examination of outbreaks of Ebola in the United States.

- **SF-1154 Introduction to Visual Studies**

Credits:

4.00

Description:

This seminar provides an introduction to Visual Studies, a relatively new interdisciplinary field that examines how images communicate and the roles that they play in society. Students will apply the concepts and techniques of Visual Studies to analyze sites and signs around Boston, such as

advertisements, street signs, fashions, newspaper photographs, buildings, and public spaces. Class projects will increase students' awareness of their visual environment and their ability to critically analyze the visual rhetoric that surrounds us and is often used to manipulate us.

Type:

Local Engagement Experience

- **SF-1155 The Boston Olympics**

Credits:

4.00

Description:

This class will teach students about the key role that sporting events can play in building a city, building its brand and the politics surrounding the process of these things occurring. Topics may include: urban development in general and the transformation of the industrial to the post-industrial Boston; the way in which cities use events like the Olympics to build their place brands; the way an effort like the Olympics can be used to encourage large scale public investment in longer term infrastructure projects that otherwise might not be justifiable; and the way government works with interest and community groups to try to shape public policy.

- **SF-1156 Thinking About the Insanity Defense**

Credits:

4.00

Description:

This course examines sixteen case examples providing a clear and compelling introduction to one of the most important topics in the relation between public policy and law. This course addresses: the history of the insanity defense; the effects of different standards for determining insanity; the arguments for its retention; abolition, and revision; media and other responses to it; and the controversies around pre and post conviction commitment. The case examples illustrates a variety of outcomes and include individuals who were found not guilty by reason of insanity; found guilty even though mentally ill; and not charged because of mental illness.

- **SF-1157 Germany in Film and History, 1945-2015**

Credits:

4.00

Description:

Since 1945, Germany has had a lot of history to reckon with- and 21st century Germany history through film, newsreels and other archival footage, radio and TV shows, war memorials and museums built since 1945, novels, published diaries, and memoirs. We will also read recent historical scholarship to put these cultural texts in context. Topics include the representation, in film and other texts; of: post-war rebuilding, the German Economic Miracle; the building of the Berlin Wall; radical politics of the 1960s and 1970s; coming to terms since 1945 with Germany's Nazi past and the Holocaust; coming to terms since 1990 with the Stasi and East German past; Ostalgie (nostalgia in the 21st century for some aspects of East German socialism); the multicultural society that is Germany today, with new Turkish, Greek, Russian, Arab, and even Israeli communities.

• SF-1158 Global Climate Change

Credits:

4.00

Description:

Conversation about the weather is considered to be the universal icebreaker. Yesterday's sweltering heat, the storm predicted for this weekend, even long-term climate shifts find their way in our daily conversation. Today, however, such casual conversations have an edge to them, because we are realizing that humans play a role in determining the climate shift. In fact, understanding the human fingerprint in the Arctic tundra melting, or a devastating hurricane, has gone well-beyond small talk to become one of the most important challenges our society faces today, and on that is wedded to geopolitics. To meaningfully participate in any dialogue that addresses this challenge people have to be aware of certain key ideas of Physics and Planetary Science. The aim of this course is to provide you with some of the essential facts and pieces of science underlying such questions. This course will enable you to grasp many of the issues that dominate today's political discourse and to develop an informed opinion (your, not our!) for which you can rationally argue.

• SF-1160 Individuals and Society in the Zombie Apocalypse

Prerequisites:

CAS Freshmen Only

Credits:

4.00

Description:

The Walking Dead tells viewers that life in the zombie apocalypse requires people to fight the dead, fear the living. Sociologists want to know why we should fear the living. How do individuals come together and try to recreate society for themselves: either to build community or fight other groups? What role do morals and values have in a society? How does all of this determine life, death, and the struggles people must face? Questions like these will give our class a new view of The Walking Dead and can help us to learn more about the society that we live in where so far the dead have remained in the ground.

- **SF-1162 Space Missions: From Moon to Mars and Beyond**

Credits:

4.00

Description:

It is hard to believe that only 60 years ago, our only close-up view of a planetary body was that of Earth. We are truly living in the Golden Age of Space Exploration, when a new mission every few years brings us spectacular images from either a neighbor in the solar system or galaxies at the edge of the universe. This course will describe the dozen space missions that changed our view of the universe, ranging from our solar system to the most distant galaxies.

- **SF-1163 Spellbound! Witches, Wizards and Spirits In American Literature**

Credits:

4.00

- **SF-1164 Reinventing Europe: Beyond Brexit and Secular Stagnation**

Credits:

4.00

Description:

While newspaper headlines focus on the multiple problems Europe is facing today, the evolving adaptation of European nation states and the integration process receive less attention. Brexit and economic crises seem to be synonymous of Europe today, but facts such as the European Union accepting five new members in the coming five years or Europe being the most advanced environmental actor or the main international provider of official aid are often ignored by public opinion. This Seminar for Freshman examines the dynamic evolution of the integration process in Europe in the context of globalization. Three sections articulate the main debates and tensions in the interplay between national and supranational institutions and policies. The first part analyzes how eight European countries have forged their national preferences to delineate their level of immersion in the

integration process; it later proceeds with the examination of the main historical events in the history of the integration process. The second part explores the functioning of the EU institutions in order to grasp the essence of the complex policy-making in the Europe of 28 members. The third and final section presents the analysis of the main areas of the EU policy making such as agriculture, monetary and economic issues, among others, and observes the main developments in the area of EU external relations.

- **SF-1165 History of Boston**

Credits:

4.00

- **SF-1166 Cinema-Monde: Global Challenges on Film**

Credits:

4.00

Description:

This course focuses on French-language films - with subtitles! - that address pressing social issues of the 20th and 21st centuries, such as hunger, female genital mutilation, immigration, racism, economic inequality, genocide, gender, sexuality, colonialism and post-colonialism.

- **SF-1167 Fantasy Fiction: Imaginary Worlds**

Credits:

4.00

- **SF-1168 The Real Thing: the Pursuit and Problems Of Authenticity**

Credits:

4.00

Description:

This course will focus on the concept of authenticity in American culture, from its origins in the early 19th century to the present. When the advertising gurus of Coca-Cola branded it as "The Real Thing," they were exploiting something powerful: the idea of something real, stripped of any falsity or

illusion. Humans have always desired to know the world and others as they really are," but this desire is particularly strong in the modern world: witness the eagerness to discover one's true self," cut through the B.S., obtain the genuine article, and live authentically. In this course we will interrogate this pursuit of the Real Thing. In various ways, the texts we study both embrace authenticity as an ideal and also question its goodness, usefulness, or even its very possibility. We will thus confront a number of interrelated questions: Where does this desire for authenticity come from? What counts as authenticity," in life and in art? Is authenticity really a virtue to live by? How does it shape artistic and literary expression? Is there even such a thing as the real you This course will be divided into three units. In the first unit, Counterfeiters and Self-Made Men," we will study how a commitment to authenticity arises in antebellum American literature and culture during a time of rapid national expansion and invention. Readings will include texts by Henry David Thoreau, Ralph Waldo Emerson, Herman Melville, and P.T. Barnum. In the second unit, Authenticity and Contamination,"we will consider two major ways in which authenticity becomes idealized around the turn of the 20th century: as artistic ideal set against fears of mass cultural production, and as a cultural ideal set against fears of racial and cultural mixing. Readings will include texts by Ernest Hemingway, Nella Larsen, Jean Toomer, and William Carlos Williams. In Unit Three, Buying and Selling Authenticity," we will examine how authenticity becomes commodified (

- **SF-1169 Immortality: Real and Imagined**

Credits:

4.00

Description:

Most of the world's religious traditions have as a part of their doctrines some notion of immortality, rendered both in scriptures as well as iconographically. What precisely is entailed by immortality and why does it constitute such a significant element of so many religious traditions? What can we learn about immortality by investigating various conceptions of the afterlife? Is immortality truly a desirable thing? These questions among others will be examined from the perspectives of philosophy, religion, psychology, anthropology, and biology. Besides being cross-disciplinary, the course will be multi-media in nature. In addition to reading philosophical and religious texts concerning the nature of immortality, students will study various accounts of immortality and the afterlife, examine how the afterlife has been dealt with in (visual) art, literature, and film, and investigate current research into life prolongation (biomedical gerontology).

- **SF-1170 From Philia to Facebook: the Meaning of Friendship**

Credits:

4.00

Description:

The thematic focus of this seminar will be friendship. Friendship is one of the most important of human relationships; one that every student in this seminar has already participated in for many years. It shapes who we are and helps determine who we may become. And while it is a universal phenomenon, it has been practiced quite differently at various times and places in human history. And while we all have an intimate, personal and

practical knowledge of friendship through our own experiences, sometimes things that are so close and so obvious to us can be hard to see. Over the course of the semester we will inquire into friendship from many different angles, trying to gain both a broader and a deeper understanding than our own individual experience allows. We will look at friendship first through the lens of philosophy, particularly through the foundational text of Aristotle, *The Nicomachean Ethics*. We will look at other views of friendship from the ancient world, starting in the past to help us see that friendship has not always been thought of the way we think of it now. After this initial foundation is laid, we will examine other writers and thinkers and take up additional topics like friendship in different cultures, friendship and gender, friendship in and through the arts and include an examination of friendship through the lenses of many different academic disciplines to see how other systematic thinkers conceive of friendship. All along we will be comparing and contrasting with our own personal experiences and considering what modern technology, such as social networking sites, has done to influence friendship, in the way we practice it and the way we conceive it. It is the aim of this class that students not just study different academic points of view, but that they take up the questions and challenges that these thinkers present to them and fully engage with them on a meaningful personal level.

- **SF-1171 Living on and Beyond the Hyphen/Latino Writers in the USA**

Credits:

4.00

Description:

Hyphenated-Americans of Latino origin come from many places and backgrounds. Often perceived as a divide, an either/or that separates and distinguishes one ethnic group from another, the hyphen can also be viewed as a link that connects, integrates and facilitates the formation of new cultural spaces. Through films and written narratives by and about U.S.A. Latino(a)(x)-Americans, students will examine how individuals who live on the threshold between two languages and cultures embrace the challenge of preserving their own identity and moving beyond stereotypes. Each of the Latino/a/x authors that we will read in this course will describe his/her own experiences living in the U.S.A. By examining their views through our own filtered lens we shall try to answer questions like the following: 1. What role does language have in our definition/understanding of cultural identity? 2. How do individuals move beyond the hyphen and stop seeing themselves as hybrids? 3. How can an individual who does not belong to a marginalized group (i.e. one considered less powerful and secondary) understand and empathize with those who do? 4. How does globalization affect the dichotomies that arise in bi-cultural and multi-cultural communities?

- **SF-1172 The United States Mexican Border**

Credits:

4.00

Description:

One hundred and sixty nine years have passed since the Treaty of Guadalupe Hidalgo was signed. It is only fitting to analyze the profound changes that the gain/loss of these territories caused for the citizens of both sides of the border. This course will explore the literature, culture, and history of the United States-Mexican Border and the most pressing problems pertaining to the region. Emphasis will be on contemporary border theater and film.

The works of Salcedo, Galindo, Lopez and others will be studied as well as contemporary films and documentaries such as *Alambrista*, *Senorita Extraviada*, *The Gatekeeper*, *Sin Nombre*, *Wetback: the Undocumented Documentary*, *Victoria para Chino*, *Which Way Home*, and much more. There are no prerequisites for this course. Though the course is conducted in English, parallel readings in Spanish will be made available to those who wish to read and/or compare the original texts.

Students in the CAS Honors Program should choose one Seminar for Freshmen course from those listed below:

- **SF-H101 Fixing the World- Energy and Water: The Science of Solutions**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

Two of the most daunting challenges the world faces (or will face) is how to provide for both its growing energy needs and potable drinking water. Regular news events include climate change, droughts, flooding, and petroleum struggles. Human nature often requires a severe crisis before it responds. This course will investigate the historical science driving the use of energy since the Industrial Revolution to convert energy resources into work, including the steam engine, the electric motor, and the internal combustion engine. It will also consider alternative energy options to fossil fuels, such as solar, wind, geothermal, and ocean power. Along the way we will consider the evidence for Global Warming and Climate Change. We will look into human nature, simple life styles, conspiracy theories, and the influence of those in power to shape human opinion. We will also consider how our water supply is provided and where it goes after being used. What options do developing countries or drought racked areas have to remedy their water needs? Although the course pursues a scientific understanding of these issues, the mathematics used will be gentle, and a larger emphasis will be placed on the intuitive appreciation of these concerns.

- **SF-H116 Enlightened Insanity**

Prerequisites:

CAS Honors students only.

Credits:

4.00

Description:

Rain or shine, the great 18th century Enlightenment philosophers would meet at the famous cafes of Paris to discuss their ideas, and to observe and criticize society. From these informal debates emerged ideas that are at the core of our modern understanding of the nature of society, marginality, human nature, civil rights, the essence of creativity and genius. Come join us in the quest to understand, define, observe, and analyze the key ideas and concepts of these great thinkers, such as Rousseau, Diderot, and Voltaire, still so relevant in our time. We will read key works of these creative thinkers and philosophers. We will enrich our experience and understanding through the use of film, theatre performances, museum visits, as well as the occasional cafe debate.

Type:

Honors

- **SF-H126 The Boston Theatre Scene: The Inside Experience**

Credits:

4.00

Description:

Using the current Boston theatre season as its syllabus, this writing- and analysis-intensive course will explore several plays in production at some of Boston's many professional theatres. We will study the script of four to five plays before attending performances of those works. Students will gain insights on the world of theatre through backstage tours and conversations with theatre professionals such as producers, directors, actors, designers, playwrights, and critics. Students must be available for evening (usually Wednesday) performances. A fee for student-rate tickets will be assessed.

Type:

Honors

- **SF-H178 Sacred Hoops & Sneaker Pimps: Understanding the American Hoop Dream**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

This course is about the basketball hoop dream played out at the high school and college levels. We will study a wide variety of materials - novels, films, websites, reference works - to understand both the construction, and destruction, of the hoop dream in such diverse places as New York City, Seattle, rural Indiana, suburban Georgia, and the Wind River Reservation in Wyoming. Issues of race and culture will serve as guiding themes as we develop critical theory explaining why the hoop dream has persisted, and adapted, over time, to fit the needs of its believers and supporters.

Type:

Honors

- **SF-H182 Heroes, Antiheroes and Outsiders: Reading the Graphic Novel**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

How is it that comics", a genre often viewed as entertainment for children and adolescents, has become one of the most exciting forms of narrative and visual art? To answer this question, this seminar will examine a range of graphic novels, from those that celebrate their origins in superhero comics, such as Alan Moore's *Watchmen*, to those that treat subjects not usually considered proper to the comics genre, such as Art Spiegelman's *Maus*, about the Holocaust, and Alison Bechdel's *Fun Home*, about the complexities of sexual identity. As we read these works, we will look at how the combination of words and still images makes the graphic novel a unique storytelling form, as well as how artists and writers push the envelope to create new styles and challenge our expectations. In addition to class discussions and writing assignments, we will take a field trip to the Museum of Fine Arts and create a collaborative group graphic novel step-by-step over the course of the semester (all abilities welcome).

Type:

Honors

- **SF-H197 Sustainability, Energy, and Technology At Suffolk University**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

In this project and team-based course, students study a sustainability problem at Suffolk University and spend the semester developing proposals to address the problem. At the end of the course students will present their proposals to Suffolk University's sustainability committee, and will exhibit their websites and visual aids in the Donahue lobby to educate the Suffolk community about sustainability. If their proposals are well-researched and well-communicated, students can see their ideas actualized while they are still undergraduates.

- **SF-H1134 The Meaning of Life**

Prerequisites:

CAS honors students only.

Credits:

4.00

Description:

What do we live for? Which beliefs, values, and experiences sustain meaningful, fulfilling existence? Are we authors of our destinies or powerless pawns in an unfathomable cosmic game? Does death render all our efforts superfluous? This award-winning course offers a cross-cultural, interdisciplinary exploration of these questions through philosophical and religious texts, art, fiction, autobiography, and psychological studies. The course opens with the Old Testament's book of Ecclesiastes, followed by three units: 1) A Life Worth Living: Humanity's Ideals focuses on the ancient and modern visions of human flourishing; 2) Threats to Meaning: Humanity's Discontents, discusses the disillusionments leading to the loss of meaning; and 3) Recovery of Meaning: Crises and Hopes, explores the post-crisis possibilities of self-discovery and growth. Please visit <http://meaningoflife.cherkasova.org/>

Type:

Honors

- **SF-H1135 Women Warriors: Stories of Captivity, Conversion, and Confession**

Credits:

4.00

Description:

Since the beginning of time, women have been doing battle to themselves, while men have gone to battle against others. Whether it is through converting to Christ, yielding to captors in order to survive, or carrying a baby, this course introduces students to the many ways in which, whatever battles they face, women are warriors; they survive. Utilizing an array of captivity, conversion, and confession narratives by women, and pairing them across the centuries, students will make connections and draw conclusions between early-and mid-19th-century-American and contemporary women. Students will connect, for example, the trials of the 17th-century Puritan captive, Mary Rowlandson, and contemporary hostage, Elizabeth Smart, to explore how women (no matter how different they seem) draw upon unique inner resources to survive.

Type:

Honors

- **SF-H1146 Fido the Friendly Wolf: A Natural History of Dogs**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

This course explores the evolution of dogs from wolves and the ways in which dogs have adapted to their niche in human society. The ecology, behavior, genetics, and adaptations of dogs will be explored in relation to both their wolf ancestry and artificial selection by humans. The course includes 2 mandatory field trips to a wolf sanctuary and an animal shelter.

Type:

Honors

- **SF-H1148 Brave New Worlds**

Prerequisites:

Restricted to CAS Honors students

Credits:

4.00

Description:

Explores themes of adventure, self-discovery, exile, and culture shock in classic and contemporary travel writing (including fiction, poetry, and non-fiction) as well as film. Students will experiment with creative writing of their own, develop theories of cosmopolitan world citizenship, travel through the city of Boston on field trips, and team up to learn about different countries in Suffolk's global network of study abroad programs.

Type:

Honors

- **SF-H1152 The Idea of America: Past, Present, Future**

Credits:

4.00

Description:

A systematic exploration of thinking of and about America, from the founding of the republic to American issues and traditions of thought that reflect upon the founding principles and the unfolding American experiment. The Declaration of Independence and the Constitution will be studied with an eye to their philosophical content and sources. The course will also examine works of philosophers and other thinkers who address conflicts over the meaning of founding principles in the course of the nation's history, from the struggle over slavery to America's contemporary role in the world. Because this course intends to apply theoretical understanding to real life, students will be expected to read contemporary journalism on a regular basis and assess the controversies of today in the light of the nation's philosophical and historical currents.

Type:

Honors

- **SF-H1161 The Playwright and the Stage**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

This writing and script analysis intensive course will explore plays across a range periods and styles. The scripts of five plays will be studied and we will attend performances of two of those works at professional theatres in Boston. Other activities will range from a backstage tour to conversations with theatre professionals such as producers, directors, actors, designers, playwrights and critics, in order to lift the script off the page and provide a living experience of theatre. Requires students to be available for evening (usually Wednesday) performances. A fee for tickets at student rates will be assessed.

Honors

Free Electives: credit varies

Minimum Total Credits Required for Degree Conferral: 64 credits

2017-2018 Archived Catalog Information

Associate of Arts Degree

Please note that these requirements are for students matriculating in or after fall, 2017. Students matriculating prior to fall, 2017 must reference the [Pre-Fall 2017 Degree Requirements \(Archives\)](#).

The AA degree program requires the successful completion of the following courses:

Core Requirements: 13-15 courses, 47-56 credits

- [First-Year Experience](#)
- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Studies in Literature](#)
- [Ethical & Philosophical Inquiry](#)
- [Human Behavior and Societies](#)
- [Social & Intellectual History/Visual & Performing Arts Theory & History](#)
- [Modern Language](#)

First-Year Writing: 2 courses, 8 credits

- WRI-101 First Year Writing I

Credits:

4.00

Description:

Study and practice of the writing process and revision in terms of expository writing modes for an academic audience.

- **WRI-102 First Year Writing II**

Prerequisites:

WRI-101 or ENG-099 with at least a B and ENG-P099 with a P or WRI-H103

Credits:

4.00

Description:

Study and practice of argumentative and research writing through further work with writing process and revision and the critical reading of a variety of texts.

A student may be assigned to other writing courses or may be invited to take WRI-H103. Students required to complete ENG-099 may be allowed to waive WRI-101 with a grade of “B” or better and the approval of the English department. Students who are invited to complete WRI-H103 and earn a “B” or better satisfy the two Writing Requirements. Waiving a course does not earn credits.

- **WRI-H103 Advanced First Year Writing**

Prerequisites:

By Invitation Only.

Credits:

4.00

Description:

This course is by invitation only and reserved for incoming Suffolk students with high admission scores. Advanced study and practice of writing process, revision, and research, based on close readings of a variety of texts. Fall semester only.

Creativity & Innovation: 1 course, 3 credits

Choose one Creativity & Innovation course from those listed below:

- **ADF-S171 CI: Integrated Studio 1**

Prerequisites:

Non-majors interesting in taking art and design courses for elective credit should refer to offerings under the ART course listings.

Credits:

3.00

Description:

This cross-disciplinary course will integrate the ideas and practices of two-dimensional design, color and drawing emphasis will be placed on understanding the creative process, exploring concepts and developing research skills. Students will undertake individual and collaborative projects in three spaces; the studio classroom, the digital world and the city at large.

Type:

Creativity and Innovation, Arts Admin Minor Elective

- **ADF-S172 CI: Integrated Studio II**

Prerequisites:

ADF S101; Non-majors interesting in taking art and design courses for elective credit should refer to offerings under the ART course listings.

Credits:

3.00

Description:

This course builds on the Integrated Studio 1 experience: synthesizing fundamental visual ideas. IS 2 investigates the construction, documentation, and transformation of volumetric form, environmental space, and time. Projects will explore narrative strategies and the creation of immersive experiences. Students will develop critical and analytical skills while employing a range of traditional and digital media-including video/sound capture and editing-as they explore the creative boundaries of the classroom studio, the city of Boston, and virtual space.

Type:

Creativity and Innovation

- **CI-000 CI Place Holder**

Credits:

0.00

Description:

Place holder for rooming purposes.

- **CI-101 Process and Epiphany**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Despite its mystical connotations, creative epiphany is the result of a long engagement with the creative process that results in a surprising and unpredictable understanding of a concept or the solution to a problem. In the way that the discoveries of science are guided by the scientific method, the path to creative innovation is through a directed creative process. All creative innovators follow such a directed creative process, whether they are industrial designers or fine artists, performers or inventors, architects or entrepreneurs. This course explores both historical examples of individuals whose creative innovation changed the world, as well as hands-on collaborative, practical problem solving employing the creative process.

Type:

Creativity and Innovation

- **CI-H101 Honors- Process and Epiphany**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

• CI-102 The End of Global Poverty

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course is designed to demystify the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking. More than one-third of our global population lives in poverty, earning less than two dollars a day. Governments, businesses, social enterprises, and charitable organizations have tried to solve the global poverty issue with mixed results. What is the solution? Is entrepreneurship the solution, part of the solution, or has no impact whatsoever? In this course, you will gain an understanding of the power of entrepreneurship (in the context of creativity and innovation), the definition and depth of global poverty (in the context of constraints, such as human, financial and physical resources embedded in local, regional, national and global cultures), and successes and failures of past initiatives to reduce poverty. This is not a course about politics or business, but rather finding a solution to a problem that has eluded mankind since the beginning of time.

Type:

Creativity and Innovation

- **CI-H102 The End of Global Poverty**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office. Honors students only

- **CI-103 Making Inventions: Sticking Your Neck Out**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course examines cutting edge technologies, the science behind them, and their practical application and follow-up success or failure. It also provides the students a chance to consider the relevance of identified needed inventions from the 1950s, and whether those projections were correct. The history behind some remarkable inventions will be presented. Finally, working in small teams, students will brainstorm to identify something useful to invent and determine several approaches to implementing it.

Type:

Creativity and Innovation

• CI-104 Historic Mentors: Biographies of the Creative and Innovative

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course introduces students to creative and innovative practices as a disciplined approach to problem-solving. Students are presented with diverse individuals and environments, thoughts and actions, challenges and opportunities, approaches and alternatives, successes and failures, and ethical behavior--all within the context of historical biographies of inventors, entrepreneurs, artists, musicians, writers, politicians, leaders- nationally and globally. Mentoring is becoming a lost art form. However, it is crucial for passing down the best of our civilization. This course offers a vicarious mentoring that enables students to critically learn from and assess the experience of others in a vast array of contexts. Thus, students are presented with a cross-section of role models for creative, innovative and ethical success.

Type:

Creativity and Innovation

• CI-106 Failing Successfully

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course is designed to demystify the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking. Did you know Netscape was the internet browser? What about MySpace, arguably the Facebook of the last decade? What led Apple from being innovative pioneers of the 70's to the verge of extinction in the 80's to the technological giant they are today? Technologies come and go, but what leads to organizations lasting more than 100 years such as IBM, General Electric, etc.? What role does failure play in successful innovation, decision-making, and business viability? In this course, you will learn about innovation that may have been successful and well-executed. You will also learn about innovation that was a viable business opportunity, but poorly executed: one phase of failure. In addition, you will learn about innovation that had no real market viability, but was launched anyway: another phase of failure. Can failure lead to success? If so, how?

Type:

Creativity and Innovation

• CI-H106 Failing Successfully

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Creativity and Innovation, Honors

- **CI-107 Going Up: Skyscraper Design in Emerging Economies**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The human population is expected to be between 8.5 and 9 billion persons by the mid-21st century. The majority of those individuals will be living in urban communities. With large populations, high real estate costs, and limited land areas, the only way to construct in urban environments is to go up! In this course, students will have an opportunity to look at traditional and novel skyscraper designs, to consider the cultural and economic significance of such structures, and to use their imagination to develop a conceptual design of a skyscraper.

Type:

Creativity and Innovation

- **CI-108 Designing the Next Best Thing**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Demystifies the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking.

Term:

Offered Both Fall and Spring

Type:

- **CI-109 Virtual Globe Trekking: an Alternate View of the World**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will examine creativity and innovation through the lens of place. Modern geography is an all-encompassing discipline that seeks to understand the earth and all of its human and natural complexities - not merely where objects are, but how they have changed and come to be. The world is filled with ideas and perspectives. By changing your location, new perspectives emerge. This course will focus on the creative process to understand that each person creates in their own way. The students will test many methods to draw forth creative thought and seek to identify their own best method for calling on their own inner genius. Often this will involve failure and mixed results, yet this is where the students will learn their strengths and weaknesses.

Type:

Creativity and Innovation

- **CI-110 The Entrepreneur's Cocktail**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

How do you and your story drive business? This course takes an innovative look at human creativity and entrepreneurship. As an entrepreneur needs perseverance and high motivation, we will explore the importance of values, risk taking, problem solving, and the discovery of the market opportunities. In order for you to be creative and essentially create successful ventures, you will discover the nuances between the three factors and explore them further through interactive discussion and debate as well as collaborative group work. You will be encouraged to think in non-conforming ways and apply new concepts and develop your own personal operating principles.

Type:

Creativity and Innovation

• CI-111 The Future of Boston

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course introduces students to creative and innovative thinking based in the field of communication. Students will work in teams to wrestle with the challenges Boston will face in the future and propose feasible strategies to meet them.

Type:

Creativity and Innovation

• CI-112 Creating Problems: a New Solution for Sustainability

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

As the majority of the world population now lives in cities, for the first time in human history, issues of urban sustainability have become more complex and more important than ever before. Presented with case studies of urban efforts to gain a sustainability foothold, students will utilize ideation, critical thinking, and strategic decision making to both identify root problems and to present solutions. This course will lean heavily on ideation processes, teamwork, and logical methods of analysis to pursue actionable solutions for significant problems. The methods of problem identification and solution analysis learned in this class will be readily adaptable to many complex problems, helping the students to make informed and decisive determinations in their careers.

Type:

Creativity and Innovation

• CI-113 Revising Reality

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Reality and perception have been debated and discussed for millennia. Humans see and experience their world in different ways. How do humans determine what is true and good and what advancements are necessary? In this course, students will creatively explore these big questions and revisit knowledge using new and sometimes divergent perspectives. Students will participate in dirty and courageous learning by crafting products,

creating visual projects, and coming into original thought via trial and error. Students will also develop their analytical and critical thinking skills, while learning to communicate effectively and honestly.

Type:

Creativity and Innovation

- **CI-114 Creating the Dream Team**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Every successful venture today is based on effective teamwork. Unlike a typical lecture format, Creating the Dream Team is a course that utilizes experiential group learning to provide students with pivotal team-building skills. These essential skills are vital for everyone's future success in the business world. As team players, students are challenged to think creatively. A collaborative problem-solving process is used to analyze real life business situations. Teamwork involves research, data collection and information analysis to develop creative solutions to typical business problems. Teams will utilize multi-media tools to present their innovative ideas. Classmates will provide peer feedback and review. Through iterations, all students will assume roles as project leaders, keynote speakers and collaborators on a series of Team Challenges. Upon successful completion of this course, all students will have formed working dream teams. As reinforcement and final evaluation, Dream Teams are required to create a multi-media Capstone Event as a course performance measure. This capstone presentation will showcase all of their newly acquired dream team-player skills.

Type:

Creativity and Innovation

- **CI-115 Poetry Out Loud**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Students will develop a deep understanding of two seminal books of 20th century poetry and other key 20th century poems as they plan and execute small-group, end of semester reading performances. Students will write creative response poems to increase their understanding of the texts, and through cooperative decision making strategize effective ways to present their own poems and poems by Bishop or Frost. The class format will foster direct spoken engagement with matters of sound, rhythm, tone, and meaning. Final reading aloud performances will be recorded and added to the Suffolk University Poetry Center Archive.

Type:

Creativity and Innovation

• CI-117 Writing for Stage and Screen

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will engage students in the process of script writing. Working in groups of four or five they will craft adaptations of stories, create original scenes, or review sketches. By the end of the semester they will produce a complete script. Each alternating week, one group will serve as the executive committee that will approve the final draft of the script of the week. There will be exams based on the textual study of collaborative and adaptation techniques.

Type:

Creativity and Innovation

• CI-119 Theatre at Work

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Theatre at Work is an introduction to creative practice using live performance as a problem solving tool in an educational environment. Specifically, students will create a performance piece in response to an issue they have uncovered in collaboration with select groups of students in a host Boston Public School. There will be a special focus on normalizing risk-taking and the learning that comes from false starts and failed ideas. Students will be responsible for creating every aspect of their performance testing its feasibility on a limited budget, ensuring that the content meets established criteria, and successfully implementing and evaluating their success both with their peers and their audience.

Type:

Creativity and Innovation, Local Engagement Experience

• CI-H119 Theatre at Work

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office. Honors students only.

Credits:

3.00

Type:

- **CI-121 Catastrophe Management: From 9/11 to the Boston Marathon Bombings**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will introduce students to the exciting world of emergency management from the perspective of scientists who are often utilized as experts during both small scale adverse events and large scale catastrophes. Students will actively and creatively explore the psychological, economic, and medical dimensions of these events and participate in role play in the classroom and site visits. By the end of the course, students will have a keen appreciation of emergency planning and management on the local and national levels.

Type:

Creativity and Innovation

- **CI-123 Comics & Co.**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Using visual narrative as the means of exploration, students will be led through a series of exercises that challenge their assumptions, broaden their perspectives, and excite their imagination. The relationship between critical, creative and inventive thinking will be the basis for individual and collaborative projects.

Type:

Creativity and Innovation

- **CI-125 Boston's Creative History in Perspective**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Our collective social consciousness is formed by physical space; through a mixture of exploration, discovery, and making, students will delve into the city that surrounds them, developing a sense of ownership and engagement in Boston's public space. During the course of the semester, students will uncover the ways that art and architecture have shaped the souls of cities around the world, using Boston as a template. In a series of local field trips, students will explore Boston through its art and architecture, focusing not only what is, but on what might have been -- designs that were ultimately unrealized. Through interview and visits with local artists and designers, students will also learn about the process of shaping public space, uncovering the myriad of ways that design decisions are political in nature. As a capstone to the course, students will create their own city plan -- identifying and researching a chosen social or physical challenge the city faces, then developing a proposal that would address their chosen issue. These design proposals will then be enacted using augmented reality. Like a layer of invisible ink, these projects will form a phantom city over the physical realities that surround us, displaying the dramatic potential of the imagination.

Type:

Creativity and Innovation

- **CI-127 Visual Perspectives: Coastline, Symmetries and Illusions**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

How do you measure the length of a coastline? How much symmetry is possible? What is an impossible object? How did the Mayans measure proportions? In this course, students will delve into these and other questions with a visual theme. While some will be clear-cut, others will be open-ended and require some choices, estimates or assumptions to be made. Throughout, the emphasis will be on creative problem solving.

Type:

Creativity and Innovation

• CI-129 Elements of Attraction- Supply and Demand

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The intent of this course is for students to examine and effectively express in writing their ideas on creativity and to inspire undergraduate students to exceed their current levels of learning. Students will learn to meaningfully integrate course content into long term-retained useful skills through applied creative collaborations. This course is based on the idea that exposure and insight development will enable students to better visualize themselves in their desired fields and make informed choices within the variety of options available to them. The focus of the course will help students to assess their personal interests and strengths as they plan for their own educational and professional futures.

Type:

Creativity and Innovation

• CI-131 Off to the Future: Leadership Through Compromise

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Some past political issues were resolved with great success (the Compromise of 1820), and some resulted in great failures (the US Civil War). In this course, students will study noteworthy political dilemmas of the past, identify the major problem solvers and examine the art of compromise. These investigations will provide guidance and inspiration for students to develop innovative and creative solutions to present day political problems such as climate change, immigration, Social Security, income distribution, higher education affordability, and homelessness. Students will work in teams and propose creative and innovative solutions that will convince the affected interest groups favorably, represented by teams of other students in the class, and result in compromises solving tomorrow's problems today.

Type:

Creativity and Innovation

- **CI-H133 Franklin and the American Experiment**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office. Honors students only.

Credits:

3.00

Description:

What made Benjamin Franklin such a creative force in American history? We will explore the many facets of Franklin's life (printer, writer, scientist, statesman) and learn about Benjamin Franklin's political and diplomatic ventures, and will recreate some of his scientific experiments.

Type:

Creativity and Innovation, Honors

- **CI-135 The Design of Everything**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will explore a selection of the genius personalities and their creative work in 5 distinct areas of human creative endeavor; art, science, nature, technology and the built environment. The course explores the underlying similarities in the process of their discovery, invention and creativity across the disciplines. Studying such names as Newton, Warhol, Hawking, Jobs, Gaudi and Banksy, students will uncover the process of design through research, analysis, synthesis, iteration and error. In class group projects will allow a hands-on opportunity to create.

Type:

Creativity and Innovation

• CI-137 Re-write for Rights: Drafting a New US Constitution

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The American Constitution is an important document, framing the basis for our lives and the lives of our neighbors. Yet it is also a very old document, which may be seen as lacking when it is compared to newer constitutions from around the world, even places that we may regard as undeveloped. In this class we will study many constitutions and also talk to many people to craft a new constitution that reflects contemporary American society and its values.

Type:

Creativity and Innovation

• CI-H139 Creating, Promoting, and Participating in the Literary Arts

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office. CAS and SBS honors students or GPA of 3.5 or above only.

Credits:

3.00

Description:

With the launch of Boston's new Literary Cultural District, we have renewed cause to celebrate the history and industry of literature in our city. This course will immerse students in the world of literary culture and its many branches: writing, editing, reviewing, and publicity. Students will practice the art of creative writing, and learn how writers find publishing venues, how authors build platforms for their work, and how literature reaches the public through readings, social media, book trailers and other marketing campaigns, authors interviews, and reader reviews. Various industry professionals, authors, editors and publicists will speak to the class about the artistic and business opportunities, trends, and futures of literature and literary publishing. Students will apply their knowledge and interests to a variety of projects, including book reviews, author interviews, social media campaigns, literary events, and other collaborative projects. We will also work as a class to launch a new digital literary journal at Suffolk.

Type:

Creativity and Innovation, Honors

• CI-141 Science = Creativity

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course is focusing on the creative process by introducing students to creative practice as a disciplined approach to problem solving and innovation requiring research, persistence and grit. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in

original ways, embrace ambiguity and support divergent thinking and risk taking. The course will have an undertone based on science, but it is suitable for non-science majors too!

Type:

Creativity and Innovation

- **CI-143 Dreams, Demons, and Dynamic Artists Creative Nature**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

What motivates your creative nature? This course will explore converging themes in Art and Psychology in order to give students the tools they need to unblock their creative potential. Collaborative small team activities, assigned readings, large group discussions, and personal reflection exercises will provide an avenue for students to explore their own creative patterns and how they are influenced by, and perceived within, the world around them. Dreams, mental illness and psychosocial theories of self will also be widely discussed in order to give students context for this inter/intrapersonal exploration.

Type:

Creativity and Innovation

- **CI-145 Living and Laughing**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This is a course about laughing and living. While it sounds fun, it can also be complex, confusing, complicated, and convoluted. Laughter and humor are also very personal. The things that make you laugh are rooted in family, culture, and personality. We are going to spend the semester getting to know ourselves and each other in an attempt to understand more about why we enjoy what we enjoy.

Type:

Creativity and Innovation

• CI-147 Seeing Double, Printmaking, the Art of Discovery, Experimentation and Process

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Always wanted to explore a creative side but never had the opportunity to take an art class? Here's your chance! Sync the power of icons/ images with ideas and making. We will use cellphone and printmaking technologies in a workshop style environment. Rather than a lecture based class, this class we will play, learn and build new Neurological pathways towards creative thinking. Come to every class excited to learn, make and discover. This course will give you the building blocks for innovative thinking beyond the classroom. Power is in the image. As in the way a dream can grip you, images carry incredible amount of influence and creative potential, when they are seen. Glimpses of these images circulate in media, movies, cell phones, and so on. Learn to develop your own images and understand the broad world of images of human culture.

Type:

Creativity and Innovation

• CI-149 SL-Creative Writing and Literacy

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

In this course, students meet community needs by engaging in service-learning outside the classroom. This course will explore the value of creativity and play in developing reading and writing skills and the habits of lifelong learning, both in our own lives and in the lives of young people in Boston. In this course, we will work closely with the non-profit literacy organization 826 Boston, which works with students ages 6-18 on reading and writing skills through playful, creative workshops, as well as tutoring and other kinds of support. Students will learn about the work of 826 Boston by volunteering with the organization, and by the end of the semester you will conceive, plan, and run creative writing workshops of your own at 826 Boston.

Type:

Creativity and Innovation,Service Learning

• CI-H149 SL-Creative Writing and Literacy

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office. Honors students only.

Creativity and Innovation,Honors,Service Learning

• CI-151 Finding Your Creative Voice

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Schools and workplaces are becoming increasingly demanding and competitive, relying on unique ideas to continue innovation. Where do fresh ideas come from? This class will provide students with the tools they need to find creativity within themselves, and set them apart in the competitive arena. Students will explore who they really are at their core, identify their innermost thoughts and feelings, and uncover their creative identity while having fun! They will also learn to communicate, or share their creative voice clearly and honestly.

Type:

Creativity and Innovation

• CI-153 Branding and Visual Identity

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

A brand may be a product, service, an organization, or a person, and at the core of every brand is a visual identity. A brand's visual identity is its strategically planned and purposeful presentation of itself. It is manifest in the brand's name, logo, tagline (slogan), color palette and other sensory elements (visual, aural, olfactory and tactile) that identify that brand and make it unique. This course will focus on analyzing the success and failure of brand's visual identities as a way of teaching students how to brainstorm and develop a new visual identity from concept through execution. The focus in this course will be on applying creative thinking to create a cohesive and meaningful visual identity.

Type:

Creativity and Innovation

- **CI-155 Improvising for Everyone, Everywhere**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Improv Comedy has become the cornerstone training of movies and television for the past 20 years. More recently, Corporate America has begun to recognize the importance of the skills improv teaches - agreement, listening, moving forward as a group and out-of-the-box thinking. This course immerses students in improv theatre exercises to apply not for performance, but to shed light on how to collaborate with others. Students will be required to actively participate in exercises in class, experiencing the benefits and takeaways first-hand. Students will be able to connect these exercises with the theories of creativity presented in text books and use both to create a final presentation piece. By the end of the semester, students will understand how to recognize and foster creative thinking to solve problems leveraging the power of a group. Students will gain confidence with presenting new ideas and responding to other student's ideas, understanding how to create and maintain relationships as part of an ensemble that encourages and values ideas.

Type:

Creativity and Innovation

- **CI-157 Mindful Journal**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

To keep a journal is to make an investment, often long before we understand the value. A journal is a personal database of snapshots in time, good ideas and bad, observational doodles and unfiltered emotions. On any given page a journal may appear inconsequential but within the rigor of filling a whole notebook (and another, and another) an individual viewpoint emerges. This class will facilitate a student's ability to draw from his or her own lived experience and discover unique springboards into universal issues by making mindful connections. An entire lifetime of images, stories and details resides within each of our minds but the ability to explore that richness requires dedication to documentation. Mindful Journal is a process class fostering focus through mindfulness practices, content generation and meaning making.

Type:

Creativity and Innovation

• CI-159 Building a Better T

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

If any set of problems could use creative and innovative thinking, it's the myriad of problems facing the T. The Boston Globe is filled with stories about financial and organizational problems in the system, and you only have to spend a few minutes on the green line to feel the effects of those issues. Still, millions depend on it every day - it is the circulatory system of our city, and it is more than a way to get around: the T increases accessibility and functions as a democratizing force. That is, when it's running. In this class we will study the MBTA and other mass transit systems in order to propose creative solutions to the T's most pressing problems. We will read articles about the T and other transit systems, we will look at interactive maps that express different kinds of data, and we will visit local stations. In addition, we will study the process of creative thinking, in order to apply those skills to the issues at hand. You will be asked to create both stand-alone short writing assignments and visual representations of your ideas, accompanied by short, written explanations, both alone and in group projects.

Type:

Creativity and Innovation

• CI-161 Making History: Public Memory in the Digital Age

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

You live in Boston now. At least for a while. Perhaps you've noticed that it has its own ways of remembering things. Consider The Boston Literary District, The Freedom Trail, and all the many events and festivals devoted to history, culture, and identity. From guided tours and colonial cosplay to images and written texts to monuments, memorials, and museums, this city tells stories about itself today in the ways it tells stories about its past. In this class, you're going to tell more stories about Boston. You're going to help it find other things to remember, and other ways of remembering them. You'll likely need to focus on parts of the real events that Boston doesn't prefer to include in its stories, emphasizing issues of race, socioeconomic class, nationality, colonialism, gender, sexuality, and other stories of unequal power and how that manifests in real people's lives and in the culture of this city.

Type:

Creativity and Innovation

• CI-H161 Making History: Public Memory in the Digital Age

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office. Honors students only.

Creativity and Innovation, Honors

- **CI-163 A Course on Skepticism and Rationality**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Magician James The Amazing Randi reminds us that No matter how smart or how well educated you are, you can be deceived. In an age fraught with deception and misinformation, students need tactics and strategies in order to separate truth from falsity. This course encourages its participants to act as skeptics - not cynics, necessarily - by requiring evidence and proof before believing or accepting claims. Students are urged to identify the most-likely-to occur opportunities for deception in their major fields and draw from the tenets of classical rhetoric, logic, and the scientific method in order to develop safeguards. Frequent collaboration with classmates will allow for dynamic solutions to small and large-scale contemporary problems ranging from the personal (e.g. used car prices and avoiding fraud) to the universal(e.g. fake news and God).

Type:

Creativity and Innovation

- **CI-165 Becoming a Zig-Zag Master**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

We will be discovering the process of becoming more creative. The emphasis is on understanding the creative process and applying effective team-working strategies towards a shared goal. Each team will choose a project and develop it during the semester with the goal of improving a product, raising awareness about an issue in a creative way, designing a board game, designing a card game, etc. Inspiration will be drawn from the numerous successful innovators in the Boston area.

Type:

Creativity and Innovation

- **CI-167 Public Health: A Need to Think Outside The Box**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course seeks to make you an innovative public health thinker by examining past campaigns and making the necessary frameshifts to help promote, protect and preserve health of the Suffolk community through the innovative thinking process. Public health activists and designers can have a positive impact on the lives of citizens living in small communities. However, the agreed rules and regulations that make up this policy landscape are created by paradigms which can be constricting. The issues the course addresses will include Suffolk's current plans for reducing carbon emission, behavioral determinants such as alcohol consumption among college students, and improving eating habits on campus. The final project will be peer reviewed and presented to the class. Programs may then be forwarded to university departments for possible integration and implementation.

Type:

Creativity and Innovation

- **CI-204 Prague: Castles to Barbwire**

Prerequisites:

At least 24 credits earned.

Credits:

3.00

Description:

Prague offers students a more recent view into history and will serve as a backdrop to learning Design Thinking. The curriculum will use Czech and Central European cultural features as the inspiration for learning the creative process, skills that can be applied broadly and globally across disciplines. WWII and its fall to Communism left the Czech Republic undamaged. Artists played a vital part in the country's rise to a Republic during the Velvet Revolution. These dissidents, including writers, actors, artists and musicians were innovators who were the catalyst for change. One could say that creative minds changed this country. This course is designed to demystify the creative process by introducing the creative practice as a disciplined approach to problem solving and innovation requiring research. This one-month study abroad experience will offer a more worldly insight to the significance of developing skills where divergent thinking and risk taking are one of many key tools in learning to generate new ideas. Travel fee covers accommodations, transfers, some meals and cultural visits. Airfare and tuition not included.

Type:

Creativity and Innovation, Global Engagement Experience

Note: Students with 30+ transfer credits are exempt from this requirement.

Free Electives: credit varies

Minimum Total Credits Required for Degree Conferral: 64 credits

2017-2018 Archived Catalog Information

Associate of Arts Degree

Please note that these requirements are for students matriculating in or after fall, 2017. Students matriculating prior to fall, 2017 must reference the [Pre-Fall 2017 Degree Requirements \(Archives\)](#).

The AA degree program requires the successful completion of the following courses:

Core Requirements: 13-15 courses, 47-56 credits

- [First-Year Experience](#)
- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Studies in Literature](#)
- [Ethical & Philosophical Inquiry](#)
- [Human Behavior and Societies](#)
- [Social & Intellectual History/Visual & Performing Arts Theory & History](#)
- [Modern Language](#)

Math: 1 course, 4 credits

Choose one Math course from those listed below:

- **MATH-128 Math for the Modern World**

Prerequisites:

MATH level 2, or Mathshop, or MATH-104

Credits:

4.00

Description:

From the ISBN on a book, to buying a car, from the size of small chips in a cell phone, to the size of the national debt, or just reading a graph in the daily newspaper, mathematics plays an important and vital role in countless areas of life and your future career and courses included. Mathematics is both an art and a tool created by humans. The common bond is a way of thinking and a way of reasoning to describe and solve problems of many types. This course uses the context of modern real life problems to introduce math needed for literacy and problem solving in contemporary life and work. It uses a minimal amount of algebra and focuses on math models, concepts and basic math manipulations. It encourages students to move from anxiety about math, to using formulas well, to thinking critically in the math context to use math to solve problems and pose new problems. Topics include scientific notation, basic financial math, linear, exponential and polynomial models and an introduction to probability. (Formerly Math 132)

- **MATH-130 Topics in Finite Mathematics**

Prerequisites:

MATH-104, or MATH-121, or MATH level 3

Credits:

4.00

Description:

Linear Modeling (for example, using linear functions to model supply/demand situations), graphing, linear programming, financial functions (compound interest, annuities, and amortization of loans) sets, Venn diagrams, counting and combinatorics, discrete probability, conditional probability, Bernoulli experiments, Bayes theorem. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

- **MATH-132 Math-Art, Tool and Human Side**

Prerequisites:

MATH-000 or appropriate Math Placement Exam score. Course does not fulfill math requirement for SBS majors.

Credits:

4.00

Description:

Mathematics is both an art and a tool. It has been used in many ways in contemporary and ancient society. The common bond is a way of thinking and a way of using reason to solve problems and describe things of all sorts. The course is designed to cultivate an appreciation of the significance of mathematics in daily life and develop students' mathematical reasoning. Topics will vary from section to section. Examples of topics that might be included are: the real meaning of a newspaper graph, methods to tally votes, fair division, routes and networks, consumer mathematics, the 'real' cost of a house, shapes and patterns, fractals, soap film surfaces, prime numbers and encryption, new discoveries in mathematics.

- **MATH-134 Calculus for Management & Social Sciences**

Prerequisites:

MATH-104, MATH-121 or MATH level 4

Credits:

4.00

Description:

A one-semester introduction to differential and integral calculus. Theory is presented informally and topics and techniques are limited to polynomials, rational functions, logarithmic and exponential functions. Topics include a review of precalculus, linear regression, limits and continuity, derivatives, differentiation rules, implicit differentiation, related rates, applications of derivatives to graphing, minima/maxima, applications of the derivative, marginal analysis, differential equations of growth and decay, anti-derivatives, the definite integral, the Fundamental Theorem of Calculus, area measurements. This course cannot be used to satisfy core or complementary requirements by students majoring in chemistry, computer science, engineering, mathematics, or physics. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

- **MATH-164 Calculus 1 Bridge With Trigonometry**

Prerequisites:

Permission of Instructor

Credits:

4.00

Description:

This course provides an alternative to MATH 165 (Calculus I) for those students who have taken MATH 134 (Calculus for Management and Social Sciences) but who do not have the trigonometric precalculus prerequisite (such as MATH 121) for MATH 165. In other words, the sequence MATH 134 / MATH 164 serves as an alternative to the sequence MATH 121 / MATH 165, and similarly prepares students to take MATH 166 (Calculus II). The course includes a thorough review of trigonometry and other precalculus topics. Aspects of limits and differentiation which students have already seen in MATH 134 are presented briefly, but in most cases with more emphasis on conceptual understanding, and often illustrated using more complicated examples. New calculus topics (i.e. not covered in MATH 134) include one-sided limits, special trigonometric limits, differentiability, derivatives of trigonometric functions and their inverses, derivatives of general inverse functions, logarithmic and implicit differentiation, related rates, L'Hopital's rule, intermediate values theorem, Rolle's theorem, mean values theorem, Newton's method, and linearization. 4 lecture hours plus 1 recitation session each week. Normally offered in spring.

- **MATH-165 Calculus I**

Prerequisites:

MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

Credits:

4.00

Description:

Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-166 Calculus II**

Prerequisites:

MATH-164 or MATH-165 with a minimum grade of C

Credits:

4.00

Description:

Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation, convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

Social, Cultural, & Global Perspectives: 1 course, 3-4 credits

Choose one SCGP course from those listed below:

- **ADPR-217 Gay and Lesbian Studies**

Credits:

4.00

Description:

Examines the portrayal of homosexuality in political, social, and cultural discourse. Analyzes the role of media and symbolic construction in the shaping of public values, opinions, and social movements.

Term:

Alternates Fall & Spring

- **ADPR-219 Rhetoric of Protest and Reform**

Credits:

4.00

Description:

Examines the persuasive strategies of social reform movements with special emphasis on the civil rights', women's rights, and gay rights movements in the United States.

Term:

Alternates Fall & Spring

- **ARH-205 Gender, Class and Alterity in Ancient And Medieval Art**

Credits:

4.00

Description:

Explores issues of sexuality, gender, race, and social class in the ancient and medieval worlds. Examines key artworks from ancient Greece, the Roman Empire and medieval Europe within historical, social and cultural contexts.

- **ARH-321 Women, Art & Society**

Credits:

4.00

Description:

Surveys women artists from the sixteenth century to the present and examines new direction in art-historical scholarship developed by feminist art historians during recent decades.

Term:

Offered Spring Term

- **AS-100 Introduction to Asian Studies: Culture, People, Ideas**

Credits:

4.00

Description:

An interdisciplinary introduction to Asian Studies will touch upon the history, politics, economics, philosophy, geography, arts, and cultures of Asia. Sample topics include political economy, religious and cultural exchanges, international relations, Asian experience in America, and the role of Asia in the twenty-first century. Students will develop conceptual frameworks for exploring the subjects covered by the Asian Studies curriculum.

Term:

Offered Both Fall and Spring

Type:

Asian Studies, Social & Intellectual HST

- **AS-500 Asian Studies Internship**

Credits:

4.00

Description:

Engages in an internship in a business or non-profit organization that deals with Asia or an Asian American community. Students may complete the internship either in Asia or in the U.S. Students will complete appropriate exercises and reports to document their learning. (1 course, 4-12 credits; can be taken multiple times in different semesters)

Term:

Offered Both Fall and Spring

Type:

Global Engagement Experience

- **BLE-325 Global Business Ethics**

Prerequisites:

BLE-215, PHIL-119, PHIL-120, PHIL-123 or PHIL-127

Credits:

3.00

Description:

Surveys business ethics as they transcend the diverse perspectives of global business. Explores current global ethics standards and values, ethical challenges, controversies, convergence and trends. Students explore famous global business cases through films, websites and independent research. Analyzes corporate social responsibility ; hence, transforming global business ethics through business.

Type:

Global Engagement Experience

- **BLKST-250 Haiti, Guadalupe and Martinique**

Credits:

4.00

Description:

This course explores the rich intellectual tradition of Haiti, Guadeloupe, and Martinique by considering historical moments linked to colonialism, the abolition of slavery, the representation of gender, departmentalization, and decolonization through essays, films, poems, novels, and short stories by critics and writers from the 19th-21st centuries.

- **CI-204 Prague: Castles to Barbwire**

Prerequisites:

At least 24 credits earned.

Credits:

3.00

Description:

Prague offers students a more recent view into history and will serve as a backdrop to learning Design Thinking. The curriculum will use Czech and Central European cultural features as the inspiration for learning the creative process, skills that can be applied broadly and globally across disciplines. WWII and its fall to Communism left the Czech Republic undamaged. Artists played a vital part in the country's rise to a Republic during the Velvet Revolution. These dissidents, including writers, actors, artists and musicians were innovators who were the catalyst for change. One could say that creative minds changed this country. This course is designed to demystify the creative process by introducing the creative practice as a disciplined approach to problem solving and innovation requiring research. This one-month study abroad experience will offer a more worldly insight to the significance of developing skills where divergent thinking and risk taking are one of many key tools in learning to generate new ideas. Travel fee covers accommodations, transfers, some meals and cultural visits. Airfare and tuition not included.

Type:

Creativity and Innovation, Global Engagement Experience

- **CJN-216 Intercultural Communication**

Credits:

4.00

Description:

An examination of communication variations and cultural viewpoints and their impact on cross-cultural communication. A special emphasis is placed on rituals and message patterns in non-Western cultures.

Term:

Offered Both Fall and Spring

- **CJN-225 World Cinema**

Credits:

4.00

Description:

An introductory course in film studies with a focus on foreign films. Movies studied include masterpieces of cinema from Europe, Asia, the Middle East, and other nations (Films have subtitles).

Term:

Alternates Fall & Spring

- **CJN-281 Asian Popular Culture**

Credits:

4.00

Description:

Students critically analyze Asian popular culture since the 1980s using a cultural ethnographic approach. Students apply the lenses of gender, identity, globalization, and business strategies to examine pop phenomena such as Korean Wave, Cool Japan, and Cantonese popular music.

Term:

Occasional

- **CJN-293 Hong Kong Cinema**

Credits:

4.00

Description:

By examining the film texts of Hong Kong auteurs such as John Woo, Wong Kar-wai, Tsui Hark, Andrew Lau, and Alan Mak, the course examines issues such as film genres, colonization/decolonization, transnational political economy, the Greater Chinese media market, and the diaspora.

Term:

Occasional

- **CJN-301 Documentary Film and the Image of Conflict in the Middle East**

Credits:

4.00

Description:

The course focus is on some of the divisions and conflicts within Israeli society. Students analyze and compare mainstream media discourse to alternative representations in documentary film. Analysis also covers media representation of the Israeli-Palestinian conflict.

Term:

Occasional

- **CJN-385 Globalization of Media and Telecommunications**

Credits:

4.00

Description:

A critique of the circulation of media goods and ideologies from both a cultural and political/economic perspective. Topics include global Hollywood, the images of Muslim women in transnational media, the information society, and global social movements.

Term:

- **EC-141 Development Economics**

Credits:

4.00

Description:

Why do so many countries remain so poor? Why have some (e.g. the Asian tigers) grown so rapidly? Why have most of the countries of Eastern Europe and the Former Soviet Union been slow to ignite economic growth? These questions are addressed by looking at domestic factors (government policies, resource endowments) as well as the international environment (mobile investors, international financial institutions). Asks what economic choices these countries face now. Normally offered yearly. Cultural Diversity B

Type:

Asian Studies

- **EC-151 Economic & Human Geography**

Credits:

4.00

Description:

The study of how economic and human activity is distributed across space, the reasons for these spatial distributions, and the processes that change the spatial organization of economic activity over time. Topics include: maps, map projections, and geographic information systems; population geography; the organization and location of cities, towns and villages; transportation and communication policy; industrial location; the geography of world trade; and geographic features of economic development. The course takes a global perspective, and draws on cases and examples from all over the world. Cultural Diversity B

Type:

Asian Studies, Human Behavior & Societies

- **EDUC-310 Culturally Responsive Education**

Credits:

4.00

Description:

The relationship between cultural diversity and schooling is explored by examining impediments to academic achievement and advancement by minority students, non-native English speaking students, and other under-represented groups. Topics include: standardized testing, identification of inequities, legal and ethical responsibilities of teachers, and promoting equity. Ten pre-practicum observation hours required for teacher candidates.

Term:

Offered Fall Term

- **EDUC-315 Strategies for Emerging English Learners**

Credits:

4.00

Description:

This course examines the specific needs and challenges of the various language and cultural groups in schools. Topics include: theories of 1st and 2nd language acquisition, strategies for teaching academic content, modifying instruction in the mainstream classroom, creating classroom cultures that invite all students into learning, the role of advocacy and professional collaboration in ESL, and analysis of policies related to assessment and placement of English Language Learners.

- **ENG-123 Great Books of the World I Great Books of World Lit. I**

Credits:

4.00

Description:

Literary masterpieces from ancient times to the Renaissance, including: Homer's Odyssey, Sophocles' Oedipus, Virgil's Aeneid, selections from the Hebrew Bible and the Gospels, and Dante's Divine Comedy. List may vary at the discretion of the instructor.

Term:

Offered Fall Term

Type:

Classics Minor, Social & Intellectual HST

- **ENG-124 Great Books of the World II**

Credits:

4.00

Description:

This course will introduce students to a selection of Great Books from around the world from the 17th century to the 21st, such as Don Quixote (Spain), Madame Bovary (France), The Communist Manifesto (Germany), The Origin of Species (England), War and Peace (Russia), On Dreams (Austria), Night (Hungary), Things Fall Apart (Nigeria), Satyagraha (India), I Am Prepared to Die (South Africa), Saeed the Pessoptomist (Israel), The Rouge of the North (China), and The House of Spirits (Chile). Readings may vary at the discretion of the instructor.

Term:

Offered Spring Term

Type:

Social & Intellectual HST

- **ENG-135 World Literature in English**

Credits:

4.00

Description:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

Term:

Offered Both Fall and Spring

Type:

Studies in Literature

- **ENG-216 World Literature in English**

Prerequisites:

WRI-102 or WRI-103

Credits:

4.00

Description:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

Term:

Offered Both Fall and Spring

- **ENG-362 Asian American Literature**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

An introduction to selected Asian-American writers with an emphasis on socio-cultural issues, such as race, gender and ethnicity. Authors include Bulosan, Hwang, Jen, Kingston, Lee, Mukherjee, Odada, and Tan. Cultural Diversity A

Term:

Occasional

Type:

Asian Studies

- **FR-202 Intermediate French II**

Prerequisites:

Take FR-201 or Instructor's consent

Credits:

4.00

Description:

Continues to review grammar, practice speaking, and explore authentic cultural and literary texts in this writing-intensive course. Examines short readings, films, and print media.

Term:

Offered Spring Term

Type:

Modern Language

- **FR-205 The Francophone World**

Prerequisites:

FR 202 or Instructor's consent

Credits:

4.00

Description:

Explores the francophone world through the study of short stories, print media, and film, by engaging with the rich textured and diverse francophone literary canon. Teaches advance notions of French grammar, write compositions, and the art of conversation related to cultural themes.

Term:

Alternates Fall & Spring

- **FR-216 Masterpieces of French and Francophone Literature in English Translation**

Credits:

4.00

Description:

Masterpieces of French and Francophone Literature in English Translation. Studies works translated into English by major authors from the Middle Ages to the present. Explores drama, fiction, and poetry from many regions of the world: Africa, Western Europe, North America, the Caribbean, and Vietnam.

Term:

Alternates Fall & Spring

Type:

Studies in Literature

- **GVT-208 Politics / Religion**

Credits:

4.00

Description:

This course explores what major religions say about the status and responsibilities of the state and how, in turn, selective states have, in theory and practice, structured the place of religions in political life. Particular attention is given to issues of politics and religion in the United States. Cultural Diversity A

- **GVT-115 Evolution of the Global System**

Credits:

4.00

Description:

The goal of this course is to introduce the student to the main actors, social facts and processes that shaped the international system in the nineteenth and twentieth centuries. By analyzing the spread of industrialization, the race for colonies, the thrust of imperialism, and the rapid growth of nationalism, among other factors, this course explains the contradictory and simultaneous trends of unprecedented levels of prosperity and violence in Europe and beyond. While the course examines the role of the United States in the international system, particularly in light of its dominant role since the early twentieth century, it also emphasizes the developments taking place in other regions such as Asia, Africa and Latin America. This will allow students to understand the global arena as a space of complex interconnections involving varieties of forms of production, national political cultures and idiosyncratic traditions. This course sets the foundations for other courses in International Relations and Regional Studies

Type:

Human Behavior & Societies

- **GVT-281 Intro to Comparative Politics**

Prerequisites:

GVT 110, GVT 115, and GVT 120 or consent of instructor; Sophomore status or higher

Credits:

4.00

Description:

This course examines various methods of comparing political systems. Institutions such as executive departments, legislatures, court systems and local governmental systems are examined comparatively. It includes analysis of the impact of different economic systems on political/governmental institutions, and on economic circumstances that impact government. It also looks at political socialization both in terms of process and comparative content. An effort is made to include countries from all regions of the world. Normally offered every year.

- **GVT-359 Hockey, International Development & Politics**

Credits:

4.00

Description:

This class examines the way in which national identity, global and regional economics and international development intersect. It uses the professionalization of the sport of hockey and its subsequent spread around the globe as its case. It will look at the rise of the pro game, the way in which it shapes national identity in the Canadian case, the way in which the pro business model has changed in response to broad socio-economic changes in North America and geo-political shifts around the globe, especially in Eastern Europe and the Former Soviet Union.

• GVT-360 Elections and Voting

Credits:

4.00

Description:

How are elections administered in the United States? Do Americans have confidence in the electoral process? Should they? Why or why not? This course will examine elections in the United States in detail -- from how they are funded to how they are administered to how voters behave. Students will have a choice of either serving as poll workers during the November election or organizing and conducting research of potential voters. Students will gain hands-on experience in actual research design, election administration, and non-partisan get-out-the-vote activities. In addition, students will gain a deeper understanding of the relationship between attitudes, opinion, and voting behavior in American politics and institutions. ECR

• GVT-391 Canada: Multicultural Politics

Prerequisites:

GVT 110/120 or Instructor's permission

Credits:

4.00

Description:

This course examines the Canadian model of incorporating diverse communities into its constitutional and political framework, including the founding British North American Act of 1867, the 1982 Constitution Act, and two later attempts at constitutional reform. Canada's role in balancing two official languages, English and French, is discussed, as is its recognition of a First Nations native-governed territory in the Arctic. This course introduces students to the Canadian polity and compares its parliamentary system with the U.S. separation of powers system. Prerequisites: GVT 110, GVT 120 or instructor's consent. Normally offered alternate years. Cultural Diversity B

- **GVT-467 Comparative Social Movements**

Prerequisites:

Junior status

Credits:

4.00

Description:

How do we explain the appearance or absence of social movements? What social or individual factors explain their development and decline? Who joins social movements? Who does not? Why? What ideas or ideals animate those who do participate? What is it like to be part of a social movement? What effect do they or have they had on politics, power and efforts at social change? These are some of the questions that have traditionally shaped debates over social movements, both domestically and internationally. They will form the analytical core of the work in this course. By critically evaluating several competing schools of thought in social movement theory and history we will attempt to highlight the social forces that have, at varying points in times, facilitated, maintained, as well as blocked the development of social movements in the US and beyond.

- **HST-100 Introduction to Asian Studies: Culture, People, Ideas**

Credits:

4.00

Description:

An interdisciplinary introduction to Asian Studies will touch upon the history, politics, economics, philosophy, geography, arts, and cultures of Asia. Sample topics include political economy, religious and cultural exchanges, international relations, the Asian experience in America, and the role of Asia in the twenty-first century. Students will develop conceptual frameworks for exploring the subjects covered by the Asian Studies curriculum.

Term:

Offered Fall Term

- **HST-246 History of Modern Iran**

Credits:

4.00

Description:

Examines the contemporary history of Persia (Iran) from the time of its independence in the beginning of the sixteenth century to the present with special concentration on geographical/historical background; social structure, ethnic, religious, and linguistic diversities; Safavid and Qajar dynasties; Anglo-Russian interventions and occupations; constitutional revolution and reform; centralization, secularization and modernization under Pahlavi dynasty; opposition to westernization and Islamic revolution.

- **HST-247 History of Modern Middle East**

Credits:

4.00

Description:

Explores the broad historical forces, conflicts and major events that have shaped the contemporary nations of the modern Middle East. Topic include: the emergence of the modern Middle East from the empires of the sixteenth and seventeenth centuries; the age of colonialism; the rise of nationalism; socialism, capitalism; the impact of Israeli and Palestinian conflict on the region; oil, the Islamic Revolution in Iran and the rise of Islamic fundamentalist movements; U.S. policy; and Saddam Hussein's Iraq.

Term:

Offered Fall Term

- **HST-251 Modern East Asia**

Credits:

4.00

Description:

China, Japan, and Korea - East Asia's critical players - share many historical influences, but each has a distinct culture, and they competed with each other for much of the twentieth century, proud of their achievements but feeling threatened by their neighbors. Lectures interspersed with movies and documentaries to show how East Asia has developed in the past one-hundred-plus years.

Type:

- **HST-263 Comparative Race Relations**

Credits:

4.00

Description:

Compares and analyzes the history of race and politics in South Africa and the United States from the 17th century to the present. Examines how race as a social and ideological construct influenced and informed political conflicts over land, labor, and social relations in the two countries including slavery, segregation, apartheid, and the struggle to create racial democracies.

Term:

Offered Fall Term

- **HST-268 History of the Mediterranean**

Credits:

4.00

Description:

Explores the history of the Mediterranean from the ancient times to the 20th century, with emphasis on the extraordinary interaction between the rich cultural, ethnic and religious backgrounds of the peoples of Europe, Middle East, and North Africa.

Term:

Occasional

Type:

Social & Intellectual HST

- **HST-274 Women in 19TH-CENTURY Europe**

Credits:

4.00

Description:

Explores the condition of European women from 1800 to 1914. Readings focus primarily on women's experiences in France and Great Britain. Topics include: the effects of industrialization on the lives of working-class women; working and middle-class women's negotiation of marriage, work, and family life; the rise of feminism, women's greater participation in the public sphere, and conservative reaction to these changes in women's place in society; women and crime; Victorian ideas about female sexuality; the politics of class and gender in nineteenth-century European society.

Term:

Occasional

- **HST-275 Women in 20TH-CENTURY Europe**

Credits:

4.00

Description:

Examines the changing place of women in European society since 1900. Topics include: women's suffrage and the political advances of the 1920s and 1930s; the revolution in sexual mores, birth control, and the rise of companionate marriage; women and the consumer economy; the anti-woman policies of Fascist Italy and Germany under National Socialism; liberation of women and retrenchment in the Soviet Union; World War II; feminism, sexual liberation, and women's political engagement since the 1960s; and, throughout the twentieth century, women's continuing negotiation of work and family responsibilities.

Term:

Occasional

- **HST-321 History of Islam**

Credits:

4.00

Description:

Presents a coherent account of the origin and history of Islam since its foundation in Arabia in the seventh century A.D. to the present. Analyzes the terms, events, characteristics, developments, movements, and institutions that have been part of the shaping of Islam. Ideological challenges and impact of Islam in the world today from both spiritual and political perspectives are examined.

Term:

Occasional

- **HST-371 U.S. Women's History Colonial to 1865**

Credits:

4.00

Description:

Traces the roles, images and experiences of women in America from colonial times to 1865. Topics include the family, work, religion, education, health care, motherhood, sexuality, social and political activism legal status, labor activism and popular culture. With attention to ethnicity, race, class, age, region of residence, disability and sexual orientation, the course focuses primarily on the everyday lives of ordinary women.

Term:

Offered Fall Term

- **HST-372 U.S. Women's History: 1865-present**

Credits:

4.00

Description:

Examines the social and cultural history of women in the United States from the close of the Civil War to the present. Using not only gender but also race, ethnicity, class, age, disability, region of residence, and sexual orientation as important categories of analysis, this course focuses on women's private and public lives. Topics include the family, work, religion, education, health care, private lives, motherhood, sexuality, social and political activism, legal status, labor activism, and popular culture.

Term:

Offered Spring Term

- **HST-484 History of the Emotions**

Credits:

4.00

Description:

Explores ideas about emotional life from the fields of history, anthropology, sociology, and psychology as well as the evolution of emotion rules and prescriptions, focusing on western Europe and the United States since 1700. In the eighteenth century, emotions were seen as a positive influence on politics and public life, especially during the French Revolution. After the fall of Robespierre, the emotions were banished to the private sphere - so we will read both primary sources and recent scholarship on 19th- and 20th- century ideas about masculinity and femininity, romantic love and marriage, childrearing, and about what parents and children are supposed feel toward each other, how ideas about these subjects have changed over time, and whether our feelings change with them.

Term:

Occasional

- **MUH-223 World Music**

Credits:

4.00

Description:

Covers topics in folk, traditional, and modern music of Africa, the Middle East, Asia, and Europe in the context of the cultures and lives of the indigenous peoples of those regions; examines how music interacts with the issues of race, gender, class, religion, politics, and social movements. Normally offered every other year.

Term:

Occasional

- **P.AD-201 Social Change**

Credits:

3.00

Description:

This course will examine social change in the U.S. and abroad. The course will also examine the role of business, nonprofits, and the public sector in addressing social problems. Topics studied may include the Industrial Revolution, the civil rights movement, the women's movement, environmentalism, and the gay and lesbian movement.

- **P.AD-H201 Honors Social Change**

Credits:

3.00

Description:

This course will examine social change in the U.S. and abroad. The course will also examine the role of business, nonprofits, and the public sector in addressing social problems. Topics studied may include the Industrial Revolution, the civil rights movement, the women's movement, environmentalism, and the gay and lesbian movement.

Type:

Honors

- **PHIL-120 Ethics and Civic Life**

Credits:

4.00

Description:

In this class you will be introduced to the perspectives and methods of politics, philosophy, and economics and see how these three disciplines present distinct but interconnected dimensions of current social and political issues.

- **PHIL-228 Feminist Philosophy**

Credits:

4.00

Description:

This course is an introduction to the philosophy of feminist thought. Feminist theories of epistemology, metaphysics and morality will be examined as critiques of traditional philosophy,. Feminist perspectives and methodologies include radical, liberal, postmodern, as well as more recent trends in ecofeminism. Special emphasis will be placed on explicit and implicit practices of alienation and exclusion as they have unfolded in the gendering of thought, truth, and reality. 1 term - 4 credits. Normally offered every third year. C b

Term:

Occasional

- **PHIL-229 Eco-Feminism**

Prerequisites:

PHIL 119, or PHIL 123, or PHIL 127

Credits:

4.00

Description:

Examines the political, social, and ecological problems facing us as a global community. Having its roots in feminist theory and deep-ecology, eco-feminism provides a critical framework for ecological responsibility and accountability. Writings from eco-feminist thinkers and environmental activists around the world will be used to highlight the philosophical and political conflicts and challenges, including globalization and loss of biodiversity, global warming, international human rights, the relationship of gender and nature, and modes of redress for eco-justice and sustainable development.

- **PHIL-261 Eastern Philosophy**

Credits:

4.00

Description:

The exposition and critical evaluation of Hinduism, Buddhism, Confucianism, Taoism, and Islam. Special attention is given to foundation principles as well as to the similarities and differences of each of these philosophies to basic ideas in Western philosophy. 1 term - 4 credits. Normally offered

alternate years. C b

Term:

Occasional

Type:

Asian Studies

- **PHIL-262 Buddhism**

Credits:

4.00

Description:

An historical survey of Buddhist philosophy. We will explore Buddhist origins, central teachings, devotional and meditational practices, ritual and institutions as developed from classical to modern times. Special attention given to the philosophical diversity of the Buddhist world view. 1 term - 4 credits. Normally offered alternate years. C b

Term:

Occasional

Type:

Asian Studies

- **PHIL-265 Women in Spirituality**

Credits:

4.00

Description:

An exploration into the various dimensions and ideologies concerning the role of the feminine in relation to the Divine. Belief systems, myths and archetypes from ancient Goddess worship to 20th century feminist theology will be examined in terms of the philosophical content and psychological

consequences. Special emphasis will be placed on feminist metaphysical structures for understanding consciousness and Reality. Classes will be conducted by means of lectures, primary and secondary texts and class discussions. Normally offered alternate years. Cultural Diversity A

Term:

Occasional

- **PHIL-267 Chinese Philosophy**

Credits:

4.00

Description:

A survey of the main developments in Chinese Philosophy. The course begins with the early dynastic concept of humanism and then turns to Confucius and Mencius. Having developed the central Confucian doctrines, students next examine the Taoist response to Confucianism in the writings of Lao Tzu and Chuang Tzu. The course then considers Zen Buddhism, which is called Ch'an Buddhism in China, where it originated. In particular, students study the concept of sudden enlightenment before turning to the Neo-Confucian scholars.

Term:

Occasional

- **PSYCH-243 Organizational Psychology**

Prerequisites:

Take PSYCH-114;

Credits:

4.00

Description:

Focuses on diversity concerns in various aspects of the psychology of the workforce. This includes job analysis, recruitment, selection, evaluation, training, retention, and termination. Employee morale, well-being, stress, and hardiness are considered.

- **PSYCH-247 Asian Perspectives on Health and Work**

Credits:

4.00

Description:

Examines theoretical and empirical approaches that provide insight into Asian viewpoints on socialization practices, family systems, health/well-being, cultural traditions/values, and spiritual philosophy/literature. Explores the diversity among Asian cultures in terms of language, history, religion/spiritual faith, and healthcare practices, all of which play a significant role in shaping the psychological characteristics, interpersonal relationships, and work dynamics of Asians and Asian immigrants. Students critically analyze similarities and differences between Asian and Western psychological perspectives of health and work through didactic and experiential learning components. This course fulfills the Cultural Diversity Requirement and may fulfill the Expanded Classroom Requirement. Normally offered alternate years.

Term:

Offered Spring Term

Type:

Asian Studies

- **RS-111 Introduction to World Religions: Western Traditions**

Credits:

4.00

Description:

This course will explore the comparative history and structure of Western religious traditions, broadly understood, and their impact on other world religions, while attempting to recognize the similarities and the differences among them. Traditions to be studied include Greek and Roman religion, the monotheistic faiths (Judaism, Christianity, and Islam, as well as Zoroastrianism, Sikhism and Bahaism). We will also explore the impact of the Western religions on indigenous traditions, such as African religion, Native American religion, and Pacific Island religion. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. 1 term - 4 credits. Normally offered every year.

- **RS-112 Introduction to World Religions: Eastern Traditions**

Credits:

4.00

Description:

This course will examine a variety of Eastern religions, including Hinduism, Buddhism, Jainism, Confucianism, Taoism, and Shintoism. Possible connections to be explored will be the impact of these traditions on others, such as Pacific Islands and African religion, as well as the growing place of Eastern religion in the West. This course will explore the history and structure of each tradition, while attempting to recognize the similarities and the differences among them. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. Normally offered every year. Cultural Diversity B

Type:

Asian Studies

- **SIB-550 Global Travel Seminar**

Prerequisites:

Please email Hillary Sabbagh at hsabbagh@suffolk.edu to register for a travel seminar.

Credits:

3.00

Description:

An in-depth analysis of timely special issues in international business. Specific topics are announced when the course is scheduled.

Type:

Global Engagement Experience

- **SF-190 Asia in America Fiction and Fact**

Credits:

4.00

Description:

With a focus on some selected ethnic groups from Asia, Asia in America studies the history and current status of Asian Americans in Boston and other parts of the country. We will examine the major reasons why these immigrants chose to leave their home country as well as their expectations and experiences here in America. We will also discuss the issues Asian immigrants have faced in this adopted home as well as the connections and conflicts among different ethnic groups or even within the same ethnic group due to political and socio-economic reasons. The course will include some level of community engagement, through Chinatown tour and service, which may enable us to have a direct contact with the Asian American population and reflect on what is being discussed in class. Through this course, we hope to gain a better understanding of the racial and cultural history of the country and arrive at a deep appreciation of the dynamics of cultural interactions in the twenty-first century. The course fulfills the SCGP requirement.

Type:

Global Engagement Experience

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

- **SOC-227 Race in American Society**

Credits:

4.00

Description:

Despite the election of Barack Obama as President of the United States, race remains one of the most divisive forces in U.S. society. While many of us struggle against racism, racial classification continues to affect where we live, where we work, and how we see ourselves. Racial classification affects our access to health care and our encounters with police officers. Distorted images of racial groups fill television and movie screens. Appeals to racism and fear of foreigners are dominant themes in elections to state and national offices. This course examines the formation and re-formation of racial classifications: how particular groups become racially identified, how these classifications change over time, and how conflicts over race have shaped American society. The meanings of race, as seen from a variety of perspectives, will be a consistent theme throughout the course.

Term:

Occasional

- **SOC-228 Cultural, Global and Social Perspectives**

Credits:

4.00

Description:

Enables students to examine, as well as develop an awareness and appreciation of, diversity within today's society. Providing an overview of the major racial, ethnic, and cultural groups in the U.S., the focus is on the ways in which cultural awareness enhances professional helping relationships and improves the operation of human services systems.

Term:

Occasional

- **SOC-275 Women and Crime**

Credits:

4.00

Description:

This course examines the complex relationships between women and crime today. This focus will include women as criminal offenders; women as victims of crime; and women as both offenders and victims. Course materials draw from recent feminist scholarship on these issues in the social sciences. Topics include the causes of women's crime women, drugs, and crime; child abuse and trauma; prostitution and sex trafficking; race, gender and victimization; and feminist social movements against violence. Crimes of violence against women are a central focus in the course.

Term:

Occasional

- **SOC-329 Sociology of Globalization**

Prerequisites:

Prerequisite: SOC 113 or SOC 116.

Credits:

4.00

Description:

Globalization is shrinking the world. How and why did this happen? This course will explore global change and the global processes which effect key social institutions: culture, the economy and politics. Students will study the processes of globalization and its impact on our lives and people around the globe.

Term:

Occasional

- **SOC-341 International Drug Control Policy**

Credits:

4.00

Description:

Relying on a simplistic demand or supply explanation of why Americans use/abuse drugs obscures the reality of America's drug problem, is ineffective as a guide to public policy and has unforeseen, often negative consequences. Drug use is a complex and multi-faceted issue. There are no easy answers. To comprehend the complexity of America's drug problem one needs an understanding of the geography, history, religion, law, economics and international politics of the Middle and Far East, Eastern Europe, Africa, Mexico, and Central and South America. This class will provide this basic understanding without losing sight that the problem we seek to remedy is our own.

Term:

Offered Spring Term

- **SOC-354 Death and Dying**

Credits:

4.00

Description:

An examination of changing definitions of life and death, social factors affecting causes and rates of death, care of the dying and their families, institutionalization, the funeral industry, suicide, crisis intervention, and the impact of technology on the dying process.

Term:

Occasional

- **SOC-357 Global Health and Healing**

Credits:

4.00

Description:

An examination of how different cultures understand health and illness. Healing approaches from Asia, Africa and the Americas will be explored.

Term:

Occasional

- **SPAN-202 Intermediate Spanish II**

Prerequisites:

SPAN 201 or Instructor's consent.

Credits:

4.00

Description:

Continues skills development from 201. Students read a collection of short stories, write compositions, develop cultural insights through comparative and contrastive assignments, and practice listening and speaking skills in weekly conversation sessions.

Term:

Offered Spring Term

Type:

Modern Language

- **SPAN-290 Advanced Composition & Conversation**

Prerequisites:

Prerequisite: Spanish 202, 203 or 250 or Instructor's consent

Credits:

4.00

Description:

Develops written and oral skills in various contexts and registers. Emphasis on strengthening written skills and learning to speak clearly and persuasively in Spanish. Short texts and audio-visual materials provide the basis for classroom activities which include regularly assigned essays, group discussions and debates.

Term:

Offered Fall Term

Type:

Modern Language

- **SPAN-300 Intro to Cultural Texts**

Prerequisites:

Spanish 202, 203, 250 or Instructor's consent.

Credits:

4.00

Description:

Explores a selection of Peninsular and Latin American cultural materials. Primarily examines texts from different literary genres (narrative, drama, essay, and poetry). Develops critical skills required in more advanced Spanish courses, through close readings and textual analysis. Activities include regularly assigned essays, group discussions, and short scene work.

Term:

Offered Spring Term

- **SPAN-301 Spanish Culture and Civilization**

Prerequisites:

Spanish 202, 203 or 250. Spanish 290 or 300 are strongly recommended

Credits:

4.00

Description:

Examines the civilization and culture of Spain highlighting its historical development and cultural manifestations from pre-historic times to the nineteenth century. Students improve their four skills through activities that include discussions, oral presentations, and writing assignments based on reading and films.

Term:

Alternates Fall & Spring

- **SPAN-302 Indigenous and Colonial Latin America**

Prerequisites:

Spanish 202, 203 or 250 or Instructor's consent. Span 290 or 300 strongly recommended.

Credits:

4.00

Description:

Introduces students to the complexity Latin America by examining its roots in pre-Columbian America and the impact of Spanish exploration and colonization. Places emphasis on cultural, economic, historical, philosophical, political and religious patterns that define the region. Includes class discussions, oral presentations, and writing assignments based on reading and audio-visual material.

Term:

Alternates Fall & Spring

- **SPAN-303 Modern and Contemporary Latin America**

Prerequisites:

SPAN 202 or 203 or Instructor's consent. SPAN 290 or 300 strongly recommended.

Credits:

4.00

Description:

Examines the path taken by Latin American and Caribbean countries to build independent nations out of colonial territories highlighting the 19th, 20th, and 21st centuries, ethnic plurality, and cultural complexity in areas such as politics, religion, sociology, economics, customs, music & film. The cultural contributions of Spanish-speaking minorities in the United States are also addressed. Includes class discussions, oral presentations, and writing assignments based on readings and audio-visual material.

- **SPAN-315 Spanish for the Professions**

Prerequisites:

SPAN 290 or SPAN 300 or Instructor's consent.

Credits:

4.00

Description:

Integrates language learning with culture via business context of the Hispanic world. Spanish for banking and finance, marketing and advertising, and international commerce are highlighted. Students increase their cross-cultural understanding and written and oral proficiency in business Spanish through a wide range of assignments.

Type:

Global Engagement Experience

- **SPAN-390 Introduction to Latin American and Caribbean Literature**

Prerequisites:

SPAN 300; SPAN 302 is strongly recommended

Credits:

4.00

Description:

Examines authors from Latin America and the Caribbean in their historical and cultural contexts. Reading and class discussions consider the relationship between the writer and society by covering such topics as colonialism, the oral tradition, modernism and the emergence of new narratives in the twentieth century. The Inca Garcilaso, Sor Juana, Carlos Fuentes, Rigoberta Menchu, and Pablo Neruda are among some writers studied.

Term:

Occasional

- **THETR-260 Broadway Musicals**

Credits:

4.00

Description:

This course is a survey of American musical theatre from its roots in the mid-19th century to the present. It provides the analytical tools and historical insight to more fully appreciate Broadway's greatest musicals and musical theatre artists. Students will explore the ways in which American forms of popular entertainment helped to shape Broadway musicals from their infancy through their adulthood. The course also explores the ways in which musicals provided opportunities for African-Americans, women, immigrants, and the GLBT community.

Term:

Offered Fall Term

- **THETR-267 Introduction to Theatre: Contemporary American**

Credits:

4.00

Description:

This course provides a formal introduction to the theories and practices strategically used by American theatre artists after the Second World War. Special emphasis is placed on theatre artists exploring issues of cultural identity including works by GLBT, African-American, Asian-American, and Latin American playwrights. These playwrights may include Tony Kushner, Paula Vogel, Suzan-Lori Parks, Adrienne Kennedy, August Wilson, David Henry Hwang, Philip Kan Gotanda, Eduardo Machado, and Melinda Lopez. The course will also provide an introduction to trends in post-modern theatre practices related to emerging work of the auteur director, solo performers, and interdisciplinary collectives. Satisfies a core requirement for Theatre majors. Normally offered alternate years.

Term:

Occasional

- **WGS-111 Women, History, & Culture**

Credits:

4.00

Description:

Explores the roles and images of women in Western culture and the realities of women's everyday lives through literature, film, history, art, psychology, and recent feminist scholarship. Analyzes gender inequalities and the influence of gender on social structure, human behavior, and artistic expression. Topics include: the social construction of gender and identity; domestic prescriptions for women; women and work; intersections of gender, class, and race in American society; sexualities and identity; the politics of motherhood and reproductive rights; educating girls; negotiating male privilege and structural inequalities; representations of women in Western art and film; and women as artists and gendered models of creativity in art, film, fiction, and science.

Term:

Offered Both Fall and Spring

Type:

Social & Intellectual HST

- WGS-H111 Women, History, & Culture

Prerequisites:

At least a 3.3 GPA required.

Credits:

4.00

Description:

Explores the roles and images of women in Western culture and the realities of women's everyday lives through literature, film, history, art, psychology, and recent feminist scholarship. Analyzes gender inequalities and the influence of gender on social structure, human behavior, and artistic expression. Topics include: the social construction of gender and identity; domestic prescriptions for women; women and work; intersections of gender, class, and race in American society; sexualities and identity; the politics of motherhood and reproductive rights; educating girls; negotiating male privilege and structural inequalities; representations of women in Western art and film; and women as artists and gendered models of creativity in art, film, fiction, and science.

Term:

Offered Both Fall and Spring

Type:

Honors

- WGS-113 Women, Science, & Society

Credits:

4.00

Description:

Explores women's lives from the perspective of the social and natural sciences, including examination of recent biological, psychological, and sociological theories about gender and gender roles, as well as the influence of feminist scholarship in these areas. Topics include: the social construction of gender; the psychology and biology of sex and gender; women and work; media representations of women; the female body and eating disorders; women's health and lifecycle; women and sexuality; reproduction, abortion, and motherhood; and sexual violence against women.

Term:

- **WGS-115 Introduction to Gender Studies**

Credits:

4.00

Description:

Introduces the key topics and debates that have shaped the field of gender studies, including queer studies, masculinity studies, and women's studies. Through lecture and class discussion of texts from literature, film, history, psychology, and sociology, explores the pervasive influence of gender on the structure of society and our everyday experiences and the role that gender plays in our understanding of love, friendship, sexuality, and even violence. Topics include: biological arguments about gender and sexuality; the social construction of gender and identity; intersections of gender, race, class, and sexuality; masculinity and femininity; and theories of sexual difference and the construction of sexuality.

Term:

Occasional

Type:

Social & Intellectual HST

- **WGS-311 Engendering Entertainment: Feminism and Popular Culture**

Credits:

4.00

Description:

Investigates the complex intersections between feminism and popular culture through several different lenses: by exploring how feminists make arguments about popular culture; by looking at the complexities of public femininity in today's popular culture, including figures such as Lady Gaga and Katy Perry and television shows like The Bachelor and Grey's Anatomy; by focusing on a variety of articulations of feminism within mass media, blogs, social media, and popular books such as Ariel Levy's Female Chauvinist Pigs, and Caitlin Moran's How to Be a Woman. Along the way we will ask questions about: what makes a work of art feminist; how modern media contributes to or distracts us from a variety of political debates in the realm of female equality and how can we, as individuals, use modern media to create and advance smart, feminist arguments.

Type:

- WGS-315 Feminist Thought

Credits:

4.00

Description:

Investigates how feminists, both today and in history, have understood inequality and difference and looked for the best ways to address these issues and bring about social justice. Examines how feminist theorists help us to understand how gender and other social categories, such as race, class, sexuality, disability, age and nationality, are constructed within and through each other; and analyzes feminist engagements with liberalism, socialism, psychoanalysis, existentialism, post-colonialism, critical race theory, and queer theory, as well as consider anti-feminist arguments. Readings include classic critical texts by authors including Mary Wollstonecraft, Emma Goldman, Virginia Woolf, Chandra Mohanty, Gloria Anzaldua, and Judith Butler.

Type:

Social & Intellectual HST

- WGS-325 Global Women's Fiction

Credits:

4.00

Description:

Explores of various cultural worldviews in order to reveal and assess the voices of women from around the world as they respond to important global issues such as sexual violence and gendered oppression. Topics include: national citizenship, sexual politics, legal discourse, aesthetic representation, literary movements, genre, constructions of femininity, sexual identities, and representations of gender in relation to race and class and international cultures, and the relationship of self-image to the body politic.

Term:

Occasional

- WGS-335 Queer Narratives

Credits:

4.00

Description:

Explores the stories that help us to understand communities, identities, and bodies that could be considered queer, and the ways that film, music, memoir and fiction have discussed queer as different, unusual, or other. Texts include the documentary, "Paris Is Burning", Frank Ocean's 2012 album, "Channel Orange", and Janet Mock's recent memoir, "Redefining Realness", as well as foundational queer theory from Judith Butler, Eve Kosofsky Sedgwick, and Lee Edelman, among others, to help build a framework for approaching and interpreting both fictional and non-fictional accounts of queer lives.

Type:

Social & Intellectual HST

Courses that fulfill the Creativity and Innovation, Humanities/History, Language, Literature, Quantitative Reasoning, Seminar for Freshmen, Social Science, or VPATH requirements may double count to fulfill the Social, Cultural, and Global Perspectives (SCGP) requirement.

Free Electives: credit varies

Minimum Total Credits Required for Degree Conferral: 64 credits

2017-2018 Archived Catalog Information

Associate of Arts Degree

Please note that these requirements are for students matriculating in or after fall, 2017. Students matriculating prior to fall, 2017 must reference the [Pre-Fall 2017 Degree Requirements \(Archives\)](#).

The AA degree program requires the successful completion of the following courses:

Core Requirements: 13-15 courses, 47-56 credits

- [First-Year Experience](#)
- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Studies in Literature](#)
- [Ethical & Philosophical Inquiry](#)
- [Human Behavior and Societies](#)
- [Social & Intellectual History/Visual & Performing Arts Theory & History](#)
- [Modern Language](#)

Science, Technology, & Engineering (STE): 2 courses and corresponding laboratories where applicable, 8 credits

Choose two STE courses (and corresponding laboratory where applicable) from those listed below. Courses do not need to be in a sequence. In the case of a course that is a lecture plus a lab, the student must complete both components to earn credit for the STE requirement.

Biology:

- **BIO-104 Environmental Biology**

Prerequisites:

BIO 101 and BIO L101, can also be taken concurrently BIO L104 must be taken concurrently

Credits:

3.00

Description:

An introduction to basic evolutionary, behavioral and ecological principles. Readings and discussions emphasize the ways that humans are affected by ecological processes and principles as well as how humans and their technology affect ecosystems. May not be taken by Biology majors or minors. This course will not fulfill requirements for a major or a minor in Biology. It is intended for non-biology majors as a follow-up to Biology 101. 3 hours lecture. Days Only. Madrid Campus only.

Type:

SCI TECH ENGNR

- **BIO-L104 Environmental Bio Lab**

Prerequisites:

BIO-104 must be taken concurrently

Credits:

1.00

Description:

Exercises and field trips designed to complement and demonstrate the ecological principles developed in the lecture section. The lab emphasizes the scientific method and employs long term group projects. Madrid Campus only.

Type:

SCI TECH ENGNR

- **BIO-105 Humans and the Evolutionary Perspective**

Prerequisites:

Non Science Majors Only

Credits:

4.00

Description:

Major topics include the scientific basis of evolution, the fossil history of vertebrates, evidence of evolution in the human body, and applying an evolutionary perspective to the social interactions and possible futures of humanity. Meets one of the non laboratory science requirements for the non-science major. This reading and writing intensive course is a non-laboratory science option for non-science majors. This course will not fulfill requirement for a major or a minor in Biology.

Term:

Occasional

Type:

SCI TECH ENGNR

- **BIO-111 Introduction to the Cell**

Prerequisites:

Must take BIO L111 concurrently

Credits:

3.00

Description:

Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L111 Introduction to the Cell Laboratory**

Prerequisites:

Concurrently with BIO 111

Credits:

1.00

Description:

Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-114 Organismal Biology**

Prerequisites:

Must take BIO L114 concurrently.

Credits:

3.00

Description:

Rigorous introduction to organismal biology emphasizing evolution, phylogenetics, form, and function. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L114 Organismal Biology Laboratory**

Prerequisites:

Must take BIO 114 concurrently

Credits:

1.00

Description:

A series of laboratory experiences in evolution, diversity, anatomy and physiology.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-201 Biology's Big Questions**

Prerequisites:

Non Science Majors Only.

Credits:

4.00

Description:

This course seeks to answer five current questions from all levels of biology, from the subcellular to the ecosystem level. Topics will be discussed in the context of genetics, evolution, and ecology. We will focus on the process of doing science, including how scientists evaluate ideas and communicate their findings. Emphasis will be placed on topics in biology that impact daily life.

Type:

SCI TECH ENGR

Chemistry:

- **CHEM-105 Chemical New Product Development**

Prerequisites:

ENT 101

Credits:

4.00

Description:

This course addresses the crucial intersection between chemistry and business, and the impact of these fields on society. It provides an introduction to important chemistry concepts and practices of business management. Primary focus is on understanding the chemistry principles behind some of the consumer products in our everyday lives, and using this knowledge to create and evaluate ideas for new products. The course also introduces the business aspects involved in the development and marketing of new products. An important component of the course is in making effective presentations; this component concludes the course, culminating in team presentations of a new chemical product to panel of executives and peers. This course satisfies the Sawyer Business School Science requirement.

Type:

- **CHEM-106 Biotechnology & Its Applications in Medicine, Agriculture, Law**

Credits:

4.00

Description:

Introduces the latest discoveries and applications of biotechnology. Topics include genetically modified food, stem cells, genetic testing, cloning, and forensics. A combination of lectures, discussions, short documentaries, mock congressional hearings, and hands-on activities will provide insight into the numerous medical, social, legal, and ethical issues surrounding this technology.

Type:

SCI TECH ENGR

- **CHEM-111 General Chemistry I**

Prerequisites:

Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:

3.00

Description:

Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- CHEM-L111 General Chemistry Laboratory I

Prerequisites:

MATH-104 MATH-108 MATH-121 MATH-128 MATH-130 MATH-134 MATH-164 MATH-165 MATHT-MPEL1 MATHT-MPEL2 or MATHT-MPEL3. Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

Computer Science:

- CMPSC-F107 Ants, Rumors and Gridlocks

Prerequisites:

Math placement level of 2 or above or any MATH course at the level 100 or above

Credits:

4.00

Description:

Do viruses and rumors spread like forest fires? How do ants cooperate? Do spoken languages and biological species evolve in a similar way? Ants, Rumors, and Gridlocks exposes students to introductory aspects of computational science by addressing and answering these and many other questions. Students use and modify virtual experiments preprogrammed in the NetLogo programming language to investigate these topics and others in Social Sciences, Biology, and Environmental Science. No prior knowledge of computer programming or NetLogo is required.

Type:

SCI TECH ENGR

Electrical Engineering:

- **ECE-288 Measuring the World**

Credits:

4.00

Description:

The world is addicted to quantifying the essence of everything, from personal IQ, to the speed of a baseball, to our healthiness, or our chances of winning the lottery. Behind most of these numeric values exists a science of measurement. Some of this is referenced to international standards, such as for length, time, weight, or temperature. Others are more arbitrary and subjective, such as ranking Olympic performance in gymnastics, beauty pageants, or popular responses as found in the game show Family Feud. A third category includes controversial areas, such as measuring whether a person is lying when interrogated, or using hype rather than reality to market products. Sometimes statistics are used to predict sports outcomes, such as in the annual March Madness NCAA basketball brackets. Finally, in a world subject to fraud and deception, it can be essential to distinguish legitimate from counterfeit items, such as in money, art, collectibles, and historical documents. Don't get hoodwinked! This course examines all of these, starting with how measurements have been made throughout history, along with a full deck of entertaining terms used during the ages. This may help you sort out your weight, whether given in pounds, kilos, or stones. Often these terms will provide insights into how people lived in different eras. We will also look at some of the technologies currently available to provide these measurements, and unravel the complexities of various sensors that are used. As we consider the meaning of accuracy we may become less naive about how much confidence to ascribe to the results given us. Hovering around all of these measurements should be the question of validity - are they meaningful, useful, or misleading? And the impact they have on society - whether they steer behavior more powerfully than one might originally suspect. Each student will also be given an opportunity to become an expert in an area of measurement of personal interest. By the end o

Type:

SCI TECH ENGR

- **ENS-103 Introduction to Engineering**

Prerequisites:

ENS L103 MUST BE TAKEN CONCURRENTLY.

Credits:

3.00

Description:

This course provides exposure to engineering practice, with particular focus on electrical engineering components such as circuit elements and systems. It seeks to go beyond the mathematics and provide an intuitive appreciation of functional devices. Examples taken from a broad swath of technological history illustrate significant crossroads, decisions, and inventiveness. Emphasis is placed on learning to think as an engineer - assessment of problems, candidate solution tradeoffs, and implementations. Frequent exercises in creative engineering design will be used. Students will be required to design several elementary devices, such as a magnet, a capacitor, a timing device, and a motor, which they will enter in a competition for overall strength, compactness, accuracy, or speed. Sometimes assignments relate to "survival on an island" concerns, such as communication or drinking water. Students also learn about reverse engineering by selecting, building, troubleshooting, and presenting an electronic kit of their choice. A term paper determining the engineering behind a topic of their choice will also be written and presented. On occasion (see ENS L103) there will be team competitions between various smaller groups in the class.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **ENS-L103 Intro to Engineering Lab**

Prerequisites:

Must be taken Concurrently w/ ENS-103

Credits:

1.00

Description:

The Lab is designed to provide opportunities to gain familiarity with engineering tools. Students will be introduced to parts (e.g. learn the resistor color code), test equipment (multimeters, prototyping trainers, signal generators, and oscilloscopes), and construction techniques (wiring, soldering, troubleshooting). Although it varies from year to year, Class Projects can be built during the Lab sessions. In the past these have included a 25 Watt electric generator, various door lock systems (both mechanical and electronic), and an AM transmitter and receiver (all projects made from scratch). It is likely that 2010-2011 may introduce some robotic creations for a competition. Electronic kits and motors can also be built and serviced in the Lab. There is an adjoining machine shop, which can be utilized (with supervision), for fabricating items. Individual creativity is encouraged, and informal problem solving sessions occasionally occupy lab time. However, the lab is accessible outside of the traditional scheduled time.

Term:

Offered Fall Term

Type:

SCI TECH ENGR

Environmental Science:

- **UES-107 Introduction to Drones**

Prerequisites:

UES-L107

Credits:

3.00

Description:

Unmanned autonomous systems (UAS) or Drones are high-tech, intelligent machines capable of traveling by air, land, or sea via a remote connection. This course presents concepts and practical methods of using Unmanned Vehicles in a professional context, particularly for environmental projects. UAVs are increasingly being used in a professional capacity such as cinematography and filming, real estate, construction, surveying, mapping, agriculture, industrial inspections, utilities inspections and many more. The course covers mission planning, operations, field data collection, data processing, legal implications, data analysis and data deliverables. The course and laboratory will include learning flying micro-drones and preparing to pass the Federal Aviation Administration's Unmanned Aerial Vehicle Airmen (Part 107) exam. The course will have an associated Laboratory component in which students will learn how to properly plan effective flight missions, fly safely and legally, develop risk management strategies, analyze the data captured and convert it into a useful data deliverable.

Type:

SCI TECH ENGR

- UES-L107 Introduction to Drones Lab

Prerequisites:

UES-107

Credits:

1.00

Description:

Type:

SCI TECH ENGR

- UES-111 Environmental Science

Prerequisites:

Must be taken concurrently with UES-L111

Credits:

3.00

Description:

Applies the fundamentals of science to environmental issues. Topics include population dynamics and resources, environmental degradation, ecosystems, geologic processes, deforestation, biodiversity, climate change, air, soil, and water resource management, and pollution and risks to health.

Term:

Offered Spring Term

Type:

SCI TECH ENGNR

- **UES-L111 Environmental Science Lab**

Prerequisites:

Must be taken concurrently with UES-111.

Credits:

1.00

Description:

Laboratory exercises are used to illustrate topics covered in UES 111. Field testing and analysis of environmental samples. Field trips may be required.

Term:

Offered Spring Term

Type:

SCI TECH ENGNR

- **UES-121 Science, Art, and the Environment**

Prerequisites:

Take UES-L121 concurrently

Credits:

3.00

Description:

Examines art and cultural objects through the lens of the biological, chemical, and physical principles of the materials and processes we use to make them. Includes consideration of factors important in art conservation. Provides an environmental context for the manufacture and use of art materials and the preservation of cultural objects.

Type:

SCI TECH ENGR

- **UES-L121 Science, Art, and the Environment Lab**

Prerequisites:

Take UES-121 concurrently

Credits:

1.00

Description:

Provides hands-on work with pigments, dyes, and other art materials using the basic principles of science and technology. Students will conduct laboratory experiments that produce art objects and other consumer products. Instruction in safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables, graphs, and graphics. Practice in synthesizing compounds like paints and finishes and in evaluating methods of art conservation.

Type:

SCI TECH ENGR

- **UES-225 Geographical Information Science**

Prerequisites:

Take UES-L225 concurrently

Credits:

3.00

Description:

Provides the fundamentals of geographic information science (GIS) including the history of automated mapping. A review of the necessary hardware and software elements used in GIS is presented. Hands-on exercises with computerized mapping software are required.

Type:

SCI TECH ENGR

- **UES-L225 Geographic Information Science Lab**

Prerequisites:

Must be taken concurrently with UES-225

Credits:

1.00

Description:

Required companion computer laboratory to be taken concurrently with UES 225.

Type:

SCI TECH ENGR

Forensic Science

- **FS-103 Introduction to Forensic Science**

Prerequisites:

FS-L103

Credits:

3.00

Description:

Application of the principles of forensic science in evaluating physical evidence, with emphasis on its role in criminal investigation. Class experiences may include guest lectures and field trips. 3-hour lecture. Normally offered Fall

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **FS-L103 Introduction to Forensic Science Lab**

Prerequisites:

FS 103 concurrently

Credits:

1.00

Description:

Laboratory experiences related to the collection and analysis of physical evidence as performed by forensic science professionals. Experiments may include forensic microscopy, drug analysis, forensic serology, physical patterns, fingerprint and firearm evidence analysis techniques. 3-hour laboratory. Normally offered Fall

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

Neuroscience:

- **NEUR-101 Intro to Neuroscience**

Credits:

4.00

Description:

Introduces the field of neuroscience, the study of the organization and function of the nervous system of humans and other animals. Neuroscientists examine how individual neurons function as signaling devices, how groups of neurons operate as circuits to produce fundamental units of behavior, and how much larger systems in the brain subserve complex functions such as memory and consciousness. Topics include the neuron and neural transmission, the overall function and organization of the nervous system, the development of the brain, neural plasticity, sleep, memory and other higher cognitive functions. Normally offered alternate years.

Type:

SCI TECH ENGR

Physics:

- **PHYS-111 College Physics I**

Prerequisites:

Take MATH-121 or MATH-134 or MATH-165 or permission of Physics department chair; PHYS L111 taken concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course.

Term:

Offered Fall Term

Type:

- **PHYS-L111 College Physics Lab I**

Prerequisites:

PHYS 111 concurrently

Credits:

1.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course. Error propagation, use of Excel, laboratory notebooks and formal reports required.

Term:

Offered Fall Term

Type:

SCI TECH ENGR

- **PHYS-151 University Physics I**

Prerequisites:

MATH-121, MATH-165 or MATH-164 and PHYS L151 concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **PHYS-L151 University Physics Lab I**

Prerequisites:

PHYS 151 concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **PHYS-152 University Physics II**

Prerequisites:

PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

Credits:

3.00

Description:

This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **PHYS-L152 University Physics Lab II**

Prerequisites:

PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **PHYS-153 University Physics III**

Prerequisites:

MATH-121, MATH-164 or MATH-165

Credits:

3.00

Description:

This calculus-based course is the introduction of the topics of modern physics. It begins with special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom. Then Schrodinger's equation is introduced with use of wave functions, particle box, barrier penetration, quantum mechanical tunneling, the Pauli Exclusion principle, the development of the periodic table, and the X-ray spectra. Development of solid state physics with bonding in molecules, band theory of solids and semiconductor behavior. The final topics cover nuclear physics, radioactivity, half-life, nuclear fission and fusion, medical uses of radiation, elementary particle physics and introduction to astrophysics.

Term:

Offered Fall Term

Type:

SCI TECH ENGR

- **PHYS-L153 University Physics III Lab**

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts of special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom.

Type:

SCI TECH ENGR

- **SCI-103 Environmental Science**

Prerequisites:

SCI-L103 must be taken concurrently

Credits:

3.00

Description:

Case study approach to the fundamentals of science applied to environmental degradation, ecosystems, geological processes, population dynamics, deforestation and biodiversity, climate change, ozone depletion, air soil, and water resource management, pollution and risks to health, economics and the environment, politics and the environment, and ethics and the environment.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **SCI-L103 Environmental Science Lab**

Prerequisites:

Must take SCI-103 concurrently

Credits:

1.00

Description:

Laboratory exercises to illustrate the topics covered in Science 103. Field-testing and analysis of environmental samples. Field trip required.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **SCI-108 Introduction to Cancer Care**

Credits:

4.00

Description:

This course will introduce the students to the top ten U.S. adult cancers, as well as the most common pediatric cancers. Topics to be covered include cancer causes, detection, and prevention. Psychosocial aspects of being diagnosed with cancer and the role nutrition plays for cancer patients will be described. The course will also discuss the major treatment modalities for each cancer including radiation therapy, surgery, chemotherapy, and bone marrow transplants. The goals and objectives of the course will be met through the use of various teaching tools including but not limited to: PowerPoint presentations, videos, guest lectures, and a poster project with a presentation component. Cognitive assessment of the students will be accomplished through homework, quizzes, exams, and a group poster and oral presentation. Students with any type of academic background are welcome.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **SCI-111 Introduction to Astronomy**

Prerequisites:

MATH-128 or higher and SCI-L111 must be taken concurrently.

Credits:

3.00

Description:

History of Astronomy from the ancients to Newton; light; telescopes; sun, earth, moon planets, comets, asteroids, meteors; space programs, science and technology in society. Course culminates with a visit to the Clay Center Observatory, where students will be able to make first hand observations. For non-science majors.

Term:

Occasional

Type:

SCI TECH ENGNR

- **SCI-L111 Introduction to Astronomy Lab**

Prerequisites:

Take SCI-111 concurrently

Credits:

1.00

Description:

Laboratory experiments and exercises to illustrate the principles discussed in Science 111. Observational exercises using the Celestron telescope, astrophotography exercises, and computer simulations. Course culminates with a visit to the Clay Center Observatory, where students will be able to make first hand observations.

Term:

Occasional

Type:

SCI TECH ENGNR

- **SCI-112 Structure of the Universe**

Prerequisites:

MATH-128 or higher and SCI-L112 concurrently

Credits:

3.00

Description:

Astronomy of the cosmos; sun, stars, interstellar materials, galaxies, pulsars, quasars, black holes; nature of time relativity, cosmology. Course culminates with a visit to the Clay Center Observatory, where students will be able to make first hand observations. For non-science majors.

Term:

Occasional

Type:

SCI TECH ENGNR

• **SCI-L112 Structure of the Universe Lab**

Prerequisites:

Take SCI-112 concurrently

Credits:

1.00

Description:

Laboratory experiments and exercises to illustrate the principles discussed in Science 112. Observational exercises using the Celestron telescope, astrophotography exercises, and computer simulations. Course culminates with a visit to the Clay Center Observatory, where students will be able to make first hand observations.

Term:

Occasional

Type:

SCI TECH ENGNR

- **SCI-113 A Habitable Earth Within the Solar System**

Credits:

4.00

Description:

This course introduces non-science majors to concepts that are central to making our planet habitable. It presents Earth in context of the solar system with a broad view of global climate change and energy resources in a quest to better understand the workings our planet. This course on Earth and Planetary Science is suitable for students who may have taken their last science and math course several years ago, or are just curious about knowing facts on major issues that pertain to the future of our planet. Together with a reading component, this course aims to give students a flavor of how researchers think, investigate and develop conclusions that directly affect our political and economic future. Topics covered in this course range from the solar system to the study of search for other habitable Earth-like planets, search for extraterrestrial life, and evolution of life on Earth. Other characteristics of this course are heavy use of audio-visual materials often including computer animations and simulations, in-class experiment demonstration, and intensive use of INTERNET-based resources.

Type:

SCI TECH ENGR

- **SCI-165 Inner Workings of Physics Universe**

Credits:

4.00

Description:

About 15 billion years ago, (data indicate) the big bang occurred and the universe was born. With it came physical laws and a spectacular array of consequences that lead to the universe as we know it. This non-lab , 4 credit course explores the inner workings of the physical universe in terms of the scientific inquiry which lead to Newton's laws, an understanding of energy, waves, light, electricity, atomic structure, chemical reactions, nuclear physics, particle physics, relativity, and the big bang theory. During the course, students will learn to make use of modern resources to access scientific and technical literature to research a scientific topic. They will learn to distinguish between science and technology (e.g. quantum mechanics and nanotechnology, the discovery of the Higgs boson and the large hadron collider that made it possible, etc.) and to understand how the science, technology, and engineering disciplines play a crucial role in recognizing and solving problems of society and the world that we share.

Type:

SCI TECH ENGR

- **SCI-171 The Built World: How Humans Engineer Environments**

Credits:

4.00

Description:

The most basic needs of humans have not changed - water, food, and shelter - but the means of meeting these needs has. In this course, we will examine how technology-driven societies operate by studying how cities are built and how they function. Topics will include water supply and distribution systems; transportation systems (including road and bridge design and construction); building design, construction, and operation (including skyscraper and sustainable building design), and waste removal systems (municipal and industrial wastewater removal and treatment, solid waste removal and treatment). This is not a course about little gadgets and widgets; this is a course about big engineering marvels; and it emphasizes applications of science - how things work - rather than scientific theory.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **SCI-173 Mapping Our World The Power of Digital Maps**

Prerequisites:

SCI L173 Must be taken concurrently Knowledge of Windows type Application

Credits:

3.00

Description:

Geographic Information Science (GIS) link information (number of fire hydrants on a block) to features on a map (e.g., a point representing street address) that has a designated geographic location (as designated by global coordinates). Unlike paper maps, GIS software allows the production of interactive maps that allows the user to layer data, to indicate spatial patterns, to analyze trends, and to combine different features of the mapped area in novel ways. For example, a business person may wish to use GIS to determine the optimum location of retail outlet (based on the mapped demographics of a neighborhood), while an environmental engineer may use GIS to describe the location of outfalls to see how they correlate to areas

of stream pollution. In this course, students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **SCI-L173 Mapping Our World Lab**

Prerequisites:

Must be taken concurrently with SCI-173

Credits:

1.00

Description:

This laboratory illustrates concepts and methods taught in SCI 173. In this lab students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **SCI-181 Science and Life in the 21st Century**

Credits:

4.00

Description:

No longer offered on Boston campus This is a four credit, non-lab, science course that examines the central scientific problems confronting the 21st century. The course studies particular topics and teaches the necessary science around these topics to provide a good understanding of the issues. The topics currently are: Energy, Science and Economic Decisions, Sustainability of Life on Earth, Health and Science.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **SCI-184 Contemporary Science and Innovation**

Credits:

4.00

Description:

This is a 4 credit, project based science course that examines the central scientific problems confronting the 21st century. The course consists of lectures, class discussions, field trips, and in-class hands-on activities designed to familiarize the student with different concepts of the lectures. The current focus is on sustainable energy production. A final team project related to the course topics will be given. This is the version of SCI 183 without a separate lab component. Students who have taken SCI 183, L183 are not allowed to take this course.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **SCI-201 Physics for Future Presidents**

Credits:

4.00

Description:

This course presents a topical introduction to the key principles and concepts of physics in the context of the world events and natural phenomena that confront world leaders and that require informed decisions and responses. Energy, health, counter-terrorism, remote sensing, space programs, nuclear proliferation, and a host of other modern challenges have technological and scientific dimensions, the understanding of which is essential to avoiding disastrous policy decisions. This course considers the application of physics to these societal challenges. The material is covered at a level and pace that a future world leader should be able to handle; the emphasis is on the development of physical reasoning skills, and not on detailed, mathematical problem solving.

Type:

SCI TECH ENGR

• SCI-210 Earth and Planetary Crystals

Prerequisites:

Take SCI-L210 concurrently

Credits:

3.00

Description:

This course will provide undergraduate students of various disciplines with an introduction to gems and crystals using interactive, evidence-based teaching approaches. Crystalline forms of matter are critical to our existence. Using innovative teaching strategies of in-class hands-on demonstration, supplemented with visuals of crystal details, the course provides students insights into the formation, alteration and unique properties that make crystals invaluable. Topics range from the study of proteins and nucleic acids to the interior of planets. The in-class lectures will provide a basic guide that will serve as a platform for individually catered in-depth study. Therefore, the course is open to advanced students as well, who can pick up higher level of information for discussion and class projects.

Type:

SCI TECH ENGR

Some Science division courses may have Math or Computer Science prerequisites; many have other Science prerequisites.

Studies in Literature: 1 course, 4 credits

Choose one Studies in Literature course from those listed below:

- **ENG-113 World Drama I**

Credits:

4.00

Description:

Survey of drama and theatre as part of world culture from classical Greece through 18th-century China. Normally offered yearly.

Term:

Offered Fall Term

Type:

Studies in Literature

- **ENG-114 World Drama II**

Credits:

4.00

Description:

Survey of drama and theatre as part of world culture from the 19th century to the present.

Term:

Offered Spring Term

Type:

Studies in Literature

- **ENG-130 Introduction to Literature**

Credits:

4.00

Description:

Study of poetry, prose, and drama, with emphasis on close reading and literary analysis. Students will compose formal essays discussing the meanings and relationship between texts as well as the author's craft and relationship to the reader. Offered every semester.

Type:

Studies in Literature

- **ENG-135 World Literature in English**

Credits:

4.00

Description:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

Term:

Offered Both Fall and Spring

Type:

Studies in Literature

- **ENG-141 Studies in British Literature**

Credits:

4.00

Description:

Study of poetry, prose, and drama from the British literary tradition, with emphasis on close reading and literary analysis. Students will compose formal essays discussing the meanings and relationship between texts as well as the author's craft and relationship to the reader. Offered every semester.

Type:

Studies in Literature

- **ENG-142 Studies in American Literature**

Credits:

4.00

Description:

Study of poetry, prose, and drama from the American literary tradition, with emphasis on close reading and literary analysis. Students will compose formal essays discussing the meanings and relationship between texts as well as the author's craft and relationship to the reader. Offered every semester.

Type:

Studies in Literature

- **ENG-151 Introduction to African-American Literature**

Credits:

4.00

Description:

Literature has the capacity to record and interrogate history in an imaginative and artistic context. African-American literature is a rich, varied, and complex body of literature that faces our tainted history directly. The authors we will read in this class examine slavery's long-term psychological and social effects while forging a literary history that is at once a part of and apart from American literary history more generally.

Type:

Studies in Literature

- **ENG-152 Horror Fiction**

Credits:

4.00

Description:

This course focuses on the reading and analysis of horror literature and the ways in which horror reflects and represents personal and cultural anxieties. Readings will include both classic and contemporary authors, for example, Edgar Allan Poe, H.P. Lovecraft, Shirley Jackson, Stephen King, and others. Assignments will include analytical essays as well as creative writing.

Type:

Studies in Literature

- **ENG-153 Literature of War**

Credits:

4.00

Type:

Studies in Literature

- **ENG-155 Young Adult Literature**

Credits:

4.00

Description:

Young Adult Literature's recent explosion in popularity raises important questions about the stories it tells, the values it promotes, and the audiences it seeks. This course approaches the YA phenomenon as one with deep historical roots as well as contemporary cultural relevance. From nineteenth century classics to current series favorites, literary works focused on young people reframe perennially fresh narratives about coming of age, negotiating personal identity, and navigating a complex moral universe. This course also considers YA literature as part of an evolving network of writers, readers, publishers, critics and filmmakers.

- **ENG-157 Poetry and Religion**

Credits:

4.00

Description:

This course will use close readings to examine poetry as a heightened form of language seeking to make contact with divine sources of faith. We will consider poems that provide examples of the struggle to attain belief, as well as poems that deny belief. Language as both the grammar of ascent and the locus of descent. The position of human beings in relation to God, or the gods, or the absence of the divine.

Type:

Studies in Literature, Classics Minor

• ENG-161 Writing the American West

Credits:

4.00

Description:

In 1893, Frederick Jackson Turner famously declared that the American frontier (i.e., the West) had closed for good. To a certain extent, Jackson's proclamation was meant to demarcate the end of the 19th century. But perhaps more importantly, it marks the beginning of a distinctly American literature that began, ironically, by mourning its own demise. In this course, we will journey among some of the more significant signposts and detours that have marked Western U.S. literature in the 20th Century. Along the way, we will question just where, exactly, the West begins and ends (The Mississippi River? The Great Plains? The Rockies?), and think about whether or not Turner's frontier thesis continues to hold true (if it ever did). We will consider whether the broad rubric of The West is adequate to describe the various sub-regions within this portion of the United States, and we'll examine the genres which seem as if they could not have happened anywhere else. We will also interrogate differences in the literature across gender lines: how, if at all, does the literature written by men and by women differ? Above all, we will strive to come away with a deeper understanding of this vitally American, and vitally Wild literary place.

Type:

Studies in Literature

• ENG-213 English Literature I

Credits:

4.00

Description:

Study of major writers of England from the beginning to the mid-18th century. Regularly assigned essays on the reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Studies in Literature

- **ENG-214 English Literature II**

Credits:

4.00

Description:

Study of major English writers from the mid-18th century to the present. Regularly assigned essays on the reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Studies in Literature

- **ENG-217 American Literature I**

Credits:

4.00

Description:

Study of major American writing from its origins through 1865. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Studies in Literature

- **ENG-218 American Literature II**

Credits:

4.00

Description:

Study of major American writing from 1865 through the present. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Studies in Literature

- **FR-216 Masterpieces of French and Francophone Literature in English Translation**

Credits:

4.00

Description:

Masterpieces of French and Francophone Literature in English Translation. Studies works translated into English by major authors from the Middle Ages to the present. Explores drama, fiction, and poetry from many regions of the world: Africa, Western Europe, North America, the Caribbean, and Vietnam.

Term:

Alternates Fall & Spring

Type:

Studies in Literature

- **FR-309 Survey of French Literature I**

Prerequisites:

FR 202 or Instructors permission

Credits:

4.00

Description:

Analyzes and discusses canonical works of French literature from medieval times to the eighteenth century.

Term:

Offered Fall Term

Type:

Studies in Literature

- **FR-310 Survey of French Literature II**

Prerequisites:

FR-202 or instructor's permission

Credits:

4.00

Description:

Study, analyze and discuss canonical works of French-language literature from the nineteenth through the twenty-first centuries, as they relate to important events in the art, culture, and history of the Francophone world.

Term:

Offered Spring Term

Type:

Studies in Literature

- **FR-315 Mots Doux: Love, Lust and Literature**

Prerequisites:

Take FR-205 or Instructor's consent

Credits:

4.00

Description:

Explores the theme of love and its manifestation in representative works while being aware of the evolution of French Literature. Addresses various thematics that accompany a traditional survey of literature course such as critical discourse, aesthetic representation, literary movements, genre, construction of sexual identities, sexual politics as well as representations of ethnicity, class, and culture.

Term:

Occasional

Type:

Studies in Literature

- **FR-318 Face in the Mirror: Writing & Reflecting the Self in French**

Prerequisites:

FR-205 and FR-305 or Instructor's consent

Credits:

4.00

Description:

Examines literature in the French language focusing on memoir, essay, and autobiography. Read authors such as, Montaigne, Rousseau, Lamartine, Colette, Duras, Beauvoir, Le, Chamoiseau, Djébar, Conde, Ernaux, Genet, and Satrapi. Develops an appreciation of the differences between autobiography and autofiction. Explores the question of truth and the fallibility of memory.

Type:

Studies in Literature

- **WGS-211 Heroines, Hotties & Hubris: Adolescent Girl's Books**

Credits:

4.00

Description:

Explores what we can learn from the books that teenage girls read. In addition to a wide array of interesting and complex Young Adult novels targeted to young female readers, students will be exposed to theories of adolescent development, literary criticism, and social theory. Topics include how the dilemmas of girlhood have changed or stayed constant and the urge, so common in books for children and teens, to teach kids how to think and behave.

Term:

Occasional

Type:

Studies in Literature

- **WGS-220 Other Worlds, Other Genders: Women and Science Fiction**

Credits:

4.00

Description:

Examines through both classic and contemporary science fiction a variety of possibilities for world-reimagining in the realms of gender, sexuality, race, and other forms of difference. Draws on theories of utopian and dystopian discourse, engages with questions of biology and reproduction, and explores colonialism through first-contact and space empire narratives.

Ethical & Philosophical Inquiry: 1 course, 4 credits

Choose one Ethics course from those listed below:

- **PHIL-119 Ethics**

Credits:

4.00

Description:

A systematic introduction to the major thinkers and their positions on the main issues of ethics, such as: What is morality? What are moral values? How should we live our lives? Are there objective, universal, absolute moral standards? If so, what are they, and what is their basis? 1 term - credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- **PHIL-120 Ethics and Civic Life**

Credits:

4.00

Description:

In this class you will be introduced to the perspectives and methods of politics, philosophy, and economics and see how these three disciplines present distinct but interconnected dimensions of current social and political issues.

- **PHIL-123 Social Ethics: The Good Life**

Credits:

4.00

Description:

An examination of contemporary Western society, particularly in the United States, in relation to philosophical attempts to define the good life. Current books that exhibit a philosophical approach towards important contemporary social issues will be discussed, as well as classics in philosophy. Topics may include: civic virtue, consumerism, current events, economic justice, popular culture (film, music, television), religion and secularism, etc. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- **PHIL-127 Contemporary Moral Issues**

Credits:

4.00

Description:

A critical examination of a number of contemporary moral issues such as: abortion, affirmative action, animal rights, capital punishment, cloning, drug legalization, environmental ethics, euthanasia, genetic engineering, gun control, pornography, same-sex marriage, suicide, war and terrorism, etc. 1 term - 4 credits. Human Behavior and Societies: 1 course, 4 credits

Choose one Human Behavior and Societies course from those listed below:

Advertising and Public Relations:

- ADPR-285 Media and Pop Culture I

Credits:

4.00

Description:

Examines the influence of media on contemporary society from a social science perspective. Television, radio, film, and print formats are discussed in terms of their persuasive impact on mass culture in the U.S.. The emergence and development of Rock N Roll is discussed in unison with the Civil Rights, Student's Rights, and anti-War movements of the period from 1946-1972.

Term:

Offered Spring Term

Type:

Human Behavior & Societies

Communication:

- CJN-255 Introduction to Media

Credits:

4.00

Description:

An introduction to the role of media in contemporary society, focusing on media's influence on cultural, political, and ideological processes. An examination of the historical contexts within which newspapers, radio, television, and new media technologies develop, and how audiences interact with and influence the use of media.

Term:

Offered Both Fall and Spring

Type:

Human Behavior & Societies

- **CJN-375 Organizational Communication**

Credits:

4.00

Description:

Historical development of the theory of organizations, examination of information flow, network analysis, communication overload and underload, corporate culture, superior-subordinate communications, organizational effectiveness, and change processes.

Term:

Offered Fall Term

Type:

Human Behavior & Societies

Economics:

- **EC-151 Economic & Human Geography**

Credits:

4.00

Description:

The study of how economic and human activity is distributed across space, the reasons for these spatial distributions, and the processes that change the spatial organization of economic activity over time. Topics include: maps, map projections, and geographic information systems; population geography; the organization and location of cities, towns and villages; transportation and communication policy; industrial location; the geography of world trade; and geographic features of economic development. The course takes a global perspective, and draws on cases and examples from all over the world. Cultural Diversity B

Type:

Government

- **GVT-110 Introduction to American Democracy**

Credits:

4.00

Description:

An introduction to the American political system and constitutional framework. Focus will be on the interplay of various institutions (the Presidency, Congress and the Judiciary) in creating public policies. Contemporary public issues will be discussed, as will the role of political theory in shaping American democracy. Attention will be given to the role of the news media, public opinion, political ideology, political parties and interest groups in the American system.

Type:

Human Behavior & Societies

- **GVT-115 Evolution of the Global System**

Credits:

4.00

Description:

The goal of this course is to introduce the student to the main actors, social facts and processes that shaped the international system in the nineteenth and twentieth centuries. By analyzing the spread of industrialization, the race for colonies, the thrust of imperialism, and the rapid growth of nationalism, among other factors, this course explains the contradictory and simultaneous trends of unprecedented levels of prosperity and violence in Europe and beyond. While the course examines the role of the United States in the international system, particularly in light of its dominant role since the early twentieth century, it also emphasizes the developments taking place in other regions such as Asia, Africa and Latin America. This will allow students to understand the global arena as a space of complex interconnections involving varieties of forms of production, national political cultures and idiosyncratic traditions. This course sets the foundations for other courses in International Relations and Regional Studies

Type:

Human Behavior & Societies

Psychology:

- **PSYCH-114 General Psychology**

Credits:

4.00

Description:

Surveys core theoretical concepts and contemporary empirical research from the major sub-fields of psychology: physiology; perception; cognition; learning; emotion; motivation; development; personality; psychopathology; psychotherapy; and social behavior. Required for psychology majors. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Human Behavior & Societies

Sociology:

- **SOC-113 Introduction to Sociology**

Credits:

4.00

Description:

An introduction to the sociological understanding of human interaction, group process and social structures. Students are introduced to basic concepts, theories and methods of sociological investigation. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

- **SOC-116 Social Justice**

Credits:

4.00

Description:

An examination of traditional and contemporary problems associated with major social institutions such as the family, economics, government and education. Social forces related to ethnicity, social class, health and welfare, and urbanization are also included. Alternative remedial measures based on behavioral science theories are discussed. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Human Behavior & Societies

- **SOC-224 Families in Contemporary Society (Spain)**

Credits:

4.00

Description:

Spain has experienced major socio-demographic changes since the mid 1970s. These transformations mainly arise from the new role of women in society and, in particular, women's higher levels of education, work experience, and labor market attachment. The changes in women's labor force participation have occurred in conjunction with a progressive postponement of main family events, such as leaving the parental home, forming a partnership and having children, as well as with a reduction in the family size. Spain is, indeed, characterized as having one of the lowest low fertility levels within Western industrialized countries, a pattern that is exacerbating the ongoing process of population aging. This picture partly reflects the conflicting relationship that currently exists between women's labor force participation and the accommodation of family responsibilities: the so-called work/ family balance. Ongoing differences among countries have been accounted for by different explanatory factors that involve socio-economic, cultural and social policy dimensions. From a comparative perspective, the course is intended to cover recent debates, controversies, and research on family formation and family dilemmas in contemporary Spain.

Offered Fall Term

Type:

Classics Minor, Social & Intellectual HST

- **ENG-124 Great Books of the World II**

Credits:

4.00

Description:

This course will introduce students to a selection of Great Books from around the world from the 17th century to the 21st, such as Don Quixote (Spain), Madame Bovary (France), The Communist Manifesto (Germany), The Origin of Species (England), War and Peace (Russia), On Dreams (Austria), Night (Hungary), Things Fall Apart (Nigeria), Satyagraha (India), I Am Prepared to Die (South Africa), Saeed the Pessoptomist (Israel), The Rouge of the North (China), and The House of Spirits (Chile). Readings may vary at the discretion of the instructor.

Term:

Offered Spring Term

Type:

Social & Intellectual HST

- **ENG-266 Mad Men: Reading Visual Narratives**

Credits:

4.00

Description:

This course will focus on the cultural phenomenon of the TV Series Mad Men, considered by many to be the foremost example of Quality TV produced during the so-called golden age of television and engage with it on visual, cultural, literary and filmic levels. The basic premise of the course is that the current practice of binge watching one's favorite shows should be a heightened experience rather than a guilty pleasure, one akin to reading a novel. Watching a complex and sophisticated TV narrative involves taking into account the viewer's positionality as a filmic consumer, textual critic and social commentator. The class will consider various theoretical approaches to television narrative, beginning with ideas gleaned from

the discourse of visual literacy, and proceed by applying textual analysis adapted from the more traditional modes of literary studies and film analysis. A combination of critical and evaluative sources will be examined, including book-length studies of the series, individual essays based on the series' appeal to style, American popular culture, advertising, gender roles, race, and 60s nostalgia. Additionally, the recent phenomenon of the series recap will serve as the touchstone to the class's collective viewing of the series and students will be challenged to synthesize and assess these popular on-line critiques as they draft their own recaps and creative readings of the episodes. The entire first two seasons of Mad Men will be studied and the invaluable resource of director/producer commentaries will be incorporated into the study of the series with a view to acquiring critical insights and analytical skills that may be applied to other quality TV series that students currently enjoy watching.

Environmental Science:

- **UES-325 Environmental History of US**

Credits:

4.00

Description:

Explores how Americans have understood the environment and their relationship to it through analysis of classic environmental texts, historical contexts, and societal perspectives. Analyzes how the environment has changed from pre-colonial times to the present and how these changes have been described through the lens of environmental history. Themes include differing viewpoints of European and indigenous peoples toward the natural environment, the impacts of the Western expansion on native species and landscapes, the rise of industrialism and its impacts on natural resources and ecosystems, and the rise of 20th century environmentalism.

Term:

Alternates Fall & Spring

Philosophy:

- **PHIL-210 History of Ancient & Medieval Philosophy**

Credits:

4.00

Description:

The study of philosophical thought from the period of the ancient Greek philosophers through the Medieval thinkers, including such philosophers as Socrates, Plato, Aristotle, Epicurus, Zeno, Parmenides, Pythagoras, Protagoras, Augustine, Aquinas, Anselm, and Abelard. An introductory course designed to equip the student with a well grounded understanding and appreciation of Philosophy. 1 term - 4 credits. Normally offered every year.

Term:

Offered Fall Term

Type:

Classics Minor, Social & Intellectual HST

- **PHIL-219 Philosophy of Art**

Credits:

4.00

Description:

What counts as art? What is beauty? Are there objective standards of beauty? This course examines the nature of aesthetic experience, art, beauty, and creativity. Through the classic and contemporary readings, the students will be introduced to philosophical issues concerning the meaning of art, artistic representation, perceptions of art, interpretation, and criticism. Students will be encouraged to reflect on their own experience of art and explore the relationships among the artist, the audience, the artwork, and the world. 1 term - 4 credits. Normally offered every third year.

- **PHIL-250 Social & Political Philosophy**

Credits:

4.00

Description:

An examination of persistent debates in political and social philosophy, such as the meaning of property and welfare, the tensions between liberty and equality, censorship and freedom of expression, the relation of church and state, the possibility of political education and civic virtue, legitimacy of the state and revolution, war and problems of end and means, addressing historic injustice, such as racism, genocide, or sexism, among other topics. The class will focus on no more than two such themes. Students will read both classic and contemporary writings to address both the historical roots and the contemporary treatment of these questions. 1 term - 4 credits. Normally offered every year.

Term:

Occasional

Type:

Social & Intellectual HST

Theatre:

- **THETR-260 Broadway Musicals**

Credits:

4.00

Description:

This course is a survey of American musical theatre from its roots in the mid-19th century to the present. It provides the analytical tools and historical insight to more fully appreciate Broadway's greatest musicals and musical theatre artists. Students will explore the ways in which American forms of popular entertainment helped to shape Broadway musicals from their infancy through their adulthood. The course also explores the ways in which musicals provided opportunities for African-Americans, women, immigrants, and the GLBT community.

Term:

Offered Fall Term

- **THETR-266 Intro to Theatre: 20th Century**

Credits:

4.00

Description:

Picking up chronologically where THETR 225 leaves off, this survey course is designed to provide students with an understanding of modern Western theatre. Beginning with a melodrama, plays will include representative works of realism, naturalism, expressionism, epic theatre, theatre of cruelty, theatre of the absurd, and metatheatricality. Lectures and class discussions will explore how these concepts translate to acting and production techniques as well as what they imply as artistic responses to a modern and post-modern world. Satisfies a core requirement for Theatre Majors.

Credits:

4.00

Description:

Investigates the complex intersections between feminism and popular culture through several different lenses: by exploring, how feminists make arguments about popular culture; by looking at the complexities of public femininity in today's popular culture, including figures such as Lady Gaga and Katy Perry and television shows like The Bachelor and Grey's Anatomy; by focusing on a variety of articulations of feminism within mass media, blogs, social media, and popular books such as Ariel Levy's Female Chauvinist Pigs, and Caitlin Moran's How to Be a Woman. Along the way we will ask questions about: what makes a work of art feminist; how modern media contributes to or distracts us from a variety of political debates in the realm of female equality and how can we, as individuals, use modern media to create and advance smart, feminist arguments.

Type:

Social & Intellectual HST

• WGS-315 Feminist Thought

Credits:

4.00

Description:

Investigates how feminists, both today and in history, have understood inequality and difference and looked for the best ways to address these issues and bring about social justice. Examines how feminist theorists help us to understand how gender and other social categories, such as race, class, sexuality, disability, age and nationality, are constructed within and through each other; and analyzes feminist engagements with liberalism, socialism, psychoanalysis, existentialism, post-colonialism, critical race theory, and queer theory, as well as consider anti-feminist arguments. Readings include classic critical texts by authors including Mary Wollstonecraft, Emma Goldman, Virginia Woolf, Chandra Mohanty, Gloria Anzaldua, and Judith Butler.

Type:

Social & Intellectual HST

• WGS-335 Queer Narratives

Credits:

4.00

Description:

Explores the stories that help us to understand communities, identities, and bodies that could be considered queer, and the ways that film, music, memoir and fiction have discussed queer as different, unusual, or other. Texts include the documentary, "Paris Is Burning", Frank Ocean's 2012 album, "Channel Orange", and Janet Mock's recent memoir, "Redefining Realness", as well as foundational queer theory from Judith Butler, Eve Kosofsky Sedgwick, and Lee Edelman, among others, to help build a framework for approaching and interpreting both fictional and non-fictional accounts of queer lives.

First Year Experience: 1 course, 1 credit

Students with 15+ transfer credits of college or university work are exempt.

Choose one of the following to be completed during the first semester of matriculation:

- **CAS-101 Strategies of Success**

Prerequisites:

CAS students only. SBS students by special permission.

Credits:

1.00

Description:

CAS 101 is a one-credit course that meets once a week and is designed to help you have a successful transition to Suffolk University and our unique urban community. It is also designed to introduce you to the principles and concepts of Oral Communication and Presentation Skills. Through interactive exercises and engaging assignments, you will explore the campus environment and learn about strategies for success as a student. You will present speeches about your research and activities to improve your abilities as a speaker.

- **ADPR-102 Professional Development**

Prerequisites:

ADPR-101 must be taken concurrently

Credits:

1.00

Description:

In this hands-on experiential course, students examine potential career paths in Advertising, Public Relations, and Social Media, become oriented to the university and the surrounding Boston area, and identify professional resources in Boston that foster career development.

Major Requirements: 8 courses, 32 credits

Minimum Total Credits Required for Degree Conferral: 64 credits

Choose one Seminar for Freshmen course from those listed below:

- **SF-101 Fixing the World- Energy and Water: The Science of Solutions**

Credits:

4.00

Description:

Two of the most daunting challenges the world faces (or will face) is how to provide for both its growing energy needs and potable drinking water. Regular news events include climate change, droughts, flooding, and petroleum struggles. Human nature often requires a severe crisis before it responds. This course will investigate the historical science driving the use of energy since the Industrial Revolution to convert energy resources into work, including the steam engine, the electric motor, and the internal combustion engine. It will also consider alternative energy options to fossil fuels, such as solar, wind, geothermal, and ocean power. Along the way we will consider the evidence for Global Warming and Climate Change. We will look into human nature, simple life styles, conspiracy theories, and the influence of those in power to shape human opinion. We will also consider how our water supply is provided and where it goes after being used. What options do developing countries or drought racked areas have to remedy their water needs? Although the course pursues a scientific understanding of these issues, the mathematics used will be gentle, and a larger emphasis will be placed on the intuitive appreciation of these concerns.

- **SF-116 Enlightened Insanity**

Credits:

4.00

Description:

Rain or shine, the great 18th century Enlightenment philosophers would meet at the famous cafes of Paris to discuss their ideas, and to observe and criticize society. From these informal debates emerged ideas that are at the core of our modern understanding of the nature of society, marginality, human nature, civil rights, the essence of creativity and genius. Come join us in the quest to understand, define, observe, and analyze the key ideas and concepts of these great thinkers, such as Rousseau, Diderot, and Voltaire, still so relevant in our time. We will read key works of these creative thinkers and philosophers. We will enrich our experience and understanding through the use of film, theatre performances, museum visits, as well as the occasional cafe debate.

- **SF-126 The Boston Theatre Scene: the Inside Experience**

Credits:

4.00

Description:

Using the current Boston theatre season as its syllabus, this writing- and analysis-intensive course will explore several plays in production at some of Boston's many professional theatres. We will study the script of four to five plays before attending performances of those works. Students will gain insights on the world of theatre through backstage tours and conversations with theatre professionals such as producers, directors, actors, designers, playwrights, and critics. Students must be available for evening (usually Wednesday) performances. A fee for student-rate tickets will be assessed.

- **SF-132 The Beatles: Here, There & Everywhere**

Credits:

4.00

Description:

This seminar will investigate the impact and legacy of the Beatles. The Fab Four deserve our scholarly attention as musical innovators and as cultural avatars of the 1960s, an era that still exerts influence today. We will examine the many ways in which the Beatles rocked the establishment and became defining figures in post-war youth culture. We will also discuss other media (the visual arts, film, fashion, style) and fields of study (mass media, marketing, recording technology, copyright law, English history) using the Beatles as our guides.

- **SF-151 Getting Over It: Dealing With the Aftermath of Group Conflict/Mass Atrocity**

Credits:

4.00

Description:

Once violent conflict between two groups has ended, what is the best way to transition back to normality coming to terms with the past or simply moving on? To answer these questions we will examine the debates surrounding war crime tribunals, truth commissions, lustration policies, and reparations in the second half of the 20th century. Case studies will include post-apartheid South Africa, post-WWII Germany, and the Israeli/Palestinian conflict. We will discuss the philosophical problems raised by each of these instruments, as well as on the political, legal, and practical difficulties their implementation present. Cultural Diversity B

- **SF-156 The Mask Behind the Face: Personas, Personalities, and Perception. Acting in /Out Life**

Credits:

4.00

Description:

The theatre has always been a metaphor for life. In modern times life has become theatre. This seminar will confront the idea of real life and the eroding boundary between performers and audience. Students will study the roots of the contemporary obsession with stars and stardom, a mania that began in the 18th century and flourished in the 19th century. We will look at performance studies, performers memoirs, plays, and films that dramatize this dilemma.

- **SF-173 Crime in American Society**

Credits:

4.00

Description:

Popular beliefs about crime are often inspired by the media and by specific criminological theories. These theories about and media images of crime will be examined in detail, including the hits and misses.

- **SF-174 Tragedy and Literature**

Credits:

4.00

Description:

This course will focus on classic works of ancient and modern literature that examine the human condition from a tragic perspective. We will concentrate on close readings from the following texts: Homer's Iliad, Sophocles' Antigone, The Bhagavad-Gita, Shakespeare's Othello, Chekhov's short stories, and Joyce's Dubliners.

Type:

Classics Minor

- **SF-175 War and Apocalypse in Science Fiction**

Credits:

4.00

- **SF-178 Sacred Hoops & Sneaker Pimps: Understanding the American Hoop Dream**

Credits:

4.00

Description:

This course is about the basketball hoop dream played out at the high school and college levels. We will study a wide variety of materials - novels, films, websites, reference works - to understand both the construction, and destruction, of the hoop dream in such diverse places as New York City, Seattle, rural Indiana, suburban Georgia, and the Wind River Reservation in Wyoming. Issues of race and culture will serve as guiding themes as we develop critical theory explaining why the hoop dream has persisted, and adapted, over time, to fit the needs of its believers and supporters.

- **SF-182 Heroes, Antiheroes and Outsiders: Reading the Graphic Novel**

Credits:

4.00

Description:

How is it that comics", a genre often viewed as entertainment for children and adolescents, has become one of the most exciting forms of narrative and visual art? To answer this question, this seminar will examine a range of graphic novels, from those that celebrate their origins in superhero comics, such as Alan Moore's *Watchmen*, to those that treat subjects not usually considered proper to the comics genre, such as Art Spiegelman's *Maus*, about the Holocaust, and Alison Bechdel's *Fun Home*, about the complexities of sexual identity. As we read these works, we will look at how the combination of words and still images makes the graphic novel a unique storytelling form, as well as how artists and writers push the envelope to create new styles and challenge our expectations. In addition to class discussions and writing assignments, we will take a field trip to the Museum of Fine Arts and create a collaborative group graphic novel step-by-step over the course of the semester (all abilities welcome).

- **SF-183 Politics, Power and the Media**

Credits:

4.00

Description:

Is there a relationship between accumulated political power and mass media representations? Is news content impacted by existing political power relations? It is the object of this course to critically analyze the role of the mass media within the framework of existing political power relations in the United States. In particular, the course will focus on the role the mass media plays in promoting and reinforcing dominant political practices and

ideologies. The course will begin by exploring various theories of the press, notably its function in a democratic society, as well as the concepts of power and propaganda. We will continue with a series of case studies, complemented by secondary sources that highlight how media representations affect the contemporary distribution of political power in the US. Topics of discussion will include the current US war on terrorism, the ongoing health care debate, the public disavowal of big government", and the concept of a liberal media.

- **SF-189 American Gothic: Edgar Allan Poe, Flannery O'Connor and Annie Proulx**

Credits:

4.00

Description:

This literature seminar will study and compare the short stories of Edgar Allan Poe, Flannery O'Connor, and Annie Proulx. Beginning with Poe as the father of the short story genre in America and exploring his critical theory of the grotesque and arabesque", the class will examine the emergence of the gothic literary idiom as a classic American genre. Critical essays on the gothic aesthetic will be analyzed and film adaptations and documentaries will be viewed.

- **SF-190 Asia in America Fiction and Fact**

Credits:

4.00

Description:

With a focus on some selected ethnic groups from Asia, Asia in America studies the history and current status of Asian Americans in Boston and other parts of the country. We will examine the major reasons why these immigrants chose to leave their home country as well as their expectations and experiences here in America. We will also discuss the issues Asian immigrants have faced in this adopted home as well as the connections and conflicts among different ethnic groups or even within the same ethnic group due to political and socio-economic reasons. The course will include some level of community engagement, through Chinatown tour and service, which may enable us to have a direct contact with the Asian American population and reflect on what is being discussed in class. Through this course, we hope to gain a better understanding of the racial and cultural history of the country and arrive at a deep appreciation of the dynamics of cultural interactions in the twenty-first century. The course fulfills the SCGP requirement.

Type:

Global Engagement Experience

- **SF-191 Film Adaptation Film Adaptation**

Credits:

4.00

Description:

Why did they change the ending of the book? The novel is so much better! We will explore the concept and industry of film adaptation. Students will read novels and watch respective film adaptations to explore how the written word is adapted to the screen; both fiction and non-fiction works will be considered. Also, field trips to past film locations in Boston will be taken to explore why specific settings were chosen for respective situations. Additionally, students will create their own written adaptations of source materials, putting into practice the concepts studied in class.

- **SF-197 Sustainability, Energy, and Technology At Suffolk University**

Credits:

4.00

Description:

In this project and team-based course, students study a sustainability problem at Suffolk University and spend the semester developing proposals to address the problem. At the end of the course students will present their proposals to Suffolk University's sustainability committee, and will exhibit their websites and visual aids in the Donahue lobby to educate the Suffolk community about sustainability. If their proposals are well-researched and well-communicated, students can see their ideas actualized while they are still undergraduates.

- **SF-198 Music and the Brain**

Credits:

4.00

Description:

What accounts for the power of music to move us so profoundly? This course explores how our brains and music evolved together: What music can teach us about the brain, what the brain can teach us about music, and what both can teach us about ourselves.

- **SF-199 Unfolding the European Union**

Credits:

4.00

Description:

The EU is a powerful political, economic and cultural block that is meant to play a major role, together with the USA and China, in the creation of a new post-crisis world order. The seminar is intended to cover, at a basic but reachable level, the history, the politics, the culture and the functions of the EU in the beginning of the Twentieth Century. An extraordinary experiment of sociopolitical engineering, comparable to that of the United States of America, the EU has been changing the life of an increasing number of Europeans for over 50 years. No American student could afford to ignore the inner structure as well as the particular peculiarities of such inclusive supranational organization in today's world. Issues as institutional functioning, problems derived from individual state sovereignty, economic coordination to face common challenges, cultural integration, future enlargement, etc. are all indispensable to understand the way in which Europe is changing. But also much more day-to-day issues, such as travel mobility, education exchange programs, citizen's participation, supranational networks of people in the arts or in business, unified labor market, gender participation, human rights, consumer's protection, etc. are all in the process of developing a more robust and functional European Citizenship.

- **SF-1110 Decoding Boston: Signs and the City**

Credits:

4.00

Description:

This interdisciplinary seminar will explore the buildings, monuments, sites, and signs around Boston from the point of view of Visual and Culture Studies. In addition to providing a compelling introduction to the history, major landmarks, and culture of the city, the seminar is specifically intended to improve students' visual literacy: that is, their awareness of their visual environment and their ability to critically analyze the rhetoric of the spaces, buildings, and images with which they are surrounded.

Type:

Local Engagement Experience

- **SF-1122 The Ethics of Peace and War: From The Ancient World to the Present**

Credits:

4.00

Description:

This course will explore historical, ethical and political issues concerned with matters of peace and war. We will examine a variety of different texts: religious, historical, philosophical and literary, but the main emphasis will be philosophical justifications for war and philosophical visions of just peace, with an eye to contemporary questions in the War on Terror. To the extent that we use non-philosophical texts, this will be in the service of focusing the imagination on the philosophical issues and applying theoretical frameworks to historical events.

- **SF-1127 The Vietnam and Iraq Wars: Polarized Perspectives**

Credits:

4.00

Description:

This class will examine some of the many controversies surrounding the Vietnam and Iraq Wars, two conflicts that have been profoundly polarizing for the American people. There are widely divergent perspectives regarding the fundamental questions surrounding each war. Were the reasons for American involvement just? To what extent were the methods used by the United States military during each war just? To what extent did the media play an appropriate role before, during, and after each war? Did opposition to these wars serve primarily to benefit the enemies of the United States or did it constitute a form of patriotism and love of country? This interdisciplinary course will address these and other complex questions by examining the histories, literature, and films (both documentaries and dramatic) that have been produced in response to these wars.

- **SF-1128 Sustainable Media**

Credits:

4.00

Description:

Contrary to a popular perception that information, communication and entertainment technologies are clean, ecologically benign and paperless, the reality of an increasingly digital life is that our fascination with the next best thing in mobile phones, video game consoles, personal computers, digital cameras, tablets, etc., has devastating impacts on our environment. These media devices are manufactured using toxic ingredients in poisonous working condition, require an abundance of energy to operate, and create hazardous waste when disposed. Media technology companies and the advertising industry that markets their wares have successfully persuaded consumers to accept rapid obsolescence and to highly anticipate the latest upgrade. But some consumers, electronics manufacturers, policy makers, and environmental groups are working to change the culture of consumption in favor of sustainable media practices that lessen the environmental footprint of the digital devices we use everyday. The purpose of this course is to understand the problem of unsustainable media, and the possible solutions for a sustainable media system.

- **SF-1129 Beacon Hill: Fact, Fiction, and Fantasy**

Credits:

4.00

Description:

The course will explore the physical geography, history, and image in literature, film, and pop culture of Suffolk University's Beacon Hill neighborhood. The purpose and objective of the course is to provide students with a deep knowledge, understanding, and appreciation of Beacon Hill through examination of written and visual sources, and feet-on and eyes-on experience of the public parts of the Hill.

Type:

Local Engagement Experience

- **SF-1133 Problems and Solutions in Early American History**

Credits:

4.00

Description:

This course will examine four major problems in the early American republic: forming a government; bridging vast distances on the American continent; slavery; international relations. We will explore the various proposed solutions to these problems. Some of the solutions worked well, others were more disastrous than the initial problem. We will read primary documents pertaining to these issues, and try to imagine how men and women considering the problems might have responded to them. What solutions could be proposed? What solutions would work? What were the political, economic, or social difficulties generated by the problem and by the proposed solutions? In considering the problems, we will also learn how to use the various archives close at hand: the Sawyer Library, the Boston Public Library, the Massachusetts Historical Society, and the Massachusetts State Archives. Students will also post their findings on a class blog, and present their work to one another in class.

- **SF-1134 The Meaning of Life**

Credits:

4.00

Description:

What do we live for? Which beliefs, values, and experiences sustain meaningful, fulfilling existence? Are we authors of our destinies or powerless pawns in an unfathomable cosmic game? Does death render all our efforts superfluous? This award-winning course offers a cross-cultural,

interdisciplinary exploration of these questions through philosophical and religious texts, art, fiction, autobiography, and psychological studies. The course opens with the Old Testament's book of Ecclesiastes, followed by three units: 1) A Life Worth Living: Humanity's Ideals focuses on the ancient and modern visions of human flourishing; 2) Threats to Meaning: Humanity's Discontents, discusses the disillusionments leading to the loss of meaning; and 3) Recovery of Meaning: Crises and Hopes, explores the post-crisis possibilities of self-discovery and growth. Please visit <http://meaningoflife.cherkasova.org/>

- **SF-1135 Women Warriors: Stories of Captivity, Conversion, and Confession**

Credits:

4.00

Description:

Since the beginning of time, women have been doing battle to themselves, while men have gone to battle against others. Whether it is through converting to Christ, yielding to captors in order to survive, or carrying a baby, this course introduces students to the many ways in which, whatever battles they face, women are warriors; they survive. Utilizing an array of captivity, conversion, and confession narratives by women, and pairing them across the centuries, students will make connections and draw conclusions between early-and mid-19th-century-American and contemporary women. Students will connect, for example, the trials of the 17th-century Puritan captive, Mary Rowlandson, and contemporary hostage, Elizabeth Smart, to explore how women (no matter how different they seem) draw upon unique inner resources to survive.

- **SF-1141 Classical Civilizations: Pathways to Wisdom**

Credits:

4.00

Description:

How is it that the knowledge, intelligence, wisdom and values of the Greeks and Romans still educate and edify the world by providing venues towards leading fulfilling and dignified lives? The guiding principles of their respective civilizations rested upon eight pillars: - Humanism: It was recognized that humans have the potential to master their world and live life to the fullest. -The Pursuit of Excellence: To imagine the highest good and strive to attain it. - Self Knowledge: It is imperative to know oneself before seeking to know the world. - Rationalism: Always question, reason and discern truth from falsehood and never consider any matter superficially. - Restless Curiosity: Often the resolution of one issue leads to the revelations of others mysteries and pursuits which compels further investigation. The wise individual makes this a lifelong endeavor. -Love of Freedom: As long as one brings no harm to others, one must be free to live and discover as much as possible. - Individualism: All are unique and, therefore, must recognize individual strengths and identity. -The Practice of Moderation: The prudence of avoiding extremes in personal and social conduct. In this course, students will read two (brief) texts on the Greek and Roman contributions to the world and then will proceed with specific readings which illuminate the eight principles above for achieving the good life.

- **SF-1143 In the First-Person: Storytelling in the 21st Century**

Credits:

4.00

Description:

This section of the Seminar for Freshmen will consider the forms, venues, and impacts of narrative nonfiction in contemporary culture. From the exploding popularity of personal essays in the digital age to the living, evolving essays we create on social media, we are constantly narrating and archiving our lives, shaping their content for specific audiences. In doing so, we shape what our experiences mean and represent. In order to analyze the power of narrative nonfiction, we will look at a variety of multimodal texts: essays, podcasts, Instagram and Twitter feeds, stand-up comedy, and storytelling slams, as well historical texts such as the essays of Michel de Montaigne and historical artifacts at the National Archives in Boston. We will also write our own narrative nonfiction, and adapt our first-person stories for listening and viewing audiences, such as the MassMouth story slam and podcasts like This American Life. Additionally, we will practice narrative nonfiction for professional audiences, using storytelling as a way to showcase personal strengths to employers, internship coordinators, and the like.

- **SF-1144 Native Americans: Walking in Two Worlds?**

Credits:

4.00

Description:

Native Americans are often described as walking in two worlds, as they attempt to navigate the process of maintaining their tribal identity and heritage while living in mainstream America. In recent years there has been a shift towards tradition and heritage, and a rejection of Western values and norms in both the US and Canada. In this course we will look at how Native people live in the US and Canada today, and examine the extent to which they are either trying to walk in two worlds or perhaps rejecting the two worlds model. To help us answer this question, we will read about reservation life, the Idle No More Movement, Indigenous History, and current events. We will also watch videos and explore indigenous culture.

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

- **SF-1146 Fido the Friendly Wolf: A Natural History of Dogs**

Credits:

4.00

Description:

This course explores the evolution of dogs from wolves and the ways in which dogs have adapted to their niche in human society. The ecology, behavior, genetics, and adaptations of dogs will be explored in relation to both their wolf ancestry and artificial selection by humans. The course includes 2 mandatory field trips to a wolf sanctuary and an animal shelter.

- **SF-1147 Global (In) Security: From ISIS to Ebola**

Credits:

4.00

Description:

This course reviews the principal features of global and national security as it is currently practiced by tracing the evolution of theories, policies and circumstances whereby current international security is developed. Students will evaluate the nature and origins of war, arms proliferation, military instability, terrorism, genocide, health threats and natural resources depletion.

- **SF-1148 Brave New Worlds**

Credits:

4.00

Description:

Explores themes of adventure, self-discovery, exile, and culture shock in classic and contemporary travel writing (including fiction, poetry, and non-fiction) as well as film. Students will experiment with creative writing of their own, develop theories of cosmopolitan world citizenship, travel through the city of Boston on field trips, and team up to learn about different countries in Suffolk's global network of study abroad programs.

- **SF-1150 Religion in Contemporary Society**

Credits:

4.00

Description:

This course is design to provide students with an overview of the social settings and cultural meanings of religion in the contemporary world. Topics that will be covered in reading and discussions include the rise of religious fundamentalism, religion and violence, women's and men's religious experiences, new religions, and portrayals of religion in popular films. In addition to the readings, students will observe and experience religious expressions and activities through fieldwork assignments. The emphasis on films and fieldwork reflects my belief that religion is made up of lived experiences of actual individuals and communities. In order to understand religion in contemporary society we will make every effort to see (in person or in film) a wide range of religious activities. The films we will see include some of the following: Leap of Faith, Devil's Playground, Kadosh, Women of Hizballah, Singing Stream, A Still Small Voice.

- **SF-1151 Reproduction and Society**

Credits:

4.00

Description:

This course explores relationships between reproductive health and rights both nationally and internationally. Many of our topics fit into two broad areas: conflicts over the control of childbearing (sterilization abuse, birth control, and abortion) and conflicts over who deserves to be a mother, especially when the mothers in question face social stigma and lack political power. Other topics include safe birth and maternal mortality, breastfeeding, infertility and reproductive technology. We also examine the politics of women's sexual and reproductive autonomy, including the policies that shape women's choices to prevent, achieve, abort, or carry to term a pregnancy. Throughout, we are guided by the following questions: Why is reproduction an important site through which to understand society? How do statuses such as race, class, gender, sexuality and ability influence people's reproductive possibilities? What is the role of the state in shaping these experiences? How have communities supported or resisted efforts at reproductive control? Why is reproductive justice central to these answers?

- **SF-1152 The Idea of America: Past, Present, Future**

Credits:

4.00

Description:

A systematic exploration of thinking of and about America, from the founding of the republic to American issues and traditions of thought that reflect upon the founding principles and the unfolding American experiment. The Declaration of Independence and the Constitution will be studied with an eye to their philosophical content and sources. The course will also examine works of philosophers and other thinkers who address conflicts over the meaning of founding principles in the course of the nation's history, from the struggle over slavery to America's contemporary role in the world. Because this course intends to apply theoretical understanding to real life, students will be expected to read contemporary journalism on a regular basis and assess the controversies of today in the light of the nation's philosophical and historical currents.

• SF-1153 Law, Disease, and Public Health

Credits:

4.00

Description:

This course is about public health law, which is the study of the legal powers and duties of the various systems of government in the United States (federal, state, and local) in collaboration with their partners (e.g., health care, business, the community, the media, and academe), to ensure the conditions for people to be healthy (to identify, prevent, and ameliorate risks to health in the population), and of the limitations on the power of these systems of government to constrain for the common good the autonomy, privacy, liberty, proprietary, and other legally protected interests of individuals. The prime objective of public health law is to pursue the highest possible level of physical and mental health in the population, consistent with the values of social justice. The course will focus especially on public health law in the area of epidemic disease. Case studies will be made of the Great Influenza of 1918 and the origins and spread of the Ebola virus, culminating in an examination of outbreaks of Ebola in the United States.

• SF-1154 Introduction to Visual Studies

Credits:

4.00

Description:

This seminar provides an introduction to Visual Studies, a relatively new interdisciplinary field that examines how images communicate and the roles that they play in society. Students will apply the concepts and techniques of Visual Studies to analyze sites and signs around Boston, such as advertisements, street signs, fashions, newspaper photographs, buildings, and public spaces. Class projects will increase students' awareness of their visual environment and their ability to critically analyze the visual rhetoric that surrounds us and is often used to manipulate us.

Type:

- **SF-1155 The Boston Olympics**

Credits:

4.00

Description:

This class will teach students about the key role that sporting events can play in building a city, building its brand and the politics surrounding the process of these things occurring. Topics may include: urban development in general and the transformation of the industrial to the post-industrial Boston; the way in which cities use events like the Olympics to build their place brands; the way an effort like the Olympics can be used to encourage large scale public investment in longer term infrastructure projects that otherwise might not be justifiable; and the way government works with interest and community groups to try to shape public policy.

- **SF-1156 Thinking About the Insanity Defense**

Credits:

4.00

Description:

This course examines sixteen case examples providing a clear and compelling introduction to one of the most important topics in the relation between public policy and law. This course addresses: the history of the insanity defense; the effects of different standards for determining insanity; the arguments for its retention; abolition, and revision; media and other responses to it; and the controversies around pre and post conviction commitment. The case examples illustrates a variety of outcomes and include individuals who were found not guilty by reason of insanity; found guilty even though mentally ill; and not charged because of mental illness.

- **SF-1157 Germany in Film and History, 1945-2015**

Credits:

4.00

Description:

Since 1945, Germany has had a lot of history to reckon with- and 21st century Germany history through film, newsreels and other archival footage, radio and TV shows, war memorials and museums built since 1945, novels, published diaries, and memoirs. We will also read recent historical scholarship to put these cultural texts in context. Topics include the representation, in film and other texts; of: post-war rebuilding, the German Economic Miracle; the building of the Berlin Wall; radical politics of the 1960s and 1970s; coming to terms since 1945 with Germany's Nazi past and the Holocaust; coming to terms since 1990 with the Stasi and East German past; Ostalgie (nostalgia in the 21st century for some aspects of East German socialism); the multicultural society that is Germany today, with new Turkish, Greek, Russian, Arab, and even Israeli communities.

- **SF-1158 Global Climate Change**

Credits:

4.00

Description:

Conversation about the weather is considered to be the universal icebreaker. Yesterday's sweltering heat, the storm predicted for this weekend, even long-term climate shifts find their way in our daily conversation. Today, however, such casual conversations have an edge to them, because we are realizing that humans play a role in determining the climate shift. In fact, understanding the human fingerprint in the Arctic tundra melting, or a devastating hurricane, has gone well-beyond small talk to become one of the most important challenges our society faces today, and on that is wedded to geopolitics. To meaningfully participate in any dialogue that addresses this challenge people have to be aware of certain key ideas of Physics and Planetary Science. The aim of this course is to provide you with some of the essential facts and pieces of science underlying such questions. This course will enable you to grasp many of the issues that dominate today's political discourse and to develop an informed opinion (your, not our!) for which you can rationally argue.

- **SF-1160 Individuals and Society in the Zombie Apocalypse**

Prerequisites:

CAS Freshmen Only

Credits:

4.00

Description:

The Walking Dead tells viewers that life in the zombie apocalypse requires people to fight the dead, fear the living. Sociologists want to know why we should fear the living. How do individuals come together and try to recreate society for themselves: either to build community or fight other groups? What role do morals and values have in a society? How does all of this determine life, death, and the struggles people must face? Questions like

these will give our class a new view of The Walking Dead and can help us to learn more about the society that we live in where so far the dead have remained in the ground.

- **SF-1162 Space Missions: From Moon to Mars and Beyond**

Credits:

4.00

Description:

It is hard to believe that only 60 years ago, our only close-up view of a planetary body was that of Earth. We are truly living in the Golden Age of Space Exploration, when a new mission every few years brings us spectacular images from either a neighbor in the solar system or galaxies at the edge of the universe. This course will describe the dozen space missions that changed our view of the universe, ranging from our solar system to the most distant galaxies.

- **SF-1163 Spellbound! Witches, Wizards and Spirits In American Literature**

Credits:

4.00

- **SF-1164 Reinventing Europe: Beyond Brexit and Secular Stagnation**

Credits:

4.00

Description:

While newspaper headlines focus on the multiple problems Europe is facing today, the evolving adaptation of European nation states and the integration process receive less attention. Brexit and economic crises seem to be synonymous of Europe today, but facts such as the European Union accepting five new members in the coming five years or Europe being the most advanced environmental actor or the main international provider of official aid are often ignored by public opinion. This Seminar for Freshman examines the dynamic evolution of the integration process in Europe in the context of globalization. Three sections articulate the main debates and tensions in the interplay between national and supranational institutions and policies. The first part analyzes how eight European countries have forged their national preferences to delineate their level of immersion in the integration process; it later proceeds with the examination of the main historical events in the history of the integration process. The second part explores the functioning of the EU institutions in order to grasp the essence of the complex policy-making in the Europe of 28 members. The third and

final section presents the analysis of the main areas of the EU policy making such as agriculture, monetary and economic issues, among others, and observes the main developments in the area of EU external relations.

- **SF-1165 History of Boston**

Credits:

4.00

- **SF-1166 Cinema-Monde: Global Challenges on Film**

Credits:

4.00

Description:

This course focuses on French-language films - with subtitles! - that address pressing social issues of the 20th and 21st centuries, such as hunger, female genital mutilation, immigration, racism, economic inequality, genocide, gender, sexuality, colonialism and post-colonialism.

- **SF-1167 Fantasy Fiction: Imaginary Worlds**

Credits:

4.00

- **SF-1168 The Real Thing: the Pursuit and Problems Of Authenticity**

Credits:

4.00

Description:

This course will focus on the concept of authenticity in American culture, from its origins in the early 19th century to the present. When the advertising gurus of Coca-Cola branded it as "The Real Thing," they were exploiting something powerful: the idea of something real, stripped of any falsity or illusion. Humans have always desired to know the world and others as they really are," but this desire is particularly strong in the modern world: witness the eagerness to discover one's true self," cut through the B.S., obtain the genuine article, and live authentically. In this course we will

interrogate this pursuit of the Real Thing. In various ways, the texts we study both embrace authenticity as an ideal and also question its goodness, usefulness, or even its very possibility. We will thus confront a number of interrelated questions: Where does this desire for authenticity come from? What counts as authenticity," in life and in art? Is authenticity really a virtue to live by? How does it shape artistic and literary expression? Is there even such a thing as the real you This course will be divided into three units. In the first unit, Counterfeiters and Self-Made Men," we will study how a commitment to authenticity arises in antebellum American literature and culture during a time of rapid national expansion and invention. Readings will include texts by Henry David Thoreau, Ralph Waldo Emerson, Herman Melville, and P.T. Barnum. In the second unit, Authenticity and Contamination,"we will consider two major ways in which authenticity becomes idealized around the turn of the 20th century: as artistic ideal set against fears of mass cultural production, and as a cultural ideal set against fears of racial and cultural mixing. Readings will include texts by Ernest Hemingway, Nella Larsen, Jean Toomer, and William Carlos Williams. In Unit Three, Buying and Selling Authenticity," we will examine how authenticity becomes commodified (

- **SF-1169 Immortality: Real and Imagined**

Credits:

4.00

Description:

Most of the world's religious traditions have as a part of their doctrines some notion of immortality, rendered both in scriptures as well as iconographically. What precisely is entailed by immortality and why does it constitute such a significant element of so many religious traditions? What can we learn about immortality by investigating various conceptions of the afterlife? Is immortality truly a desirable thing? These questions among others will be examined from the perspectives of philosophy, religion, psychology, anthropology, and biology. Besides being cross-disciplinary, the course will be multi-media in nature. In addition to reading philosophical and religious texts concerning the nature of immortality, students will study various accounts of immortality and the afterlife, examine how the afterlife has been dealt with in (visual) art, literature, and film, and investigate current research into life prolongation (biomedical gerontology).

- **SF-1170 From Philia to Facebook: the Meaning of Friendship**

Credits:

4.00

Description:

The thematic focus of this seminar will be friendship. Friendship is one of the most important of human relationships; one that every student in this seminar has already participated in for many years. It shapes who we are and helps determine who we may become. And while it is a universal phenomenon, it has been practiced quite differently at various times and places in human history. And while we all have an intimate, personal and practical knowledge of friendship through our own experiences, sometimes things that are so close and so obvious to us can be hard to see. Over the course of the semester we will inquire into friendship from many different angles, trying to gain both a broader and a deeper understanding than our

own individual experience allows. We will look at friendship first through the lens of philosophy, particularly through the foundational text of Aristotle, The Nicomachean Ethics. We will look at other views of friendship from the ancient world, starting in the past to help us see that friendship has not always been thought of the way we think of it now. After this initial foundation is laid, we will examine other writers and thinkers and take up additional topics like friendship in different cultures, friendship and gender, friendship in and through the arts and include an examination of friendship through the lenses of many different academic disciplines to see how other systematic thinkers conceive of friendship. All along we will be comparing and contrasting with our own personal experiences and considering what modern technology, such as social networking sites, has done to influence friendship, in the way we practice it and the way we conceive it. It is the aim of this class that students not just study different academic points of view, but that they take up the questions and challenges that these thinkers present to them and fully engage with them on a meaningful personal level.

- **SF-1171 Living on and Beyond the Hyphen/Latino Writers in the USA**

Credits:

4.00

Description:

Hyphenated-Americans of Latino origin come from many places and backgrounds. Often perceived as a divide, an either/or that separates and distinguishes one ethnic group from another, the hyphen can also be viewed as a link that connects, integrates and facilitates the formation of new cultural spaces. Through films and written narratives by and about U.S.A. Latino(a)(x)-Americans, students will examine how individuals who live on the threshold between two languages and cultures embrace the challenge of preserving their own identity and moving beyond stereotypes. Each of the Latino/a/x authors that we will read in this course will describe his/her own experiences living in the U.S.A. By examining their views through our own filtered lens we shall try to answer questions like the following: 1. What role does language have in our definition/understanding of cultural identity? 2. How do individuals move beyond the hyphen and stop seeing themselves as hybrids? 3. How can an individual who does not belong to a marginalized group (i.e. one considered less powerful and secondary) understand and empathize with those who do? 4. How does globalization affect the dichotomies that arise in bi-cultural and multi-cultural communities?

- **SF-1172 The United States Mexican Border**

Credits:

4.00

Description:

One hundred and sixty nine years have passed since the Treaty of Guadalupe Hidalgo was signed. It is only fitting to analyze the profound changes that the gain/loss of these territories caused for the citizens of both sides of the border. This course will explore the literature, culture, and history of the United States-Mexican Border and the most pressing problems pertaining to the region. Emphasis will be on contemporary border theater and film. The works of Salcedo, Galindo, Lopez and others will be studied as well as contemporary films and documentaries such as Alambriata, Senorita Extraviada, The Gatekeeper, Sin Nombre, Wetback: the Undocumented Documentary, Victoria para Chino, Which Way Home, and much more. There

are no prerequisites for this course. Though the course is conducted in English, parallel readings in Spanish will be made available to those who wish to read and/or compare the original texts.

Students in the CAS Honors Program should choose one Seminar for Freshmen course from those listed below:

- **SF-H101 Fixing the World- Energy and Water: The Science of Solutions**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

Two of the most daunting challenges the world faces (or will face) is how to provide for both its growing energy needs and potable drinking water. Regular news events include climate change, droughts, flooding, and petroleum struggles. Human nature often requires a severe crisis before it responds. This course will investigate the historical science driving the use of energy since the Industrial Revolution to convert energy resources into work, including the steam engine, the electric motor, and the internal combustion engine. It will also consider alternative energy options to fossil fuels, such as solar, wind, geothermal, and ocean power. Along the way we will consider the evidence for Global Warming and Climate Change. We will look into human nature, simple life styles, conspiracy theories, and the influence of those in power to shape human opinion. We will also consider how our water supply is provided and where it goes after being used. What options do developing countries or drought racked areas have to remedy their water needs? Although the course pursues a scientific understanding of these issues, the mathematics used will be gentle, and a larger emphasis will be placed on the intuitive appreciation of these concerns.

- **SF-H116 Enlightened Insanity**

Prerequisites:

CAS Honors students only.

Credits:

4.00

Description:

Rain or shine, the great 18th century Enlightenment philosophers would meet at the famous cafes of Paris to discuss their ideas, and to observe and criticize society. From these informal debates emerged ideas that are at the core of our modern understanding of the nature of society, marginality, human nature, civil rights, the essence of creativity and genius. Come join us in the quest to understand, define, observe, and analyze the key ideas and concepts of these great thinkers, such as Rousseau, Diderot, and Voltaire, still so relevant in our time. We will read key works of these creative thinkers and philosophers. We will enrich our experience and understanding through the use of film, theatre performances, museum visits, as well as the occasional cafe debate.

Type:

Honors

- **SF-H126 The Boston Theatre Scene: The Inside Experience**

Credits:

4.00

Description:

Using the current Boston theatre season as its syllabus, this writing- and analysis-intensive course will explore several plays in production at some of Boston's many professional theatres. We will study the script of four to five plays before attending performances of those works. Students will gain insights on the world of theatre through backstage tours and conversations with theatre professionals such as producers, directors, actors, designers, playwrights, and critics. Students must be available for evening (usually Wednesday) performances. A fee for student-rate tickets will be assessed.

Type:

Honors

- **SF-H178 Sacred Hoops & Sneaker Pimps: Understanding the American Hoop Dream**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

This course is about the basketball hoop dream played out at the high school and college levels. We will study a wide variety of materials - novels, films, websites, reference works - to understand both the construction, and destruction, of the hoop dream in such diverse places as New York City, Seattle, rural Indiana, suburban Georgia, and the Wind River Reservation in Wyoming. Issues of race and culture will serve as guiding themes as we develop critical theory explaining why the hoop dream has persisted, and adapted, over time, to fit the needs of its believers and supporters.

Type:

Honors

- **SF-H182 Heroes, Antiheroes and Outsiders: Reading the Graphic Novel**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

How is it that comics", a genre often viewed as entertainment for children and adolescents, has become one of the most exciting forms of narrative and visual art? To answer this question, this seminar will examine a range of graphic novels, from those that celebrate their origins in superhero comics, such as Alan Moore's *Watchmen*, to those that treat subjects not usually considered proper to the comics genre, such as Art Spiegelman's *Maus*, about the Holocaust, and Alison Bechdel's *Fun Home*, about the complexities of sexual identity. As we read these works, we will look at how the combination of words and still images makes the graphic novel a unique storytelling form, as well as how artists and writers push the envelope to create new styles and challenge our expectations. In addition to class discussions and writing assignments, we will take a field trip to the Museum of Fine Arts and create a collaborative group graphic novel step-by-step over the course of the semester (all abilities welcome).

Type:

Honors

- **SF-H197 Sustainability, Energy, and Technology At Suffolk University**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

In this project and team-based course, students study a sustainability problem at Suffolk University and spend the semester developing proposals to address the problem. At the end of the course students will present their proposals to Suffolk University's sustainability committee, and will exhibit their websites and visual aids in the Donahue lobby to educate the Suffolk community about sustainability. If their proposals are well-researched and well-communicated, students can see their ideas actualized while they are still undergraduates.

- **SF-H1134 The Meaning of Life**

Prerequisites:

CAS honors students only.

Credits:

4.00

Description:

What do we live for? Which beliefs, values, and experiences sustain meaningful, fulfilling existence? Are we authors of our destinies or powerless pawns in an unfathomable cosmic game? Does death render all our efforts superfluous? This award-winning course offers a cross-cultural, interdisciplinary exploration of these questions through philosophical and religious texts, art, fiction, autobiography, and psychological studies. The course opens with the Old Testament's book of Ecclesiastes, followed by three units: 1) A Life Worth Living: Humanity's Ideals focuses on the ancient and modern visions of human flourishing; 2) Threats to Meaning: Humanity's Discontents, discusses the disillusionments leading to the loss of meaning; and 3) Recovery of Meaning: Crises and Hopes, explores the post-crisis possibilities of self-discovery and growth. Please visit <http://meaningoflife.cherkasova.org/>

Type:

Honors

- **SF-H1135 Women Warriors: Stories of Captivity, Conversion, and Confession**

Credits:

4.00

Description:

Since the beginning of time, women have been doing battle to themselves, while men have gone to battle against others. Whether it is through converting to Christ, yielding to captors in order to survive, or carrying a baby, this course introduces students to the many ways in which, whatever battles they face, women are warriors; they survive. Utilizing an array of captivity, conversion, and confession narratives by women, and pairing them across the centuries, students will make connections and draw conclusions between early-and mid-19th-century-American and contemporary women. Students will connect, for example, the trials of the 17th-century Puritan captive, Mary Rowlandson, and contemporary hostage, Elizabeth Smart, to explore how women (no matter how different they seem) draw upon unique inner resources to survive.

Type:

Honors

- **SF-H1146 Fido the Friendly Wolf: A Natural History of Dogs**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

This course explores the evolution of dogs from wolves and the ways in which dogs have adapted to their niche in human society. The ecology, behavior, genetics, and adaptations of dogs will be explored in relation to both their wolf ancestry and artificial selection by humans. The course includes 2 mandatory field trips to a wolf sanctuary and an animal shelter.

Type:

Honors

- **SF-H1148 Brave New Worlds**

Prerequisites:

Restricted to CAS Honors students

Credits:

4.00

Description:

Explores themes of adventure, self-discovery, exile, and culture shock in classic and contemporary travel writing (including fiction, poetry, and non-fiction) as well as film. Students will experiment with creative writing of their own, develop theories of cosmopolitan world citizenship, travel through the city of Boston on field trips, and team up to learn about different countries in Suffolk's global network of study abroad programs.

Type:

Honors

- **SF-H1152 The Idea of America: Past, Present, Future**

Credits:

4.00

Description:

A systematic exploration of thinking of and about America, from the founding of the republic to American issues and traditions of thought that reflect upon the founding principles and the unfolding American experiment. The Declaration of Independence and the Constitution will be studied with an eye to their philosophical content and sources. The course will also examine works of philosophers and other thinkers who address conflicts over the meaning of founding principles in the course of the nation's history, from the struggle over slavery to America's contemporary role in the world. Because this course intends to apply theoretical understanding to real life, students will be expected to read contemporary journalism on a regular basis and assess the controversies of today in the light of the nation's philosophical and historical currents.

Type:

Honors

- **SF-H1161 The Playwright and the Stage**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

This writing and script analysis intensive course will explore plays across a range periods and styles. The scripts of five plays will be studied and we will attend performances of two of those works at professional theatres in Boston. Other activities will range from a backstage tour to conversations with theatre professionals such as producers, directors, actors, designers, playwrights and critics, in order to lift the script off the page and provide a living experience of theatre. Requires students to be available for evening (usually Wednesday) performances. A fee for tickets at student rates will be assessed.

Type:

Honors

Major Requirements: 8 courses, 32 credits

Minimum Total Credits Required for Degree Conferral: 64 credits

2017-2018 Archived Catalog Information

Associate of Science in Paralegal Studies

Please note that these requirements are for students matriculating in or after fall, 2017. Students matriculating prior to fall, 2017 must reference the [Pre-Fall 2017 Degree Requirements \(Archives\)](#).

The ASPS degree requires the successful completion of the following courses:

Core Requirements: 11 courses, 40-41 credits

- [First-Year Experience](#)
- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Ethical & Philosophical Inquiry](#)
- [Social Science](#)
- [Social and Intellectual History](#)

First-Year Writing: 2 courses, 8 credits

- WRI-101 First Year Writing I

Credits:

4.00

Description:

Study and practice of the writing process and revision in terms of expository writing modes for an academic audience.

- **WRI-102 First Year Writing II**

Prerequisites:

WRI-101 or ENG-099 with at least a B and ENG-P099 with a P or WRI-H103

Credits:

4.00

Description:

Study and practice of argumentative and research writing through further work with writing process and revision and the critical reading of a variety of texts.

A student may be assigned to other writing courses or may be invited to take WRI-H103. Students required to complete ENG-099 may be allowed to waive WRI-101 with a grade of “B” or better and the approval of the English department. Students who are invited to complete WRI-H103 and earn a “B” or better satisfy the two Writing Requirements. Waiving a course does not earn credits.

- **WRI-H103 Advanced First Year Writing**

Prerequisites:

By Invitation Only.

Credits:

4.00

Description:

This course is by invitation only and reserved for incoming Suffolk students with high admission scores. Advanced study and practice of writing process, revision, and research, based on close readings of a variety of texts. Fall semester only.

Type:

Honors

Major Requirements: 8 courses, 32 credits

Minimum Total Credits Required for Degree Conferral: 64 credits

Math: 1 course, 4 credits

Choose one Math course from those listed below:

- MATH-128 Math for the Modern World

Prerequisites:

MATH level 2, or Mathshop, or MATH-104

Credits:

4.00

Description:

From the ISBN on a book, to buying a car, from the size of small chips in a cell phone, to the size of the national debt, or just reading a graph in the daily newspaper, mathematics plays an important and vital role in countless areas of life and your future career and courses included. Mathematics is both an art and a tool created by humans. The common bond is a way of thinking and a way of reasoning to describe and solve problems of many types. This course uses the context of modern real life problems to introduce math needed for literacy and problem solving in contemporary life and work. It uses a minimal amount of algebra and focuses on math models, concepts and basic math manipulations. It encourages students to move from anxiety about math, to using formulas well, to thinking critically in the math context to use math to solve problems and pose new problems. Topics include scientific notation, basic financial math, linear, exponential and polynomial models and an introduction to probability. (Formerly Math 132)

- **MATH-130 Topics in Finite Mathematics**

Prerequisites:

MATH-104, or MATH-121, or MATH level 3

Credits:

4.00

Description:

Linear Modeling (for example, using linear functions to model supply/demand situations), graphing, linear programming, financial functions (compound interest, annuities, and amortization of loans) sets, Venn diagrams, counting and combinatorics, discrete probability, conditional probability, Bernoulli experiments, Bayes theorem. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

- **MATH-132 Math-Art, Tool and Human Side**

Prerequisites:

MATH-000 or appropriate Math Placement Exam score. Course does not fulfill math requirement for SBS majors.

Credits:

4.00

Description:

Mathematics is both an art and a tool. It has been used in many ways in contemporary and ancient society. The common bond is a way of thinking and a way of using reason to solve problems and describe things of all sorts. The course is designed to cultivate an appreciation of the significance of mathematics in daily life and develop students' mathematical reasoning. Topics will vary from section to section. Examples of topics that might be included are: the real meaning of a newspaper graph, methods to tally votes, fair division, routes and networks, consumer mathematics, the 'real' cost of a house, shapes and patterns, fractals, soap film surfaces, prime numbers and encryption, new discoveries in mathematics.

• MATH-134 Calculus for Management & Social Sciences

Prerequisites:

MATH-104, MATH-121 or MATH level 4

Credits:

4.00

Description:

A one-semester introduction to differential and integral calculus. Theory is presented informally and topics and techniques are limited to polynomials, rational functions, logarithmic and exponential functions. Topics include a review of precalculus, linear regression, limits and continuity, derivatives, differentiation rules, implicit differentiation, related rates, applications of derivatives to graphing, minima/maxima, applications of the derivative, marginal analysis, differential equations of growth and decay, anti-derivatives, the definite integral, the Fundamental Theorem of Calculus, area measurements. This course cannot be used to satisfy core or complementary requirements by students majoring in chemistry, computer science, engineering, mathematics, or physics. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

• MATH-164 Calculus 1 Bridge With Trigonometry

Prerequisites:

Permission of Instructor

Credits:

4.00

Description:

This course provides an alternative to MATH 165 (Calculus I) for those students who have taken MATH 134 (Calculus for Management and Social Sciences) but who do not have the trigonometric precalculus prerequisite (such as MATH 121) for MATH 165. In other words, the sequence MATH 134 / MATH 164 serves as an alternative to the sequence MATH 121 / MATH 165, and similarly prepares students to take MATH 166 (Calculus II). The course includes a thorough review of trigonometry and other precalculus topics. Aspects of limits and differentiation which students have already seen in MATH 134 are presented briefly, but in most cases with more emphasis on conceptual understanding, and often illustrated using more complicated examples. New calculus topics (i.e. not covered in MATH 134) include one-sided limits, special trigonometric limits, differentiability, derivatives of trigonometric functions and their inverses, derivatives of general inverse functions, logarithmic and implicit differentiation, related rates, L'Hopital's rule, intermediate values theorem, Rolle's theorem, mean values theorem, Newton's method, and linearization. 4 lecture hours plus 1 recitation session each week. Normally offered in spring.

- **MATH-165 Calculus I**

Prerequisites:

MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

Credits:

4.00

Description:

Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-166 Calculus II**

Prerequisites:

MATH-164 or MATH-165 with a minimum grade of C

Credits:

4.00

Description:

Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation, convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

Major Requirements: 8 courses, 32 credits

Minimum Total Credits Required for Degree Conferral: 64 credits

2017-2018 Archived Catalog Information

Associate of Science in Paralegal Studies

Please note that these requirements are for students matriculating in or after fall, 2017. Students matriculating prior to fall, 2017 must reference the [Pre-Fall 2017 Degree Requirements \(Archives\)](#).

The ASPS degree requires the successful completion of the following courses:

Core Requirements: 11 courses, 40-41 credits

- [First-Year Experience](#)
- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Ethical & Philosophical Inquiry](#)
- [Social Science](#)
- [Social and Intellectual History](#)

Social, Cultural, & Global Perspectives: 1 course, 3-4 credits

Choose one SCGP course from those listed below:

- ADPR-217 Gay and Lesbian Studies

Credits:

4.00

Examines the portrayal of homosexuality in political, social, and cultural discourse. Analyzes the role of media and symbolic construction in the shaping of public values, opinions, and social movements.

Term:

Alternates Fall & Spring

- **ADPR-219 Rhetoric of Protest and Reform**

Credits:

4.00

Description:

Examines the persuasive strategies of social reform movements with special emphasis on the civil rights', women's rights, and gay rights movements in the United States.

Term:

Alternates Fall & Spring

- **ARH-205 Gender, Class and Alterity in Ancient And Medieval Art**

Credits:

4.00

Description:

Explores issues of sexuality, gender, race, and social class in the ancient and medieval worlds. Examines key artworks from ancient Greece, the Roman Empire and medieval Europe within historical, social and cultural contexts.

- **ARH-321 Women, Art & Society**

Credits:

4.00

Description:

Surveys women artists from the sixteenth century to the present and examines new direction in art-historical scholarship developed by feminist art historians during recent decades.

Term:

Offered Spring Term

- **AS-100 Introduction to Asian Studies: Culture, People, Ideas**

Credits:

4.00

Description:

An interdisciplinary introduction to Asian Studies will touch upon the history, politics, economics, philosophy, geography, arts, and cultures of Asia. Sample topics include political economy, religious and cultural exchanges, international relations, Asian experience in America, and the role of Asia in the twenty-first century. Students will develop conceptual frameworks for exploring the subjects covered by the Asian Studies curriculum.

Term:

Offered Both Fall and Spring

Type:

Asian Studies, Social & Intellectual HST

- **AS-500 Asian Studies Internship**

Credits:

4.00

Description:

Engages in an internship in a business or non-profit organization that deals with Asia or an Asian American community. Students may complete the internship either in Asia or in the U.S. Students will complete appropriate exercises and reports to document their learning. (1 course, 4-12 credits; can be taken multiple times in different semesters)

Term:

Offered Both Fall and Spring

Type:

Global Engagement Experience

- **BLE-325 Global Business Ethics**

Prerequisites:

BLE-215, PHIL-119, PHIL-120, PHIL-123 or PHIL-127

Credits:

3.00

Description:

Surveys business ethics as they transcend the diverse perspectives of global business. Explores current global ethics standards and values, ethical challenges, controversies, convergence and trends. Students explore famous global business cases through films, websites and independent research. Emphasizes identification and resolution of global business ethical issues within the context of ethical decision-making and sustainability. Analyzes corporate social responsibility ; hence, transforming global business ethics through business.

Type:

Global Engagement Experience

- **BLKST-250 Haiti, Guadalupe and Martinique**

Credits:

4.00

Description:

This course explores the rich intellectual tradition of Haiti, Guadeloupe, and Martinique by considering historical moments linked to colonialism, the abolition of slavery, the representation of gender, departmentalization, and decolonization through essays, films, poems, novels, and short stories by critics and writers from the 19th-21st centuries.

- **CI-204 Prague: Castles to Barbwire**

Prerequisites:

At least 24 credits earned.

Credits:

3.00

Description:

Prague offers students a more recent view into history and will serve as a backdrop to learning Design Thinking. The curriculum will use Czech and Central European cultural features as the inspiration for learning the creative process, skills that can be applied broadly and globally across disciplines. WWII and its fall to Communism left the Czech Republic undamaged. Artists played a vital part in the country's rise to a Republic during the Velvet Revolution. These dissidents, including writers, actors, artists and musicians were innovators who were the catalyst for change. One could say that creative minds changed this country. This course is designed to demystify the creative process by introducing the creative practice as a disciplined approach to problem solving and innovation requiring research. This one-month study abroad experience will offer a more worldly insight to the significance of developing skills where divergent thinking and risk taking are one of many key tools in learning to generate new ideas. Travel fee covers accommodations, transfers, some meals and cultural visits. Airfare and tuition not included.

Type:

Creativity and Innovation, Global Engagement Experience

- **CJN-216 Intercultural Communication**

Credits:

4.00

Description:

An examination of communication variations and cultural viewpoints and their impact on cross-cultural communication. A special emphasis is placed on rituals and message patterns in non-Western cultures.

Term:

Offered Both Fall and Spring

- **CJN-225 World Cinema**

Credits:

4.00

Description:

An introductory course in film studies with a focus on foreign films. Movies studied include masterpieces of cinema from Europe, Asia, the Middle East, and other nations (Films have subtitles).

Term:

Alternates Fall & Spring

- **CJN-281 Asian Popular Culture**

Credits:

4.00

Description:

Students critically analyze Asian popular culture since the 1980s using a cultural ethnographic approach. Students apply the lenses of gender, identity, globalization, and business strategies to examine pop phenomena such as Korean Wave, Cool Japan, and Cantonese popular music.

Term:

Occasional

- **CJN-293 Hong Kong Cinema**

Credits:

4.00

Description:

By examining the film texts of Hong Kong auteurs such as John Woo, Wong Kar-wai, Tsui Hark, Andrew Lau, and Alan Mak, the course examines issues such as film genres, colonization/decolonization, transnational political economy, the Greater Chinese media market, and the diaspora.

Term:

Occasional

- **CJN-301 Documentary Film and the Image of Conflict in the Middle East**

Credits:

4.00

Description:

The course focus is on some of the divisions and conflicts within Israeli society. Students analyze and compare mainstream media discourse to alternative representations in documentary film. Analysis also covers media representation of the Israeli-Palestinian conflict.

Term:

Occasional

- **CJN-385 Globalization of Media and Telecommunications**

Credits:

4.00

Description:

A critique of the circulation of media goods and ideologies from both a cultural and political/economic perspective. Topics include global Hollywood, the images of Muslim women in transnational media, the information society, and global social movements.

Term:

Offered Spring Term

- **EC-141 Development Economics**

Credits:

4.00

Description:

Why do so many countries remain so poor? Why have some (e.g. the Asian tigers) grown so rapidly? Why have most of the countries of Eastern Europe and the Former Soviet Union been slow to ignite economic growth? These questions are addressed by looking at domestic factors (government policies, resource endowments) as well as the international environment (mobile investors, international financial institutions). Asks what economic choices these countries face now. Normally offered yearly. Cultural Diversity B

Type:

Asian Studies

- **EC-151 Economic & Human Geography**

Credits:

4.00

Description:

The study of how economic and human activity is distributed across space, the reasons for these spatial distributions, and the processes that change the spatial organization of economic activity over time. Topics include: maps, map projections, and geographic information systems; population geography; the organization and location of cities, towns and villages; transportation and communication policy; industrial location; the geography of world trade; and geographic features of economic development. The course takes a global perspective, and draws on cases and examples from all over the world. Cultural Diversity B

Type:

Asian Studies, Human Behavior & Societies

- **EDUC-310 Culturally Responsive Education**

Credits:

4.00

Description:

The relationship between cultural diversity and schooling is explored by examining impediments to academic achievement and advancement by minority students, non-native English speaking students, and other under-represented groups. Topics include: standardized testing, identification of inequities, legal and ethical responsibilities of teachers, and promoting equity. Ten pre-practicum observation hours required for teacher candidates.

Term:

Offered Fall Term

- **EDUC-315 Strategies for Emerging English Learners**

Credits:

4.00

Description:

This course examines the specific needs and challenges of the various language and cultural groups in schools. Topics include: theories of 1st and 2nd language acquisition, strategies for teaching academic content, modifying instruction in the mainstream classroom, creating classroom cultures that invite all students into learning, the role of advocacy and professional collaboration in ESL, and analysis of policies related to assessment and placement of English Language Learners.

- **ENG-123 Great Books of the World I Great Books of World Lit. I**

Credits:

4.00

Description:

Literary masterpieces from ancient times to the Renaissance, including: Homer's Odyssey, Sophocles' Oedipus, Virgil's Aeneid, selections from the Hebrew Bible and the Gospels, and Dante's Divine Comedy. List may vary at the discretion of the instructor.

Term:

Offered Fall Term

Type:

Classics Minor, Social & Intellectual HST

- **ENG-124 Great Books of the World II**

Credits:

4.00

Description:

This course will introduce students to a selection of Great Books from around the world from the 17th century to the 21st, such as Don Quixote (Spain), Madame Bovary (France), The Communist Manifesto (Germany), The Origin of Species (England), War and Peace (Russia), On Dreams (Austria), Night (Hungary), Things Fall Apart (Nigeria), Satyagraha (India), I Am Prepared to Die (South Africa), Saeed the Pessoptomist (Israel), The Rouge of the North (China), and The House of Spirits (Chile). Readings may vary at the discretion of the instructor.

Term:

Offered Spring Term

Type:

Social & Intellectual HST

- **ENG-135 World Literature in English**

Credits:

4.00

Description:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

Term:

Offered Both Fall and Spring

Type:

Studies in Literature

- **ENG-216 World Literature in English**

Prerequisites:

WRI-102 or WRI-103

Credits:

4.00

Description:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

Term:

Offered Both Fall and Spring

- **ENG-362 Asian American Literature**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

An introduction to selected Asian-American writers with an emphasis on socio-cultural issues, such as race, gender and ethnicity. Authors include Bulosan, Hwang, Jen, Kingston, Lee, Mukherjee, Odada, and Tan. Cultural Diversity A

Term:

Occasional

Type:

- **FR-202 Intermediate French II**

Prerequisites:

Take FR-201 or Instructor's consent

Credits:

4.00

Description:

Continues to review grammar, practice speaking, and explore authentic cultural and literary texts in this writing-intensive course. Examines short readings, films, and print media.

Term:

Offered Spring Term

Type:

Modern Language

- **FR-205 The Francophone World**

Prerequisites:

FR 202 or Instructor's consent

Credits:

4.00

Description:

Explores the francophone world through the study of short stories, print media, and film, by engaging with the rich textured and diverse francophone literary canon. Teaches advance notions of French grammar, write compositions, and the art of conversation related to cultural themes.

Term:

Alternates Fall & Spring

- **FR-216 Masterpieces of French and Francophone Literature in English Translation**

Credits:

4.00

Description:

Masterpieces of French and Francophone Literature in English Translation. Studies works translated into English by major authors from the Middle Ages to the present. Explores drama, fiction, and poetry from many regions of the world: Africa, Western Europe, North America, the Caribbean, and Vietnam.

Term:

Alternates Fall & Spring

Type:

Studies in Literature

- **GVT-208 Politics / Religion**

Credits:

4.00

Description:

This course explores what major religions say about the status and responsibilities of the state and how, in turn, selective states have, in theory and practice, structured the place of religions in political life. Particular attention is given to issues of politics and religion in the United States. Cultural Diversity A

- **GVT-115 Evolution of the Global System**

Credits:

4.00

Description:

The goal of this course is to introduce the student to the main actors, social facts and processes that shaped the international system in the nineteenth and twentieth centuries. By analyzing the spread of industrialization, the race for colonies, the thrust of imperialism, and the rapid growth of nationalism, among other factors, this course explains the contradictory and simultaneous trends of unprecedented levels of prosperity and violence in Europe and beyond. While the course examines the role of the United States in the international system, particularly in light of its dominant role since the early twentieth century, it also emphasizes the developments taking place in other regions such as Asia, Africa and Latin America. This will allow students to understand the global arena as a space of complex interconnections involving varieties of forms of production, national political cultures and idiosyncratic traditions. This course sets the foundations for other courses in International Relations and Regional Studies

Type:

Human Behavior & Societies

• GVT-281 Intro to Comparative Politics

Prerequisites:

GVT 110, GVT 115, and GVT 120 or consent of instructor; Sophomore status or higher

Credits:

4.00

Description:

This course examines various methods of comparing political systems. Institutions such as executive departments, legislatures, court systems and local governmental systems are examined comparatively. It includes analysis of the impact of different economic systems on political/governmental institutions, and on economic circumstances that impact government. It also looks at political socialization both in terms of process and comparative content. An effort is made to include countries from all regions of the world. Normally offered every year.

• GVT-359 Hockey, International Development & Politics

Credits:

4.00

Description:

This class examines the way in which national identity, global and regional economics and international development intersect. It uses the professionalization of the sport of hockey and its subsequent spread around the globe as its case. It will look at the rise of the pro game, the way in which it shapes national identity in the Canadian case, the way in which the pro business model has changed in response to broad socio-economic changes in North America and geo-political shifts around the globe, especially in Eastern Europe and the Former Soviet Union.

- **GVT-360 Elections and Voting**

Credits:

4.00

Description:

How are elections administered in the United States? Do Americans have confidence in the electoral process? Should they? Why or why not? This course will examine elections in the United States in detail -- from how they are funded to how they are administered to how voters behave. Students will have a choice of either serving as poll workers during the November election or organizing and conducting research of potential voters. Students will gain hands-on experience in actual research design, election administration, and non-partisan get-out-the-vote activities. In addition, students will gain a deeper understanding of the relationship between attitudes, opinion, and voting behavior in American politics and institutions. ECR

- **GVT-391 Canada: Multicultural Politics**

Prerequisites:

GVT 110/120 or Instructor's permission

Credits:

4.00

Description:

This course examines the Canadian model of incorporating diverse communities into its constitutional and political framework, including the founding British North American Act of 1867, the 1982 Constitution Act, and two later attempts at constitutional reform. Canada's role in balancing two official languages, English and French, is discussed, as is its recognition of a First Nations native-governed territory in the Arctic. This course introduces students to the Canadian polity and compares its parliamentary system with the U.S. separation of powers system. Prerequisites: GVT 110, GVT 120 or instructor's consent. Normally offered alternate years. Cultural Diversity B

- **GVT-467 Comparative Social Movements**

Prerequisites:

Junior status

Credits:

4.00

Description:

How do we explain the appearance or absence of social movements? What social or individual factors explain their development and decline? Who joins social movements? Who does not? Why? What ideas or ideals animate those who do participate? What is it like to be part of a social movement? What effect do they or have they had on politics, power and efforts at social change? These are some of the questions that have traditionally shaped debates over social movements, both domestically and internationally. They will form the analytical core of the work in this course. By critically evaluating several competing schools of thought in social movement theory and history we will attempt to highlight the social forces that have, at varying points in times, facilitated, maintained, as well as blocked the development of social movements in the US and beyond.

- **HST-100 Introduction to Asian Studies: Culture, People, Ideas**

Credits:

4.00

Description:

An interdisciplinary introduction to Asian Studies will touch upon the history, politics, economics, philosophy, geography, arts, and cultures of Asia. Sample topics include political economy, religious and cultural exchanges, international relations, the Asian experience in America, and the role of Asia in the twenty-first century. Students will develop conceptual frameworks for exploring the subjects covered by the Asian Studies curriculum.

Term:

Offered Fall Term

- **HST-246 History of Modern Iran**

Credits:

4.00

Description:

Examines the contemporary history of Persia (Iran) from the time of its independence in the beginning of the sixteenth century to the present with special concentration on geographical/historical background; social structure, ethnic, religious, and linguistic diversities; Safavid and Qajar dynasties; Anglo-Russian interventions and occupations; constitutional revolution and reform; centralization, secularization and modernization under Pahlavi dynasty; opposition to westernization and Islamic revolution.

- **HST-247 History of Modern Middle East**

Credits:

4.00

Description:

Explores the broad historical forces, conflicts and major events that have shaped the contemporary nations of the modern Middle East. Topics include: the emergence of the modern Middle East from the empires of the sixteenth and seventeenth centuries; the age of colonialism; the rise of nationalism; socialism, capitalism; the impact of Israeli and Palestinian conflict on the region; oil, the Islamic Revolution in Iran and the rise of Islamic fundamentalist movements; U.S. policy; and Saddam Hussein's Iraq.

Term:

Offered Fall Term

- **HST-251 Modern East Asia**

Credits:

4.00

Description:

China, Japan, and Korea - East Asia's critical players - share many historical influences, but each has a distinct culture, and they competed with each other for much of the twentieth century, proud of their achievements but feeling threatened by their neighbors. Lectures interspersed with movies and documentaries to show how East Asia has developed in the past one-hundred-plus years.

Type:

Social & Intellectual HST

- **HST-263 Comparative Race Relations**

Credits:

4.00

Description:

Compares and analyzes the history of race and politics in South Africa and the United States from the 17th century to the present. Examines how race as a social and ideological construct influenced and informed political conflicts over land, labor, and social relations in the two countries including slavery, segregation, apartheid, and the struggle to create racial democracies.

Term:

Offered Fall Term

- **HST-268 History of the Mediterranean**

Credits:

4.00

Description:

Explores the history of the Mediterranean from the ancient times to the 20th century, with emphasis on the extraordinary interaction between the rich cultural, ethnic and religious backgrounds of the peoples of Europe, Middle East, and North Africa.

Term:

Occasional

Type:

Social & Intellectual HST

- **HST-274 Women in 19TH-CENTURY Europe**

Credits:

4.00

Description:

Explores the condition of European women from 1800 to 1914. Readings focus primarily on women's experiences in France and Great Britain. Topics include: the effects of industrialization on the lives of working-class women; working and middle-class women's negotiation of marriage, work, and family life; the rise of feminism, women's greater participation in the public sphere, and conservative reaction to these changes in women's place in society; women and crime; Victorian ideas about female sexuality; the politics of class and gender in nineteenth-century European society.

Term:

Occasional

- **HST-275 Women in 20TH-CENTURY Europe**

Credits:

4.00

Description:

Examines the changing place of women in European society since 1900. Topics include: women's suffrage and the political advances of the 1920s and 1930s; the revolution in sexual mores, birth control, and the rise of companionate marriage; women and the consumer economy; the anti-woman policies of Fascist Italy and Germany under National Socialism; liberation of women and retrenchment in the Soviet Union; World War II; feminism, sexual liberation, and women's political engagement since the 1960s; and, throughout the twentieth century, women's continuing negotiation of work and family responsibilities.

Term:

Occasional

- **HST-321 History of Islam**

Credits:

4.00

Description:

Presents a coherent account of the origin and history of Islam since its foundation in Arabia in the seventh century A.D. to the present. Analyzes the terms, events, characteristics, developments, movements, and institutions that have been part of the shaping of Islam. Ideological challenges and impact of Islam in the world today from both spiritual and political perspectives are examined.

Term:

Occasional

- **HST-371 U.S. Women's History Colonial to 1865**

Credits:

4.00

Description:

Traces the roles, images and experiences of women in America from colonial times to 1865. Topics include the family, work, religion, education, health care, motherhood, sexuality, social and political activism legal status, labor activism and popular culture. With attention to ethnicity, race, class, age, region of residence, disability and sexual orientation, the course focuses primarily on the everyday lives of ordinary women.

Term:

Offered Fall Term

- **HST-372 U.S. Women's History: 1865-present**

Credits:

4.00

Description:

Examines the social and cultural history of women in the United States from the close of the Civil War to the present. Using not only gender but also race, ethnicity, class, age, disability, region of residence, and sexual orientation as important categories of analysis, this course focuses on women's private and public lives. Topics include the family, work, religion, education, health care, private lives, motherhood, sexuality, social and political activism, legal status, labor activism, and popular culture.

Term:

Offered Spring Term

- **HST-484 History of the Emotions**

Credits:

4.00

Description:

Explores ideas about emotional life from the fields of history, anthropology, sociology, and psychology as well as the evolution of emotion rules and prescriptions, focusing on western Europe and the United States since 1700. In the eighteenth century, emotions were seen as a positive influence on politics and public life, especially during the French Revolution. After the fall of Robespierre, the emotions were banished to the private sphere - so we will read both primary sources and recent scholarship on 19th- and 20th- century ideas about masculinity and femininity, romantic love and marriage, childrearing, and about what parents and children are supposed feel toward each other, how ideas about these subjects have changed over time, and whether our feelings change with them.

Term:

Occasional

- **MUH-223 World Music**

Credits:

4.00

Description:

Covers topics in folk, traditional, and modern music of Africa, the Middle East, Asia, and Europe in the context of the cultures and lives of the indigenous peoples of those regions; examines how music interacts with the issues of race, gender, class, religion, politics, and social movements. Normally offered every other year.

Term:

Occasional

- **P.AD-201 Social Change**

Credits:

3.00

Description:

This course will examine social change in the U.S. and abroad. The course will also examine the role of business, nonprofits, and the public sector in addressing social problems. Topics studied may include the Industrial Revolution, the civil rights movement, the women's movement, environmentalism, and the gay and lesbian movement.

- **P.AD-H201 Honors Social Change**

Credits:

3.00

Description:

This course will examine social change in the U.S. and abroad. The course will also examine the role of business, nonprofits, and the public sector in addressing social problems. Topics studied may include the Industrial Revolution, the civil rights movement, the women's movement, environmentalism, and the gay and lesbian movement.

Type:

Honors

- **PHIL-120 Ethics and Civic Life**

Credits:

4.00

Description:

In this class you will be introduced to the perspectives and methods of politics, philosophy, and economics and see how these three disciplines present distinct but interconnected dimensions of current social and political issues.

- **PHIL-228 Feminist Philosophy**

Credits:

4.00

Description:

This course is an introduction to the philosophy of feminist thought. Feminist theories of epistemology, metaphysics and morality will be examined as critiques of traditional philosophy,. Feminist perspectives and methodologies include radical, liberal, postmodern, as well as more recent trends in ecofeminism. Special emphasis will be placed on explicit and implicit practices of alienation and exclusion as they have unfolded in the gendering of thought, truth, and reality. 1 term - 4 credits. Normally offered every third year. C b

Term:

Occasional

• PHIL-229 Eco-Feminism

Prerequisites:

PHIL 119, or PHIL 123, or PHIL 127

Credits:

4.00

Description:

Examines the political, social, and ecological problems facing us as a global community. Having its roots in feminist theory and deep-ecology, eco-feminism provides a critical framework for ecological responsibility and accountability. Writings from eco-feminist thinkers and environmental activists around the world will be used to highlight the philosophical and political conflicts and challenges, including globalization and loss of biodiversity, global warming, international human rights, the relationship of gender and nature, and modes of redress for eco-justice and sustainable development.

• PHIL-261 Eastern Philosophy

Credits:

4.00

Description:

The exposition and critical evaluation of Hinduism, Buddhism, Confucianism, Taoism, and Islam. Special attention is given to foundation principles as well as to the similarities and differences of each of these philosophies to basic ideas in Western philosophy. 1 term - 4 credits. Normally offered alternate years. C b

Term:

Occasional

Type:

Asian Studies

- **PHIL-262 Buddhism**

Credits:

4.00

Description:

An historical survey of Buddhist philosophy. We will explore Buddhist origins, central teachings, devotional and meditational practices, ritual and institutions as developed from classical to modern times. Special attention given to the philosophical diversity of the Buddhist world view. 1 term - 4 credits. Normally offered alternate years. C b

Term:

Occasional

Type:

Asian Studies

- **PHIL-265 Women in Spirituality**

Credits:

4.00

Description:

An exploration into the various dimensions and ideologies concerning the role of the feminine in relation to the Divine. Belief systems, myths and archetypes from ancient Goddess worship to 20th century feminist theology will be examined in terms of the philosophical content and psychological consequences. Special emphasis will be placed on feminist metaphysical structures for understanding consciousness and Reality. Classes will be conducted by means of lectures, primary and secondary texts and class discussions. Normally offered alternate years. Cultural Diversity A

Term:

Occasional

- **PHIL-267 Chinese Philosophy**

Credits:

4.00

Description:

A survey of the main developments in Chinese Philosophy. The course begins with the early dynastic concept of humanism and then turns to Confucius and Mencius. Having developed the central Confucian doctrines, students next examine the Taoist response to Confucianism in the writings of Lao Tzu and Chuang Tzu. The course then considers Zen Buddhism, which is called Ch'an Buddhism in China, where it originated. In particular, students study the concept of sudden enlightenment before turning to the Neo-Confucian scholars.

Term:

Occasional

- **PSYCH-243 Organizational Psychology**

Prerequisites:

Take PSYCH-114;

Credits:

4.00

Description:

Focuses on diversity concerns in various aspects of the psychology of the workforce. This includes job analysis, recruitment, selection, evaluation, training, retention, and termination. Employee morale, well-being, stress, and hardiness are considered.

- **PSYCH-247 Asian Perspectives on Health and Work**

Credits:

4.00

Description:

Examines theoretical and empirical approaches that provide insight into Asian viewpoints on socialization practices, family systems, health/well-being, cultural traditions/values, and spiritual philosophy/literature. Explores the diversity among Asian cultures in terms of language, history, religion/spiritual faith, and healthcare practices, all of which play a significant role in shaping the psychological characteristics, interpersonal relationships, and work dynamics of Asians and Asian immigrants. Students critically analyze similarities and differences between Asian and Western psychological perspectives of health and work through didactic and experiential learning components. This course fulfills the Cultural Diversity Requirement and may fulfill the Expanded Classroom Requirement. Normally offered alternate years.

Term:

Offered Spring Term

Type:

Asian Studies

• RS-111 Introduction to World Religions: Western Traditions

Credits:

4.00

Description:

This course will explore the comparative history and structure of Western religious traditions, broadly understood, and their impact on other world religions, while attempting to recognize the similarities and the differences among them. Traditions to be studied include Greek and Roman religion, the monotheistic faiths (Judaism, Christianity, and Islam, as well as Zoroastrianism, Sikhism and Bahaism). We will also explore the impact of the Western religions on indigenous traditions, such as African religion, Native American religion, and Pacific Island religion. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. 1 term - 4 credits. Normally offered every year.

• RS-112 Introduction to World Religions: Eastern Traditions

Credits:

4.00

Description:

This course will examine a variety of Eastern religions, including Hinduism, Buddhism, Jainism, Confucianism, Taoism, and Shintoism. Possible connections to be explored will be the impact of these traditions on others, such as Pacific Islands and African religion, as well as the growing place of Eastern religion in the West. This course will explore the history and structure of each tradition, while attempting to recognize the similarities and the differences among them. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. Normally offered every year. Cultural Diversity B

Type:

Asian Studies

- **SIB-550 Global Travel Seminar**

Prerequisites:

Please email Hillary Sabbagh at hsabbagh@suffolk.edu to register for a travel seminar.

Credits:

3.00

Description:

An in-depth analysis of timely special issues in international business. Specific topics are announced when the course is scheduled.

Type:

Global Engagement Experience

- **SF-190 Asia in America Fiction and Fact**

Credits:

4.00

Description:

With a focus on some selected ethnic groups from Asia, Asia in America studies the history and current status of Asian Americans in Boston and other parts of the country. We will examine the major reasons why these immigrants chose to leave their home country as well as their expectations and experiences here in America. We will also discuss the issues Asian immigrants have faced in this adopted home as well as the connections and conflicts among different ethnic groups or even within the same ethnic group due to political and socio-economic reasons. The course will include

some level of community engagement, through Chinatown tour and service, which may enable us to have a direct contact with the Asian American population and reflect on what is being discussed in class. Through this course, we hope to gain a better understanding of the racial and cultural history of the country and arrive at a deep appreciation of the dynamics of cultural interactions in the twenty-first century. The course fulfills the SCGP requirement.

Type:

Global Engagement Experience

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

- **SOC-227 Race in American Society**

Credits:

4.00

Description:

Despite the election of Barack Obama as President of the United States, race remains one of the most divisive forces in U.S. society. While many of us struggle against racism, racial classification continues to affect where we live, where we work, and how we see ourselves. Racial classification affects our access to health care and our encounters with police officers. Distorted images of racial groups fill television and movie screens. Appeals to racism and fear of foreigners are dominant themes in elections to state and national offices. This course examines the formation and re-formation of racial classifications: how particular groups become racially identified, how these classifications change over time, and how conflicts over race have shaped American society. The meanings of race, as seen from a variety of perspectives, will be a consistent theme throughout the course.

Term:

Occasional

- **SOC-228 Cultural, Global and Social Perspectives**

Credits:

4.00

Description:

Enables students to examine, as well as develop an awareness and appreciation of, diversity within today's society. Providing an overview of the major racial, ethnic, and cultural groups in the U.S., the focus is on the ways in which cultural awareness enhances professional helping relationships and improves the operation of human services systems.

Term:

Occasional

- **SOC-275 Women and Crime**

Credits:

4.00

Description:

This course examines the complex relationships between women and crime today. This focus will include women as criminal offenders; women as victims of crime; and women as both offenders and victims. Course materials draw from recent feminist scholarship on these issues in the social sciences. Topics include the causes of women's crime women, drugs, and crime; child abuse and trauma; prostitution and sex trafficking; race, gender and victimization; and feminist social movements against violence. Crimes of violence against women are a central focus in the course.

Term:

Occasional

- **SOC-329 Sociology of Globalization**

Prerequisites:

Prerequisite: SOC 113 or SOC 116.

Credits:

4.00

Description:

Globalization is shrinking the world. How and why did this happen? This course will explore global change and the global processes which effect key social institutions: culture, the economy and politics. Students will study the processes of globalization and its impact on our lives and people around the globe.

Term:

Occasional

- **SOC-341 International Drug Control Policy**

Credits:

4.00

Description:

Relying on a simplistic demand or supply explanation of why Americans use/abuse drugs obscures the reality of America's drug problem, is ineffective as a guide to public policy and has unforeseen, often negative consequences. Drug use is a complex and multi-faceted issue. There are no easy answers. To comprehend the complexity of America's drug problem one needs an understanding of the geography, history, religion, law, economics and international politics of the Middle and Far East, Eastern Europe, Africa, Mexico, and Central and South America. This class will provide this basic understanding without losing sight that the problem we seek to remedy is our own.

Term:

Offered Spring Term

- **SOC-354 Death and Dying**

Credits:

4.00

Description:

An examination of changing definitions of life and death, social factors affecting causes and rates of death, care of the dying and their families, institutionalization, the funeral industry, suicide, crisis intervention, and the impact of technology on the dying process.

Term:

Occasional

- **SOC-357 Global Health and Healing**

Credits:

4.00

Description:

An examination of how different cultures understand health and illness. Healing approaches from Asia, Africa and the Americas will be explored.

Term:

Occasional

- **SPAN-202 Intermediate Spanish II**

Prerequisites:

SPAN 201 or Instructor's consent.

Credits:

4.00

Description:

Continues skills development from 201. Students read a collection of short stories, write compositions, develop cultural insights through comparative and contrastive assignments, and practice listening and speaking skills in weekly conversation sessions.

Term:

Offered Spring Term

Type:

Modern Language

• SPAN-290 Advanced Composition & Conversation

Prerequisites:

Prerequisite: Spanish 202, 203 or 250 or Instructor's consent

Credits:

4.00

Description:

Develops written and oral skills in various contexts and registers. Emphasis on strengthening written skills and learning to speak clearly and persuasively in Spanish. Short texts and audio-visual materials provide the basis for classroom activities which include regularly assigned essays, group discussions and debates.

Term:

Offered Fall Term

Type:

Modern Language

• SPAN-300 Intro to Cultural Texts

Prerequisites:

Spanish 202, 203, 250 or Instructor's consent.

Credits:

4.00

Description:

Explores a selection of Peninsular and Latin American cultural materials. Primarily examines texts from different literary genres (narrative, drama, essay, and poetry). Develops critical skills required in more advanced Spanish courses, through close readings and textual analysis. Activities include regularly assigned essays, group discussions, and short scene work.

Term:

- **SPAN-301 Spanish Culture and Civilization**

Prerequisites:

Spanish 202, 203 or 250. Spanish 290 or 300 are strongly recommended

Credits:

4.00

Description:

Examines the civilization and culture of Spain highlighting its historical development and cultural manifestations from pre-historic times to the nineteenth century. Students improve their four skills through activities that include discussions, oral presentations, and writing assignments based on reading and films.

Term:

Alternates Fall & Spring

- **SPAN-302 Indigenous and Colonial Latin America**

Prerequisites:

Spanish 202, 203 or 250 or Instructor's consent. Span 290 or 300 strongly recommended.

Credits:

4.00

Description:

Introduces students to the complexity Latin America by examining its roots in pre-Columbian America and the impact of Spanish exploration and colonization. Places emphasis on cultural, economic, historical, philosophical, political and religious patterns that define the region. Includes class discussions, oral presentations, and writing assignments based on reading and audio-visual material.

Term:

Alternates Fall & Spring

- **SPAN-303 Modern and Contemporary Latin America**

Prerequisites:

SPAN 202 or 203 or Instructor's consent. SPAN 290 or 300 strongly recommended.

Credits:

4.00

Description:

Examines the path taken by Latin American and Caribbean countries to build independent nations out of colonial territories highlighting the 19th, 20th, and 21st centuries, ethnic plurality, and cultural complexity in areas such as politics, religion, sociology, economics, customs, music & film. The cultural contributions of Spanish-speaking minorities in the United States are also addressed. Includes class discussions, oral presentations, and writing assignments based on readings and audio-visual material.

- **SPAN-315 Spanish for the Professions**

Prerequisites:

SPAN 290 or SPAN 300 or Instructor's consent.

Credits:

4.00

Description:

Integrates language learning with culture via business context of the Hispanic world. Spanish for banking and finance, marketing and advertising, and international commerce are highlighted. Students increase their cross-cultural understanding and written and oral proficiency in business Spanish through a wide range of assignments.

Type:

Global Engagement Experience

- **SPAN-390 Introduction to Latin American and Caribbean Literature**

Prerequisites:

SPAN 300; SPAN 302 is strongly recommended

Credits:

4.00

Description:

Examines authors from Latin America and the Caribbean in their historical and cultural contexts. Reading and class discussions consider the relationship between the writer and society by covering such topics as colonialism, the oral tradition, modernism and the emergence of new narratives in the twentieth century. The Inca Garcilaso, Sor Juana, Carlos Fuentes, Rigoberta Menchu, and Pablo Neruda are among some writers studied.

Term:

Occasional

• **THETR-260 Broadway Musicals**

Credits:

4.00

Description:

This course is a survey of American musical theatre from its roots in the mid-19th century to the present. It provides the analytical tools and historical insight to more fully appreciate Broadway's greatest musicals and musical theatre artists. Students will explore the ways in which American forms of popular entertainment helped to shape Broadway musicals from their infancy through their adulthood. The course also explores the ways in which musicals provided opportunities for African-Americans, women, immigrants, and the GLBT community.

Term:

Offered Fall Term

• **THETR-267 Introduction to Theatre: Contemporary American**

Credits:

4.00

Description:

This course provides a formal introduction to the theories and practices strategically used by American theatre artists after the Second World War. Special emphasis is placed on theatre artists exploring issues of cultural identity including works by GLBT, African-American, Asian-American, and Latin American playwrights. These playwrights may include Tony Kushner, Paula Vogel, Suzan-Lori Parks, Adrienne Kennedy, August Wilson, David Henry Hwang, Philip Kan Gotanda, Eduardo Machado, and Melinda Lopez. The course will also provide an introduction to trends in post-modern theatre practices related to emerging work of the auteur director, solo performers, and interdisciplinary collectives. Satisfies a core requirement for Theatre majors. Normally offered alternate years.

Term:

Occasional

- **WGS-111 Women, History, & Culture**

Credits:

4.00

Description:

Explores the roles and images of women in Western culture and the realities of women's everyday lives through literature, film, history, art, psychology, and recent feminist scholarship. Analyzes gender inequalities and the influence of gender on social structure, human behavior, and artistic expression. Topics include: the social construction of gender and identity; domestic prescriptions for women; women and work; intersections of gender, class, and race in American society; sexualities and identity; the politics of motherhood and reproductive rights; educating girls; negotiating male privilege and structural inequalities; representations of women in Western art and film; and women as artists and gendered models of creativity in art, film, fiction, and science.

Term:

Offered Both Fall and Spring

Type:

Social & Intellectual HST

- **WGS-H111 Women, History, & Culture**

Prerequisites:

At least a 3.3 GPA required.

Credits:

4.00

Description:

Explores the roles and images of women in Western culture and the realities of women's everyday lives through literature, film, history, art, psychology, and recent feminist scholarship. Analyzes gender inequalities and the influence of gender on social structure, human behavior, and artistic expression. Topics include: the social construction of gender and identity; domestic prescriptions for women; women and work; intersections of gender, class, and race in American society; sexualities and identity; the politics of motherhood and reproductive rights; educating girls; negotiating male privilege and structural inequalities; representations of women in Western art and film; and women as artists and gendered models of creativity in art, film, fiction, and science.

Term:

Offered Both Fall and Spring

Type:

Honors

- **WGS-113 Women, Science, & Society**

Credits:

4.00

Description:

Explores women's lives from the perspective of the social and natural sciences, including examination of recent biological, psychological, and sociological theories about gender and gender roles, as well as the influence of feminist scholarship in these areas. Topics include: the social construction of gender; the psychology and biology of sex and gender; women and work; media representations of women; the female body and eating disorders; women's health and lifecycle; women and sexuality; reproduction, abortion, and motherhood; and sexual violence against women.

Term:

Offered Both Fall and Spring

- **WGS-115 Introduction to Gender Studies**

Credits:

4.00

Description:

Introduces the key topics and debates that have shaped the field of gender studies, including queer studies, masculinity studies, and women's studies. Through lecture and class discussion of texts from literature, film, history, psychology, and sociology, explores the pervasive influence of gender on the structure of society and our everyday experiences and the role that gender plays in our understanding of love, friendship, sexuality, and even violence. Topics include: biological arguments about gender and sexuality; the social construction of gender and identity; intersections of gender, race, class, and sexuality; masculinity and femininity; and theories of sexual difference and the construction of sexuality.

Term:

Occasional

Type:

Social & Intellectual HST

• WGS-311 Engendering Entertainment: Feminism and Popular Culture

Credits:

4.00

Description:

Investigates the complex intersections between feminism and popular culture through several different lenses: by exploring, how feminists make arguments about popular culture; by looking at the complexities of public femininity in today's popular culture, including figures such as Lady Gaga and Katy Perry and television shows like The Bachelor and Grey's Anatomy; by focusing on a variety of articulations of feminism within mass media, blogs, social media, and popular books such as Ariel Levy's Female Chauvinist Pigs, and Caitlin Moran's How to Be a Woman. Along the way we will ask questions about: what makes a work of art feminist; how modern media contributes to or distracts us from a variety of political debates in the realm of female equality and how can we, as individuals, use modern media to create and advance smart, feminist arguments.

Type:

Social & Intellectual HST

• WGS-315 Feminist Thought

Credits:

4.00

Description:

Investigates how feminists, both today and in history, have understood inequality and difference and looked for the best ways to address these issues and bring about social justice. Examines how feminist theorists help us to understand how gender and other social categories, such as race, class, sexuality, disability, age and nationality, are constructed within and through each other; and analyzes feminist engagements with liberalism, socialism, psychoanalysis, existentialism, post-colonialism, critical race theory, and queer theory, as well as consider anti-feminist arguments. Readings include classic critical texts by authors including Mary Wollstonecraft, Emma Goldman, Virginia Woolf, Chandra Mohanty, Gloria Anzaldua, and Judith Butler.

Type:

Social & Intellectual HST

- **WGS-325 Global Women's Fiction**

Credits:

4.00

Description:

Explores of various cultural worldviews in order to reveal and assess the voices of women from around the world as they respond to important global issues such as sexual violence and gendered oppression. Topics include: national citizenship, sexual politics, legal discourse, aesthetic representation, literary movements, genre, constructions of femininity, sexual identities, and representations of gender in relation to race and class and international cultures, and the relationship of self-image to the body politic.

Term:

Occasional

- **WGS-335 Queer Narratives**

Credits:

4.00

Description:

Explores the stories that help us to understand communities, identities, and bodies that could be considered queer, and the ways that film, music, memoir and fiction have discussed queer as different, unusual, or other. Texts include the documentary, "Paris Is Burning", Frank Ocean's 2012 album, "Channel Orange", and Janet Mock's recent memoir, "Redefining Realness", as well as foundational queer theory from Judith Butler, Eve Kosofsky Sedgwick, and Lee Edelman, among others, to help build a framework for approaching and interpreting both fictional and non-fictional accounts of queer lives.

Type:

Social & Intellectual HST

Courses that fulfill the Creativity and Innovation, Humanities/History, Language, Literature, Quantitative Reasoning, Seminar for Freshmen, Social Science, or VPATH requirements may double count to fulfill the Social, Cultural, and Global Perspectives (SCGP) requirement.

Major Requirements: 8 courses, 32 credits

Minimum Total Credits Required for Degree Conferral: 64 credits

2017-2018 Archived Catalog Information

Associate of Science in Paralegal Studies

Please note that these requirements are for students matriculating in or after fall, 2017. Students matriculating prior to fall, 2017 must reference the [Pre-Fall 2017 Degree Requirements \(Archives\)](#).

The ASPS degree requires the successful completion of the following courses:

Core Requirements: 11 courses, 40-41 credits

- [First-Year Experience](#)
- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Ethical & Philosophical Inquiry](#)
- [Social Science](#)
- [Social and Intellectual History](#)

Science, Technology, & Engineering (STE): 2 courses, at least one with a laboratory, 8 credits

Choose two STE (Science, Technology, and Engineering) courses, at least one with a corresponding laboratory, from those listed below. Courses do not need to be in a sequence. In the case of a course that is a lecture plus a lab, the student must complete both components to earn credit for the STE requirement.

Biology:

- **BIO-104 Environmental Biology**

Prerequisites:

BIO 101 and BIO L101, can also be taken concurrently BIO L104 must be taken concurrently

Credits:

3.00

Description:

An introduction to basic evolutionary, behavioral and ecological principles. Readings and discussions emphasize the ways that humans are affected by ecological processes and principles as well as how humans and their technology affect ecosystems. May not be taken by Biology majors or minors. This course will not fulfill requirements for a major or a minor in Biology. It is intended for non-biology majors as a follow-up to Biology 101. 3 hours lecture. Days Only. Madrid Campus only.

Type:

SCI TECH ENGR

- **BIO-L104 Environmental Bio Lab**

Prerequisites:

BIO-104 must be taken concurrently

Credits:

1.00

Description:

Exercises and field trips designed to complement and demonstrate the ecological principles developed in the lecture section. The lab emphasizes the scientific method and employs long term group projects. Madrid Campus only.

Type:

SCI TECH ENGR

- **BIO-105 Humans and the Evolutionary Perspective**

Prerequisites:

Non Science Majors Only

Credits:

4.00

Description:

Major topics include the scientific basis of evolution, the fossil history of vertebrates, evidence of evolution in the human body, and applying an evolutionary perspective to the social interactions and possible futures of humanity. Meets one of the non laboratory science requirements for the non-science major. This reading and writing intensive course is a non-laboratory science option for non-science majors. This course will not fulfill requirement for a major or a minor in Biology.

Term:

Occasional

Type:

SCI TECH ENGNR

• **BIO-111 Introduction to the Cell**

Prerequisites:

Must take BIO L111 concurrently

Credits:

3.00

Description:

Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L111 Introduction to the Cell Laboratory**

Prerequisites:

Concurrently with BIO 111

Credits:

1.00

Description:

Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-114 Organismal Biology**

Prerequisites:

Must take BIO L114 concurrently.

Credits:

3.00

Description:

Rigorous introduction to organismal biology emphasizing evolution, phylogenetics, form, and function. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **BIO-L114 Organismal Biology Laboratory**

Prerequisites:

Must take BIO 114 concurrently

Credits:

1.00

Description:

A series of laboratory experiences in evolution, diversity, anatomy and physiology.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **BIO-201 Biology's Big Questions**

Prerequisites:

Non Science Majors Only.

Credits:

4.00

Description:

This course seeks to answer five current questions from all levels of biology, from the subcellular to the ecosystem level. Topics will be discussed in the context of genetics, evolution, and ecology. We will focus on the process of doing science, including how scientists evaluate ideas and communicate their findings. Emphasis will be placed on topics in biology that impact daily life.

Type:

SCI TECH ENGR

Chemistry:

- **CHEM-105 Chemical New Product Development**

Prerequisites:

ENT 101

Credits:

4.00

Description:

This course addresses the crucial intersection between chemistry and business, and the impact of these fields on society. It provides an introduction to important chemistry concepts and practices of business management. Primary focus is on understanding the chemistry principles behind some of the consumer products in our everyday lives, and using this knowledge to create and evaluate ideas for new products. The course also introduces the business aspects involved in the development and marketing of new products. An important component of the course is in making effective presentations; this component concludes the course, culminating in team presentations of a new chemical product to panel of executives and peers. This course satisfies the Sawyer Business School Science requirement.

Type:

SCI TECH ENGR

- **CHEM-106 Biotechnology & Its Applications in Medicine, Agriculture, Law**

Credits:

4.00

Description:

Introduces the latest discoveries and applications of biotechnology. Topics include genetically modified food, stem cells, genetic testing, cloning, and forensics. A combination of lectures, discussions, short documentaries, mock congressional hearings, and hands-on activities will provide insight into the numerous medical, social, legal, and ethical issues surrounding this technology.

Type:

SCI TECH ENGR

- **CHEM-111 General Chemistry I**

Prerequisites:

Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:

3.00

Description:

Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **CHEM-L111 General Chemistry Laboratory I**

Prerequisites:

MATH-104 MATH-108 MATH-121 MATH-128 MATH-130 MATH-134 MATH-164 MATH-165 MATHT-MPEL1 MATHT-MPEL2 or MATHT-MPEL3. Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

Computer Science:

- **CMPSC-F107 Ants, Rumors and Gridlocks**

Prerequisites:

Math placement level of 2 or above or any MATH course at the level 100 or above

Credits:

4.00

Description:

Do viruses and rumors spread like forest fires? How do ants cooperate? Do spoken languages and biological species evolve in a similar way? Ants, Rumors, and Gridlocks exposes students to introductory aspects of computational science by addressing and answering these and many other questions. Students use and modify virtual experiments preprogrammed in the NetLogo programming language to investigate these topics and others in Social Sciences, Biology, and Environmental Science. No prior knowledge of computer programming or NetLogo is required.

Type:

SCI TECH ENGNR

Electrical Engineering:

- **ECE-288 Measuring the World**

Credits:

4.00

Description:

The world is addicted to quantifying the essence of everything, from personal IQ, to the speed of a baseball, to our healthiness, or our chances of winning the lottery. Behind most of these numeric values exists a science of measurement. Some of this is referenced to international standards, such as for length, time, weight, or temperature. Others are more arbitrary and subjective, such as ranking Olympic performance in gymnastics, beauty pageants, or popular responses as found in the game show Family Feud. A third category includes controversial areas, such as measuring whether a person is lying when interrogated, or using hype rather than reality to market products. Sometimes statistics are used to predict sports outcomes, such as in the annual March Madness NCAA basketball brackets. Finally, in a world subject to fraud and deception, it can be essential to distinguish legitimate from counterfeit items, such as in money, art, collectibles, and historical documents. Don't get hoodwinked! This course examines all of these, starting with how measurements have been made throughout history, along with a full deck of entertaining terms used during the ages. This may help you sort out your weight, whether given in pounds, kilos, or stones. Often these terms will provide insights into how people lived in different eras. We will also look at some of the technologies currently available to provide these measurements, and unravel the complexities of various sensors that are used. As we consider the meaning of accuracy we may become less naive about how much confidence to ascribe to the results given us. Hovering around all of these measurements should be the question of validity - are they meaningful, useful, or misleading? And the impact they have on society - whether they steer behavior more powerfully than one might originally suspect. Each student will also be given an opportunity to become an expert in an area of measurement of personal interest. By the end o

Type:

SCI TECH ENGR

Engineering Science:

- **ENS-103 Introduction to Engineering**

Prerequisites:

ENS L103 MUST BE TAKEN CONCURRENTLY.

Credits:

3.00

Description:

This course provides exposure to engineering practice, with particular focus on electrical engineering components such as circuit elements and systems. It seeks to go beyond the mathematics and provide an intuitive appreciation of functional devices. Examples taken from a broad swath of technological history illustrate significant crossroads, decisions, and inventiveness. Emphasis is placed on learning to think as an engineer - assessment of problems, candidate solution tradeoffs, and implementations. Frequent exercises in creative engineering design will be used. Students will be required to design several elementary devices, such as a magnet, a capacitor, a timing device, and a motor, which they will enter in a competition for overall strength, compactness, accuracy, or speed. Sometimes assignments relate to "survival on an island" concerns, such as communication or drinking water. Students also learn about reverse engineering by selecting, building, troubleshooting, and presenting an electronic kit of their choice. A term paper determining the engineering behind a topic of their choice will also be written and presented. On occasion (see ENS L103) there will be team competitions between various smaller groups in the class.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

• ENS-L103 Intro to Engineering Lab

Prerequisites:

Must be taken Concurrently w/ ENS-103

Credits:

1.00

Description:

The Lab is designed to provide opportunities to gain familiarity with engineering tools. Students will be introduced to parts (e.g. learn the resistor color code), test equipment (multimeters, prototyping trainers, signal generators, and oscilloscopes), and construction techniques (wiring, soldering, troubleshooting). Although it varies from year to year, Class Projects can be built during the Lab sessions. In the past these have included a 25 Watt electric generator, various door lock systems (both mechanical and electronic), and an AM transmitter and receiver (all projects made from scratch). It is likely that 2010-2011 may introduce some robotic creations for a competition. Electronic kits and motors can also be built and serviced in the Lab. There is an adjoining machine shop, which can be utilized (with supervision), for fabricating items. Individual creativity is encouraged, and informal problem solving sessions occasionally occupy lab time. However, the lab is accessible outside of the traditional scheduled time.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

Environmental Science:

- **UES-107 Introduction to Drones**

Prerequisites:

UES-L107

Credits:

3.00

Description:

Unmanned autonomous systems (UAS) or Drones are high-tech, intelligent machines capable of traveling by air, land, or sea via a remote connection. This course presents concepts and practical methods of using Unmanned Vehicles in a professional context, particularly for environmental projects. UAVs are increasingly being used in a professional capacity such as cinematography and filming, real estate, construction, surveying, mapping, agriculture, industrial inspections, utilities inspections and many more. The course covers mission planning, operations, field data collection, data processing, legal implications, data analysis and data deliverables. The course and laboratory will include learning flying micro-drones and preparing to pass the Federal Aviation Administration's Unmanned Aerial Vehicle Airmen (Part 107) exam. The course will have an associated Laboratory component in which students will learn how to properly plan effective flight missions, fly safely and legally, develop risk management strategies, analyze the data captured and convert it into a useful data deliverable.

Type:

SCI TECH ENGNR

- **UES-L107 Introduction to Drones Lab**

Prerequisites:

UES-107

Credits:

1.00

Description:

Type:

SCI TECH ENGR

• UES-111 Environmental Science

Prerequisites:

Must be taken concurrently with UES-L111

Credits:

3.00

Description:

Applies the fundamentals of science to environmental issues. Topics include population dynamics and resources, environmental degradation, ecosystems, geologic processes, deforestation, biodiversity, climate change, air, soil, and water resource management, and pollution and risks to health.

Term:

Offered Spring Term

Type:

SCI TECH ENGR

- **UES-L111 Environmental Science Lab**

Prerequisites:

Must be taken concurrently with UES-111.

Credits:

1.00

Description:

Laboratory exercises are used to illustrate topics covered in UES 111. Field testing and analysis of environmental samples. Field trips may be required.

Term:

Offered Spring Term

Type:

SCI TECH ENGR

- **UES-121 Science, Art, and the Environment**

Prerequisites:

Take UES-L121 concurrently

Credits:

3.00

Description:

Examines art and cultural objects through the lens of the biological, chemical, and physical principles of the materials and processes we use to make them. Includes consideration of factors important in art conservation. Provides an environmental context for the manufacture and use of art materials and the preservation of cultural objects.

Type:

SCI TECH ENGR

- UES-L121 Science, Art, and the Environment Lab

Prerequisites:

Take UES-121 concurrently

Credits:

1.00

Description:

Provides hands-on work with pigments, dyes, and other art materials using the basic principles of science and technology. Students will conduct laboratory experiments that produce art objects and other consumer products. Instruction in safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables, graphs, and graphics. Practice in synthesizing compounds like paints and finishes and in evaluating methods of art conservation.

Type:

SCI TECH ENGR

- UES-225 Geographical Information Science

Prerequisites:

Take UES-L225 concurrently

Credits:

3.00

Description:

Provides the fundamentals of geographic information science (GIS) including the history of automated mapping. A review of the necessary hardware and software elements used in GIS is presented. Hands-on exercises with computerized mapping software are required.

Type:

SCI TECH ENGR

- **UES-L225 Geographic Information Science Lab**

Prerequisites:

Must be taken concurrently with UES-225

Credits:

1.00

Description:

Required companion computer laboratory to be taken concurrently with UES 225.

Type:

SCI TECH ENGNR

Forensic Science:

- **FS-103 Introduction to Forensic Science**

Prerequisites:

FS-L103

Credits:

3.00

Description:

Application of the principles of forensic science in evaluating physical evidence, with emphasis on its role in criminal investigation. Class experiences may include guest lectures and field trips. 3-hour lecture. Normally offered Fall

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **FS-L103 Introduction to Forensic Science Lab**

Prerequisites:

FS 103 concurrently

Credits:

1.00

Description:

Laboratory experiences related to the collection and analysis of physical evidence as performed by forensic science professionals. Experiments may include forensic microscopy, drug analysis, forensic serology, physical patterns, fingerprint and firearm evidence analysis techniques. 3-hour laboratory. Normally offered Fall

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

Neuroscience:

- **NEUR-101 Intro to Neuroscience**

Credits:

4.00

Description:

Introduces the field of neuroscience, the study of the organization and function of the nervous system of humans and other animals. Neuroscientists examine how individual neurons function as signaling devices, how groups of neurons operate as circuits to produce fundamental units of behavior, and how much larger systems in the brain subserve complex functions such as memory and consciousness. Topics include the neuron and neural transmission, the overall function and organization of the nervous system, the development of the brain, neural plasticity, sleep, memory and other higher cognitive functions. Normally offered alternate years.

Type:

SCI TECH ENGNR

Physics:

- **PHYS-111 College Physics I**

Prerequisites:

Take MATH-121 or MATH-134 or MATH-165 or permission of Physics department chair; PHYS L111 taken concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **PHYS-L111 College Physics Lab I**

Prerequisites:

PHYS 111 concurrently

Credits:

1.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course. Error propagation, use of Excel, laboratory notebooks and formal reports required.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

• PHYS-151 University Physics I

Prerequisites:

MATH-121, MATH-165 or MATH-164 and PHYS L151 concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

• PHYS-L151 University Physics Lab I

Prerequisites:

PHYS 151 concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

• PHYS-152 University Physics II**Prerequisites:**

PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

Credits:

3.00

Description:

This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **PHYS-L152 University Physics Lab II**

Prerequisites:

PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **PHYS-153 University Physics III**

Prerequisites:

MATH-121, MATH-164 or MATH-165

Credits:

3.00

Description:

This calculus-based course is the introduction of the topics of modern physics. It begins with special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom. Then Schrodinger's equation is introduced with use of wave functions, particle box, barrier penetration, quantum mechanical tunneling, the Pauli Exclusion principle, the development of the periodic table, and the X-ray spectra. Development of solid state physics with bonding in molecules, band theory of solids and semiconductor behavior. The final topics cover

nuclear physics, radioactivity, half-life, nuclear fission and fusion, medical uses of radiation, elementary particle physics and introduction to astrophysics.

Term:

Offered Fall Term

Type:

SCI TECH ENGR

- **PHYS-L153 University Physics III Lab**

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts of special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom.

Type:

SCI TECH ENGR

Science:

- **SCI-103 Environmental Science**

Prerequisites:

SCI-L103 must be taken concurrently

Credits:

3.00

Description:

Case study approach to the fundamentals of science applied to environmental degradation, ecosystems, geological processes, population dynamics, deforestation and biodiversity, climate change, ozone depletion, air soil, and water resource management, pollution and risks to health, economics and the environment, politics and the environment, and ethics and the environment.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **SCI-L103 Environmental Science Lab**

Prerequisites:

Must take SCI-103 concurrently

Credits:

1.00

Description:

Laboratory exercises to illustrate the topics covered in Science 103. Field-testing and analysis of environmental samples. Field trip required.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **SCI-108 Introduction to Cancer Care**

Credits:

4.00

Description:

This course will introduce the students to the top ten U.S. adult cancers, as well as the most common pediatric cancers. Topics to be covered include cancer causes, detection, and prevention. Psychosocial aspects of being diagnosed with cancer and the role nutrition plays for cancer patients will be described. The course will also discuss the major treatment modalities for each cancer including radiation therapy, surgery, chemotherapy, and bone marrow transplants. The goals and objectives of the course will be met through the use of various teaching tools including but not limited to: PowerPoint presentations, videos, guest lectures, and a poster project with a presentation component. Cognitive assessment of the students will be accomplished through homework, quizzes, exams, and a group poster and oral presentation. Students with any type of academic background are welcome.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **SCI-111 Introduction to Astronomy**

Prerequisites:

MATH-128 or higher and SCI-L111 must be taken concurrently.

Credits:

3.00

Description:

History of Astronomy from the ancients to Newton; light; telescopes; sun, earth, moon planets, comets, asteroids, meteors; space programs, science and technology in society. Course culminates with a visit to the Clay Center Observatory, where students will be able to make first hand observations. For non-science majors.

Term:

Occasional

Type:

SCI TECH ENGNR

- **SCI-L111 Introduction to Astronomy Lab**

Prerequisites:

Take SCI-111 concurrently

Credits:

1.00

Description:

Laboratory experiments and exercises to illustrate the principles discussed in Science 111. Observational exercises using the Celestron telescope, astrophotography exercises, and computer simulations. Course culminates with a visit to the Clay Center Observatory, where students will be able to make first hand observations.

Term:

Occasional

Type:

SCI TECH ENGNR

• **SCI-112 Structure of the Universe**

Prerequisites:

MATH-128 or higher and SCI-L112 concurrently

Credits:

3.00

Description:

Astronomy of the cosmos; sun, stars, interstellar materials, galaxies, pulsars, quasars, black holes; nature of time relativity, cosmology. Course culminates with a visit to the Clay Center Observatory, where students will be able to make first hand observations. For non-science majors.

Term:

Occasional

Type:

- **SCI-L112 Structure of the Universe Lab**

Prerequisites:

Take SCI-112 concurrently

Credits:

1.00

Description:

Laboratory experiments and exercises to illustrate the principles discussed in Science 112. Observational exercises using the Celestron telescope, astrophotography exercises, and computer simulations. Course culminates with a visit to the Clay Center Observatory, where students will be able to make first hand observations.

Term:

Occasional

Type:

SCI TECH ENGR

- **SCI-113 A Habitable Earth Within the Solar System**

Credits:

4.00

Description:

This course introduces non-science majors to concepts that are central to making our planet habitable. It presents Earth in context of the solar system with a broad view of global climate change and energy resources in a quest to better understand the workings our planet. This course on Earth and Planetary Science is suitable for students who may have taken their last science and math course several years ago, or are just curious about knowing facts on major issues that pertain to the future of our planet. Together with a reading component, this course aims to give students a flavor of how researchers think, investigate and develop conclusions that directly affect our political and economic future. Topics covered in this course range from the solar system to the study of search for other habitable Earth-like planets, search for extraterrestrial life, and evolution of life on Earth. Other

characteristics of this course are heavy use of audio-visual materials often including computer animations and simulations, in-class experiment demonstration, and intensive use of INTERNET-based resources.

Type:

SCI TECH ENGR

- **SCI-165 Inner Workings of Physics Universe**

Credits:

4.00

Description:

About 15 billion years ago, (data indicate) the big bang occurred and the universe was born. With it came physical laws and a spectacular array of consequences that lead to the universe as we know it. This non-lab , 4 credit course explores the inner workings of the physical universe in terms of the scientific inquiry which lead to Newton's laws, an understanding of energy, waves, light, electricity, atomic structure, chemical reactions, nuclear physics, particle physics, relativity, and the big bang theory. During the course, students will learn to make use of modern resources to access scientific and technical literature to research a scientific topic. They will learn to distinguish between science and technology (e.g. quantum mechanics and nanotechnology, the discovery of the Higgs boson and the large hadron collider that made it possible, etc.) and to understand how the science, technology, and engineering disciplines play a crucial role in recognizing and solving problems of society and the world that we share.

Type:

SCI TECH ENGR

- **SCI-171 The Built World: How Humans Engineer Environments**

Credits:

4.00

Description:

The most basic needs of humans have not changed - water, food, and shelter - but the means of meeting these needs has. In this course, we will examine how technology-driven societies operate by studying how cities are built and how they function. Topics will include water supply and distribution systems; transportation systems (including road and bridge design and construction); building design, construction, and operation (including skyscraper and sustainable building design), and waste removal systems (municipal and industrial wastewater removal and treatment, solid

waste removal and treatment). This is not a course about little gadgets and widgets; this is a course about big engineering marvels; and it emphasizes applications of science - how things work - rather than scientific theory.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **SCI-173 Mapping Our World The Power of Digital Maps**

Prerequisites:

SCI L173 Must be taken concurrently Knowledge of Windows type Application

Credits:

3.00

Description:

Geographic Information Science (GIS) link information (number of fire hydrants on a block) to features on a map (e.g., a point representing street address) that has a designated geographic location (as designated by global coordinates). Unlike paper maps, GIS software allows the production of interactive maps that allows the user to layer data, to indicate spatial patterns, to analyze trends, and to combine different features of the mapped area in novel ways. For example, a business person may wish to use GIS to determine the optimum location of retail outlet (based on the mapped demographics of a neighborhood), while an environmental engineer may use GIS to describe the location of outfalls to see how they correlate to areas of stream pollution. In this course, students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **SCI-L173 Mapping Our World Lab**

Prerequisites:

Must be taken concurrently with SCI-173

Credits:

1.00

Description:

This laboratory illustrates concepts and methods taught in SCI 173. In this lab students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **SCI-181 Science and Life in the 21st Century**

Credits:

4.00

Description:

No longer offered on Boston campus This is a four credit, non-lab, science course that examines the central scientific problems confronting the 21st century. The course studies particular topics and teaches the necessary science around these topics to provide a good understanding of the issues. The topics currently are: Energy, Science and Economic Decisions, Sustainability of Life on Earth, Health and Science.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **SCI-184 Contemporary Science and Innovation**

Credits:

4.00

Description:

This is a 4 credit, project based science course that examines the central scientific problems confronting the 21st century. The course consists of lectures, class discussions, field trips, and in-class hands-on activities designed to familiarize the student with different concepts of the lectures. The current focus is on sustainable energy production. A final team project related to the course topics will be given. This is the version of SCI 183 without a separate lab component. Students who have taken SCI 183, L183 are not allowed to take this course.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **SCI-201 Physics for Future Presidents**

Credits:

4.00

Description:

This course presents a topical introduction to the key principles and concepts of physics in the context of the world events and natural phenomena that confront world leaders and that require informed decisions and responses. Energy, health, counter-terrorism, remote sensing, space programs, nuclear proliferation, and a host of other modern challenges have technological and scientific dimensions, the understanding of which is essential to avoiding disastrous policy decisions. This course considers the application of physics to these societal challenges. The material is covered at a level and pace that a future world leader should be able to handle; the emphasis is on the development of physical reasoning skills, and not on detailed, mathematical problem solving.

Type:

SCI TECH ENGNR

• SCI-210 Earth and Planetary Crystals

Prerequisites:

Take SCI-L210 concurrently

Credits:

3.00

Description:

This course will provide undergraduate students of various disciplines with an introduction to gems and crystals using interactive, evidence-based teaching approaches. Crystalline forms of matter are critical to our existence. Using innovative teaching strategies of in-class hands-on demonstration, supplemented with visuals of crystal details, the course provides students insights into the formation, alteration and unique properties that make crystals invaluable. Topics range from the study of proteins and nucleic acids to the interior of planets. The in-class lectures will provide a basic guide that will serve as a platform for individually catered in-depth study. Therefore, the course is open to advanced students as well, who can pick up higher level of information for discussion and class projects.

Type:

SCI TECH ENGNR

Some Science division courses may have Math or Computer Science prerequisites; many have other Science prerequisites.

Major Requirements: 8 courses, 32 credits

Minimum Total Credits Required for Degree Conferral: 64 credits

2017-2018 Archived Catalog Information

Associate of Science in Paralegal Studies

Please note that these requirements are for students matriculating in or after fall, 2017. Students matriculating prior to fall, 2017 must reference the [Pre-Fall 2017 Degree Requirements \(Archives\)](#).

The ASPS degree requires the successful completion of the following courses:

Core Requirements: 11 courses, 40-41 credits

- [First-Year Experience](#)
- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Ethical & Philosophical Inquiry](#)
- [Social Science](#)
- [Social and Intellectual History](#)

Ethical & Philosophical Inquiry: 1 course, 4 credits

Choose one Ethics course from those listed below:

- PHIL-119 Ethics

Credits:

4.00

Description:

A systematic introduction to the major thinkers and their positions on the main issues of ethics, such as: What is morality? What are moral values? How should we live our lives? Are there objective, universal, absolute moral standards? If so, what are they, and what is their basis? 1 term - credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- **PHIL-120 Ethics and Civic Life**

Credits:

4.00

Description:

In this class you will be introduced to the perspectives and methods of politics, philosophy, and economics and see how these three disciplines present distinct but interconnected dimensions of current social and political issues.

- **PHIL-123 Social Ethics: The Good Life**

Credits:

4.00

Description:

An examination of contemporary Western society, particularly in the United States, in relation to philosophical attempts to define the good life. Current books that exhibit a philosophical approach towards important contemporary social issues will be discussed, as well as classics in philosophy. Topics may include: civic virtue, consumerism, current events, economic justice, popular culture (film, music, television), religion and secularism, etc. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- **PHIL-127 Contemporary Moral Issues**

Credits:

4.00

Description:

A critical examination of a number of contemporary moral issues such as: abortion, affirmative action, animal rights, capital punishment, cloning, drug legalization, environmental ethics, euthanasia, genetic engineering, gun control, pornography, same-sex marriage, suicide, war and terrorism, etc. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

Major Requirements: 8 courses, 32 credits

Minimum Total Credits Required for Degree Conferral: 64 credits

2017-2018 Archived Catalog Information

Social Science: 1 course, 4 credits

- LAWU-211 Litigation

Prerequisites:

Certificate or Sophomore status, or Instructor's consent

Credits:

4.00

Description:

The Rules of Civil Procedure dictate the steps taken in state and federal lawsuits. This course will acquaint students with rules and the practical requirements of the rules, from filing a complaint to clarifying a judgment and to the duties of paralegals in a litigation office. Normally offered each semester.

Major Requirements: 8 courses, 32 credits

Minimum Total Credits Required for Degree Conferral: 64 credits

Social and Intellectual History: 1 course, 4 credits

Choose one course from those listed below:

American Studies:

- AMST-111 Defining America and Americans

Credits:

4.00

Description:

Examines artistic, social, and political imaginings of America and Americans. We will read works by American and foreign observers of the United States to ask how Americans define themselves and how others see them. Course assignments will introduce students to themes, perspectives, and methods in the field of American Studies.

Type:

Social & Intellectual HST

Art & Design:

- **ADG-224 History of Graphic Design**

Credits:

4.00

Description:

The first part of the course will focus on the history of graphic design from prehistoric times to the Industrial Revolution, including the origins of graphic communications in the ancient world, the development of the alphabet and early printing and typography. The second portion will concentrate on the period from the late 19th century to the present, and will include the Arts and Crafts Movement, the various-isms and their influence on modern art, the Bauhaus and International Style, and contemporary visual systems and image making.

Term:

Offered Fall Term

Asian Studies:

- **AS-100 Introduction to Asian Studies: Culture, People, Ideas**

Credits:

4.00

Description:

An interdisciplinary introduction to Asian Studies will touch upon the history, politics, economics, philosophy, geography, arts, and cultures of Asia. Sample topics include political economy, religious and cultural exchanges, international relations, Asian experience in America, and the role of Asia in the twenty-first century. Students will develop conceptual frameworks for exploring the subjects covered by the Asian Studies curriculum.

Term:

Offered Both Fall and Spring

Type:

Asian Studies, Social & Intellectual HST

Communication:

- **CJN-114 Great Works of Journalism**

Credits:

4.00

Description:

An examination of important contributions to the literature of journalism through an analysis of major writers and news coverage of significant events from a journalistic perspective.

Term:

Occasional

Type:

Social & Intellectual HST

English:

- **ENG-123 Great Books of the World I Great Books of World Lit. I**

Credits:

4.00

Description:

Literary masterpieces from ancient times to the Renaissance, including: Homer's Odyssey, Sophocles' Oedipus, Virgil's Aeneid, selections from the Hebrew Bible and the Gospels, and Dante's Divine Comedy. List may vary at the discretion of the instructor.

Term:

Offered Fall Term

Type:

Classics Minor, Social & Intellectual HST

- **ENG-124 Great Books of the World II**

Credits:

4.00

Description:

This course will introduce students to a selection of Great Books from around the world from the 17th century to the 21st, such as Don Quixote (Spain), Madame Bovary (France), The Communist Manifesto (Germany), The Origin of Species (England), War and Peace (Russia), On Dreams (Austria), Night (Hungary), Things Fall Apart (Nigeria), Satyagraha (India), I Am Prepared to Die (South Africa), Saeed the Pessoptomist (Israel), The Rouge of the North (China), and The House of Spirits (Chile). Readings may vary at the discretion of the instructor.

Term:

Offered Spring Term

Type:

Social & Intellectual HST

Environmental Science:

- **UES-325 Environmental History of US**

Credits:

4.00

Description:

Explores how Americans have understood the environment and their relationship to it through analysis of classic environmental texts, historical contexts, and societal perspectives. Analyzes how the environment has changed from pre-colonial times to the present and how these changes have been described through the lens of environmental history. Themes include differing viewpoints of European and indigenous peoples toward the natural environment, the impacts of the Western expansion on native species and landscapes, the rise of industrialism and its impacts on natural resources and ecosystems, and the rise of 20th century environmentalism.

Term:

Offered Fall Term

Type:

Social & Intellectual HST

History:

- **HST-101 History of Western Civilization I**

Credits:

4.00

Description:

Surveys European culture, politics, and society from antiquity to the seventeenth century. Topics include: the Greek, Judaic, and Roman heritage; the rise of Christianity; feudal society in the Middle Ages; Renaissance and Reformation; the Scientific Revolution; and the development of absolutist and constitutional governments.

Term:

Offered Fall Term

Type:

Classics Minor, Social & Intellectual HST

• HST-102 History of Western Civilization II

Credits:

4.00

Description:

Surveys European culture, politics, and society from the Scientific Revolution to the present. Topics include: the development of absolutist and constitutional governments; the Enlightenment; the French Revolution; Industrialization and urbanization; nationalism and imperialism; World War I, World War II, and the Cold War; the decline of Europe as a world power.

Term:

Offered Spring Term

Type:

Social & Intellectual HST

• HST-121 World History I

Credits:

4.00

Description:

Explores the major themes of human history to 1500. Topics include: hunter-gathering, the migration of humans across the globe, transitions to food production, and the development of complex societies based on agriculture. Major early Eurasian civilizations (China, India, the Middle East, and Europe) are examined (alongside their interactions with Inner Asia and the Arabian Peninsula). So too are Sub-Saharan Africa and the Americas.

Term:

Offered Fall Term

Type:

Social & Intellectual HST

• HST-149 Empires & Globalization in World History I

Credits:

4.00

Description:

This is the first of the two-course series of Empires and Globalization in World History. Course discusses the origins and development of globalization and capitalism from the perspective of economic history. Major issues include the formation of the medieval trade system, the development of finance and capitalism in the early modern ages, and economic changes prior to the Industrial Revolution. The specific topics may change every year due to new academic developments and publications. Cultural Diversity B

Term:

Offered Fall Term

Type:

Social & Intellectual HST

• HST-150 Empires & Globalization in World History II

Credits:

4.00

Description:

This is the second of the two-course series of Empires and Globalization in World History. Course discusses the origins and development of globalization and capitalism from the perspective of economic history. Major issues include state-making, wars, and the rivalry among early modern empires, economic development, the Industrial Revolution and the formation of the global trade system. The specific topics may change every year due to new academic developments and publications. Cultural Diversity B

Term:

Offered Spring Term

Type:

Social & Intellectual HST

- **HST-181 American Life to the Civil War Era**

Credits:

4.00

Description:

Surveys American history from European colonization up through the era of the Civil War. Topics include interactions with Native Americans; slavery; the American Revolution; the founding of a new republic; social and economic developments in the early nineteenth century; expansion; party politics; sectional conflict; the Civil War and Reconstruction.

Term:

Offered Fall Term

Type:

Social & Intellectual HST

- **HST-182 American Life Since the Civil War Era**

Credits:

4.00

Description:

Surveys American history from the 1870s to the present. Topics include the new industrial order; farmer and worker protests; progressivism; America's emergence as a world power; the two World Wars; the Great Depression; the New Deal; the Cold War; post-World War II American society; the Civil rights movement; Vietnam; dissent and counterculture in the 1960s; the women's movement; economic, social, and political changes in the late-twentieth century; America's relationship to a globalized world.

Term:

Offered Spring Term

Type:

Social & Intellectual HST

- **HST-251 Modern East Asia**

Credits:

4.00

Description:

China, Japan, and Korea - East Asia's critical players - share many historical influences, but each has a distinct culture, and they competed with each other for much of the twentieth century, proud of their achievements but feeling threatened by their neighbors. Lectures interspersed with movies and documentaries to show how East Asia has developed in the past one-hundred-plus years.

Type:

Social & Intellectual HST

- **HST-260 Asian Peoples and Cultures**

Credits:

4.00

Description:

Introduces the peoples of Asia and the cultures they have created. Particular attention is paid to the lives of the common people in both historical and contemporary times. By understanding the richness and complexities of daily life in Asia, we will understand the continuities and discontinuities brought on by social, cultural, and economic changes. We will gain an appreciation of our fellow human beings in Asia.

Type:

Social & Intellectual HST

- **HST-268 History of the Mediterranean**

Credits:

4.00

Description:

Explores the history of the Mediterranean from the ancient times to the 20th century, with emphasis on the extraordinary interaction between the rich cultural, ethnic and religious backgrounds of the peoples of Europe, Middle East, and North Africa.

Term:

Occasional

Type:

Social & Intellectual HST

- **HST-312 Renaissance and Reformation Europe**

Credits:

4.00

Description:

Explores the intellectual and cultural developments of the Renaissance, and of the Protestant and Catholic Reformations in their social and political contexts. Topics include: Humanism, the rise of the city-state; art, and science; changes in family and social life; the causes of the Reformation (intellectual, social, technological); Calvinists, Lutherans, and Radical Reformers; Counter-Reformation and its political consequences; the Wars of Religion.

Social & Intellectual HST

- **HST-383 Boston: Heritage of a City**

Prerequisites:

One History course

Credits:

4.00

Description:

Boston from its foundation in 1630 to its development as a 21st century metropolis. From the Massachusetts Bay Colony, to cradle of the American Revolution, to a Yankee merchant capital, Brahmin cultural center, and immigrant melting pot. When offered in the hybrid format, this course will meet at the regularly-scheduled time, but lectures and other course materials will be available on the course Blackboard site in case you cannot attend.

Term:

Offered Fall Term

Type:

Social & Intellectual HST

- **HST-394 Slavery in Film, Literature and History**

Credits:

4.00

Description:

A seminar on slavery in the United States as depicted in history, literature, and film. Topics may include resistance to slavery, honor, the attack on slavery, the cultural and social worlds of masters and enslaved people, the thought of masters and enslaved people, women and slavery, and/or slavery as an economic institution.

Type:

Social & Intellectual HST

• HST-412 Europe in the 20th Century

Credits:

4.00

Description:

Examines the political, economic, social and cultural developments of the principal European states since 1900. Topics include: World War I; the social and economic dislocations of the 1920s and 1930s; the rise of Fascism and National Socialism; World War II; the remains of colonialism; modernization and Americanization since the 1960s; the European Union; Europe after the Cold War; and throughout the twentieth century, the importance of class and class conflict, nationalism, and war in shaping the European experience.

Term:

Occasional

Type:

Social & Intellectual HST

• HST-426 Politics and Culture in Europe 1919-1939

Credits:

4.00

Description:

Explores the social and political development of European society between the two world wars, primarily through the literature, art, and films of the period. Topics include: the dissolution of pre-1914 middle class society; deviance and sexuality in the 1920s; the role of decadence in art and the

Fascist response to deviance in life and art; women, workers, and the new technology; the rise of Fascism; political engagement and polarization throughout European society in the face of economic and social crisis.

Type:

Social & Intellectual HST

- **HST-489 Germany: Film, Politics, Memory Since 1945**

Credits:

4.00

Description:

Explores German history since 1945 through film, newsreels and other archival footage, war memorials and museums, novels, published diaries, memoirs, and recent historical scholarship. Topics include the representation, in film and other texts, of: post-war rebuilding; the German Economic Miracle; divided Berlin; 1960s and 70s radical politics; coming to terms since 1945, with Germany's Nazi past and the Holocaust; coming to terms since 1990 with the Stasi and East German past; Ostalgie (nostalgia in the 21st century for some aspects of East German socialism); the multi-cultural society that is Germany today, with new Turkish, Greek, Russian, Arab, and even Israeli communities.

Type:

Social & Intellectual HST

Philosophy:

- **PHIL-210 History of Ancient & Medieval Philosophy**

Credits:

4.00

Description:

The study of philosophical thought from the period of the ancient Greek philosophers through the Medieval thinkers, including such philosophers as Socrates, Plato, Aristotle, Epicurus, Zeno, Parmenides, Pythagoras, Protagoras, Augustine, Aquinas, Anselm, and Abelard. An introductory course designed to equip the student with a well grounded understanding and appreciation of Philosophy. 1 term - 4 credits. Normally offered every year.

Term:

Offered Fall Term

Type:

Classics Minor, Social & Intellectual HST

- **PHIL-250 Social & Political Philosophy**

Credits:

4.00

Description:

An examination of persistent debates in political and social philosophy, such as the meaning of property and welfare, the tensions between liberty and equality, censorship and freedom of expression, the relation of church and state, the possibility of political education and civic virtue, legitimacy of the state and revolution, war and problems of end and means, addressing historic injustice, such as racism, genocide, or sexism, among other topics. The class will focus on no more than two such themes. Students will read both classic and contemporary writings to address both the historical roots and the contemporary treatment of these questions. 1 term - 4 credits. Normally offered every year.

Women's & Gender Studies:

- **WGS-111 Women, History, & Culture**

Credits:

4.00

Description:

Explores the roles and images of women in Western culture and the realities of women's everyday lives through literature, film, history, art, psychology, and recent feminist scholarship. Analyzes gender inequalities and the influence of gender on social structure, human behavior, and artistic expression. Topics include: the social construction of gender and identity; domestic prescriptions for women; women and work; intersections of gender, class, and race in American society; sexualities and identity; the politics of motherhood and reproductive rights; educating girls; negotiating male privilege and structural inequalities; representations of women in Western art and film; and women as artists and gendered models of creativity in art, film, fiction, and science.

Term:

Offered Both Fall and Spring

Type:

Social & Intellectual HST

• WGS-115 Introduction to Gender Studies

Credits:

4.00

Description:

Introduces the key topics and debates that have shaped the field of gender studies, including queer studies, masculinity studies, and women's studies. Through lecture and class discussion of texts from literature, film, history, psychology, and sociology, explores the pervasive influence of gender on the structure of society and our everyday experiences and the role that gender plays in our understanding of love, friendship, sexuality, and even violence. Topics include: biological arguments about gender and sexuality; the social construction of gender and identity; intersections of gender, race, class, and sexuality; masculinity and femininity; and theories of sexual difference and the construction of sexuality.

Term:

Occasional

Type:

Social & Intellectual HST

- **WGS-311 Engendering Entertainment: Feminism and Popular Culture**

Credits:

4.00

Description:

Investigates the complex intersections between feminism and popular culture through several different lenses: by exploring, how feminists make arguments about popular culture; by looking at the complexities of public femininity in today's popular culture, including figures such as Lady Gaga and Katy Perry and television shows like The Bachelor and Grey's Anatomy; by focusing on a variety of articulations of feminism within mass media, blogs, social media, and popular books such as Ariel Levy's Female Chauvinist Pigs, and Caitlin Moran's How to Be a Woman. Along the way we will ask questions about: what makes a work of art feminist; how modern media contributes to or distracts us from a variety of political debates in the realm of female equality and how can we, as individuals, use modern media to create and advance smart, feminist arguments.

Type:

Social & Intellectual HST

- **WGS-315 Feminist Thought**

Credits:

4.00

Description:

Investigates how feminists, both today and in history, have understood inequality and difference and looked for the best ways to address these issues and bring about social justice. Examines how feminist theorists help us to understand how gender and other social categories, such as race, class, sexuality, disability, age and nationality, are constructed within and through each other; and analyzes feminist engagements with liberalism, socialism, psychoanalysis, existentialism, post-colonialism, critical race theory, and queer theory, as well as consider anti-feminist arguments. Readings include classic critical texts by authors including Mary Wollstonecraft, Emma Goldman, Virginia Woolf, Chandra Mohanty, Gloria Anzaldua, and Judith Butler.

Type:

Social & Intellectual HST

- **WGS-335 Queer Narratives**

Credits:

4.00

Description:

Explores the stories that help us to understand communities, identities, and bodies that could be considered queer, and the ways that film, music, memoir and fiction have discussed queer as different, unusual, or other. Texts include the documentary, "Paris Is Burning", Frank Ocean's 2012 album, "Channel Orange", and Janet Mock's recent memoir, "Redefining Realness", as well as foundational queer theory from Judith Butler, Eve Kosofsky Sedgwick, and Lee Edelman, among others, to help build a framework for approaching and interpreting both fictional and non-fictional accounts of queer lives.

Major Requirements: 8 courses, 32 credits

Minimum Total Credits Required for Degree Conferral: 64 credits

2017-2018 Archived Catalog Information

Associate of Science Degree

Please note that these requirements are for students matriculating in or after fall, 2017. Students matriculating prior to fall, 2017 must reference the [Pre-Fall 2017 Degree Requirements \(Archives\)](#).

The AS degree program requires the successful completion of the following courses:

Core Requirements: 15 courses, 54-56 credits

- [First-Year Experience](#)
- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Studies in Literature](#)
- [Ethical & Philosophical Inquiry](#)
- [Human Behavior and Societies](#)
- [Social and Intellectual History](#)
- [Visual & Performing Arts Theory and History](#)
- [Quantitative Analysis](#)

First Year Experience: 1 course, 1 credit

Students with 15+ transfer credits of college or university work are exempt.

Choose one of the following to be completed during the first semester of matriculation:

- **CAS-101 Strategies of Success**

Prerequisites:

CAS students only. SBS students by special permission.

Credits:

1.00

Description:

CAS 101 is a one-credit course that meets once a week and is designed to help you have a successful transition to Suffolk University and our unique urban community. It is also designed to introduce you to the principles and concepts of Oral Communication and Presentation Skills. Through interactive exercises and engaging assignments, you will explore the campus environment and learn about strategies for success as a student. You will present speeches about your research and activities to improve your abilities as a speaker.

- **ADPR-102 Professional Development**

Prerequisites:

ADPR-101 must be taken concurrently

Credits:

1.00

Description:

In this hands-on experiential course, students examine potential career paths in Advertising, Public Relations, and Social Media, become oriented to the university and the surrounding Boston area, and identify professional resources in Boston that foster career development.

Free Electives: credit varies

Minimum Total Credits Required for Degree Conferral: 64 credits

Students with 15+ transfer credits of college or university work are exempt.

Please note that not all courses are offered each semester. Students should contact their advisor to learn about current course offerings.

Choose one Seminar for Freshmen course from those listed below:

- **SF-101 Fixing the World- Energy and Water: The Science of Solutions**

Credits:

4.00

Description:

Two of the most daunting challenges the world faces (or will face) is how to provide for both its growing energy needs and potable drinking water. Regular news events include climate change, droughts, flooding, and petroleum struggles. Human nature often requires a severe crisis before it responds. This course will investigate the historical science driving the use of energy since the Industrial Revolution to convert energy resources into work, including the steam engine, the electric motor, and the internal combustion engine. It will also consider alternative energy options to fossil fuels, such as solar, wind, geothermal, and ocean power. Along the way we will consider the evidence for Global Warming and Climate Change. We will look into human nature, simple life styles, conspiracy theories, and the influence of those in power to shape human opinion. We will also consider how our water supply is provided and where it goes after being used. What options do developing countries or drought racked areas have to remedy their water needs? Although the course pursues a scientific understanding of these issues, the mathematics used will be gentle, and a larger emphasis will be placed on the intuitive appreciation of these concerns.

- **SF-116 Enlightened Insanity**

Credits:

4.00

Description:

Rain or shine, the great 18th century Enlightenment philosophers would meet at the famous cafes of Paris to discuss their ideas, and to observe and criticize society. From these informal debates emerged ideas that are at the core of our modern understanding of the nature of society, marginality, human nature, civil rights, the essence of creativity and genius. Come join us in the quest to understand, define, observe, and analyze the key ideas and concepts of these great thinkers, such as Rousseau, Diderot, and Voltaire, still so relevant in our time. We will read key works of these creative thinkers and philosophers. We will enrich our experience and understanding through the use of film, theatre performances, museum visits, as well as the occasional cafe debate.

- **SF-126 The Boston Theatre Scene: the Inside Experience**

Credits:

4.00

Description:

Using the current Boston theatre season as its syllabus, this writing- and analysis-intensive course will explore several plays in production at some of Boston's many professional theatres. We will study the script of four to five plays before attending performances of those works. Students will gain insights on the world of theatre through backstage tours and conversations with theatre professionals such as producers, directors, actors, designers, playwrights, and critics. Students must be available for evening (usually Wednesday) performances. A fee for student-rate tickets will be assessed.

- **SF-132 The Beatles: Here, There & Everywhere**

Credits:

4.00

Description:

This seminar will investigate the impact and legacy of the Beatles. The Fab Four deserve our scholarly attention as musical innovators and as cultural avatars of the 1960s, an era that still exerts influence today. We will examine the many ways in which the Beatles rocked the establishment and became defining figures in post-war youth culture. We will also discuss other media (the visual arts, film, fashion, style) and fields of study (mass media, marketing, recording technology, copyright law, English history) using the Beatles as our guides.

- **SF-151 Getting Over It: Dealing With the Aftermath of Group Conflict/Mass Atrocity**

Credits:

4.00

Description:

Once violent conflict between two groups has ended, what is the best way to transition back to normality coming to terms with the past or simply moving on? To answer these questions we will examine the debates surrounding war crime tribunals, truth commissions, lustration policies, and reparations in the second half of the 20th century. Case studies will include post-apartheid South Africa, post-WWII Germany, and the Israeli/Palestinian conflict. We will discuss the philosophical problems raised by each of these instruments, as well as on the political, legal, and practical difficulties their implementation present. Cultural Diversity B

- **SF-156 The Mask Behind the Face: Personas, Personalities, and Perception. Acting in /Out Life**

Credits:

4.00

Description:

The theatre has always been a metaphor for life. In modern times life has become theatre. This seminar will confront the idea of real life and the eroding boundary between performers and audience. Students will study the roots of the contemporary obsession with stars and stardom, a mania that began in the 18th century and flourished in the 19th century. We will look at performance studies, performers memoirs, plays, and films that dramatize this dilemma.

- **SF-173 Crime in American Society**

Credits:

4.00

Description:

Popular beliefs about crime are often inspired by the media and by specific criminological theories. These theories about and media images of crime will be examined in detail, including the hits and misses.

- **SF-174 Tragedy and Literature**

Credits:

4.00

Description:

This course will focus on classic works of ancient and modern literature that examine the human condition from a tragic perspective. We will concentrate on close readings from the following texts: Homer's Iliad, Sophocles' Antigone, The Bhagavad-Gita, Shakespeare's Othello, Chekhov's short stories, and Joyce's Dubliners.

Type:

Classics Minor

- **SF-175 War and Apocalypse in Science Fiction**

Credits:

4.00

- SF-178 Sacred Hoops & Sneaker Pimps: Understanding the American Hoop Dream

Credits:

4.00

Description:

This course is about the basketball hoop dream played out at the high school and college levels. We will study a wide variety of materials - novels, films, websites, reference works - to understand both the construction, and destruction, of the hoop dream in such diverse places as New York City, Seattle, rural Indiana, suburban Georgia, and the Wind River Reservation in Wyoming. Issues of race and culture will serve as guiding themes as we develop critical theory explaining why the hoop dream has persisted, and adapted, over time, to fit the needs of its believers and supporters.

- SF-182 Heroes, Antiheroes and Outsiders: Reading the Graphic Novel

Credits:

4.00

Description:

How is it that comics", a genre often viewed as entertainment for children and adolescents, has become one of the most exciting forms of narrative and visual art? To answer this question, this seminar will examine a range of graphic novels, from those that celebrate their origins in superhero comics, such as Alan Moore's Watchmen, to those that treat subjects not usually considered proper to the comics genre, such as Art Spiegelman's Maus, about the Holocaust, and Alison Bechdel's Fun Home, about the complexities of sexual identity. As we read these works, we will look at how the combination of words and still images makes the graphic novel a unique storytelling form, as well as how artists and writers push the envelope to create new styles and challenge our expectations. In addition to class discussions and writing assignments, we will take a field trip to the Museum of Fine Arts and create a collaborative group graphic novel step-by-step over the course of the semester (all abilities welcome).

- SF-183 Politics, Power and the Media

Credits:

4.00

Description:

Is there a relationship between accumulated political power and mass media representations? Is news content impacted by existing political power relations? It is the object of this course to critically analyze the role of the mass media within the framework of existing political power relations in the United States. In particular, the course will focus on the role the mass media plays in promoting and reinforcing dominant political practices and ideologies. The course will begin by exploring various theories of the press, notably its function in a democratic society, as well as the concepts of power and propaganda. We will continue with a series of case studies, complemented by secondary sources that highlight how media representations affect the contemporary distribution of political power in the US. Topics of discussion will include the current US war on terrorism, the ongoing health care debate, the public disavowal of big government", and the concept of a liberal media.

• SF-189 American Gothic: Edgar Allan Poe, Flannery O'Connor and Annie Proulx

Credits:

4.00

Description:

This literature seminar will study and compare the short stories of Edgar Allan Poe, Flannery O'Connor, and Annie Proulx. Beginning with Poe as the father of the short story genre in America and exploring his critical theory of the grotesque and arabesque", the class will examine the emergence of the gothic literary idiom as a classic American genre. Critical essays on the gothic aesthetic will be analyzed and film adaptations and documentaries will be viewed.

• SF-190 Asia in America Fiction and Fact

Credits:

4.00

Description:

With a focus on some selected ethnic groups from Asia, Asia in America studies the history and current status of Asian Americans in Boston and other parts of the country. We will examine the major reasons why these immigrants chose to leave their home country as well as their expectations and experiences here in America. We will also discuss the issues Asian immigrants have faced in this adopted home as well as the connections and conflicts among different ethnic groups or even within the same ethnic group due to political and socio-economic reasons. The course will include some level of community engagement, through Chinatown tour and service, which may enable us to have a direct contact with the Asian American population and reflect on what is being discussed in class. Through this course, we hope to gain a better understanding of the racial and cultural history of the country and arrive at a deep appreciation of the dynamics of cultural interactions in the twenty-first century. The course fulfills the SCGP requirement.

Type:

Global Engagement Experience

- **SF-191 Film Adaptation Film Adaptation**

Credits:

4.00

Description:

Why did they change the ending of the book? The novel is so much better! We will explore the concept and industry of film adaptation. Students will read novels and watch respective film adaptations to explore how the written word is adapted to the screen; both fiction and non-fiction works will be considered. Also, field trips to past film locations in Boston will be taken to explore why specific settings were chosen for respective situations. Additionally, students will create their own written adaptations of source materials, putting into practice the concepts studied in class.

- **SF-197 Sustainability, Energy, and Technology At Suffolk University**

Credits:

4.00

Description:

In this project and team-based course, students study a sustainability problem at Suffolk University and spend the semester developing proposals to address the problem. At the end of the course students will present their proposals to Suffolk University's sustainability committee, and will exhibit their websites and visual aids in the Donahue lobby to educate the Suffolk community about sustainability. If their proposals are well-researched and well-communicated, students can see their ideas actualized while they are still undergraduates.

- **SF-198 Music and the Brain**

Credits:

4.00

Description:

What accounts for the power of music to move us so profoundly? This course explores how our brains and music evolved together: What music can teach us about the brain, what the brain can teach us about music, and what both can teach us about ourselves.

- **SF-199 Unfolding the European Union**

Credits:

4.00

Description:

The EU is a powerful political, economic and cultural block that is meant to play a major role, together with the USA and China, in the creation of a new post-crisis world order. The seminar is intended to cover, at a basic but reachable level, the history, the politics, the culture and the functions of the EU in the beginning of the Twentieth Century. An extraordinary experiment of sociopolitical engineering, comparable to that of the United States of America, the EU has been changing the life of an increasing number of Europeans for over 50 years. No American student could afford to ignore the inner structure as well as the particular peculiarities of such inclusive supranational organization in today's world. Issues as institutional functioning, problems derived from individual state sovereignty, economic coordination to face common challenges, cultural integration, future enlargement, etc. are all indispensable to understand the way in which Europe is changing. But also much more day-to-day issues, such as travel mobility, education exchange programs, citizen's participation, supranational networks of people in the arts or in business, unified labor market, gender participation, human rights, consumer's protection, etc. are all in the process of developing a more robust and functional European Citizenship.

- **SF-1110 Decoding Boston: Signs and the City**

Credits:

4.00

Description:

This interdisciplinary seminar will explore the buildings, monuments, sites, and signs around Boston from the point of view of Visual and Culture Studies. In addition to providing a compelling introduction to the history, major landmarks, and culture of the city, the seminar is specifically intended to improve students' visual literacy: that is, their awareness of their visual environment and their ability to critically analyze the rhetoric of the spaces, buildings, and images with which they are surrounded.

Type:

Local Engagement Experience

- **SF-1122 The Ethics of Peace and War: From The Ancient World to the Present**

Credits:

4.00

Description:

This course will explore historical, ethical and political issues concerned with matters of peace and war. We will examine a variety of different texts: religious, historical, philosophical and literary, but the main emphasis will be philosophical justifications for war and philosophical visions of just peace, with an eye to contemporary questions in the War on Terror. To the extent that we use non-philosophical texts, this will be in the service of focusing the imagination on the philosophical issues and applying theoretical frameworks to historical events.

• SF-1127 The Vietnam and Iraq Wars: Polarized Perspectives

Credits:

4.00

Description:

This class will examine some of the many controversies surrounding the Vietnam and Iraq Wars, two conflicts that have been profoundly polarizing for the American people. There are widely divergent perspectives regarding the fundamental questions surrounding each war. Were the reasons for American involvement just? To what extent were the methods used by the United States military during each war just? To what extent did the media play an appropriate role before, during, and after each war? Did opposition to these wars serve primarily to benefit the enemies of the United States or did it constitute a form of patriotism and love of country? This interdisciplinary course will address these and other complex questions by examining the histories, literature, and films (both documentaries and dramatic) that have been produced in response to these wars.

• SF-1128 Sustainable Media

Credits:

4.00

Description:

Contrary to a popular perception that information, communication and entertainment technologies are clean, ecologically benign and paperless, the reality of an increasingly digital life is that our fascination with the next best thing in mobile phones, video game consoles, personal computers, digital cameras, tablets, etc., has devastating impacts on our environment. These media devices are manufactured using toxic ingredients in poisonous working condition, require an abundance of energy to operate, and create hazardous waste when disposed. Media technology companies and the advertising industry that markets their wares have successfully persuaded consumers to accept rapid obsolescence and to highly anticipate the latest upgrade. But some consumers, electronics manufacturers, policy makers, and environmental groups are working to change the culture of

consumption in favor of sustainable media practices that lessen the environmental footprint of the digital devices we use everyday. The purpose of this course is to understand the problem of unsustainable media, and the possible solutions for a sustainable media system.

- **SF-1129 Beacon Hill: Fact, Fiction, and Fantasy**

Credits:

4.00

Description:

The course will explore the physical geography, history, and image in literature, film, and pop culture of Suffolk University's Beacon Hill neighborhood. The purpose and objective of the course is to provide students with a deep knowledge, understanding, and appreciation of Beacon Hill through examination of written and visual sources, and feet-on and eyes-on experience of the public parts of the Hill.

Type:

Local Engagement Experience

- **SF-1133 Problems and Solutions in Early American History**

Credits:

4.00

Description:

This course will examine four major problems in the early American republic: forming a government; bridging vast distances on the American continent; slavery; international relations. We will explore the various proposed solutions to these problems. Some of the solutions worked well, others were more disastrous than the initial problem. We will read primary documents pertaining to these issues, and try to imagine how men and women considering the problems might have responded to them. What solutions could be proposed? What solutions would work? What were the political, economic, or social difficulties generated by the problem and by the proposed solutions? In considering the problems, we will also learn how to use the various archives close at hand: the Sawyer Library, the Boston Public Library, the Massachusetts Historical Society, and the Massachusetts State Archives. Students will also post their findings on a class blog, and present their work to one another in class.

- **SF-1134 The Meaning of Life**

Credits:

4.00

Description:

What do we live for? Which beliefs, values, and experiences sustain meaningful, fulfilling existence? Are we authors of our destinies or powerless pawns in an unfathomable cosmic game? Does death render all our efforts superfluous? This award-winning course offers a cross-cultural, interdisciplinary exploration of these questions through philosophical and religious texts, art, fiction, autobiography, and psychological studies. The course opens with the Old Testament's book of Ecclesiastes, followed by three units: 1) A Life Worth Living: Humanity's Ideals focuses on the ancient and modern visions of human flourishing; 2) Threats to Meaning: Humanity's Discontents, discusses the disillusionments leading to the loss of meaning; and 3) Recovery of Meaning: Crises and Hopes, explores the post-crisis possibilities of self-discovery and growth. Please visit <http://meaningoflife.cherkasova.org/>

- **SF-1135 Women Warriors: Stories of Captivity, Conversion, and Confession**

Credits:

4.00

Description:

Since the beginning of time, women have been doing battle to themselves, while men have gone to battle against others. Whether it is through converting to Christ, yielding to captors in order to survive, or carrying a baby, this course introduces students to the many ways in which, whatever battles they face, women are warriors; they survive. Utilizing an array of captivity, conversion, and confession narratives by women, and pairing them across the centuries, students will make connections and draw conclusions between early-and mid-19th-century-American and contemporary women. Students will connect, for example, the trials of the 17th-century Puritan captive, Mary Rowlandson, and contemporary hostage, Elizabeth Smart, to explore how women (no matter how different they seem) draw upon unique inner resources to survive.

- **SF-1141 Classical Civilizations: Pathways to Wisdom**

Credits:

4.00

Description:

How is it that the knowledge, intelligence, wisdom and values of the Greeks and Romans still educate and edify the world by providing venues towards leading fulfilling and dignified lives? The guiding principles of their respective civilizations rested upon eight pillars: - Humanism: It was recognized that humans have the potential to master their world and live life to the fullest. -The Pursuit of Excellence: To imagine the highest good and strive to attain it. - Self Knowledge: It is imperative to know oneself before seeking to know the world. - Rationalism: Always question, reason and discern truth from falsehood and never consider any matter superficially. - Restless Curiosity: Often the resolution of one issue leads to the revelations

of others mysteries and pursuits which compels further investigation. The wise individual makes this a lifelong endeavor. -Love of Freedom: As long as one brings no harm to others, one must be free to live and discover as much as possible. - Individualism: All are unique and, therefore, must recognize individual strengths and identity. -The Practice of Moderation: The prudence of avoiding extremes in personal and social conduct. In this course, students will read two (brief) texts on the Greek and Roman contributions to the world and then will proceed with specific readings which illuminate the eight principles above for achieving the good life.

- **SF-1143 In the First-Person: Storytelling in the 21st Century**

Credits:

4.00

Description:

This section of the Seminar for Freshmen will consider the forms, venues, and impacts of narrative nonfiction in contemporary culture. From the exploding popularity of personal essays in the digital age to the living, evolving essays we create on social media, we are constantly narrating and archiving our lives, shaping their content for specific audiences. In doing so, we shape what our experiences mean and represent. In order to analyze the power of narrative nonfiction, we will look at a variety of multimodal texts: essays, podcasts, Instagram and Twitter feeds, stand-up comedy, and storytelling slams, as well historical texts such as the essays of Michel de Montaigne and historical artifacts at the National Archives in Boston. We will also write our own narrative nonfiction, and adapt our first-person stories for listening and viewing audiences, such as the MassMouth story slam and podcasts like This American Life. Additionally, we will practice narrative nonfiction for professional audiences, using storytelling as a way to showcase personal strengths to employers, internship coordinators, and the like.

- **SF-1144 Native Americans: Walking in Two Worlds?**

Credits:

4.00

Description:

Native Americans are often described as walking in two worlds, as they attempt to navigate the process of maintaining their tribal identity and heritage while living in mainstream America. In recent years there has been a shift towards tradition and heritage, and a rejection of Western values and norms in both the US and Canada. In this course we will look at how Native people live in the US and Canada today, and examine the extent to which they are either trying to walk in two worlds or perhaps rejecting the two worlds model. To help us answer this question, we will read about reservation life, the Idle No More Movement, Indigenous History, and current events. We will also watch videos and explore indigenous culture.

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

- **SF-1146 Fido the Friendly Wolf: A Natural History of Dogs**

Credits:

4.00

Description:

This course explores the evolution of dogs from wolves and the ways in which dogs have adapted to their niche in human society. The ecology, behavior, genetics, and adaptations of dogs will be explored in relation to both their wolf ancestry and artificial selection by humans. The course includes 2 mandatory field trips to a wolf sanctuary and an animal shelter.

- **SF-1147 Global (In) Security: From ISIS to Ebola**

Credits:

4.00

Description:

This course reviews the principal features of global and national security as it is currently practiced by tracing the evolution of theories, policies and circumstances whereby current international security is developed. Students will evaluate the nature and origins of war, arms proliferation, military instability, terrorism, genocide, health threats and natural resources depletion.

- **SF-1148 Brave New Worlds**

Credits:

4.00

Description:

Explores themes of adventure, self-discovery, exile, and culture shock in classic and contemporary travel writing (including fiction, poetry, and non-fiction) as well as film. Students will experiment with creative writing of their own, develop theories of cosmopolitan world citizenship, travel through the city of Boston on field trips, and team up to learn about different countries in Suffolk's global network of study abroad programs.

• SF-1150 Religion in Contemporary Society

Credits:

4.00

Description:

This course is design to provide students with an overview of the social settings and cultural meanings of religion in the contemporary world. Topics that will be covered in reading and discussions include the rise of religious fundamentalism, religion and violence, women's and men's religious experiences, new religions, and portrayals of religion in popular films. In addition to the readings, students will observe and experience religious expressions and activities through fieldwork assignments. The emphasis on films and fieldwork reflects my belief that religion is made up of lived experiences of actual individuals and communities. In order to understand religion in contemporary society we will make every effort to see (in person or in film) a wide range of religious activities. The films we will see include some of the following: Leap of Faith, Devil's Playground, Kadosh, Women of Hizballah, Singing Stream, A Still Small Voice.

• SF-1151 Reproduction and Society

Credits:

4.00

Description:

This course explores relationships between reproductive health and rights both nationally and internationally. Many of our topics fit into two broad areas: conflicts over the control of childbearing (sterilization abuse, birth control, and abortion) and conflicts over who deserves to be a mother, especially when the mothers in question face social stigma and lack political power. Other topics include safe birth and maternal mortality, breastfeeding, infertility and reproductive technology. We also examine the politics of women's sexual and reproductive autonomy, including the policies that shape women's choices to prevent, achieve, abort, or carry to term a pregnancy. Throughout, we are guided by the following questions: Why is reproduction an important site through which to understand society? How do statuses such as race, class, gender, sexuality and ability influence people's reproductive possibilities? What is the role of the state in shaping these experiences? How have communities supported or resisted efforts at reproductive control? Why is reproductive justice central to these answers?

- **SF-1152 The Idea of America: Past, Present, Future**

Credits:

4.00

Description:

A systematic exploration of thinking of and about America, from the founding of the republic to American issues and traditions of thought that reflect upon the founding principles and the unfolding American experiment. The Declaration of Independence and the Constitution will be studied with an eye to their philosophical content and sources. The course will also examine works of philosophers and other thinkers who address conflicts over the meaning of founding principles in the course of the nation's history, from the struggle over slavery to America's contemporary role in the world. Because this course intends to apply theoretical understanding to real life, students will be expected to read contemporary journalism on a regular basis and assess the controversies of today in the light of the nation's philosophical and historical currents.

- **SF-1153 Law, Disease, and Public Health**

Credits:

4.00

Description:

This course is about public health law, which is the study of the legal powers and duties of the various systems of government in the United States (federal, state, and local) in collaboration with their partners (e.g., health care, business, the community, the media, and academe), to ensure the conditions for people to be healthy (to identify, prevent, and ameliorate risks to health in the population), and of the limitations on the power of these systems of government to constrain for the common good the autonomy, privacy, liberty, proprietary, and other legally protected interests of individuals. The prime objective of public health law is to pursue the highest possible level of physical and mental health in the population, consistent with the values of social justice. The course will focus especially on public health law in the area of epidemic disease. Case studies will be made of the Great Influenza of 1918 and the origins and spread of the Ebola virus, culminating in an examination of outbreaks of Ebola in the United States.

- **SF-1154 Introduction to Visual Studies**

Credits:

4.00

Description:

This seminar provides an introduction to Visual Studies, a relatively new interdisciplinary field that examines how images communicate and the roles that they play in society. Students will apply the concepts and techniques of Visual Studies to analyze sites and signs around Boston, such as advertisements, street signs, fashions, newspaper photographs, buildings, and public spaces. Class projects will increase students' awareness of their visual environment and their ability to critically analyze the visual rhetoric that surrounds us and is often used to manipulate us.

Type:

Local Engagement Experience

- **SF-1155 The Boston Olympics**

Credits:

4.00

Description:

This class will teach students about the key role that sporting events can play in building a city, building its brand and the politics surrounding the process of these things occurring. Topics may include: urban development in general and the transformation of the industrial to the post-industrial Boston; the way in which cities use events like the Olympics to build their place brands; the way an effort like the Olympics can be used to encourage large scale public investment in longer term infrastructure projects that otherwise might not be justifiable; and the way government works with interest and community groups to try to shape public policy.

- **SF-1156 Thinking About the Insanity Defense**

Credits:

4.00

Description:

This course examines sixteen case examples providing a clear and compelling introduction to one of the most important topics in the relation between public policy and law. This course addresses: the history of the insanity defense; the effects of different standards for determining insanity; the arguments for its retention; abolition, and revision; media and other responses to it; and the controversies around pre and post conviction commitment. The case examples illustrates a variety of outcomes and include individuals who were found not guilty by reason of insanity; found guilty even though mentally ill; and not charged because of mental illness.

- **SF-1157 Germany in Film and History, 1945-2015**

Credits:

4.00

Description:

Since 1945, Germany has had a lot of history to reckon with- and 21st century Germany history through film, newsreels and other archival footage, radio and TV shows, war memorials and museums built since 1945, novels, published diaries, and memoirs. We will also read recent historical scholarship to put these cultural texts in context. Topics include the representation, in film and other texts; of: post-war rebuilding, the German Economic Miracle; the building of the Berlin Wall; radical politics of the 1960s and 1970s; coming to terms since 1945 with Germany's Nazi past and the Holocaust; coming to terms since 1990 with the Stasi and East German past; Ostalgie (nostalgia in the 21st century for some aspects of East German socialism); the multicultural society that is Germany today, with new Turkish, Greek, Russian, Arab, and even Israeli communities.

• SF-1158 Global Climate Change

Credits:

4.00

Description:

Conversation about the weather is considered to be the universal icebreaker. Yesterday's sweltering heat, the storm predicted for this weekend, even long-term climate shifts find their way in our daily conversation. Today, however, such casual conversations have an edge to them, because we are realizing that humans play a role in determining the climate shift. In fact, understanding the human fingerprint in the Arctic tundra melting, or a devastating hurricane, has gone well-beyond small talk to become one of the most important challenges our society faces today, and on that is wedded to geopolitics. To meaningfully participate in any dialogue that addresses this challenge people have to be aware of certain key ideas of Physics and Planetary Science. The aim of this course is to provide you with some of the essential facts and pieces of science underlying such questions. This course will enable you to grasp many of the issues that dominate today's political discourse and to develop an informed opinion (your, not our!) for which you can rationally argue.

• SF-1160 Individuals and Society in the Zombie Apocalypse

Prerequisites:

CAS Freshmen Only

Credits:

4.00

Description:

The Walking Dead tells viewers that life in the zombie apocalypse requires people to fight the dead, fear the living. Sociologists want to know why we should fear the living. How do individuals come together and try to recreate society for themselves: either to build community or fight other groups? What role do morals and values have in a society? How does all of this determine life, death, and the struggles people must face? Questions like these will give our class a new view of The Walking Dead and can help us to learn more about the society that we live in where so far the dead have remained in the ground.

- **SF-1162 Space Missions: From Moon to Mars and Beyond**

Credits:

4.00

Description:

It is hard to believe that only 60 years ago, our only close-up view of a planetary body was that of Earth. We are truly living in the Golden Age of Space Exploration, when a new mission every few years brings us spectacular images from either a neighbor in the solar system or galaxies at the edge of the universe. This course will describe the dozen space missions that changed our view of the universe, ranging from our solar system to the most distant galaxies.

- **SF-1163 Spellbound! Witches, Wizards and Spirits In American Literature**

Credits:

4.00

- **SF-1164 Reinventing Europe: Beyond Brexit and Secular Stagnation**

Credits:

4.00

Description:

While newspaper headlines focus on the multiple problems Europe is facing today, the evolving adaptation of European nation states and the integration process receive less attention. Brexit and economic crises seem to be synonymous of Europe today, but facts such as the European Union accepting five new members in the coming five years or Europe being the most advanced environmental actor or the main international provider of official aid are often ignored by public opinion. This Seminar for Freshman examines the dynamic evolution of the integration process in Europe in the

context of globalization. Three sections articulate the main debates and tensions in the interplay between national and supranational institutions and policies. The first part analyzes how eight European countries have forged their national preferences to delineate their level of immersion in the integration process; it later proceeds with the examination of the main historical events in the history of the integration process. The second part explores the functioning of the EU institutions in order to grasp the essence of the complex policy-making in the Europe of 28 members. The third and final section presents the analysis of the main areas of the EU policy making such as agriculture, monetary and economic issues, among others, and observes the main developments in the area of EU external relations.

- **SF-1165 History of Boston**

Credits:

4.00

- **SF-1166 Cinema-Monde: Global Challenges on Film**

Credits:

4.00

Description:

This course focuses on French-language films - with subtitles! - that address pressing social issues of the 20th and 21st centuries, such as hunger, female genital mutilation, immigration, racism, economic inequality, genocide, gender, sexuality, colonialism and post-colonialism.

- **SF-1167 Fantasy Fiction: Imaginary Worlds**

Credits:

4.00

- **SF-1168 The Real Thing: the Pursuit and Problems Of Authenticity**

Credits:

4.00

Description:

This course will focus on the concept of authenticity in American culture, from its origins in the early 19th century to the present. When the advertising gurus of Coca-Cola branded it as "The Real Thing," they were exploiting something powerful: the idea of something real, stripped of any falsity or illusion. Humans have always desired to know the world and others as they really are," but this desire is particularly strong in the modern world: witness the eagerness to discover one's true self," cut through the B.S., obtain the genuine article, and live authentically. In this course we will interrogate this pursuit of the Real Thing. In various ways, the texts we study both embrace authenticity as an ideal and also question its goodness, usefulness, or even its very possibility. We will thus confront a number of interrelated questions: Where does this desire for authenticity come from? What counts as authenticity," in life and in art? Is authenticity really a virtue to live by? How does it shape artistic and literary expression? Is there even such a thing as the real you This course will be divided into three units. In the first unit, "Counterfeiters and Self-Made Men," we will study how a commitment to authenticity arises in antebellum American literature and culture during a time of rapid national expansion and invention. Readings will include texts by Henry David Thoreau, Ralph Waldo Emerson, Herman Melville, and P.T. Barnum. In the second unit, "Authenticity and Contamination," we will consider two major ways in which authenticity becomes idealized around the turn of the 20th century: as artistic ideal set against fears of mass cultural production, and as a cultural ideal set against fears of racial and cultural mixing. Readings will include texts by Ernest Hemingway, Nella Larsen, Jean Toomer, and William Carlos Williams. In Unit Three, "Buying and Selling Authenticity," we will examine how authenticity becomes commodified (

- **SF-1169 Immortality: Real and Imagined**

Credits:

4.00

Description:

Most of the world's religious traditions have as a part of their doctrines some notion of immortality, rendered both in scriptures as well as iconographically. What precisely is entailed by immortality and why does it constitute such a significant element of so many religious traditions? What can we learn about immortality by investigating various conceptions of the afterlife? Is immortality truly a desirable thing? These questions among others will be examined from the perspectives of philosophy, religion, psychology, anthropology, and biology. Besides being cross-disciplinary, the course will be multi-media in nature. In addition to reading philosophical and religious texts concerning the nature of immortality, students will study various accounts of immortality and the afterlife, examine how the afterlife has been dealt with in (visual) art, literature, and film, and investigate current research into life prolongation (biomedical gerontology).

- **SF-1170 From Philia to Facebook: the Meaning of Friendship**

Credits:

4.00

Description:

The thematic focus of this seminar will be friendship. Friendship is one of the most important of human relationships; one that every student in this seminar has already participated in for many years. It shapes who we are and helps determine who we may become. And while it is a universal phenomenon, it has been practiced quite differently at various times and places in human history. And while we all have an intimate, personal and practical knowledge of friendship through our own experiences, sometimes things that are so close and so obvious to us can be hard to see. Over the course of the semester we will inquire into friendship from many different angles, trying to gain both a broader and a deeper understanding than our own individual experience allows. We will look at friendship first through the lens of philosophy, particularly through the foundational text of Aristotle, *The Nicomachean Ethics*. We will look at other views of friendship from the ancient world, starting in the past to help us see that friendship has not always been thought of the way we think of it now. After this initial foundation is laid, we will examine other writers and thinkers and take up additional topics like friendship in different cultures, friendship and gender, friendship in and through the arts and include an examination of friendship through the lenses of many different academic disciplines to see how other systematic thinkers conceive of friendship. All along we will be comparing and contrasting with our own personal experiences and considering what modern technology, such as social networking sites, has done to influence friendship, in the way we practice it and the way we conceive it. It is the aim of this class that students not just study different academic points of view, but that they take up the questions and challenges that these thinkers present to them and fully engage with them on a meaningful personal level.

- **SF-1171 Living on and Beyond the Hyphen/Latino Writers in the USA**

Credits:

4.00

Description:

Hyphenated-Americans of Latino origin come from many places and backgrounds. Often perceived as a divide, an either/or that separates and distinguishes one ethnic group from another, the hyphen can also be viewed as a link that connects, integrates and facilitates the formation of new cultural spaces. Through films and written narratives by and about U.S.A. Latino(a)(x)-Americans, students will examine how individuals who live on the threshold between two languages and cultures embrace the challenge of preserving their own identity and moving beyond stereotypes. Each of the Latino/a/x authors that we will read in this course will describe his/her own experiences living in the U.S.A. By examining their views through our own filtered lens we shall try to answer questions like the following: 1. What role does language have in our definition/understanding of cultural identity? 2. How do individuals move beyond the hyphen and stop seeing themselves as hybrids? 3. How can an individual who does not belong to a marginalized group (i.e. one considered less powerful and secondary) understand and empathize with those who do? 4. How does globalization affect the dichotomies that arise in bi-cultural and multi-cultural communities?

- **SF-1172 The United States Mexican Border**

Credits:

4.00

Description:

One hundred and sixty nine years have passed since the Treaty of Guadalupe Hidalgo was signed. It is only fitting to analyze the profound changes that the gain/loss of these territories caused for the citizens of both sides of the border. This course will explore the literature, culture, and history of the United States-Mexican Border and the most pressing problems pertaining to the region. Emphasis will be on contemporary border theater and film. The works of Salcedo, Galindo, Lopez and others will be studied as well as contemporary films and documentaries such as *Alambrista*, *Senorita Extraviada*, *The Gatekeeper*, *Sin Nombre*, *Wetback: the Undocumented Documentary*, *Victoria para Chino*, *Which Way Home*, and much more. There are no prerequisites for this course. Though the course is conducted in English, parallel readings in Spanish will be made available to those who wish to read and/or compare the original texts.

Students in the CAS Honors Program should choose one Seminar for Freshmen course from those listed below:

- **SF-H101 Fixing the World- Energy and Water: The Science of Solutions**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

Two of the most daunting challenges the world faces (or will face) is how to provide for both its growing energy needs and potable drinking water. Regular news events include climate change, droughts, flooding, and petroleum struggles. Human nature often requires a severe crisis before it responds. This course will investigate the historical science driving the use of energy since the Industrial Revolution to convert energy resources into work, including the steam engine, the electric motor, and the internal combustion engine. It will also consider alternative energy options to fossil fuels, such as solar, wind, geothermal, and ocean power. Along the way we will consider the evidence for Global Warming and Climate Change. We will look into human nature, simple life styles, conspiracy theories, and the influence of those in power to shape human opinion. We will also consider how our water supply is provided and where it goes after being used. What options do developing countries or drought racked areas have to remedy their water needs? Although the course pursues a scientific understanding of these issues, the mathematics used will be gentle, and a larger emphasis will be placed on the intuitive appreciation of these concerns.

- **SF-H116 Enlightened Insanity**

Prerequisites:

CAS Honors students only.

Credits:

4.00

Description:

Rain or shine, the great 18th century Enlightenment philosophers would meet at the famous cafes of Paris to discuss their ideas, and to observe and criticize society. From these informal debates emerged ideas that are at the core of our modern understanding of the nature of society, marginality, human nature, civil rights, the essence of creativity and genius. Come join us in the quest to understand, define, observe, and analyze the key ideas and concepts of these great thinkers, such as Rousseau, Diderot, and Voltaire, still so relevant in our time. We will read key works of these creative thinkers and philosophers. We will enrich our experience and understanding through the use of film, theatre performances, museum visits, as well as the occasional cafe debate.

Type:

Honors

- **SF-H126 The Boston Theatre Scene: The Inside Experience**

Credits:

4.00

Description:

Using the current Boston theatre season as its syllabus, this writing- and analysis-intensive course will explore several plays in production at some of Boston's many professional theatres. We will study the script of four to five plays before attending performances of those works. Students will gain insights on the world of theatre through backstage tours and conversations with theatre professionals such as producers, directors, actors, designers, playwrights, and critics. Students must be available for evening (usually Wednesday) performances. A fee for student-rate tickets will be assessed.

Type:

Honors

- **SF-H178 Sacred Hoops & Sneaker Pimps: Understanding the American Hoop Dream**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

This course is about the basketball hoop dream played out at the high school and college levels. We will study a wide variety of materials - novels, films, websites, reference works - to understand both the construction, and destruction, of the hoop dream in such diverse places as New York City, Seattle, rural Indiana, suburban Georgia, and the Wind River Reservation in Wyoming. Issues of race and culture will serve as guiding themes as we develop critical theory explaining why the hoop dream has persisted, and adapted, over time, to fit the needs of its believers and supporters.

Type:

Honors

- **SF-H182 Heroes, Antiheroes and Outsiders: Reading the Graphic Novel**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

How is it that comics", a genre often viewed as entertainment for children and adolescents, has become one of the most exciting forms of narrative and visual art? To answer this question, this seminar will examine a range of graphic novels, from those that celebrate their origins in superhero comics, such as Alan Moore's *Watchmen*, to those that treat subjects not usually considered proper to the comics genre, such as Art Spiegelman's *Maus*, about the Holocaust, and Alison Bechdel's *Fun Home*, about the complexities of sexual identity. As we read these works, we will look at how the combination of words and still images makes the graphic novel a unique storytelling form, as well as how artists and writers push the envelope to create new styles and challenge our expectations. In addition to class discussions and writing assignments, we will take a field trip to the Museum of Fine Arts and create a collaborative group graphic novel step-by-step over the course of the semester (all abilities welcome).

Type:

Honors

- **SF-H197 Sustainability, Energy, and Technology At Suffolk University**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

In this project and team-based course, students study a sustainability problem at Suffolk University and spend the semester developing proposals to address the problem. At the end of the course students will present their proposals to Suffolk University's sustainability committee, and will exhibit their websites and visual aids in the Donahue lobby to educate the Suffolk community about sustainability. If their proposals are well-researched and well-communicated, students can see their ideas actualized while they are still undergraduates.

- **SF-H1134 The Meaning of Life**

Prerequisites:

CAS honors students only.

Credits:

4.00

Description:

What do we live for? Which beliefs, values, and experiences sustain meaningful, fulfilling existence? Are we authors of our destinies or powerless pawns in an unfathomable cosmic game? Does death render all our efforts superfluous? This award-winning course offers a cross-cultural, interdisciplinary exploration of these questions through philosophical and religious texts, art, fiction, autobiography, and psychological studies. The course opens with the Old Testament's book of Ecclesiastes, followed by three units: 1) A Life Worth Living: Humanity's Ideals focuses on the ancient and modern visions of human flourishing; 2) Threats to Meaning: Humanity's Discontents, discusses the disillusionments leading to the loss of meaning; and 3) Recovery of Meaning: Crises and Hopes, explores the post-crisis possibilities of self-discovery and growth. Please visit <http://meaningoflife.cherkasova.org/>

Type:

Honors

- **SF-H1135 Women Warriors: Stories of Captivity, Conversion, and Confession**

Credits:

4.00

Description:

Since the beginning of time, women have been doing battle to themselves, while men have gone to battle against others. Whether it is through converting to Christ, yielding to captors in order to survive, or carrying a baby, this course introduces students to the many ways in which, whatever battles they face, women are warriors; they survive. Utilizing an array of captivity, conversion, and confession narratives by women, and pairing them across the centuries, students will make connections and draw conclusions between early-and mid-19th-century-American and contemporary women. Students will connect, for example, the trials of the 17th-century Puritan captive, Mary Rowlandson, and contemporary hostage, Elizabeth Smart, to explore how women (no matter how different they seem) draw upon unique inner resources to survive.

Type:

Honors

- **SF-H1146 Fido the Friendly Wolf: A Natural History of Dogs**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

This course explores the evolution of dogs from wolves and the ways in which dogs have adapted to their niche in human society. The ecology, behavior, genetics, and adaptations of dogs will be explored in relation to both their wolf ancestry and artificial selection by humans. The course includes 2 mandatory field trips to a wolf sanctuary and an animal shelter.

Type:

Honors

- **SF-H1148 Brave New Worlds**

Prerequisites:

Restricted to CAS Honors students

Credits:

4.00

Description:

Explores themes of adventure, self-discovery, exile, and culture shock in classic and contemporary travel writing (including fiction, poetry, and non-fiction) as well as film. Students will experiment with creative writing of their own, develop theories of cosmopolitan world citizenship, travel through the city of Boston on field trips, and team up to learn about different countries in Suffolk's global network of study abroad programs.

Type:

Honors

- **SF-H1152 The Idea of America: Past, Present, Future**

Credits:

4.00

Description:

A systematic exploration of thinking of and about America, from the founding of the republic to American issues and traditions of thought that reflect upon the founding principles and the unfolding American experiment. The Declaration of Independence and the Constitution will be studied with an eye to their philosophical content and sources. The course will also examine works of philosophers and other thinkers who address conflicts over the meaning of founding principles in the course of the nation's history, from the struggle over slavery to America's contemporary role in the world. Because this course intends to apply theoretical understanding to real life, students will be expected to read contemporary journalism on a regular basis and assess the controversies of today in the light of the nation's philosophical and historical currents.

Type:

Honors

- **SF-H1161 The Playwright and the Stage**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

This writing and script analysis intensive course will explore plays across a range periods and styles. The scripts of five plays will be studied and we will attend performances of two of those works at professional theatres in Boston. Other activities will range from a backstage tour to conversations with theatre professionals such as producers, directors, actors, designers, playwrights and critics, in order to lift the script off the page and provide a living experience of theatre. Requires students to be available for evening (usually Wednesday) performances. A fee for tickets at student rates will be assessed.

- [Quantitative Analysis](#)

First-Year Writing: 2 courses, 8 credits

- **WRI-101 First Year Writing I**

Credits:

4.00

Description:

Study and practice of the writing process and revision in terms of expository writing modes for an academic audience.

- **WRI-102 First Year Writing II**

Prerequisites:

WRI-101 or ENG-099 with at least a B and ENG-P099 with a P or WRI-H103

Credits:

4.00

Description:

Study and practice of argumentative and research writing through further work with writing process and revision and the critical reading of a variety of texts.

A student may be assigned to other writing courses or may be invited to take WRI-H103. Students required to complete ENG-099 may be allowed to waive WRI-101 with a grade of “B” or better and the approval of the English department. Students who are invited to complete WRI-H103 and earn a “B” or better satisfy the two Writing Requirements. Waiving a course does not earn credits.

- **WRI-H103 Advanced First Year Writing**

Prerequisites:

By Invitation Only.

Credits:

4.00

Description:

This course is by invitation only and reserved for incoming Suffolk students with high admission scores. Advanced study and practice of writing process, revision, and research, based on close readings of a variety of texts. Fall semester only.

Creativity & Innovation: 1 course, 3 credits

Choose one Creativity & Innovation course from those listed below:

- **ADF-S171 CI: Integrated Studio 1**

Prerequisites:

Non-majors interesting in taking art and design courses for elective credit should refer to offerings under the ART course listings.

Credits:

3.00

Description:

This cross-disciplinary course will integrate the ideas and practices of two-dimensional design, color and drawing emphasis will be placed on understanding the creative process, exploring concepts and developing research skills. Students will undertake individual and collaborative projects in three spaces; the studio classroom, the digital world and the city at large.

Type:

Creativity and Innovation, Arts Admin Minor Elective

- **ADF-S172 CI: Integrated Studio II**

Prerequisites:

ADF S101; Non-majors interesting in taking art and design courses for elective credit should refer to offerings under the ART course listings.

Credits:

3.00

Description:

This course builds on the Integrated Studio 1 experience: synthesizing fundamental visual ideas. IS 2 investigates the construction, documentation, and transformation of volumetric form, environmental space, and time. Projects will explore narrative strategies and the creation of immersive experiences. Students will develop critical and analytical skills while employing a range of traditional and digital media-including video/sound capture and editing-as they explore the creative boundaries of the classroom studio, the city of Boston, and virtual space.

Type:

Creativity and Innovation

- **CI-000 CI Place Holder**

Credits:

0.00

Description:

Place holder for rooming purposes.

- **CI-101 Process and Epiphany**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Despite its mystical connotations, creative epiphany is the result of a long engagement with the creative process that results in a surprising and unpredictable understanding of a concept or the solution to a problem. In the way that the discoveries of science are guided by the scientific method, the path to creative innovation is through a directed creative process. All creative innovators follow such a directed creative process, whether they are industrial designers or fine artists, performers or inventors, architects or entrepreneurs. This course explores both historical examples of individuals whose creative innovation changed the world, as well as hands-on collaborative, practical problem solving employing the creative process.

Type:

Creativity and Innovation

- **CI-H101 Honors- Process and Epiphany**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

• CI-102 The End of Global Poverty

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course is designed to demystify the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking. More than one-third of our global population lives in poverty, earning less than two dollars a day. Governments, businesses, social enterprises, and charitable organizations have tried to solve the global poverty issue with mixed results. What is the solution? Is entrepreneurship the solution, part of the solution, or has no impact whatsoever? In this course, you will gain an understanding of the power of entrepreneurship (in the context of creativity and innovation), the definition and depth of global poverty (in the context of constraints, such as human, financial and physical resources embedded in local, regional, national and global cultures), and successes and failures of past initiatives to reduce poverty. This is not a course about politics or business, but rather finding a solution to a problem that has eluded mankind since the beginning of time.

Type:

Creativity and Innovation

- **CI-H102 The End of Global Poverty**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office. Honors students only

- **CI-103 Making Inventions: Sticking Your Neck Out**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course examines cutting edge technologies, the science behind them, and their practical application and follow-up success or failure. It also provides the students a chance to consider the relevance of identified needed inventions from the 1950s, and whether those projections were correct. The history behind some remarkable inventions will be presented. Finally, working in small teams, students will brainstorm to identify something useful to invent and determine several approaches to implementing it.

Type:

Creativity and Innovation

• CI-104 Historic Mentors: Biographies of the Creative and Innovative

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course introduces students to creative and innovative practices as a disciplined approach to problem-solving. Students are presented with diverse individuals and environments, thoughts and actions, challenges and opportunities, approaches and alternatives, successes and failures, and ethical behavior--all within the context of historical biographies of inventors, entrepreneurs, artists, musicians, writers, politicians, leaders- nationally and globally. Mentoring is becoming a lost art form. However, it is crucial for passing down the best of our civilization. This course offers a vicarious mentoring that enables students to critically learn from and assess the experience of others in a vast array of contexts. Thus, students are presented with a cross-section of role models for creative, innovative and ethical success.

Type:

Creativity and Innovation

• CI-106 Failing Successfully

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course is designed to demystify the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking. Did you know Netscape was the internet browser? What about MySpace, arguably the Facebook of the last decade? What led Apple from being innovative pioneers of the 70's to the verge of extinction in the 80's to the technological giant they are today? Technologies come and go, but what leads to organizations lasting more than 100 years such as IBM, General Electric, etc.? What role does failure play in successful innovation, decision-making, and business viability? In this course, you will learn about innovation that may have been successful and well-executed. You will also learn about innovation that was a viable business opportunity, but poorly executed: one phase of failure. In addition, you will learn about innovation that had no real market viability, but was launched anyway: another phase of failure. Can failure lead to success? If so, how?

Type:

Creativity and Innovation

• CI-H106 Failing Successfully

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Creativity and Innovation, Honors

- **CI-107 Going Up: Skyscraper Design in Emerging Economies**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The human population is expected to be between 8.5 and 9 billion persons by the mid-21st century. The majority of those individuals will be living in urban communities. With large populations, high real estate costs, and limited land areas, the only way to construct in urban environments is to go up! In this course, students will have an opportunity to look at traditional and novel skyscraper designs, to consider the cultural and economic significance of such structures, and to use their imagination to develop a conceptual design of a skyscraper.

Type:

Creativity and Innovation

- **CI-108 Designing the Next Best Thing**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Demystifies the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking.

Term:

Offered Both Fall and Spring

Type:

Creativity and Innovation

- **CI-109 Virtual Globe Trekking: an Alternate View of the World**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will examine creativity and innovation through the lens of place. Modern geography is an all-encompassing discipline that seeks to understand the earth and all of its human and natural complexities - not merely where objects are, but how they have changed and come to be. The world is filled with ideas and perspectives. By changing your location, new perspectives emerge. This course will focus on the creative process to understand that each person creates in their own way. The students will test many methods to draw forth creative thought and seek to identify their own best method for calling on their own inner genius. Often this will involve failure and mixed results, yet this is where the students will learn their strengths and weaknesses.

Type:

Creativity and Innovation

- **CI-110 The Entrepreneur's Cocktail**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

How do you and your story drive business? This course takes an innovative look at human creativity and entrepreneurship. As an entrepreneur needs perseverance and high motivation, we will explore the importance of values, risk taking, problem solving, and the discovery of the market opportunities. In order for you to be creative and essentially create successful ventures, you will discover the nuances between the three factors and explore them further through interactive discussion and debate as well as collaborative group work. You will be encouraged to think in non-conforming ways and apply new concepts and develop your own personal operating principles.

Type:

Creativity and Innovation

• CI-111 The Future of Boston

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course introduces students to creative and innovative thinking based in the field of communication. Students will work in teams to wrestle with the challenges Boston will face in the future and propose feasible strategies to meet them.

Type:

Creativity and Innovation

• CI-112 Creating Problems: a New Solution for Sustainability

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

As the majority of the world population now lives in cities, for the first time in human history, issues of urban sustainability have become more complex and more important than ever before. Presented with case studies of urban efforts to gain a sustainability foothold, students will utilize ideation, critical thinking, and strategic decision making to both identify root problems and to present solutions. This course will lean heavily on ideation processes, teamwork, and logical methods of analysis to pursue actionable solutions for significant problems. The methods of problem identification and solution analysis learned in this class will be readily adaptable to many complex problems, helping the students to make informed and decisive determinations in their careers.

Type:

Creativity and Innovation

• CI-113 Revising Reality

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Reality and perception have been debated and discussed for millennia. Humans see and experience their world in different ways. How do humans determine what is true and good and what advancements are necessary? In this course, students will creatively explore these big questions and revisit knowledge using new and sometimes divergent perspectives. Students will participate in dirty and courageous learning by crafting products,

creating visual projects, and coming into original thought via trial and error. Students will also develop their analytical and critical thinking skills, while learning to communicate effectively and honestly.

Type:

Creativity and Innovation

• CI-114 Creating the Dream Team

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Every successful venture today is based on effective teamwork. Unlike a typical lecture format, Creating the Dream Team is a course that utilizes experiential group learning to provide students with pivotal team-building skills. These essential skills are vital for everyone's future success in the business world. As team players, students are challenged to think creatively. A collaborative problem-solving process is used to analyze real life business situations. Teamwork involves research, data collection and information analysis to develop creative solutions to typical business problems. Teams will utilize multi-media tools to present their innovative ideas. Classmates will provide peer feedback and review. Through iterations, all students will assume roles as project leaders, keynote speakers and collaborators on a series of Team Challenges. Upon successful completion of this course, all students will have formed working dream teams. As reinforcement and final evaluation, Dream Teams are required to create a multi-media Capstone Event as a course performance measure. This capstone presentation will showcase all of their newly acquired dream team-player skills.

Type:

Creativity and Innovation

• CI-115 Poetry Out Loud

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Students will develop a deep understanding of two seminal books of 20th century poetry and other key 20th century poems as they plan and execute small-group, end of semester reading performances. Students will write creative response poems to increase their understanding of the texts, and through cooperative decision making strategize effective ways to present their own poems and poems by Bishop or Frost. The class format will foster direct spoken engagement with matters of sound, rhythm, tone, and meaning. Final reading aloud performances will be recorded and added to the Suffolk University Poetry Center Archive.

Type:

Creativity and Innovation

• CI-117 Writing for Stage and Screen

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will engage students in the process of script writing. Working in groups of four or five they will craft adaptations of stories, create original scenes, or review sketches. By the end of the semester they will produce a complete script. Each alternating week, one group will serve as the executive committee that will approve the final draft of the script of the week. There will be exams based on the textual study of collaborative and adaptation techniques.

Type:

Creativity and Innovation

• CI-119 Theatre at Work

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Theatre at Work is an introduction to creative practice using live performance as a problem solving tool in an educational environment. Specifically, students will create a performance piece in response to an issue they have uncovered in collaboration with select groups of students in a host Boston Public School. There will be a special focus on normalizing risk-taking and the learning that comes from false starts and failed ideas. Students will be responsible for creating every aspect of their performance testing its feasibility on a limited budget, ensuring that the content meets established criteria, and successfully implementing and evaluating their success both with their peers and their audience.

Type:

Creativity and Innovation, Local Engagement Experience

• CI-H119 Theatre at Work

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office. Honors students only.

Credits:

3.00

Type:

- **CI-121 Catastrophe Management: From 9/11 to the Boston Marathon Bombings**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will introduce students to the exciting world of emergency management from the perspective of scientists who are often utilized as experts during both small scale adverse events and large scale catastrophes. Students will actively and creatively explore the psychological, economic, and medical dimensions of these events and participate in role play in the classroom and site visits. By the end of the course, students will have a keen appreciation of emergency planning and management on the local and national levels.

Type:

Creativity and Innovation

- **CI-123 Comics & Co.**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Using visual narrative as the means of exploration, students will be led through a series of exercises that challenge their assumptions, broaden their perspectives, and excite their imagination. The relationship between critical, creative and inventive thinking will be the basis for individual and collaborative projects.

Type:

Creativity and Innovation

- **CI-125 Boston's Creative History in Perspective**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Our collective social consciousness is formed by physical space; through a mixture of exploration, discovery, and making, students will delve into the city that surrounds them, developing a sense of ownership and engagement in Boston's public space. During the course of the semester, students will uncover the ways that art and architecture have shaped the souls of cities around the world, using Boston as a template. In a series of local field trips, students will explore Boston through its art and architecture, focusing not only what is, but on what might have been -- designs that were ultimately unrealized. Through interview and visits with local artists and designers, students will also learn about the process of shaping public space, uncovering the myriad of ways that design decisions are political in nature. As a capstone to the course, students will create their own city plan -- identifying and researching a chosen social or physical challenge the city faces, then developing a proposal that would address their chosen issue. These design proposals will then be enacted using augmented reality. Like a layer of invisible ink, these projects will form a phantom city over the physical realities that surround us, displaying the dramatic potential of the imagination.

Type:

Creativity and Innovation

- **CI-127 Visual Perspectives: Coastline, Symmetries and Illusions**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

How do you measure the length of a coastline? How much symmetry is possible? What is an impossible object? How did the Mayans measure proportions? In this course, students will delve into these and other questions with a visual theme. While some will be clear-cut, others will be open-ended and require some choices, estimates or assumptions to be made. Throughout, the emphasis will be on creative problem solving.

Type:

Creativity and Innovation

• CI-129 Elements of Attraction- Supply and Demand

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The intent of this course is for students to examine and effectively express in writing their ideas on creativity and to inspire undergraduate students to exceed their current levels of learning. Students will learn to meaningfully integrate course content into long term-retained useful skills through applied creative collaborations. This course is based on the idea that exposure and insight development will enable students to better visualize themselves in their desired fields and make informed choices within the variety of options available to them. The focus of the course will help students to assess their personal interests and strengths as they plan for their own educational and professional futures.

Type:

Creativity and Innovation

• CI-131 Off to the Future: Leadership Through Compromise

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Some past political issues were resolved with great success (the Compromise of 1820), and some resulted in great failures (the US Civil War). In this course, students will study noteworthy political dilemmas of the past, identify the major problem solvers and examine the art of compromise. These investigations will provide guidance and inspiration for students to develop innovative and creative solutions to present day political problems such as climate change, immigration, Social Security, income distribution, higher education affordability, and homelessness. Students will work in teams and propose creative and innovative solutions that will convince the affected interest groups favorably, represented by teams of other students in the class, and result in compromises solving tomorrow's problems today.

Type:

Creativity and Innovation

- **CI-H133 Franklin and the American Experiment**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office. Honors students only.

Credits:

3.00

Description:

What made Benjamin Franklin such a creative force in American history? We will explore the many facets of Franklin's life (printer, writer, scientist, statesman) and learn about Benjamin Franklin's political and diplomatic ventures, and will recreate some of his scientific experiments.

Type:

Creativity and Innovation, Honors

- **CI-135 The Design of Everything**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will explore a selection of the genius personalities and their creative work in 5 distinct areas of human creative endeavor; art, science, nature, technology and the built environment. The course explores the underlying similarities in the process of their discovery, invention and creativity across the disciplines. Studying such names as Newton, Warhol, Hawking, Jobs, Gaudi and Banksy, students will uncover the process of design through research, analysis, synthesis, iteration and error. In class group projects will allow a hands-on opportunity to create.

Type:

Creativity and Innovation

• CI-137 Re-write for Rights: Drafting a New US Constitution

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The American Constitution is an important document, framing the basis for our lives and the lives of our neighbors. Yet it is also a very old document, which may be seen as lacking when it is compared to newer constitutions from around the world, even places that we may regard as undeveloped. In this class we will study many constitutions and also talk to many people to craft a new constitution that reflects contemporary American society and its values.

Type:

Creativity and Innovation

• CI-H139 Creating, Promoting, and Participating in the Literary Arts

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office. CAS and SBS honors students or GPA of 3.5 or above only.

Credits:

3.00

Description:

With the launch of Boston's new Literary Cultural District, we have renewed cause to celebrate the history and industry of literature in our city. This course will immerse students in the world of literary culture and its many branches: writing, editing, reviewing, and publicity. Students will practice the art of creative writing, and learn how writers find publishing venues, how authors build platforms for their work, and how literature reaches the public through readings, social media, book trailers and other marketing campaigns, authors interviews, and reader reviews. Various industry professionals, authors, editors and publicists will speak to the class about the artistic and business opportunities, trends, and futures of literature and literary publishing. Students will apply their knowledge and interests to a variety of projects, including book reviews, author interviews, social media campaigns, literary events, and other collaborative projects. We will also work as a class to launch a new digital literary journal at Suffolk.

Type:

Creativity and Innovation, Honors

• CI-141 Science = Creativity

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course is focusing on the creative process by introducing students to creative practice as a disciplined approach to problem solving and innovation requiring research, persistence and grit. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in

original ways, embrace ambiguity and support divergent thinking and risk taking. The course will have an undertone based on science, but it is suitable for non-science majors too!

Type:

Creativity and Innovation

- **CI-143 Dreams, Demons, and Dynamic Artists Creative Nature**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

What motivates your creative nature? This course will explore converging themes in Art and Psychology in order to give students the tools they need to unblock their creative potential. Collaborative small team activities, assigned readings, large group discussions, and personal reflection exercises will provide an avenue for students to explore their own creative patterns and how they are influenced by, and perceived within, the world around them. Dreams, mental illness and psychosocial theories of self will also be widely discussed in order to give students context for this inter/intrapersonal exploration.

Type:

Creativity and Innovation

- **CI-145 Living and Laughing**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This is a course about laughing and living. While it sounds fun, it can also be complex, confusing, complicated, and convoluted. Laughter and humor are also very personal. The things that make you laugh are rooted in family, culture, and personality. We are going to spend the semester getting to know ourselves and each other in an attempt to understand more about why we enjoy what we enjoy.

Type:

Creativity and Innovation

- **CI-147 Seeing Double, Printmaking, the Art of Discovery, Experimentation and Process**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Always wanted to explore a creative side but never had the opportunity to take an art class? Here's your chance! Sync the power of icons/ images with ideas and making. We will use cellphone and printmaking technologies in a workshop style environment. Rather than a lecture based class, this class we will play, learn and build new Neurological pathways towards creative thinking. Come to every class excited to learn, make and discover. This course will give you the building blocks for innovative thinking beyond the classroom. Power is in the image. As in the way a dream can grip you, images carry incredible amount of influence and creative potential, when they are seen. Glimpses of these images circulate in media, movies, cell phones, and so on. Learn to develop your own images and understand the broad world of images of human culture.

Type:

Creativity and Innovation

- **CI-149 SL-Creative Writing and Literacy**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

In this course, students meet community needs by engaging in service-learning outside the classroom. This course will explore the value of creativity and play in developing reading and writing skills and the habits of lifelong learning, both in our own lives and in the lives of young people in Boston. In this course, we will work closely with the non-profit literacy organization 826 Boston, which works with students ages 6-18 on reading and writing skills through playful, creative workshops, as well as tutoring and other kinds of support. Students will learn about the work of 826 Boston by volunteering with the organization, and by the end of the semester you will conceive, plan, and run creative writing workshops of your own at 826 Boston.

Type:

Creativity and Innovation,Service Learning

• CI-H149 SL-Creative Writing and Literacy

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office. Honors students only.

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Schools and workplaces are becoming increasingly demanding and competitive, relying on unique ideas to continue innovation. Where do fresh ideas come from? This class will provide students with the tools they need to find creativity within themselves, and set them apart in the competitive arena. Students will explore who they really are at their core, identify their innermost thoughts and feelings, and uncover their creative identity while having fun! They will also learn to communicate, or share their creative voice clearly and honestly.

Type:

Creativity and Innovation

• CI-153 Branding and Visual Identity

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

A brand may be a product, service, an organization, or a person, and at the core of every brand is a visual identity. A brand's visual identity is its strategically planned and purposeful presentation of itself. It is manifest in the brand's name, logo, tagline (slogan), color palette and other sensory elements (visual, aural, olfactory and tactile) that identity that brand and make it unique. This course will focus on analyzing the success and failure of brand's visual identities as a way of teaching students how to brainstorm and develop a new visual identity from concept through execution. The focus in this course will be on applying creative thinking to create a cohesive and meaningful visual identity.

Type:

Creativity and Innovation

- CI-155 Improvising for Everyone, Everywhere

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Improv Comedy has become the cornerstone training of movies and television for the past 20 years. More recently, Corporate America has begun to recognize the importance of the skills improv teaches - agreement, listening, moving forward as a group and out-of-the-box thinking. This course immerses students in improv theatre exercises to apply not for performance, but to shed light on how to collaborate with others. Students will be required to actively participate in exercises in class, experiencing the benefits and takeaways first-hand. Students will be able to connect these exercises with the theories of creativity presented in text books and use both to create a final presentation piece. By the end of the semester, students will understand how to recognize and foster creative thinking to solve problems leveraging the power of a group. Students will gain confidence with presenting new ideas and responding to other student's ideas, understanding how to create and maintain relationships as part of an ensemble that encourages and values ideas.

Type:

Creativity and Innovation

- CI-157 Mindful Journal

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

To keep a journal is to make an investment, often long before we understand the value. A journal is a personal database of snapshots in time, good ideas and bad, observational doodles and unfiltered emotions. On any given page a journal may appear inconsequential but within the rigor of filling a whole notebook (and another, and another) an individual viewpoint emerges. This class will facilitate a student's ability to draw from his or her own lived experience and discover unique springboards into universal issues by making mindful connections. An entire lifetime of images, stories and details resides within each of our minds but the ability to explore that richness requires dedication to documentation. Mindful Journal is a process class fostering focus through mindfulness practices, content generation and meaning making.

Type:

Creativity and Innovation

• CI-159 Building a Better T

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

If any set of problems could use creative and innovative thinking, it's the myriad of problems facing the T. The Boston Globe is filled with stories about financial and organizational problems in the system, and you only have to spend a few minutes on the green line to feel the effects of those issues. Still, millions depend on it every day - it is the circulatory system of our city, and it is more than a way to get around: the T increases accessibility and functions as a democratizing force. That is, when it's running. In this class we will study the MBTA and other mass transit systems in order to propose creative solutions to the T's most pressing problems. We will read articles about the T and other transit systems, we will look at interactive maps that express different kinds of data, and we will visit local stations. In addition, we will study the process of creative thinking, in order to apply those skills to the issues at hand. You will be asked to create both stand-alone short writing assignments and visual representations of your ideas, accompanied by short, written explanations, both alone and in group projects.

Type:

Creativity and Innovation

• CI-161 Making History: Public Memory in the Digital Age

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

You live in Boston now. At least for a while. Perhaps you've noticed that it has its own ways of remembering things. Consider The Boston Literary District, The Freedom Trail, and all the many events and festivals devoted to history, culture, and identity. From guided tours and colonial cosplay to images and written texts to monuments, memorials, and museums, this city tells stories about itself today in the ways it tells stories about its past. In this class, you're going to tell more stories about Boston. You're going to help it find other things to remember, and other ways of remembering them. You'll likely need to focus on parts of the real events that Boston doesn't prefer to include in its stories, emphasizing issues of race, socioeconomic class, nationality, colonialism, gender, sexuality, and other stories of unequal power and how that manifests in real people's lives and in the culture of this city.

Type:

Creativity and Innovation

• CI-H161 Making History: Public Memory in the Digital Age

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office. Honors students only.

Credits:

3.00

Type:

Creativity and Innovation, Honors

- **CI-163 A Course on Skepticism and Rationality**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Magician James The Amazing Randi reminds us that No matter how smart or how well educated you are, you can be deceived. In an age fraught with deception and misinformation, students need tactics and strategies in order to separate truth from falsity. This course encourages its participants to act as skeptics - not cynics, necessarily - by requiring evidence and proof before believing or accepting claims. Students are urged to identify the most-likely-to occur opportunities for deception in their major fields and draw from the tenets of classical rhetoric, logic, and the scientific method in order to develop safeguards. Frequent collaboration with classmates will allow for dynamic solutions to small and large-scale contemporary problems ranging from the personal (e.g. used car prices and avoiding fraud) to the universal(e.g. fake news and God).

Type:

Creativity and Innovation

- **CI-165 Becoming a Zig-Zag Master**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

We will be discovering the process of becoming more creative. The emphasis is on understanding the creative process and applying effective team-working strategies towards a shared goal. Each team will choose a project and develop it during the semester with the goal of improving a product, raising awareness about an issue in a creative way, designing a board game, designing a card game, etc. Inspiration will be drawn from the numerous successful innovators in the Boston area.

Type:

Creativity and Innovation

- **CI-167 Public Health: A Need to Think Outside The Box**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course seeks to make you an innovative public health thinker by examining past campaigns and making the necessary frameshifts to help promote, protect and preserve health of the Suffolk community through the innovative thinking process. Public health activists and designers can have a positive impact on the lives of citizens living in small communities. However, the agreed rules and regulations that make up this policy landscape are created by paradigms which can be constricting. The issues the course addresses will include Suffolk's current plans for reducing carbon emission, behavioral determinants such as alcohol consumption among college students, and improving eating habits on campus. The final project will be peer reviewed and presented to the class. Programs may then be forwarded to university departments for possible integration and implementation.

Type:

Creativity and Innovation

- **CI-204 Prague: Castles to Barbwire**

Prerequisites:

At least 24 credits earned.

Credits:

3.00

Description:

Prague offers students a more recent view into history and will serve as a backdrop to learning Design Thinking. The curriculum will use Czech and Central European cultural features as the inspiration for learning the creative process, skills that can be applied broadly and globally across disciplines. WWII and its fall to Communism left the Czech Republic undamaged. Artists played a vital part in the country's rise to a Republic during the Velvet Revolution. These dissidents, including writers, actors, artists and musicians were innovators who were the catalyst for change. One could say that creative minds changed this country. This course is designed to demystify the creative process by introducing the creative practice as a disciplined approach to problem solving and innovation requiring research. This one-month study abroad experience will offer a more worldly insight to the significance of developing skills where divergent thinking and risk taking are one of many key tools in learning to generate new ideas. Travel fee covers accommodations, transfers, some meals and cultural visits. Airfare and tuition not included.

Type:

Creativity and Innovation, Global Engagement Experience

Note: Students with 30+ transfer credits are exempt from this requirement.

Free Electives: credit varies

Minimum Total Credits Required for Degree Conferral: 64 credits

2017-2018 Archived Catalog Information

Associate of Science Degree

Please note that these requirements are for students matriculating in or after fall, 2017. Students matriculating prior to fall, 2017 must reference the [Pre-Fall 2017 Degree Requirements \(Archives\)](#).

The AS degree program requires the successful completion of the following courses:

Core Requirements: 15 courses, 54-56 credits

- [First-Year Experience](#)
- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Studies in Literature](#)
- [Ethical & Philosophical Inquiry](#)
- [Human Behavior and Societies](#)
- [Social and Intellectual History](#)
- [Visual & Performing Arts Theory and History](#)
- [Quantitative Analysis](#)

Math: 1 course, 4 credits

Choose one Math course from those listed below:

- **MATH-128 Math for the Modern World**

Prerequisites:

MATH level 2, or Mathshop, or MATH-104

Credits:

4.00

Description:

From the ISBN on a book, to buying a car, from the size of small chips in a cell phone, to the size of the national debt, or just reading a graph in the daily newspaper, mathematics plays an important and vital role in countless areas of life and your future career and courses included. Mathematics is both an art and a tool created by humans. The common bond is a way of thinking and a way of reasoning to describe and solve problems of many types. This course uses the context of modern real life problems to introduce math needed for literacy and problem solving in contemporary life and work. It uses a minimal amount of algebra and focuses on math models, concepts and basic math manipulations. It encourages students to move from anxiety about math, to using formulas well, to thinking critically in the math context to use math to solve problems and pose new problems. Topics include scientific notation, basic financial math, linear, exponential and polynomial models and an introduction to probability. (Formerly Math 132)

- **MATH-130 Topics in Finite Mathematics**

Prerequisites:

MATH-104, or MATH-121, or MATH level 3

Credits:

4.00

Description:

Linear Modeling (for example, using linear functions to model supply/demand situations), graphing, linear programming, financial functions (compound interest, annuities, and amortization of loans) sets, Venn diagrams, counting and combinatorics, discrete probability, conditional probability, Bernoulli experiments, Bayes theorem. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

- **MATH-132 Math-Art, Tool and Human Side**

Prerequisites:

MATH-000 or appropriate Math Placement Exam score. Course does not fulfill math requirement for SBS majors.

Credits:

4.00

Description:

Mathematics is both an art and a tool. It has been used in many ways in contemporary and ancient society. The common bond is a way of thinking and a way of using reason to solve problems and describe things of all sorts. The course is designed to cultivate an appreciation of the significance of mathematics in daily life and develop students' mathematical reasoning. Topics will vary from section to section. Examples of topics that might be included are: the real meaning of a newspaper graph, methods to tally votes, fair division, routes and networks, consumer mathematics, the 'real' cost of a house, shapes and patterns, fractals, soap film surfaces, prime numbers and encryption, new discoveries in mathematics.

• MATH-134 Calculus for Management & Social Sciences

Prerequisites:

MATH-104, MATH-121 or MATH level 4

Credits:

4.00

Description:

A one-semester introduction to differential and integral calculus. Theory is presented informally and topics and techniques are limited to polynomials, rational functions, logarithmic and exponential functions. Topics include a review of precalculus, linear regression, limits and continuity, derivatives, differentiation rules, implicit differentiation, related rates, applications of derivatives to graphing, minima/maxima, applications of the derivative, marginal analysis, differential equations of growth and decay, anti-derivatives, the definite integral, the Fundamental Theorem of Calculus, area measurements. This course cannot be used to satisfy core or complementary requirements by students majoring in chemistry, computer science, engineering, mathematics, or physics. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

• MATH-164 Calculus 1 Bridge With Trigonometry

Prerequisites:

Permission of Instructor

Credits:

4.00

Description:

This course provides an alternative to MATH 165 (Calculus I) for those students who have taken MATH 134 (Calculus for Management and Social Sciences) but who do not have the trigonometric precalculus prerequisite (such as MATH 121) for MATH 165. In other words, the sequence MATH 134 / MATH 164 serves as an alternative to the sequence MATH 121 / MATH 165, and similarly prepares students to take MATH 166 (Calculus II). The course includes a thorough review of trigonometry and other precalculus topics. Aspects of limits and differentiation which students have already seen in MATH 134 are presented briefly, but in most cases with more emphasis on conceptual understanding, and often illustrated using more complicated examples. New calculus topics (i.e. not covered in MATH 134) include one-sided limits, special trigonometric limits, differentiability, derivatives of trigonometric functions and their inverses, derivatives of general inverse functions, logarithmic and implicit differentiation, related rates, L'Hopital's rule, intermediate values theorem, Rolle's theorem, mean values theorem, Newton's method, and linearization. 4 lecture hours plus 1 recitation session each week. Normally offered in spring.

- **MATH-165 Calculus I**

Prerequisites:

MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

Credits:

4.00

Description:

Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-166 Calculus II**

Prerequisites:

MATH-164 or MATH-165 with a minimum grade of C

Credits:

4.00

Description:

Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation, convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

Social, Cultural, & Global Perspectives: 1 course, 3-4 credits

Choose one SCGP course from those listed below:

- **ADPR-217 Gay and Lesbian Studies**

Credits:

4.00

Description:

Examines the portrayal of homosexuality in political, social, and cultural discourse. Analyzes the role of media and symbolic construction in the shaping of public values, opinions, and social movements.

Term:

Alternates Fall & Spring

- **ADPR-219 Rhetoric of Protest and Reform**

Credits:

4.00

Description:

Examines the persuasive strategies of social reform movements with special emphasis on the civil rights', women's rights, and gay rights movements in the United States.

Term:

Alternates Fall & Spring

- **ARH-205 Gender, Class and Alterity in Ancient And Medieval Art**

Credits:

4.00

Description:

Explores issues of sexuality, gender, race, and social class in the ancient and medieval worlds. Examines key artworks from ancient Greece, the Roman Empire and medieval Europe within historical, social and cultural contexts.

- **ARH-321 Women, Art & Society**

Credits:

4.00

Description:

Surveys women artists from the sixteenth century to the present and examines new direction in art-historical scholarship developed by feminist art historians during recent decades.

Term:

Offered Spring Term

- **AS-100 Introduction to Asian Studies: Culture, People, Ideas**

Credits:

4.00

Description:

An interdisciplinary introduction to Asian Studies will touch upon the history, politics, economics, philosophy, geography, arts, and cultures of Asia. Sample topics include political economy, religious and cultural exchanges, international relations, Asian experience in America, and the role of Asia in the twenty-first century. Students will develop conceptual frameworks for exploring the subjects covered by the Asian Studies curriculum.

Term:

Offered Both Fall and Spring

Type:

Asian Studies, Social & Intellectual HST

- **AS-500 Asian Studies Internship**

Credits:

4.00

Description:

Engages in an internship in a business or non-profit organization that deals with Asia or an Asian American community. Students may complete the internship either in Asia or in the U.S. Students will complete appropriate exercises and reports to document their learning. (1 course, 4-12 credits; can be taken multiple times in different semesters)

Term:

Offered Both Fall and Spring

Type:

Global Engagement Experience

- **BLE-325 Global Business Ethics**

Prerequisites:

BLE-215, PHIL-119, PHIL-120, PHIL-123 or PHIL-127

Credits:

3.00

Description:

Surveys business ethics as they transcend the diverse perspectives of global business. Explores current global ethics standards and values, ethical challenges, controversies, convergence and trends. Students explore famous global business cases through films, websites and independent research. Emphasizes identification and resolution of global business ethical issues within the context of ethical decision-making and sustainability. Analyzes corporate social responsibility ; hence, transforming global business ethics through business.

Type:

Global Engagement Experience

- **BLKST-250 Haiti, Guadalupe and Martinique**

Credits:

4.00

Description:

This course explores the rich intellectual tradition of Haiti, Guadeloupe, and Martinique by considering historical moments linked to colonialism, the abolition of slavery, the representation of gender, departmentalization, and decolonization through essays, films, poems, novels, and short stories by critics and writers from the 19th-21st centuries.

- **CI-204 Prague: Castles to Barbwire**

Prerequisites:

At least 24 credits earned.

Credits:

3.00

Description:

Prague offers students a more recent view into history and will serve as a backdrop to learning Design Thinking. The curriculum will use Czech and Central European cultural features as the inspiration for learning the creative process, skills that can be applied broadly and globally across disciplines. WWII and its fall to Communism left the Czech Republic undamaged. Artists played a vital part in the country's rise to a Republic during the Velvet Revolution. These dissidents, including writers, actors, artists and musicians were innovators who were the catalyst for change. One could say that creative minds changed this country. Travel fee covers accommodations, transfers, some meals and cultural visits. Airfare and tuition not included.

Type:

Creativity and Innovation, Global Engagement Experience

- **CJN-216 Intercultural Communication**

Credits:

4.00

Description:

An examination of communication variations and cultural viewpoints and their impact on cross-cultural communication. A special emphasis is placed on rituals and message patterns in non-Western cultures.

Term:

Offered Both Fall and Spring

- **CJN-225 World Cinema**

Credits:

4.00

Description:

An introductory course in film studies with a focus on foreign films. Movies studied include masterpieces of cinema from Europe, Asia, the Middle East, and other nations (Films have subtitles).

Term:

Alternates Fall & Spring

- **CJN-281 Asian Popular Culture**

Credits:

4.00

Description:

Students critically analyze Asian popular culture since the 1980s using a cultural ethnographic approach. Students apply the lenses of gender, identity, globalization, and business strategies to examine pop phenomena such as Korean Wave, Cool Japan, and Cantonese popular music.

Term:

Occasional

- **CJN-293 Hong Kong Cinema**

Credits:

4.00

Description:

By examining the film texts of Hong Kong auteurs such as John Woo, Wong Kar-wai, Tsui Hark, Andrew Lau, and Alan Mak, the course examines issues such as film genres, colonization/decolonization, transnational political economy, the Greater Chinese media market, and the diaspora.

Term:

Occasional

- **CJN-301 Documentary Film and the Image of Conflict in the Middle East**

Credits:

4.00

Description:

The course focus is on some of the divisions and conflicts within Israeli society. Students analyze and compare mainstream media discourse to alternative representations in documentary film. Analysis also covers media representation of the Israeli-Palestinian conflict.

Term:

Occasional

- **CJN-385 Globalization of Media and Telecommunications**

Credits:

4.00

Description:

A critique of the circulation of media goods and ideologies from both a cultural and political/economic perspective. Topics include global Hollywood, the images of Muslim women in transnational media, the information society, and global social movements.

Term:

- **EC-141 Development Economics**

Credits:

4.00

Description:

Why do so many countries remain so poor? Why have some (e.g. the Asian tigers) grown so rapidly? Why have most of the countries of Eastern Europe and the Former Soviet Union been slow to ignite economic growth? These questions are addressed by looking at domestic factors (government policies, resource endowments) as well as the international environment (mobile investors, international financial institutions). Asks what economic choices these countries face now. Normally offered yearly. Cultural Diversity B

Type:

Asian Studies

- **EC-151 Economic & Human Geography**

Credits:

4.00

Description:

The study of how economic and human activity is distributed across space, the reasons for these spatial distributions, and the processes that change the spatial organization of economic activity over time. Topics include: maps, map projections, and geographic information systems; population geography; the organization and location of cities, towns and villages; transportation and communication policy; industrial location; the geography of world trade; and geographic features of economic development. The course takes a global perspective, and draws on cases and examples from all over the world. Cultural Diversity B

Type:

Asian Studies, Human Behavior & Societies

- **EDUC-310 Culturally Responsive Education**

Credits:

4.00

Description:

The relationship between cultural diversity and schooling is explored by examining impediments to academic achievement and advancement by minority students, non-native English speaking students, and other under-represented groups. Topics include: standardized testing, identification of inequities, legal and ethical responsibilities of teachers, and promoting equity. Ten pre-practicum observation hours required for teacher candidates.

Term:

Offered Fall Term

- **EDUC-315 Strategies for Emerging English Learners**

Credits:

4.00

Description:

This course examines the specific needs and challenges of the various language and cultural groups in schools. Topics include: theories of 1st and 2nd language acquisition, strategies for teaching academic content, modifying instruction in the mainstream classroom, creating classroom cultures that invite all students into learning, the role of advocacy and professional collaboration in ESL, and analysis of policies related to assessment and placement of English Language Learners.

- **ENG-123 Great Books of the World I Great Books of World Lit. I**

Credits:

4.00

Description:

Literary masterpieces from ancient times to the Renaissance, including: Homer's Odyssey, Sophocles' Oedipus, Virgil's Aeneid, selections from the Hebrew Bible and the Gospels, and Dante's Divine Comedy. List may vary at the discretion of the instructor.

Term:

Offered Fall Term

Type:

Classics Minor, Social & Intellectual HST

- **ENG-124 Great Books of the World II**

Credits:

4.00

Description:

This course will introduce students to a selection of Great Books from around the world from the 17th century to the 21st, such as Don Quixote (Spain), Madame Bovary (France), The Communist Manifesto (Germany), The Origin of Species (England), War and Peace (Russia), On Dreams (Austria), Night (Hungary), Things Fall Apart (Nigeria), Satyagraha (India), I Am Prepared to Die (South Africa), Saeed the Pessoptomist (Israel), The Rouge of the North (China), and The House of Spirits (Chile). Readings may vary at the discretion of the instructor.

Term:

Offered Spring Term

Type:

Social & Intellectual HST

- **ENG-135 World Literature in English**

Credits:

4.00

Description:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

Term:

Offered Both Fall and Spring

Type:

Studies in Literature

- **ENG-216 World Literature in English**

Prerequisites:

WRI-102 or WRI-103

Credits:

4.00

Description:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

Term:

Offered Both Fall and Spring

- **ENG-362 Asian American Literature**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

An introduction to selected Asian-American writers with an emphasis on socio-cultural issues, such as race, gender and ethnicity. Authors include Bulosan, Hwang, Jen, Kingston, Lee, Mukherjee, Odada, and Tan. Cultural Diversity A

Term:

Occasional

Type:

Asian Studies

- **FR-202 Intermediate French II**

Prerequisites:

Take FR-201 or Instructor's consent

Credits:

4.00

Description:

Continues to review grammar, practice speaking, and explore authentic cultural and literary texts in this writing-intensive course. Examines short readings, films, and print media.

Term:

Offered Spring Term

Type:

Modern Language

- **FR-205 The Francophone World**

Prerequisites:

FR 202 or Instructor's consent

Credits:

4.00

Description:

Explores the francophone world through the study of short stories, print media, and film, by engaging with the rich textured and diverse francophone literary canon. Teaches advance notions of French grammar, write compositions, and the art of conversation related to cultural themes.

Term:

Alternates Fall & Spring

- **FR-216 Masterpieces of French and Francophone Literature in English Translation**

Credits:

4.00

Description:

Masterpieces of French and Francophone Literature in English Translation. Studies works translated into English by major authors from the Middle Ages to the present. Explores drama, fiction, and poetry from many regions of the world: Africa, Western Europe, North America, the Caribbean, and Vietnam.

Term:

Alternates Fall & Spring

Type:

Studies in Literature

- **GVT-208 Politics / Religion**

Credits:

4.00

Description:

This course explores what major religions say about the status and responsibilities of the state and how, in turn, selective states have, in theory and practice, structured the place of religions in political life. Particular attention is given to issues of politics and religion in the United States. Cultural Diversity A

- **GVT-115 Evolution of the Global System**

Credits:

4.00

Description:

The goal of this course is to introduce the student to the main actors, social facts and processes that shaped the international system in the nineteenth and twentieth centuries. By analyzing the spread of industrialization, the race for colonies, the thrust of imperialism, and the rapid growth of nationalism, among other factors, this course explains the contradictory and simultaneous trends of unprecedented levels of prosperity and violence in Europe and beyond. While the course examines the role of the United States in the international system, particularly in light of its dominant role since the early twentieth century, it also emphasizes the developments taking place in other regions such as Asia, Africa and Latin America. This will allow students to understand the global arena as a space of complex interconnections involving varieties of forms of production, national political cultures and idiosyncratic traditions. This course sets the foundations for other courses in International Relations and Regional Studies

Type:

Human Behavior & Societies

- **GVT-281 Intro to Comparative Politics**

Prerequisites:

GVT 110, GVT 115, and GVT 120 or consent of instructor; Sophomore status or higher

Credits:

4.00

Description:

This course examines various methods of comparing political systems. Institutions such as executive departments, legislatures, court systems and local governmental systems are examined comparatively. It includes analysis of the impact of different economic systems on political/governmental institutions, and on economic circumstances that impact government. It also looks at political socialization both in terms of process and comparative content. An effort is made to include countries from all regions of the world. Normally offered every year.

- **GVT-359 Hockey, International Development & Politics**

Credits:

4.00

Description:

This class examines the way in which national identity, global and regional economics and international development intersect. It uses the professionalization of the sport of hockey and its subsequent spread around the globe as its case. It will look at the rise of the pro game, the way in which it shapes national identity in the Canadian case, the way in which the pro business model has changed in response to broad socio-economic changes in North America and geo-political shifts around the globe, especially in Eastern Europe and the Former Soviet Union.

• GVT-360 Elections and Voting

Credits:

4.00

Description:

How are elections administered in the United States? Do Americans have confidence in the electoral process? Should they? Why or why not? This course will examine elections in the United States in detail -- from how they are funded to how they are administered to how voters behave. Students will have a choice of either serving as poll workers during the November election or organizing and conducting research of potential voters. Students will gain hands-on experience in actual research design, election administration, and non-partisan get-out-the-vote activities. In addition, students will gain a deeper understanding of the relationship between attitudes, opinion, and voting behavior in American politics and institutions. ECR

• GVT-391 Canada: Multicultural Politics

Prerequisites:

GVT 110/120 or Instructor's permission

Credits:

4.00

Description:

This course examines the Canadian model of incorporating diverse communities into its constitutional and political framework, including the founding British North American Act of 1867, the 1982 Constitution Act, and two later attempts at constitutional reform. Canada's role in balancing two official languages, English and French, is discussed, as is its recognition of a First Nations native-governed territory in the Arctic. This course introduces students to the Canadian polity and compares its parliamentary system with the U.S. separation of powers system. Prerequisites: GVT 110, GVT 120 or instructor's consent. Normally offered alternate years. Cultural Diversity B

- **GVT-467 Comparative Social Movements**

Prerequisites:

Junior status

Credits:

4.00

Description:

How do we explain the appearance or absence of social movements? What social or individual factors explain their development and decline? Who joins social movements? Who does not? Why? What ideas or ideals animate those who do participate? What is it like to be part of a social movement? What effect do they or have they had on politics, power and efforts at social change? These are some of the questions that have traditionally shaped debates over social movements, both domestically and internationally. They will form the analytical core of the work in this course. By critically evaluating several competing schools of thought in social movement theory and history we will attempt to highlight the social forces that have, at varying points in times, facilitated, maintained, as well as blocked the development of social movements in the US and beyond.

- **HST-100 Introduction to Asian Studies: Culture, People, Ideas**

Credits:

4.00

Description:

An interdisciplinary introduction to Asian Studies will touch upon the history, politics, economics, philosophy, geography, arts, and cultures of Asia. Sample topics include political economy, religious and cultural exchanges, international relations, the Asian experience in America, and the role of Asia in the twenty-first century. Students will develop conceptual frameworks for exploring the subjects covered by the Asian Studies curriculum.

Term:

Offered Fall Term

- **HST-246 History of Modern Iran**

Credits:

4.00

Description:

Examines the contemporary history of Persia (Iran) from the time of its independence in the beginning of the sixteenth century to the present with special concentration on geographical/historical background; social structure, ethnic, religious, and linguistic diversities; Safavid and Qajar dynasties; Anglo-Russian interventions and occupations; constitutional revolution and reform; centralization, secularization and modernization under Pahlavi dynasty; opposition to westernization and Islamic revolution.

- **HST-247 History of Modern Middle East**

Credits:

4.00

Description:

Explores the broad historical forces, conflicts and major events that have shaped the contemporary nations of the modern Middle East. Topic include: the emergence of the modern Middle East from the empires of the sixteenth and seventeenth centuries; the age of colonialism; the rise of nationalism; socialism, capitalism; the impact of Israeli and Palestinian conflict on the region; oil, the Islamic Revolution in Iran and the rise of Islamic fundamentalist movements; U.S. policy; and Saddam Hussein's Iraq.

Term:

Offered Fall Term

- **HST-251 Modern East Asia**

Credits:

4.00

Description:

China, Japan, and Korea - East Asia's critical players - share many historical influences, but each has a distinct culture, and they competed with each other for much of the twentieth century, proud of their achievements but feeling threatened by their neighbors. Lectures interspersed with movies and documentaries to show how East Asia has developed in the past one-hundred-plus years.

Type:

- **HST-263 Comparative Race Relations**

Credits:

4.00

Description:

Compares and analyzes the history of race and politics in South Africa and the United States from the 17th century to the present. Examines how race as a social and ideological construct influenced and informed political conflicts over land, labor, and social relations in the two countries including slavery, segregation, apartheid, and the struggle to create racial democracies.

Term:

Offered Fall Term

- **HST-268 History of the Mediterranean**

Credits:

4.00

Description:

Explores the history of the Mediterranean from the ancient times to the 20th century, with emphasis on the extraordinary interaction between the rich cultural, ethnic and religious backgrounds of the peoples of Europe, Middle East, and North Africa.

Term:

Occasional

Type:

Social & Intellectual HST

- **HST-274 Women in 19TH-CENTURY Europe**

Credits:

4.00

Description:

Explores the condition of European women from 1800 to 1914. Readings focus primarily on women's experiences in France and Great Britain. Topics include: the effects of industrialization on the lives of working-class women; working and middle-class women's negotiation of marriage, work, and family life; the rise of feminism, women's greater participation in the public sphere, and conservative reaction to these changes in women's place in society; women and crime; Victorian ideas about female sexuality; the politics of class and gender in nineteenth-century European society.

Term:

Occasional

- **HST-275 Women in 20TH-CENTURY Europe**

Credits:

4.00

Description:

Examines the changing place of women in European society since 1900. Topics include: women's suffrage and the political advances of the 1920s and 1930s; the revolution in sexual mores, birth control, and the rise of companionate marriage; women and the consumer economy; the anti-woman policies of Fascist Italy and Germany under National Socialism; liberation of women and retrenchment in the Soviet Union; World War II; feminism, sexual liberation, and women's political engagement since the 1960s; and, throughout the twentieth century, women's continuing negotiation of work and family responsibilities.

Term:

Occasional

- **HST-321 History of Islam**

Credits:

4.00

Description:

Presents a coherent account of the origin and history of Islam since its foundation in Arabia in the seventh century A.D. to the present. Analyzes the terms, events, characteristics, developments, movements, and institutions that have been part of the shaping of Islam. Ideological challenges and impact of Islam in the world today from both spiritual and political perspectives are examined.

Term:

Occasional

- **HST-371 U.S. Women's History Colonial to 1865**

Credits:

4.00

Description:

Traces the roles, images and experiences of women in America from colonial times to 1865. Topics include the family, work, religion, education, health care, motherhood, sexuality, social and political activism legal status, labor activism and popular culture. With attention to ethnicity, race, class, age, region of residence, disability and sexual orientation, the course focuses primarily on the everyday lives of ordinary women.

Term:

Offered Fall Term

- **HST-372 U.S. Women's History: 1865-present**

Credits:

4.00

Description:

Examines the social and cultural history of women in the United States from the close of the Civil War to the present. Using not only gender but also race, ethnicity, class, age, disability, region of residence, and sexual orientation as important categories of analysis, this course focuses on women's private and public lives. Topics include the family, work, religion, education, health care, private lives, motherhood, sexuality, social and political activism, legal status, labor activism, and popular culture.

Term:

Offered Spring Term

- **HST-484 History of the Emotions**

Credits:

4.00

Description:

Explores ideas about emotional life from the fields of history, anthropology, sociology, and psychology as well as the evolution of emotion rules and prescriptions, focusing on western Europe and the United States since 1700. In the eighteenth century, emotions were seen as a positive influence on politics and public life, especially during the French Revolution. After the fall of Robespierre, the emotions were banished to the private sphere - so we will read both primary sources and recent scholarship on 19th- and 20th- century ideas about masculinity and femininity, romantic love and marriage, childrearing, and about what parents and children are supposed feel toward each other, how ideas about these subjects have changed over time, and whether our feelings change with them.

Term:

Occasional

- **MUH-223 World Music**

Credits:

4.00

Description:

Covers topics in folk, traditional, and modern music of Africa, the Middle East, Asia, and Europe in the context of the cultures and lives of the indigenous peoples of those regions; examines how music interacts with the issues of race, gender, class, religion, politics, and social movements. Normally offered every other year.

Term:

Occasional

- **P.AD-201 Social Change**

Credits:

3.00

Description:

This course will examine social change in the U.S. and abroad. The course will also examine the role of business, nonprofits, and the public sector in addressing social problems. Topics studied may include the Industrial Revolution, the civil rights movement, the women's movement, environmentalism, and the gay and lesbian movement.

- **P.AD-H201 Honors Social Change**

Credits:

3.00

Description:

This course will examine social change in the U.S. and abroad. The course will also examine the role of business, nonprofits, and the public sector in addressing social problems. Topics studied may include the Industrial Revolution, the civil rights movement, the women's movement, environmentalism, and the gay and lesbian movement.

Type:

Honors

- **PHIL-120 Ethics and Civic Life**

Credits:

4.00

Description:

In this class you will be introduced to the perspectives and methods of politics, philosophy, and economics and see how these three disciplines present distinct but interconnected dimensions of current social and political issues.

- **PHIL-228 Feminist Philosophy**

Credits:

4.00

Description:

This course is an introduction to the philosophy of feminist thought. Feminist theories of epistemology, metaphysics and morality will be examined as critiques of traditional philosophy,. Feminist perspectives and methodologies include radical, liberal, postmodern, as well as more recent trends in ecofeminism. Special emphasis will be placed on explicit and implicit practices of alienation and exclusion as they have unfolded in the gendering of thought, truth, and reality. 1 term - 4 credits. Normally offered every third year. C b

Term:

Occasional

- **PHIL-229 Eco-Feminism**

Prerequisites:

PHIL 119, or PHIL 123, or PHIL 127

Credits:

4.00

Description:

Examines the political, social, and ecological problems facing us as a global community. Having its roots in feminist theory and deep-ecology, eco-feminism provides a critical framework for ecological responsibility and accountability. Writings from eco-feminist thinkers and environmental activists around the world will be used to highlight the philosophical and political conflicts and challenges, including globalization and loss of biodiversity, global warming, international human rights, the relationship of gender and nature, and modes of redress for eco-justice and sustainable development.

- **PHIL-261 Eastern Philosophy**

Credits:

4.00

Description:

The exposition and critical evaluation of Hinduism, Buddhism, Confucianism, Taoism, and Islam. Special attention is given to foundation principles as well as to the similarities and differences of each of these philosophies to basic ideas in Western philosophy. 1 term - 4 credits. Normally offered

alternate years. C b

Term:

Occasional

Type:

Asian Studies

- **PHIL-262 Buddhism**

Credits:

4.00

Description:

An historical survey of Buddhist philosophy. We will explore Buddhist origins, central teachings, devotional and meditational practices, ritual and institutions as developed from classical to modern times. Special attention given to the philosophical diversity of the Buddhist world view. 1 term - 4 credits. Normally offered alternate years. C b

Term:

Occasional

Type:

Asian Studies

- **PHIL-265 Women in Spirituality**

Credits:

4.00

Description:

An exploration into the various dimensions and ideologies concerning the role of the feminine in relation to the Divine. Belief systems, myths and archetypes from ancient Goddess worship to 20th century feminist theology will be examined in terms of the philosophical content and psychological

consequences. Special emphasis will be placed on feminist metaphysical structures for understanding consciousness and Reality. Classes will be conducted by means of lectures, primary and secondary texts and class discussions. Normally offered alternate years. Cultural Diversity A

Term:

Occasional

- **PHIL-267 Chinese Philosophy**

Credits:

4.00

Description:

A survey of the main developments in Chinese Philosophy. The course begins with the early dynastic concept of humanism and then turns to Confucius and Mencius. Having developed the central Confucian doctrines, students next examine the Taoist response to Confucianism in the writings of Lao Tzu and Chuang Tzu. The course then considers Zen Buddhism, which is called Ch'an Buddhism in China, where it originated. In particular, students study the concept of sudden enlightenment before turning to the Neo-Confucian scholars.

Term:

Occasional

- **PSYCH-243 Organizational Psychology**

Prerequisites:

Take PSYCH-114;

Credits:

4.00

Description:

Focuses on diversity concerns in various aspects of the psychology of the workforce. This includes job analysis, recruitment, selection, evaluation, training, retention, and termination. Employee morale, well-being, stress, and hardiness are considered.

- **PSYCH-247 Asian Perspectives on Health and Work**

Credits:

4.00

Description:

Examines theoretical and empirical approaches that provide insight into Asian viewpoints on socialization practices, family systems, health/well-being, cultural traditions/values, and spiritual philosophy/literature. Explores the diversity among Asian cultures in terms of language, history, religion/spiritual faith, and healthcare practices, all of which play a significant role in shaping the psychological characteristics, interpersonal relationships, and work dynamics of Asians and Asian immigrants. Students critically analyze similarities and differences between Asian and Western psychological perspectives of health and work through didactic and experiential learning components. This course fulfills the Cultural Diversity Requirement and may fulfill the Expanded Classroom Requirement. Normally offered alternate years.

Term:

Offered Spring Term

Type:

Asian Studies

- **RS-111 Introduction to World Religions: Western Traditions**

Credits:

4.00

Description:

This course will explore the comparative history and structure of Western religious traditions, broadly understood, and their impact on other world religions, while attempting to recognize the similarities and the differences among them. Traditions to be studied include Greek and Roman religion, the monotheistic faiths (Judaism, Christianity, and Islam, as well as Zoroastrianism, Sikhism and Bahaism). We will also explore the impact of the Western religions on indigenous traditions, such as African religion, Native American religion, and Pacific Island religion. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. 1 term - 4 credits. Normally offered every year.

- **RS-112 Introduction to World Religions: Eastern Traditions**

Credits:

4.00

Description:

This course will examine a variety of Eastern religions, including Hinduism, Buddhism, Jainism, Confucianism, Taoism, and Shintoism. Possible connections to be explored will be the impact of these traditions on others, such as Pacific Islands and African religion, as well as the growing place of Eastern religion in the West. This course will explore the history and structure of each tradition, while attempting to recognize the similarities and the differences among them. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. Normally offered every year. Cultural Diversity B

Type:

Asian Studies

- **SIB-550 Global Travel Seminar**

Prerequisites:

Please email Hillary Sabbagh at hsabbagh@suffolk.edu to register for a travel seminar.

Credits:

3.00

Description:

An in-depth analysis of timely special issues in international business. Specific topics are announced when the course is scheduled.

Type:

Global Engagement Experience

- **SF-190 Asia in America Fiction and Fact**

Credits:

4.00

Description:

With a focus on some selected ethnic groups from Asia, Asia in America studies the history and current status of Asian Americans in Boston and other parts of the country. We will examine the major reasons why these immigrants chose to leave their home country as well as their expectations and experiences here in America. We will also discuss the issues Asian immigrants have faced in this adopted home as well as the connections and conflicts among different ethnic groups or even within the same ethnic group due to political and socio-economic reasons. The course will include some level of community engagement, through Chinatown tour and service, which may enable us to have a direct contact with the Asian American population and reflect on what is being discussed in class. Through this course, we hope to gain a better understanding of the racial and cultural history of the country and arrive at a deep appreciation of the dynamics of cultural interactions in the twenty-first century. The course fulfills the SCGP requirement.

Type:

Global Engagement Experience

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

- **SOC-227 Race in American Society**

Credits:

4.00

Description:

Despite the election of Barack Obama as President of the United States, race remains one of the most divisive forces in U.S. society. While many of us struggle against racism, racial classification continues to affect where we live, where we work, and how we see ourselves. Racial classification affects our access to health care and our encounters with police officers. Distorted images of racial groups fill television and movie screens. Appeals to racism and fear of foreigners are dominant themes in elections to state and national offices. This course examines the formation and re-formation of racial classifications: how particular groups become racially identified, how these classifications change over time, and how conflicts over race have shaped American society. The meanings of race, as seen from a variety of perspectives, will be a consistent theme throughout the course.

Term:

Occasional

- **SOC-228 Cultural, Global and Social Perspectives**

Credits:

4.00

Description:

Enables students to examine, as well as develop an awareness and appreciation of, diversity within today's society. Providing an overview of the major racial, ethnic, and cultural groups in the U.S., the focus is on the ways in which cultural awareness enhances professional helping relationships and improves the operation of human services systems.

Term:

Occasional

- **SOC-275 Women and Crime**

Credits:

4.00

Description:

This course examines the complex relationships between women and crime today. This focus will include women as criminal offenders; women as victims of crime; and women as both offenders and victims. Course materials draw from recent feminist scholarship on these issues in the social sciences. Topics include the causes of women's crime women, drugs, and crime; child abuse and trauma; prostitution and sex trafficking; race, gender and victimization; and feminist social movements against violence. Crimes of violence against women are a central focus in the course.

Term:

Occasional

- **SOC-329 Sociology of Globalization**

Prerequisites:

Prerequisite: SOC 113 or SOC 116.

Credits:

4.00

Description:

Globalization is shrinking the world. How and why did this happen? This course will explore global change and the global processes which effect key social institutions: culture, the economy and politics. Students will study the processes of globalization and its impact on our lives and people around the globe.

Term:

Occasional

- **SOC-341 International Drug Control Policy**

Credits:

4.00

Description:

Relying on a simplistic demand or supply explanation of why Americans use/abuse drugs obscures the reality of America's drug problem, is ineffective as a guide to public policy and has unforeseen, often negative consequences. Drug use is a complex and multi-faceted issue. There are no easy answers. To comprehend the complexity of America's drug problem one needs an understanding of the geography, history, religion, law, economics and international politics of the Middle and Far East, Eastern Europe, Africa, Mexico, and Central and South America. This class will provide this basic understanding without losing sight that the problem we seek to remedy is our own.

Term:

Offered Spring Term

- **SOC-354 Death and Dying**

Credits:

4.00

Description:

An examination of changing definitions of life and death, social factors affecting causes and rates of death, care of the dying and their families, institutionalization, the funeral industry, suicide, crisis intervention, and the impact of technology on the dying process.

Term:

Occasional

- **SOC-357 Global Health and Healing**

Credits:

4.00

Description:

An examination of how different cultures understand health and illness. Healing approaches from Asia, Africa and the Americas will be explored.

Term:

Occasional

- **SPAN-202 Intermediate Spanish II**

Prerequisites:

SPAN 201 or Instructor's consent.

Credits:

4.00

Description:

Continues skills development from 201. Students read a collection of short stories, write compositions, develop cultural insights through comparative and contrastive assignments, and practice listening and speaking skills in weekly conversation sessions.

Term:

Offered Spring Term

Type:

Modern Language

- **SPAN-290 Advanced Composition & Conversation**

Prerequisites:

Prerequisite: Spanish 202, 203 or 250 or Instructor's consent

Credits:

4.00

Description:

Develops written and oral skills in various contexts and registers. Emphasis on strengthening written skills and learning to speak clearly and persuasively in Spanish. Short texts and audio-visual materials provide the basis for classroom activities which include regularly assigned essays, group discussions and debates.

Term:

Offered Fall Term

Type:

Modern Language

- **SPAN-300 Intro to Cultural Texts**

Prerequisites:

Spanish 202, 203, 250 or Instructor's consent.

Credits:

4.00

Description:

Explores a selection of Peninsular and Latin American cultural materials. Primarily examines texts from different literary genres (narrative, drama, essay, and poetry). Develops critical skills required in more advanced Spanish courses, through close readings and textual analysis. Activities include regularly assigned essays, group discussions, and short scene work.

Term:

Offered Spring Term

- **SPAN-301 Spanish Culture and Civilization**

Prerequisites:

Spanish 202, 203 or 250. Spanish 290 or 300 are strongly recommended

Credits:

4.00

Description:

Examines the civilization and culture of Spain highlighting its historical development and cultural manifestations from pre-historic times to the nineteenth century. Students improve their four skills through activities that include discussions, oral presentations, and writing assignments based on reading and films.

Term:

Alternates Fall & Spring

- **SPAN-302 Indigenous and Colonial Latin America**

Prerequisites:

Spanish 202, 203 or 250 or Instructor's consent. Span 290 or 300 strongly recommended.

Credits:

4.00

Description:

Introduces students to the complexity Latin America by examining its roots in pre-Columbian America and the impact of Spanish exploration and colonization. Places emphasis on cultural, economic, historical, philosophical, political and religious patterns that define the region. Includes class discussions, oral presentations, and writing assignments based on reading and audio-visual material.

Term:

Alternates Fall & Spring

- **SPAN-303 Modern and Contemporary Latin America**

Prerequisites:

SPAN 202 or 203 or Instructor's consent. SPAN 290 or 300 strongly recommended.

Credits:

4.00

Description:

Examines the path taken by Latin American and Caribbean countries to build independent nations out of colonial territories highlighting the 19th, 20th, and 21st centuries, ethnic plurality, and cultural complexity in areas such as politics, religion, sociology, economics, customs, music & film. The cultural contributions of Spanish-speaking minorities in the United States are also addressed. Includes class discussions, oral presentations, and writing assignments based on readings and audio-visual material.

- **SPAN-315 Spanish for the Professions**

Prerequisites:

SPAN 290 or SPAN 300 or Instructor's consent.

Credits:

4.00

Description:

Integrates language learning with culture via business context of the Hispanic world. Spanish for banking and finance, marketing and advertising, and international commerce are highlighted. Students increase their cross-cultural understanding and written and oral proficiency in business Spanish through a wide range of assignments.

Type:

Global Engagement Experience

- **SPAN-390 Introduction to Latin American and Caribbean Literature**

Prerequisites:

SPAN 300; SPAN 302 is strongly recommended

Credits:

4.00

Description:

Examines authors from Latin America and the Caribbean in their historical and cultural contexts. Reading and class discussions consider the relationship between the writer and society by covering such topics as colonialism, the oral tradition, modernism and the emergence of new narratives in the twentieth century. The Inca Garcilaso, Sor Juana, Carlos Fuentes, Rigoberta Menchu, and Pablo Neruda are among some writers studied.

Term:

Occasional

- **THETR-260 Broadway Musicals**

Credits:

4.00

Description:

This course is a survey of American musical theatre from its roots in the mid-19th century to the present. It provides the analytical tools and historical insight to more fully appreciate Broadway's greatest musicals and musical theatre artists. Students will explore the ways in which American forms of popular entertainment helped to shape Broadway musicals from their infancy through their adulthood. The course also explores the ways in which musicals provided opportunities for African-Americans, women, immigrants, and the GLBT community.

Term:

Offered Fall Term

- **THETR-267 Introduction to Theatre: Contemporary American**

Credits:

4.00

Description:

This course provides a formal introduction to the theories and practices strategically used by American theatre artists after the Second World War. Special emphasis is placed on theatre artists exploring issues of cultural identity including works by GLBT, African-American, Asian-American, and Latin American playwrights. These playwrights may include Tony Kushner, Paula Vogel, Suzan-Lori Parks, Adrienne Kennedy, August Wilson, David Henry Hwang, Philip Kan Gotanda, Eduardo Machado, and Melinda Lopez. The course will also provide an introduction to trends in post-modern theatre practices related to emerging work of the auteur director, solo performers, and interdisciplinary collectives. Satisfies a core requirement for Theatre majors. Normally offered alternate years.

Term:

Occasional

- **WGS-111 Women, History, & Culture**

Credits:

4.00

Description:

Explores the roles and images of women in Western culture and the realities of women's everyday lives through literature, film, history, art, psychology, and recent feminist scholarship. Analyzes gender inequalities and the influence of gender on social structure, human behavior, and artistic expression. Topics include: the social construction of gender and identity; domestic prescriptions for women; women and work; intersections of gender, class, and race in American society; sexualities and identity; the politics of motherhood and reproductive rights; educating girls; negotiating male privilege and structural inequalities; representations of women in Western art and film; and women as artists and gendered models of creativity in art, film, fiction, and science.

Type:

Social & Intellectual HST

- WGS-H111 Women, History, & Culture

Prerequisites:

At least a 3.3 GPA required.

Credits:

4.00

Description:

Explores the roles and images of women in Western culture and the realities of women's everyday lives through literature, film, history, art, psychology, and recent feminist scholarship. Analyzes gender inequalities and the influence of gender on social structure, human behavior, and artistic expression. Topics include: the social construction of gender and identity; domestic prescriptions for women; women and work; intersections of gender, class, and race in American society; sexualities and identity; the politics of motherhood and reproductive rights; educating girls; negotiating male privilege and structural inequalities; representations of women in Western art and film; and women as artists and gendered models of creativity in art, film, fiction, and science.

Term:

Offered Both Fall and Spring

Type:

Honors

- WGS-113 Women, Science, & Society

Credits:

4.00

Description:

Explores women's lives from the perspective of the social and natural sciences, including examination of recent biological, psychological, and sociological theories about gender and gender roles, as well as the influence of feminist scholarship in these areas. Topics include: the social construction of gender; the psychology and biology of sex and gender; women and work; media representations of women; the female body and eating disorders; women's health and lifecycle; women and sexuality; reproduction, abortion, and motherhood; and sexual violence against women.

Term:

- **WGS-115 Introduction to Gender Studies**

Credits:

4.00

Description:

Introduces the key topics and debates that have shaped the field of gender studies, including queer studies, masculinity studies, and women's studies. Through lecture and class discussion of texts from literature, film, history, psychology, and sociology, explores the pervasive influence of gender on the structure of society and our everyday experiences and the role that gender plays in our understanding of love, friendship, sexuality, and even violence. Topics include: biological arguments about gender and sexuality; the social construction of gender and identity; intersections of gender, race, class, and sexuality; masculinity and femininity; and theories of sexual difference and the construction of sexuality.

Term:

Occasional

Type:

Social & Intellectual HST

- **WGS-311 Engendering Entertainment: Feminism and Popular Culture**

Credits:

4.00

Description:

Investigates the complex intersections between feminism and popular culture through several different lenses: by exploring how feminists make arguments about popular culture; by looking at the complexities of public femininity in today's popular culture, including figures such as Lady Gaga and Katy Perry and television shows like The Bachelor and Grey's Anatomy; by focusing on a variety of articulations of feminism within mass media, blogs, social media, and popular books such as Ariel Levy's Female Chauvinist Pigs, and Caitlin Moran's How to Be a Woman. Along the way we will ask questions about: what makes a work of art feminist; how modern media contributes to or distracts us from a variety of political debates in the realm of female equality and how can we, as individuals, use modern media to create and advance smart, feminist arguments.

Type:

- WGS-315 Feminist Thought

Credits:

4.00

Description:

Investigates how feminists, both today and in history, have understood inequality and difference and looked for the best ways to address these issues and bring about social justice. Examines how feminist theorists help us to understand how gender and other social categories, such as race, class, sexuality, disability, age and nationality, are constructed within and through each other; and analyzes feminist engagements with liberalism, socialism, psychoanalysis, existentialism, post-colonialism, critical race theory, and queer theory, as well as consider anti-feminist arguments. Readings include classic critical texts by authors including Mary Wollstonecraft, Emma Goldman, Virginia Woolf, Chandra Mohanty, Gloria Anzaldua, and Judith Butler.

Type:

Social & Intellectual HST

- WGS-325 Global Women's Fiction

Credits:

4.00

Description:

Explores of various cultural worldviews in order to reveal and assess the voices of women from around the world as they respond to important global issues such as sexual violence and gendered oppression. Topics include: national citizenship, sexual politics, legal discourse, aesthetic representation, literary movements, genre, constructions of femininity, sexual identities, and representations of gender in relation to race and class and international cultures, and the relationship of self-image to the body politic.

Term:

Occasional

- WGS-335 Queer Narratives

Credits:

4.00

Description:

Explores the stories that help us to understand communities, identities, and bodies that could be considered queer, and the ways that film, music, memoir and fiction have discussed queer as different, unusual, or other. Texts include the documentary, "Paris Is Burning", Frank Ocean's 2012 album, "Channel Orange", and Janet Mock's recent memoir, "Redefining Realness", as well as foundational queer theory from Judith Butler, Eve Kosofsky Sedgwick, and Lee Edelman, among others, to help build a framework for approaching and interpreting both fictional and non-fictional accounts of queer lives.

Type:

Social & Intellectual HST

Courses that fulfill the Creativity and Innovation, Humanities/History, Language, Literature, Quantitative Reasoning, Seminar for Freshmen, Social Science, or VPATH requirements may double count to fulfill the Social, Cultural, and Global Perspectives (SCGP) requirement.

Free Electives: credit varies

Minimum Total Credits Required for Degree Conferral: 64 credits

2017-2018 Archived Catalog Information

Associate of Science Degree

Please note that these requirements are for students matriculating in or after fall, 2017. Students matriculating prior to fall, 2017 must reference the [Pre-Fall 2017 Degree Requirements \(Archives\)](#).

The AS degree program requires the successful completion of the following courses:

Core Requirements: 15 courses, 54-56 credits

- [First-Year Experience](#)
- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Studies in Literature](#)
- [Ethical & Philosophical Inquiry](#)
- [Human Behavior and Societies](#)
- [Social and Intellectual History](#)
- [Visual & Performing Arts Theory and History](#)
- [Quantitative Analysis](#)

Science, Technology, & Engineering (STE): 2 courses, at least one with a laboratory, 8 credits

Choose two STE (Science, Technology, and Engineering) courses, at least one with a corresponding laboratory, from those listed below. Courses do not need to be in a sequence. In the case of a course that is a lecture plus a lab, the student must complete both components to earn credit for the STE requirement.

Biology:

- **BIO-104 Environmental Biology**

Prerequisites:

BIO 101 and BIO L101, can also be taken concurrently BIO L104 must be taken concurrently

Credits:

3.00

Description:

An introduction to basic evolutionary, behavioral and ecological principles. Readings and discussions emphasize the ways that humans are affected by ecological processes and principles as well as how humans and their technology affect ecosystems. May not be taken by Biology majors or minors. This course will not fulfill requirements for a major or a minor in Biology. It is intended for non-biology majors as a follow-up to Biology 101. 3 hours lecture. Days Only. Madrid Campus only.

Type:

SCI TECH ENGNR

- **BIO-L104 Environmental Bio Lab**

Prerequisites:

BIO-104 must be taken concurrently

Credits:

1.00

Description:

Exercises and field trips designed to complement and demonstrate the ecological principles developed in the lecture section. The lab emphasizes the scientific method and employs long term group projects. Madrid Campus only.

Type:

- **BIO-105 Humans and the Evolutionary Perspective**

Prerequisites:

Non Science Majors Only

Credits:

4.00

Description:

Major topics include the scientific basis of evolution, the fossil history of vertebrates, evidence of evolution in the human body, and applying an evolutionary perspective to the social interactions and possible futures of humanity. Meets one of the non laboratory science requirements for the non-science major. This reading and writing intensive course is a non-laboratory science option for non-science majors. This course will not fulfill requirement for a major or a minor in Biology.

Term:

Occasional

Type:

SCI TECH ENGR

- **BIO-111 Introduction to the Cell**

Prerequisites:

Must take BIO L111 concurrently

Credits:

3.00

Description:

Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **BIO-L111 Introduction to the Cell Laboratory**

Prerequisites:

Concurrently with BIO 111

Credits:

1.00

Description:

Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **BIO-114 Organismal Biology**

Prerequisites:

Must take BIO L114 concurrently.

Credits:

3.00

Description:

Rigorous introduction to organismal biology emphasizing evolution, phylogenetics, form, and function. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L114 Organismal Biology Laboratory**

Prerequisites:

Must take BIO 114 concurrently

Credits:

1.00

Description:

A series of laboratory experiences in evolution, diversity, anatomy and physiology.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-201 Biology's Big Questions**

Prerequisites:

Non Science Majors Only.

Credits:

4.00

Description:

This course seeks to answer five current questions from all levels of biology, from the subcellular to the ecosystem level. Topics will be discussed in the context of genetics, evolution, and ecology. We will focus on the process of doing science, including how scientists evaluate ideas and communicate their findings. Emphasis will be placed on topics in biology that impact daily life.

Type:

SCI TECH ENGR

Chemistry:

- **CHEM-105 Chemical New Product Development**

Prerequisites:

ENT 101

Credits:

4.00

Description:

This course addresses the crucial intersection between chemistry and business, and the impact of these fields on society. It provides an introduction to important chemistry concepts and practices of business management. Primary focus is on understanding the chemistry principles behind some of the consumer products in our everyday lives, and using this knowledge to create and evaluate ideas for new products. The course also introduces the business aspects involved in the development and marketing of new products. An important component of the course is in making effective presentations; this component concludes the course, culminating in team presentations of a new chemical product to panel of executives and peers. This course satisfies the Sawyer Business School Science requirement.

Type:

SCI TECH ENGR

- **CHEM-106 Biotechnology & Its Applications in Medicine, Agriculture, Law**

Credits:

4.00

Description:

Introduces the latest discoveries and applications of biotechnology. Topics include genetically modified food, stem cells, genetic testing, cloning, and forensics. A combination of lectures, discussions, short documentaries, mock congressional hearings, and hands-on activities will provide insight into the numerous medical, social, legal, and ethical issues surrounding this technology.

Type:

SCI TECH ENGNR

- **CHEM-111 General Chemistry I**

Prerequisites:

Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:

3.00

Description:

Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **CHEM-L111 General Chemistry Laboratory I**

Prerequisites:

MATH-104 MATH-108 MATH-121 MATH-128 MATH-130 MATH-134 MATH-164 MATH-165 MATHT-MPEL1 MATHT-MPEL2 or MATHT-MPEL3. Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

Computer Science:

- **CMPSC-F107 Ants, Rumors and Gridlocks**

Prerequisites:

Math placement level of 2 or above or any MATH course at the level 100 or above

Credits:

4.00

Description:

Do viruses and rumors spread like forest fires? How do ants cooperate? Do spoken languages and biological species evolve in a similar way? Ants, Rumors, and Gridlocks exposes students to introductory aspects of computational science by addressing and answering these and many other questions. Students use and modify virtual experiments preprogrammed in the NetLogo programming language to investigate these topics and others in Social Sciences, Biology, and Environmental Science. No prior knowledge of computer programming or NetLogo is required.

Type:

SCI TECH ENGR

Electrical Engineering:

- **ECE-288 Measuring the World**

Credits:

4.00

Description:

The world is addicted to quantifying the essence of everything, from personal IQ, to the speed of a baseball, to our healthiness, or our chances of winning the lottery. Behind most of these numeric values exists a science of measurement. Some of this is referenced to international standards, such as for length, time, weight, or temperature. Others are more arbitrary and subjective, such as ranking Olympic performance in gymnastics, beauty pageants, or popular responses as found in the game show Family Feud. A third category includes controversial areas, such as measuring whether a person is lying when interrogated, or using hype rather than reality to market products. Sometimes statistics are used to predict sports outcomes, such as in the annual March Madness NCAA basketball brackets. Finally, in a world subject to fraud and deception, it can be essential to distinguish legitimate from counterfeit items, such as in money, art, collectibles, and historical documents. Don't get hoodwinked! This course examines all of these, starting with how measurements have been made throughout history, along with a full deck of entertaining terms used during the ages. This may help you sort out your weight, whether given in pounds, kilos, or stones. Often these terms will provide insights into how people lived in different eras. We will also look at some of the technologies currently available to provide these measurements, and unravel the complexities of various sensors that are used. As we consider the meaning of accuracy we may become less naive about how much confidence to ascribe to the results given us. Hovering around all of these measurements should be the question of validity - are they meaningful, useful, or misleading? And the impact they have on society - whether they steer behavior more powerfully than one might originally suspect. Each student will also be given an opportunity to become an expert in an area of measurement of personal interest. By the end o

Type:

SCI TECH ENGR

Engineering Science:

- **ENS-103 Introduction to Engineering**

Prerequisites:

ENS L103 MUST BE TAKEN CONCURRENTLY.

Credits:

3.00

Description:

This course provides exposure to engineering practice, with particular focus on electrical engineering components such as circuit elements and systems. It seeks to go beyond the mathematics and provide an intuitive appreciation of functional devices. Examples taken from a broad swath of technological history illustrate significant crossroads, decisions, and inventiveness. Emphasis is placed on learning to think as an engineer - assessment of problems, candidate solution tradeoffs, and implementations. Frequent exercises in creative engineering design will be used. Students will be required to design several elementary devices, such as a magnet, a capacitor, a timing device, and a motor, which they will enter in a competition for overall strength, compactness, accuracy, or speed. Sometimes assignments relate to "survival on an island" concerns, such as communication or drinking water. Students also learn about reverse engineering by selecting, building, troubleshooting, and presenting an electronic kit of their choice. A term paper determining the engineering behind a topic of their choice will also be written and presented. On occasion (see ENS L103) there will be team competitions between various smaller groups in the class.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

• ENS-L103 Intro to Engineering Lab

Prerequisites:

Must be taken Concurrently w/ ENS-103

Credits:

1.00

Description:

The Lab is designed to provide opportunities to gain familiarity with engineering tools. Students will be introduced to parts (e.g. learn the resistor color code), test equipment (multimeters, prototyping trainers, signal generators, and oscilloscopes), and construction techniques (wiring, soldering, troubleshooting). Although it varies from year to year, Class Projects can be built during the Lab sessions. In the past these have included a 25 Watt electric generator, various door lock systems (both mechanical and electronic), and an AM transmitter and receiver (all projects made from scratch). It is likely that 2010-2011 may introduce some robotic creations for a competition. Electronic kits and motors can also be built and serviced in the Lab.

There is an adjoining machine shop, which can be utilized (with supervision), for fabricating items. Individual creativity is encouraged, and informal problem solving sessions occasionally occupy lab time. However, the lab is accessible outside of the traditional scheduled time.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

Environmental Science:

- **UES-107 Introduction to Drones**

Prerequisites:

UES-L107

Credits:

3.00

Description:

Unmanned autonomous systems (UAS) or Drones are high-tech, intelligent machines capable of traveling by air, land, or sea via a remote connection. This course presents concepts and practical methods of using Unmanned Vehicles in a professional context, particularly for environmental projects. UAVs are increasingly being used in a professional capacity such as cinematography and filming, real estate, construction, surveying, mapping, agriculture, industrial inspections, utilities inspections and many more. The course covers mission planning, operations, field data collection, data processing, legal implications, data analysis and data deliverables. The course and laboratory will include learning flying micro-drones and preparing to pass the Federal Aviation Administration's Unmanned Aerial Vehicle Airmen (Part 107) exam. The course will have an associated Laboratory component in which students will learn how to properly plan effective flight missions, fly safely and legally, develop risk management strategies, analyze the data captured and convert it into a useful data deliverable.

Type:

SCI TECH ENGNR

- **UES-L107 Introduction to Drones Lab**

Prerequisites:

UES-107

Credits:

1.00

Type:

SCI TECH ENGNR

• UES-111 Environmental Science**Prerequisites:**

Must be taken concurrently with UES-L111

Credits:

3.00

Description:

Applies the fundamentals of science to environmental issues. Topics include population dynamics and resources, environmental degradation, ecosystems, geologic processes, deforestation, biodiversity, climate change, air, soil, and water resource management, and pollution and risks to health.

Term:

Offered Spring Term

Type:

SCI TECH ENGR

- **UES-L111 Environmental Science Lab**

Prerequisites:

Must be taken concurrently with UES-111.

Credits:

1.00

Description:

Laboratory exercises are used to illustrate topics covered in UES 111. Field testing and analysis of environmental samples. Field trips may be required.

Term:

Offered Spring Term

Type:

SCI TECH ENGR

- **UES-121 Science, Art, and the Environment**

Prerequisites:

Take UES-L121 concurrently

Credits:

3.00

Description:

Examines art and cultural objects through the lens of the biological, chemical, and physical principles of the materials and processes we use to make them. Includes consideration of factors important in art conservation. Provides an environmental context for the manufacture and use of art materials

and the preservation of cultural objects.

Type:

SCI TECH ENGR

- **UES-L121 Science, Art, and the Environment Lab**

Prerequisites:

Take UES-121 concurrently

Credits:

1.00

Description:

Provides hands-on work with pigments, dyes, and other art materials using the basic principles of science and technology. Students will conduct laboratory experiments that produce art objects and other consumer products. Instruction in safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables, graphs, and graphics. Practice in synthesizing compounds like paints and finishes and in evaluating methods of art conservation.

Type:

SCI TECH ENGR

- **UES-225 Geographical Information Science**

Prerequisites:

Take UES-L225 concurrently

Credits:

3.00

Description:

Provides the fundamentals of geographic information science (GIS) including the history of automated mapping. A review of the necessary hardware and software elements used in GIS is presented. Hands-on exercises with computerized mapping software are required.

Type:

SCI TECH ENGNR

- **UES-L225 Geographic Information Science Lab**

Prerequisites:

Must be taken concurrently with UES-225

Credits:

1.00

Description:

Required companion computer laboratory to be taken concurrently with UES 225.

Type:

SCI TECH ENGNR

Forensic Science:

- **FS-103 Introduction to Forensic Science**

Prerequisites:

FS-L103

Credits:

3.00

Description:

Application of the principles of forensic science in evaluating physical evidence, with emphasis on its role in criminal investigation. Class experiences may include guest lectures and field trips. 3-hour lecture. Normally offered Fall

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **FS-L103 Introduction to Forensic Science Lab**

Prerequisites:

FS 103 concurrently

Credits:

1.00

Description:

Laboratory experiences related to the collection and analysis of physical evidence as performed by forensic science professionals. Experiments may include forensic microscopy, drug analysis, forensic serology, physical patterns, fingerprint and firearm evidence analysis techniques. 3-hour laboratory. Normally offered Fall

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

Neuroscience:

- **NEUR-101 Intro to Neuroscience**

Credits:

4.00

Description:

Introduces the field of neuroscience, the study of the organization and function of the nervous system of humans and other animals. Neuroscientists examine how individual neurons function as signaling devices, how groups of neurons operate as circuits to produce fundamental units of behavior, and how much larger systems in the brain subserve complex functions such as memory and consciousness. Topics include the neuron and neural transmission, the overall function and organization of the nervous system, the development of the brain, neural plasticity, sleep, memory and other higher cognitive functions. Normally offered alternate years.

Type:

SCI TECH ENGNR

Physics:

- **PHYS-111 College Physics I**

Prerequisites:

Take MATH-121 or MATH-134 or MATH-165 or permission of Physics department chair; PHYS L111 taken concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **PHYS-L111 College Physics Lab I**

Prerequisites:

PHYS 111 concurrently

Credits:

1.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course. Error propagation, use of Excel, laboratory notebooks and formal reports required.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

• **PHYS-151 University Physics I**

Prerequisites:

MATH-121, MATH-165 or MATH-164 and PHYS L151 concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **PHYS-L151 University Physics Lab I**

Prerequisites:

PHYS 151 concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **PHYS-152 University Physics II**

Prerequisites:

PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

Credits:

3.00

Description:

This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **PHYS-L152 University Physics Lab II**

Prerequisites:

PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **PHYS-153 University Physics III**

Prerequisites:

MATH-121, MATH-164 or MATH-165

Credits:

3.00

Description:

This calculus-based course is the introduction of the topics of modern physics. It begins with special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom. Then Schrodinger's equation is introduced with use of wave functions, particle box, barrier penetration, quantum mechanical tunneling, the Pauli Exclusion principle, the development of the periodic table, and the X-ray spectra. Development of solid state physics with bonding in molecules, band theory of solids and semiconductor behavior. The final topics cover nuclear physics, radioactivity, half-life, nuclear fission and fusion, medical uses of radiation, elementary particle physics and introduction to astrophysics.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **PHYS-L153 University Physics III Lab**

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts of special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom.

Type:

SCI TECH ENGNR

Science:

- **SCI-103 Environmental Science**

Prerequisites:

SCI-L103 must be taken concurrently

Credits:

3.00

Description:

Case study approach to the fundamentals of science applied to environmental degradation, ecosystems, geological processes, population dynamics, deforestation and biodiversity, climate change, ozone depletion, air soil, and water resource management, pollution and risks to health, economics and the environment, politics and the environment, and ethics and the environment.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

• **SCI-L103 Environmental Science Lab**

Prerequisites:

Must take SCI-103 concurrently

Credits:

1.00

Description:

Laboratory exercises to illustrate the topics covered in Science 103. Field-testing and analysis of environmental samples. Field trip required.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

• **SCI-108 Introduction to Cancer Care**

Credits:

4.00

Description:

This course will introduce the students to the top ten U.S. adult cancers, as well as the most common pediatric cancers. Topics to be covered include cancer causes, detection, and prevention. Psychosocial aspects of being diagnosed with cancer and the role nutrition plays for cancer patients will be described. The course will also discuss the major treatment modalities for each cancer including radiation therapy, surgery, chemotherapy, and bone marrow transplants. The goals and objectives of the course will be met through the use of various teaching tools including but not limited to: PowerPoint presentations, videos, guest lectures, and a poster project with a presentation component. Cognitive assessment of the students will be accomplished through homework, quizzes, exams, and a group poster and oral presentation. Students with any type of academic background are welcome.

Term:

Offered Fall Term

Type:

SCI TECH ENGR

• SCI-111 Introduction to Astronomy

Prerequisites:

MATH-128 or higher and SCI-L111 must be taken concurrently.

Credits:

3.00

Description:

History of Astronomy from the ancients to Newton; light; telescopes; sun, earth, moon planets, comets, asteroids, meteors; space programs, science and technology in society. Course culminates with a visit to the Clay Center Observatory, where students will be able to make first hand observations. For non-science majors.

Term:

Occasional

Type:

SCI TECH ENGR

- **SCI-L111 Introduction to Astronomy Lab**

Prerequisites:

Take SCI-111 concurrently

Credits:

1.00

Description:

Laboratory experiments and exercises to illustrate the principles discussed in Science 111. Observational exercises using the Celestron telescope, astrophotography exercises, and computer simulations. Course culminates with a visit to the Clay Center Observatory, where students will be able to make first hand observations.

Term:

Occasional

Type:

SCI TECH ENGR

- **SCI-112 Structure of the Universe**

Prerequisites:

MATH-128 or higher and SCI-L112 concurrently

Credits:

3.00

Description:

Astronomy of the cosmos; sun, stars, interstellar materials, galaxies, pulsars, quasars, black holes; nature of time relativity, cosmology. Course culminates with a visit to the Clay Center Observatory, where students will be able to make first hand observations. For non-science majors.

Term:

Occasional

Type:

SCI TECH ENGNR

- **SCI-L112 Structure of the Universe Lab**

Prerequisites:

Take SCI-112 concurrently

Credits:

1.00

Description:

Laboratory experiments and exercises to illustrate the principles discussed in Science 112. Observational exercises using the Celestron telescope, astrophotography exercises, and computer simulations. Course culminates with a visit to the Clay Center Observatory, where students will be able to make first hand observations.

Term:

Occasional

Type:

SCI TECH ENGNR

- **SCI-113 A Habitable Earth Within the Solar System**

Credits:

4.00

Description:

This course introduces non-science majors to concepts that are central to making our planet habitable. It presents Earth in context of the solar system with a broad view of global climate change and energy resources in a quest to better understand the workings our planet. This course on Earth and Planetary Science is suitable for students who may have taken their last science and math course several years ago, or are just curious about knowing facts on major issues that pertain to the future of our planet. Together with a reading component, this course aims to give students a flavor of how researchers think, investigate and develop conclusions that directly affect our political and economic future. Topics covered in this course range from the solar system to the study of search for other habitable Earth-like planets, search for extraterrestrial life, and evolution of life on Earth. Other characteristics of this course are heavy use of audio-visual materials often including computer animations and simulations, in-class experiment demonstration, and intensive use of INTERNET-based resources.

Type:

SCI TECH ENGNR

• SCI-165 Inner Workings of Physics Universe

Credits:

4.00

Description:

About 15 billion years ago, (data indicate) the big bang occurred and the universe was born. With it came physical laws and a spectacular array of consequences that lead to the universe as we know it. This non-lab , 4 credit course explores the inner workings of the physical universe in terms of the scientific inquiry which lead to Newton's laws, an understanding of energy, waves, light, electricity, atomic structure, chemical reactions, nuclear physics, particle physics, relativity, and the big bang theory. During the course, students will learn to make use of modern resources to access scientific and technical literature to research a scientific topic. They will learn to distinguish between science and technology (e.g. quantum mechanics and nanotechnology, the discovery of the Higgs boson and the large hadron collider that made it possible, etc.) and to understand how the science, technology, and engineering disciplines play a crucial role in recognizing and solving problems of society and the world that we share.

Type:

SCI TECH ENGNR

• SCI-171 The Built World: How Humans Engineer Environments

Credits:

4.00

Description:

The most basic needs of humans have not changed - water, food, and shelter - but the means of meeting these needs has. In this course, we will examine how technology-driven societies operate by studying how cities are built and how they function. Topics will include water supply and distribution systems; transportation systems (including road and bridge design and construction); building design, construction, and operation (including skyscraper and sustainable building design), and waste removal systems (municipal and industrial wastewater removal and treatment, solid waste removal and treatment). This is not a course about little gadgets and widgets; this is a course about big engineering marvels; and it emphasizes applications of science - how things work - rather than scientific theory.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

• SCI-173 Mapping Our World The Power of Digital Maps

Prerequisites:

SCI L173 Must be taken concurrently Knowledge of Windows type Application

Credits:

3.00

Description:

Geographic Information Science (GIS) link information (number of fire hydrants on a block) to features on a map (e.g., a point representing street address) that has a designated geographic location (as designated by global coordinates). Unlike paper maps, GIS software allows the production of interactive maps that allows the user to layer data, to indicate spatial patterns, to analyze trends, and to combine different features of the mapped area in novel ways. For example, a business person may wish to use GIS to determine the optimum location of retail outlet (based on the mapped demographics of a neighborhood), while an environmental engineer may use GIS to describe the location of outfalls to see how they correlate to areas of stream pollution. In this course, students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

- **SCI-L173 Mapping Our World Lab**

Prerequisites:

Must be taken concurrently with SCI-173

Credits:

1.00

Description:

This laboratory illustrates concepts and methods taught in SCI 173. In this lab students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **SCI-181 Science and Life in the 21st Century**

Credits:

4.00

Description:

No longer offered on Boston campus This is a four credit, non-lab, science course that examines the central scientific problems confronting the 21st century. The course studies particular topics and teaches the necessary science around these topics to provide a good understanding of the issues. The topics currently are: Energy, Science and Economic Decisions, Sustainability of Life on Earth, Health and Science.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **SCI-184 Contemporary Science and Innovation**

Credits:

4.00

Description:

This is a 4 credit, project based science course that examines the central scientific problems confronting the 21st century. The course consists of lectures, class discussions, field trips, and in-class hands-on activities designed to familiarize the student with different concepts of the lectures. The current focus is on sustainable energy production. A final team project related to the course topics will be given. This is the version of SCI 183 without a separate lab component. Students who have taken SCI 183, L183 are not allowed to take this course.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **SCI-201 Physics for Future Presidents**

Credits:

4.00

Description:

This course presents a topical introduction to the key principles and concepts of physics in the context of the world events and natural phenomena that confront world leaders and that require informed decisions and responses. Energy, health, counter-terrorism, remote sensing, space programs, nuclear proliferation, and a host of other modern challenges have technological and scientific dimensions, the understanding of which is essential to avoiding disastrous policy decisions. This course considers the application of physics to these societal challenges. The material is covered at a level and pace that a future world leader should be able to handle; the emphasis is on the development of physical reasoning skills, and not on detailed, mathematical problem solving.

Type:

SCI TECH ENGNR

- **SCI-210 Earth and Planetary Crystals**

Prerequisites:

Take SCI-L210 concurrently

Credits:

3.00

Description:

This course will provide undergraduate students of various disciplines with an introduction to gems and crystals using interactive, evidence-based teaching approaches. Crystalline forms of matter are critical to our existence. Using innovative teaching strategies of in-class hands-on demonstration, supplemented with visuals of crystal details, the course provides students insights into the formation, alteration and unique properties that make crystals invaluable. Topics range from the study of proteins and nucleic acids to the interior of planets. The in-class lectures will provide a basic guide that will serve as a platform for individually catered in-depth study. Therefore, the course is open to advanced students as well, who can pick up higher level of information for discussion and class projects.

Type:

SCI TECH ENGNR

Some Science division courses may have Math or Computer Science prerequisites; many have other Science prerequisites.

Studies in Literature: 1 course, 4 credits

Choose one Studies in Literature course from those listed below:

- **ENG-113 World Drama I**

Credits:

4.00

Description:

Survey of drama and theatre as part of world culture from classical Greece through 18th-century China. Normally offered yearly.

Term:

Offered Fall Term

Type:

Studies in Literature

- **ENG-114 World Drama II**

Credits:

4.00

Description:

Survey of drama and theatre as part of world culture from the 19th century to the present.

Term:

Offered Spring Term

Type:

Studies in Literature

- **ENG-130 Introduction to Literature**

Credits:

4.00

Description:

Study of poetry, prose, and drama, with emphasis on close reading and literary analysis. Students will compose formal essays discussing the meanings and relationship between texts as well as the author's craft and relationship to the reader. Offered every semester.

Type:

Studies in Literature

- **ENG-135 World Literature in English**

Credits:

4.00

Description:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

Term:

Offered Both Fall and Spring

Type:

Studies in Literature

- **ENG-141 Studies in British Literature**

Credits:

4.00

Description:

Study of poetry, prose, and drama from the British literary tradition, with emphasis on close reading and literary analysis. Students will compose formal essays discussing the meanings and relationship between texts as well as the author's craft and relationship to the reader. Offered every semester.

Type:

Studies in Literature

- **ENG-142 Studies in American Literature**

Credits:

4.00

Description:

Study of poetry, prose, and drama from the American literary tradition, with emphasis on close reading and literary analysis. Students will compose formal essays discussing the meanings and relationship between texts as well as the author's craft and relationship to the reader. Offered every semester.

Type:

Studies in Literature

- **ENG-151 Introduction to African-American Literature**

Credits:

4.00

Description:

Literature has the capacity to record and interrogate history in an imaginative and artistic context. African-American literature is a rich, varied, and complex body of literature that faces our tainted history directly. The authors we will read in this class examine slavery's long-term psychological and social effects while forging a literary history that is at once a part of and apart from American literary history more generally.

Type:

Studies in Literature

- **ENG-152 Horror Fiction**

Credits:

4.00

Description:

This course focuses on the reading and analysis of horror literature and the ways in which horror reflects and represents personal and cultural anxieties. Readings will include both classic and contemporary authors, for example, Edgar Allan Poe, H.P. Lovecraft, Shirley Jackson, Stephen King, and others. Assignments will include analytical essays as well as creative writing.

Type:

Studies in Literature

- **ENG-153 Literature of War**

Credits:

4.00

Type:

Studies in Literature

- **ENG-155 Young Adult Literature**

Credits:

4.00

Description:

Young Adult Literature's recent explosion in popularity raises important questions about the stories it tells, the values it promotes, and the audiences it seeks. This course approaches the YA phenomenon as one with deep historical roots as well as contemporary cultural relevance. From nineteenth century classics to current series favorites, literary works focused on young people reframe perennially fresh narratives about coming of age, negotiating personal identity, and navigating a complex moral universe. This course also considers YA literature as part of an evolving network of writers, readers, publishers, critics and filmmakers.

- **ENG-157 Poetry and Religion**

Credits:

4.00

Description:

This course will use close readings to examine poetry as a heightened form of language seeking to make contact with divine sources of faith. We will consider poems that provide examples of the struggle to attain belief, as well as poems that deny belief. Language as both the grammar of ascent and the locus of descent. The position of human beings in relation to God, or the gods, or the absence of the divine.

Type:

Studies in Literature, Classics Minor

- **ENG-161 Writing the American West**

Credits:

4.00

Description:

In 1893, Frederick Jackson Turner famously declared that the American frontier (i.e., the West) had closed for good. To a certain extent, Jackson's proclamation was meant to demarcate the end of the 19th century. But perhaps more importantly, it marks the beginning of a distinctly American literature that began, ironically, by mourning its own demise. In this course, we will journey among some of the more significant signposts and detours that have marked Western U.S. literature in the 20th Century. Along the way, we will question just where, exactly, the West begins and ends (The Mississippi River? The Great Plains? The Rockies?), and think about whether or not Turner's frontier thesis continues to hold true (if it ever did). We will consider whether the broad rubric of The West is adequate to describe the various sub-regions within this portion of the United States, and we'll examine the genres which seem as if they could not have happened anywhere else. We will also interrogate differences in the literature across gender lines: how, if at all, does the literature written by men and by women differ? Above all, we will strive to come away with a deeper understanding of this vitally American, and vitally Wild literary place.

Type:

Studies in Literature

- **ENG-213 English Literature I**

Credits:

4.00

Description:

Study of major writers of England from the beginning to the mid-18th century. Regularly assigned essays on the reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Studies in Literature

- **ENG-214 English Literature II**

Credits:

4.00

Description:

Study of major English writers from the mid-18th century to the present. Regularly assigned essays on the reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Studies in Literature

- **ENG-217 American Literature I**

Credits:

4.00

Description:

Study of major American writing from its origins through 1865. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Studies in Literature

- **ENG-218 American Literature II**

Credits:

4.00

Description:

Study of major American writing from 1865 through the present. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Studies in Literature

- **FR-216 Masterpieces of French and Francophone Literature in English Translation**

Credits:

4.00

Description:

Masterpieces of French and Francophone Literature in English Translation. Studies works translated into English by major authors from the Middle Ages to the present. Explores drama, fiction, and poetry from many regions of the world: Africa, Western Europe, North America, the Caribbean, and Vietnam.

Term:

Alternates Fall & Spring

Type:

Studies in Literature

- **FR-309 Survey of French Literature I**

Prerequisites:

FR 202 or Instructors permission

Credits:

4.00

Description:

Analyzes and discusses canonical works of French literature from medieval times to the eighteenth century.

Term:

Offered Fall Term

Type:

Studies in Literature

- **FR-310 Survey of French Literature II**

Prerequisites:

FR-202 or instructor's permission

Credits:

4.00

Description:

Study, analyze and discuss canonical works of French-language literature from the nineteenth through the twenty-first centuries, as they relate to important events in the art, culture, and history of the Francophone world.

Term:

Offered Spring Term

Type:

Studies in Literature

- **FR-315 Mots Doux: Love, Lust and Literature**

Prerequisites:

Take FR-205 or Instructor's consent

Credits:

4.00

Description:

Explores the theme of love and its manifestation in representative works while being aware of the evolution of French Literature. Addresses various thematics that accompany a traditional survey of literature course such as critical discourse, aesthetic representation, literary movements, genre, construction of sexual identities, sexual politics as well as representations of ethnicity, class, and culture.

Term:

Occasional

Type:

Studies in Literature

- **FR-318 Face in the Mirror: Writing & Reflecting the Self in French**

Prerequisites:

FR-205 and FR-305 or Instructor's consent

Credits:

4.00

Description:

Examines literature in the French language focusing on memoir, essay, and autobiography. Read authors such as, Montaigne, Rousseau, Lamartine, Colette, Duras, Beauvoir, Le, Chamoiseau, Djébar, Conde, Ernaux, Genet, and Satrapi. Develops an appreciation of the differences between autobiography and autofiction. Explores the question of truth and the fallibility of memory.

Type:

Studies in Literature

• **WGS-211 Heroines, Hotties & Hubris: Adolescent Girl's Books**

Credits:

4.00

Description:

Explores what we can learn from the books that teenage girls read. In addition to a wide array of interesting and complex Young Adult novels targeted to young female readers, students will be exposed to theories of adolescent development, literary criticism, and social theory. Topics include how the dilemmas of girlhood have changed or stayed constant and the urge, so common in books for children and teens, to teach kids how to think and behave.

Term:

Occasional

Type:

Studies in Literature

• **WGS-220 Other Worlds, Other Genders: Women and Science Fiction**

Credits:

4.00

Description:

Examines through both classic and contemporary science fiction a variety of possibilities for world-reimagining in the realms of gender, sexuality, race, and other forms of difference. Draws on theories of utopian and dystopian discourse, engages with questions of biology and reproduction, and explores colonialism through first-contact and space empire narratives.

Ethical & Philosophical Inquiry: 1 course, 4 credits

Choose one Ethics course from those listed below:

- **PHIL-119 Ethics**

Credits:

4.00

Description:

A systematic introduction to the major thinkers and their positions on the main issues of ethics, such as: What is morality? What are moral values? How should we live our lives? Are there objective, universal, absolute moral standards? If so, what are they, and what is their basis? 1 term - credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- **PHIL-120 Ethics and Civic Life**

Credits:

4.00

Description:

In this class you will be introduced to the perspectives and methods of politics, philosophy, and economics and see how these three disciplines present distinct but interconnected dimensions of current social and political issues.

- **PHIL-123 Social Ethics: The Good Life**

Credits:

4.00

Description:

An examination of contemporary Western society, particularly in the United States, in relation to philosophical attempts to define the good life. Current books that exhibit a philosophical approach towards important contemporary social issues will be discussed, as well as classics in philosophy. Topics may include: civic virtue, consumerism, current events, economic justice, popular culture (film, music, television), religion and secularism, etc. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- **PHIL-127 Contemporary Moral Issues**

Credits:

4.00

Description:

A critical examination of a number of contemporary moral issues such as: abortion, affirmative action, animal rights, capital punishment, cloning, drug legalization, environmental ethics, euthanasia, genetic engineering, gun control, pornography, same-sex marriage, suicide, war and terrorism, etc. 1 term - 4 credits. Type:

Human Behavior & Societies

Economics:

- **EC-151 Economic & Human Geography**

Credits:

4.00

Description:

The study of how economic and human activity is distributed across space, the reasons for these spatial distributions, and the processes that change the spatial organization of economic activity over time. Topics include: maps, map projections, and geographic information systems; population geography; the organization and location of cities, towns and villages; transportation and communication policy; industrial location; the geography of world trade; and geographic features of economic development. The course takes a global perspective, and draws on cases and examples from all over the world. Cultural Diversity B

Type:

Asian Studies, Human Behavior & Societies

Government

- **GVT-110 Introduction to American Democracy**

Credits:

4.00

Description:

An introduction to the American political system and constitutional framework. Focus will be on the interplay of various institutions (the Presidency, Congress and the Judiciary) in creating public policies. Contemporary public issues will be discussed, as will the role of political theory in shaping American democracy. Attention will be given to the role of the news media, public opinion, political ideology, political parties and interest groups in the American system.

Type:

Human Behavior & Societies

- **GVT-115 Evolution of the Global System**

Credits:

4.00

Description:

The goal of this course is to introduce the student to the main actors, social facts and processes that shaped the international system in the nineteenth and twentieth centuries. By analyzing the spread of industrialization, the race for colonies, the thrust of imperialism, and the rapid growth of nationalism, among other factors, this course explains the contradictory and simultaneous trends of unprecedented levels of prosperity and violence in Europe and beyond. While the course examines the role of the United States in the international system, particularly in light of its dominant role since the early twentieth century, it also emphasizes the developments taking place in other regions such as Asia, Africa and Latin America. This will allow students to understand the global arena as a space of complex interconnections involving varieties of forms of production, national political cultures and idiosyncratic traditions. This course sets the foundations for other courses in International Relations and Regional Studies

Type:

Psychology:

- **PSYCH-114 General Psychology**

Credits:

4.00

Description:

Surveys core theoretical concepts and contemporary empirical research from the major sub-fields of psychology: physiology; perception; cognition; learning; emotion; motivation; development; personality; psychopathology; psychotherapy; and social behavior. Required for psychology majors. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Human Behavior & Societies

Sociology:

- **SOC-113 Introduction to Sociology**

Credits:

4.00

Description:

An introduction to the sociological understanding of human interaction, group process and social structures. Students are introduced to basic concepts, theories and methods of sociological investigation. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Human Behavior & Societies

- **SOC-116 Social Justice**

Credits:

4.00

Description:

An examination of traditional and contemporary problems associated with major social institutions such as the family, economics, government and education. Social forces related to ethnicity, social class, health and welfare, and urbanization are also included. Alternative remedial measures based on behavioral science theories are discussed. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Human Behavior & Societies

- **SOC-224 Families in Contemporary Society (Spain)**

Credits:

4.00

Description:

Spain has experienced major socio-demographic changes since the mid 1970s. These transformations mainly arise from the new role of women in society and, in particular, women's higher levels of education, work experience, and labor market attachment. The changes in women's labor force participation have occurred in conjunction with a progressive postponement of main family events, such as leaving the parental home, forming a partnership and having children, as well as with a reduction in the family size. Spain is, indeed, characterized as having one of the lowest low fertility levels within Western industrialized countries, a pattern that is exacerbating the ongoing process of population aging. This picture partly reflects the conflicting relationship that currently exists between women's labor force participation and the accommodation of family responsibilities: the so-called work/ family balance. Ongoing differences among countries have been accounted for by different explanatory factors that involve socio-economic,

cultural and social policy dimensions. From a comparative perspective, the course is intended to cover recent debates, controversies, and research on family formation and family dilemmas in contemporary Spain.

4.00

Description:

Surveys American history from European colonization up through the era of the Civil War. Topics include interactions with Native Americans; slavery; the American Revolution; the founding of a new republic; social and economic developments in the early nineteenth century; expansion; party politics; sectional conflict; the Civil War and Reconstruction.

Term:

Offered Fall Term

Type:

Social & Intellectual HST

- **HST-182 American Life Since the Civil War Era**

Credits:

4.00

Description:

Surveys American history from the 1870s to the present. Topics include the new industrial order; farmer and worker protests; progressivism; America's emergence as a world power; the two World Wars; the Great Depression; the New Deal; the Cold War; post-World War II American society; the Civil rights movement; Vietnam; dissent and counterculture in the 1960s; the women's movement; economic, social, and political changes in the late-twentieth century; America's relationship to a globalized world.

Term:

Offered Spring Term

Type:

Social & Intellectual HST

- **HST-251 Modern East Asia**

Credits:

4.00

Description:

China, Japan, and Korea - East Asia's critical players - share many historical influences, but each has a distinct culture, and they competed with each other for much of the twentieth century, proud of their achievements but feeling threatened by their neighbors. Lectures interspersed with movies and documentaries to show how East Asia has developed in the past one-hundred-plus years.

Type:

Social & Intellectual HST

- **HST-260 Asian Peoples and Cultures**

Credits:

4.00

Description:

Introduces the peoples of Asia and the cultures they have created. Particular attention is paid to the lives of the common people in both historical and contemporary times. By understanding the richness and complexities of daily life in Asia, we will understand the continuities and discontinuities brought on by social, cultural, and economic changes. We will gain an appreciation of our fellow human beings in Asia.

Type:

Social & Intellectual HST

- **HST-268 History of the Mediterranean**

Credits:

4.00

Description:

Explores the history of the Mediterranean from the ancient times to the 20th century, with emphasis on the extraordinary interaction between the rich cultural, ethnic and religious backgrounds of the peoples of Europe, Middle East, and North Africa.

Term:

Occasional

Type:

Social & Intellectual HST

- **HST-312 Renaissance and Reformation Europe**

Credits:

4.00

Description:

Explores the intellectual and cultural developments of the Renaissance, and of the Protestant and Catholic Reformations in their social and political contexts. Topics include: Humanism, the rise of the city-state; art, and science; changes in family and social life; the causes of the Reformation (intellectual, social, technological); Calvinists, Lutherans, and Radical Reformers; Counter-Reformation and its political consequences; the Wars of Religion.

Term:

Occasional

Type:

Social & Intellectual HST

- **HST-361 Native America 1832 to Present**

Credits:

4.00

Description:

Topics will include the Plains Indian Wars; ethnological aspects of Indian tribes; the pitfalls of Indian reform movements; Indian resistance to U.S. assimilation and reservation policies; the Indian New Deal; activism and the American Indian Movement; Indians' future prospects. Cultural Diversity A

Term:

Occasional

Type:

Social & Intellectual HST

- **HST-383 Boston: Heritage of a City**

Prerequisites:

One History course

Credits:

4.00

Description:

Boston from its foundation in 1630 to its development as a 21st century metropolis. From the Massachusetts Bay Colony, to cradle of the American Revolution, to a Yankee merchant capital, Brahmin cultural center, and immigrant melting pot. When offered in the hybrid format, this course will meet at the regularly-scheduled time, but lectures and other course materials will be available on the course Blackboard site in case you cannot attend.

Term:

Offered Fall Term

Type:

Social & Intellectual HST

- **HST-394 Slavery in Film, Literature and History**

Credits:

4.00

Description:

A seminar on slavery in the United States as depicted in history, literature, and film. Topics may include resistance to slavery, honor, the attack on slavery, the cultural and social worlds of masters and enslaved people, the thought of masters and enslaved people, women and slavery, and/or slavery as an economic institution.

Type:

Social & Intellectual HST

- HST-412 Europe in the 20th Century

Credits:

4.00

Description:

Examines the political, economic, social and cultural developments of the principal European states since 1900. Topics include: World War I; the social and economic dislocations of the 1920s and 1930s; the rise of Fascism and National Socialism; World War II; the remains of colonialism; modernization and Americanization since the 1960s; the European Union; Europe after the Cold War; and throughout the twentieth century, the importance of class and class conflict, nationalism, and war in shaping the European experience.

Term:

Occasional

Type:

Social & Intellectual HST

- HST-426 Politics and Culture in Europe 1919-1939

Credits:

4.00

Description:

Explores the social and political development of European society between the two world wars, primarily through the literature, art, and films of the period. Topics include: the dissolution of pre-1914 middle class society; deviance and sexuality in the 1920s; the role of decadence in art and the Fascist response to deviance in life and art; women, workers, and the new technology; the rise of Fascism; political engagement and polarization throughout European society in the face of economic and social crisis.

Term:

Occasional

Type:

Social & Intellectual HST

- **HST-489 Germany: Film, Politics, Memory Since 1945**

Credits:

4.00

Description:

Explores German history since 1945 through film, newsreels and other archival footage, war memorials and museums, novels, published diaries, memoirs, and recent historical scholarship. Topics include the representation, in film and other texts, of: post-war rebuilding; the German Economic Miracle; divided Berlin; 1960s and 70s radical politics; coming to terms since 1945, with Germany's Nazi past and the Holocaust; coming to terms since 1990 with the Stasi and East German past; Ostalgie (nostalgia in the 21st century for some aspects of East German socialism); the multi-cultural society that is Germany today, with new Turkish, Greek, Russian, Arab, and even Israeli communities.

Type:

Social & Intellectual HST

Philosophy:

- **PHIL-210 History of Ancient & Medieval Philosophy**

Credits:

4.00

Description:

The study of philosophical thought from the period of the ancient Greek philosophers through the Medieval thinkers, including such philosophers as Socrates, Plato, Aristotle, Epicurus, Zeno, Parmenides, Pythagoras, Protagoras, Augustine, Aquinas, Anselm, and Abelard. An introductory course designed to equip the student with a well grounded understanding and appreciation of Philosophy. 1 term - 4 credits. Normally offered every year.

Term:

Offered Fall Term

Type:

Classics Minor, Social & Intellectual HST

- **PHIL-250 Social & Political Philosophy**

Credits:

4.00

Description:

An examination of persistent debates in political and social philosophy, such as the meaning of property and welfare, the tensions between liberty and equality, censorship and freedom of expression, the relation of church and state, the possibility of political education and civic virtue, legitimacy of the state and revolution, war and problems of end and means, addressing historic injustice, such as racism, genocide, or sexism, among other topics. The class will focus on no more than two such themes. Students will read both classic and contemporary writings to address both the historical roots and the contemporary treatment of these questions. 1 term - 4 credits. Normally offered every year.

Term:

Occasional

Type:

Social & Intellectual HST

Women's & Gender Studies:

- **WGS-111 Women, History, & Culture**

Credits:

4.00

Description:

Explores the roles and images of women in Western culture and the realities of women's everyday lives through literature, film, history, art, psychology, and recent feminist scholarship. Analyzes gender inequalities and the influence of gender on social structure, human behavior, and artistic expression. Topics include: the social construction of gender and identity; domestic prescriptions for women; women and work; intersections of gender, class, and race in American society; sexualities and identity; the politics of motherhood and reproductive rights; educating girls; negotiating male privilege and structural inequalities; representations of women in Western art and film; and women as artists and gendered models of creativity in art, film, fiction, and science.

Term:

Offered Both Fall and Spring

Type:

Social & Intellectual HST

- **WGS-115 Introduction to Gender Studies**

Credits:

4.00

Description:

Introduces the key topics and debates that have shaped the field of gender studies, including queer studies, masculinity studies, and women's studies. Through lecture and class discussion of texts from literature, film, history, psychology, and sociology, explores the pervasive influence of gender on the structure of society and our everyday experiences and the role that gender plays in our understanding of love, friendship, sexuality, and even violence. Topics include: biological arguments about gender and sexuality; the social construction of gender and identity; intersections of gender, race, class, and sexuality; masculinity and femininity; and theories of sexual difference and the construction of sexuality.

Term:

Occasional

Type:

Social & Intellectual HST

- **WGS-311 Engendering Entertainment: Feminism and Popular Culture**

Credits:

4.00

Description:

Investigates the complex intersections between feminism and popular culture through several different lenses: by exploring, how feminists make arguments about popular culture; by looking at the complexities of public femininity in today's popular culture, including figures such as Lady Gaga and Katy Perry and television shows like *The Bachelor* and *Grey's Anatomy*; by focusing on a variety of articulations of feminism within mass media, blogs, social media, and popular books such as Ariel Levy's *Female Chauvinist Pigs*, and Caitlin Moran's *How to Be a Woman*. Along the way we will ask questions about: what makes a work of art feminist; how modern media contributes to or distracts us from a variety of political debates in the realm of female equality and how can we, as individuals, use modern media to create and advance smart, feminist arguments.

Type:

Social & Intellectual HST

- **WGS-315 Feminist Thought**

Credits:

4.00

Description:

Investigates how feminists, both today and in history, have understood inequality and difference and looked for the best ways to address these issues and bring about social justice. Examines how feminist theorists help us to understand how gender and other social categories, such as race, class, sexuality, disability, age and nationality, are constructed within and through each other; and analyzes feminist engagements with liberalism, socialism, psychoanalysis, existentialism, post-colonialism, critical race theory, and queer theory, as well as consider anti-feminist arguments. Readings include classic critical texts by authors including Mary Wollstonecraft, Emma Goldman, Virginia Woolf, Chandra Mohanty, Gloria Anzaldua, and Judith Butler.

Type:

Social & Intellectual HST

- **WGS-335 Queer Narratives**

Credits:

4.00

Description:

Explores the stories that help us to understand communities, identities, and bodies that could be considered queer, and the ways that film, music, memoir and fiction have discussed queer as different, unusual, or other. Texts include the documentary, "Paris Is Burning", Frank Ocean's 2012 album, "Channel Orange", and Janet Mock's recent memoir, "Redefining Realness", as well as foundational queer theory from Judith Butler, Eve Kosofsky Sedgwick, and Lee Edelman, among others, to help build a framework for approaching and interpreting both fictional and non-fictional accounts of queer lives.

Visual & Performing Arts Theory and History: 1 course, 3-4 credits

Choose one course from those listed below:

- **ADG-224 History of Graphic Design**

Credits:

4.00

Description:

The first part of the course will focus on the history of graphic design from prehistoric times to the Industrial Revolution, including the origins of graphic communications in the ancient world, the development of the alphabet and early printing and typography. The second portion will concentrate on the period from the late 19th century to the present, and will include the Arts and Crafts Movement, the various-isms and their influence on modern art, the Bauhaus and International Style, and contemporary visual systems and image making.

Term:

Offered Fall Term

- **ADI-234 History & Theory of Interior Architecture**

Prerequisites:

Taken concurrently with ADI S201

Credits:

3.00

Description:

This course introduces students to the important individuals, ideas and issues that have shaped the direction of contemporary interior design practice in the twentieth century, building upon the historical foundation established by the Ideas of Western Art and History of Furniture and Architecture classes. Intermixing lectures and readings with visits to important local buildings, it discusses the influences of culture, technology, fashion and media upon the work and thinking of the first generation of modern designers, as well as emerging social, moral and environmental imperatives that will form the basis of future practice; cultural identity, interdisciplinary collaboration, sustainability and universal design.

Term:

Offered Fall Term

- **ARH-101 Art History I**

Credits:

4.00

Description:

Surveys the art of Western civilization from prehistoric caves to medieval cathedrals. Considers works from the Ancient Near East, Ancient Egypt, Ancient Greece and Rome, the Byzantine Era, the Romanesque Period, and the Gothic Period in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

- **ARH-102 Art History II**

Credits:

4.00

Description:

Surveys the art of Europe and America from the Renaissance to the present. Considers work of painting, sculpture, and architecture from periods such as the Renaissance, the Baroque, the Rococo, Neoclassicism, Romanticism, Impressionism, Abstract Impressionism, and Post-Modernism in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

- **ARH-205 Gender, Class and Alterity in Ancient And Medieval Art**

Credits:

4.00

Description:

Explores issues of sexuality, gender, race, and social class in the ancient and medieval worlds. Examines key artworks from ancient Greece, the Roman Empire and medieval Europe within historical, social and cultural contexts.

- **ARH-307 Art of the Italian Renaissance**

Credits:

4.00

Description:

Examines painting, sculpture and architecture of the 14th, 15th, and 16th centuries in Italy in their cultural context. Artists include Giotto, Masaccio, Donatello, Leonardo da Vinci, Raphael, Michelangelo, and Titian.

Term:

Occasional

- **ARH-308 Art of the Baroque & Rococo**

Credits:

4.00

Description:

Explores painting, sculpture and architecture in Italy, Spain and Northern Europe during the 17th and 18th century. Works by Rembrandt, Rubens, Caravaggio, Bernini, Poussin, Velasquez, Watteau, Boucher, Fragonard, Chardin, Hogarth and others considered within their historical contexts.

Term:

Occasional

- **ARH-309 Art of the 19th Century**

Credits:

4.00

Description:

Examines Neoclassicism, Romanticism, Realism and Impression in the European painting. Considers works by artists such as David, Ingres, Friedrich, Constable, Delacroix, Goya, Courbet, Millet, Daumier, Manet, Monet, Renoir, Degas, and Cassatt within their historical contexts.

Term:

Occasional

- **ARH-310 Modernism in Art**

Credits:

4.00

Description:

Examines European painting and sculpture from around 1880 to 1940, including Symbolism, Post-Impressionism, Fauvism, Expressionism, Cubism, Futurism, The Bauhaus, Dada, and Surrealism. Considers works by artists such as Gauguin, Cezanne, Van Gogh, Matisse, Kandinsky, Picasso, Braque, Mondrian, Duchamp, Magritte, Dali, and Ernst within their historical contexts.

- **ARH-311 American Art**

Credits:

4.00

Description:

Surveys American painting, sculpture, photography and architecture from the colonial period through WWII. Considers works by artists such as Smibert, Copley, West, Stuart, Whistler, Sargent, Eakins, Homer, Ryder, Bierstadt, Cole, Inness, Sloan, Sullivan, Wright, Hopper, O' Keefe, Dove, Hartley, Bellows, Stieglitz, Weston, and Steichen.

Term:

Occasional

- **ARH-312 Art of the Northern Renaissance**

Credits:

4.00

Description:

Examines painting, sculpture, and architecture of the 14th, 15th and 16th centuries in Northern Europe, within their historical context. Topics include the rise of oil painting, the development of woodcut and engraving, the effect of the Reformation on art. Artists include van Eyck, Bosch, Durer, Holbein and Brueghel.

Term:

Occasional

- **CJN-152 Visual Aesthetics**

Credits:

4.00

Description:

This course provides an introduction to a humanities approach to a range of media, including but not limited to film and television. The course helps students develop visual literacies, enriching their understanding of multiple forms of media. The class also explores how media texts are constructed for specific cultural, entertainment, informative and propaganda purposes.

Term:

Offered Both Fall and Spring

- **CJN-292 Film History: From Silent Cinema to the Modern Era**

Credits:

4.00

Description:

An introductory film studies course that covers the history of the film medium from its birth until the 1970s. It provides an introduction to major film theory concepts, such as genre and/or auteur studies, as well as key films and stars in movie history.

Term:

Alternates Fall & Spring

- **ENG-266 Mad Men: Reading Visual Narratives**

Credits:

4.00

Description:

This course will focus on the cultural phenomenon of the TV Series Mad Men, considered by many to be the foremost example of Quality TV produced during the so-called golden age of television and engage with it on visual, cultural, literary and filmic levels. The basic premise of the course is that the current practice of binge watching one's favorite shows should be a heightened experience rather than a guilty pleasure, one akin to reading a novel. Watching a complex and sophisticated TV narrative involves taking into account the viewer's positionality as a filmic consumer, textual critic and social commentator. The class will consider various theoretical approaches to television narrative, beginning with ideas gleaned from the discourse of visual literacy, and proceed by applying textual analysis adapted from the more traditional modes of literary studies and film analysis. A combination of critical and evaluative sources will be examined, including book-length studies of the series, individual essays based on the series' appeal to style, American popular culture, advertising, gender roles, race, and 60s nostalgia. Additionally, the recent phenomenon of the series recap will serve as the touchstone to the class's collective viewing of the series and students will be challenged to synthesize and assess these popular on-line critiques as they draft their own recaps and creative readings of the episodes. The entire first two seasons of Mad Men will be studied and the invaluable resource of director/producer commentaries will be incorporated into the study of the series with a view to acquiring critical insights and analytical skills that may be applied to other quality TV series that students currently enjoy watching.

- **FR-220 French & Francophone Cinema**

Credits:

4.00

Description:

Discusses and deepens understanding of French and Francophone cinema from its origins in the late nineteenth century to the early twenty-first century. Explores early works from France, by the Lumiere Brothers and Georges Melies as well as contemporary films from France, Algeria, Burkina Faso, Canada, Haiti, and Senegal.

Term:

Occasional

- **MUH-101 History of Music I**

Credits:

4.00

Description:

Surveys Western music from CE800-1800, from Gregorian to Beethoven; selected major composers, representative masterworks, and the musical styles of the Medieval, Renaissance, Baroque, and Classical periods; links the music to some of the major historical, cultural, artistic, and intellectual trends of these periods. Normally offered yearly.

Term:

Offered Fall Term

- **MUH-102 History of Music II**

Credits:

4.00

Description:

Surveys Western art music from 1800-present, from Schubert to Jennifer Higdon; selected major composers, representative masterworks, and the musical styles of Romantic, Contemporary, and post-Modern periods; links the music to some of the major historical, cultural, artistic, and intellectual trends of these periods. Normally offered yearly.

Term:

Offered Spring Term

- **MUH-211 Music of the United States**

Credits:

4.00

Description:

Surveys American music from Colonial times to the present; various attempts to create an indigenous musical style; vernacular and art music genres including folk, concert, and religious music, jazz and musical theatre; includes music of Billings, Amy Beach, Ives, Copland, Bernstein, and Libby Larsen. Normally offered yearly.

Term:

- **PHIL-219 Philosophy of Art**

Credits:

4.00

Description:

What counts as art? What is beauty? Are there objective standards of beauty? This course examines the nature of aesthetic experience, art, beauty, and creativity. Through the classic and contemporary readings, the students will be introduced to philosophical issues concerning the meaning of art, artistic representation, perceptions of art, interpretation, and criticism. Students will be encouraged to reflect on their own experience of art and explore the relationships among the artist, the audience, the artwork, and the world. 1 term - 4 credits. Normally offered every third year.

- **THETR-260 Broadway Musicals**

Credits:

4.00

Description:

This course is a survey of American musical theatre from its roots in the mid-19th century to the present. It provides the analytical tools and historical insight to more fully appreciate Broadway's greatest musicals and musical theatre artists. Students will explore the ways in which American forms of popular entertainment helped to shape Broadway musicals from their infancy through their adulthood. The course also explores the ways in which musicals provided opportunities for African-Americans, women, immigrants, and the GLBT community.

Term:

Offered Fall Term

- **THETR-266 Intro to Theatre: 20th Century**

Credits:

4.00

Description:

Picking up chronologically where THETR 225 leaves off, this survey course is designed to provide students with an understanding of modern Western theatre. Beginning with a melodrama, plays will include representative works of realism, naturalism, expressionism, epic theatre, theatre of cruelty, theatre of the absurd, and metatheatricality. Lectures and class discussions will explore how these concepts translate to acting and production techniques as well as what they imply as artistic responses to a modern and post-modern world. Satisfies a core requirement for Theatre Majors.

Quantitative Analysis: 1 course, 4 credits

Choose one course from those listed below:

Biology:

- **BIO-273 Biostatistics**

Prerequisites:

BIO 111/L111

Credits:

4.00

Description:

Introduction to the statistical methods used to evaluate biological problems. Sampling, probability, confidence intervals, hypothesis tests, experimental design, analysis of variance, regression, and correlation are some of the topics offered. Software for data handling, graphics, and analysis will be used.

Term:

Offered Fall Term

Type:

Quantitative Analysis

Communication:

- **CJN-210 Communication Research Statistics**

Credits:

4.00

Description:

The course develops an understanding of how statistics are used in the presentation of information and arguments in Communication and Journalism. Emphasizing a conceptual approach to learning statistics, the course focuses on data collection and summarization, correlation, regression, sampling, estimation, and tests of significance. Students perform basic statistical calculations using SPSS software.

Term:

Offered Both Fall and Spring

Computer Science:

- **CMPSC-F120 Programming for the World Wide Web**

Credits:

4.00

Description:

This is a hands-on course aimed at non-CS students who want to learn how to build interesting and interactive web pages. We do not use any drag-and-drop software for this purpose. Instead we cover the basics of HTML and PHP and, if time permits, we look at some ways of building web pages that interact with databases. Each student will have, for the duration of the course, an account on a server that permits individuals to have web pages that are visible on the World Wide Web.

Type:

Quantitative Analysis

- **CMPSC-F124 Game Programming**

Credits:

4.00

Description:

This course introduces students to computer game development, including, but not limited to, game programming. We use Game Maker, a framework for personal computers that runs equally well on XP, Vista, and Linux. We learn about the foundational concepts of two-dimensional (flat) games: graphics, sound, objects, actions, rooms, scores, levels, multiplayer support, artificial intelligence, and more. Game Maker has an intuitive interface that makes game development approachable for everyone, including those who have never written a single game or a single computer program. All games created by Game Maker can be saved as standalone applications and can be shared freely with classmates, friends, and family. This is not a course in graphics design, audio editing, or scriptwriting. Students are encouraged to use their creativity and imagination to design games and the correctness of game implementation is stressed throughout the course.

Type:

Government:

- **GVT-201 Data Analysis and Politics**

Prerequisites:

Sophomore Standing GVT 110 and 120 and Math 128 or higher.

Credits:

4.00

Description:

Quantitative analysis is quickly changing the way we understand and engage in politics, how we implement policy, and how organizations across the world make decisions. In this course, we will learn the fundamental principles of statistical inference and develop the necessary programming skills to answer a wide range of political and policy oriented questions with data analysis. Who is most likely to win the upcoming presidential election? Do countries become less democratic when leaders are assassinated? Is there racial discrimination in the labor market? These are just a few of the questions we will work on in the course.

Type:

Quantitative Analysis

Philosophy:

- **PHIL-212 Formal Logic**

Credits:

4.00

Description:

An introduction to formal (or semi-formal) study of the basic types of deductive arguments (propositional and syllogistic logic). 1 term - 4 credits. Normally offered every year.

Term:

Occasional

Type:

Quantitative Analysis

Psychology:

- **PSYCH-215 Behavioral Statistics**

Prerequisites:

PSYCH 114; Restricted to majors only unless with permission of instructor.

Credits:

4.00

Description:

Introduces the use of statistics as tools for description and decision-making, including hypothesis testing. Prepares students for the analysis, interpretation, and evaluation of psychological research. Required for psychology majors; should be taken before the junior year. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Quantitative Analysis

Sociology:

- **SOC-212 Statistics for Sociology**

Prerequisites:

SOC-113 OR SOC-116 and MATH-128 or higher

Credits:

4.00

Description:

In this course, students will be introduced to descriptive and basic inferential statistical techniques. The course will provide information on the following topics: Description - measures of central tendency (mean, median, mode) and measures of dispersion (range, standard deviation); logic of statistical inference, including normal curve and sampling distribution; hypothesis testing with one sample and two samples; measures of association between two variables (bivariate analysis), including chi-square, regression, and correlation; and introduction to multivariate regression. Students will utilize SPSS (Statistical Package for the Social Sciences) software to input and analyze data. The goals of the course are for students to appreciate the need for statistical methods in the broad field of sociology and to gain basic statistical literacy.

Term:

Offered Both Fall and Spring

Type:

Quantitative Analysis

Statistics:

- **STATS-240 Introduction to Statistics**

Prerequisites:

Math 128 or higher. REMINDER: STATS 240 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

Credits:

4.00

Description:

Topics include: data presentation, measures of central locations and dispersion, probability and probability distributions, estimation, hypothesis testing, simple and multiple regression models. The use of Excel and SPSS will be emphasized throughout the course. 1 term - 4 credits (4 hours per week). Normally offered each semester. STATS 240 satisfies the same requirements as STATS 250

Type:

- **STATS-250 Applied Statistics**

Prerequisites:

MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

Credits:

4.00

Description:

Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

First Year Experience: 1 course, 1 credit

Students with 15+ transfer credits of college or university work are exempt.

Choose one of the following to be completed during the first semester of matriculation:

- CAS-101 Strategies of Success

Prerequisites:

CAS students only. SBS students by special permission.

Credits:

1.00

Description:

CAS 101 is a one-credit course that meets once a week and is designed to help you have a successful transition to Suffolk University and our unique urban community. It is also designed to introduce you to the principles and concepts of Oral Communication and Presentation Skills. Through interactive exercises and engaging assignments, you will explore the campus environment and learn about strategies for success as a student. You will present speeches about your research and activities to improve your abilities as a speaker.

• ADPR-102 Professional Development**Prerequisites:**

ADPR-101 must be taken concurrently

Credits:

1.00

Description:

In this hands-on experiential course, students examine potential career paths in Advertising, Public Relations, and Social Media, become oriented to the university and the surrounding Boston area, and identify professional resources in Boston that foster career development.

Major Requirements Minimum: 8 courses, 32 credits

Complementary Major Requirements, Minor Requirements, and Free Electives: credit varies

Minimum Total Credits Required for Degree Conferral: 126 credits

Seminar for Freshmen: 1 course, 4 credits

Students with 15+ transfer credits of college or university work are exempt.

Please note that not all courses are offered each semester. Students should contact their advisor to learn about current course offerings.

Choose one Seminar for Freshmen course from those listed below:

- SF-101 Fixing the World- Energy and Water: The Science of Solutions

Credits:

4.00

Description:

Two of the most daunting challenges the world faces (or will face) is how to provide for both its growing energy needs and potable drinking water. Regular news events include climate change, droughts, flooding, and petroleum struggles. Human nature often requires a severe crisis before it responds. This course will investigate the historical science driving the use of energy since the Industrial Revolution to convert energy resources into work, including the steam engine, the electric motor, and the internal combustion engine. It will also consider alternative energy options to fossil fuels, such as solar, wind, geothermal, and ocean power. Along the way we will consider the evidence for Global Warming and Climate Change. We will look into human nature, simple life styles, conspiracy theories, and the influence of those in power to shape human opinion. We will also consider how our water supply is provided and where it goes after being used. What options do developing countries or drought racked areas have to remedy their water needs? Although the course pursues a scientific understanding of these issues, the mathematics used will be gentle, and a larger emphasis will be placed on the intuitive appreciation of these concerns.

• SF-116 Enlightened Insanity**Credits:**

4.00

Description:

Rain or shine, the great 18th century Enlightenment philosophers would meet at the famous cafes of Paris to discuss their ideas, and to observe and criticize society. From these informal debates emerged ideas that are at the core of our modern understanding of the nature of society, marginality, human nature, civil rights, the essence of creativity and genius. Come join us in the quest to understand, define, observe, and analyze the key ideas and concepts of these great thinkers, such as Rousseau, Diderot, and Voltaire, still so relevant in our time. We will read key works of these creative thinkers and philosophers. We will enrich our experience and understanding through the use of film, theatre performances, museum visits, as well as the occasional cafe debate.

• SF-126 The Boston Theatre Scene: the Inside Experience**Credits:**

4.00

Description:

Using the current Boston theatre season as its syllabus, this writing- and analysis-intensive course will explore several plays in production at some of Boston's many professional theatres. We will study the script of four to five plays before attending performances of those works. Students will gain insights on the world of theatre through backstage tours and conversations with theatre professionals such as

producers, directors, actors, designers, playwrights, and critics. Students must be available for evening (usually Wednesday) performances. A fee for student-rate tickets will be assessed.

- **SF-132 The Beatles: Here, There & Everywhere**

Credits:

4.00

Description:

This seminar will investigate the impact and legacy of the Beatles. The Fab Four deserve our scholarly attention as musical innovators and as cultural avatars of the 1960s, an era that still exerts influence today. We will examine the many ways in which the Beatles rocked the establishment and became defining figures in post-war youth culture. We will also discuss other media (the visual arts, film, fashion, style) and fields of study (mass media, marketing, recording technology, copyright law, English history) using the Beatles as our guides.

- **SF-151 Getting Over It: Dealing With the Aftermath of Group Conflict/Mass Atrocity**

Credits:

4.00

Description:

Once violent conflict between two groups has ended, what is the best way to transition back to normality coming to terms with the past or simply moving on? To answer these questions we will examine the debates surrounding war crime tribunals, truth commissions, lustration policies, and reparations in the second half of the 20th century. Case studies will include post-apartheid South Africa, post-WWII Germany, and the Israeli/Palestinian conflict. We will discuss the philosophical problems raised by each of these instruments, as well as on the political, legal, and practical difficulties their implementation present. Cultural Diversity B

- **SF-156 The Mask Behind the Face: Personas, Personalities, and Perception. Acting in /Out Life**

Credits:

4.00

Description:

The theatre has always been a metaphor for life. In modern times life has become theatre. This seminar will confront the idea of real life and the eroding boundary between performers and audience. Students will study the roots of the contemporary obsession with stars and stardom, a mania that

began in the 18th century and flourished in the 19th century. We will look at performance studies, performers memoirs, plays, and films that dramatize this dilemma.

- **SF-173 Crime in American Society**

Credits:

4.00

Description:

Popular beliefs about crime are often inspired by the media and by specific criminological theories. These theories about and media images of crime will be examined in detail, including the hits and misses.

- **SF-174 Tragedy and Literature**

Credits:

4.00

Description:

This course will focus on classic works of ancient and modern literature that examine the human condition from a tragic perspective. We will concentrate on close readings from the following texts: Homer's Iliad, Sophocles' Antigone, The Bhagavad-Gita, Shakespeare's Othello, Chekhov's short stories, and Joyce's Dubliners.

Type:

Classics Minor

- **SF-175 War and Apocalypse in Science Fiction**

Credits:

4.00

- **SF-178 Sacred Hoops & Sneaker Pimps: Understanding the American Hoop Dream**

Credits:

4.00

Description:

This course is about the basketball hoop dream played out at the high school and college levels. We will study a wide variety of materials - novels, films, websites, reference works - to understand both the construction, and destruction, of the hoop dream in such diverse places as New York City, Seattle, rural Indiana, suburban Georgia, and the Wind River Reservation in Wyoming. Issues of race and culture will serve as guiding themes as we develop critical theory explaining why the hoop dream has persisted, and adapted, over time, to fit the needs of its believers and supporters.

- **SF-182 Heroes, Antiheroes and Outsiders: Reading the Graphic Novel**

Credits:

4.00

Description:

How is it that comics", a genre often viewed as entertainment for children and adolescents, has become one of the most exciting forms of narrative and visual art? To answer this question, this seminar will examine a range of graphic novels, from those that celebrate their origins in superhero comics, such as Alan Moore's *Watchmen*, to those that treat subjects not usually considered proper to the comics genre, such as Art Spiegelman's *Maus*, about the Holocaust, and Alison Bechdel's *Fun Home*, about the complexities of sexual identity. As we read these works, we will look at how the combination of words and still images makes the graphic novel a unique storytelling form, as well as how artists and writers push the envelope to create new styles and challenge our expectations. In addition to class discussions and writing assignments, we will take a field trip to the Museum of Fine Arts and create a collaborative group graphic novel step-by-step over the course of the semester (all abilities welcome).

- **SF-183 Politics, Power and the Media**

Credits:

4.00

Description:

Is there a relationship between accumulated political power and mass media representations? Is news content impacted by existing political power relations? It is the object of this course to critically analyze the role of the mass media within the framework of existing political power relations in the United States. In particular, the course will focus on the role the mass media plays in promoting and reinforcing dominant political practices and ideologies. The course will begin by exploring various theories of the press, notably its function in a democratic society, as well as the concepts of power and propaganda. We will continue with a series of case studies, complemented by secondary sources that highlight how media representations affect the contemporary distribution of political power in the US. Topics of discussion will include the current US war on terrorism, the ongoing health care debate, the public disavowal of big government", and the concept of a liberal media.

- **SF-189 American Gothic: Edgar Allan Poe, Flannery O'Connor and Annie Proulx**

Credits:

4.00

Description:

This literature seminar will study and compare the short stories of Edgar Allan Poe, Flannery O'Connor, and Annie Proulx. Beginning with Poe as the father of the short story genre in America and exploring his critical theory of the grotesque and arabesque", the class will examine the emergence of the gothic literary idiom as a classic American genre. Critical essays on the gothic aesthetic will be analyzed and film adaptations and documentaries will be viewed.

- **SF-190 Asia in America Fiction and Fact**

Credits:

4.00

Description:

With a focus on some selected ethnic groups from Asia, Asia in America studies the history and current status of Asian Americans in Boston and other parts of the country. We will examine the major reasons why these immigrants chose to leave their home country as well as their expectations and experiences here in America. We will also discuss the issues Asian immigrants have faced in this adopted home as well as the connections and conflicts among different ethnic groups or even within the same ethnic group due to political and socio-economic reasons. The course will include some level of community engagement, through Chinatown tour and service, which may enable us to have a direct contact with the Asian American population and reflect on what is being discussed in class. Through this course, we hope to gain a better understanding of the racial and cultural history of the country and arrive at a deep appreciation of the dynamics of cultural interactions in the twenty-first century. The course fulfills the SCGP requirement.

Type:

Global Engagement Experience

- **SF-191 Film Adaptation Film Adaptation**

Credits:

4.00

Description:

Why did they change the ending of the book? The novel is so much better! We will explore the concept and industry of film adaptation. Students will read novels and watch respective film adaptations to

explore how the written word is adapted to the screen; both fiction and non-fiction works will be considered. Also, field trips to past film locations in Boston will be taken to explore why specific settings were chosen for respective situations. Additionally, students will create their own written adaptations of source materials, putting into practice the concepts studied in class.

- **SF-197 Sustainability, Energy, and Technology At Suffolk University**

Credits:

4.00

Description:

In this project and team-based course, students study a sustainability problem at Suffolk University and spend the semester developing proposals to address the problem. At the end of the course students will present their proposals to Suffolk University's sustainability committee, and will exhibit their websites and visual aids in the Donahue lobby to educate the Suffolk community about sustainability. If their proposals are well-researched and well-communicated, students can see their ideas actualized while they are still undergraduates.

- **SF-198 Music and the Brain**

Credits:

4.00

Description:

What accounts for the power of music to move us so profoundly? This course explores how our brains and music evolved together: What music can teach us about the brain, what the brain can teach us about music, and what both can teach us about ourselves.

- **SF-199 Unfolding the European Union**

Credits:

4.00

Description:

The EU is a powerful political, economic and cultural block that is meant to play a major role, together with the USA and China, in the creation of a new post-crisis world order. The seminar is intended to cover, at a basic but reachable level, the history, the politics, the culture and the functions of the EU in the beginning of the Twentieth Century. An extraordinary experiment of sociopolitical engineering, comparable to that of the United States of America, the EU has been changing the life of an increasing number of Europeans for over 50 years. No American student could afford to ignore the inner structure as well as the particular peculiarities of such inclusive supranational organization in today's world. Issues as institutional functioning, problems derived from individual state sovereignty, economic

coordination to face common challenges, cultural integration, future enlargement, etc. are all indispensable to understand the way in which Europe is changing. But also much more day-to-day issues, such as travel mobility, education exchange programs, citizen's participation, supranational networks of people in the arts or in business, unified labor market, gender participation, human rights, consumer's protection, etc. are all in the process of developing a more robust and functional European Citizenship.

- **SF-1110 Decoding Boston: Signs and the City**

Credits:

4.00

Description:

This interdisciplinary seminar will explore the buildings, monuments, sites, and signs around Boston from the point of view of Visual and Culture Studies. In addition to providing a compelling introduction to the history, major landmarks, and culture of the city, the seminar is specifically intended to improve students' visual literacy: that is, their awareness of their visual environment and their ability to critically analyze the rhetoric of the spaces, buildings, and images with which they are surrounded.

Type:

Local Engagement Experience

- **SF-1122 The Ethics of Peace and War: From The Ancient World to the Present**

Credits:

4.00

Description:

This course will explore historical, ethical and political issues concerned with matters of peace and war. We will examine a variety of different texts: religious, historical, philosophical and literary, but the main emphasis will be philosophical justifications for war and philosophical visions of just peace, with an eye to contemporary questions in the War on Terror. To the extent that we use non-philosophical texts, this will be in the service of focusing the imagination on the philosophical issues and applying theoretical frameworks to historical events.

- **SF-1127 The Vietnam and Iraq Wars: Polarized Perspectives**

Credits:

4.00

Description:

This class will examine some of the many controversies surrounding the Vietnam and Iraq Wars, two conflicts that have been profoundly polarizing for the American people. There are widely divergent perspectives regarding the fundamental questions surrounding each war. Were the reasons for American involvement just? To what extent were the methods used by the United States military during each war just? To what extent did the media play an appropriate role before, during, and after each war? Did opposition to these wars serve primarily to benefit the enemies of the United States or did it constitute a form of patriotism and love of country? This interdisciplinary course will address these and other complex questions by examining the histories, literature, and films (both documentaries and dramatic) that have been produced in response to these wars.

• SF-1128 Sustainable Media

Credits:

4.00

Description:

Contrary to a popular perception that information, communication and entertainment technologies are clean, ecologically benign and paperless, the reality of an increasingly digital life is that our fascination with the next best thing in mobile phones, video game consoles, personal computers, digital cameras, tablets, etc., has devastating impacts on our environment. These media devices are manufactured using toxic ingredients in poisonous working condition, require an abundance of energy to operate, and create hazardous waste when disposed. Media technology companies and the advertising industry that markets their wares have successfully persuaded consumers to accept rapid obsolescence and to highly anticipate the latest upgrade. But some consumers, electronics manufacturers, policy makers, and environmental groups are working to change the culture of consumption in favor of sustainable media practices that lessen the environmental footprint of the digital devices we use everyday. The purpose of this course is to understand the problem of unsustainable media, and the possible solutions for a sustainable media system.

• SF-1129 Beacon Hill: Fact, Fiction, and Fantasy

Credits:

4.00

Description:

The course will explore the physical geography, history, and image in literature, film, and pop culture of Suffolk University's Beacon Hill neighborhood. The purpose and objective of the course is to provide students with a deep knowledge, understanding, and appreciation of Beacon Hill through examination of written and visual sources, and feet-on and eyes-on experience of the public parts of the Hill.

Type:

Local Engagement Experience

- **SF-1133 Problems and Solutions in Early American History**

Credits:

4.00

Description:

This course will examine four major problems in the early American republic: forming a government; bridging vast distances on the American continent; slavery; international relations. We will explore the various proposed solutions to these problems. Some of the solutions worked well, others were more disastrous than the initial problem. We will read primary documents pertaining to these issues, and try to imagine how men and women considering the problems might have responded to them. What solutions could be proposed? What solutions would work? What were the political, economic, or social difficulties generated by the problem and by the proposed solutions? In considering the problems, we will also learn how to use the various archives close at hand: the Sawyer Library, the Boston Public Library, the Massachusetts Historical Society, and the Massachusetts State Archives. Students will also post their findings on a class blog, and present their work to one another in class.

- **SF-1134 The Meaning of Life**

Credits:

4.00

Description:

What do we live for? Which beliefs, values, and experiences sustain meaningful, fulfilling existence? Are we authors of our destinies or powerless pawns in an unfathomable cosmic game? Does death render all our efforts superfluous? This award-winning course offers a cross-cultural, interdisciplinary exploration of these questions through philosophical and religious texts, art, fiction, autobiography, and psychological studies. The course opens with the Old Testament's book of Ecclesiastes, followed by three units: 1) A Life Worth Living: Humanity's Ideals focuses on the ancient and modern visions of human flourishing; 2) Threats to Meaning: Humanity's Discontents, discusses the disillusionments leading to the loss of meaning; and 3) Recovery of Meaning: Crises and Hopes, explores the post-crisis possibilities of self-discovery and growth. Please visit <http://meaningoflife.cherkasova.org/>

- **SF-1135 Women Warriors: Stories of Captivity, Conversion, and Confession**

Credits:

4.00

Description:

Since the beginning of time, women have been doing battle to themselves, while men have gone to battle against others. Whether it is through converting to Christ, yielding to captors in order to survive, or carrying a baby, this course introduces students to the many ways in which, whatever battles they

face, women are warriors; they survive. Utilizing an array of captivity, conversion, and confession narratives by women, and pairing them across the centuries, students will make connections and draw conclusions between early-and mid-19th-century-American and contemporary women. Students will connect, for example, the trials of the 17th-century Puritan captive, Mary Rowlandson, and contemporary hostage, Elizabeth Smart, to explore how women (no matter how different they seem) draw upon unique inner resources to survive.

• SF-1141 Classical Civilizations: Pathways to Wisdom

Credits:

4.00

Description:

How is it that the knowledge, intelligence, wisdom and values of the Greeks and Romans still educate and edify the world by providing venues towards leading fulfilling and dignified lives? The guiding principles of their respective civilizations rested upon eight pillars: - Humanism: It was recognized that humans have the potential to master their world and live life to the fullest. -The Pursuit of Excellence: To imagine the highest good and strive to attain it. - Self Knowledge: It is imperative to know oneself before seeking to know the world. - Rationalism: Always question, reason and discern truth from falsehood and never consider any matter superficially. - Restless Curiosity: Often the resolution of one issue leads to the revelations of others mysteries and pursuits which compels further investigation. The wise individual makes this a lifelong endeavor. -Love of Freedom: As long as one brings no harm to others, one must be free to live and discover as much as possible. - Individualism: All are unique and, therefore, must recognize individual strengths and identity. -The Practice of Moderation: The prudence of avoiding extremes in personal and social conduct. In this course, students will read two (brief) texts on the Greek and Roman contributions to the world and then will proceed with specific readings which illuminate the eight principles above for achieving the good life.

• SF-1143 In the First-Person: Storytelling in the 21st Century

Credits:

4.00

Description:

This section of the Seminar for Freshmen will consider the forms, venues, and impacts of narrative nonfiction in contemporary culture. From the exploding popularity of personal essays in the digital age to the living, evolving essays we create on social media, we are constantly narrating and archiving our lives, shaping their content for specific audiences. In doing so, we shape what our experiences mean and represent. In order to analyze the power of narrative nonfiction, we will look at a variety of multimodal texts: essays, podcasts, Instagram and Twitter feeds, stand-up comedy, and storytelling slams, as well historical texts such as the essays of Michel de Montaigne and historical artifacts at the National Archives in Boston. We will also write our own narrative nonfiction, and adapt our first-person stories for listening and viewing audiences, such as the MassMouth story slam and podcasts like This American Life. Additionally, we will practice narrative nonfiction for professional audiences, using

storytelling as a way to showcase personal strengths to employers, internship coordinators, and the like.

- **SF-1144 Native Americans: Walking in Two Worlds?**

Credits:

4.00

Description:

Native Americans are often described as walking in two worlds, as they attempt to navigate the process of maintaining their tribal identity and heritage while living in mainstream America. In recent years there has been a shift towards tradition and heritage, and a rejection of Western values and norms in both the US and Canada. In this course we will look at how Native people live in the US and Canada today, and examine the extent to which they are either trying to walk in two worlds or perhaps rejecting the two worlds model. To help us answer this question, we will read about reservation life, the Idle No More Movement, Indigenous History, and current events. We will also watch videos and explore indigenous culture.

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

- **SF-1146 Fido the Friendly Wolf: A Natural History of Dogs**

Credits:

4.00

Description:

This course explores the evolution of dogs from wolves and the ways in which dogs have adapted to their niche in human society. The ecology, behavior, genetics, and adaptations of dogs will be explored in relation to both their wolf ancestry and artificial selection by humans. The course includes 2 mandatory field trips to a wolf sanctuary and an animal shelter.

- **SF-1147 Global (In) Security: From ISIS to Ebola**

Credits:

4.00

Description:

This course reviews the principal features of global and national security as it is currently practiced by tracing the evolution of theories, policies and circumstances whereby current international security is developed. Students will evaluate the nature and origins of war, arms proliferation, military instability, terrorism, genocide, health threats and natural resources depletion.

- **SF-1148 Brave New Worlds**

Credits:

4.00

Description:

Explores themes of adventure, self-discovery, exile, and culture shock in classic and contemporary travel writing (including fiction, poetry, and non-fiction) as well as film. Students will experiment with creative writing of their own, develop theories of cosmopolitan world citizenship, travel through the city of Boston on field trips, and team up to learn about different countries in Suffolk's global network of study abroad programs.

- **SF-1150 Religion in Contemporary Society**

Credits:

4.00

Description:

This course is design to provide students with an overview of the social settings and cultural meanings of religion in the contemporary world. Topics that will be covered in reading and discussions include the rise of religious fundamentalism, religion and violence, women's and men's religious experiences, new religions, and portrayals of religion in popular films. In addition to the readings, students will observe and experience religious expressions and activities through fieldwork assignments. The emphasis on films and fieldwork reflects my belief that religion is made up of lived experiences of actual individuals and communities. In order to understand religion in contemporary society we will make every effort to see (in person or in film) a wide range of religious activities. The films we will see include some of the following: Leap of Faith, Devil's Playground, Kadosh, Women of Hizballah, Singing Stream, A Still Small Voice.

- **SF-1151 Reproduction and Society**

Credits:

4.00

Description:

This course explores relationships between reproductive health and rights both nationally and internationally. Many of our topics fit into two broad areas: conflicts over the control of childbearing (sterilization abuse, birth control, and abortion) and conflicts over who deserves to be a mother, especially when the mothers in question face social stigma and lack political power. Other topics include safe birth and maternal mortality, breastfeeding, infertility and reproductive technology. We also examine the politics of women's sexual and reproductive autonomy, including the policies that shape women's choices to prevent, achieve, abort, or carry to term a pregnancy. Throughout, we are guided by the following questions: Why is reproduction an important site through which to understand society? How do statuses such as race, class, gender, sexuality and ability influence people's reproductive possibilities? What is the role of the state in shaping these experiences? How have communities supported or resisted efforts at reproductive control? Why is reproductive justice central to these answers?

- **SF-1152 The Idea of America: Past, Present, Future**

Credits:

4.00

Description:

A systematic exploration of thinking of and about America, from the founding of the republic to American issues and traditions of thought that reflect upon the founding principles and the unfolding American experiment. The Declaration of Independence and the Constitution will be studied with an eye to their philosophical content and sources. The course will also examine works of philosophers and other thinkers who address conflicts over the meaning of founding principles in the course of the nation's history, from the struggle over slavery to America's contemporary role in the world. Because this course intends to apply theoretical understanding to real life, students will be expected to read contemporary journalism on a regular basis and assess the controversies of today in the light of the nation's philosophical and historical currents.

- **SF-1153 Law, Disease, and Public Health**

Credits:

4.00

Description:

This course is about public health law, which is the study of the legal powers and duties of the various systems of government in the United States (federal, state, and local) in collaboration with their partners (e.g., health care, business, the community, the media, and academe), to ensure the conditions for people to be healthy (to identify, prevent, and ameliorate risks to health in the

population), and of the limitations on the power of these systems of government to constrain for the common good the autonomy, privacy, liberty, proprietary, and other legally protected interests of individuals. The prime objective of public health law is to pursue the highest possible level of physical and mental health in the population, consistent with the values of social justice. The course will focus especially on public health law in the area of epidemic disease. Case studies will be made of the Great Influenza of 1918 and the origins and spread of the Ebola virus, culminating in an examination of outbreaks of Ebola in the United States.

• SF-1154 Introduction to Visual Studies

Credits:

4.00

Description:

This seminar provides an introduction to Visual Studies, a relatively new interdisciplinary field that examines how images communicate and the roles that they play in society. Students will apply the concepts and techniques of Visual Studies to analyze sites and signs around Boston, such as advertisements, street signs, fashions, newspaper photographs, buildings, and public spaces. Class projects will increase students' awareness of their visual environment and their ability to critically analyze the visual rhetoric that surrounds us and is often used to manipulate us.

Type:

Local Engagement Experience

• SF-1155 The Boston Olympics

Credits:

4.00

Description:

This class will teach students about the key role that sporting events can play in building a city, building its brand and the politics surrounding the process of these things occurring. Topics may include: urban development in general and the transformation of the industrial to the post-industrial Boston; the way in which cities use events like the Olympics to build their place brands; the way an effort like the Olympics can be used to encourage large scale public investment in longer term infrastructure projects that otherwise might not be justifiable; and the way government works with interest and community groups to try to shape public policy.

• SF-1156 Thinking About the Insanity Defense

Credits:

4.00

Description:

This course examines sixteen case examples providing a clear and compelling introduction to one of the most important topics in the relation between public policy and law. This course addresses: the history of the insanity defense; the effects of different standards for determining insanity; the arguments for its retention; abolition, and revision; media and other responses to it; and the controversies around pre and post conviction commitment. The case examples illustrates a variety of outcomes and include individuals who were found not guilty by reason of insanity; found guilty even though mentally ill; and not charged because of mental illness.

• SF-1157 Germany in Film and History, 1945-2015

Credits:

4.00

Description:

Since 1945, Germany has had a lot of history to reckon with- and 21st century Germany history through film, newsreels and other archival footage, radio and TV shows, war memorials and museums built since 1945, novels, published diaries, and memoirs. We will also read recent historical scholarship to put these cultural texts in context. Topics include the representation, in film and other texts; of: post-war rebuilding, the German Economic Miracle; the building of the Berlin Wall; radical politics of the 1960s and 1970s; coming to terms since 1945 with Germany's Nazi past and the Holocaust; coming to terms since 1990 with the Stasi and East German past; Ostalgie (nostalgia in the 21st century for some aspects of East German socialism); the multicultural society that is Germany today, with new Turkish, Greek, Russian, Arab, and even Israeli communities.

• SF-1158 Global Climate Change

Credits:

4.00

Description:

Conversation about the weather is considered to be the universal icebreaker. Yesterday's sweltering heat, the storm predicted for this weekend, even long-term climate shifts find their way in our daily conversation. Today, however, such casual conversations have an edge to them, because we are realizing that humans play a role in determining the climate shift. In fact, understanding the human fingerprint in the Arctic tundra melting, or a devastating hurricane, has gone well-beyond small talk to become one of the most important challenges our society faces today, and on that is wedded to geopolitics. To meaningfully participate in any dialogue that addresses this challenge people have to be aware of certain key ideas of Physics and Planetary Science. The aim of this course is to provide you with some of the essential facts and pieces of science underlying such questions. This course will enable you to grasp many of the issues that dominate today's political discourse and to develop an informed opinion (your, not our!) for which you can rationally argue.

- **SF-1160 Individuals and Society in the Zombie Apocalypse**

Prerequisites:

CAS Freshmen Only

Credits:

4.00

Description:

The Walking Dead tells viewers that life in the zombie apocalypse requires people to fight the dead, fear the living. Sociologists want to know why we should fear the living. How do individuals come together and try to recreate society for themselves: either to build community or fight other groups? What role do morals and values have in a society? How does all of this determine life, death, and the struggles people must face? Questions like these will give our class a new view of The Walking Dead and can help us to learn more about the society that we live in where so far the dead have remained in the ground.

- **SF-1162 Space Missions: From Moon to Mars and Beyond**

Credits:

4.00

Description:

It is hard to believe that only 60 years ago, our only close-up view of a planetary body was that of Earth. We are truly living in the Golden Age of Space Exploration, when a new mission every few years brings us spectacular images from either a neighbor in the solar system or galaxies at the edge of the universe. This course will describe the dozen space missions that changed our view of the universe, ranging from our solar system to the most distant galaxies.

- **SF-1163 Spellbound! Witches, Wizards and Spirits In American Literature**

Credits:

4.00

- **SF-1164 Reinventing Europe: Beyond Brexit and Secular Stagnation**

Credits:

4.00

Description:

While newspaper headlines focus on the multiple problems Europe is facing today, the evolving adaptation of European nation states and the integration process receive less attention. Brexit and economic crises seem to be synonymous of Europe today, but facts such as the European Union accepting five new members in the coming five years or Europe being the most advanced environmental actor or the main international provider of official aid are often ignored by public opinion. This Seminar for Freshman examines the dynamic evolution of the integration process in Europe in the context of globalization. Three sections articulate the main debates and tensions in the interplay between national and supranational institutions and policies. The first part analyzes how eight European countries have forged their national preferences to delineate their level of immersion in the integration process; it later proceeds with the examination of the main historical events in the history of the integration process. The second part explores the functioning of the EU institutions in order to grasp the essence of the complex policy-making in the Europe of 28 members. The third and final section presents the analysis of the main areas of the EU policy making such as agriculture, monetary and economic issues, among others, and observes the main developments in the area of EU external relations.

- **SF-1165 History of Boston**

Credits:

4.00

- **SF-1166 Cinema-Monde: Global Challenges on Film**

Credits:

4.00

Description:

This course focuses on French-language films - with subtitles! - that address pressing social issues of the 20th and 21st centuries, such as hunger, female genital mutilation, immigration, racism, economic inequality, genocide, gender, sexuality, colonialism and post-colonialism.

- **SF-1167 Fantasy Fiction: Imaginary Worlds**

Credits:

4.00

- **SF-1168 The Real Thing: the Pursuit and Problems Of Authenticity**

Credits:

4.00

Description:

This course will focus on the concept of authenticity in American culture, from its origins in the early 19th century to the present. When the advertising gurus of Coca-Cola branded it as "The Real Thing," they were exploiting something powerful: the idea of something real, stripped of any falsity or illusion. Humans have always desired to know the world and others as they really are," but this desire is particularly strong in the modern world: witness the eagerness to discover one's true self," cut through the B.S., obtain the genuine article, and live authentically. In this course we will interrogate this pursuit of the Real Thing. In various ways, the texts we study both embrace authenticity as an ideal and also question its goodness, usefulness, or even its very possibility. We will thus confront a number of interrelated questions: Where does this desire for authenticity come from? What counts as authenticity," in life and in art? Is authenticity really a virtue to live by? How does it shape artistic and literary expression? Is there even such a thing as the real you This course will be divided into three units. In the first unit, "Counterfeiters and Self-Made Men," we will study how a commitment to authenticity arises in antebellum American literature and culture during a time of rapid national expansion and invention. Readings will include texts by Henry David Thoreau, Ralph Waldo Emerson, Herman Melville, and P.T. Barnum. In the second unit, "Authenticity and Contamination," we will consider two major ways in which authenticity becomes idealized around the turn of the 20th century: as an artistic ideal set against fears of mass cultural production, and as a cultural ideal set against fears of racial and cultural mixing. Readings will include texts by Ernest Hemingway, Nella Larsen, Jean Toomer, and William Carlos Williams. In Unit Three, "Buying and Selling Authenticity," we will examine how authenticity becomes commodified (

• SF-1169 Immortality: Real and Imagined

Credits:

4.00

Description:

Most of the world's religious traditions have as a part of their doctrines some notion of immortality, rendered both in scriptures as well as iconographically. What precisely is entailed by immortality and why does it constitute such a significant element of so many religious traditions? What can we learn about immortality by investigating various conceptions of the afterlife? Is immortality truly a desirable thing? These questions among others will be examined from the perspectives of philosophy, religion, psychology, anthropology, and biology. Besides being cross-disciplinary, the course will be multi-media in nature. In addition to reading philosophical and religious texts concerning the nature of immortality, students will study various accounts of immortality and the afterlife, examine how the afterlife has been dealt with in (visual) art, literature, and film, and investigate current research into life prolongation (biomedical gerontology).

• SF-1170 From Philia to Facebook: the Meaning of Friendship

Credits:

4.00

Description:

The thematic focus of this seminar will be friendship. Friendship is one of the most important of human relationships; one that every student in this seminar has already participated in for many years. It shapes who we are and helps determine who we may become. And while it is a universal phenomenon, it has been practiced quite differently at various times and places in human history. And while we all have an intimate, personal and practical knowledge of friendship through our own experiences, sometimes things that are so close and so obvious to us can be hard to see. Over the course of the semester we will inquire into friendship from many different angles, trying to gain both a broader and a deeper understanding than our own individual experience allows. We will look at friendship first through the lens of philosophy, particularly through the foundational text of Aristotle, *The Nicomachean Ethics*. We will look at other views of friendship from the ancient world, starting in the past to help us see that friendship has not always been thought of the way we think of it now. After this initial foundation is laid, we will examine other writers and thinkers and take up additional topics like friendship in different cultures, friendship and gender, friendship in and through the arts and include an examination of friendship through the lenses of many different academic disciplines to see how other systematic thinkers conceive of friendship. All along we will be comparing and contrasting with our own personal experiences and considering what modern technology, such as social networking sites, has done to influence friendship, in the way we practice it and the way we conceive it. It is the aim of this class that students not just study different academic points of view, but that they take up the questions and challenges that these thinkers present to them and fully engage with them on a meaningful personal level.

- **SF-1171 Living on and Beyond the Hyphen/Latino Writers in the USA**

Credits:

4.00

Description:

Hyphenated-Americans of Latino origin come from many places and backgrounds. Often perceived as a divide, an either/or that separates and distinguishes one ethnic group from another, the hyphen can also be viewed as a link that connects, integrates and facilitates the formation of new cultural spaces. Through films and written narratives by and about U.S.A. Latino(a)(x)-Americans, students will examine how individuals who live on the threshold between two languages and cultures embrace the challenge of preserving their own identity and moving beyond stereotypes. Each of the Latino/a/x authors that we will read in this course will describe his/her own experiences living in the U.S.A. By examining their views through our own filtered lens we shall try to answer questions like the following: 1. What role does language have in our definition/understanding of cultural identity? 2. How do individuals move beyond the hyphen and stop seeing themselves as hybrids? 3. How can an individual who does not belong to a marginalized group (i.e. one considered less powerful and secondary) understand and empathize with those who do? 4. How does globalization affect the dichotomies that arise in bi-cultural and multi-cultural communities?

- **SF-1172 The United States Mexican Border**

Credits:

4.00

Description:

One hundred and sixty nine years have passed since the Treaty of Guadalupe Hidalgo was signed. It is only fitting to analyze the profound changes that the gain/loss of these territories caused for the citizens of both sides of the border. This course will explore the literature, culture, and history of the United States-Mexican Border and the most pressing problems pertaining to the region. Emphasis will be on contemporary border theater and film. The works of Salcedo, Galindo, Lopez and others will be studied as well as contemporary films and documentaries such as *Alambrista*, *Senorita Extraviada*, *The Gatekeeper*, *Sin Nombre*, *Wetback: the Undocumented Documentary*, *Victoria para Chino*, *Which Way Home*, and much more. There are no prerequisites for this course. Though the course is conducted in English, parallel readings in Spanish will be made available to those who wish to read and/or compare the original texts.

Students in the CAS Honors Program should choose one Seminar for Freshmen course from those listed below:

- **SF-H101 Fixing the World- Energy and Water: The Science of Solutions**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

Two of the most daunting challenges the world faces (or will face) is how to provide for both its growing energy needs and potable drinking water. Regular news events include climate change, droughts, flooding, and petroleum struggles. Human nature often requires a severe crisis before it responds. This course will investigate the historical science driving the use of energy since the Industrial Revolution to convert energy resources into work, including the steam engine, the electric motor, and the internal combustion engine. It will also consider alternative energy options to fossil fuels, such as solar, wind, geothermal, and ocean power. Along the way we will consider the evidence for Global Warming and Climate Change. We will look into human nature, simple life styles, conspiracy theories, and the influence of those in power to shape human opinion. We will also consider how our water supply is provided and where it goes after being used. What options do developing countries or drought racked areas have to remedy their water needs? Although the course pursues a scientific understanding of these issues, the mathematics used will be gentle, and a larger emphasis will be placed on the intuitive appreciation of these concerns.

- **SF-H116 Enlightened Insanity**

Prerequisites:

CAS Honors students only.

Credits:

4.00

Description:

Rain or shine, the great 18th century Enlightenment philosophers would meet at the famous cafes of Paris to discuss their ideas, and to observe and criticize society. From these informal debates emerged ideas that are at the core of our modern understanding of the nature of society, marginality, human nature, civil rights, the essence of creativity and genius. Come join us in the quest to understand, define, observe, and analyze the key ideas and concepts of these great thinkers, such as Rousseau, Diderot, and Voltaire, still so relevant in our time. We will read key works of these creative thinkers and philosophers. We will enrich our experience and understanding through the use of film, theatre performances, museum visits, as well as the occasional cafe debate.

Type:

Honors

- **SF-H126 The Boston Theatre Scene: The Inside Experience**

Credits:

4.00

Description:

Using the current Boston theatre season as its syllabus, this writing- and analysis-intensive course will explore several plays in production at some of Boston's many professional theatres. We will study the script of four to five plays before attending performances of those works. Students will gain insights on the world of theatre through backstage tours and conversations with theatre professionals such as producers, directors, actors, designers, playwrights, and critics. Students must be available for evening (usually Wednesday) performances. A fee for student-rate tickets will be assessed.

Type:

Honors

- **SF-H178 Sacred Hoops & Sneaker Pimps: Understanding the American Hoop Dream**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

This course is about the basketball hoop dream played out at the high school and college levels. We will study a wide variety of materials - novels, films, websites, reference works - to understand both the construction, and destruction, of the hoop dream in such diverse places as New York City, Seattle, rural Indiana, suburban Georgia, and the Wind River Reservation in Wyoming. Issues of race and culture will serve as guiding themes as we develop critical theory explaining why the hoop dream has persisted, and adapted, over time, to fit the needs of its believers and supporters.

Type:

Honors

- **SF-H182 Heroes, Antiheroes and Outsiders: Reading the Graphic Novel**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

How is it that comics", a genre often viewed as entertainment for children and adolescents, has become one of the most exciting forms of narrative and visual art? To answer this question, this seminar will examine a range of graphic novels, from those that celebrate their origins in superhero comics, such as Alan Moore's *Watchmen*, to those that treat subjects not usually considered proper to the comics genre, such as Art Spiegelman's *Maus*, about the Holocaust, and Alison Bechdel's *Fun Home*, about the complexities of sexual identity. As we read these works, we will look at how the combination of words and still images makes the graphic novel a unique storytelling form, as well as how artists and writers push the envelope to create new styles and challenge our expectations. In addition to class discussions and writing assignments, we will take a field trip to the Museum of Fine Arts and create a collaborative group graphic novel step-by-step over the course of the semester (all abilities welcome).

Type:

Honors

- **SF-H197 Sustainability, Energy, and Technology At Suffolk University**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

In this project and team-based course, students study a sustainability problem at Suffolk University and spend the semester developing proposals to address the problem. At the end of the course students will present their proposals to Suffolk University's sustainability committee, and will exhibit their websites and visual aids in the Donahue lobby to educate the Suffolk community about sustainability. If their proposals are well-researched and well-communicated, students can see their ideas actualized while they are still undergraduates.

- **SF-H1134 The Meaning of Life**

Prerequisites:

CAS honors students only.

Credits:

4.00

Description:

What do we live for? Which beliefs, values, and experiences sustain meaningful, fulfilling existence? Are we authors of our destinies or powerless pawns in an unfathomable cosmic game? Does death render all our efforts superfluous? This award-winning course offers a cross-cultural, interdisciplinary exploration of these questions through philosophical and religious texts, art, fiction, autobiography, and psychological studies. The course opens with the Old Testament's book of Ecclesiastes, followed by three units: 1) A Life Worth Living: Humanity's Ideals focuses on the ancient and modern visions of human flourishing; 2) Threats to Meaning: Humanity's Discontents, discusses the disillusionments leading to the loss of meaning; and 3) Recovery of Meaning: Crises and Hopes, explores the post-crisis possibilities of self-discovery and growth. Please visit <http://meaningoflife.cherkasova.org/>

Type:

Honors

- **SF-H1135 Women Warriors: Stories of Captivity, Conversion, and Confession**

Credits:

4.00

Description:

Since the beginning of time, women have been doing battle to themselves, while men have gone to battle against others. Whether it is through converting to Christ, yielding to captors in order to survive, or carrying a baby, this course introduces students to the many ways in which, whatever battles they face, women are warriors; they survive. Utilizing an array of captivity, conversion, and confession narratives by women, and pairing them across the centuries, students will make connections and draw conclusions between early-and mid-19th-century-American and contemporary women. Students will connect, for example, the trials of the 17th-century Puritan captive, Mary Rowlandson, and contemporary hostage, Elizabeth Smart, to explore how women (no matter how different they seem) draw upon unique inner resources to survive.

Type:

Honors

- **SF-H1146 Fido the Friendly Wolf: A Natural History of Dogs**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

This course explores the evolution of dogs from wolves and the ways in which dogs have adapted to their niche in human society. The ecology, behavior, genetics, and adaptations of dogs will be explored in relation to both their wolf ancestry and artificial selection by humans. The course includes 2 mandatory field trips to a wolf sanctuary and an animal shelter.

Type:

Honors

- **SF-H1148 Brave New Worlds**

Prerequisites:

Restricted to CAS Honors students

Credits:

4.00

Description:

Explores themes of adventure, self-discovery, exile, and culture shock in classic and contemporary travel writing (including fiction, poetry, and non-fiction) as well as film. Students will experiment with creative writing of their own, develop theories of cosmopolitan world citizenship, travel through the city of Boston on field trips, and team up to learn about different countries in Suffolk's global network of study abroad programs.

Type:

Honors

• SF-H1152 The Idea of America: Past, Present, Future

Credits:

4.00

Description:

A systematic exploration of thinking of and about America, from the founding of the republic to American issues and traditions of thought that reflect upon the founding principles and the unfolding American experiment. The Declaration of Independence and the Constitution will be studied with an eye to their philosophical content and sources. The course will also examine works of philosophers and other thinkers who address conflicts over the meaning of founding principles in the course of the nation's history, from the struggle over slavery to America's contemporary role in the world. Because this course intends to apply theoretical understanding to real life, students will be expected to read contemporary journalism on a regular basis and assess the controversies of today in the light of the nation's philosophical and historical currents.

Type:

Honors

• SF-H1161 The Playwright and the Stage

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

This writing and script analysis intensive course will explore plays across a range periods and styles. The scripts of five plays will be studied and we will attend performances of two of those works at professional theatres in Boston. Other activities will range from a backstage tour to conversations with theatre professionals such as producers, directors, actors, designers, playwrights and critics, in order to lift the script off the page and provide a living experience of theatre. Requires students to be

available for evening (usually Wednesday) performances. A fee for tickets at student rates will be assessed.

First-Year Writing: 2 courses, 8 credits

- WRI-101 First Year Writing I

Credits:

4.00

Description:

Study and practice of the writing process and revision in terms of expository writing modes for an academic audience.

• WRI-102 First Year Writing II

Prerequisites:

WRI-101 or ENG-099 with at least a B and ENG-P099 with a P or WRI-H103

Credits:

4.00

Description:

Study and practice of argumentative and research writing through further work with writing process and revision and the critical reading of a variety of texts.

A student may be assigned to other writing courses or may be invited to take WRI-H103. Students required to complete ENG-099 may be allowed to waive WRI-101 with a grade of "B" or better and the approval of the English department. Students who are invited to complete WRI-H103 and earn a "B" or better satisfy the two Writing Requirements. Waiving a course does not earn credits.

• WRI-H103 Advanced First Year Writing

Prerequisites:

By Invitation Only.

Credits:

4.00

Description:

This course is by invitation only and reserved for incoming Suffolk students with high admission scores. Advanced study and practice of writing process, revision, and research, based on close readings of a variety of texts. Fall semester only.

Creativity & Innovation: 1 course, 3 credits

Choose one Creativity & Innovation course from those listed below:

- **ADF-S171 CI: Integrated Studio 1**

Prerequisites:

Non-majors interesting in taking art and design courses for elective credit should refer to offerings under the ART course listings.

Credits:

3.00

Description:

This cross-disciplinary course will integrate the ideas and practices of two-dimensional design, color and drawing emphasis will be placed on understanding the creative process, exploring concepts and developing research skills. Students will undertake individual and collaborative projects in three spaces; the studio classroom, the digital world and the city at large.

Type:

Creativity and Innovation, Arts Admin Minor Elective

• ADF-S172 CI: Integrated Studio II**Prerequisites:**

ADF S101; Non-majors interesting in taking art and design courses for elective credit should refer to offerings under the ART course listings.

Credits:

3.00

Description:

This course builds on the Integrated Studio 1 experience: synthesizing fundamental visual ideas. IS 2 investigates the construction, documentation, and transformation of volumetric form, environmental space, and time. Projects will explore narrative strategies and the creation of immersive experiences. Students will develop critical and analytical skills while employing a range of traditional and digital media-including video/sound capture and editing-as they explore the creative boundaries of the classroom studio, the city of Boston, and virtual space.

Type:

Creativity and Innovation

• CI-000 CI Place Holder**Credits:**

0.00

Description:

Place holder for rooming purposes.

• CI-101 Process and Epiphany

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Despite its mystical connotations, creative epiphany is the result of a long engagement with the creative process that results in a surprising and unpredictable understanding of a concept or the solution to a problem. In the way that the discoveries of science are guided by the scientific method, the path to creative innovation is through a directed creative process. All creative innovators follow such a directed creative process, whether they are industrial designers or fine artists, performers or inventors, architects or entrepreneurs. This course explores both historical examples of individuals whose creative innovation changed the world, as well as hands-on collaborative, practical problem solving employing the creative process.

Type:

Creativity and Innovation

• CI-H101 Honors- Process and Epiphany

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Creativity and Innovation, Honors

• CI-102 The End of Global Poverty

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course is designed to demystify the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking. More than one-third of our global population lives in poverty, earning less than two dollars a day. Governments, businesses, social enterprises, and charitable organizations have tried to solve the global poverty issue with mixed results. What is the solution? Is entrepreneurship the solution, part of the solution, or has no impact whatsoever? In this course, you will gain an understanding of the power of entrepreneurship (in the context of creativity and innovation), the definition and depth of global poverty (in the context of constraints, such as human, financial and physical resources embedded in local, regional, national and global cultures), and successes and failures of past initiatives to reduce poverty. This is not a course about politics or business, but rather finding a solution to a problem that has eluded mankind since the beginning of time.

Type:

Creativity and Innovation

• CI-H102 The End of Global Poverty

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office. Honors students only

• CI-103 Making Inventions: Sticking Your Neck Out

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course examines cutting edge technologies, the science behind them, and their practical application and follow-up success or failure. It also provides the students a chance to consider the relevance of identified needed inventions from the 1950s, and whether those projections were correct. The history behind some remarkable inventions will be presented. Finally, working in small teams, students will brainstorm to identify something useful to invent and determine several approaches to implementing it.

Type:

Creativity and Innovation

• CI-104 Historic Mentors: Biographies of the Creative and Innovative

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course introduces students to creative and innovative practices as a disciplined approach to problem-solving. Students are presented with diverse individuals and environments, thoughts and actions, challenges and opportunities, approaches and alternatives, successes and failures, and ethical behavior--all within the context of historical biographies of inventors, entrepreneurs, artists, musicians, writers, politicians, leaders- nationally and globally. Mentoring is becoming a lost art form. However, it is crucial for passing down the best of our civilization. This course offers a vicarious mentoring that enables students to critically learn from and assess the experience of others in a vast array of contexts. Thus, students are presented with a cross-section of role models for creative, innovative and ethical success.

Type:

Creativity and Innovation

• CI-106 Failing Successfully**Prerequisites:**

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course is designed to demystify the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking. Did you know Netscape was the internet browser? What about MySpace, arguably the Facebook of the last decade? What led Apple from being innovative pioneers of the 70's to the verge of extinction in the 80's to the technological giant they are today? Technologies come and go, but what leads to organizations lasting more than 100 years such as IBM, General Electric, etc.? What role does failure play in successful innovation, decision-making, and business viability? In this course, you will learn about innovation that may have been successful and well-executed. You will also learn about innovation that was a viable business opportunity, but poorly executed: one phase of failure. In addition, you will learn about innovation that had no real market viability, but was launched anyway: another phase of failure. Can failure lead to success? If so, how?

Type:

Creativity and Innovation

• CI-H106 Failing Successfully

Prerequisites:

What role does failure play in successful innovation, decision-making, and business viability? In this course, you will learn about innovation that may have been successful and well-executed. You will also learn about innovation that was a viable business opportunity, but poorly executed: one phase of failure. In addition, you will learn about innovation that had no real market viability, but was launched anyway: another phase of failure. Can failure lead to success? If so, how?

- **CI-107 Going Up: Skyscraper Design in Emerging Economies**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The human population is expected to be between 8.5 and 9 billion persons by the mid-21st century. The majority of those individuals will be living in urban communities. With large populations, high real estate costs, and limited land areas, the only way to construct in urban environments is to go up! In this course, students will have an opportunity to look at traditional and novel skyscraper designs, to consider the cultural and economic significance of such structures, and to use their imagination to develop a conceptual design of a skyscraper.

Type:

Creativity and Innovation

- **CI-108 Designing the Next Best Thing**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Demystifies the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking.

Term:

Offered Both Fall and Spring

Type:

Creativity and Innovation

- **CI-109 Virtual Globe Trekking: an Alternate View of the World**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will examine creativity and innovation through the lens of place. Modern geography is an all-encompassing discipline that seeks to understand the earth and all of its human and natural complexities - not merely where objects are, but how they have changed and come to be. The world is filled with ideas and perspectives. By changing your location, new perspectives emerge. This course will focus on the creative process to understand that each person creates in their own way. The students will test many methods to draw forth creative thought and seek to identify their own best method for calling on their own inner genius. Often this will involve failure and mixed results, yet this is where the students will learn their strengths and weaknesses.

Type:

Creativity and Innovation

• CI-110 The Entrepreneur's Cocktail**Prerequisites:**

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

How do you and your story drive business? This course takes an innovative look at human creativity and entrepreneurship. As an entrepreneur needs perseverance and high motivation, we will explore the importance of values, risk taking, problem solving, and the discovery of the market opportunities. In order for you to be creative and essentially create successful ventures, you will discover the nuances between the three factors and explore them further through interactive discussion and debate as well as collaborative group work. You will be encouraged to think in non-conforming ways and apply new concepts and develop your own personal operating principles.

Type:

Creativity and Innovation

• CI-111 The Future of Boston**Prerequisites:**

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course introduces students to creative and innovative thinking based in the field of communication. Students will work in teams to wrestle with the challenges Boston will face in the future and propose feasible strategies to meet them.

Type:

Creativity and Innovation

• CI-112 Creating Problems: a New Solution for Sustainability

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

As the majority of the world population now lives in cities, for the first time in human history, issues of urban sustainability have become more complex and more important than ever before. Presented with case studies of urban efforts to gain a sustainability foothold, students will utilize ideation, critical thinking, and strategic decision making to both identify root problems and to present solutions. This course will lean heavily on ideation processes, teamwork, and logical methods of analysis to pursue actionable solutions for significant problems. The methods of problem identification and solution analysis learned in this class will be readily adaptable to many complex problems, helping the students to make informed and decisive determinations in their careers.

Type:

Creativity and Innovation

• CI-113 Revising Reality

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Reality and perception have been debated and discussed for millennia. Humans see and experience their world in different ways. How do humans determine what is true and good and what advancements are necessary? In this course, students will creatively explore these big questions and revisit knowledge using new and sometimes divergent perspectives. Students will participate in dirty and courageous learning by crafting products, creating visual projects, and coming into original thought via trial and error. Students will also develop their analytical and critical thinking skills, while learning to communicate effectively and honestly.

Type:

Creativity and Innovation

• CI-114 Creating the Dream Team

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Every successful venture today is based on effective teamwork. Unlike a typical lecture format, Creating the Dream Team is a course that utilizes experiential group learning to provide students with pivotal team-building skills. These essential skills are vital for everyone's future success in the business world. As team players, students are challenged to think creatively. A collaborative problem-solving process is used to analyze real life business situations. Teamwork involves research, data collection and information analysis to develop creative solutions to typical business problems. Teams will utilize multi-media tools to present their innovative ideas. Classmates will provide peer feedback and review. Through iterations, all students will assume roles as project leaders, keynote speakers and collaborators on a series of Team Challenges. Upon successful completion of this course, all students will have formed working dream teams. As reinforcement and final evaluation, Dream Teams are required to create a multi-media Capstone Event as a course performance measure. This capstone presentation will showcase all of their newly acquired dream team-player skills.

Type:

Creativity and Innovation

• CI-115 Poetry Out Loud

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Students will develop a deep understanding of two seminal books of 20th century poetry and other key 20th century poems as they plan and execute small-group, end of semester reading performances. Students will write creative response poems to increase their understanding of the texts, and through cooperative decision making strategize effective ways to present their own poems and poems by

Bishop or Frost. The class format will foster direct spoken engagement with matters of sound, rhythm, tone, and meaning. Final reading aloud performances will be recorded and added to the Suffolk University Poetry Center Archive.

Type:

Creativity and Innovation

• CI-117 Writing for Stage and Screen

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will engage students in the process of script writing. Working in groups of four or five they will craft adaptations of stories, create original scenes, or review sketches. By the end of the semester they will produce a complete script. Each alternating week, one group will serve as the executive committee that will approve the final draft of the script of the week. There will be exams based on the textual study of collaborative and adaptation techniques.

Type:

Creativity and Innovation

• CI-119 Theatre at Work

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Theatre at Work is an introduction to creative practice using live performance as a problem solving tool in an educational environment. Specifically, students will create a performance piece in response to an issue they have uncovered in collaboration with select groups of students in a host Boston Public School. There will be a special focus on normalizing risk-taking and the learning that comes from false starts and failed ideas. Students will be responsible for creating every aspect of their performance

testing its feasibility on a limited budget, ensuring that the content meets established criteria, and successfully implementing and evaluating their success both with their peers and their audience.

Type:

Creativity and Innovation,Local Engagement Experience

• CI-H119 Theatre at Work

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office. Honors students only.

• CI-121 Catastrophe Management: From 9/11 to the Boston Marathon Bombings

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will introduce students to the exciting world of emergency management from the perspective of scientists who are often utilized as experts during both small scale adverse events and

large scale catastrophes. Students will actively and creatively explore the psychological, economic, and medical dimensions of these events and participate in role play in the classroom and site visits. By the end of the course, students will have a keen appreciation of emergency planning and management on the local and national levels.

Type:

Creativity and Innovation

• CI-123 Comics & Co.

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Using visual narrative as the means of exploration, students will be led through a series of exercises that challenge their assumptions, broaden their perspectives, and excite their imagination. The relationship between critical, creative and inventive thinking will be the basis for individual and collaborative projects.

Type:

Creativity and Innovation

• CI-125 Boston's Creative History in Perspective

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Our collective social consciousness is formed by physical space; through a mixture of exploration, discovery, and making, students will delve into the city that surrounds them, developing a sense of ownership and engagement in Boston's public space. During the course of the semester, students will uncover the ways that art and architecture have shaped the souls of cities around the world, using Boston as a template. In a series of local field trips, students will explore Boston through its art and

architecture, focusing not only what is, but on what might have been -- designs that were ultimately unrealized. Through interview and visits with local artists and designers, students will also learn about the process of shaping public space, uncovering the myriad of ways that design decisions are political in nature. As a capstone to the course, students will create their own city plan -- identifying and researching a chosen social or physical challenge the city faces, then developing a proposal that would address their chosen issue. These design proposals will then be enacted using augmented reality. Like a layer of invisible ink, these projects will form a phantom city over the physical realities that surround us, displaying the dramatic potential of the imagination.

Type:

Creativity and Innovation

• CI-127 Visual Perspectives: Coastline, Symmetries and Illusions

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

How do you measure the length of a coastline? How much symmetry is possible? What is an impossible object? How did the Mayans measure proportions? In this course, students will delve into these and other questions with a visual theme. While some will be clear-cut, others will be open-ended and require some choices, estimates or assumptions to be made. Throughout, the emphasis will be on creative problem solving.

Type:

Creativity and Innovation

• CI-129 Elements of Attraction- Supply and Demand

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The intent of this course is for students to examine and effectively express in writing their ideas on creativity and to inspire undergraduate students to exceed their current levels of learning. Students will learn to meaningfully integrate course content into long term-retained useful skills through applied creative collaborations. This course is based on the idea that exposure and insight development will enable students to better visualize themselves in their desired fields and make informed choices within the variety of options available to them. The focus of the course will help students to assess their personal interests and strengths as they plan for their own educational and professional futures.

Type:

Creativity and Innovation

• CI-131 Off to the Future: Leadership Through Compromise

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Some past political issues were resolved with great success (the Compromise of 1820), and some resulted in great failures (the US Civil War). In this course, students will study noteworthy political dilemmas of the past, identify the major problem solvers and examine the art of compromise. These investigations will provide guidance and inspiration for students to develop innovative and creative solutions to present day political problems such as climate change, immigration, Social Security, income distribution, higher education affordability, and homelessness. Students will work in teams and propose creative and innovative solutions that will convince the affected interest groups favorably, represented by teams of other students in the class, and result in compromises solving tomorrow's problems today.

Type:

Creativity and Innovation

• CI-H133 Franklin and the American Experiment

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office. Honors students only.

Credits:

3.00

Description:

What made Benjamin Franklin such a creative force in American history? We will explore the many facets of Franklin's life (printer, writer, scientist, statesman) and learn about Benjamin Franklin's political and diplomatic ventures, and will recreate some of his scientific experiments.

Type:

Creativity and Innovation,Honors

- **CI-135 The Design of Everything**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will explore a selection of the genius personalities and their creative work in 5 distinct areas of human creative endeavor; art, science, nature, technology and the built environment. The course explores the underlying similarities in the process of their discovery, invention and creativity across the disciplines. Studying such names as Newton, Warhol, Hawking, Jobs, Gaudi and Banksy, students will uncover the process of design through research, analysis, synthesis, iteration and error. In class group projects will allow a hands-on opportunity to create.

Type:

Creativity and Innovation

- **CI-137 Re-write for Rights: Drafting a New US Constitution**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The American Constitution is an important document, framing the basis for our lives and the lives of our neighbors. Yet it is also a very old document, which may be seen as lacking when it is compared to newer constitutions from around the world, even places that we may regard as undeveloped. In this class we will study many constitutions and also talk to many people to craft a new constitution that reflects contemporary American society and its values.

Type:

Creativity and Innovation

• CI-H139 Creating, Promoting, and Participating in the Literary Arts

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office. CAS and SBS honors students or GPA of 3.5 or above only.

Credits:

3.00

Description:

With the launch of Boston's new Literary Cultural District, we have renewed cause to celebrate the history and industry of literature in our city. This course will immerse students in the world of literary culture and its many branches: writing, editing, reviewing, and publicity. Students will practice the art of creative writing, and learn how writers find publishing venues, how authors build platforms for their work, and how literature reaches the public through readings, social media, book trailers and other marketing campaigns, authors interviews, and reader reviews. Various industry professionals, authors, editors and publicists will speak to the class about the artistic and business opportunities, trends, and futures of literature and literary publishing. Students will apply their knowledge and interests to a variety of projects, including book reviews, author interviews, social media campaigns, literary events, and other collaborative projects. We will also work as a class to launch a new digital literary journal at Suffolk.

Type:

Creativity and Innovation, Honors

• CI-141 Science = Creativity

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course is focusing on the creative process by introducing students to creative practice as a disciplined approach to problem solving and innovation requiring research, persistence and grit. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original ways, embrace ambiguity and support divergent thinking and risk taking. The course will have an undertone based on science, but it is suitable for non-science majors too!

Type:

Creativity and Innovation

• CI-143 Dreams, Demons, and Dynamic Artists Creative Nature**Prerequisites:**

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

What motivates your creative nature? This course will explore converging themes in Art and Psychology in order to give students the tools they need to unblock their creative potential. Collaborative small team activities, assigned readings, large group discussions, and personal reflection exercises will provide an avenue for students to explore their own creative patterns and how they are influenced by, and perceived within, the world around them. Dreams, mental illness and psychosocial theories of self will also be widely discussed in order to give students context for this inter/intrapersonal exploration.

Type:

Creativity and Innovation

• CI-145 Living and Laughing**Prerequisites:**

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This is a course about laughing and living. While it sounds fun, it can also be complex, confusing, complicated, and convoluted. Laughter and humor are also very personal. The things that make you laugh are rooted in family, culture, and personality. We are going to spend the semester getting to know ourselves and each other in an attempt to understand more about why we enjoy what we enjoy.

Type:

Creativity and Innovation

- **CI-147 Seeing Double, Printmaking, the Art of Discovery, Experimentation and Process**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Always wanted to explore a creative side but never had the opportunity to take an art class? Here's your chance! Sync the power of icons/ images with ideas and making. We will use cellphone and printmaking technologies in a workshop style environment. Rather than a lecture based class, this class we will play, learn and build new Neurological pathways towards creative thinking. Come to every class excited to learn, make and discover. This course will give you the building blocks for innovative thinking beyond the classroom. Power is in the image. As in the way a dream can grip you, images carry incredible amount of influence and creative potential, when they are seen. Glimpses of these images circulate in media, movies, cell phones, and so on. Learn to develop your own images and understand the broad world of images of human culture.

Type:

Creativity and Innovation

- **CI-149 SL-Creative Writing and Literacy**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

In this course, students meet community needs by engaging in service-learning outside the classroom. This course will explore the value of creativity and play in developing reading and writing skills and the habits of lifelong learning, both in our own lives and in the lives of young people in Boston. In this course, we will work closely with the non-profit literacy organization 826 Boston, which works with students ages 6-18 on reading and writing skills through playful, creative workshops, as well as tutoring and other kinds of support. Students will learn about the work of 826 Boston by volunteering with the organization, and by the end of the semester you will conceive, plan, and run creative writing workshops of your own at 826 Boston.

Type:

Creativity and Innovation,Service Learning

• CI-H149 SL-Creative Writing and Literacy

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office. Honors students only.

Credits:

3.00

• CI-151 Finding Your Creative Voice

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Schools and workplaces are becoming increasingly demanding and competitive, relying on unique ideas to continue innovation. Where do fresh ideas come from? This class will provide students with the tools they need to find creativity within themselves, and set them apart in the competitive arena. Students will explore who they really are at their core, identify their innermost thoughts and feelings, and uncover their creative identity while having fun! They will also learn to communicate, or share their creative voice clearly and honestly.

Type:

Creativity and Innovation

- **CI-153 Branding and Visual Identity**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

A brand may be a product, service, an organization, or a person, and at the core of every brand is a visual identity. A brand's visual identity is its strategically planned and purposeful presentation of itself. It is manifest in the brand's name, logo, tagline (slogan), color palette and other sensory elements (visual, aural, olfactory and tactile) that identity that brand and make it unique. This course will focus on analyzing the success and failure of brand's visual identities as a way of teaching students how to brainstorm and develop a new visual identity from concept through execution. The focus in this course will be on applying creative thinking to create a cohesive and meaningful visual identity.

Type:

Creativity and Innovation

- **CI-155 Improvising for Everyone, Everywhere**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Improv Comedy has become the cornerstone training of movies and television for the past 20 years. More recently, Corporate America has begun to recognize the importance of the skills improv teaches - agreement, listening, moving forward as a group and out-of-the-box thinking. This course immerses students in improv theatre exercises to apply not for performance, but to shed light on how to collaborate with others. Students will be required to actively participate in exercises in class, experiencing the benefits and takeaways first-hand. Students will be able to connect these exercises with the theories of creativity presented in text books and use both to create a final presentation piece. By the end of the semester, students will understand how to recognize and foster creative thinking to solve problems leveraging the power of a group. Students will gain confidence with presenting new ideas and responding to other student's ideas, understanding how to create and maintain relationships as part of an ensemble that encourages and values ideas.

Type:

Creativity and Innovation

• CI-157 Mindful Journal**Prerequisites:**

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

To keep a journal is to make an investment, often long before we understand the value. A journal is a personal database of snapshots in time, good ideas and bad, observational doodles and unfiltered emotions. On any given page a journal may appear inconsequential but within the rigor of filling a whole notebook (and another, and another) an individual viewpoint emerges. This class will facilitate a student's ability to draw from his or her own lived experience and discover unique springboards into universal issues by making mindful connections. An entire lifetime of images, stories and details resides within each of our minds but the ability to explore that richness requires dedication to documentation. Mindful Journal is a process class fostering focus through mindfulness practices, content generation and meaning making.

Type:

Creativity and Innovation

• CI-159 Building a Better T

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

If any set of problems could use creative and innovative thinking, it's the myriad of problems facing the T. The Boston Globe is filled with stories about financial and organizational problems in the system, and you only have to spend a few minutes on the green line to feel the effects of those issues. Still, millions depend on it every day - it is the circulatory system of our city, and it is more than a way to get around: the T increases accessibility and functions as a democratizing force. That is, when it's running. In this class we will study the MBTA and other mass transit systems in order to propose creative solutions to the T's most pressing problems. We will read articles about the T and other transit systems, we will look at interactive maps that express different kinds of data, and we will visit local stations. In addition, we will study the process of creative thinking, in order to apply those skills to the issues at hand. You will be asked to create both stand-alone short writing assignments and visual representations of your ideas, accompanied by short, written explanations, both alone and in group projects.

Type:

Creativity and Innovation

• CI-161 Making History: Public Memory in the Digital Age

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

You live in Boston now. At least for a while. Perhaps you've noticed that it has its own ways of remembering things. Consider The Boston Literary District, The Freedom Trail, and all the many events and festivals devoted to history, culture, and identity. From guided tours and colonial cosplay to images and written texts to monuments, memorials, and museums, this city tells stories about itself today in the ways it tells stories about its past. In this class, you're going to tell more stories about Boston. You're going to help it find other things to remember, and other ways of remembering them. You'll likely need to focus on parts of the real events that Boston doesn't prefer to include in its stories,

emphasizing issues of race, socioeconomic class, nationality, colonialism, gender, sexuality, and other stories of unequal power and how that manifests in real people's lives and in the culture of this city.

Type:

Creativity and Innovation

• CI-H161 Making History: Public Memory in the Digital Age

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office. Honors students only.

Credits:

• CI-163 A Course on Skepticism and Rationality

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Magician James The Amazing Randi reminds us that No matter how smart or how well educated you are, you can be deceived. In an age fraught with deception and misinformation, students need tactics and strategies in order to separate truth from falsity. This course encourages its participants to act as skeptics - not cynics, necessarily - by requiring evidence and proof before believing or accepting claims. Students are urged to identify the most-likely-to occur opportunities for deception in their major fields and draw from the tenets of classical rhetoric, logic, and the scientific method in order to develop safeguards. Frequent collaboration with classmates will allow for dynamic solutions to small and large-scale contemporary problems ranging from the personal (e.g. used car prices and avoiding fraud) to the universal(e.g. fake news and God).

Type:

Creativity and Innovation

• CI-165 Becoming a Zig-Zag Master

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

We will be discovering the process of becoming more creative. The emphasis is on understanding the creative process and applying effective team-working strategies towards a shared goal. Each team will choose a project and develop it during the semester with the goal of improving a product, raising awareness about an issue in a creative way, designing a board game, designing a card game, etc. Inspiration will be drawn from the numerous successful innovators in the Boston area.

Type:

Creativity and Innovation

• CI-167 Public Health: A Need to Think Outside The Box

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course seeks to make you an innovative public health thinker by examining past campaigns and making the necessary frameshifts to help promote, protect and preserve health of the Suffolk community through the innovative thinking process. Public health activists and designers can have a positive impact on the lives of citizens living in small communities. However, the agreed rules and regulations that make up this policy landscape are created by paradigms which can be constricting. The issues the course addresses will include Suffolk's current plans for reducing carbon emission, behavioral determinants such as alcohol consumption among college students, and improving eating habits on campus. The final project will be peer reviewed and presented to the class. Programs may then be forwarded to university departments for possible integration and implementation.

Type:

Creativity and Innovation

• **CI-204 Prague: Castles to Barbwire**

Prerequisites:

At least 24 credits earned.

Credits:

3.00

Description:

Prague offers students a more recent view into history and will serve as a backdrop to learning Design Thinking. The curriculum will use Czech and Central European cultural features as the inspiration for learning the creative process, skills that can be applied broadly and globally across disciplines. WWII and its fall to Communism left the Czech Republic undamaged. Artists played a vital part in the country's rise to a Republic during the Velvet Revolution. These dissidents, including writers, actors, artists and musicians were innovators who were the catalyst for change. One could say that creative minds changed this country. This course is designed to demystify the creative process by introducing the creative practice as a disciplined approach to problem solving and innovation requiring research. This one-month study abroad experience will offer a more worldly insight to the significance of developing skills where divergent thinking and risk taking are one of many key tools in learning to generate new ideas. Travel fee covers accommodations, transfers, some meals and cultural visits. Airfare and tuition not included.

Type:

Creativity and Innovation, Global Engagement Experience

Note: Students with 30+ transfer credits are exempt from this requirement.

Major Requirements Minimum: 8 courses, 32 credits

Complementary Major Requirements, Minor Requirements, and Free Electives: credit varies

Minimum Total Credits Required for Degree Conferral: 126 credits

2017-2018 Archived Catalog Information

Bachelor of Arts

Please note that these requirements are for students matriculating in or after fall, 2017. Students matriculating prior to fall, 2017 must reference the [Pre-Fall 2017 Degree Requirements \(Archives\)](#).

All BA degree programs require the successful completion of the following courses:

Core Requirements: 13-15 courses, 47-56 credits

- [First-Year Experience](#)
- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Studies in Literature](#)
- [Ethical & Philosophical Inquiry](#)
- [Human Behavior and Societies](#)
- [Social & Intellectual History/Visual & Performing Arts Theory & History](#)
- [Modern Language](#)

Math: 1 course, 4 credits

Choose one Math course from those listed below:

- **MATH-128 Math for the Modern World**

Prerequisites:

MATH level 2, or Mathshop, or MATH-104

Credits:

4.00

Description:

From the ISBN on a book, to buying a car, from the size of small chips in a cell phone, to the size of the national debt, or just reading a graph in the daily newspaper, mathematics plays an important and vital role in countless areas of life and your future career and courses included. Mathematics is both an art and a tool created by humans. The common bond is a way of thinking and a way of reasoning to describe and solve problems of many types. This course uses the context of modern real life problems to introduce math needed for literacy and problem solving in contemporary life and work. It uses a minimal amount of algebra and focuses on math models, concepts and basic math manipulations. It encourages students to move from anxiety about math, to using formulas well, to thinking critically in the math context to use math to solve problems and pose new problems. Topics include scientific notation, basic financial math, linear, exponential and polynomial models and an introduction to probability. (Formerly Math 132)

• MATH-130 Topics in Finite Mathematics**Prerequisites:**

MATH-104, or MATH-121, or MATH level 3

Credits:

4.00

Description:

Linear Modeling (for example, using linear functions to model supply/demand situations), graphing, linear programming, financial functions (compound interest, annuities, and amortization of loans) sets, Venn diagrams, counting and combinatorics, discrete probability, conditional probability, Bernoulli experiments, Bayes theorem. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

• MATH-132 Math-Art, Tool and Human Side**Prerequisites:**

MATH-000 or appropriate Math Placement Exam score. Course does not fulfill math requirement for SBS majors.

Credits:

4.00

Description:

Mathematics is both an art and a tool. It has been used in many ways in contemporary and ancient society. The common bond is a way of thinking and a way of using reason to solve problems and

describe things of all sorts. The course is designed to cultivate an appreciation of the significance of mathematics in daily life and develop students' mathematical reasoning. Topics will vary from section to section. Examples of topics that might be included are: the real meaning of a newspaper graph, methods to tally votes, fair division, routes and networks, consumer mathematics, the 'real' cost of a house, shapes and patterns, fractals, soap film surfaces, prime numbers and encryption, new discoveries in mathematics.

• MATH-134 Calculus for Management & Social Sciences

Prerequisites:

MATH-104, MATH-121 or MATH level 4

Credits:

4.00

Description:

A one-semester introduction to differential and integral calculus. Theory is presented informally and topics and techniques are limited to polynomials, rational functions, logarithmic and exponential functions. Topics include a review of precalculus, linear regression, limits and continuity, derivatives, differentiation rules, implicit differentiation, related rates, applications of derivatives to graphing, minima/maxima, applications of the derivative, marginal analysis, differential equations of growth and decay, anti-derivatives, the definite integral, the Fundamental Theorem of Calculus, area measurements. This course cannot be used to satisfy core or complementary requirements by students majoring in chemistry, computer science, engineering, mathematics, or physics. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

• MATH-164 Calculus 1 Bridge With Trigonometry

Prerequisites:

Permission of Instructor

Credits:

4.00

Description:

This course provides an alternative to MATH 165 (Calculus I) for those students who have taken MATH 134 (Calculus for Management and Social Sciences) but who do not have the trigonometric precalculus prerequisite (such as MATH 121) for MATH 165. In other words, the sequence MATH 134 / MATH 164 serves as an alternative to the sequence MATH 121 / MATH 165, and similarly prepares students to take MATH 166 (Calculus II). The course includes a thorough review of trigonometry and other precalculus topics. Aspects of limits and differentiation which students have already seen in MATH 134 are presented briefly, but in most cases with more emphasis on conceptual understanding,

and often illustrated using more complicated examples. New calculus topics (i.e. not covered in MATH 134) include one-sided limits, special trigonometric limits, differentiability, derivatives of trigonometric functions and their inverses, derivatives of general inverse functions, logarithmic and implicit differentiation, related rates, L'Hopital's rule, intermediate values theorem, Rolle's theorem, mean values theorem, Newton's method, and linearization. 4 lecture hours plus 1 recitation session each week. Normally offered in spring.

• MATH-165 Calculus I

Prerequisites:

MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

Credits:

4.00

Description:

Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

• MATH-166 Calculus II

Prerequisites:

MATH-164 or MATH-165 with a minimum grade of C

Credits:

4.00

Description:

Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation, convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

Social, Cultural, & Global Perspectives: 1 course, 3-4 credits

Choose one SCGP course from those listed below:

- ADPR-217 Gay and Lesbian Studies

Credits:

4.00

Description:

Examines the portrayal of homosexuality in political, social, and cultural discourse. Analyzes the role of media and symbolic construction in the shaping of public values, opinions, and social movements.

Term:

Alternates Fall & Spring

- **ADPR-219 Rhetoric of Protest and Reform**

Credits:

4.00

Description:

Examines the persuasive strategies of social reform movements with special emphasis on the civil rights', women's rights, and gay rights movements in the United States.

Term:

Alternates Fall & Spring

- **ARH-205 Gender, Class and Alterity in Ancient And Medieval Art**

Credits:

4.00

Description:

Explores issues of sexuality, gender, race, and social class in the ancient and medieval worlds. Examines key artworks from ancient Greece, the Roman Empire and medieval Europe within historical, social and cultural contexts.

- **ARH-321 Women, Art & Society**

Credits:

4.00

Description:

Surveys women artists from the sixteenth century to the present and examines new direction in art-historical scholarship developed by feminist art historians during recent decades.

Term:

Offered Spring Term

- **AS-100 Introduction to Asian Studies: Culture, People, Ideas**

Credits:

4.00

Description:

An interdisciplinary introduction to Asian Studies will touch upon the history, politics, economics, philosophy, geography, arts, and cultures of Asia. Sample topics include political economy, religious and cultural exchanges, international relations, Asian experience in America, and the role of Asia in the twenty-first century. Students will develop conceptual frameworks for exploring the subjects covered by the Asian Studies curriculum.

Term:

Offered Both Fall and Spring

Type:

Asian Studies, Social & Intellectual HST

- **AS-500 Asian Studies Internship**

Credits:

4.00

Description:

Engages in an internship in a business or non-profit organization that deals with Asia or an Asian American community. Students may complete the internship either in Asia or in the U.S. Students will complete appropriate exercises and reports to document their learning. (1 course, 4-12 credits; can be taken multiple times in different semesters)

Term:

Offered Both Fall and Spring

Type:

Global Engagement Experience

- **BLE-325 Global Business Ethics**

Prerequisites:

BLE-215, PHIL-119, PHIL-120, PHIL-123 or PHIL-127

Credits:

3.00

Description:

Surveys business ethics as they transcend the diverse perspectives of global business. Explores current global ethics standards and values, ethical challenges, controversies, convergence and trends. Students explore famous global business cases through films, websites and independent research. Emphasizes identification and resolution of global business ethical issues within the context of ethical decision-making and sustainability. Analyzes corporate social responsibility ; hence, transforming global business ethics through business.

Type:

Global Engagement Experience

- **BLKST-250 Haiti, Guadelupe and Martinique**

Credits:

4.00

Description:

This course explores the rich intellectual tradition of Haiti, Guadeloupe, and Martinique by considering historical moments linked to colonialism, the abolition of slavery, the representation of gender, departmentalization, and decolonization through essays, films, poems, novels, and short stories by critics and writers from the 19th-21st centuries.

- **CI-204 Prague: Castles to Barbwire**

Prerequisites:

At least 24 credits earned.

Credits:

3.00

Description:

Prague offers students a more recent view into history and will serve as a backdrop to learning Design Thinking. The curriculum will use Czech and Central European cultural features as the inspiration for learning the creative process, skills that can be applied broadly and globally across disciplines. WWII and its fall to Communism left the Czech Republic undamaged. Artists played a vital part in the country's rise to a Republic during the Velvet Revolution. These dissidents, including writers, actors, artists and musicians were innovators who were the catalyst for change. One could say that creative minds changed this country. This course is designed to demystify the creative process by introducing

the creative practice as a disciplined approach to problem solving and innovation requiring research. This one-month study abroad experience will offer a more worldly insight to the significance of developing skills where divergent thinking and risk taking are one of many key tools in learning to generate new ideas. Travel fee covers accommodations, transfers, some meals and cultural visits. Airfare and tuition not included.

Type:

Creativity and Innovation, Global Engagement Experience

- **CJN-216 Intercultural Communication**

Credits:

4.00

Description:

An examination of communication variations and cultural viewpoints and their impact on cross-cultural communication. A special emphasis is placed on rituals and message patterns in non-Western cultures.

Term:

Offered Both Fall and Spring

- **CJN-225 World Cinema**

Credits:

4.00

Description:

An introductory course in film studies with a focus on foreign films. Movies studied include masterpieces of cinema from Europe, Asia, the Middle East, and other nations (Films have subtitles).

Term:

Alternates Fall & Spring

- **CJN-281 Asian Popular Culture**

Credits:

4.00

Description:

Students critically analyze Asian popular culture since the 1980s using a cultural ethnographic approach. Students apply the lenses of gender, identity, globalization, and business strategies to examine pop phenomena such as Korean Wave, Cool Japan, and Cantonese popular music.

Term:

Occasional

- **CJN-293 Hong Kong Cinema**

Credits:

4.00

Description:

By examining the film texts of Hong Kong auteurs such as John Woo, Wong Kar-wai, Tsui Hark, Andrew Lau, and Alan Mak, the course examines issues such as film genres, colonization/decolonization, transnational political economy, the Greater Chinese media market, and the diaspora.

Term:

Occasional

- **CJN-301 Documentary Film and the Image of Conflict in the Middle East**

Credits:

4.00

Description:

The course focus is on some of the divisions and conflicts within Israeli society. Students analyze and compare mainstream media discourse to alternative representations in documentary film. Analysis also covers media representation of the Israeli-Palestinian conflict.

Term:

Occasional

- **CJN-385 Globalization of Media and Telecommunications**

Credits:

4.00

Description:

A critique of the circulation of media goods and ideologies from both a cultural and political/economic perspective. Topics include global Hollywood, the images of Muslim women in transnational media, the information society, and global social movements.

Term:

Offered Spring Term

• EC-141 Development Economics**Credits:**

4.00

Description:

Why do so many countries remain so poor? Why have some (e.g. the Asian tigers) grown so rapidly? Why have most of the countries of Eastern Europe and the Former Soviet Union been slow to ignite economic growth? These questions are addressed by looking at domestic factors (government policies, resource endowments) as well as the international environment (mobile investors, international financial institutions). Asks what economic choices these countries face now. Normally offered yearly. Cultural Diversity B

Type:

Asian Studies

• EC-151 Economic & Human Geography**Credits:**

4.00

Description:

The study of how economic and human activity is distributed across space, the reasons for these spatial distributions, and the processes that change the spatial organization of economic activity over time. Topics include: maps, map projections, and geographic information systems; population geography; the organization and location of cities, towns and villages; transportation and communication policy; industrial location; the geography of world trade; and geographic features of economic development. The course takes a global perspective, and draws on cases and examples from all over the world. Cultural Diversity B

Type:

Asian Studies, Human Behavior & Societies

- **EDUC-310 Culturally Responsive Education**

Credits:

4.00

Description:

The relationship between cultural diversity and schooling is explored by examining impediments to academic achievement and advancement by minority students, non-native English speaking students, and other under-represented groups. Topics include: standardized testing, identification of inequities, legal and ethical responsibilities of teachers, and promoting equity. Ten pre-practicum observation hours required for teacher candidates.

Term:

Offered Fall Term

- **EDUC-315 Strategies for Emerging English Learners**

Credits:

4.00

Description:

This course examines the specific needs and challenges of the various language and cultural groups in schools. Topics include: theories of 1st and 2nd language acquisition, strategies for teaching academic content, modifying instruction in the mainstream classroom, creating classroom cultures that invite all students into learning, the role of advocacy and professional collaboration in ESL, and analysis of policies related to assessment and placement of English Language Learners.

- **ENG-123 Great Books of the World I Great Books of World Lit. I**

Credits:

4.00

Description:

Literary masterpieces from ancient times to the Renaissance, including: Homer's *Odyssey*, Sophocles' *Oedipus*, Virgil's *Aeneid*, selections from the Hebrew Bible and the Gospels, and Dante's *Divine Comedy*. List may vary at the discretion of the instructor.

Term:

Offered Fall Term

Type:

Classics Minor, Social & Intellectual HST

- **ENG-124 Great Books of the World II**

Credits:

4.00

Description:

This course will introduce students to a selection of Great Books from around the world from the 17th century to the 21st, such as Don Quixote (Spain), Madame Bovary (France), The Communist Manifesto (Germany), The Origin of Species (England), War and Peace (Russia), On Dreams (Austria), Night (Hungary), Things Fall Apart (Nigeria), Satyagraha (India), I Am Prepared to Die (South Africa), Saeed the Pessoptomist (Israel), The Rouge of the North (China), and The House of Spirits (Chile). Readings may vary at the discretion of the instructor.

Term:

Offered Spring Term

Type:

Social & Intellectual HST

- **ENG-135 World Literature in English**

Credits:

4.00

Description:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

Term:

Offered Both Fall and Spring

Type:

Studies in Literature

- **ENG-216 World Literature in English**

Prerequisites:

WRI-102 or WRI-103

Credits:

4.00

Description:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

Term:

Offered Both Fall and Spring

• ENG-362 Asian American Literature**Prerequisites:**

WRI-102 or WRI-H103

Credits:

4.00

Description:

An introduction to selected Asian-American writers with an emphasis on socio-cultural issues, such as race, gender and ethnicity. Authors include Bulosan, Hwang, Jen, Kingston, Lee, Mukherjee, Odada, and Tan. Cultural Diversity A

Term:

Occasional

Type:

Asian Studies

• FR-202 Intermediate French II**Prerequisites:**

Take FR-201 or Instructor's consent

Credits:

4.00

Description:

Continues to review grammar, practice speaking, and explore authentic cultural and literary texts in this writing-intensive course. Examines short readings, films, and print media.

Term:

Offered Spring Term

Type:

Modern Language

- **FR-205 The Francophone World**

Prerequisites:

FR 202 or Instructor's consent

Credits:

4.00

Description:

Explores the francophone world through the study of short stories, print media, and film, by engaging with the rich textured and diverse francophone literary canon. Teaches advance notions of French grammar, write compositions, and the art of conversation related to cultural themes.

Term:

Alternates Fall & Spring

- **FR-216 Masterpieces of French and Francophone Literature in English Translation**

Credits:

4.00

Description:

Masterpieces of French and Francophone Literature in English Translation. Studies works translated into English by major authors from the Middle Ages to the present. Explores drama, fiction, and poetry from many regions of the world: Africa, Western Europe, North America, the Caribbean, and Vietnam.

Term:

Alternates Fall & Spring

Type:

Studies in Literature

- **GVT-208 Politics / Religion**

Credits:

4.00

Description:

This course explores what major religions say about the status and responsibilities of the state and how, in turn, selective states have, in theory and practice, structured the place of religions in political life. Particular attention is given to issues of politics and religion in the United States. Cultural Diversity A

- **GVT-115 Evolution of the Global System**

Credits:

4.00

Description:

The goal of this course is to introduce the student to the main actors, social facts and processes that shaped the international system in the nineteenth and twentieth centuries. By analyzing the spread of industrialization, the race for colonies, the thrust of imperialism, and the rapid growth of nationalism, among other factors, this course explains the contradictory and simultaneous trends of unprecedented levels of prosperity and violence in Europe and beyond. While the course examines the role of the United States in the international system, particularly in light of its dominant role since the early twentieth century, it also emphasizes the developments taking place in other regions such as Asia, Africa and Latin America. This will allow students to understand the global arena as a space of complex interconnections involving varieties of forms of production, national political cultures and idiosyncratic traditions. This course sets the foundations for other courses in International Relations and Regional Studies

Type:

Human Behavior & Societies

- **GVT-281 Intro to Comparative Politics**

Prerequisites:

GVT 110, GVT 115, and GVT 120 or consent of instructor; Sophomore status or higher

Credits:

4.00

Description:

This course examines various methods of comparing political systems. Institutions such as executive departments, legislatures, court systems and local governmental systems are examined comparatively. It includes analysis of the impact of different economic systems on political/governmental institutions, and on economic circumstances that impact government. It also looks at political socialization both in terms of process and comparative content. An effort is made to include countries from all regions of the world. Normally offered every year.

• GVT-359 Hockey, International Development & Politics**Credits:**

4.00

Description:

This class examines the way in which national identity, global and regional economics and international development intersect. It uses the professionalization of the sport of hockey and its subsequent spread around the globe as its case. It will look at the rise of the pro game, the way in which it shapes national identity in the Canadian case, the way in which the pro business model has changed in response to broad socio-economic changes in North America and geo-political shifts around the globe, especially in Eastern Europe and the Former Soviet Union.

• GVT-360 Elections and Voting**Credits:**

4.00

Description:

How are elections administered in the United States? Do Americans have confidence in the electoral process? Should they? Why or why not? This course will examine elections in the United States in detail -- from how they are funded to how they are administered to how voters behave. Students will have a choice of either serving as poll workers during the November election or organizing and conducting research of potential voters. Students will gain hands-on experience in actual research design, election administration, and non-partisan get-out-the-vote activities. In addition, students will gain a deeper understanding of the relationship between attitudes, opinion, and voting behavior in American politics and institutions. ECR

• GVT-391 Canada: Multicultural Politics**Prerequisites:**

GVT 110/120 or Instructor's permission

Credits:

4.00

Description:

This course examines the Canadian model of incorporating diverse communities into its constitutional and political framework, including the founding British North American Act of 1867, the 1982 Constitution Act, and two later attempts at constitutional reform. Canada's role in balancing two official languages, English and French, is discussed, as is its recognition of a First Nations native-governed territory in the Arctic. This course introduces students to the Canadian polity and compares its parliamentary system with the U.S. separation of powers system. Prerequisites: GVT 110, GVT 120 or instructor's consent. Normally offered alternate years. Cultural Diversity B

• GVT-467 Comparative Social Movements

Prerequisites:

Junior status

Credits:

4.00

Description:

How do we explain the appearance or absence of social movements? What social or individual factors explain their development and decline? Who joins social movements? Who does not? Why? What ideas or ideals animate those who do participate? What is it like to be part of a social movement? What effect do they or have they had on politics, power and efforts at social change? These are some of the questions that have traditionally shaped debates over social movements, both domestically and internationally. They will form the analytical core of the work in this course. By critically evaluating several competing schools of thought in social movement theory and history we will attempt to highlight the social forces that have, at varying points in times, facilitated, maintained, as well as blocked the development of social movements in the US and beyond.

• HST-100 Introduction to Asian Studies: Culture, People, Ideas

Credits:

4.00

Description:

An interdisciplinary introduction to Asian Studies will touch upon the history, politics, economics, philosophy, geography, arts, and cultures of Asia. Sample topics include political economy, religious and cultural exchanges, international relations, the Asian experience in America, and the role of Asia

in the twenty-first century. Students will develop conceptual frameworks for exploring the subjects covered by the Asian Studies curriculum.

Term:

Offered Fall Term

- **HST-246 History of Modern Iran**

Credits:

4.00

Description:

Examines the contemporary history of Persia (Iran) from the time of its independence in the beginning of the sixteenth century to the present with special concentration on geographical/historical background; social structure, ethnic, religious, and linguistic diversities; Safavid and Qajar dynasties; Anglo-Russian interventions and occupations; constitutional revolution and reform; centralization, secularization and modernization under Pahlavi dynasty; opposition to westernization and Islamic revolution.

- **HST-247 History of Modern Middle East**

Credits:

4.00

Description:

Explores the broad historical forces, conflicts and major events that have shaped the contemporary nations of the modern Middle East. Topic include: the emergence of the modern Middle East from the empires of the sixteenth and seventeenth centuries; the age of colonialism; the rise of nationalism; socialism, capitalism; the impact of Israeli and Palestinian conflict on the region; oil, the Islamic Revolution in Iran and the rise of Islamic fundamentalist movements; U.S. policy; and Saddam Hussein's Iraq.

Term:

Offered Fall Term

- **HST-251 Modern East Asia**

Credits:

4.00

Description:

China, Japan, and Korea - East Asia's critical players - share many historical influences, but each has a distinct culture, and they competed with each other for much of the twentieth century, proud of their achievements but feeling threatened by their neighbors. Lectures interspersed with movies and documentaries to show how East Asia has developed in the past one-hundred-plus years.

Type:

Social & Intellectual HST

• HST-263 Comparative Race Relations

Credits:

4.00

Description:

Compares and analyzes the history of race and politics in South Africa and the United States from the 17th century to the present. Examines how race as a social and ideological construct influenced and informed political conflicts over land, labor, and social relations in the two countries including slavery, segregation, apartheid, and the struggle to create racial democracies.

Term:

Offered Fall Term

• HST-268 History of the Mediterranean

Credits:

4.00

Description:

Explores the history of the Mediterranean from the ancient times to the 20th century, with emphasis on the extraordinary interaction between the rich cultural, ethnic and religious backgrounds of the peoples of Europe, Middle East, and North Africa.

Term:

Occasional

Type:

Social & Intellectual HST

• HST-274 Women in 19TH-CENTURY Europe

Credits:

4.00

Description:

Explores the condition of European women from 1800 to 1914. Readings focus primarily on women's experiences in France and Great Britain. Topics include: the effects of industrialization on the lives of working-class women; working and middle-class women's negotiation of marriage, work, and family life; the rise of feminism, women's greater participation in the public sphere, and conservative reaction to these changes in women's place in society; women and crime; Victorian ideas about female sexuality; the politics of class and gender in nineteenth-century European society.

Term:

Occasional

- **HST-275 Women in 20TH-CENTURY Europe**

Credits:

4.00

Description:

Examines the changing place of women in European society since 1900. Topics include: women's suffrage and the political advances of the 1920s and 1930s; the revolution in sexual mores, birth control, and the rise of companionate marriage; women and the consumer economy; the anti-woman policies of Fascist Italy and Germany under National Socialism; liberation of women and retrenchment in the Soviet Union; World War II; feminism, sexual liberation, and women's political engagement since the 1960s; and, throughout the twentieth century, women's continuing negotiation of work and family responsibilities.

Term:

Occasional

- **HST-321 History of Islam**

Credits:

4.00

Description:

Presents a coherent account of the origin and history of Islam since its foundation in Arabia in the seventh century A.D. to the present. Analyzes the terms, events, characteristics, developments, movements, and institutions that have been part of the shaping of Islam. Ideological challenges and impact of Islam in the world today from both spiritual and political perspectives are examined.

Term:

Occasional

- **HST-371 U.S. Women's History Colonial to 1865**

Credits:

4.00

Description:

Traces the roles, images and experiences of women in America from colonial times to 1865. Topics include the family, work, religion, education, health care, motherhood, sexuality, social and political activism legal status, labor activism and popular culture. With attention to ethnicity, race, class, age, region of residence, disability and sexual orientation, the course focuses primarily on the everyday lives of ordinary women.

Term:

Offered Fall Term

- **HST-372 U.S. Women's History: 1865-present**

Credits:

4.00

Description:

Examines the social and cultural history of women in the United States from the close of the Civil War to the present. Using not only gender but also race, ethnicity, class, age, disability, region of residence, and sexual orientation as important categories of analysis, this course focuses on women's private and public lives. Topics include the family, work, religion, education, health care, private lives, motherhood, sexuality, social and political activism, legal status, labor activism, and popular culture.

Term:

Offered Spring Term

- **HST-484 History of the Emotions**

Credits:

4.00

Description:

Explores ideas about emotional life from the fields of history, anthropology, sociology, and psychology as well as the evolution of emotion rules and prescriptions, focusing on western Europe and the United States since 1700. In the eighteenth century, emotions were seen as a positive influence on politics and public life, especially during the French Revolution. After the fall of Robespierre, the emotions were banished to the private sphere - so we will read both primary sources and recent scholarship on 19th- and 20th- century ideas about masculinity and femininity, romantic love and marriage, childrearing, and about what parents and children are supposed feel toward each other, how ideas about these subjects have changed over time, and whether our feelings change with them.

Term:

Occasional

• MUH-223 World Music

Credits:

4.00

Description:

Covers topics in folk, traditional, and modern music of Africa, the Middle East, Asia, and Europe in the context of the cultures and lives of the indigenous peoples of those regions; examines how music interacts with the issues of race, gender, class, religion, politics, and social movements. Normally offered every other year.

Term:

Occasional

• P.AD-201 Social Change

Credits:

3.00

Description:

This course will examine social change in the U.S. and abroad. The course will also examine the role of business, nonprofits, and the public sector in addressing social problems. Topics studied may include the Industrial Revolution, the civil rights movement, the women's movement, environmentalism, and the gay and lesbian movement.

• P.AD-H201 Honors Social Change

Credits:

3.00

Description:

This course will examine social change in the U.S. and abroad. The course will also examine the role of business, nonprofits, and the public sector in addressing social problems. Topics studied may include the Industrial Revolution, the civil rights movement, the women's movement, environmentalism, and the gay and lesbian movement.

Type:

Honors

• PHIL-120 Ethics and Civic Life**Credits:**

4.00

Description:

In this class you will be introduced to the perspectives and methods of politics, philosophy, and economics and see how these three disciplines present distinct but interconnected dimensions of current social and political issues.

• PHIL-228 Feminist Philosophy**Credits:**

4.00

Description:

This course is an introduction to the philosophy of feminist thought. Feminist theories of epistemology, metaphysics and morality will be examined as critiques of traditional philosophy. Feminist perspectives and methodologies include radical, liberal, postmodern, as well as more recent trends in ecofeminism. Special emphasis will be placed on explicit and implicit practices of alienation and exclusion as they have unfolded in the gendering of thought, truth, and reality. 1 term - 4 credits. Normally offered every third year. C b

Term:

Occasional

• PHIL-229 Eco-Feminism**Prerequisites:**

PHIL 119, or PHIL 123, or PHIL 127

Credits:

4.00

Description:

Examines the political, social, and ecological problems facing us as a global community. Having its roots in feminist theory and deep-ecology, eco-feminism provides a critical framework for ecological responsibility and accountability. Writings from eco-feminist thinkers and environmental activists around the world will be used to highlight the philosophical and political conflicts and challenges, including globalization and loss of biodiversity, global warming, international human rights, the relationship of gender and nature, and modes of redress for eco-justice and sustainable development.

• PHIL-261 Eastern Philosophy**Credits:**

4.00

Description:

The exposition and critical evaluation of Hinduism, Buddhism, Confucianism, Taoism, and Islam. Special attention is given to foundation principles as well as to the similarities and differences of each of these philosophies to basic ideas in Western philosophy. 1 term - 4 credits. Normally offered alternate years. C b

Term:

Occasional

Type:

Asian Studies

• PHIL-262 Buddhism**Credits:**

4.00

Description:

An historical survey of Buddhist philosophy. We will explore Buddhist origins, central teachings, devotional and meditational practices, ritual and institutions as developed from classical to modern times. Special attention given to the philosophical diversity of the Buddhist world view. 1 term - 4 credits. Normally offered alternate years. C b

Term:

Occasional

Type:

Asian Studies

- **PHIL-265 Women in Spirituality**

Credits:

4.00

Description:

An exploration into the various dimensions and ideologies concerning the role of the feminine in relation to the Divine. Belief systems, myths and archetypes from ancient Goddess worship to 20th century feminist theology will be examined in terms of the philosophical content and psychological consequences. Special emphasis will be placed on feminist metaphysical structures for understanding consciousness and Reality. Classes will be conducted by means of lectures, primary and secondary texts and class discussions. Normally offered alternate years. Cultural Diversity A

Term:

Occasional

- **PHIL-267 Chinese Philosophy**

Credits:

4.00

Description:

A survey of the main developments in Chinese Philosophy. The course begins with the early dynastic concept of humanism and then turns to Confucius and Mencius. Having developed the central Confucian doctrines, students next examine the Taoist response to Confucianism in the writings of Lao Tzu and Chuang Tzu. The course then considers Zen Buddhism, which is called Ch'an Buddhism in China, where it originated. In particular, students study the concept of sudden enlightenment before turning to the Neo-Confucian scholars.

Term:

Occasional

- **PSYCH-243 Organizational Psychology**

Prerequisites:

Take PSYCH-114;

Credits:

4.00

Description:

Focuses on diversity concerns in various aspects of the psychology of the workforce. This includes job analysis, recruitment, selection, evaluation, training, retention, and termination. Employee morale, well-being, stress, and hardiness are considered.

- **PSYCH-247 Asian Perspectives on Health and Work**

Credits:

4.00

Description:

Examines theoretical and empirical approaches that provide insight into Asian viewpoints on socialization practices, family systems, health/well-being, cultural traditions/values, and spiritual philosophy/literature. Explores the diversity among Asian cultures in terms of language, history, religion/spiritual faith, and healthcare practices, all of which play a significant role in shaping the psychological characteristics, interpersonal relationships, and work dynamics of Asians and Asian immigrants. Students critically analyze similarities and differences between Asian and Western psychological perspectives of health and work through didactic and experiential learning components. This course fulfills the Cultural Diversity Requirement and may fulfill the Expanded Classroom Requirement. Normally offered alternate years.

Term:

Offered Spring Term

Type:

Asian Studies

- **RS-111 Introduction to World Religions: Western Traditions**

Credits:

4.00

Description:

This course will explore the comparative history and structure of Western religious traditions, broadly understood, and their impact on other world religions, while attempting to recognize the similarities and the differences among them. Traditions to be studied include Greek and Roman religion, the

monotheistic faiths (Judaism, Christianity, and Islam, as well as Zoroastrianism, Sikhism and Bahaiism). We will also explore the impact of the Western religions on indigenous traditions, such as African religion, Native American religion, and Pacific Island religion. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. 1 term - 4 credits. Normally offered every year.

• RS-112 Introduction to World Religions: Eastern Traditions

Credits:

4.00

Description:

This course will examine a variety of Eastern religions, including Hinduism, Buddhism, Jainism, Confucianism, Taoism, and Shintoism. Possible connections to be explored will be the impact of these traditions on others, such as Pacific Islands and African religion, as well as the growing place of Eastern religion in the West. This course will explore the history and structure of each tradition, while attempting to recognize the similarities and the differences among them. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. Normally offered every year. Cultural Diversity B

Type:

Asian Studies

• SIB-550 Global Travel Seminar

Prerequisites:

Please email Hillary Sabbagh at hsabbagh@suffolk.edu to register for a travel seminar.

Credits:

3.00

Description:

An in-depth analysis of timely special issues in international business. Specific topics are announced when the course is scheduled.

Type:

Global Engagement Experience

• SF-190 Asia in America Fiction and Fact

Credits:

4.00

Description:

With a focus on some selected ethnic groups from Asia, Asia in America studies the history and current status of Asian Americans in Boston and other parts of the country. We will examine the major reasons why these immigrants chose to leave their home country as well as their expectations and experiences here in America. We will also discuss the issues Asian immigrants have faced in this adopted home as well as the connections and conflicts among different ethnic groups or even within the same ethnic group due to political and socio-economic reasons. The course will include some level of community engagement, through Chinatown tour and service, which may enable us to have a direct contact with the Asian American population and reflect on what is being discussed in class. Through this course, we hope to gain a better understanding of the racial and cultural history of the country and arrive at a deep appreciation of the dynamics of cultural interactions in the twenty-first century. The course fulfills the SCGP requirement.

Type:

Global Engagement Experience

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

- **SOC-227 Race in American Society**

Credits:

4.00

Description:

Despite the election of Barack Obama as President of the United States, race remains one of the most divisive forces in U.S. society. While many of us struggle against racism, racial classification continues to affect where we live, where we work, and how we see ourselves. Racial classification affects our access to health care and our encounters with police officers. Distorted images of racial groups fill television and movie screens. Appeals to racism and fear of foreigners are dominant themes in elections to state and national offices. This course examines the formation and re-formation of racial

classifications: how particular groups become racially identified, how these classifications change over time, and how conflicts over race have shaped American society. The meanings of race, as seen from a variety of perspectives, will be a consistent theme throughout the course.

Term:

Occasional

- **SOC-228 Cultural, Global and Social Perspectives**

Credits:

4.00

Description:

Enables students to examine, as well as develop an awareness and appreciation of, diversity within today's society. Providing an overview of the major racial, ethnic, and cultural groups in the U.S., the focus is on the ways in which cultural awareness enhances professional helping relationships and improves the operation of human services systems.

Term:

Occasional

- **SOC-275 Women and Crime**

Credits:

4.00

Description:

This course examines the complex relationships between women and crime today. This focus will include women as criminal offenders; women as victims of crime; and women as both offenders and victims. Course materials draw from recent feminist scholarship on these issues in the social sciences. Topics include the causes of women's crime women, drugs, and crime; child abuse and trauma; prostitution and sex trafficking; race, gender and victimization; and feminist social movements against violence. Crimes of violence against women are a central focus in the course.

Term:

Occasional

- **SOC-329 Sociology of Globalization**

Prerequisites:

Prerequisite: SOC 113 or SOC 116.

Credits:

4.00

Description:

Globalization is shrinking the world. How and why did this happen? This course will explore global change and the global processes which effect key social institutions: culture, the economy and politics. Students will study the processes of globalization and its impact on our lives and people around the globe.

Term:

Occasional

- **SOC-341 International Drug Control Policy**

Credits:

4.00

Description:

Relying on a simplistic demand or supply explanation of why Americans use/abuse drugs obscures the reality of America's drug problem, is ineffective as a guide to public policy and has unforeseen, often negative consequences. Drug use is a complex and multi-faceted issue. There are no easy answers. To comprehend the complexity of America's drug problem one needs an understanding of the geography, history, religion, law, economics and international politics of the Middle and Far East, Eastern Europe, Africa, Mexico, and Central and South America. This class will provide this basic understanding without losing sight that the problem we seek to remedy is our own.

Term:

Offered Spring Term

- **SOC-354 Death and Dying**

Credits:

4.00

Description:

An examination of changing definitions of life and death, social factors affecting causes and rates of death, care of the dying and their families, institutionalization, the funeral industry, suicide, crisis intervention, and the impact of technology on the dying process.

Term:

Occasional

- **SOC-357 Global Health and Healing**

Credits:

4.00

Description:

An examination of how different cultures understand health and illness. Healing approaches from Asia, Africa and the Americas will be explored.

Term:

Occasional

- **SPAN-202 Intermediate Spanish II**

Prerequisites:

SPAN 201 or Instructor's consent.

Credits:

4.00

Description:

Continues skills development from 201. Students read a collection of short stories, write compositions, develop cultural insights through comparative and contrastive assignments, and practice listening and speaking skills in weekly conversation sessions.

Term:

Offered Spring Term

Type:

Modern Language

- **SPAN-290 Advanced Composition & Conversation**

Prerequisites:

Prerequisite: Spanish 202, 203 or 250 or Instructor's consent

Credits:

4.00

Description:

Develops written and oral skills in various contexts and registers. Emphasis on strengthening written skills and learning to speak clearly and persuasively in Spanish. Short texts and audio-visual materials provide the basis for classroom activities which include regularly assigned essays, group discussions and debates.

Term:

Offered Fall Term

Type:

Modern Language

• SPAN-300 Intro to Cultural Texts**Prerequisites:**

Spanish 202, 203, 250 or Instructor's consent.

Credits:

4.00

Description:

Explores a selection of Peninsular and Latin American cultural materials. Primarily examines texts from different literary genres (narrative, drama, essay, and poetry). Develops critical skills required in more advanced Spanish courses, through close readings and textual analysis. Activities include regularly assigned essays, group discussions, and short scene work.

Term:

Offered Spring Term

• SPAN-301 Spanish Culture and Civilization**Prerequisites:**

Spanish 202, 203 or 250. Spanish 290 or 300 are strongly recommended

Credits:

4.00

Description:

Examines the civilization and culture of Spain highlighting its historical development and cultural manifestations from pre-historic times to the nineteenth century. Students improve their four skills through activities that include discussions, oral presentations, and writing assignments based on reading and films.

Term:

Alternates Fall & Spring

• SPAN-302 Indigenous and Colonial Latin America**Prerequisites:**

Spanish 202, 203 or 250 or Instructor's consent. Span 290 or 300 strongly recommended.

Credits:

4.00

Description:

Introduces students to the complexity Latin America by examining its roots in pre-Columbian America and the impact of Spanish exploration and colonization. Places emphasis on cultural, economic, historical, philosophical, political and religious patterns that define the region. Includes class discussions, oral presentations, and writing assignments based on reading and audio-visual material.

Term:

Alternates Fall & Spring

• SPAN-303 Modern and Contemporary Latin America**Prerequisites:**

SPAN 202 or 203 or Instructor's consent. SPAN 290 or 300 strongly recommended.

Credits:

4.00

Description:

Examines the path taken by Latin American and Caribbean countries to build independent nations out of colonial territories highlighting the 19th, 20th, and 21st centuries, ethnic plurality, and cultural complexity in areas such as politics, religion, sociology, economics, customs, music & film. The cultural contributions of Spanish-speaking minorities in the United States are also addressed. Includes class discussions, oral presentations, and writing assignments based on readings and audio-visual material.

- **SPAN-315 Spanish for the Professions**

Prerequisites:

SPAN 290 or SPAN 300 or Instructor's consent.

Credits:

4.00

Description:

Integrates language learning with culture via business context of the Hispanic world. Spanish for banking and finance, marketing and advertising, and international commerce are highlighted. Students increase their cross-cultural understanding and written and oral proficiency in business Spanish through a wide range of assignments.

Type:

Global Engagement Experience

- **SPAN-390 Introduction to Latin American and Caribbean Literature**

Prerequisites:

SPAN 300; SPAN 302 is strongly recommended

Credits:

4.00

Description:

Examines authors from Latin America and the Caribbean in their historical and cultural contexts. Reading and class discussions consider the relationship between the writer and society by covering such topics as colonialism, the oral tradition, modernism and the emergence of new narratives in the twentieth century. The Inca Garcilaso, Sor Juana, Carlos Fuentes, Rigoberta Menchu, and Pablo Neruda are among some writers studied.

Term:

Occasional

- **THETR-260 Broadway Musicals**

Credits:

4.00

Description:

This course is a survey of American musical theatre from its roots in the mid-19th century to the present. It provides the analytical tools and historical insight to more fully appreciate Broadway's greatest musicals and musical theatre artists. Students will explore the ways in which American forms of popular entertainment helped to shape Broadway musicals from their infancy through their adulthood. The course also explores the ways in which musicals provided opportunities for African-Americans, women, immigrants, and the GLBT community.

Term:

Offered Fall Term

- **THETR-267 Introduction to Theatre: Contemporary American**

Credits:

4.00

Description:

This course provides a formal introduction to the theories and practices strategically used by American theatre artists after the Second World War. Special emphasis is placed on theatre artists exploring issues of cultural identity including works by GLBT, African-American, Asian-American, and Latin American playwrights. These playwrights may include Tony Kushner, Paula Vogel, Suzan-Lori Parks, Adrienne Kennedy, August Wilson, David Henry Hwang, Philip Kan Gotanda, Eduardo Machado, and Melinda Lopez. The course will also provide an introduction to trends in post-modern theatre practices related to emerging work of the auteur director, solo performers, and interdisciplinary collectives. Satisfies a core requirement for Theatre majors. Normally offered alternate years.

Term:

Occasional

- **WGS-111 Women, History, & Culture**

Credits:

4.00

Description:

Explores the roles and images of women in Western culture and the realities of women's everyday lives through literature, film, history, art, psychology, and recent feminist scholarship. Analyzes gender inequalities and the influence of gender on social structure, human behavior, and artistic expression. Topics include: the social construction of gender and identity; domestic prescriptions for women; women and work; intersections of gender, class, and race in American society; sexualities and identity; the politics of motherhood and reproductive rights; educating girls; negotiating male privilege and

structural inequalities; representations of women in Western art and film; and women as artists and gendered models of creativity in art, film, fiction, and science.

Term:

Offered Both Fall and Spring

Type:

Social & Intellectual HST

• WGS-H111 Women, History, & Culture

Prerequisites:

At least a 3.3 GPA required.

Credits:

4.00

Description:

Explores the roles and images of women in Western culture and the realities of women's everyday lives through literature, film, history, art, psychology, and recent feminist scholarship. Analyzes gender inequalities and the influence of gender on social structure, human behavior, and artistic expression. Topics include: the social construction of gender and identity; domestic prescriptions for women; women and work; intersections of gender, class, and race in American society; sexualities and identity; the politics of motherhood and reproductive rights; educating girls; negotiating male privilege and structural inequalities; representations of women in Western art and film; and women as artists and gendered models of creativity in art, film, fiction, and science.

Term:

Offered Both Fall and Spring

Type:

Honors

• WGS-113 Women, Science, & Society

Credits:

4.00

Description:

Explores women's lives from the perspective of the social and natural sciences, including examination of recent biological, psychological, and sociological theories about gender and gender roles, as well as the influence of feminist scholarship in these areas. Topics include: the social construction of gender; the psychology and biology of sex and gender; women and work; media representations of women; the female body and eating disorders; women's health and lifecycle; women and sexuality; reproduction, abortion, and motherhood; and sexual violence against women.

Term:

Offered Both Fall and Spring

• WGS-115 Introduction to Gender Studies

Credits:

4.00

Description:

Introduces the key topics and debates that have shaped the field of gender studies, including queer studies, masculinity studies, and women's studies. Through lecture and class discussion of texts from literature, film, history, psychology, and sociology, explores the pervasive influence of gender on the structure of society and our everyday experiences and the role that gender plays in our understanding of love, friendship, sexuality, and even violence. Topics include: biological arguments about gender and sexuality; the social construction of gender and identity; intersections of gender, race, class, and sexuality; masculinity and femininity; and theories of sexual difference and the construction of sexuality.

Term:

Occasional

Type:

Social & Intellectual HST

• WGS-311 Engendering Entertainment: Feminism and Popular Culture

Credits:

4.00

Description:

Investigates the complex intersections between feminism and popular culture through several different lenses: by exploring how feminists make arguments about popular culture; by looking at the complexities of public femininity in today's popular culture, including figures such as Lady Gaga and Katy Perry and television shows like *The Bachelor* and *Grey's Anatomy*; by focusing on a variety of

articulations of feminism within mass media, blogs, social media, and popular books such as Ariel Levy's *Female Chauvinist Pigs*, and Caitlin Moran's *How to Be a Woman*. Along the way we will ask questions about: what makes a work of art feminist; how modern media contributes to or distracts us from a variety of political debates in the realm of female equality and how can we, as individuals, use modern media to create and advance smart, feminist arguments.

Type:

Social & Intellectual HST

• WGS-315 Feminist Thought

Credits:

4.00

Description:

Investigates how feminists, both today and in history, have understood inequality and difference and looked for the best ways to address these issues and bring about social justice. Examines how feminist theorists help us to understand how gender and other social categories, such as race, class, sexuality, disability, age and nationality, are constructed within and through each other; and analyzes feminist engagements with liberalism, socialism, psychoanalysis, existentialism, post-colonialism, critical race theory, and queer theory, as well as consider anti-feminist arguments. Readings include classic critical texts by authors including Mary Wollstonecraft, Emma Goldman, Virginia Woolf, Chandra Mohanty, Gloria Anzaldua, and Judith Butler.

Type:

Social & Intellectual HST

• WGS-325 Global Women's Fiction

Credits:

4.00

Description:

Explores of various cultural worldviews in order to reveal and assess the voices of women from around the world as they respond to important global issues such as sexual violence and gendered oppression. Topics include: national citizenship, sexual politics, legal discourse, aesthetic representation, literary movements, genre, constructions of femininity, sexual identities, and representations of gender in relation to race and class and international cultures, and the relationship of self-image to the body politic.

Term:

Occasional

- **WGS-335 Queer Narratives**

Credits:

4.00

Description:

Explores the stories that help us to understand communities, identities, and bodies that could be considered queer, and the ways that film, music, memoir and fiction have discussed queer as different, unusual, or other. Texts include the documentary, "Paris Is Burning", Frank Ocean's 2012 album, "Channel Orange", and Janet Mock's recent memoir, "Redefining Realness", as well as foundational queer theory from Judith Butler, Eve Kosofsky Sedgwick, and Lee Edelman, among others, to help build a framework for approaching and interpreting both fictional and non-fictional accounts of queer lives.

Type:

Social & Intellectual HST

Science, Technology, & Engineering (STE): 2 courses and corresponding laboratories where applicable, 8 credits

Choose two STE courses (and corresponding laboratory where applicable) from those listed below. Courses do not need to be in a sequence. In the case of a course that is a lecture plus a lab, the student must complete both components to earn credit for the STE requirement.

Biology:

- **BIO-104 Environmental Biology**

Prerequisites:

BIO 101 and BIO L101, can also be taken concurrently BIO L104 must be taken concurrently

Credits:

3.00

Description:

An introduction to basic evolutionary, behavioral and ecological principles. Readings and discussions emphasize the ways that humans are affected by ecological processes and principles as well as how humans and their technology affect ecosystems. May not be taken by Biology majors or minors. This course will not fulfill requirements for a major or a minor in Biology. It is intended for non-biology majors as a follow-up to Biology 101. 3 hours lecture. Days Only. Madrid Campus only.

Type:

SCI TECH ENGR

- **BIO-L104 Environmental Bio Lab**

Prerequisites:

BIO-104 must be taken concurrently

Credits:

1.00

Description:

Exercises and field trips designed to complement and demonstrate the ecological principles developed in the lecture section. The lab emphasizes the scientific method and employs long term group projects. Madrid Campus only.

Type:

SCI TECH ENGR

- **BIO-105 Humans and the Evolutionary Perspective**

Prerequisites:

Non Science Majors Only

Credits:

4.00

Description:

Major topics include the scientific basis of evolution, the fossil history of vertebrates, evidence of evolution in the human body, and applying an evolutionary perspective to the social interactions and possible futures of humanity. Meets one of the non laboratory science requirements for the non-science major. This reading and writing intensive course is a non-laboratory science option for non-science majors. This course will not fulfill requirement for a major or a minor in Biology.

Term:

Occasional

Type:

SCI TECH ENGNR

- **BIO-111 Introduction to the Cell**

Prerequisites:

Must take BIO L111 concurrently

Credits:

3.00

Description:

Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L111 Introduction to the Cell Laboratory**

Prerequisites:

Concurrently with BIO 111

Credits:

1.00

Description:

Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-114 Organismal Biology**

Prerequisites:

Must take BIO L114 concurrently.

Credits:

3.00

Description:

Rigorous introduction to organismal biology emphasizing evolution, phylogenetics, form, and function. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L114 Organismal Biology Laboratory**

Prerequisites:

Must take BIO 114 concurrently

Credits:

1.00

Description:

A series of laboratory experiences in evolution, diversity, anatomy and physiology.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-201 Biology's Big Questions**

Prerequisites:

Non Science Majors Only.

Credits:

4.00

Description:

This course seeks to answer five current questions from all levels of biology, from the subcellular to the ecosystem level. Topics will be discussed in the context of genetics, evolution, and ecology. We will focus on the process of doing science, including how scientists evaluate ideas and communicate their findings. Emphasis will be placed on topics in biology that impact daily life.

Type:

SCI TECH ENGNR

Chemistry:

- **CHEM-105 Chemical New Product Development**

Prerequisites:

ENT 101

Credits:

4.00

Description:

This course addresses the crucial intersection between chemistry and business, and the impact of these fields on society. It provides an introduction to important chemistry concepts and practices of

business management. Primary focus is on understanding the chemistry principles behind some of the consumer products in our everyday lives, and using this knowledge to create and evaluate ideas for new products. The course also introduces the business aspects involved in the development and marketing of new products. An important component of the course is in making effective presentations; this component concludes the course, culminating in team presentations of a new chemical product to panel of executives and peers. This course satisfies the Sawyer Business School Science requirement.

Type:

SCI TECH ENGNR

- **CHEM-106 Biotechnology & Its Applications in Medicine, Agriculture, Law**

Credits:

4.00

Description:

Introduces the latest discoveries and applications of biotechnology. Topics include genetically modified food, stem cells, genetic testing, cloning, and forensics. A combination of lectures, discussions, short documentaries, mock congressional hearings, and hands-on activities will provide insight into the numerous medical, social, legal, and ethical issues surrounding this technology.

Type:

SCI TECH ENGNR

- **CHEM-111 General Chemistry I**

Prerequisites:

Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:

3.00

Description:

Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **CHEM-L111 General Chemistry Laboratory I**

Prerequisites:

MATH-104 MATH-108 MATH-121 MATH-128 MATH-130 MATH-134 MATH-164 MATH-165 MATHT-MPEL1 MATHT-MPEL2 or MATHT-MPEL3. Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

Computer Science:

- **CMPSC-F107 Ants, Rumors and Gridlocks**

Prerequisites:

Math placement level of 2 or above or any MATH course at the level 100 or above

Credits:

4.00

Description:

Do viruses and rumors spread like forest fires? How do ants cooperate? Do spoken languages and biological species evolve in a similar way? *Ants, Rumors, and Gridlocks* exposes students to introductory aspects of computational science by addressing and answering these and many other questions. Students use and modify virtual experiments preprogrammed in the NetLogo programming language to investigate these topics and others in Social Sciences, Biology, and Environmental Science. No prior knowledge of computer programming or NetLogo is required.

Type:

SCI TECH ENGR

Electrical Engineering:

- **ECE-288 Measuring the World**

Credits:

4.00

Description:

The world is addicted to quantifying the essence of everything, from personal IQ, to the speed of a baseball, to our healthiness, or our chances of winning the lottery. Behind most of these numeric values exists a science of measurement. Some of this is referenced to international standards, such as for length, time, weight, or temperature. Others are more arbitrary and subjective, such as ranking Olympic performance in gymnastics, beauty pageants, or popular responses as found in the game show *Family Feud*. A third category includes controversial areas, such as measuring whether a person is lying when interrogated, or using hype rather than reality to market products. Sometimes statistics are used to predict sports outcomes, such as in the annual March Madness NCAA basketball brackets. Finally, in a world subject to fraud and deception, it can be essential to distinguish legitimate from counterfeit items, such as in money, art, collectibles, and historical documents. Don't get hoodwinked! This course examines all of these, starting with how measurements have been made throughout history, along with a full deck of entertaining terms used during the ages. This may help you sort out your weight, whether given in pounds, kilos, or stones. Often these terms will provide insights into how people lived in different eras. We will also look at some of the technologies currently available to provide these measurements, and unravel the complexities of various sensors that are used. As we consider the meaning of accuracy we may become less naive about how much confidence to ascribe to the results given us. Hovering around all of these measurements should be the question of validity - are they meaningful, useful, or misleading? And the impact they have on society - whether they steer behavior more powerfully than one might originally suspect. Each student will also be given an opportunity to become an expert in an area of measurement of personal interest. By the end o

SCI TECH ENGR

Engineering Science:

• ENS-103 Introduction to Engineering

Prerequisites:

ENS L103 MUST BE TAKEN CONCURRENTLY.

Credits:

3.00

Description:

This course provides exposure to engineering practice, with particular focus on electrical engineering components such as circuit elements and systems. It seeks to go beyond the mathematics and provide an intuitive appreciation of functional devices. Examples taken from a broad swath of technological history illustrate significant crossroads, decisions, and inventiveness. Emphasis is placed on learning to think as an engineer - assessment of problems, candidate solution tradeoffs, and implementations. Frequent exercises in creative engineering design will be used. Students will be required to design several elementary devices, such as a magnet, a capacitor, a timing device, and a motor, which they will enter in a competition for overall strength, compactness, accuracy, or speed. Sometimes assignments relate to "survival on an island" concerns, such as communication or drinking water. Students also learn about reverse engineering by selecting, building, troubleshooting, and presenting an electronic kit of their choice. A term paper determining the engineering behind a topic of their choice will also be written and presented. On occasion (see ENS L103) there will be team competitions between various smaller groups in the class.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

• ENS-L103 Intro to Engineering Lab

Prerequisites:

Must be taken Concurrently w/ ENS-103

Credits:

1.00

Description:

The Lab is designed to provide opportunities to gain familiarity with engineering tools. Students will be introduced to parts (e.g. learn the resistor color code), test equipment (multimeters, prototyping trainers, signal generators, and oscilloscopes), and construction techniques (wiring, soldering, troubleshooting). Although it varies from year to year, Class Projects can be built during the Lab

sessions. In the past these have included a 25 Watt electric generator, various door lock systems (both mechanical and electronic), and an AM transmitter and receiver (all projects made from scratch). It is likely that 2010-2011 may introduce some robotic creations for a competition. Electronic kits and motors can also be built and serviced in the Lab. There is an adjoining machine shop, which can be utilized (with supervision), for fabricating items. Individual creativity is encouraged, and informal problem solving sessions occasionally occupy lab time. However, the lab is accessible outside of the traditional scheduled time.

Term:

Offered Fall Term

Type:

SCI TECH ENGR

Environmental Science:

- **UES-107 Introduction to Drones**

Prerequisites:

UES-L107

Credits:

3.00

Description:

Unmanned autonomous systems (UAS) or Drones are high-tech, intelligent machines capable of traveling by air, land, or sea via a remote connection. This course presents concepts and practical methods of using Unmanned Vehicles in a professional context, particularly for environmental projects. UAVs are increasingly being used in a professional capacity such as cinematography and filming, real estate, construction, surveying, mapping, agriculture, industrial inspections, utilities inspections and many more. The course covers mission planning, operations, field data collection, data processing, legal implications, data analysis and data deliverables. The course and laboratory will include learning flying micro-drones and preparing to pass the Federal Aviation Administration's Unmanned Aerial Vehicle Airmen (Part 107) exam. The course will have an associated Laboratory component in which students will learn how to properly plan effective flight missions, fly safely and legally, develop risk management strategies, analyze the data captured and convert it into a useful data deliverable.

Type:

Type:

SCI TECH ENGNR

• UES-111 Environmental Science

Prerequisites:

Must be taken concurrently with UES-L111

Credits:

3.00

Description:

Applies the fundamentals of science to environmental issues. Topics include population dynamics and resources, environmental degradation, ecosystems, geologic processes, deforestation, biodiversity, climate change, air, soil, and water resource management, and pollution and risks to health.

Term:

Offered Spring Term

Type:

SCI TECH ENGNR

• UES-L111 Environmental Science Lab

Prerequisites:

Must be taken concurrently with UES-111.

Credits:

1.00

Description:

Laboratory exercises are used to illustrate topics covered in UES 111. Field testing and analysis of environmental samples. Field trips may be required.

Term:

Offered Spring Term

Type:

SCI TECH ENGR

- **UES-121 Science, Art, and the Environment**

Prerequisites:

Take UES-L121 concurrently

Credits:

3.00

Description:

Examines art and cultural objects through the lens of the biological, chemical, and physical principles of the materials and processes we use to make them. Includes consideration of factors important in art conservation. Provides an environmental context for the manufacture and use of art materials and the preservation of cultural objects.

Type:

SCI TECH ENGR

- **UES-L121 Science, Art, and the Environment Lab**

Prerequisites:

Take UES-121 concurrently

Credits:

1.00

Description:

Provides hands-on work with pigments, dyes, and other art materials using the basic principles of science and technology. Students will conduct laboratory experiments that produce art objects and other consumer products. Instruction in safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables, graphs, and graphics. Practice in synthesizing compounds like paints and finishes and in evaluating methods of art conservation.

Type:

SCI TECH ENGR

• UES-225 Geographical Information Science**Prerequisites:**

Take UES-L225 concurrently

Credits:

3.00

Description:

Provides the fundamentals of geographic information science (GIS) including the history of automated mapping. A review of the necessary hardware and software elements used in GIS is presented. Hands-on exercises with computerized mapping software are required.

Type:

SCI TECH ENGR

• UES-L225 Geographic Information Science Lab**Prerequisites:**

Must be taken concurrently with UES-225

Credits:

1.00

Description:

Required companion computer laboratory to be taken concurrently with UES 225.

Type:

SCI TECH ENGNR

Forensic Science

- **FS-103 Introduction to Forensic Science**

Prerequisites:

FS-L103

Credits:

3.00

Description:

Application of the principles of forensic science in evaluating physical evidence, with emphasis on its role in criminal investigation. Class experiences may include guest lectures and field trips. 3-hour lecture. Normally offered Fall

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **FS-L103 Introduction to Forensic Science Lab**

Prerequisites:

FS 103 concurrently

Credits:

1.00

Description:

Laboratory experiences related to the collection and analysis of physical evidence as performed by forensic science professionals. Experiments may include forensic microscopy, drug analysis, forensic serology, physical patterns, fingerprint and firearm evidence analysis techniques. 3-hour laboratory. Normally offered Fall

Term:

Offered Fall Term

Type:

SCI TECH ENGR

Neuroscience:

- **NEUR-101 Intro to Neuroscience**

Credits:

4.00

Description:

Introduces the field of neuroscience, the study of the organization and function of the nervous system of humans and other animals. Neuroscientists examine how individual neurons function as signaling devices, how groups of neurons operate as circuits to produce fundamental units of behavior, and how much larger systems in the brain subserve complex functions such as memory and consciousness. Topics include the neuron and neural transmission, the overall function and organization of the nervous system, the development of the brain, neural plasticity, sleep, memory and other higher cognitive functions. Normally offered alternate years.

Type:

SCI TECH ENGR

Physics:

- **PHYS-111 College Physics I**

Prerequisites:

Take MATH-121 or MATH-134 or MATH-165 or permission of Physics department chair; PHYS L111 taken concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **PHYS-L111 College Physics Lab I**

Prerequisites:

PHYS 111 concurrently

Credits:

1.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course. Error propagation, use of Excel, laboratory notebooks and formal reports required.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **PHYS-151 University Physics I**

Prerequisites:

MATH-121, MATH-165 or MATH-164 and PHYS L151 concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **PHYS-L151 University Physics Lab I**

Prerequisites:

PHYS 151 concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **PHYS-152 University Physics II**

Prerequisites:

PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

Credits:

3.00

Description:

This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

• PHYS-L152 University Physics Lab II

Prerequisites:

PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

• PHYS-153 University Physics III

Prerequisites:

MATH-121, MATH-164 or MATH-165

Credits:

3.00

Description:

This calculus-based course is the introduction of the topics of modern physics. It begins with special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom. Then Schrodinger's equation is introduced with use of wave functions, particle box, barrier penetration, quantum mechanical tunneling, the Pauli Exclusion principle, the development of the periodic table, and the X-ray spectra. Development of solid state physics with bonding in molecules, band theory of solids and semiconductor behavior. The final topics cover nuclear physics, radioactivity, half-life, nuclear fission and fusion, medical uses of radiation, elementary particle physics and introduction to astrophysics.

Term:

Offered Fall Term

Type:

SCI TECH ENGR

• PHYS-L153 University Physics III Lab**Credits:**

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts of special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom.

Type:

SCI TECH ENGR

Science:**• SCI-103 Environmental Science****Prerequisites:**

SCI-L103 must be taken concurrently

Credits:

3.00

Description:

Case study approach to the fundamentals of science applied to environmental degradation, ecosystems, geological processes, population dynamics, deforestation and biodiversity, climate change, ozone depletion, air soil, and water resource management, pollution and risks to health, economics and the environment, politics and the environment, and ethics and the environment.

Term:

Offered Fall Term

Type:

SCI TECH ENGR

• **SCI-L103 Environmental Science Lab****Prerequisites:**

Must take SCI-103 concurrently

Credits:

1.00

Description:

Laboratory exercises to illustrate the topics covered in Science 103. Field-testing and analysis of environmental samples. Field trip required.

Term:

Offered Fall Term

Type:

SCI TECH ENGR

• **SCI-108 Introduction to Cancer Care****Credits:**

4.00

Description:

This course will introduce the students to the top ten U.S. adult cancers, as well as the most common pediatric cancers. Topics to be covered include cancer causes, detection, and prevention. Psychosocial aspects of being diagnosed with cancer and the role nutrition plays for cancer patients will be described. The course will also discuss the major treatment modalities for each cancer including radiation therapy, surgery, chemotherapy, and bone marrow transplants. The goals and objectives of the course will be met through the use of various teaching tools including but not limited to: PowerPoint presentations, videos, guest lectures, and a poster project with a presentation component. Cognitive assessment of the students will be accomplished through homework, quizzes, exams, and a group poster and oral presentation. Students with any type of academic background are welcome.

Term:

Offered Fall Term

Type:

SCI TECH ENGR

- **SCI-111 Introduction to Astronomy**

Prerequisites:

MATH-128 or higher and SCI-L111 must be taken concurrently.

Credits:

3.00

Description:

History of Astronomy from the ancients to Newton; light; telescopes; sun, earth, moon planets, comets, asteroids, meteors; space programs, science and technology in society. Course culminates with a visit to the Clay Center Observatory, where students will be able to make first hand observations. For non-science majors.

Term:

Occasional

Type:

SCI TECH ENGR

- **SCI-L111 Introduction to Astronomy Lab**

Prerequisites:

Take SCI-111 concurrently

Credits:

1.00

Description:

Laboratory experiments and exercises to illustrate the principles discussed in Science 111. Observational exercises using the Celestron telescope, astrophotography exercises, and computer simulations. Course culminates with a visit to the Clay Center Observatory, where students will be able to make first hand observations.

Term:

Occasional

Type:

SCI TECH ENGNR

- **SCI-112 Structure of the Universe**

Prerequisites:

MATH-128 or higher and SCI-L112 concurrently

Credits:

3.00

Description:

Astronomy of the cosmos; sun, stars, interstellar materials, galaxies, pulsars, quasars, black holes; nature of time relativity, cosmology. Course culminates with a visit to the Clay Center Observatory, where students will be able to make first hand observations. For non-science majors.

Term:

Occasional

Type:

SCI TECH ENGNR

- **SCI-L112 Structure of the Universe Lab**

Prerequisites:

Take SCI-112 concurrently

Credits:

1.00

Description:

Laboratory experiments and exercises to illustrate the principles discussed in Science 112. Observational exercises using the Celestron telescope, astrophotography exercises, and computer simulations. Course culminates with a visit to the Clay Center Observatory, where students will be able to make first hand observations.

Term:

Occasional

Type:

SCI TECH ENGNR

- **SCI-113 A Habitable Earth Within the Solar System**

Credits:

4.00

Description:

This course introduces non-science majors to concepts that are central to making our planet habitable. It presents Earth in context of the solar system with a broad view of global climate change and energy resources in a quest to better understand the workings our planet. This course on Earth and Planetary Science is suitable for students who may have taken their last science and math course several years ago, or are just curious about knowing facts on major issues that pertain to the future of our planet. Together with a reading component, this course aims to give students a flavor of how researchers think, investigate and develop conclusions that directly affect our political and economic future. Topics covered in this course range from the solar system to the study of search for other habitable Earth-like planets, search for extraterrestrial life, and evolution of life on Earth. Other characteristics of this course are heavy use of audio-visual materials often including computer animations and simulations, in-class experiment demonstration, and intensive use of INTERNET-based resources.

Type:

SCI TECH ENGR

- **SCI-165 Inner Workings of Physics Universe**

Credits:

4.00

Description:

About 15 billion years ago, (data indicate) the big bang occurred and the universe was born. With it came physical laws and a spectacular array of consequences that lead to the universe as we know it. This non-lab , 4 credit course explores the inner workings of the physical universe in terms of the scientific inquiry which lead to Newton's laws, an understanding of energy, waves, light, electricity, atomic structure, chemical reactions, nuclear physics, particle physics, relativity, and the big bang theory. During the course, students will learn to make use of modern resources to access scientific and technical literature to research a scientific topic. They will learn to distinguish between science and technology (e.g. quantum mechanics and nanotechnology, the discovery of the Higgs boson and the large hadron collider that made it possible, etc.) and to understand how the science, technology, and engineering disciplines play a crucial role in recognizing and solving problems of society and the world that we share.

Type:

SCI TECH ENGR

- **SCI-171 The Built World: How Humans Engineer Environments**

Credits:

4.00

Description:

The most basic needs of humans have not changed - water, food, and shelter - but the means of meeting these needs has. In this course, we will examine how technology-driven societies operate by studying how cities are built and how they function. Topics will include water supply and distribution systems; transportation systems (including road and bridge design and construction); building design, construction, and operation (including skyscraper and sustainable building design), and waste removal systems (municipal and industrial wastewater removal and treatment, solid waste removal and treatment). This is not a course about little gadgets and widgets; this is a course about big engineering marvels; and it emphasizes applications of science - how things work - rather than scientific theory.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **SCI-173 Mapping Our World The Power of Digital Maps**

Prerequisites:

SCI L173 Must be taken concurrently Knowledge of Windows type Application

Credits:

3.00

Description:

Geographic Information Science (GIS) link information (number of fire hydrants on a block) to features on a map (e.g., a point representing street address) that has a designated geographic location (as designated by global coordinates). Unlike paper maps, GIS software allows the production of interactive maps that allows the user to layer data, to indicate spatial patterns, to analyze trends, and to combine different features of the mapped area in novel ways. For example, a business person may wish to use GIS to determine the optimum location of retail outlet (based on the mapped demographics of a neighborhood), while an environmental engineer may use GIS to describe the location of outfalls to see how they correlate to areas of stream pollution. In this course, students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **SCI-L173 Mapping Our World Lab**

Prerequisites:

Must be taken concurrently with SCI-173

Credits:

1.00

Description:

This laboratory illustrates concepts and methods taught in SCI 173. In this lab students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **SCI-181 Science and Life in the 21st Century**

Credits:

4.00

Description:

No longer offered on Boston campus This is a four credit, non-lab, science course that examines the central scientific problems confronting the 21st century. The course studies particular topics and teaches the necessary science around these topics to provide a good understanding of the issues. The topics currently are: Energy, Science and Economic Decisions, Sustainability of Life on Earth, Health and Science.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **SCI-184 Contemporary Science and Innovation**

Credits:

4.00

Description:

This is a 4 credit, project based science course that examines the central scientific problems confronting the 21st century. The course consists of lectures, class discussions, field trips, and in-class hands-on activities designed to familiarize the student with different concepts of the lectures. The current focus is on sustainable energy production. A final team project related to the course topics will be given. This is the version of SCI 183 without a separate lab component. Students who have taken SCI 183, L183 are not allowed to take this course.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **SCI-201 Physics for Future Presidents**

Credits:

4.00

Description:

This course presents a topical introduction to the key principles and concepts of physics in the context of the world events and natural phenomena that confront world leaders and that require informed decisions and responses. Energy, health, counter-terrorism, remote sensing, space programs, nuclear proliferation, and a host of other modern challenges have technological and scientific dimensions, the understanding of which is essential to avoiding disastrous policy decisions. This course considers the application of physics to these societal challenges. The material is covered at a level and pace that a future world leader should be able to handle; the emphasis is on the development of physical reasoning skills, and not on detailed, mathematical problem solving.

Type:

SCI TECH ENGR

- **SCI-210 Earth and Planetary Crystals**

Prerequisites:

Take SCI-L210 concurrently

Credits:

3.00

Description:

This course will provide undergraduate students of various disciplines with an introduction to gems and crystals using interactive, evidence-based teaching approaches. Crystalline forms of matter are critical to our existence. Using innovative teaching strategies of in-class hands-on demonstration, supplemented with visuals of crystal details, the course provides students insights into the formation, alteration and unique properties that make crystals invaluable. Topics range from the study of proteins and nucleic acids to the interior of planets. The in-class lectures will provide a basic guide that will serve as a platform for individually catered in-depth study. Therefore, the course is open to advanced students as well, who can pick up higher level of information for discussion and class projects.

Type:

SCI TECH ENGNR

Some Science division courses may have Math or Computer Science prerequisites; many have other Science prerequisites.

Studies in Literature: 1 course, 4 credits

Choose one Studies in Literature course from those listed below:

- **ENG-113 World Drama I**

Credits:

4.00

Description:

Survey of drama and theatre as part of world culture from classical Greece through 18th-century China. Normally offered yearly.

Term:

Offered Fall Term

Type:

Studies in Literature

- **ENG-114 World Drama II**

Credits:

4.00

Description:

Survey of drama and theatre as part of world culture from the 19th century to the present.

Term:

Offered Spring Term

Type:

Studies in Literature

- **ENG-130 Introduction to Literature**

Credits:

4.00

Description:

Study of poetry, prose, and drama, with emphasis on close reading and literary analysis. Students will compose formal essays discussing the meanings and relationship between texts as well as the author's craft and relationship to the reader. Offered every semester.

Type:

Studies in Literature

- **ENG-135 World Literature in English**

Credits:

4.00

Description:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

Term:

Offered Both Fall and Spring

Type:

Studies in Literature

• ENG-141 Studies in British Literature**Credits:**

4.00

Description:

Study of poetry, prose, and drama from the British literary tradition, with emphasis on close reading and literary analysis. Students will compose formal essays discussing the meanings and relationship between texts as well as the author's craft and relationship to the reader. Offered every semester.

Type:

Studies in Literature

• ENG-142 Studies in American Literature**Credits:**

4.00

Description:

Study of poetry, prose, and drama from the American literary tradition, with emphasis on close reading and literary analysis. Students will compose formal essays discussing the meanings and relationship between texts as well as the author's craft and relationship to the reader. Offered every semester.

Type:

Studies in Literature

- **ENG-151 Introduction to African-American Literature**

Credits:

4.00

Description:

Literature has the capacity to record and interrogate history in an imaginative and artistic context. African-American literature is a rich, varied, and complex body of literature that faces our tainted history directly. The authors we will read in this class examine slavery's long-term psychological and social effects while forging a literary history that is at once a part of and apart from American literary history more generally.

Type:

Studies in Literature

- **ENG-152 Horror Fiction**

Credits:

4.00

Description:

This course focuses on the reading and analysis of horror literature and the ways in which horror reflects and represents personal and cultural anxieties. Readings will include both classic and contemporary authors, for example, Edgar Allan Poe, H.P. Lovecraft, Shirley Jackson, Stephen King, and others. Assignments will include analytical essays as well as creative writing.

Type:

Studies in Literature

- **ENG-153 Literature of War**

Credits:

4.00

Type:

Studies in Literature

- **ENG-155 Young Adult Literature**

Credits:

4.00

Description:

Young Adult Literature's recent explosion in popularity raises important questions about the stories it tells, the values it promotes, and the audiences it seeks. This course approaches the YA phenomenon as one with deep historical roots as well as contemporary cultural relevance. From nineteenth century classics to current series favorites, literary works focused on young people reframe perennially fresh narratives about coming of age, negotiating personal identity, and navigating a complex moral universe. This course also considers YA literature as part of an evolving network of writers, readers, publishers, critics and filmmakers.

- **ENG-157 Poetry and Religion**

Credits:

4.00

Description:

This course will use close readings to examine poetry as a heightened form of language seeking to make contact with divine sources of faith. We will consider poems that provide examples of the struggle to attain belief, as well as poems that deny belief. Language as both the grammar of ascent and the locus of descent. The position of human beings in relation to God, or the gods, or the absence of the divine.

Type:

Studies in Literature, Classics Minor

- **ENG-161 Writing the American West**

Credits:

4.00

Description:

In 1893, Frederick Jackson Turner famously declared that the American frontier (i.e., the West) had closed for good. To a certain extent, Jackson's proclamation was meant to demarcate the end of the 19th century. But perhaps more importantly, it marks the beginning of a distinctly American literature that began, ironically, by mourning its own demise. In this course, we will journey among some of the more significant signposts and detours that have marked Western U.S. literature in the 20th Century. Along the way, we will question just where, exactly, the West begins and ends (The Mississippi River? The Great Plains? The Rockies?), and think about whether or not Turner's frontier thesis continues to

hold true (if it ever did). We will consider whether the broad rubric of The West is adequate to describe the various sub-regions within this portion of the United States, and we'll examine the genres which seem as if they could not have happened anywhere else. We will also interrogate differences in the literature across gender lines: how, if at all, does the literature written by men and by women differ? Above all, we will strive to come away with a deeper understanding of this vitally American, and vitally Wild literary place.

Type:

Studies in Literature

• ENG-213 English Literature I

Credits:

4.00

Description:

Study of major writers of England from the beginning to the mid-18th century. Regularly assigned essays on the reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Type:

Human Behavior & Societies

Economics:

- **EC-151 Economic & Human Geography**

Credits:

4.00

Description:

The study of how economic and human activity is distributed across space, the reasons for these spatial distributions, and the processes that change the spatial organization of economic activity over time. Topics include: maps, map projections, and geographic information systems; population geography; the organization and location of cities, towns and villages; transportation and communication policy; industrial location; the geography of world trade; and geographic features of economic development. The course takes a global perspective, and draws on cases and examples from all over the world. Cultural Diversity B

Type:

Asian Studies, Human Behavior & Societies

Government

- **GVT-110 Introduction to American Democracy**

Credits:

4.00

Description:

An introduction to the American political system and constitutional framework. Focus will be on the interplay of various institutions (the Presidency, Congress and the Judiciary) in creating public policies. Contemporary public issues will be discussed, as will the role of political theory in shaping American

democracy. Attention will be given to the role of the news media, public opinion, political ideology, political parties and interest groups in the American system.

Type:

Human Behavior & Societies

• GVT-115 Evolution of the Global System

Credits:

4.00

Description:

The goal of this course is to introduce the student to the main actors, social facts and processes that shaped the international system in the nineteenth and twentieth centuries. By analyzing the spread of industrialization, the race for colonies, the thrust of imperialism, and the rapid growth of nationalism, among other factors, this course explains the contradictory and simultaneous trends of unprecedented levels of prosperity and violence in Europe and beyond. While the course examines the role of the United States in the international system, particularly in light of its dominant role since the early twentieth century, it also emphasizes the developments taking place in other regions such as Asia, Africa and Latin America. This will allow students to understand the global arena as a space of complex interconnections involving varieties of forms of production, national political cultures and idiosyncratic traditions. This course sets the foundations for other courses in International Relations and Regional Studies

Type:

Human Behavior & Societies

Psychology:

• PSYCH-114 General Psychology

Credits:

4.00

Description:

Surveys core theoretical concepts and contemporary empirical research from the major sub-fields of psychology: physiology; perception; cognition; learning; emotion; motivation; development; personality; psychopathology; psychotherapy; and social behavior. Required for psychology majors. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Human Behavior & Societies

Sociology:

- **SOC-113 Introduction to Sociology**

Credits:

4.00

Description:

An introduction to the sociological understanding of human interaction, group process and social structures. Students are introduced to basic concepts, theories and methods of sociological investigation. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Human Behavior & Societies

- **SOC-116 Social Justice**

Credits:

4.00

Description:

An examination of traditional and contemporary problems associated with major social institutions such as the family, economics, government and education. Social forces related to ethnicity, social class, health and welfare, and urbanization are also included. Alternative remedial measures based on behavioral science theories are discussed. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Human Behavior & Societies

- **SOC-224 Families in Contemporary Society (Spain)**

Credits:

4.00

Description:

Spain has experienced major socio-demographic changes since the mid 1970s. These transformations mainly arise from the new role of women in society and, in particular, women's higher levels of education, work experience, and labor market attachment. The changes in women's labor force participation have occurred in conjunction with a progressive postponement of main family events, such as leaving the parental home, forming a partnership and having children, as well as with a reduction in the family size. Spain is, indeed, characterized as having one of the lowest low fertility levels within Western industrialized countries, a pattern that is exacerbating the ongoing process of population aging. This picture partly reflects the conflicting relationship that currently exists between women's labor force participation and the accommodation of family responsibilities: the so-called work/family balance. Ongoing differences among countries have been accounted for by different explanatory factors that involve socio-economic, cultural and social policy dimensions. From a comparative perspective, the course is intended to cover recent debates, controversies, and research on family formation and family dilemmas in contemporary Spain.

Credits:

4.00

Description:

This course will introduce students to a selection of Great Books from around the world from the 17th century to the 21st, such as Don Quixote (Spain), Madame Bovary (France), The Communist Manifesto (Germany), The Origin of Species (England), War and Peace (Russia), On Dreams (Austria), Night (Hungary), Things Fall Apart (Nigeria), Satyagraha (India), I Am Prepared to Die (South Africa), Saeed the Pessoptomist (Israel), The Rouge of the North (China), and The House of Spirits (Chile). Readings may vary at the discretion of the instructor.

Term:

Offered Spring Term

Type:

Social & Intellectual HST

- **ENG-266 Mad Men: Reading Visual Narratives**

Credits:

4.00

Description:

This course will focus on the cultural phenomenon of the TV Series Mad Men, considered by many to be the foremost example of Quality TV produced during the so-called golden age of television and engage with it on visual, cultural, literary and filmic levels. The basic premise of the course is that the current practice of binge watching one's favorite shows should be a heightened experience rather than a guilty pleasure, one akin to reading a novel. Watching a complex and sophisticated TV narrative involves taking into account the viewer's positionality as a filmic consumer, textual critic and social commentator. The class will consider various theoretical approaches to television narrative, beginning with ideas gleaned from the discourse of visual literacy, and proceed by applying textual analysis adapted from the more traditional modes of literary studies and film analysis. A combination of critical and evaluative sources will be examined, including book-length studies of the series, individual essays based on the series' appeal to style, American popular culture, advertising, gender roles, race, and 60s nostalgia. Additionally, the recent phenomenon of the series recap will serve as the touchstone to

the class's collective viewing of the series and students will be challenged to synthesize and assess these popular on-line critiques as they draft their own recaps and creative readings of the episodes. The entire first two seasons of Mad Men will be studied and the invaluable resource of director/producer commentaries will be incorporated into the study of the series with a view to acquiring critical insights and analytical skills that may be applied to other quality TV series that students currently enjoy watching.

Environmental Science:

- **UES-325 Environmental History of US**

Credits:

4.00

Description:

Explores how Americans have understood the environment and their relationship to it through analysis of classic environmental texts, historical contexts, and societal perspectives. Analyzes how the environment has changed from pre-colonial times to the present and how these changes have been described through the lens of environmental history. Themes include differing viewpoints of European and indigenous peoples toward the natural environment, the impacts of the Western expansion on native species and landscapes, the rise of industrialism and its impacts on natural resources and ecosystems, and the rise of 20th century environmentalism.

Social & Intellectual HST

• HST-251 Modern East Asia**Credits:**

4.00

Description:

China, Japan, and Korea - East Asia's critical players - share many historical influences, but each has a distinct culture, and they competed with each other for much of the twentieth century, proud of their achievements but feeling threatened by their neighbors. Lectures interspersed with movies and documentaries to show how East Asia has developed in the past one-hundred-plus years.

Type:

Social & Intellectual HST

- **HST-260 Asian Peoples and Cultures**

Credits:

4.00

Description:

Introduces the peoples of Asia and the cultures they have created. Particular attention is paid to the lives of the common people in both historical and contemporary times. By understanding the richness and complexities of daily life in Asia, we will understand the continuities and discontinuities brought on by social, cultural, and economic changes. We will gain an appreciation of our fellow human beings in Asia.

Type:

Social & Intellectual HST

- **HST-268 History of the Mediterranean**

Credits:

4.00

Description:

Explores the history of the Mediterranean from the ancient times to the 20th century, with emphasis on the extraordinary interaction between the rich cultural, ethnic and religious backgrounds of the peoples of Europe, Middle East, and North Africa.

Term:

Occasional

Type:

Social & Intellectual HST

- **HST-312 Renaissance and Reformation Europe**

Credits:

4.00

Description:

Explores the intellectual and cultural developments of the Renaissance, and of the Protestant and Catholic Reformations in their social and political contexts. Topics include: Humanism, the rise of the city-state; art, and science; changes in family and social life; the causes of the Reformation

(intellectual, social, technological); Calvinists, Lutherans, and Radical Reformers; Counter-Reformation and its political consequences; the Wars of Religion.

• HST-383 Boston: Heritage of a City

Prerequisites:

One History course

Credits:

4.00

Description:

Boston from its foundation in 1630 to its development as a 21st century metropolis. From the Massachusetts Bay Colony, to cradle of the American Revolution, to a Yankee merchant capital, Brahmin cultural center, and immigrant melting pot. When offered in the hybrid format, this course will meet at the regularly-scheduled time, but lectures and other course materials will be available on the course Blackboard site in case you cannot attend.

Term:

Offered Fall Term

Type:

Social & Intellectual HST

- **HST-394 Slavery in Film, Literature and History**

Credits:

4.00

Description:

A seminar on slavery in the United States as depicted in history, literature, and film. Topics may include resistance to slavery, honor, the attack on slavery, the cultural and social worlds of masters and enslaved people, the thought of masters and enslaved people, women and slavery, and/or slavery as an economic institution.

Type:

Social & Intellectual HST

- **HST-412 Europe in the 20th Century**

Credits:

4.00

Description:

Examines the political, economic, social and cultural developments of the principal European states since 1900. Topics include: World War I; the social and economic dislocations of the 1920s and 1930s; the rise of Fascism and National Socialism; World War II; the remains of colonialism; modernization and Americanization since the 1960s; the European Union; Europe after the Cold War; and throughout the twentieth century, the importance of class and class conflict, nationalism, and war in shaping the European experience.

Term:

Occasional

Type:

Social & Intellectual HST

- **HST-426 Politics and Culture in Europe 1919-1939**

Credits:

4.00

Description:

Explores the social and political development of European society between the two world wars, primarily through the literature, art, and films of the period. Topics include: the dissolution of pre-1914 middle class society; deviance and sexuality in the 1920s; the role of decadence in art and the Fascist response to deviance in life and art; women, workers, and the new technology; the rise of Fascism; political engagement and polarization throughout European society in the face of economic and social crisis.

Term:

Occasional

Type:

Social & Intellectual HST

- **HST-489 Germany: Film, Politics, Memory Since 1945**

Credits:

4.00

Description:

Explores German history since 1945 through film, newsreels and other archival footage, war memorials and museums, novels, published diaries, memoirs, and recent historical scholarship. Topics include the representation, in film and other texts, of: post-war rebuilding; the German Economic Miracle; divided Berlin; 1960s and 70s radical politics; coming to terms since 1945, with Germany's Nazi past and the Holocaust; coming to terms since 1990 with the Stasi and East German past; Ostalgie (nostalgia in the 21st century for some aspects of East German socialism); the multi-cultural society that is Germany today, with new Turkish, Greek, Russian, Arab, and even Israeli communities.

Type:

Music History:

- **MUH-101 History of Music I**

Credits:

4.00

Description:

Surveys Western music from CE800-1800, from Gregorian to Beethoven; selected major composers, representative masterworks, and the musical styles of the Medieval, Renaissance, Baroque, and Classical periods; links the music to some of the major historical, cultural, artistic, and intellectual trends of these periods. Normally offered yearly.

Term:

Offered Fall Term

- **MUH-102 History of Music II**

Credits:

4.00

Description:

Surveys Western art music from 1800-present, from Schubert to Jennifer Higdon; selected major composers, representative masterworks, and the musical styles of Romantic, Contemporary, and post-Modern periods; links the music to some of the major historical, cultural, artistic, and intellectual trends of these periods. Normally offered yearly.

Term:

Offered Spring Term

- **MUH-211 Music of the United States**

Credits:

4.00

Description:

Surveys American music from Colonial times to the present; various attempts to create an indigenous musical style; vernacular and art music genres including folk, concert, and religious music, jazz and musical theatre; includes music of Billings, Amy Beach, Ives, Copland, Bernstein, and Libby Larsen. Normally offered yearly.

Term:

Alternates Fall & Spring

Philosophy:

- **PHIL-210 History of Ancient & Medieval Philosophy**

Credits:

4.00

Description:

The study of philosophical thought from the period of the ancient Greek philosophers through the Medieval thinkers, including such philosophers as Socrates, Plato, Aristotle, Epicurus, Zeno, Parmenides, Pythagoras, Protagoras, Augustine, Aquinas, Anselm, and Abelard. An introductory course designed to equip the student with a well grounded understanding and appreciation of Philosophy. 1 term - 4 credits. Normally offered every year.

Term:

Offered Fall Term

Type:

Classics Minor, Social & Intellectual HST

- **PHIL-219 Philosophy of Art**

Credits:

4.00

Description:

What counts as art? What is beauty? Are there objective standards of beauty? This course examines the nature of aesthetic experience, art, beauty, and creativity. Through the classic and contemporary readings, the students will be introduced to philosophical issues concerning the meaning of art, artistic representation, perceptions of art, interpretation, and criticism. Students will be encouraged to reflect on their own experience of art and explore the relationships among the artist, the audience, the artwork, and the world. 1 term - 4 credits. Normally offered every third year.

- **PHIL-250 Social & Political Philosophy**

Credits:

4.00

Description:

An examination of persistent debates in political and social philosophy, such as the meaning of property and welfare, the tensions between liberty and equality, censorship and freedom of expression, the relation of church and state, the possibility of political education and civic virtue, legitimacy of the state and revolution, war and problems of end and means, addressing historic

injustice, such as racism, genocide, or sexism, among other topics. The class will focus on no more than two such themes. Students will read both classic and contemporary writings to address both the historical roots and the contemporary treatment of these questions. 1 term - 4 credits. Normally offered every year.

Term:

Occasional

Type:

Social & Intellectual HST

Theatre:

- **THETR-260 Broadway Musicals**

Credits:

4.00

Description:

This course is a survey of American musical theatre from its roots in the mid-19th century to the present. It provides the analytical tools and historical insight to more fully appreciate Broadway's greatest musicals and musical theatre artists. Students will explore the ways in which American forms of popular entertainment helped to shape Broadway musicals from their infancy through their adulthood. The course also explores the ways in which musicals provided opportunities for African-Americans, women, immigrants, and the GLBT community.

Term:

Offered Fall Term

- **THETR-266 Intro to Theatre: 20th Century**

Credits:

4.00

Description:

Picking up chronologically where THETR 225 leaves off, this survey course is designed to provide students with an understanding of modern Western theatre. Beginning with a melodrama, plays will include representative works of realism, naturalism, expressionism, epic theatre, theatre of cruelty, theatre of the absurd, and metatheatricity. Lectures and class discussions will explore how these concepts translate to acting and production techniques as well as what they imply as artistic responses to a modern and post-modern world. Satisfies a core requirement for Theatre Majors.

Term:

Offered Spring Term

Women's & Gender Studies:

- **WGS-111 Women, History, & Culture**

Credits:

4.00

Description:

Explores the roles and images of women in Western culture and the realities of women's everyday lives through literature, film, history, art, psychology, and recent feminist scholarship. Analyzes gender inequalities and the influence of gender on social structure, human behavior, and artistic expression. Topics include: the social construction of gender and identity; domestic prescriptions for women; women and work; intersections of gender, class, and race in American society; sexualities and identity; the politics of motherhood and reproductive rights; educating girls; negotiating male privilege and structural inequalities; representations of women in Western art and film; and women as artists and gendered models of creativity in art, film, fiction, and science.

Term:

Offered Both Fall and Spring

Type:

Social & Intellectual HST

- **WGS-115 Introduction to Gender Studies**

Credits:

4.00

Description:

Introduces the key topics and debates that have shaped the field of gender studies, including queer studies, masculinity studies, and women's studies. Through lecture and class discussion of texts from literature, film, history, psychology, and sociology, explores the pervasive influence of gender on the structure of society and our everyday experiences and the role that gender plays in our understanding of love, friendship, sexuality, and even violence. Topics include: biological arguments about gender and sexuality; the social construction of gender and identity; intersections of gender, race, class, and sexuality; masculinity and femininity; and theories of sexual difference and the construction of sexuality.

Term:

Occasional

Type:

Social & Intellectual HST

- **WGS-311 Engendering Entertainment: Feminism and Popular Culture**

Credits:

4.00

Description:

Investigates the complex intersections between feminism and popular culture through several different lenses: by exploring, how feminists make arguments about popular culture; by looking at the complexities of public femininity in today's popular culture, including figures such as Lady Gaga and Katy Perry and television shows like *The Bachelor* and *Grey's Anatomy*; by focusing on a variety of articulations of feminism within mass media, blogs, social media, and popular books such as Ariel Levy's *Female Chauvinist Pigs*, and Caitlin Moran's *How to Be a Woman*. Along the way we will ask questions about: what makes a work of art feminist; how modern media contributes to or distracts us from a variety of political debates in the realm of female equality and how can we, as individuals, use modern media to create and advance smart, feminist arguments.

Type:

Social & Intellectual HST

- **WGS-315 Feminist Thought**

Credits:

4.00

Description:

Investigates how feminists, both today and in history, have understood inequality and difference and looked for the best ways to address these issues and bring about social justice. Examines how feminist theorists help us to understand how gender and other social categories, such as race, class, sexuality, disability, age and nationality, are constructed within and through each other; and analyzes feminist engagements with liberalism, socialism, psychoanalysis, existentialism, post-colonialism, critical race theory, and queer theory, as well as consider anti-feminist arguments. Readings include classic critical texts by authors including Mary Wollstonecraft, Emma Goldman, Virginia Woolf, Chandra Mohanty, Gloria Anzaldua, and Judith Butler.

Type:

Social & Intellectual HST

- **WGS-335 Queer Narratives**

Credits:

4.00

Description:

Explores the stories that help us to understand communities, identities, and bodies that could be considered queer, and the ways that film, music, memoir and fiction have discussed queer as different, unusual, or other. Texts include the documentary, "Paris Is Burning", Frank Ocean's 2012 album, "Channel Orange", and Janet Mock's recent memoir, "Redefining Realness", as well as foundational queer theory from Judith Butler, Eve Kosofsky Sedgwick, and Lee Edelman, among others, to help build a framework for approaching and interpreting both fictional and non-fictional accounts of queer lives.

Students with 15+ transfer credits of college or university work are exempt.

Please note that not all courses are offered each semester. Students should contact their advisor to learn about current course offerings.

Choose one Seminar for Freshmen course from those listed below:

- **SF-101 Fixing the World- Energy and Water: The Science of Solutions**

Credits:

4.00

Description:

Two of the most daunting challenges the world faces (or will face) is how to provide for both its growing energy needs and potable drinking water. Regular news events include climate change, droughts, flooding, and petroleum struggles. Human nature often requires a severe crisis before it responds. This course will investigate the historical science driving the use of energy since the Industrial Revolution to convert energy resources into work, including the steam engine, the electric motor, and the internal combustion engine. It will also consider alternative energy options to fossil fuels, such as solar, wind, geothermal, and ocean power. Along the way we will consider the evidence for Global Warming and Climate Change. We will look into human nature, simple life styles, conspiracy theories, and the influence of those in power to shape human opinion. We will also consider how our water supply is provided and where it goes after being used. What options do developing countries or drought racked areas have to remedy their water needs? Although the course pursues a scientific understanding of these issues, the mathematics used will be gentle, and a larger emphasis will be placed on the intuitive appreciation of these concerns.

- **SF-116 Enlightened Insanity**

Credits:

4.00

Description:

Rain or shine, the great 18th century Enlightenment philosophers would meet at the famous cafes of Paris to discuss their ideas, and to observe and criticize society. From these informal debates emerged ideas that are at the core of our modern understanding of the nature of society, marginality, human nature, civil rights, the essence of creativity and genius. Come join us in the quest to understand, define, observe, and analyze the key ideas and concepts of these great thinkers, such as Rousseau, Diderot, and Voltaire, still so relevant in our time. We will read key works of these creative thinkers and philosophers. We will enrich our experience and understanding through the use of film, theatre performances, museum visits, as well as the occasional cafe debate.

- **SF-126 The Boston Theatre Scene: the Inside Experience**

Credits:

4.00

Description:

Using the current Boston theatre season as its syllabus, this writing- and analysis-intensive course will explore several plays in production at some of Boston's many professional theatres. We will study the script of four to five plays before attending performances of those works. Students will gain insights on the world of theatre through backstage tours and conversations with theatre professionals such as producers, directors, actors, designers, playwrights, and critics. Students must be available for evening (usually Wednesday) performances. A fee for student-rate tickets will be assessed.

- **SF-132 The Beatles: Here, There & Everywhere**

Credits:

4.00

Description:

This seminar will investigate the impact and legacy of the Beatles. The Fab Four deserve our scholarly attention as musical innovators and as cultural avatars of the 1960s, an era that still exerts influence today. We will examine the many ways in which the Beatles rocked the establishment and became defining figures in post-war youth culture. We will also discuss other media (the visual arts, film, fashion, style) and fields of study (mass media, marketing, recording technology, copyright law, English history) using the Beatles as our guides.

- **SF-151 Getting Over It: Dealing With the Aftermath of Group Conflict/Mass Atrocity**

Credits:

4.00

Description:

Once violent conflict between two groups has ended, what is the best way to transition back to normality coming to terms with the past or simply moving on? To answer these questions we will examine the debates surrounding war crime tribunals, truth commissions, lustration policies, and reparations in the second half of the 20th century. Case studies will include post-apartheid South Africa, post-WWII Germany, and the Israeli/Palestinian conflict. We will discuss the philosophical problems raised by each of these instruments, as well as on the political, legal, and practical difficulties their implementation present. Cultural Diversity B

- **SF-156 The Mask Behind the Face: Personas, Personalities, and Perception. Acting in /Out Life**

Credits:

4.00

Description:

The theatre has always been a metaphor for life. In modern times life has become theatre. This seminar will confront the idea of real life and the eroding boundary between performers and audience. Students will study the roots of the contemporary obsession with stars and stardom, a mania that began in the 18th century and flourished in the 19th century. We will look at performance studies, performers memoirs, plays, and films that dramatize this dilemma.

- **SF-173 Crime in American Society**

Credits:

4.00

Description:

Popular beliefs about crime are often inspired by the media and by specific criminological theories. These theories about and media images of crime will be examined in detail, including the hits and misses.

- **SF-174 Tragedy and Literature**

Credits:

4.00

Description:

This course will focus on classic works of ancient and modern literature that examine the human condition from a tragic perspective. We will concentrate on close readings from the following texts: Homer's Iliad, Sophocles' Antigone, The Bhagavad-Gita, Shakespeare's Othello, Chekhov's short stories, and Joyce's Dubliners.

Type:

Classics Minor

- **SF-175 War and Apocalypse in Science Fiction**

Credits:

4.00

- **SF-178 Sacred Hoops & Sneaker Pimps: Understanding the American Hoop Dream**

Credits:

4.00

Description:

This course is about the basketball hoop dream played out at the high school and college levels. We will study a wide variety of materials - novels, films, websites, reference works - to understand both the construction, and destruction, of the hoop dream in such diverse places as New York City, Seattle, rural Indiana, suburban Georgia, and the Wind River Reservation in Wyoming. Issues of race and culture will serve as guiding themes as we develop critical theory explaining why the hoop dream has persisted, and adapted, over time, to fit the needs of its believers and supporters.

- **SF-182 Heroes, Antiheroes and Outsiders: Reading the Graphic Novel**

Credits:

4.00

Description:

How is it that comics", a genre often viewed as entertainment for children and adolescents, has become one of the most exciting forms of narrative and visual art? To answer this question, this seminar will examine a range of graphic novels, from those that celebrate their origins in superhero comics, such as Alan Moore's Watchmen, to those that treat subjects not usually considered proper to the comics genre, such as Art Spiegelman's Maus, about the Holocaust, and Alison Bechdel's Fun Home, about the complexities of sexual identity. As we read these works, we will look at how the combination of words and still images makes the graphic novel a unique storytelling form, as well as how artists and writers push the envelope to create new styles and challenge our expectations. In addition to class discussions and writing assignments, we will take a field trip to the Museum of Fine Arts and create a collaborative group graphic novel step-by-step over the course of the semester (all abilities welcome).

- **SF-183 Politics, Power and the Media**

Credits:

4.00

Description:

Is there a relationship between accumulated political power and mass media representations? Is news content impacted by existing political power relations? It is the object of this course to critically analyze the role of the mass media within the framework of existing political power relations in the United States. In particular, the course will focus on the role the mass media plays in promoting and reinforcing dominant political practices and ideologies. The course will begin by exploring various theories of the press, notably its function in a democratic society, as well as the concepts of power and propaganda. We will continue with a series of case studies, complemented by secondary sources that highlight how media representations affect the contemporary distribution of political power in the US. Topics of discussion will include the current US war on terrorism, the ongoing health care debate, the public disavowal of big government", and the concept of a liberal media.

- **SF-189 American Gothic: Edgar Allan Poe, Flannery O'Connor and Annie Proulx**

Credits:

4.00

Description:

This literature seminar will study and compare the short stories of Edgar Allan Poe, Flannery O'Connor, and Annie Proulx. Beginning with Poe as the father of the short story genre in America and exploring his critical theory of the grotesque and arabesque", the class will examine the emergence of the gothic literary idiom as a classic American genre. Critical essays on the gothic aesthetic will be analyzed and film adaptations and documentaries will be viewed.

- **SF-190 Asia in America Fiction and Fact**

Credits:

4.00

Description:

With a focus on some selected ethnic groups from Asia, Asia in America studies the history and current status of Asian Americans in Boston and other parts of the country. We will examine the major reasons why these immigrants chose to leave their home country as well as their expectations and experiences here in America. We will also discuss the issues Asian immigrants have faced in this adopted home as well as the connections and conflicts among different ethnic groups or even within the same ethnic group due to political and socio-economic reasons. The course will include some level of community engagement, through Chinatown tour and service, which may enable us to have a direct contact with the Asian American population and reflect on what is being discussed in class. Through this course, we hope to gain a better understanding of the racial and cultural history of the country and arrive at a deep appreciation of the dynamics of cultural interactions in the twenty-first century. The course fulfills the SCGP requirement.

Type:

- **SF-191 Film Adaptation Film Adaptation**

Credits:

4.00

Description:

Why did they change the ending of the book? The novel is so much better! We will explore the concept and industry of film adaptation. Students will read novels and watch respective film adaptations to explore how the written word is adapted to the screen; both fiction and non-fiction works will be considered. Also, field trips to past film locations in Boston will be taken to explore why specific settings were chosen for respective situations. Additionally, students will create their own written adaptations of source materials, putting into practice the concepts studied in class.

- **SF-197 Sustainability, Energy, and Technology At Suffolk University**

Credits:

4.00

Description:

In this project and team-based course, students study a sustainability problem at Suffolk University and spend the semester developing proposals to address the problem. At the end of the course students will present their proposals to Suffolk University's sustainability committee, and will exhibit their websites and visual aids in the Donahue lobby to educate the Suffolk community about sustainability. If their proposals are well-researched and well-communicated, students can see their ideas actualized while they are still undergraduates.

- **SF-198 Music and the Brain**

Credits:

4.00

Description:

What accounts for the power of music to move us so profoundly? This course explores how our brains and music evolved together: What music can teach us about the brain, what the brain can teach us about music, and what both can teach us about ourselves.

- **SF-199 Unfolding the European Union**

Credits:

4.00

Description:

The EU is a powerful political, economic and cultural block that is meant to play a major role, together with the USA and China, in the creation of a new post-crisis world order. The seminar is intended to cover, at a basic but reachable level, the history, the politics, the culture and the functions of the EU in the beginning of the Twentieth Century. An extraordinary experiment of sociopolitical engineering, comparable to that of the United States of America, the EU has been changing the life of an increasing number of Europeans for over 50 years. No American student could afford to ignore the inner structure as well as the particular peculiarities of such inclusive supranational organization in today's world. Issues as institutional functioning, problems derived from individual state sovereignty, economic coordination to face common challenges, cultural integration, future enlargement, etc. are all indispensable to understand the way in which Europe is changing. But also much more day-to-day issues, such as travel mobility, education exchange programs, citizen's participation, supranational networks of people in the arts or in business, unified labor market, gender participation, human rights, consumer's protection, etc. are all in the process of developing a more robust and functional European Citizenship.

- **SF-1110 Decoding Boston: Signs and the City**

Credits:

4.00

Description:

This interdisciplinary seminar will explore the buildings, monuments, sites, and signs around Boston from the point of view of Visual and Culture Studies. In addition to providing a compelling introduction to the history, major landmarks, and culture of the city, the seminar is specifically intended to improve students' visual literacy: that is, their awareness of their visual environment and their ability to critically analyze the rhetoric of the spaces, buildings, and images with which they are surrounded.

Type:

Local Engagement Experience

- **SF-1122 The Ethics of Peace and War: From The Ancient World to the Present**

Credits:

4.00

Description:

This course will explore historical, ethical and political issues concerned with matters of peace and war. We will examine a variety of different texts: religious, historical, philosophical and literary, but the main emphasis will be philosophical justifications for war and philosophical visions of just peace, with an eye to contemporary questions in the War on Terror. To the extent that we use non-philosophical texts, this will be in the service of focusing the imagination on the philosophical issues and applying theoretical frameworks to historical events.

- **SF-1127 The Vietnam and Iraq Wars: Polarized Perspectives**

Credits:

4.00

Description:

This class will examine some of the many controversies surrounding the Vietnam and Iraq Wars, two conflicts that have been profoundly polarizing for the American people. There are widely divergent perspectives regarding the fundamental questions surrounding each war. Were the reasons for American involvement just? To what extent were the methods used by the United States military during each war just? To what extent did the media play an appropriate role before, during, and after each war? Did opposition to these wars serve primarily to benefit the enemies of the United States or did it constitute a form of patriotism and love of country? This interdisciplinary course will address these and other complex questions by examining the histories, literature, and films (both documentaries and dramatic) that have been produced in response to these wars.

- **SF-1128 Sustainable Media**

Credits:

4.00

Description:

Contrary to a popular perception that information, communication and entertainment technologies are clean, ecologically benign and paperless, the reality of an increasingly digital life is that our fascination with the next best thing in mobile phones, video game consoles, personal computers, digital cameras, tablets, etc., has devastating impacts on our environment. These media devices are manufactured using toxic ingredients in poisonous working condition, require an abundance of energy to operate, and create hazardous waste when disposed. Media technology companies and the advertising industry that markets their wares have successfully persuaded consumers to accept rapid obsolescence and to highly anticipate the latest upgrade. But some consumers, electronics manufacturers, policy makers, and environmental groups are working to change the culture of consumption in favor of sustainable media practices that lessen the environmental footprint of the digital devices we use everyday. The purpose of this course is to understand the problem of unsustainable media, and the possible solutions for a sustainable media system.

- **SF-1129 Beacon Hill: Fact, Fiction, and Fantasy**

Credits:

4.00

Description:

The course will explore the physical geography, history, and image in literature, film, and pop culture of Suffolk University's Beacon Hill neighborhood. The purpose and objective of the course is to provide students with a deep knowledge, understanding, and appreciation of Beacon Hill through examination of written and visual sources, and feet-on and eyes-on experience of the public parts of the Hill.

Type:

Local Engagement Experience

- **SF-1133 Problems and Solutions in Early American History**

Credits:

4.00

Description:

This course will examine four major problems in the early American republic: forming a government; bridging vast distances on the American continent; slavery; international relations. We will explore the various proposed solutions to these problems. Some of the solutions worked well, others were more disastrous than the initial problem. We will read primary documents pertaining to these issues, and try to imagine how men and women considering the problems might have responded to them. What solutions could be proposed? What solutions would work? What were the political, economic, or social difficulties generated by the problem and by the proposed solutions? In considering the problems, we will also learn how to use the various archives close at hand: the Sawyer Library, the Boston Public Library, the Massachusetts Historical Society, and the Massachusetts State Archives. Students will also post their findings on a class blog, and present their work to one another in class.

- **SF-1134 The Meaning of Life**

Credits:

4.00

Description:

What do we live for? Which beliefs, values, and experiences sustain meaningful, fulfilling existence? Are we authors of our destinies or powerless pawns in an unfathomable cosmic game? Does death render all our efforts superfluous? This award-winning course offers a cross-cultural, interdisciplinary exploration of these questions through philosophical and religious texts, art, fiction, autobiography, and psychological studies. The course opens with the Old Testament's book of Ecclesiastes, followed by three units: 1) A Life Worth Living: Humanity's Ideals focuses on the ancient and modern visions of human flourishing; 2) Threats to Meaning: Humanity's Discontents, discusses the disillusionments leading to the loss of meaning; and 3) Recovery of Meaning: Crises and Hopes, explores the post-crisis possibilities of self-discovery and growth. Please visit <http://meaningoflife.cherkasova.org/>

- **SF-1135 Women Warriors: Stories of Captivity, Conversion, and Confession**

Credits:

4.00

Description:

Since the beginning of time, women have been doing battle to themselves, while men have gone to battle against others. Whether it is through converting to Christ, yielding to captors in order to survive, or carrying a baby, this course introduces students to the many ways in which, whatever battles they face, women are warriors; they survive. Utilizing an array of captivity, conversion, and confession narratives by women, and pairing them across the centuries, students will make connections and draw conclusions between early-and mid-19th-century-American and contemporary women. Students will connect, for example, the trials of the 17th-century Puritan captive, Mary Rowlandson, and contemporary hostage, Elizabeth Smart, to explore how women (no matter how different they seem) draw upon unique inner resources to survive.

- **SF-1141 Classical Civilizations: Pathways to Wisdom**

Credits:

4.00

Description:

How is it that the knowledge, intelligence, wisdom and values of the Greeks and Romans still educate and edify the world by providing venues towards leading fulfilling and dignified lives? The guiding principles of their respective civilizations rested upon eight pillars: - Humanism: It was recognized that humans have the potential to master their world and live life to the fullest. -The Pursuit of Excellence: To imagine the highest good and strive to attain it. - Self Knowledge: It is imperative to know oneself before seeking to know the world. - Rationalism: Always question, reason and discern truth from falsehood and never consider any matter superficially. - Restless Curiosity: Often the resolution of one issue leads to the revelations of others mysteries and pursuits which compels further investigation. The wise individual makes this a lifelong endeavor. -Love of Freedom: As long as one brings no harm to others, one must be free to live and discover as much as possible. - Individualism: All are unique and, therefore, must recognize individual strengths and identity. -The Practice of Moderation: The prudence of avoiding extremes in personal and social conduct. In this

course, students will read two (brief) texts on the Greek and Roman contributions to the world and then will proceed with specific readings which illuminate the eight principles above for achieving the good life.

- **SF-1143 In the First-Person: Storytelling in the 21st Century**

Credits:

4.00

Description:

This section of the Seminar for Freshmen will consider the forms, venues, and impacts of narrative nonfiction in contemporary culture. From the exploding popularity of personal essays in the digital age to the living, evolving essays we create on social media, we are constantly narrating and archiving our lives, shaping their content for specific audiences. In doing so, we shape what our experiences mean and represent. In order to analyze the power of narrative nonfiction, we will look at a variety of multimodal texts: essays, podcasts, Instagram and Twitter feeds, stand-up comedy, and storytelling slams, as well historical texts such as the essays of Michel de Montaigne and historical artifacts at the National Archives in Boston. We will also write our own narrative nonfiction, and adapt our first-person stories for listening and viewing audiences, such as the MassMouth story slam and podcasts like This American Life. Additionally, we will practice narrative nonfiction for professional audiences, using storytelling as a way to showcase personal strengths to employers, internship coordinators, and the like.

- **SF-1144 Native Americans: Walking in Two Worlds?**

Credits:

4.00

Description:

Native Americans are often described as walking in two worlds, as they attempt to navigate the process of maintaining their tribal identity and heritage while living in mainstream America. In recent years there has been a shift towards tradition and heritage, and a rejection of Western values and norms in both the US and Canada. In this course we will look at how Native people live in the US and Canada today, and examine the extent to which they are either trying to walk in two worlds or perhaps rejecting the two worlds model. To help us answer this question, we will read about reservation life, the Idle No More Movement, Indigenous History, and current events. We will also watch videos and explore indigenous culture.

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

- **SF-1146 Fido the Friendly Wolf: A Natural History of Dogs**

Credits:

4.00

Description:

This course explores the evolution of dogs from wolves and the ways in which dogs have adapted to their niche in human society. The ecology, behavior, genetics, and adaptations of dogs will be explored in relation to both their wolf ancestry and artificial selection by humans. The course includes 2 mandatory field trips to a wolf sanctuary and an animal shelter.

- **SF-1147 Global (In) Security: From ISIS to Ebola**

Credits:

4.00

Description:

This course reviews the principal features of global and national security as it is currently practiced by tracing the evolution of theories, policies and circumstances whereby current international security is developed. Students will evaluate the nature and origins of war, arms proliferation, military instability, terrorism, genocide, health threats and natural resources depletion.

- **SF-1148 Brave New Worlds**

Credits:

4.00

Description:

Explores themes of adventure, self-discovery, exile, and culture shock in classic and contemporary travel writing (including fiction, poetry, and non-fiction) as well as film. Students will experiment with creative writing of their own, develop theories of cosmopolitan world citizenship, travel through the city of Boston on field trips, and team up to learn about different countries in Suffolk's global network of study abroad programs.

- **SF-1150 Religion in Contemporary Society**

Credits:

4.00

Description:

This course is design to provide students with an overview of the social settings and cultural meanings of religion in the contemporary world. Topics that will be covered in reading and discussions include the rise of religious fundamentalism, religion and violence, women's and men's religious experiences, new religions, and portrayals of religion in popular films. In addition to the readings, students will observe and experience religious expressions and activities through fieldwork assignments. The emphasis on films and fieldwork reflects my belief that religion is made up of lived experiences of actual individuals and communities. In order to understand religion in contemporary society we will make every effort to see (in person or in film) a wide range of religious activities. The films we will see include some of the following: Leap of Faith, Devil's Playground, Kadosh, Women of Hizballah, Singing Stream, A Still Small Voice.

- **SF-1151 Reproduction and Society**

Credits:

4.00

Description:

This course explores relationships between reproductive health and rights both nationally and internationally. Many of our topics fit into two broad areas: conflicts over the control of childbearing (sterilization abuse, birth control, and abortion) and conflicts over who deserves to be a mother, especially when the mothers in question face social stigma and lack political power. Other topics include safe birth and maternal mortality, breastfeeding, infertility and reproductive technology. We also examine the politics of women's sexual and reproductive autonomy, including the policies that shape women's choices to prevent, achieve, abort, or carry to term a pregnancy. Throughout, we are guided by the following questions: Why is reproduction an important site through which to understand society? How do statuses such as race, class, gender, sexuality and ability influence people's reproductive possibilities? What is the role of the state in shaping these experiences? How have communities supported or resisted efforts at reproductive control? Why is reproductive justice central to these answers?

- **SF-1152 The Idea of America: Past, Present, Future**

Credits:

4.00

Description:

A systematic exploration of thinking of and about America, from the founding of the republic to American issues and traditions of thought that reflect upon the founding principles and the unfolding American experiment. The Declaration of Independence and the Constitution will be studied with an eye to their philosophical content and sources. The course will also examine works of philosophers and other thinkers who address conflicts over the meaning of founding principles in the course of the nation's history, from the struggle over slavery to America's contemporary role in the world. Because this course intends to apply theoretical understanding to real life, students will be expected to read contemporary journalism on a regular basis and assess the controversies of today in the light of the nation's philosophical and historical currents.

- **SF-1153 Law, Disease, and Public Health**

Credits:

4.00

Description:

This course is about public health law, which is the study of the legal powers and duties of the various systems of government in the United States (federal, state, and local) in collaboration with their partners (e.g., health care, business, the community, the media, and academe), to ensure the conditions for people to be healthy (to identify, prevent, and ameliorate risks to health in the population), and of the limitations on the power of these systems of government to constrain for the common good the autonomy, privacy, liberty, proprietary, and other legally protected interests of individuals. The prime objective of public health law is to pursue the highest possible level of physical and mental health in the population, consistent with the values of social justice. The course will focus especially on public health law in the area of epidemic disease. Case studies will be made of the Great Influenza of 1918 and the origins and spread of the Ebola virus, culminating in an examination of outbreaks of Ebola in the United States.

- **SF-1154 Introduction to Visual Studies**

Credits:

4.00

Description:

This seminar provides an introduction to Visual Studies, a relatively new interdisciplinary field that examines how images communicate and the roles that they play in society. Students will apply the concepts and techniques of Visual Studies to analyze sites and signs around Boston, such as

advertisements, street signs, fashions, newspaper photographs, buildings, and public spaces. Class projects will increase students' awareness of their visual environment and their ability to critically analyze the visual rhetoric that surrounds us and is often used to manipulate us.

Type:

Local Engagement Experience

- **SF-1155 The Boston Olympics**

Credits:

4.00

Description:

This class will teach students about the key role that sporting events can play in building a city, building its brand and the politics surrounding the process of these things occurring. Topics may include: urban development in general and the transformation of the industrial to the post-industrial Boston; the way in which cities use events like the Olympics to build their place brands; the way an effort like the Olympics can be used to encourage large scale public investment in longer term infrastructure projects that otherwise might not be justifiable; and the way government works with interest and community groups to try to shape public policy.

- **SF-1156 Thinking About the Insanity Defense**

Credits:

4.00

Description:

This course examines sixteen case examples providing a clear and compelling introduction to one of the most important topics in the relation between public policy and law. This course addresses: the history of the insanity defense; the effects of different standards for determining insanity; the arguments for its retention; abolition, and revision; media and other responses to it; and the controversies around pre and post conviction commitment. The case examples illustrates a variety of outcomes and include individuals who were found not guilty by reason of insanity; found guilty even though mentally ill; and not charged because of mental illness.

- **SF-1157 Germany in Film and History, 1945-2015**

Credits:

4.00

Description:

Since 1945, Germany has had a lot of history to reckon with- and 21st century Germany history through film, newsreels and other archival footage, radio and TV shows, war memorials and museums built since 1945, novels, published diaries, and memoirs. We will also read recent historical scholarship to put these cultural texts in context. Topics include the representation, in film and other texts; of: post-war rebuilding, the German Economic Miracle; the building of the Berlin Wall; radical politics of the 1960s and 1970s; coming to terms since 1945 with Germany's Nazi past and the Holocaust; coming to terms since 1990 with the Stasi and East German past; Ostalgie (nostalgia in the 21st century for some aspects of East German socialism); the multicultural society that is Germany today, with new Turkish, Greek, Russian, Arab, and even Israeli communities.

• SF-1158 Global Climate Change

Credits:

4.00

Description:

Conversation about the weather is considered to be the universal icebreaker. Yesterday's sweltering heat, the storm predicted for this weekend, even long-term climate shifts find their way in our daily conversation. Today, however, such casual conversations have an edge to them, because we are realizing that humans play a role in determining the climate shift. In fact, understanding the human fingerprint in the Arctic tundra melting, or a devastating hurricane, has gone well-beyond small talk to become one of the most important challenges our society faces today, and on that is wedded to geopolitics. To meaningfully participate in any dialogue that addresses this challenge people have to be aware of certain key ideas of Physics and Planetary Science. The aim of this course is to provide you with some of the essential facts and pieces of science underlying such questions. This course will enable you to grasp many of the issues that dominate today's political discourse and to develop an informed opinion (your, not our!) for which you can rationally argue.

• SF-1160 Individuals and Society in the Zombie Apocalypse

Prerequisites:

CAS Freshmen Only

Credits:

4.00

Description:

The Walking Dead tells viewers that life in the zombie apocalypse requires people to fight the dead, fear the living. Sociologists want to know why we should fear the living. How do individuals come together and try to recreate society for themselves: either to build community or fight other groups? What role do morals and values have in a society? How does all of this determine life, death, and the struggles people must face? Questions like these will give our class a new view of The Walking Dead and can help us to learn more about the society that we live in where so far the dead have remained in the ground.

- **SF-1162 Space Missions: From Moon to Mars and Beyond**

Credits:

4.00

Description:

It is hard to believe that only 60 years ago, our only close-up view of a planetary body was that of Earth. We are truly living in the Golden Age of Space Exploration, when a new mission every few years brings us spectacular images from either a neighbor in the solar system or galaxies at the edge of the universe. This course will describe the dozen space missions that changed our view of the universe, ranging from our solar system to the most distant galaxies.

- **SF-1163 Spellbound! Witches, Wizards and Spirits In American Literature**

Credits:

4.00

- **SF-1164 Reinventing Europe: Beyond Brexit and Secular Stagnation**

Credits:

4.00

Description:

While newspaper headlines focus on the multiple problems Europe is facing today, the evolving adaptation of European nation states and the integration process receive less attention. Brexit and economic crises seem to be synonymous of Europe today, but facts such as the European Union accepting five new members in the coming five years or Europe being the most advanced environmental actor or the main international provider of official aid are often ignored by public opinion. This Seminar for Freshman examines the dynamic evolution of the integration process in Europe in the context of globalization. Three sections articulate the main debates and tensions in the interplay between national and supranational institutions and policies. The first part analyzes how eight European countries have forged their national preferences to delineate their level of immersion in the

integration process; it later proceeds with the examination of the main historical events in the history of the integration process. The second part explores the functioning of the EU institutions in order to grasp the essence of the complex policy-making in the Europe of 28 members. The third and final section presents the analysis of the main areas of the EU policy making such as agriculture, monetary and economic issues, among others, and observes the main developments in the area of EU external relations.

- **SF-1165 History of Boston**

Credits:

4.00

- **SF-1166 Cinema-Monde: Global Challenges on Film**

Credits:

4.00

Description:

This course focuses on French-language films - with subtitles! - that address pressing social issues of the 20th and 21st centuries, such as hunger, female genital mutilation, immigration, racism, economic inequality, genocide, gender, sexuality, colonialism and post-colonialism.

- **SF-1167 Fantasy Fiction: Imaginary Worlds**

Credits:

4.00

- **SF-1168 The Real Thing: the Pursuit and Problems Of Authenticity**

Credits:

4.00

Description:

This course will focus on the concept of authenticity in American culture, from its origins in the early 19th century to the present. When the advertising gurus of Coca-Cola branded it as "The Real Thing," they were exploiting something powerful: the idea of something real, stripped of any falsity or

illusion. Humans have always desired to know the world and others as they really are," but this desire is particularly strong in the modern world: witness the eagerness to discover one's true self," cut through the B.S., obtain the genuine article, and live authentically. In this course we will interrogate this pursuit of the Real Thing. In various ways, the texts we study both embrace authenticity as an ideal and also question its goodness, usefulness, or even its very possibility. We will thus confront a number of interrelated questions: Where does this desire for authenticity come from? What counts as authenticity," in life and in art? Is authenticity really a virtue to live by? How does it shape artistic and literary expression? Is there even such a thing as the real you This course will be divided into three units. In the first unit, Counterfeiters and Self-Made Men," we will study how a commitment to authenticity arises in antebellum American literature and culture during a time of rapid national expansion and invention. Readings will include texts by Henry David Thoreau, Ralph Waldo Emerson, Herman Melville, and P.T. Barnum. In the second unit, Authenticity and Contamination,"we will consider two major ways in which authenticity becomes idealized around the turn of the 20th century: as artistic ideal set against fears of mass cultural production, and as a cultural ideal set against fears of racial and cultural mixing. Readings will include texts by Ernest Hemingway, Nella Larsen, Jean Toomer, and William Carlos Williams. In Unit Three, Buying and Selling Authenticity," we will examine how authenticity becomes commodified (

- **SF-1169 Immortality: Real and Imagined**

Credits:

4.00

Description:

Most of the world's religious traditions have as a part of their doctrines some notion of immortality, rendered both in scriptures as well as iconographically. What precisely is entailed by immortality and why does it constitute such a significant element of so many religious traditions? What can we learn about immortality by investigating various conceptions of the afterlife? Is immortality truly a desirable thing? These questions among others will be examined from the perspectives of philosophy, religion, psychology, anthropology, and biology. Besides being cross-disciplinary, the course will be multi-media in nature. In addition to reading philosophical and religious texts concerning the nature of immortality, students will study various accounts of immortality and the afterlife, examine how the afterlife has been dealt with in (visual) art, literature, and film, and investigate current research into life prolongation (biomedical gerontology).

- **SF-1170 From Philia to Facebook: the Meaning of Friendship**

Credits:

4.00

Description:

The thematic focus of this seminar will be friendship. Friendship is one of the most important of human relationships; one that every student in this seminar has already participated in for many years. It shapes who we are and helps determine who we may become. And while it is a universal phenomenon, it has been practiced quite differently at various times and places in human history. And while we all have an intimate, personal and

practical knowledge of friendship through our own experiences, sometimes things that are so close and so obvious to us can be hard to see. Over the course of the semester we will inquire into friendship from many different angles, trying to gain both a broader and a deeper understanding than our own individual experience allows. We will look at friendship first through the lens of philosophy, particularly through the foundational text of Aristotle, *The Nicomachean Ethics*. We will look at other views of friendship from the ancient world, starting in the past to help us see that friendship has not always been thought of the way we think of it now. After this initial foundation is laid, we will examine other writers and thinkers and take up additional topics like friendship in different cultures, friendship and gender, friendship in and through the arts and include an examination of friendship through the lenses of many different academic disciplines to see how other systematic thinkers conceive of friendship. All along we will be comparing and contrasting with our own personal experiences and considering what modern technology, such as social networking sites, has done to influence friendship, in the way we practice it and the way we conceive it. It is the aim of this class that students not just study different academic points of view, but that they take up the questions and challenges that these thinkers present to them and fully engage with them on a meaningful personal level.

- **SF-1171 Living on and Beyond the Hyphen/Latino Writers in the USA**

Credits:

4.00

Description:

Hyphenated-Americans of Latino origin come from many places and backgrounds. Often perceived as a divide, an either/or that separates and distinguishes one ethnic group from another, the hyphen can also be viewed as a link that connects, integrates and facilitates the formation of new cultural spaces. Through films and written narratives by and about U.S.A. Latino(a)(x)-Americans, students will examine how individuals who live on the threshold between two languages and cultures embrace the challenge of preserving their own identity and moving beyond stereotypes. Each of the Latino/a/x authors that we will read in this course will describe his/her own experiences living in the U.S.A. By examining their views through our own filtered lens we shall try to answer questions like the following: 1. What role does language have in our definition/understanding of cultural identity? 2. How do individuals move beyond the hyphen and stop seeing themselves as hybrids? 3. How can an individual who does not belong to a marginalized group (i.e. one considered less powerful and secondary) understand and empathize with those who do? 4. How does globalization affect the dichotomies that arise in bi-cultural and multi-cultural communities?

- **SF-1172 The United States Mexican Border**

Credits:

4.00

Description:

One hundred and sixty nine years have passed since the Treaty of Guadalupe Hidalgo was signed. It is only fitting to analyze the profound changes that the gain/loss of these territories caused for the citizens of both sides of the border. This course will explore the literature, culture, and history of the United States-Mexican Border and the most pressing problems pertaining to the region. Emphasis will be on contemporary border theater and film.

The works of Salcedo, Galindo, Lopez and others will be studied as well as contemporary films and documentaries such as *Alambrista*, *Senorita Extraviada*, *The Gatekeeper*, *Sin Nombre*, *Wetback: the Undocumented Documentary*, *Victoria para Chino*, *Which Way Home*, and much more. There are no prerequisites for this course. Though the course is conducted in English, parallel readings in Spanish will be made available to those who wish to read and/or compare the original texts.

Students in the CAS Honors Program should choose one Seminar for Freshmen course from those listed below:

- **SF-H101 Fixing the World- Energy and Water: The Science of Solutions**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

Two of the most daunting challenges the world faces (or will face) is how to provide for both its growing energy needs and potable drinking water. Regular news events include climate change, droughts, flooding, and petroleum struggles. Human nature often requires a severe crisis before it responds. This course will investigate the historical science driving the use of energy since the Industrial Revolution to convert energy resources into work, including the steam engine, the electric motor, and the internal combustion engine. It will also consider alternative energy options to fossil fuels, such as solar, wind, geothermal, and ocean power. Along the way we will consider the evidence for Global Warming and Climate Change. We will look into human nature, simple life styles, conspiracy theories, and the influence of those in power to shape human opinion. We will also consider how our water supply is provided and where it goes after being used. What options do developing countries or drought racked areas have to remedy their water needs? Although the course pursues a scientific understanding of these issues, the mathematics used will be gentle, and a larger emphasis will be placed on the intuitive appreciation of these concerns.

- **SF-H116 Enlightened Insanity**

Prerequisites:

CAS Honors students only.

Credits:

4.00

Description:

Rain or shine, the great 18th century Enlightenment philosophers would meet at the famous cafes of Paris to discuss their ideas, and to observe and criticize society. From these informal debates emerged ideas that are at the core of our modern understanding of the nature of society, marginality, human nature, civil rights, the essence of creativity and genius. Come join us in the quest to understand, define, observe, and analyze the key ideas and concepts of these great thinkers, such as Rousseau, Diderot, and Voltaire, still so relevant in our time. We will read key works of these creative thinkers and philosophers. We will enrich our experience and understanding through the use of film, theatre performances, museum visits, as well as the occasional cafe debate.

Type:

Honors

- **SF-H126 The Boston Theatre Scene: The Inside Experience**

Credits:

4.00

Description:

Using the current Boston theatre season as its syllabus, this writing- and analysis-intensive course will explore several plays in production at some of Boston's many professional theatres. We will study the script of four to five plays before attending performances of those works. Students will gain insights on the world of theatre through backstage tours and conversations with theatre professionals such as producers, directors, actors, designers, playwrights, and critics. Students must be available for evening (usually Wednesday) performances. A fee for student-rate tickets will be assessed.

Type:

Honors

- **SF-H178 Sacred Hoops & Sneaker Pimps: Understanding the American Hoop Dream**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

This course is about the basketball hoop dream played out at the high school and college levels. We will study a wide variety of materials - novels, films, websites, reference works - to understand both the construction, and destruction, of the hoop dream in such diverse places as New York City, Seattle, rural Indiana, suburban Georgia, and the Wind River Reservation in Wyoming. Issues of race and culture will serve as guiding themes as we develop critical theory explaining why the hoop dream has persisted, and adapted, over time, to fit the needs of its believers and supporters.

Type:

Honors

- **SF-H182 Heroes, Antiheroes and Outsiders: Reading the Graphic Novel**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

How is it that comics", a genre often viewed as entertainment for children and adolescents, has become one of the most exciting forms of narrative and visual art? To answer this question, this seminar will examine a range of graphic novels, from those that celebrate their origins in superhero comics, such as Alan Moore's *Watchmen*, to those that treat subjects not usually considered proper to the comics genre, such as Art Spiegelman's *Maus*, about the Holocaust, and Alison Bechdel's *Fun Home*, about the complexities of sexual identity. As we read these works, we will look at how the combination of words and still images makes the graphic novel a unique storytelling form, as well as how artists and writers push the envelope to create new styles and challenge our expectations. In addition to class discussions and writing assignments, we will take a field trip to the Museum of Fine Arts and create a collaborative group graphic novel step-by-step over the course of the semester (all abilities welcome).

Type:

Honors

- **SF-H197 Sustainability, Energy, and Technology At Suffolk University**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

In this project and team-based course, students study a sustainability problem at Suffolk University and spend the semester developing proposals to address the problem. At the end of the course students will present their proposals to Suffolk University's sustainability committee, and will exhibit their websites and visual aids in the Donahue lobby to educate the Suffolk community about sustainability. If their proposals are well-researched and well-communicated, students can see their ideas actualized while they are still undergraduates.

- **SF-H1134 The Meaning of Life**

Prerequisites:

CAS honors students only.

Credits:

4.00

Description:

What do we live for? Which beliefs, values, and experiences sustain meaningful, fulfilling existence? Are we authors of our destinies or powerless pawns in an unfathomable cosmic game? Does death render all our efforts superfluous? This award-winning course offers a cross-cultural, interdisciplinary exploration of these questions through philosophical and religious texts, art, fiction, autobiography, and psychological studies. The course opens with the Old Testament's book of Ecclesiastes, followed by three units: 1) A Life Worth Living: Humanity's Ideals focuses on the ancient and modern visions of human flourishing; 2) Threats to Meaning: Humanity's Discontents, discusses the disillusionments leading to the loss of meaning; and 3) Recovery of Meaning: Crises and Hopes, explores the post-crisis possibilities of self-discovery and growth. Please visit <http://meaningoflife.cherkasova.org/>

Type:

Honors

- **SF-H1135 Women Warriors: Stories of Captivity, Conversion, and Confession**

Credits:

4.00

Description:

Since the beginning of time, women have been doing battle to themselves, while men have gone to battle against others. Whether it is through converting to Christ, yielding to captors in order to survive, or carrying a baby, this course introduces students to the many ways in which, whatever battles they face, women are warriors; they survive. Utilizing an array of captivity, conversion, and confession narratives by women, and pairing them across the centuries, students will make connections and draw conclusions between early-and mid-19th-century-American and contemporary women. Students will connect, for example, the trials of the 17th-century Puritan captive, Mary Rowlandson, and contemporary hostage, Elizabeth Smart, to explore how women (no matter how different they seem) draw upon unique inner resources to survive.

Type:

Honors

- **SF-H1146 Fido the Friendly Wolf: A Natural History of Dogs**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

This course explores the evolution of dogs from wolves and the ways in which dogs have adapted to their niche in human society. The ecology, behavior, genetics, and adaptations of dogs will be explored in relation to both their wolf ancestry and artificial selection by humans. The course includes 2 mandatory field trips to a wolf sanctuary and an animal shelter.

Type:

Honors

- **SF-H1148 Brave New Worlds**

Prerequisites:

Restricted to CAS Honors students

Credits:

4.00

Description:

Explores themes of adventure, self-discovery, exile, and culture shock in classic and contemporary travel writing (including fiction, poetry, and non-fiction) as well as film. Students will experiment with creative writing of their own, develop theories of cosmopolitan world citizenship, travel through the city of Boston on field trips, and team up to learn about different countries in Suffolk's global network of study abroad programs.

Type:

Honors

- **SF-H1152 The Idea of America: Past, Present, Future**

Credits:

4.00

Description:

A systematic exploration of thinking of and about America, from the founding of the republic to American issues and traditions of thought that reflect upon the founding principles and the unfolding American experiment. The Declaration of Independence and the Constitution will be studied with an eye to their philosophical content and sources. The course will also examine works of philosophers and other thinkers who address conflicts over the meaning of founding principles in the course of the nation's history, from the struggle over slavery to America's contemporary role in the world. Because this course intends to apply theoretical understanding to real life, students will be expected to read contemporary journalism on a regular basis and assess the controversies of today in the light of the nation's philosophical and historical currents.

Type:

Honors

- **SF-H1161 The Playwright and the Stage**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

This writing and script analysis intensive course will explore plays across a range periods and styles. The scripts of five plays will be studied and we will attend performances of two of those works at professional theatres in Boston. Other activities will range from a backstage tour to conversations with theatre professionals such as producers, directors, actors, designers, playwrights and critics, in order to lift the script off the page and provide a living experience of theatre. Requires students to be available for evening (usually Wednesday) performances. A fee for tickets at student rates will be assessed.

Type:

Honors

Minimum Total Credits Required for Degree Conferral: 124 credits

2017-2018 Archived Catalog Information

Bachelor of Fine Arts Degree

Please note that these requirements are for students matriculating in or after fall, 2017. Students matriculating prior to fall, 2017 must reference the [Pre-Fall 2017 Degree Requirements \(Archives\)](#).

All BFA degree programs require the successful completion of the following courses:

Core Requirements: 12 courses, 47-48 credits

- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Studies in Literature](#)
- [Ethical & Philosophical Inquiry](#)
- [Human Behavior and Societies](#)
- [Social & Intellectual History/Visual & Performing Arts](#)

First-Year Writing: 2 courses, 8 credits

- WRI-101 First Year Writing I

Credits:

4.00

Description:

Study and practice of the writing process and revision in terms of expository writing modes for an academic audience.

- **WRI-102 First Year Writing II**

Prerequisites:

WRI-101 or ENG-099 with at least a B and ENG-P099 with a P or WRI-H103

Credits:

4.00

Description:

Study and practice of argumentative and research writing through further work with writing process and revision and the critical reading of a variety of texts.

A student may be assigned to other writing courses or may be invited to take WRI-H103. Students required to complete ENG-099 may be allowed to waive WRI-101 with a grade of “B” or better and the approval of the English department. Students who are invited to complete WRI-H103 and earn a “B” or better satisfy the two Writing Requirements. Waiving a course does not earn credits.

- **WRI-H103 Advanced First Year Writing**

Prerequisites:

By Invitation Only.

Credits:

4.00

Description:

This course is by invitation only and reserved for incoming Suffolk students with high admission scores. Advanced study and practice of writing process, revision, and research, based on close readings of a variety of texts. Fall semester only.

Type:

Honors

Minimum Total Credits Required for Degree Conferral: 124 credits

Creativity & Innovation: 1 course, 4 credits

The Creativity & Innovation requirement is satisfied by completion of the BFA Foundation Studies requirement of ADF-S171 or ADF-S172.

- ADF-S171 CI: Integrated Studio 1

Prerequisites:

Non-majors interesting in taking art and design courses for elective credit should refer to offerings under the ART course listings.

Credits:

3.00

Description:

This cross-disciplinary course will integrate the ideas and practices of two-dimensional design, color and drawing emphasis will be placed on understanding the creative process, exploring concepts and developing research skills. Students will undertake individual and collaborative projects in three spaces; the studio classroom, the digital world and the city at large.

Type:

Creativity and Innovation, Arts Admin Minor Elective

• ADF-S172 CI: Integrated Studio II

Prerequisites:

ADF S101; Non-majors interesting in taking art and design courses for elective credit should refer to offerings under the ART course listings.

Credits:

3.00

Description:

This course builds on the Integrated Studio 1 experience: synthesizing fundamental visual ideas. IS 2 investigates the construction, documentation, and transformation of volumetric form, environmental space, and time. Projects will explore narrative strategies and the creation of immersive experiences. Students will develop critical and analytical skills while employing a range of traditional and digital media-including video/sound capture and editing-as they explore the creative boundaries of the classroom studio, the city of Boston, and virtual space.

Type:

Creativity and Innovation

Math: 1 course, 4 credits

Choose one Math course from those listed below:

- MATH-128 Math for the Modern World

Prerequisites:

MATH level 2, or Mathshop, or MATH-104

Credits:

4.00

Description:

From the ISBN on a book, to buying a car, from the size of small chips in a cell phone, to the size of the national debt, or just reading a graph in the daily newspaper, mathematics plays an important and vital role in countless areas of life and your future career and courses included. Mathematics is both an art and a tool created by humans. The common bond is a way of thinking and a way of reasoning to describe and solve problems of many types. This course uses the context of modern real life problems to introduce math needed for literacy and problem solving in contemporary life and work. It uses a minimal amount of algebra and focuses on math models, concepts and basic math manipulations. It encourages students to move from anxiety about math, to using formulas well, to thinking critically in the math context to use math to solve problems and pose new problems. Topics include scientific notation, basic financial math, linear, exponential and polynomial models and an introduction to probability. (Formerly Math 132)

• MATH-130 Topics in Finite Mathematics

Prerequisites:

MATH-104, or MATH-121, or MATH level 3

Credits:

4.00

Description:

Linear Modeling (for example, using linear functions to model supply/demand situations), graphing, linear programming, financial functions (compound interest, annuities, and amortization of loans) sets, Venn diagrams, counting and combinatorics, discrete probability, conditional probability, Bernoulli experiments, Bayes theorem. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

• MATH-132 Math-Art, Tool and Human Side

Prerequisites:

MATH-000 or appropriate Math Placement Exam score. Course does not fulfill math requirement for SBS majors.

Credits:

4.00

Description:

Mathematics is both an art and a tool. It has been used in many ways in contemporary and ancient society. The common bond is a way of thinking and a way of using reason to solve problems and describe things of all sorts. The course is designed to cultivate an appreciation of the significance of mathematics in daily life and develop students' mathematical reasoning. Topics will vary from section to section. Examples of topics that might be included are: the real meaning of a newspaper graph, methods to tally votes, fair division, routes and networks, consumer mathematics, the 'real' cost of a house, shapes and patterns, fractals, soap film surfaces, prime numbers and encryption, new discoveries in mathematics.

- **MATH-134 Calculus for Management & Social Sciences**

Prerequisites:

MATH-104, MATH-121 or MATH level 4

Credits:

4.00

Description:

A one-semester introduction to differential and integral calculus. Theory is presented informally and topics and techniques are limited to polynomials, rational functions, logarithmic and exponential functions. Topics include a review of precalculus, linear regression, limits and continuity, derivatives, differentiation rules, implicit differentiation, related rates, applications of derivatives to graphing, minima/maxima, applications of the derivative, marginal analysis, differential equations of growth and decay, anti-derivatives, the definite integral, the Fundamental Theorem of Calculus, area measurements. This course cannot be used to satisfy core or complementary requirements by students majoring in chemistry, computer science, engineering, mathematics, or physics. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

- **MATH-164 Calculus 1 Bridge With Trigonometry**

Prerequisites:

Permission of Instructor

Credits:

4.00

Description:

This course provides an alternative to MATH 165 (Calculus I) for those students who have taken MATH 134 (Calculus for Management and Social Sciences) but who do not have the trigonometric precalculus prerequisite (such as MATH 121) for MATH 165. In other words, the sequence MATH 134 / MATH 164 serves as an alternative to the sequence MATH 121 / MATH 165, and similarly prepares students to take MATH 166 (Calculus II). The course includes a thorough review of trigonometry and other precalculus topics. Aspects of limits and differentiation which students have already seen in MATH 134 are presented briefly, but in most cases with more emphasis on conceptual understanding, and often illustrated using more complicated examples. New calculus topics (i.e. not covered in MATH 134) include one-sided limits, special trigonometric limits, differentiability, derivatives of trigonometric functions and their inverses, derivatives of general inverse functions, logarithmic and implicit differentiation, related rates, L'Hopital's rule, intermediate values theorem, Rolle's theorem, mean values theorem, Newton's method, and linearization. 4 lecture hours plus 1 recitation session each week. Normally offered in spring.

• MATH-165 Calculus I

Prerequisites:

MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

Credits:

4.00

Description:

Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

• MATH-166 Calculus II

Prerequisites:

MATH-164 or MATH-165 with a minimum grade of C

Credits:

4.00

Description:

Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation, convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

Minimum Total Credits Required for Degree Conferral: 124 credits

Social, Cultural, & Global Perspectives: 1 course, 3-4 credits

Choose one SCGP course from those listed below:

- ADPR-217 Gay and Lesbian Studies

Credits:

4.00

Description:

Examines the portrayal of homosexuality in political, social, and cultural discourse. Analyzes the role of media and symbolic construction in the shaping of public values, opinions, and social movements.

Term:

Alternates Fall & Spring

- **ADPR-219 Rhetoric of Protest and Reform**

Credits:

4.00

Description:

Examines the persuasive strategies of social reform movements with special emphasis on the civil rights', women's rights, and gay rights movements in the United States.

Term:

Alternates Fall & Spring

- **ARH-205 Gender, Class and Alterity in Ancient And Medieval Art**

Credits:

4.00

Description:

Explores issues of sexuality, gender, race, and social class in the ancient and medieval worlds. Examines key artworks from ancient Greece, the Roman Empire and medieval Europe within historical, social and cultural contexts.

- **ARH-321 Women, Art & Society**

Credits:

4.00

Description:

Surveys women artists from the sixteenth century to the present and examines new direction in art-historical scholarship developed by feminist art historians during recent decades.

Term:

Offered Spring Term

- **AS-100 Introduction to Asian Studies: Culture, People, Ideas**

Credits:

4.00

Description:

An interdisciplinary introduction to Asian Studies will touch upon the history, politics, economics, philosophy, geography, arts, and cultures of Asia. Sample topics include political economy, religious and cultural exchanges, international relations, Asian experience in America, and the role of Asia in the twenty-first century. Students will develop conceptual frameworks for exploring the subjects covered by the Asian Studies curriculum.

Term:

Offered Both Fall and Spring

Type:

Asian Studies, Social & Intellectual HST

- **AS-500 Asian Studies Internship**

Credits:

4.00

Description:

Engages in an internship in a business or non-profit organization that deals with Asia or an Asian American community. Students may complete the internship either in Asia or in the U.S. Students will complete appropriate exercises and reports to document their learning. (1 course, 4-12 credits; can be taken multiple times in different semesters)

Term:

Offered Both Fall and Spring

Type:

Global Engagement Experience

- **BLE-325 Global Business Ethics**

Prerequisites:

BLE-215, PHIL-119, PHIL-120, PHIL-123 or PHIL-127

Credits:

3.00

Description:

Surveys business ethics as they transcend the diverse perspectives of global business. Explores current global ethics standards and values, ethical challenges, controversies, convergence and trends. Students explore famous global business cases through films, websites and independent research. Emphasizes identification and resolution of global business ethical issues within the context of ethical decision-making and sustainability. Analyzes corporate social responsibility ; hence, transforming global business ethics through business.

Type:

Global Engagement Experience

- **BLKST-250 Haiti, Guadalupe and Martinique**

Credits:

4.00

Description:

This course explores the rich intellectual tradition of Haiti, Guadeloupe, and Martinique by considering historical moments linked to colonialism, the abolition of slavery, the representation of gender, departmentalization, and decolonization through essays, films, poems, novels, and short stories by critics and writers from the 19th-21st centuries.

• CI-204 Prague: Castles to Barbwire

Prerequisites:

At least 24 credits earned.

Credits:

3.00

Description:

Prague offers students a more recent view into history and will serve as a backdrop to learning Design Thinking. The curriculum will use Czech and Central European cultural features as the inspiration for learning the creative process, skills that can be applied broadly and globally across disciplines. WWII and its fall to Communism left the Czech Republic undamaged. Artists played a vital part in the country's rise to a Republic during the Velvet Revolution. These dissidents, including writers, actors, artists and musicians were innovators who were the catalyst for change. One could say that creative minds changed this country. This course is designed to demystify the creative process by introducing the creative practice as a disciplined approach to problem solving and innovation requiring research. This one-month study abroad experience will offer a more worldly insight to the significance of developing skills where divergent thinking and risk taking are one of many key tools in learning to generate new ideas. Travel fee covers accommodations, transfers, some meals and cultural visits. Airfare and tuition not included.

Type:

Creativity and Innovation, Global Engagement Experience

• CJN-216 Intercultural Communication

Credits:

4.00

Description:

An examination of communication variations and cultural viewpoints and their impact on cross-cultural communication. A special emphasis is placed on rituals and message patterns in non-Western cultures.

Term:

Offered Both Fall and Spring

- **CJN-225 World Cinema**

Credits:

4.00

Description:

An introductory course in film studies with a focus on foreign films. Movies studied include masterpieces of cinema from Europe, Asia, the Middle East, and other nations (Films have subtitles).

Term:

Alternates Fall & Spring

- **CJN-281 Asian Popular Culture**

Credits:

4.00

Description:

Students critically analyze Asian popular culture since the 1980s using a cultural ethnographic approach. Students apply the lenses of gender, identity, globalization, and business strategies to examine pop phenomena such as Korean Wave, Cool Japan, and Cantonese popular music.

Term:

Occasional

- **CJN-293 Hong Kong Cinema**

Credits:

4.00

Description:

By examining the film texts of Hong Kong auteurs such as John Woo, Wong Kar-wai, Tsui Hark, Andrew Lau, and Alan Mak, the course examines issues such as film genres, colonization/decolonization, transnational political economy, the Greater Chinese media market, and the diaspora.

Term:

Occasional

- **CJN-301 Documentary Film and the Image of Conflict in the Middle East**

Credits:

4.00

Description:

The course focus is on some of the divisions and conflicts within Israeli society. Students analyze and compare mainstream media discourse to alternative representations in documentary film. Analysis also covers media representation of the Israeli-Palestinian conflict.

Term:

Occasional

- **CJN-385 Globalization of Media and Telecommunications**

Credits:

4.00

Description:

A critique of the circulation of media goods and ideologies from both a cultural and political/economic perspective. Topics include global Hollywood, the images of Muslim women in transnational media, the information society, and global social movements.

Term:

- **EC-141 Development Economics**

Credits:

4.00

Description:

Why do so many countries remain so poor? Why have some (e.g. the Asian tigers) grown so rapidly? Why have most of the countries of Eastern Europe and the Former Soviet Union been slow to ignite economic growth? These questions are addressed by looking at domestic factors (government policies, resource endowments) as well as the international environment (mobile investors, international financial institutions). Asks what economic choices these countries face now. Normally offered yearly. Cultural Diversity B

Type:

Asian Studies

- **EC-151 Economic & Human Geography**

Credits:

4.00

Description:

The study of how economic and human activity is distributed across space, the reasons for these spatial distributions, and the processes that change the spatial organization of economic activity over time. Topics include: maps, map projections, and geographic information systems; population geography; the organization and location of cities, towns and villages; transportation and communication policy; industrial location; the geography of world trade; and geographic features of economic development. The course takes a global perspective, and draws on cases and examples from all over the world. Cultural Diversity B

Type:

Asian Studies, Human Behavior & Societies

- **EDUC-310 Culturally Responsive Education**

Credits:

4.00

Description:

The relationship between cultural diversity and schooling is explored by examining impediments to academic achievement and advancement by minority students, non-native English speaking students, and other under-represented groups. Topics include: standardized testing, identification of inequities, legal and ethical responsibilities of teachers, and promoting equity. Ten pre-practicum observation hours required for teacher candidates.

Term:

Offered Fall Term

- **EDUC-315 Strategies for Emerging English Learners**

Credits:

4.00

Description:

This course examines the specific needs and challenges of the various language and cultural groups in schools. Topics include: theories of 1st and 2nd language acquisition, strategies for teaching academic content, modifying instruction in the mainstream classroom, creating classroom cultures that invite all students into learning, the role of advocacy and professional collaboration in ESL, and analysis of policies related to assessment and placement of English Language Learners.

- **ENG-123 Great Books of the World I Great Books of World Lit. I**

Credits:

4.00

Description:

Literary masterpieces from ancient times to the Renaissance, including: Homer's Odyssey, Sophocles' Oedipus, Virgil's Aeneid, selections from the Hebrew Bible and the Gospels, and Dante's Divine Comedy. List may vary at the discretion of the instructor.

Term:

Offered Fall Term

Type:

Classics Minor, Social & Intellectual HST

- **ENG-124 Great Books of the World II**

Credits:

4.00

Description:

This course will introduce students to a selection of Great Books from around the world from the 17th century to the 21st, such as Don Quixote (Spain), Madame Bovary (France), The Communist Manifesto (Germany), The Origin of Species (England), War and Peace (Russia), On Dreams (Austria), Night (Hungary), Things Fall Apart (Nigeria), Satyagraha (India), I Am Prepared to Die (South Africa), Saeed the Pessoptomist (Israel), The Rouge of the North (China), and The House of Spirits (Chile). Readings may vary at the discretion of the instructor.

Term:

Offered Spring Term

Type:

Social & Intellectual HST

- **ENG-135 World Literature in English**

Credits:

4.00

Description:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

Term:

Offered Both Fall and Spring

Type:

Studies in Literature

- **ENG-216 World Literature in English**

Prerequisites:

WRI-102 or WRI-103

Credits:

4.00

Description:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

Term:

Offered Both Fall and Spring

- **ENG-362 Asian American Literature**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

An introduction to selected Asian-American writers with an emphasis on socio-cultural issues, such as race, gender and ethnicity. Authors include Bulosan, Hwang, Jen, Kingston, Lee, Mukherjee, Odada, and Tan. Cultural Diversity A

Term:

Occasional

Type:

Asian Studies

- **FR-202 Intermediate French II**

Prerequisites:

Take FR-201 or Instructor's consent

Credits:

4.00

Description:

Continues to review grammar, practice speaking, and explore authentic cultural and literary texts in this writing-intensive course. Examines short readings, films, and print media.

Term:

Offered Spring Term

Type:

Modern Language

- **FR-205 The Francophone World**

Prerequisites:

FR 202 or Instructor's consent

Credits:

4.00

Description:

Explores the francophone world through the study of short stories, print media, and film, by engaging with the rich textured and diverse francophone literary canon. Teaches advance notions of French grammar, write compositions, and the art of conversation related to cultural themes.

Term:

Alternates Fall & Spring

- **FR-216 Masterpieces of French and Francophone Literature in English Translation**

Credits:

4.00

Description:

Masterpieces of French and Francophone Literature in English Translation. Studies works translated into English by major authors from the Middle Ages to the present. Explores drama, fiction, and poetry from many regions of the world: Africa, Western Europe, North America, the Caribbean, and Vietnam.

Term:

Alternates Fall & Spring

Type:

Studies in Literature

- **GVT-208 Politics / Religion**

Credits:

4.00

Description:

This course explores what major religions say about the status and responsibilities of the state and how, in turn, selective states have, in theory and practice, structured the place of religions in political life. Particular attention is given to issues of politics and religion in the United States. Cultural Diversity A

- **GVT-115 Evolution of the Global System**

Credits:

4.00

Description:

The goal of this course is to introduce the student to the main actors, social facts and processes that shaped the international system in the nineteenth and twentieth centuries. By analyzing the spread of industrialization, the race for colonies, the thrust of imperialism, and the rapid growth of nationalism, among other factors, this course explains the contradictory and simultaneous trends of unprecedented levels of prosperity and violence in Europe and beyond. While the course examines the role of the United States in the international system, particularly in light of its dominant role since the early twentieth century, it also emphasizes the developments taking place in other regions such as Asia, Africa and Latin America. This will allow students to understand the global arena as a space of complex interconnections involving varieties of forms of production, national political cultures and idiosyncratic traditions. This course sets the foundations for other courses in International Relations and Regional Studies

Type:

Human Behavior & Societies

- **GVT-281 Intro to Comparative Politics**

Prerequisites:

GVT 110, GVT 115, and GVT 120 or consent of instructor; Sophomore status or higher

Credits:

4.00

Description:

This course examines various methods of comparing political systems. Institutions such as executive departments, legislatures, court systems and local governmental systems are examined comparatively. It includes analysis of the impact of different economic systems on political/governmental institutions, and on economic circumstances that impact government. It also looks at political socialization both in terms of process and comparative content. An effort is made to include countries from all regions of the world. Normally offered every year.

- **GVT-359 Hockey, International Development & Politics**

Credits:

4.00

Description:

This class examines the way in which national identity, global and regional economics and international development intersect. It uses the professionalization of the sport of hockey and its subsequent spread around the globe as its case. It will look at the rise of the pro game, the way in which it shapes national identity in the Canadian case, the way in which the pro business model has changed in response to broad socio-economic changes in North America and geo-political shifts around the globe, especially in Eastern Europe and the Former Soviet Union.

• GVT-360 Elections and Voting

Credits:

4.00

Description:

How are elections administered in the United States? Do Americans have confidence in the electoral process? Should they? Why or why not? This course will examine elections in the United States in detail -- from how they are funded to how they are administered to how voters behave. Students will have a choice of either serving as poll workers during the November election or organizing and conducting research of potential voters. Students will gain hands-on experience in actual research design, election administration, and non-partisan get-out-the-vote activities. In addition, students will gain a deeper understanding of the relationship between attitudes, opinion, and voting behavior in American politics and institutions. ECR

• GVT-391 Canada: Multicultural Politics

Prerequisites:

GVT 110/120 or Instructor's permission

Credits:

4.00

Description:

This course examines the Canadian model of incorporating diverse communities into its constitutional and political framework, including the founding British North American Act of 1867, the 1982 Constitution Act, and two later attempts at constitutional reform. Canada's role in balancing two official languages, English and French, is discussed, as is its recognition of a First Nations native-governed territory in the Arctic. This course introduces students to the Canadian polity and compares its parliamentary system with the U.S. separation of powers system. Prerequisites: GVT 110, GVT 120 or instructor's consent. Normally offered alternate years. Cultural Diversity B

- **GVT-467 Comparative Social Movements**

Prerequisites:

Junior status

Credits:

4.00

Description:

How do we explain the appearance or absence of social movements? What social or individual factors explain their development and decline? Who joins social movements? Who does not? Why? What ideas or ideals animate those who do participate? What is it like to be part of a social movement? What effect do they or have they had on politics, power and efforts at social change? These are some of the questions that have traditionally shaped debates over social movements, both domestically and internationally. They will form the analytical core of the work in this course. By critically evaluating several competing schools of thought in social movement theory and history we will attempt to highlight the social forces that have, at varying points in times, facilitated, maintained, as well as blocked the development of social movements in the US and beyond.

- **HST-100 Introduction to Asian Studies: Culture, People, Ideas**

Credits:

4.00

Description:

An interdisciplinary introduction to Asian Studies will touch upon the history, politics, economics, philosophy, geography, arts, and cultures of Asia. Sample topics include political economy, religious and cultural exchanges, international relations, the Asian experience in America, and the role of Asia in the twenty-first century. Students will develop conceptual frameworks for exploring the subjects covered by the Asian Studies curriculum.

Term:

Offered Fall Term

- **HST-246 History of Modern Iran**

Credits:

4.00

Description:

Examines the contemporary history of Persia (Iran) from the time of its independence in the beginning of the sixteenth century to the present with special concentration on geographical/historical background; social structure, ethnic, religious, and linguistic diversities; Safavid and Qajar dynasties; Anglo-Russian interventions and occupations; constitutional revolution and reform; centralization, secularization and modernization under Pahlavi dynasty; opposition to westernization and Islamic revolution.

- **HST-247 History of Modern Middle East**

Credits:

4.00

Description:

Explores the broad historical forces, conflicts and major events that have shaped the contemporary nations of the modern Middle East. Topic include: the emergence of the modern Middle East from the empires of the sixteenth and seventeenth centuries; the age of colonialism; the rise of nationalism; socialism, capitalism; the impact of Israeli and Palestinian conflict on the region; oil, the Islamic Revolution in Iran and the rise of Islamic fundamentalist movements; U.S. policy; and Saddam Hussein's Iraq.

Term:

Offered Fall Term

- **HST-251 Modern East Asia**

Credits:

4.00

Description:

China, Japan, and Korea - East Asia's critical players - share many historical influences, but each has a distinct culture, and they competed with each other for much of the twentieth century, proud of their achievements but feeling threatened by their neighbors. Lectures interspersed with movies and documentaries to show how East Asia has developed in the past one-hundred-plus years.

Type:

- **HST-263 Comparative Race Relations**

Credits:

4.00

Description:

Compares and analyzes the history of race and politics in South Africa and the United States from the 17th century to the present. Examines how race as a social and ideological construct influenced and informed political conflicts over land, labor, and social relations in the two countries including slavery, segregation, apartheid, and the struggle to create racial democracies.

Term:

Offered Fall Term

- **HST-268 History of the Mediterranean**

Credits:

4.00

Description:

Explores the history of the Mediterranean from the ancient times to the 20th century, with emphasis on the extraordinary interaction between the rich cultural, ethnic and religious backgrounds of the peoples of Europe, Middle East, and North Africa.

Term:

Occasional

Type:

Social & Intellectual HST

- **HST-274 Women in 19TH-CENTURY Europe**

Credits:

4.00

Description:

Explores the condition of European women from 1800 to 1914. Readings focus primarily on women's experiences in France and Great Britain. Topics include: the effects of industrialization on the lives of working-class women; working and middle-class women's negotiation of marriage, work, and family life; the rise of feminism, women's greater participation in the public sphere, and conservative reaction to these changes in women's place in society; women and crime; Victorian ideas about female sexuality; the politics of class and gender in nineteenth-century European society.

Term:

Occasional

- **HST-275 Women in 20TH-CENTURY Europe**

Credits:

4.00

Description:

Examines the changing place of women in European society since 1900. Topics include: women's suffrage and the political advances of the 1920s and 1930s; the revolution in sexual mores, birth control, and the rise of companionate marriage; women and the consumer economy; the anti-woman policies of Fascist Italy and Germany under National Socialism; liberation of women and retrenchment in the Soviet Union; World War II; feminism, sexual liberation, and women's political engagement since the 1960s; and, throughout the twentieth century, women's continuing negotiation of work and family responsibilities.

Term:

Occasional

- **HST-321 History of Islam**

Credits:

4.00

Description:

Presents a coherent account of the origin and history of Islam since its foundation in Arabia in the seventh century A.D. to the present. Analyzes the terms, events, characteristics, developments, movements, and institutions that have been part of the shaping of Islam. Ideological challenges and impact of Islam in the world today from both spiritual and political perspectives are examined.

Term:

Occasional

- **HST-371 U.S. Women's History Colonial to 1865**

Credits:

4.00

Description:

Traces the roles, images and experiences of women in America from colonial times to 1865. Topics include the family, work, religion, education, health care, motherhood, sexuality, social and political activism legal status, labor activism and popular culture. With attention to ethnicity, race, class, age, region of residence, disability and sexual orientation, the course focuses primarily on the everyday lives of ordinary women.

Term:

Offered Fall Term

- **HST-372 U.S. Women's History: 1865-present**

Credits:

4.00

Description:

Examines the social and cultural history of women in the United States from the close of the Civil War to the present. Using not only gender but also race, ethnicity, class, age, disability, region of residence, and sexual orientation as important categories of analysis, this course focuses on women's private and public lives. Topics include the family, work, religion, education, health care, private lives, motherhood, sexuality, social and political activism, legal status, labor activism, and popular culture.

Term:

Offered Spring Term

- **HST-484 History of the Emotions**

Credits:

4.00

Description:

Explores ideas about emotional life from the fields of history, anthropology, sociology, and psychology as well as the evolution of emotion rules and prescriptions, focusing on western Europe and the United States since 1700. In the eighteenth century, emotions were seen as a positive influence on politics and public life, especially during the French Revolution. After the fall of Robespierre, the emotions were banished to the private sphere - so we will read both primary sources and recent scholarship on 19th- and 20th- century ideas about masculinity and femininity, romantic love and marriage, childrearing, and about what parents and children are supposed feel toward each other, how ideas about these subjects have changed over time, and whether our feelings change with them.

Term:

Occasional

- **MUH-223 World Music**

Credits:

4.00

Description:

Covers topics in folk, traditional, and modern music of Africa, the Middle East, Asia, and Europe in the context of the cultures and lives of the indigenous peoples of those regions; examines how music interacts with the issues of race, gender, class, religion, politics, and social movements. Normally offered every other year.

Term:

Occasional

- **P.AD-201 Social Change**

Credits:

3.00

Description:

This course will examine social change in the U.S. and abroad. The course will also examine the role of business, nonprofits, and the public sector in addressing social problems. Topics studied may include the Industrial Revolution, the civil rights movement, the women's movement, environmentalism, and the gay and lesbian movement.

- **P.AD-H201 Honors Social Change**

Credits:

3.00

Description:

This course will examine social change in the U.S. and abroad. The course will also examine the role of business, nonprofits, and the public sector in addressing social problems. Topics studied may include the Industrial Revolution, the civil rights movement, the women's movement, environmentalism, and the gay and lesbian movement.

Type:

Honors

- **PHIL-120 Ethics and Civic Life**

Credits:

4.00

Description:

In this class you will be introduced to the perspectives and methods of politics, philosophy, and economics and see how these three disciplines present distinct but interconnected dimensions of current social and political issues.

- **PHIL-228 Feminist Philosophy**

Credits:

4.00

Description:

This course is an introduction to the philosophy of feminist thought. Feminist theories of epistemology, metaphysics and morality will be examined as critiques of traditional philosophy,. Feminist perspectives and methodologies include radical, liberal, postmodern, as well as more recent trends in ecofeminism. Special emphasis will be placed on explicit and implicit practices of alienation and exclusion as they have unfolded in the gendering of thought, truth, and reality. 1 term - 4 credits. Normally offered every third year. C b

Term:

Occasional

- **PHIL-229 Eco-Feminism**

Prerequisites:

PHIL 119, or PHIL 123, or PHIL 127

Credits:

4.00

Description:

Examines the political, social, and ecological problems facing us as a global community. Having its roots in feminist theory and deep-ecology, eco-feminism provides a critical framework for ecological responsibility and accountability. Writings from eco-feminist thinkers and environmental activists around the world will be used to highlight the philosophical and political conflicts and challenges, including globalization and loss of biodiversity, global warming, international human rights, the relationship of gender and nature, and modes of redress for eco-justice and sustainable development.

- **PHIL-261 Eastern Philosophy**

Credits:

4.00

Description:

The exposition and critical evaluation of Hinduism, Buddhism, Confucianism, Taoism, and Islam. Special attention is given to foundation principles as well as to the similarities and differences of each of these philosophies to basic ideas in Western philosophy. 1 term - 4 credits. Normally offered

alternate years. C b

Term:

Occasional

Type:

Asian Studies

- **PHIL-262 Buddhism**

Credits:

4.00

Description:

An historical survey of Buddhist philosophy. We will explore Buddhist origins, central teachings, devotional and meditational practices, ritual and institutions as developed from classical to modern times. Special attention given to the philosophical diversity of the Buddhist world view. 1 term - 4 credits. Normally offered alternate years. C b

Term:

Occasional

Type:

Asian Studies

- **PHIL-265 Women in Spirituality**

Credits:

4.00

Description:

An exploration into the various dimensions and ideologies concerning the role of the feminine in relation to the Divine. Belief systems, myths and archetypes from ancient Goddess worship to 20th century feminist theology will be examined in terms of the philosophical content and psychological

consequences. Special emphasis will be placed on feminist metaphysical structures for understanding consciousness and Reality. Classes will be conducted by means of lectures, primary and secondary texts and class discussions. Normally offered alternate years. Cultural Diversity A

Term:

Occasional

- **PHIL-267 Chinese Philosophy**

Credits:

4.00

Description:

A survey of the main developments in Chinese Philosophy. The course begins with the early dynastic concept of humanism and then turns to Confucius and Mencius. Having developed the central Confucian doctrines, students next examine the Taoist response to Confucianism in the writings of Lao Tzu and Chuang Tzu. The course then considers Zen Buddhism, which is called Ch'an Buddhism in China, where it originated. In particular, students study the concept of sudden enlightenment before turning to the Neo-Confucian scholars.

Term:

Occasional

- **PSYCH-243 Organizational Psychology**

Prerequisites:

Take PSYCH-114;

Credits:

4.00

Description:

Focuses on diversity concerns in various aspects of the psychology of the workforce. This includes job analysis, recruitment, selection, evaluation, training, retention, and termination. Employee morale, well-being, stress, and hardiness are considered.

- **PSYCH-247 Asian Perspectives on Health and Work**

Credits:

4.00

Description:

Examines theoretical and empirical approaches that provide insight into Asian viewpoints on socialization practices, family systems, health/well-being, cultural traditions/values, and spiritual philosophy/literature. Explores the diversity among Asian cultures in terms of language, history, religion/spiritual faith, and healthcare practices, all of which play a significant role in shaping the psychological characteristics, interpersonal relationships, and work dynamics of Asians and Asian immigrants. Students critically analyze similarities and differences between Asian and Western psychological perspectives of health and work through didactic and experiential learning components. This course fulfills the Cultural Diversity Requirement and may fulfill the Expanded Classroom Requirement. Normally offered alternate years.

Term:

Offered Spring Term

Type:

Asian Studies

- **RS-111 Introduction to World Religions: Western Traditions**

Credits:

4.00

Description:

This course will explore the comparative history and structure of Western religious traditions, broadly understood, and their impact on other world religions, while attempting to recognize the similarities and the differences among them. Traditions to be studied include Greek and Roman religion, the monotheistic faiths (Judaism, Christianity, and Islam, as well as Zoroastrianism, Sikhism and Bahaism). We will also explore the impact of the Western religions on indigenous traditions, such as African religion, Native American religion, and Pacific Island religion. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. 1 term - 4 credits. Normally offered every year.

- **RS-112 Introduction to World Religions: Eastern Traditions**

Credits:

4.00

Description:

This course will examine a variety of Eastern religions, including Hinduism, Buddhism, Jainism, Confucianism, Taoism, and Shintoism. Possible connections to be explored will be the impact of these traditions on others, such as Pacific Islands and African religion, as well as the growing place of Eastern religion in the West. This course will explore the history and structure of each tradition, while attempting to recognize the similarities and the differences among them. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. Normally offered every year. Cultural Diversity B

Type:

Asian Studies

- **SIB-550 Global Travel Seminar**

Prerequisites:

Please email Hillary Sabbagh at hsabbagh@suffolk.edu to register for a travel seminar.

Credits:

3.00

Description:

An in-depth analysis of timely special issues in international business. Specific topics are announced when the course is scheduled.

Type:

Global Engagement Experience

- **SF-190 Asia in America Fiction and Fact**

Credits:

4.00

Description:

With a focus on some selected ethnic groups from Asia, Asia in America studies the history and current status of Asian Americans in Boston and other parts of the country. We will examine the major reasons why these immigrants chose to leave their home country as well as their expectations and experiences here in America. We will also discuss the issues Asian immigrants have faced in this adopted home as well as the connections and conflicts among different ethnic groups or even within the same ethnic group due to political and socio-economic reasons. The course will include some level of community engagement, through Chinatown tour and service, which may enable us to have a direct contact with the Asian American population and reflect on what is being discussed in class. Through this course, we hope to gain a better understanding of the racial and cultural history of the country and arrive at a deep appreciation of the dynamics of cultural interactions in the twenty-first century. The course fulfills the SCGP requirement.

Type:

Global Engagement Experience

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

- **SOC-227 Race in American Society**

Credits:

4.00

Description:

Despite the election of Barack Obama as President of the United States, race remains one of the most divisive forces in U.S. society. While many of us struggle against racism, racial classification continues to affect where we live, where we work, and how we see ourselves. Racial classification affects our access to health care and our encounters with police officers. Distorted images of racial groups fill television and movie screens. Appeals to racism and fear of foreigners are dominant themes in elections to state and national offices. This course examines the formation and re-formation of racial classifications: how particular groups become racially identified, how these classifications change over time, and how conflicts over race have shaped American society. The meanings of race, as seen from a variety of perspectives, will be a consistent theme throughout the course.

Term:

Occasional

- **SOC-228 Cultural, Global and Social Perspectives**

Credits:

4.00

Description:

Enables students to examine, as well as develop an awareness and appreciation of, diversity within today's society. Providing an overview of the major racial, ethnic, and cultural groups in the U.S., the focus is on the ways in which cultural awareness enhances professional helping relationships and improves the operation of human services systems.

Term:

Occasional

- **SOC-275 Women and Crime**

Credits:

4.00

Description:

This course examines the complex relationships between women and crime today. This focus will include women as criminal offenders; women as victims of crime; and women as both offenders and victims. Course materials draw from recent feminist scholarship on these issues in the social sciences. Topics include the causes of women's crime women, drugs, and crime; child abuse and trauma; prostitution and sex trafficking; race, gender and victimization; and feminist social movements against violence. Crimes of violence against women are a central focus in the course.

Term:

Occasional

- **SOC-329 Sociology of Globalization**

Prerequisites:

Prerequisite: SOC 113 or SOC 116.

Credits:

4.00

Description:

Globalization is shrinking the world. How and why did this happen? This course will explore global change and the global processes which effect key social institutions: culture, the economy and politics. Students will study the processes of globalization and its impact on our lives and people around the globe.

Term:

Occasional

• SOC-341 International Drug Control Policy

Credits:

4.00

Description:

Relying on a simplistic demand or supply explanation of why Americans use/abuse drugs obscures the reality of America's drug problem, is ineffective as a guide to public policy and has unforeseen, often negative consequences. Drug use is a complex and multi-faceted issue. There are no easy answers. To comprehend the complexity of America's drug problem one needs an understanding of the geography, history, religion, law, economics and international politics of the Middle and Far East, Eastern Europe, Africa, Mexico, and Central and South America. This class will provide this basic understanding without losing sight that the problem we seek to remedy is our own.

Term:

Offered Spring Term

• SOC-354 Death and Dying

Credits:

4.00

Description:

An examination of changing definitions of life and death, social factors affecting causes and rates of death, care of the dying and their families, institutionalization, the funeral industry, suicide, crisis intervention, and the impact of technology on the dying process.

Term:

Occasional

- **SOC-357 Global Health and Healing**

Credits:

4.00

Description:

An examination of how different cultures understand health and illness. Healing approaches from Asia, Africa and the Americas will be explored.

Term:

Occasional

- **SPAN-202 Intermediate Spanish II**

Prerequisites:

SPAN 201 or Instructor's consent.

Credits:

4.00

Description:

Continues skills development from 201. Students read a collection of short stories, write compositions, develop cultural insights through comparative and contrastive assignments, and practice listening and speaking skills in weekly conversation sessions.

Term:

Offered Spring Term

Type:

Modern Language

- **SPAN-290 Advanced Composition & Conversation**

Prerequisites:

Prerequisite: Spanish 202, 203 or 250 or Instructor's consent

Credits:

4.00

Description:

Develops written and oral skills in various contexts and registers. Emphasis on strengthening written skills and learning to speak clearly and persuasively in Spanish. Short texts and audio-visual materials provide the basis for classroom activities which include regularly assigned essays, group discussions and debates.

Term:

Offered Fall Term

Type:

Modern Language

- **SPAN-300 Intro to Cultural Texts**

Prerequisites:

Spanish 202, 203, 250 or Instructor's consent.

Credits:

4.00

Description:

Explores a selection of Peninsular and Latin American cultural materials. Primarily examines texts from different literary genres (narrative, drama, essay, and poetry). Develops critical skills required in more advanced Spanish courses, through close readings and textual analysis. Activities include regularly assigned essays, group discussions, and short scene work.

Term:

Offered Spring Term

- **SPAN-301 Spanish Culture and Civilization**

Prerequisites:

Spanish 202, 203 or 250. Spanish 290 or 300 are strongly recommended

Credits:

4.00

Description:

Examines the civilization and culture of Spain highlighting its historical development and cultural manifestations from pre-historic times to the nineteenth century. Students improve their four skills through activities that include discussions, oral presentations, and writing assignments based on reading and films.

Term:

Alternates Fall & Spring

- **SPAN-302 Indigenous and Colonial Latin America**

Prerequisites:

Spanish 202, 203 or 250 or Instructor's consent. Span 290 or 300 strongly recommended.

Credits:

4.00

Description:

Introduces students to the complexity Latin America by examining its roots in pre-Columbian America and the impact of Spanish exploration and colonization. Places emphasis on cultural, economic, historical, philosophical, political and religious patterns that define the region. Includes class discussions, oral presentations, and writing assignments based on reading and audio-visual material.

Term:

Alternates Fall & Spring

- **SPAN-303 Modern and Contemporary Latin America**

Prerequisites:

SPAN 202 or 203 or Instructor's consent. SPAN 290 or 300 strongly recommended.

Credits:

4.00

Description:

Examines the path taken by Latin American and Caribbean countries to build independent nations out of colonial territories highlighting the 19th, 20th, and 21st centuries, ethnic plurality, and cultural complexity in areas such as politics, religion, sociology, economics, customs, music & film. The cultural contributions of Spanish-speaking minorities in the United States are also addressed. Includes class discussions, oral presentations, and writing assignments based on readings and audio-visual material.

- **SPAN-315 Spanish for the Professions**

Prerequisites:

SPAN 290 or SPAN 300 or Instructor's consent.

Credits:

4.00

Description:

Integrates language learning with culture via business context of the Hispanic world. Spanish for banking and finance, marketing and advertising, and international commerce are highlighted. Students increase their cross-cultural understanding and written and oral proficiency in business Spanish through a wide range of assignments.

Type:

Global Engagement Experience

- **SPAN-390 Introduction to Latin American and Caribbean Literature**

Prerequisites:

SPAN 300; SPAN 302 is strongly recommended

Credits:

4.00

Description:

Examines authors from Latin America and the Caribbean in their historical and cultural contexts. Reading and class discussions consider the relationship between the writer and society by covering such topics as colonialism, the oral tradition, modernism and the emergence of new narratives in the twentieth century. The Inca Garcilaso, Sor Juana, Carlos Fuentes, Rigoberta Menchu, and Pablo Neruda are among some writers studied.

Term:

Occasional

- **THETR-260 Broadway Musicals**

Credits:

4.00

Description:

This course is a survey of American musical theatre from its roots in the mid-19th century to the present. It provides the analytical tools and historical insight to more fully appreciate Broadway's greatest musicals and musical theatre artists. Students will explore the ways in which American forms of popular entertainment helped to shape Broadway musicals from their infancy through their adulthood. The course also explores the ways in which musicals provided opportunities for African-Americans, women, immigrants, and the GLBT community.

Term:

Offered Fall Term

- **THETR-267 Introduction to Theatre: Contemporary American**

Credits:

4.00

Description:

This course provides a formal introduction to the theories and practices strategically used by American theatre artists after the Second World War. Special emphasis is placed on theatre artists exploring issues of cultural identity including works by GLBT, African-American, Asian-American, and Latin American playwrights. These playwrights may include Tony Kushner, Paula Vogel, Suzan-Lori Parks, Adrienne Kennedy, August Wilson, David Henry Hwang, Philip Kan Gotanda, Eduardo Machado, and Melinda Lopez. The course will also provide an introduction to trends in post-modern theatre practices related to emerging work of the auteur director, solo performers, and interdisciplinary collectives. Satisfies a core requirement for Theatre majors. Normally offered alternate years.

Term:

Occasional

- **WGS-111 Women, History, & Culture**

Credits:

4.00

Description:

Explores the roles and images of women in Western culture and the realities of women's everyday lives through literature, film, history, art, psychology, and recent feminist scholarship. Analyzes gender inequalities and the influence of gender on social structure, human behavior, and artistic expression. Topics include: the social construction of gender and identity; domestic prescriptions for women; women and work; intersections of gender, class, and race in American society; sexualities and identity; the politics of motherhood and reproductive rights; educating girls; negotiating male privilege and structural inequalities; representations of women in Western art and film; and women as artists and gendered models of creativity in art, film, fiction, and science.

Term:

Offered Both Fall and Spring

Type:

Social & Intellectual HST

- WGS-H111 Women, History, & Culture

Prerequisites:

At least a 3.3 GPA required.

Credits:

4.00

Description:

Explores the roles and images of women in Western culture and the realities of women's everyday lives through literature, film, history, art, psychology, and recent feminist scholarship. Analyzes gender inequalities and the influence of gender on social structure, human behavior, and artistic expression. Topics include: the social construction of gender and identity; domestic prescriptions for women; women and work; intersections of gender, class, and race in American society; sexualities and identity; the politics of motherhood and reproductive rights; educating girls; negotiating male privilege and structural inequalities; representations of women in Western art and film; and women as artists and gendered models of creativity in art, film, fiction, and science.

Term:

Offered Both Fall and Spring

Type:

Honors

- WGS-113 Women, Science, & Society

Credits:

4.00

Description:

Explores women's lives from the perspective of the social and natural sciences, including examination of recent biological, psychological, and sociological theories about gender and gender roles, as well as the influence of feminist scholarship in these areas. Topics include: the social construction of gender; the psychology and biology of sex and gender; women and work; media representations of women; the female body and eating disorders; women's health and lifecycle; women and sexuality; reproduction, abortion, and motherhood; and sexual violence against women.

Term:

- **WGS-115 Introduction to Gender Studies**

Credits:

4.00

Description:

Introduces the key topics and debates that have shaped the field of gender studies, including queer studies, masculinity studies, and women's studies. Through lecture and class discussion of texts from literature, film, history, psychology, and sociology, explores the pervasive influence of gender on the structure of society and our everyday experiences and the role that gender plays in our understanding of love, friendship, sexuality, and even violence. Topics include: biological arguments about gender and sexuality; the social construction of gender and identity; intersections of gender, race, class, and sexuality; masculinity and femininity; and theories of sexual difference and the construction of sexuality.

Term:

Occasional

Type:

Social & Intellectual HST

- **WGS-311 Engendering Entertainment: Feminism and Popular Culture**

Credits:

4.00

Description:

Investigates the complex intersections between feminism and popular culture through several different lenses: by exploring how feminists make arguments about popular culture; by looking at the complexities of public femininity in today's popular culture, including figures such as Lady Gaga and Katy Perry and television shows like The Bachelor and Grey's Anatomy; by focusing on a variety of articulations of feminism within mass media, blogs, social media, and popular books such as Ariel Levy's Female Chauvinist Pigs, and Caitlin Moran's How to Be a Woman. Along the way we will ask questions about: what makes a work of art feminist; how modern media contributes to or distracts us from a variety of political debates in the realm of female equality and how can we, as individuals, use modern media to create and advance smart, feminist arguments.

Type:

- WGS-315 Feminist Thought

Credits:

4.00

Description:

Investigates how feminists, both today and in history, have understood inequality and difference and looked for the best ways to address these issues and bring about social justice. Examines how feminist theorists help us to understand how gender and other social categories, such as race, class, sexuality, disability, age and nationality, are constructed within and through each other; and analyzes feminist engagements with liberalism, socialism, psychoanalysis, existentialism, post-colonialism, critical race theory, and queer theory, as well as consider anti-feminist arguments. Readings include classic critical texts by authors including Mary Wollstonecraft, Emma Goldman, Virginia Woolf, Chandra Mohanty, Gloria Anzaldua, and Judith Butler.

Type:

Social & Intellectual HST

- WGS-325 Global Women's Fiction

Credits:

4.00

Description:

Explores of various cultural worldviews in order to reveal and assess the voices of women from around the world as they respond to important global issues such as sexual violence and gendered oppression. Topics include: national citizenship, sexual politics, legal discourse, aesthetic representation, literary movements, genre, constructions of femininity, sexual identities, and representations of gender in relation to race and class and international cultures, and the relationship of self-image to the body politic.

Term:

Occasional

- WGS-335 Queer Narratives

Credits:

4.00

Description:

Explores the stories that help us to understand communities, identities, and bodies that could be considered queer, and the ways that film, music, memoir and fiction have discussed queer as different, unusual, or other. Texts include the documentary, "Paris Is Burning", Frank Ocean's 2012 album, "Channel Orange", and Janet Mock's recent memoir, "Redefining Realness", as well as foundational queer theory from Judith Butler, Eve Kosofsky Sedgwick, and Lee Edelman, among others, to help build a framework for approaching and interpreting both fictional and non-fictional accounts of queer lives.

Type:

Social & Intellectual HST

Courses that fulfill the Creativity and Innovation, Humanities/History, Language, Literature, Quantitative Reasoning, Seminar for Freshmen, Social Science, or VPATH requirements may double count to fulfill the Social, Cultural, and Global Perspectives (SCGP) requirement.

BIO 101 and BIO L101, can also be taken concurrently BIO L104 must be taken concurrently

Credits:

3.00

Description:

An introduction to basic evolutionary, behavioral and ecological principles. Readings and discussions emphasize the ways that humans are affected by ecological processes and principles as well as how humans and their technology affect ecosystems. May not be taken by Biology majors or minors. This course will not fulfill requirements for a major or a minor in Biology. It is intended for non-biology majors as a follow-up to Biology 101. 3 hours lecture. Days Only. Madrid Campus only.

Type:

SCI TECH ENGNR

- **BIO-L104 Environmental Bio Lab**

Prerequisites:

BIO-104 must be taken concurrently

Credits:

1.00

Description:

Exercises and field trips designed to complement and demonstrate the ecological principles developed in the lecture section. The lab emphasizes the scientific method and employs long term group projects. Madrid Campus only.

Type:

- **BIO-105 Humans and the Evolutionary Perspective**

Prerequisites:

Non Science Majors Only

Credits:

4.00

Description:

Major topics include the scientific basis of evolution, the fossil history of vertebrates, evidence of evolution in the human body, and applying an evolutionary perspective to the social interactions and possible futures of humanity. Meets one of the non laboratory science requirements for the non-science major. This reading and writing intensive course is a non-laboratory science option for non-science majors. This course will not fulfill requirement for a major or a minor in Biology.

Term:

Occasional

Type:

SCI TECH ENGR

- **BIO-111 Introduction to the Cell**

Prerequisites:

Must take BIO L111 concurrently

Credits:

3.00

Description:

Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **BIO-L111 Introduction to the Cell Laboratory**

Prerequisites:

Concurrently with BIO 111

Credits:

1.00

Description:

Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **BIO-114 Organismal Biology**

Prerequisites:

Must take BIO L114 concurrently.

Credits:

3.00

Description:

Rigorous introduction to organismal biology emphasizing evolution, phylogenetics, form, and function. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L114 Organismal Biology Laboratory**

Prerequisites:

Must take BIO 114 concurrently

Credits:

1.00

Description:

A series of laboratory experiences in evolution, diversity, anatomy and physiology.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-201 Biology's Big Questions**

Prerequisites:

Non Science Majors Only.

Credits:

4.00

Description:

This course seeks to answer five current questions from all levels of biology, from the subcellular to the ecosystem level. Topics will be discussed in the context of genetics, evolution, and ecology. We will focus on the process of doing science, including how scientists evaluate ideas and communicate their findings. Emphasis will be placed on topics in biology that impact daily life.

Type:

SCI TECH ENGR

Chemistry:

- **CHEM-105 Chemical New Product Development**

Prerequisites:

ENT 101

Credits:

4.00

Description:

This course addresses the crucial intersection between chemistry and business, and the impact of these fields on society. It provides an introduction to important chemistry concepts and practices of business management. Primary focus is on understanding the chemistry principles behind some of the consumer products in our everyday lives, and using this knowledge to create and evaluate ideas for new products. The course also introduces the business aspects involved in the development and marketing of new products. An important component of the course is in making effective presentations; this component concludes the course, culminating in team presentations of a new chemical product to panel of executives and peers. This course satisfies the Sawyer Business School Science requirement.

Type:

SCI TECH ENGR

- **CHEM-106 Biotechnology & Its Applications in Medicine, Agriculture, Law**

Credits:

4.00

Description:

Introduces the latest discoveries and applications of biotechnology. Topics include genetically modified food, stem cells, genetic testing, cloning, and forensics. A combination of lectures, discussions, short documentaries, mock congressional hearings, and hands-on activities will provide insight into the numerous medical, social, legal, and ethical issues surrounding this technology.

Type:

SCI TECH ENGR

- **CHEM-111 General Chemistry I**

Prerequisites:

Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:

3.00

Description:

Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **CHEM-L111 General Chemistry Laboratory I**

Prerequisites:

MATH-104 MATH-108 MATH-121 MATH-128 MATH-130 MATH-134 MATH-164 MATH-165 MATHT-MPEL1 MATHT-MPEL2 or MATHT-MPEL3. Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

Computer Science:

- **CMPSC-F107 Ants, Rumors and Gridlocks**

Prerequisites:

Math placement level of 2 or above or any MATH course at the level 100 or above

Credits:

4.00

Description:

Do viruses and rumors spread like forest fires? How do ants cooperate? Do spoken languages and biological species evolve in a similar way? Ants, Rumors, and Gridlocks exposes students to introductory aspects of computational science by addressing and answering these and many other questions. Students use and modify virtual experiments preprogrammed in the NetLogo programming language to investigate these topics and others in Social Sciences, Biology, and Environmental Science. No prior knowledge of computer programming or NetLogo is required.

Type:

SCI TECH ENGR

Electrical Engineering:

- **ECE-288 Measuring the World**

Credits:

4.00

Description:

The world is addicted to quantifying the essence of everything, from personal IQ, to the speed of a baseball, to our healthiness, or our chances of winning the lottery. Behind most of these numeric values exists a science of measurement. Some of this is referenced to international standards, such as for length, time, weight, or temperature. Others are more arbitrary and subjective, such as ranking Olympic performance in gymnastics, beauty pageants, or popular responses as found in the game show Family Feud. A third category includes controversial areas, such as measuring whether a person is lying when interrogated, or using hype rather than reality to market products. Sometimes statistics are used to predict sports outcomes, such as in the annual March Madness NCAA basketball brackets. Finally, in a world subject to fraud and deception, it can be essential to distinguish legitimate from counterfeit items, such as in money, art, collectibles, and historical documents. Don't get hoodwinked! This course examines all of these, starting with how measurements have been made throughout history, along with a full deck of entertaining terms used during the ages. This may help you sort out your weight, whether given in pounds, kilos, or stones. Often these terms will provide insights into how people lived in different eras. We will also look at some of the technologies currently available to provide these measurements, and unravel the complexities of various sensors that are used. As we consider the meaning of accuracy we may become less naive about how much confidence to ascribe to the results given us. Hovering around all of these measurements should be the question of validity - are they meaningful, useful, or misleading? And the impact they have on society - whether they steer behavior more powerfully than one might originally suspect. Each student will also be given an opportunity to become an expert in an area of measurement of personal interest. By the end o

Type:

SCI TECH ENGR

Engineering Science:

- **ENS-103 Introduction to Engineering**

Prerequisites:

ENS L103 MUST BE TAKEN CONCURRENTLY.

Credits:

3.00

Description:

This course provides exposure to engineering practice, with particular focus on electrical engineering components such as circuit elements and systems. It seeks to go beyond the mathematics and provide an intuitive appreciation of functional devices. Examples taken from a broad swath of technological history illustrate significant crossroads, decisions, and inventiveness. Emphasis is placed on learning to think as an engineer - assessment of problems, candidate solution tradeoffs, and implementations. Frequent exercises in creative engineering design will be used. Students will be required to design several elementary devices, such as a magnet, a capacitor, a timing device, and a motor, which they will enter in a competition for overall strength, compactness, accuracy, or speed. Sometimes assignments relate to "survival on an island" concerns, such as communication or drinking water. Students also learn about reverse engineering by selecting, building, troubleshooting, and presenting an electronic kit of their choice. A term paper determining the engineering behind a topic of their choice will also be written and presented. On occasion (see ENS L103) there will be team competitions between various smaller groups in the class.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

• ENS-L103 Intro to Engineering Lab

Prerequisites:

Must be taken Concurrently w/ ENS-103

Credits:

1.00

Description:

The Lab is designed to provide opportunities to gain familiarity with engineering tools. Students will be introduced to parts (e.g. learn the resistor color code), test equipment (multimeters, prototyping trainers, signal generators, and oscilloscopes), and construction techniques (wiring, soldering, troubleshooting). Although it varies from year to year, Class Projects can be built during the Lab sessions. In the past these have included a 25 Watt electric generator, various door lock systems (both mechanical and electronic), and an AM transmitter and receiver (all projects made from scratch). It is likely that 2010-2011 may introduce some robotic creations for a competition. Electronic kits and motors can also be built and serviced in the Lab.

There is an adjoining machine shop, which can be utilized (with supervision), for fabricating items. Individual creativity is encouraged, and informal problem solving sessions occasionally occupy lab time. However, the lab is accessible outside of the traditional scheduled time.

Term:

Offered Fall Term

Type:

SCI TECH ENGR

Environmental Science:

- **UES-107 Introduction to Drones**

Prerequisites:

UES-L107

Credits:

3.00

Description:

Unmanned autonomous systems (UAS) or Drones are high-tech, intelligent machines capable of traveling by air, land, or sea via a remote connection. This course presents concepts and practical methods of using Unmanned Vehicles in a professional context, particularly for environmental projects. UAVs are increasingly being used in a professional capacity such as cinematography and filming, real estate, construction, surveying, mapping, agriculture, industrial inspections, utilities inspections and many more. The course covers mission planning, operations, field data collection, data processing, legal implications, data analysis and data deliverables. The course and laboratory will include learning flying micro-drones and preparing to pass the Federal Aviation Administration's Unmanned Aerial Vehicle Airmen (Part 107) exam. The course will have an associated Laboratory component in which students will learn how to properly plan effective flight missions, fly safely and legally, develop risk management strategies, analyze the data captured and convert it into a useful data deliverable.

Type:

SCI TECH ENGR

- **UES-L107 Introduction to Drones Lab**

Prerequisites:

UES-107

Credits:

1.00

Type:

SCI TECH ENGNR

• UES-111 Environmental Science**Prerequisites:**

Must be taken concurrently with UES-L111

Credits:

3.00

Description:

Applies the fundamentals of science to environmental issues. Topics include population dynamics and resources, environmental degradation, ecosystems, geologic processes, deforestation, biodiversity, climate change, air, soil, and water resource management, and pollution and risks to health.

Term:

Offered Spring Term

Type:

SCI TECH ENGNR

- **UES-L111 Environmental Science Lab**

Prerequisites:

Must be taken concurrently with UES-111.

Credits:

1.00

Description:

Laboratory exercises are used to illustrate topics covered in UES 111. Field testing and analysis of environmental samples. Field trips may be required.

Term:

Offered Spring Term

Type:

SCI TECH ENGNR

- **UES-121 Science, Art, and the Environment**

Prerequisites:

Take UES-L121 concurrently

Credits:

3.00

Description:

Examines art and cultural objects through the lens of the biological, chemical, and physical principles of the materials and processes we use to make them. Includes consideration of factors important in art conservation. Provides an environmental context for the manufacture and use of art materials

and the preservation of cultural objects.

Type:

SCI TECH ENGR

- **UES-L121 Science, Art, and the Environment Lab**

Prerequisites:

Take UES-121 concurrently

Credits:

1.00

Description:

Provides hands-on work with pigments, dyes, and other art materials using the basic principles of science and technology. Students will conduct laboratory experiments that produce art objects and other consumer products. Instruction in safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables, graphs, and graphics. Practice in synthesizing compounds like paints and finishes and in evaluating methods of art conservation.

Type:

SCI TECH ENGR

- **UES-225 Geographical Information Science**

Prerequisites:

Take UES-L225 concurrently

Credits:

3.00

Description:

Provides the fundamentals of geographic information science (GIS) including the history of automated mapping. A review of the necessary hardware and software elements used in GIS is presented. Hands-on exercises with computerized mapping software are required.

Type:

SCI TECH ENGNR

- **UES-L225 Geographic Information Science Lab**

Prerequisites:

Must be taken concurrently with UES-225

Credits:

1.00

Description:

Required companion computer laboratory to be taken concurrently with UES 225.

Type:

SCI TECH ENGNR

Forensic Science

- **FS-103 Introduction to Forensic Science**

Prerequisites:

FS-L103

Credits:

3.00

Description:

Application of the principles of forensic science in evaluating physical evidence, with emphasis on its role in criminal investigation. Class experiences may include guest lectures and field trips. 3-hour lecture. Normally offered Fall

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **FS-L103 Introduction to Forensic Science Lab**

Prerequisites:

FS 103 concurrently

Credits:

1.00

Description:

Laboratory experiences related to the collection and analysis of physical evidence as performed by forensic science professionals. Experiments may include forensic microscopy, drug analysis, forensic serology, physical patterns, fingerprint and firearm evidence analysis techniques. 3-hour laboratory. Normally offered Fall

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

Neuroscience:

- **NEUR-101 Intro to Neuroscience**

Credits:

4.00

Description:

Introduces the field of neuroscience, the study of the organization and function of the nervous system of humans and other animals. Neuroscientists examine how individual neurons function as signaling devices, how groups of neurons operate as circuits to produce fundamental units of behavior, and how much larger systems in the brain subserve complex functions such as memory and consciousness. Topics include the neuron and neural transmission, the overall function and organization of the nervous system, the development of the brain, neural plasticity, sleep, memory and other higher cognitive functions. Normally offered alternate years.

Type:

SCI TECH ENGNR

Physics:

- **PHYS-111 College Physics I**

Prerequisites:

Take MATH-121 or MATH-134 or MATH-165 or permission of Physics department chair; PHYS L111 taken concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **PHYS-L111 College Physics Lab I**

Prerequisites:

PHYS 111 concurrently

Credits:

1.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course. Error propagation, use of Excel, laboratory notebooks and formal reports required.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

• **PHYS-151 University Physics I**

Prerequisites:

MATH-121, MATH-165 or MATH-164 and PHYS L151 concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **PHYS-L151 University Physics Lab I**

Prerequisites:

PHYS 151 concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **PHYS-152 University Physics II**

Prerequisites:

PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

Credits:

3.00

Description:

This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **PHYS-L152 University Physics Lab II**

Prerequisites:

PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **PHYS-153 University Physics III**

Prerequisites:

MATH-121, MATH-164 or MATH-165

Credits:

3.00

Description:

This calculus-based course is the introduction of the topics of modern physics. It begins with special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom. Then Schrodinger's equation is introduced with use of wave functions, particle box, barrier penetration, quantum mechanical tunneling, the Pauli Exclusion principle, the development of the periodic table, and the X-ray spectra. Development of solid state physics with bonding in molecules, band theory of solids and semiconductor behavior. The final topics cover nuclear physics, radioactivity, half-life, nuclear fission and fusion, medical uses of radiation, elementary particle physics and introduction to astrophysics.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **PHYS-L153 University Physics III Lab**

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts of special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom.

Type:

SCI TECH ENGNR

Science:

- **SCI-103 Environmental Science**

Prerequisites:

SCI-L103 must be taken concurrently

Credits:

3.00

Description:

Case study approach to the fundamentals of science applied to environmental degradation, ecosystems, geological processes, population dynamics, deforestation and biodiversity, climate change, ozone depletion, air soil, and water resource management, pollution and risks to health, economics and the environment, politics and the environment, and ethics and the environment.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

• **SCI-L103 Environmental Science Lab**

Prerequisites:

Must take SCI-103 concurrently

Credits:

1.00

Description:

Laboratory exercises to illustrate the topics covered in Science 103. Field-testing and analysis of environmental samples. Field trip required.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

• **SCI-108 Introduction to Cancer Care**

Credits:

4.00

Description:

This course will introduce the students to the top ten U.S. adult cancers, as well as the most common pediatric cancers. Topics to be covered include cancer causes, detection, and prevention. Psychosocial aspects of being diagnosed with cancer and the role nutrition plays for cancer patients will be described. The course will also discuss the major treatment modalities for each cancer including radiation therapy, surgery, chemotherapy, and bone marrow transplants. The goals and objectives of the course will be met through the use of various teaching tools including but not limited to: PowerPoint presentations, videos, guest lectures, and a poster project with a presentation component. Cognitive assessment of the students will be accomplished through homework, quizzes, exams, and a group poster and oral presentation. Students with any type of academic background are welcome.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

• SCI-111 Introduction to Astronomy

Prerequisites:

MATH-128 or higher and SCI-L111 must be taken concurrently.

Credits:

3.00

Description:

History of Astronomy from the ancients to Newton; light; telescopes; sun, earth, moon planets, comets, asteroids, meteors; space programs, science and technology in society. Course culminates with a visit to the Clay Center Observatory, where students will be able to make first hand observations. For non-science majors.

Term:

Occasional

Type:

SCI TECH ENGNR

- **SCI-L111 Introduction to Astronomy Lab**

Prerequisites:

Take SCI-111 concurrently

Credits:

1.00

Description:

Laboratory experiments and exercises to illustrate the principles discussed in Science 111. Observational exercises using the Celestron telescope, astrophotography exercises, and computer simulations. Course culminates with a visit to the Clay Center Observatory, where students will be able to make first hand observations.

Term:

Occasional

Type:

SCI TECH ENGNR

- **SCI-112 Structure of the Universe**

Prerequisites:

MATH-128 or higher and SCI-L112 concurrently

Credits:

3.00

Description:

Astronomy of the cosmos; sun, stars, interstellar materials, galaxies, pulsars, quasars, black holes; nature of time relativity, cosmology. Course culminates with a visit to the Clay Center Observatory, where students will be able to make first hand observations. For non-science majors.

Term:

Occasional

Type:

SCI TECH ENGNR

- **SCI-L112 Structure of the Universe Lab**

Prerequisites:

Take SCI-112 concurrently

Credits:

1.00

Description:

Laboratory experiments and exercises to illustrate the principles discussed in Science 112. Observational exercises using the Celestron telescope, astrophotography exercises, and computer simulations. Course culminates with a visit to the Clay Center Observatory, where students will be able to make first hand observations.

Term:

Occasional

Type:

SCI TECH ENGNR

- **SCI-113 A Habitable Earth Within the Solar System**

Credits:

4.00

Description:

This course introduces non-science majors to concepts that are central to making our planet habitable. It presents Earth in context of the solar system with a broad view of global climate change and energy resources in a quest to better understand the workings our planet. This course on Earth and Planetary Science is suitable for students who may have taken their last science and math course several years ago, or are just curious about knowing facts on major issues that pertain to the future of our planet. Together with a reading component, this course aims to give students a flavor of how researchers think, investigate and develop conclusions that directly affect our political and economic future. Topics covered in this course range from the solar system to the study of search for other habitable Earth-like planets, search for extraterrestrial life, and evolution of life on Earth. Other characteristics of this course are heavy use of audio-visual materials often including computer animations and simulations, in-class experiment demonstration, and intensive use of INTERNET-based resources.

Type:

SCI TECH ENGNR

• SCI-165 Inner Workings of Physics Universe

Credits:

4.00

Description:

About 15 billion years ago, (data indicate) the big bang occurred and the universe was born. With it came physical laws and a spectacular array of consequences that lead to the universe as we know it. This non-lab , 4 credit course explores the inner workings of the physical universe in terms of the scientific inquiry which lead to Newton's laws, an understanding of energy, waves, light, electricity, atomic structure, chemical reactions, nuclear physics, particle physics, relativity, and the big bang theory. During the course, students will learn to make use of modern resources to access scientific and technical literature to research a scientific topic. They will learn to distinguish between science and technology (e.g. quantum mechanics and nanotechnology, the discovery of the Higgs boson and the large hadron collider that made it possible, etc.) and to understand how the science, technology, and engineering disciplines play a crucial role in recognizing and solving problems of society and the world that we share.

Type:

SCI TECH ENGNR

• SCI-171 The Built World: How Humans Engineer Environments

Credits:

4.00

Description:

The most basic needs of humans have not changed - water, food, and shelter - but the means of meeting these needs has. In this course, we will examine how technology-driven societies operate by studying how cities are built and how they function. Topics will include water supply and distribution systems; transportation systems (including road and bridge design and construction); building design, construction, and operation (including skyscraper and sustainable building design), and waste removal systems (municipal and industrial wastewater removal and treatment, solid waste removal and treatment). This is not a course about little gadgets and widgets; this is a course about big engineering marvels; and it emphasizes applications of science - how things work - rather than scientific theory.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

• SCI-173 Mapping Our World The Power of Digital Maps

Prerequisites:

SCI L173 Must be taken concurrently Knowledge of Windows type Application

Credits:

3.00

Description:

Geographic Information Science (GIS) link information (number of fire hydrants on a block) to features on a map (e.g., a point representing street address) that has a designated geographic location (as designated by global coordinates). Unlike paper maps, GIS software allows the production of interactive maps that allows the user to layer data, to indicate spatial patterns, to analyze trends, and to combine different features of the mapped area in novel ways. For example, a business person may wish to use GIS to determine the optimum location of retail outlet (based on the mapped demographics of a neighborhood), while an environmental engineer may use GIS to describe the location of outfalls to see how they correlate to areas of stream pollution. In this course, students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

- **SCI-L173 Mapping Our World Lab**

Prerequisites:

Must be taken concurrently with SCI-173

Credits:

1.00

Description:

This laboratory illustrates concepts and methods taught in SCI 173. In this lab students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **SCI-181 Science and Life in the 21st Century**

Credits:

4.00

Description:

No longer offered on Boston campus This is a four credit, non-lab, science course that examines the central scientific problems confronting the 21st century. The course studies particular topics and teaches the necessary science around these topics to provide a good understanding of the issues. The topics currently are: Energy, Science and Economic Decisions, Sustainability of Life on Earth, Health and Science.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **SCI-184 Contemporary Science and Innovation**

Credits:

4.00

Description:

This is a 4 credit, project based science course that examines the central scientific problems confronting the 21st century. The course consists of lectures, class discussions, field trips, and in-class hands-on activities designed to familiarize the student with different concepts of the lectures. The current focus is on sustainable energy production. A final team project related to the course topics will be given. This is the version of SCI 183 without a separate lab component. Students who have taken SCI 183, L183 are not allowed to take this course.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **SCI-201 Physics for Future Presidents**

Credits:

4.00

Description:

This course presents a topical introduction to the key principles and concepts of physics in the context of the world events and natural phenomena that confront world leaders and that require informed decisions and responses. Energy, health, counter-terrorism, remote sensing, space programs, nuclear proliferation, and a host of other modern challenges have technological and scientific dimensions, the understanding of which is essential to avoiding disastrous policy decisions. This course considers the application of physics to these societal challenges. The material is covered at a level and pace that a future world leader should be able to handle; the emphasis is on the development of physical reasoning skills, and not on detailed, mathematical problem solving.

Type:

SCI TECH ENGNR

- **SCI-210 Earth and Planetary Crystals**

Prerequisites:

Take SCI-L210 concurrently

Credits:

3.00

Description:

This course will provide undergraduate students of various disciplines with an introduction to gems and crystals using interactive, evidence-based teaching approaches. Crystalline forms of matter are critical to our existence. Using innovative teaching strategies of in-class hands-on demonstration, supplemented with visuals of crystal details, the course provides students insights into the formation, alteration and unique properties that make crystals invaluable. Topics range from the study of proteins and nucleic acids to the interior of planets. The in-class lectures will provide a basic guide that will serve as a platform for individually catered in-depth study. Therefore, the course is open to advanced students as well, who can pick up higher level of information for discussion and class projects.

Studies in Literature: 1 course, 4 credits

Choose one Studies in Literature course from those listed below:

- **ENG-113 World Drama I**

Credits:

4.00

Description:

Survey of drama and theatre as part of world culture from classical Greece through 18th-century China. Normally offered yearly.

Term:

Offered Fall Term

Type:

Studies in Literature

- **ENG-114 World Drama II**

Credits:

4.00

Description:

Survey of drama and theatre as part of world culture from the 19th century to the present.

Term:

Offered Spring Term

Type:

Studies in Literature

- **ENG-130 Introduction to Literature**

Credits:

4.00

Description:

Study of poetry, prose, and drama, with emphasis on close reading and literary analysis. Students will compose formal essays discussing the meanings and relationship between texts as well as the author's craft and relationship to the reader. Offered every semester.

Type:

Studies in Literature

- **ENG-135 World Literature in English**

Credits:

4.00

Description:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

Term:

Offered Both Fall and Spring

Type:

Studies in Literature

- **ENG-141 Studies in British Literature**

Credits:

4.00

Description:

Study of poetry, prose, and drama from the British literary tradition, with emphasis on close reading and literary analysis. Students will compose formal essays discussing the meanings and relationship between texts as well as the author's craft and relationship to the reader. Offered every semester.

Type:

- **ENG-142 Studies in American Literature**

Credits:

4.00

Description:

Study of poetry, prose, and drama from the American literary tradition, with emphasis on close reading and literary analysis. Students will compose formal essays discussing the meanings and relationship between texts as well as the author's craft and relationship to the reader. Offered every semester.

Type:

Studies in Literature

- **ENG-151 Introduction to African-American Literature**

Credits:

4.00

Description:

Literature has the capacity to record and interrogate history in an imaginative and artistic context. African-American literature is a rich, varied, and complex body of literature that faces our tainted history directly. The authors we will read in this class examine slavery's long-term psychological and social effects while forging a literary history that is at once a part of and apart from American literary history more generally.

Type:

Studies in Literature

- **ENG-152 Horror Fiction**

Credits:

4.00

Description:

This course focuses on the reading and analysis of horror literature and the ways in which horror reflects and represents personal and cultural anxieties. Readings will include both classic and contemporary authors, for example, Edgar Allan Poe, H.P. Lovecraft, Shirley Jackson, Stephen King, and others. Assignments will include analytical essays as well as creative writing.

Type:

Studies in Literature

- **ENG-153 Literature of War**

Credits:

4.00

Type:

Studies in Literature

- **ENG-155 Young Adult Literature**

Credits:

4.00

Description:

Young Adult Literature's recent explosion in popularity raises important questions about the stories it tells, the values it promotes, and the audiences it seeks. This course approaches the YA phenomenon as one with deep historical roots as well as contemporary cultural relevance. From nineteenth century classics to current series favorites, literary works focused on young people reframe perennially fresh narratives about coming of age, negotiating personal identity, and navigating a complex moral universe. This course also considers YA literature as part of an evolving network of writers, readers, publishers, critics and filmmakers.

- **ENG-157 Poetry and Religion**

Credits:

4.00

Description:

This course will use close readings to examine poetry as a heightened form of language seeking to make contact with divine sources of faith. We will consider poems that provide examples of the struggle to attain belief, as well as poems that deny belief. Language as both the grammar of ascent and the locus of descent. The position of human beings in relation to God, or the gods, or the absence of the divine.

Type:

Studies in Literature, Classics Minor

• ENG-161 Writing the American West

Credits:

4.00

Description:

In 1893, Frederick Jackson Turner famously declared that the American frontier (i.e., the West) had closed for good. To a certain extent, Jackson's proclamation was meant to demarcate the end of the 19th century. But perhaps more importantly, it marks the beginning of a distinctly American literature that began, ironically, by mourning its own demise. In this course, we will journey among some of the more significant signposts and detours that have marked Western U.S. literature in the 20th Century. Along the way, we will question just where, exactly, the West begins and ends (The Mississippi River? The Great Plains? The Rockies?), and think about whether or not Turner's frontier thesis continues to hold true (if it ever did). We will consider whether the broad rubric of The West is adequate to describe the various sub-regions within this portion of the United States, and we'll examine the genres which seem as if they could not have happened anywhere else. We will also interrogate differences in the literature across gender lines: how, if at all, does the literature written by men and by women differ? Above all, we will strive to come away with a deeper understanding of this vitally American, and vitally Wild literary place.

Type:

Studies in Literature

• ENG-213 English Literature I

Credits:

4.00

Description:

Study of major writers of England from the beginning to the mid-18th century. Regularly assigned essays on the reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Studies in Literature

- **ENG-214 English Literature II**

Credits:

4.00

Description:

Study of major English writers from the mid-18th century to the present. Regularly assigned essays on the reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Studies in Literature

- **ENG-217 American Literature I**

Credits:

4.00

Description:

Study of major American writing from its origins through 1865. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Studies in Literature

- **ENG-218 American Literature II**

Credits:

4.00

Description:

Study of major American writing from 1865 through the present. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Studies in Literature

- **FR-216 Masterpieces of French and Francophone Literature in English Translation**

Credits:

4.00

Description:

Masterpieces of French and Francophone Literature in English Translation. Studies works translated into English by major authors from the Middle Ages to the present. Explores drama, fiction, and poetry from many regions of the world: Africa, Western Europe, North America, the Caribbean, and Vietnam.

Term:

Alternates Fall & Spring

Type:

Studies in Literature

- **FR-309 Survey of French Literature I**

Prerequisites:

FR 202 or Instructors permission

Credits:

4.00

Description:

Analyzes and discusses canonical works of French literature from medieval times to the eighteenth century.

Term:

Offered Fall Term

Type:

Studies in Literature

- **FR-310 Survey of French Literature II**

Prerequisites:

FR-202 or instructor's permission

Credits:

4.00

Description:

Study, analyze and discuss canonical works of French-language literature from the nineteenth through the twenty-first centuries, as they relate to important events in the art, culture, and history of the Francophone world.

Term:

Offered Spring Term

Type:

Studies in Literature

- **FR-315 Mots Doux: Love, Lust and Literature**

Prerequisites:

Take FR-205 or Instructor's consent

Credits:

4.00

Description:

Explores the theme of love and its manifestation in representative works while being aware of the evolution of French Literature. Addresses various thematic that accompany a traditional survey of literature course such as critical discourse, aesthetic representation, literary movements, genre, construction of sexual identities, sexual politics as well as representations of ethnicity, class, and culture.

Term:

Occasional

Type:

Studies in Literature

- **FR-318 Face in the Mirror: Writing & Reflecting the Self in French**

Prerequisites:

FR-205 and FR-305 or Instructor's consent

Credits:

4.00

Description:

Examines literature in the French language focusing on memoir, essay, and autobiography. Read authors such as, Montaigne, Rousseau, Lamartine, Colette, Duras, Beauvoir, Le, Chamoiseau, Djébar, Conde, Ernaux, Genet, and Satrapi. Develops an appreciation of the differences between autobiography and autofiction. Explores the question of truth and the fallibility of memory.

Type:

Studies in Literature

- **WGS-211 Heroines, Hotties & Hubris: Adolescent Girl's Books**

Credits:

4.00

Description:

Explores what we can learn from the books that teenage girls read. In addition to a wide array of interesting and complex Young Adult novels targeted to young female readers, students will be exposed to theories of adolescent development, literary criticism, and social theory. Topics include how the dilemmas of girlhood have changed or stayed constant and the urge, so common in books for children and teens, to teach kids how to think and behave.

Term:

Occasional

Type:

Studies in Literature

- **WGS-220 Other Worlds, Other Genders: Women and Science Fiction**

Credits:

4.00

Description:

Examines through both classic and contemporary science fiction a variety of possibilities for world-reimagining in the realms of gender, sexuality, race, and other forms of difference. Draws on theories of utopian and dystopian discourse, engages with questions of biology and reproduction, and explores colonialism through first-contact and space empire narratives.

Ethical & Philosophical Inquiry: 1 course, 4 credits

Choose one Ethics course from those listed below:

- PHIL-119 Ethics

Credits:

4.00

Description:

A systematic introduction to the major thinkers and their positions on the main issues of ethics, such as: What is morality? What are moral values? How should we live our lives? Are there objective, universal, absolute moral standards? If so, what are they, and what is their basis? 1 term - credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- **PHIL-120 Ethics and Civic Life**

Credits:

4.00

Description:

In this class you will be introduced to the perspectives and methods of politics, philosophy, and economics and see how these three disciplines present distinct but interconnected dimensions of current social and political issues.

- **PHIL-123 Social Ethics: The Good Life**

Credits:

4.00

Description:

An examination of contemporary Western society, particularly in the United States, in relation to philosophical attempts to define the good life. Current books that exhibit a philosophical approach towards important contemporary social issues will be discussed, as well as classics in philosophy. Topics may include: civic virtue, consumerism, current events, economic justice, popular culture (film, music, television), religion and secularism, etc. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- **PHIL-127 Contemporary Moral Issues**

Credits:

4.00

Description:

A critical examination of a number of contemporary moral issues such as: abortion, affirmative action, animal rights, capital punishment, cloning, drug legalization, environmental ethics, euthanasia, genetic engineering, gun control, pornography, same-sex marriage, suicide, war and terrorism, etc. 1 term - 4 credits. Human Behavior and Societies: 1 course, 4 credits

Choose one Human Behavior and Societies course from those listed below:

- **ADPR-285 Media and Pop Culture I**

Credits:

4.00

Description:

Examines the influence of media on contemporary society from a social science perspective. Television, radio, film, and print formats are discussed in terms of their persuasive impact on mass culture in the U.S.. The emergence and development of Rock N Roll is discussed in unison with the Civil Rights, Student's Rights, and anti-War movements of the period from 1946-1972.

Term:

Offered Spring Term

Type:

Human Behavior & Societies

Communication:

- **CJN-255 Introduction to Media**

Credits:

4.00

Description:

An introduction to the role of media in contemporary society, focusing on media's influence on cultural, political, and ideological processes. An examination of the historical contexts within which newspapers, radio, television, and new media technologies develop, and how audiences interact with and influence the use of media.

Term:

Offered Both Fall and Spring

Type:

- **CJN-375 Organizational Communication**

Credits:

4.00

Description:

Historical development of the theory of organizations, examination of information flow, network analysis, communication overload and underload, corporate culture, superior-subordinate communications, organizational effectiveness, and change processes.

Term:

Offered Fall Term

Type:

Human Behavior & Societies

Economics:

- **EC-151 Economic & Human Geography**

Credits:

4.00

Description:

The study of how economic and human activity is distributed across space, the reasons for these spatial distributions, and the processes that change the spatial organization of economic activity over time. Topics include: maps, map projections, and geographic information systems; population geography; the organization and location of cities, towns and villages; transportation and communication policy; industrial location; the geography of world trade; and geographic features of economic development. The course takes a global perspective, and draws on cases and examples from all over the world. Cultural Diversity B

Type:

Asian Studies, Human Behavior & Societies

- **GVT-110 Introduction to American Democracy**

Credits:

4.00

Description:

An introduction to the American political system and constitutional framework. Focus will be on the interplay of various institutions (the Presidency, Congress and the Judiciary) in creating public policies. Contemporary public issues will be discussed, as will the role of political theory in shaping American democracy. Attention will be given to the role of the news media, public opinion, political ideology, political parties and interest groups in the American system.

Type:

Human Behavior & Societies

- **GVT-115 Evolution of the Global System**

Credits:

4.00

Description:

The goal of this course is to introduce the student to the main actors, social facts and processes that shaped the international system in the nineteenth and twentieth centuries. By analyzing the spread of industrialization, the race for colonies, the thrust of imperialism, and the rapid growth of nationalism, among other factors, this course explains the contradictory and simultaneous trends of unprecedented levels of prosperity and violence in Europe and beyond. While the course examines the role of the United States in the international system, particularly in light of its dominant role since the early twentieth century, it also emphasizes the developments taking place in other regions such as Asia, Africa and Latin America. This will allow students to understand the global arena as a space of complex interconnections involving varieties of forms of production, national political cultures and idiosyncratic traditions. This course sets the foundations for other courses in International Relations and Regional Studies

Type:

Human Behavior & Societies

Psychology:

- **PSYCH-114 General Psychology**

Credits:

4.00

Description:

Surveys core theoretical concepts and contemporary empirical research from the major sub-fields of psychology: physiology; perception; cognition; learning; emotion; motivation; development; personality; psychopathology; psychotherapy; and social behavior. Required for psychology majors. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Human Behavior & Societies

Sociology:

- **SOC-113 Introduction to Sociology**

Credits:

4.00

Description:

An introduction to the sociological understanding of human interaction, group process and social structures. Students are introduced to basic concepts, theories and methods of sociological investigation. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

- **SOC-116 Social Justice**

Credits:

4.00

Description:

An examination of traditional and contemporary problems associated with major social institutions such as the family, economics, government and education. Social forces related to ethnicity, social class, health and welfare, and urbanization are also included. Alternative remedial measures based on behavioral science theories are discussed. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Human Behavior & Societies

- **SOC-224 Families in Contemporary Society (Spain)**

Credits:

4.00

Description:

Spain has experienced major socio-demographic changes since the mid 1970s. These transformations mainly arise from the new role of women in society and, in particular, women's higher levels of education, work experience, and labor market attachment. The changes in women's labor force participation have occurred in conjunction with a progressive postponement of main family events, such as leaving the parental home, forming a partnership and having children, as well as with a reduction in the family size. Spain is, indeed, characterized as having one of the lowest low fertility levels within Western industrialized countries, a pattern that is exacerbating the ongoing process of population aging. This picture partly reflects the conflicting relationship that currently exists between women's labor force participation and the accommodation of family responsibilities: the so-called work/ family balance. Ongoing differences among countries have been accounted for by different explanatory factors that involve socio-economic, cultural and social policy dimensions. From a comparative perspective, the course is intended to cover recent debates, controversies, and research on family formation and family dilemmas in contemporary Spain.

Bachelor of General Studies

The Bachelor of General Studies (BGS) degree is an alternative to the traditional department-centered baccalaureate program. A student follows the core requirements of the Bachelor of Science degree and then takes 44 hours within one of the five interdepartmental clusters -- Humanities, Social Sciences, Life Sciences, Physical Sciences, or Visual Arts -- in place of a single departmental concentration.

The degree is designed principally to meet the needs of transfer students and adult learners returning to college after an absence of several years. The degree allows the student with an eclectic set of transfer credits to earn a bachelor's degree. The BGS is not appropriate for most students planning to go on to graduate or professional study. A student seeking a BGS should consult with the Office of Undergraduate Admission and a department chair in the proposed Interdepartmental Cluster prior to enrolling in this degree program.

Composition of the Interdepartmental Clusters:

Humanities:

- Communication & Journalism
- Theatre Arts
- English
- History
- World Languages & Cultural Studies
- Philosophy
- Women's & Gender Studies (courses with a humanities focus)

Social Sciences:

- ADPR
- Economics

- Education Studies
- Environmental Studies
- Government
- History
- Psychology
- Sociology
- Women's & Gender Studies (courses with a social science focus)

Life Sciences:

- Biology
- Chemistry
- Radiation Science

Physical Sciences:

- Chemistry
- Computer Science
- Environmental Science
- Mathematics
- Physics

Visual Arts:

- Art Foundation Studies
- Art History
- Fine Arts
- Graphic Design
- Illustration
- Interior Design

First Year Experience: 1 course, 1 credit

Students with 15+ transfer credits of college or university work are exempt.

Choose one of the following to be completed during the first semester of matriculation:

- **CAS-101 Strategies of Success**

Prerequisites:

CAS students only. SBS students by special permission.

Credits:

1.00

Description:

CAS 101 is a one-credit course that meets once a week and is designed to help you have a successful transition to Suffolk University and our unique urban community. It is also designed to introduce you to the principles and concepts of Oral Communication and Presentation Skills. Through interactive exercises and engaging assignments, you will explore the campus environment and learn about strategies for success as a student. You will present speeches about your research and activities to improve your abilities as a speaker.

- **ADPR-102 Professional Development**

Prerequisites:

ADPR-101 must be taken concurrently

Credits:

1.00

Description:

In this hands-on experiential course, students examine potential career paths in Advertising, Public Relations, and Social Media, become oriented to the university and the surrounding Boston area, and identify professional resources in Boston that foster career development.

Major Requirements Minimum: 8 courses, 32 credits

Complementary Major Requirements, Minor Requirements, and Free Electives: credit varies

Minimum Total Credits Required for Degree Conferral: 126 credits

Note:

Courses may also count toward major if taken at appropriate level.

Some degree programs exceed 126 credits.

Choose one Seminar for Freshmen course from those listed below:

- **SF-101 Fixing the World- Energy and Water: The Science of Solutions**

Credits:

4.00

Description:

Two of the most daunting challenges the world faces (or will face) is how to provide for both its growing energy needs and potable drinking water. Regular news events include climate change, droughts, flooding, and petroleum struggles. Human nature often requires a severe crisis before it responds. This course will investigate the historical science driving the use of energy since the Industrial Revolution to convert energy resources into work, including the steam engine, the electric motor, and the internal combustion engine. It will also consider alternative energy options to fossil fuels, such as solar, wind, geothermal, and ocean power. Along the way we will consider the evidence for Global Warming and Climate Change. We will look into human nature, simple life styles, conspiracy theories, and the influence of those in power to shape human opinion. We will also consider how our water supply is provided and where it goes after being used. What options do developing countries or drought racked areas have to remedy their water needs? Although the course pursues a scientific understanding of these issues, the mathematics used will be gentle, and a larger emphasis will be placed on the intuitive appreciation of these concerns.

- **SF-116 Enlightened Insanity**

Credits:

4.00

Description:

Rain or shine, the great 18th century Enlightenment philosophers would meet at the famous cafes of Paris to discuss their ideas, and to observe and criticize society. From these informal debates emerged ideas that are at the core of our modern understanding of the nature of society, marginality, human nature, civil rights, the essence of creativity and genius. Come join us in the quest to understand, define, observe, and analyze the key ideas and concepts of these great thinkers, such as Rousseau, Diderot, and Voltaire, still so relevant in our time. We will read key works of these creative thinkers and philosophers. We will enrich our experience and understanding through the use of film, theatre performances, museum visits, as well as the occasional cafe debate.

- **SF-126 The Boston Theatre Scene: the Inside Experience**

Credits:

4.00

Description:

Using the current Boston theatre season as its syllabus, this writing- and analysis-intensive course will explore several plays in production at some of Boston's many professional theatres. We will study the script of four to five plays before attending performances of those works. Students will gain insights on the world of theatre through backstage tours and conversations with theatre professionals such as producers, directors, actors, designers, playwrights, and critics. Students must be available for evening (usually Wednesday) performances. A fee for student-rate tickets will be assessed.

- **SF-132 The Beatles: Here, There & Everywhere**

Credits:

4.00

Description:

This seminar will investigate the impact and legacy of the Beatles. The Fab Four deserve our scholarly attention as musical innovators and as cultural avatars of the 1960s, an era that still exerts influence today. We will examine the many ways in which the Beatles rocked the establishment and became defining figures in post-war youth culture. We will also discuss other media (the visual arts, film, fashion, style) and fields of study (mass media, marketing, recording technology, copyright law, English history) using the Beatles as our guides.

- **SF-151 Getting Over It: Dealing With the Aftermath of Group Conflict/Mass Atrocity**

Credits:

4.00

Description:

Once violent conflict between two groups has ended, what is the best way to transition back to normality coming to terms with the past or simply moving on? To answer these questions we will examine the debates surrounding war crime tribunals, truth commissions, lustration policies, and reparations in the second half of the 20th century. Case studies will include post-apartheid South Africa, post-WWII Germany, and the Israeli/Palestinian conflict. We will discuss the philosophical problems raised by each of these instruments, as well as on the political, legal, and practical difficulties their implementation present. Cultural Diversity B

- **SF-156 The Mask Behind the Face: Personas, Personalities, and Perception. Acting in /Out Life**

Credits:

4.00

Description:

The theatre has always been a metaphor for life. In modern times life has become theatre. This seminar will confront the idea of real life and the eroding boundary between performers and audience. Students will study the roots of the contemporary obsession with stars and stardom, a mania that began in the 18th century and flourished in the 19th century. We will look at performance studies, performers memoirs, plays, and films that dramatize this dilemma.

- **SF-173 Crime in American Society**

Credits:

4.00

Description:

Popular beliefs about crime are often inspired by the media and by specific criminological theories. These theories about and media images of crime will be examined in detail, including the hits and misses.

- **SF-174 Tragedy and Literature**

Credits:

4.00

Description:

This course will focus on classic works of ancient and modern literature that examine the human condition from a tragic perspective. We will concentrate on close readings from the following texts: Homer's Iliad, Sophocles' Antigone, The Bhagavad-Gita, Shakespeare's Othello, Chekhov's short stories, and Joyce's Dubliners.

Type:

Classics Minor

- **SF-175 War and Apocalypse in Science Fiction**

Credits:

4.00

- **SF-178 Sacred Hoops & Sneaker Pimps: Understanding the American Hoop Dream**

Credits:

4.00

Description:

This course is about the basketball hoop dream played out at the high school and college levels. We will study a wide variety of materials - novels, films, websites, reference works - to understand both the construction, and destruction, of the hoop dream in such diverse places as New York City, Seattle, rural Indiana, suburban Georgia, and the Wind River Reservation in Wyoming. Issues of race and culture will serve as guiding themes as we develop critical theory explaining why the hoop dream has persisted, and adapted, over time, to fit the needs of its believers and supporters.

- **SF-182 Heroes, Antiheroes and Outsiders: Reading the Graphic Novel**

Credits:

4.00

Description:

How is it that comics", a genre often viewed as entertainment for children and adolescents, has become one of the most exciting forms of narrative and visual art? To answer this question, this seminar will examine a range of graphic novels, from those that celebrate their origins in superhero comics, such as Alan Moore's *Watchmen*, to those that treat subjects not usually considered proper to the comics genre, such as Art Spiegelman's *Maus*, about the Holocaust, and Alison Bechdel's *Fun Home*, about the complexities of sexual identity. As we read these works, we will look at how the combination of words and still images makes the graphic novel a unique storytelling form, as well as how artists and writers push the envelope to create new styles and challenge our expectations. In addition to class discussions and writing assignments, we will take a field trip to the Museum of Fine Arts and create a collaborative group graphic novel step-by-step over the course of the semester (all abilities welcome).

- **SF-183 Politics, Power and the Media**

Credits:

4.00

Description:

Is there a relationship between accumulated political power and mass media representations? Is news content impacted by existing political power relations? It is the object of this course to critically analyze the role of the mass media within the framework of existing political power relations in the United States. In particular, the course will focus on the role the mass media plays in promoting and reinforcing dominant political practices and ideologies. The course will begin by exploring various theories of the press, notably its function in a democratic society, as well as the concepts of power and propaganda. We will continue with a series of case studies, complemented by secondary sources that highlight how media representations affect the contemporary distribution of political power in the US. Topics of discussion will include the current US war on terrorism, the ongoing health care debate, the public disavowal of big government", and the concept of a liberal media.

• SF-189 American Gothic: Edgar Allan Poe, Flannery O'Connor and Annie Proulx

Credits:

4.00

Description:

This literature seminar will study and compare the short stories of Edgar Allan Poe, Flannery O'Connor, and Annie Proulx. Beginning with Poe as the father of the short story genre in America and exploring his critical theory of the grotesque and arabesque", the class will examine the emergence of the gothic literary idiom as a classic American genre. Critical essays on the gothic aesthetic will be analyzed and film adaptations and documentaries will be viewed.

• SF-190 Asia in America Fiction and Fact

Credits:

4.00

Description:

With a focus on some selected ethnic groups from Asia, Asia in America studies the history and current status of Asian Americans in Boston and other parts of the country. We will examine the major reasons why these immigrants chose to leave their home country as well as their expectations and experiences here in America. We will also discuss the issues Asian immigrants have faced in this adopted home as well as the connections and conflicts among different ethnic groups or even within the same ethnic group due to political and socio-economic reasons. The course will include some level of community engagement, through Chinatown tour and service, which may enable us to have a direct contact with the Asian American population and reflect on what is being discussed in class. Through this course, we hope to gain a better understanding of the racial and cultural history of the country and arrive at a deep appreciation of the dynamics of cultural interactions in the twenty-first century. The course fulfills the SCGP requirement.

Type:

Global Engagement Experience

- **SF-191 Film Adaptation Film Adaptation**

Credits:

4.00

Description:

Why did they change the ending of the book? The novel is so much better! We will explore the concept and industry of film adaptation. Students will read novels and watch respective film adaptations to explore how the written word is adapted to the screen; both fiction and non-fiction works will be considered. Also, field trips to past film locations in Boston will be taken to explore why specific settings were chosen for respective situations. Additionally, students will create their own written adaptations of source materials, putting into practice the concepts studied in class.

- **SF-197 Sustainability, Energy, and Technology At Suffolk University**

Credits:

4.00

Description:

In this project and team-based course, students study a sustainability problem at Suffolk University and spend the semester developing proposals to address the problem. At the end of the course students will present their proposals to Suffolk University's sustainability committee, and will exhibit their websites and visual aids in the Donahue lobby to educate the Suffolk community about sustainability. If their proposals are well-researched and well-communicated, students can see their ideas actualized while they are still undergraduates.

- **SF-198 Music and the Brain**

Credits:

4.00

Description:

What accounts for the power of music to move us so profoundly? This course explores how our brains and music evolved together: What music can teach us about the brain, what the brain can teach us about music, and what both can teach us about ourselves.

- **SF-199 Unfolding the European Union**

Credits:

4.00

Description:

The EU is a powerful political, economic and cultural block that is meant to play a major role, together with the USA and China, in the creation of a new post-crisis world order. The seminar is intended to cover, at a basic but reachable level, the history, the politics, the culture and the functions of the EU in the beginning of the Twentieth Century. An extraordinary experiment of sociopolitical engineering, comparable to that of the United States of America, the EU has been changing the life of an increasing number of Europeans for over 50 years. No American student could afford to ignore the inner structure as well as the particular peculiarities of such inclusive supranational organization in today's world. Issues as institutional functioning, problems derived from individual state sovereignty, economic coordination to face common challenges, cultural integration, future enlargement, etc. are all indispensable to understand the way in which Europe is changing. But also much more day-to-day issues, such as travel mobility, education exchange programs, citizen's participation, supranational networks of people in the arts or in business, unified labor market, gender participation, human rights, consumer's protection, etc. are all in the process of developing a more robust and functional European Citizenship.

- **SF-1110 Decoding Boston: Signs and the City**

Credits:

4.00

Description:

This interdisciplinary seminar will explore the buildings, monuments, sites, and signs around Boston from the point of view of Visual and Culture Studies. In addition to providing a compelling introduction to the history, major landmarks, and culture of the city, the seminar is specifically intended to improve students' visual literacy: that is, their awareness of their visual environment and their ability to critically analyze the rhetoric of the spaces, buildings, and images with which they are surrounded.

Type:

Local Engagement Experience

- **SF-1122 The Ethics of Peace and War: From The Ancient World to the Present**

Credits:

4.00

Description:

This course will explore historical, ethical and political issues concerned with matters of peace and war. We will examine a variety of different texts: religious, historical, philosophical and literary, but the main emphasis will be philosophical justifications for war and philosophical visions of just peace, with an eye to contemporary questions in the War on Terror. To the extent that we use non-philosophical texts, this will be in the service of focusing the imagination on the philosophical issues and applying theoretical frameworks to historical events.

• SF-1127 The Vietnam and Iraq Wars: Polarized Perspectives

Credits:

4.00

Description:

This class will examine some of the many controversies surrounding the Vietnam and Iraq Wars, two conflicts that have been profoundly polarizing for the American people. There are widely divergent perspectives regarding the fundamental questions surrounding each war. Were the reasons for American involvement just? To what extent were the methods used by the United States military during each war just? To what extent did the media play an appropriate role before, during, and after each war? Did opposition to these wars serve primarily to benefit the enemies of the United States or did it constitute a form of patriotism and love of country? This interdisciplinary course will address these and other complex questions by examining the histories, literature, and films (both documentaries and dramatic) that have been produced in response to these wars.

• SF-1128 Sustainable Media

Credits:

4.00

Description:

Contrary to a popular perception that information, communication and entertainment technologies are clean, ecologically benign and paperless, the reality of an increasingly digital life is that our fascination with the next best thing in mobile phones, video game consoles, personal computers, digital cameras, tablets, etc., has devastating impacts on our environment. These media devices are manufactured using toxic ingredients in poisonous working condition, require an abundance of energy to operate, and create hazardous waste when disposed. Media technology companies and the advertising industry that markets their wares have successfully persuaded consumers to accept rapid obsolescence and to highly anticipate the latest upgrade. But some consumers, electronics manufacturers, policy makers, and environmental groups are working to change the culture of

consumption in favor of sustainable media practices that lessen the environmental footprint of the digital devices we use everyday. The purpose of this course is to understand the problem of unsustainable media, and the possible solutions for a sustainable media system.

- **SF-1129 Beacon Hill: Fact, Fiction, and Fantasy**

Credits:

4.00

Description:

The course will explore the physical geography, history, and image in literature, film, and pop culture of Suffolk University's Beacon Hill neighborhood. The purpose and objective of the course is to provide students with a deep knowledge, understanding, and appreciation of Beacon Hill through examination of written and visual sources, and feet-on and eyes-on experience of the public parts of the Hill.

Type:

Local Engagement Experience

- **SF-1133 Problems and Solutions in Early American History**

Credits:

4.00

Description:

This course will examine four major problems in the early American republic: forming a government; bridging vast distances on the American continent; slavery; international relations. We will explore the various proposed solutions to these problems. Some of the solutions worked well, others were more disastrous than the initial problem. We will read primary documents pertaining to these issues, and try to imagine how men and women considering the problems might have responded to them. What solutions could be proposed? What solutions would work? What were the political, economic, or social difficulties generated by the problem and by the proposed solutions? In considering the problems, we will also learn how to use the various archives close at hand: the Sawyer Library, the Boston Public Library, the Massachusetts Historical Society, and the Massachusetts State Archives. Students will also post their findings on a class blog, and present their work to one another in class.

- **SF-1134 The Meaning of Life**

Credits:

4.00

Description:

What do we live for? Which beliefs, values, and experiences sustain meaningful, fulfilling existence? Are we authors of our destinies or powerless pawns in an unfathomable cosmic game? Does death render all our efforts superfluous? This award-winning course offers a cross-cultural, interdisciplinary exploration of these questions through philosophical and religious texts, art, fiction, autobiography, and psychological studies. The course opens with the Old Testament's book of Ecclesiastes, followed by three units: 1) A Life Worth Living: Humanity's Ideals focuses on the ancient and modern visions of human flourishing; 2) Threats to Meaning: Humanity's Discontents, discusses the disillusionments leading to the loss of meaning; and 3) Recovery of Meaning: Crises and Hopes, explores the post-crisis possibilities of self-discovery and growth. Please visit <http://meaningoflife.cherkasova.org/>

- **SF-1135 Women Warriors: Stories of Captivity, Conversion, and Confession**

Credits:

4.00

Description:

Since the beginning of time, women have been doing battle to themselves, while men have gone to battle against others. Whether it is through converting to Christ, yielding to captors in order to survive, or carrying a baby, this course introduces students to the many ways in which, whatever battles they face, women are warriors; they survive. Utilizing an array of captivity, conversion, and confession narratives by women, and pairing them across the centuries, students will make connections and draw conclusions between early-and mid-19th-century-American and contemporary women. Students will connect, for example, the trials of the 17th-century Puritan captive, Mary Rowlandson, and contemporary hostage, Elizabeth Smart, to explore how women (no matter how different they seem) draw upon unique inner resources to survive.

- **SF-1141 Classical Civilizations: Pathways to Wisdom**

Credits:

4.00

Description:

How is it that the knowledge, intelligence, wisdom and values of the Greeks and Romans still educate and edify the world by providing venues towards leading fulfilling and dignified lives? The guiding principles of their respective civilizations rested upon eight pillars: - Humanism: It was recognized that humans have the potential to master their world and live life to the fullest. -The Pursuit of Excellence: To imagine the highest good and strive to attain it. - Self Knowledge: It is imperative to know oneself before seeking to know the world. - Rationalism: Always question, reason and discern truth from falsehood and never consider any matter superficially. - Restless Curiosity: Often the resolution of one issue leads to the revelations

of others mysteries and pursuits which compels further investigation. The wise individual makes this a lifelong endeavor. -Love of Freedom: As long as one brings no harm to others, one must be free to live and discover as much as possible. - Individualism: All are unique and, therefore, must recognize individual strengths and identity. -The Practice of Moderation: The prudence of avoiding extremes in personal and social conduct. In this course, students will read two (brief) texts on the Greek and Roman contributions to the world and then will proceed with specific readings which illuminate the eight principles above for achieving the good life.

- **SF-1143 In the First-Person: Storytelling in the 21st Century**

Credits:

4.00

Description:

This section of the Seminar for Freshmen will consider the forms, venues, and impacts of narrative nonfiction in contemporary culture. From the exploding popularity of personal essays in the digital age to the living, evolving essays we create on social media, we are constantly narrating and archiving our lives, shaping their content for specific audiences. In doing so, we shape what our experiences mean and represent. In order to analyze the power of narrative nonfiction, we will look at a variety of multimodal texts: essays, podcasts, Instagram and Twitter feeds, stand-up comedy, and storytelling slams, as well historical texts such as the essays of Michel de Montaigne and historical artifacts at the National Archives in Boston. We will also write our own narrative nonfiction, and adapt our first-person stories for listening and viewing audiences, such as the MassMouth story slam and podcasts like This American Life. Additionally, we will practice narrative nonfiction for professional audiences, using storytelling as a way to showcase personal strengths to employers, internship coordinators, and the like.

- **SF-1144 Native Americans: Walking in Two Worlds?**

Credits:

4.00

Description:

Native Americans are often described as walking in two worlds, as they attempt to navigate the process of maintaining their tribal identity and heritage while living in mainstream America. In recent years there has been a shift towards tradition and heritage, and a rejection of Western values and norms in both the US and Canada. In this course we will look at how Native people live in the US and Canada today, and examine the extent to which they are either trying to walk in two worlds or perhaps rejecting the two worlds model. To help us answer this question, we will read about reservation life, the Idle No More Movement, Indigenous History, and current events. We will also watch videos and explore indigenous culture.

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

- **SF-1146 Fido the Friendly Wolf: A Natural History of Dogs**

Credits:

4.00

Description:

This course explores the evolution of dogs from wolves and the ways in which dogs have adapted to their niche in human society. The ecology, behavior, genetics, and adaptations of dogs will be explored in relation to both their wolf ancestry and artificial selection by humans. The course includes 2 mandatory field trips to a wolf sanctuary and an animal shelter.

- **SF-1147 Global (In) Security: From ISIS to Ebola**

Credits:

4.00

Description:

This course reviews the principal features of global and national security as it is currently practiced by tracing the evolution of theories, policies and circumstances whereby current international security is developed. Students will evaluate the nature and origins of war, arms proliferation, military instability, terrorism, genocide, health threats and natural resources depletion.

- **SF-1148 Brave New Worlds**

Credits:

4.00

Description:

Explores themes of adventure, self-discovery, exile, and culture shock in classic and contemporary travel writing (including fiction, poetry, and non-fiction) as well as film. Students will experiment with creative writing of their own, develop theories of cosmopolitan world citizenship, travel through the city of Boston on field trips, and team up to learn about different countries in Suffolk's global network of study abroad programs.

• SF-1150 Religion in Contemporary Society

Credits:

4.00

Description:

This course is design to provide students with an overview of the social settings and cultural meanings of religion in the contemporary world. Topics that will be covered in reading and discussions include the rise of religious fundamentalism, religion and violence, women's and men's religious experiences, new religions, and portrayals of religion in popular films. In addition to the readings, students will observe and experience religious expressions and activities through fieldwork assignments. The emphasis on films and fieldwork reflects my belief that religion is made up of lived experiences of actual individuals and communities. In order to understand religion in contemporary society we will make every effort to see (in person or in film) a wide range of religious activities. The films we will see include some of the following: Leap of Faith, Devil's Playground, Kadosh, Women of Hizballah, Singing Stream, A Still Small Voice.

• SF-1151 Reproduction and Society

Credits:

4.00

Description:

This course explores relationships between reproductive health and rights both nationally and internationally. Many of our topics fit into two broad areas: conflicts over the control of childbearing (sterilization abuse, birth control, and abortion) and conflicts over who deserves to be a mother, especially when the mothers in question face social stigma and lack political power. Other topics include safe birth and maternal mortality, breastfeeding, infertility and reproductive technology. We also examine the politics of women's sexual and reproductive autonomy, including the policies that shape women's choices to prevent, achieve, abort, or carry to term a pregnancy. Throughout, we are guided by the following questions: Why is reproduction an important site through which to understand society? How do statuses such as race, class, gender, sexuality and ability influence people's reproductive possibilities? What is the role of the state in shaping these experiences? How have communities supported or resisted efforts at reproductive control? Why is reproductive justice central to these answers?

- **SF-1152 The Idea of America: Past, Present, Future**

Credits:

4.00

Description:

A systematic exploration of thinking of and about America, from the founding of the republic to American issues and traditions of thought that reflect upon the founding principles and the unfolding American experiment. The Declaration of Independence and the Constitution will be studied with an eye to their philosophical content and sources. The course will also examine works of philosophers and other thinkers who address conflicts over the meaning of founding principles in the course of the nation's history, from the struggle over slavery to America's contemporary role in the world. Because this course intends to apply theoretical understanding to real life, students will be expected to read contemporary journalism on a regular basis and assess the controversies of today in the light of the nation's philosophical and historical currents.

- **SF-1153 Law, Disease, and Public Health**

Credits:

4.00

Description:

This course is about public health law, which is the study of the legal powers and duties of the various systems of government in the United States (federal, state, and local) in collaboration with their partners (e.g., health care, business, the community, the media, and academe), to ensure the conditions for people to be healthy (to identify, prevent, and ameliorate risks to health in the population), and of the limitations on the power of these systems of government to constrain for the common good the autonomy, privacy, liberty, proprietary, and other legally protected interests of individuals. The prime objective of public health law is to pursue the highest possible level of physical and mental health in the population, consistent with the values of social justice. The course will focus especially on public health law in the area of epidemic disease. Case studies will be made of the Great Influenza of 1918 and the origins and spread of the Ebola virus, culminating in an examination of outbreaks of Ebola in the United States.

- **SF-1154 Introduction to Visual Studies**

Credits:

4.00

Description:

This seminar provides an introduction to Visual Studies, a relatively new interdisciplinary field that examines how images communicate and the roles that they play in society. Students will apply the concepts and techniques of Visual Studies to analyze sites and signs around Boston, such as advertisements, street signs, fashions, newspaper photographs, buildings, and public spaces. Class projects will increase students' awareness of their visual environment and their ability to critically analyze the visual rhetoric that surrounds us and is often used to manipulate us.

Type:

Local Engagement Experience

- **SF-1155 The Boston Olympics**

Credits:

4.00

Description:

This class will teach students about the key role that sporting events can play in building a city, building its brand and the politics surrounding the process of these things occurring. Topics may include: urban development in general and the transformation of the industrial to the post-industrial Boston; the way in which cities use events like the Olympics to build their place brands; the way an effort like the Olympics can be used to encourage large scale public investment in longer term infrastructure projects that otherwise might not be justifiable; and the way government works with interest and community groups to try to shape public policy.

- **SF-1156 Thinking About the Insanity Defense**

Credits:

4.00

Description:

This course examines sixteen case examples providing a clear and compelling introduction to one of the most important topics in the relation between public policy and law. This course addresses: the history of the insanity defense; the effects of different standards for determining insanity; the arguments for its retention; abolition, and revision; media and other responses to it; and the controversies around pre and post conviction commitment. The case examples illustrates a variety of outcomes and include individuals who were found not guilty by reason of insanity; found guilty even though mentally ill; and not charged because of mental illness.

- **SF-1157 Germany in Film and History, 1945-2015**

Credits:

4.00

Description:

Since 1945, Germany has had a lot of history to reckon with- and 21st century Germany history through film, newsreels and other archival footage, radio and TV shows, war memorials and museums built since 1945, novels, published diaries, and memoirs. We will also read recent historical scholarship to put these cultural texts in context. Topics include the representation, in film and other texts; of: post-war rebuilding, the German Economic Miracle; the building of the Berlin Wall; radical politics of the 1960s and 1970s; coming to terms since 1945 with Germany's Nazi past and the Holocaust; coming to terms since 1990 with the Stasi and East German past; Ostalgie (nostalgia in the 21st century for some aspects of East German socialism); the multicultural society that is Germany today, with new Turkish, Greek, Russian, Arab, and even Israeli communities.

• SF-1158 Global Climate Change

Credits:

4.00

Description:

Conversation about the weather is considered to be the universal icebreaker. Yesterday's sweltering heat, the storm predicted for this weekend, even long-term climate shifts find their way in our daily conversation. Today, however, such casual conversations have an edge to them, because we are realizing that humans play a role in determining the climate shift. In fact, understanding the human fingerprint in the Arctic tundra melting, or a devastating hurricane, has gone well-beyond small talk to become one of the most important challenges our society faces today, and on that is wedded to geopolitics. To meaningfully participate in any dialogue that addresses this challenge people have to be aware of certain key ideas of Physics and Planetary Science. The aim of this course is to provide you with some of the essential facts and pieces of science underlying such questions. This course will enable you to grasp many of the issues that dominate today's political discourse and to develop an informed opinion (your, not our!) for which you can rationally argue.

• SF-1160 Individuals and Society in the Zombie Apocalypse

Prerequisites:

CAS Freshmen Only

Credits:

4.00

Description:

The Walking Dead tells viewers that life in the zombie apocalypse requires people to fight the dead, fear the living. Sociologists want to know why we should fear the living. How do individuals come together and try to recreate society for themselves: either to build community or fight other groups? What role do morals and values have in a society? How does all of this determine life, death, and the struggles people must face? Questions like these will give our class a new view of The Walking Dead and can help us to learn more about the society that we live in where so far the dead have remained in the ground.

- **SF-1162 Space Missions: From Moon to Mars and Beyond**

Credits:

4.00

Description:

It is hard to believe that only 60 years ago, our only close-up view of a planetary body was that of Earth. We are truly living in the Golden Age of Space Exploration, when a new mission every few years brings us spectacular images from either a neighbor in the solar system or galaxies at the edge of the universe. This course will describe the dozen space missions that changed our view of the universe, ranging from our solar system to the most distant galaxies.

- **SF-1163 Spellbound! Witches, Wizards and Spirits In American Literature**

Credits:

4.00

- **SF-1164 Reinventing Europe: Beyond Brexit and Secular Stagnation**

Credits:

4.00

Description:

While newspaper headlines focus on the multiple problems Europe is facing today, the evolving adaptation of European nation states and the integration process receive less attention. Brexit and economic crises seem to be synonymous of Europe today, but facts such as the European Union accepting five new members in the coming five years or Europe being the most advanced environmental actor or the main international provider of official aid are often ignored by public opinion. This Seminar for Freshman examines the dynamic evolution of the integration process in Europe in the

context of globalization. Three sections articulate the main debates and tensions in the interplay between national and supranational institutions and policies. The first part analyzes how eight European countries have forged their national preferences to delineate their level of immersion in the integration process; it later proceeds with the examination of the main historical events in the history of the integration process. The second part explores the functioning of the EU institutions in order to grasp the essence of the complex policy-making in the Europe of 28 members. The third and final section presents the analysis of the main areas of the EU policy making such as agriculture, monetary and economic issues, among others, and observes the main developments in the area of EU external relations.

- **SF-1165 History of Boston**

Credits:

4.00

- **SF-1166 Cinema-Monde: Global Challenges on Film**

Credits:

4.00

Description:

This course focuses on French-language films - with subtitles! - that address pressing social issues of the 20th and 21st centuries, such as hunger, female genital mutilation, immigration, racism, economic inequality, genocide, gender, sexuality, colonialism and post-colonialism.

- **SF-1167 Fantasy Fiction: Imaginary Worlds**

Credits:

4.00

- **SF-1168 The Real Thing: the Pursuit and Problems Of Authenticity**

Credits:

4.00

Description:

This course will focus on the concept of authenticity in American culture, from its origins in the early 19th century to the present. When the advertising gurus of Coca-Cola branded it as "The Real Thing," they were exploiting something powerful: the idea of something real, stripped of any falsity or illusion. Humans have always desired to know the world and others as they really are," but this desire is particularly strong in the modern world: witness the eagerness to discover one's true self," cut through the B.S., obtain the genuine article, and live authentically. In this course we will interrogate this pursuit of the Real Thing. In various ways, the texts we study both embrace authenticity as an ideal and also question its goodness, usefulness, or even its very possibility. We will thus confront a number of interrelated questions: Where does this desire for authenticity come from? What counts as authenticity," in life and in art? Is authenticity really a virtue to live by? How does it shape artistic and literary expression? Is there even such a thing as the real you This course will be divided into three units. In the first unit, "Counterfeiters and Self-Made Men," we will study how a commitment to authenticity arises in antebellum American literature and culture during a time of rapid national expansion and invention. Readings will include texts by Henry David Thoreau, Ralph Waldo Emerson, Herman Melville, and P.T. Barnum. In the second unit, "Authenticity and Contamination," we will consider two major ways in which authenticity becomes idealized around the turn of the 20th century: as artistic ideal set against fears of mass cultural production, and as a cultural ideal set against fears of racial and cultural mixing. Readings will include texts by Ernest Hemingway, Nella Larsen, Jean Toomer, and William Carlos Williams. In Unit Three, "Buying and Selling Authenticity," we will examine how authenticity becomes commodified (

- **SF-1169 Immortality: Real and Imagined**

Credits:

4.00

Description:

Most of the world's religious traditions have as a part of their doctrines some notion of immortality, rendered both in scriptures as well as iconographically. What precisely is entailed by immortality and why does it constitute such a significant element of so many religious traditions? What can we learn about immortality by investigating various conceptions of the afterlife? Is immortality truly a desirable thing? These questions among others will be examined from the perspectives of philosophy, religion, psychology, anthropology, and biology. Besides being cross-disciplinary, the course will be multi-media in nature. In addition to reading philosophical and religious texts concerning the nature of immortality, students will study various accounts of immortality and the afterlife, examine how the afterlife has been dealt with in (visual) art, literature, and film, and investigate current research into life prolongation (biomedical gerontology).

- **SF-1170 From Philia to Facebook: the Meaning of Friendship**

Credits:

4.00

Description:

The thematic focus of this seminar will be friendship. Friendship is one of the most important of human relationships; one that every student in this seminar has already participated in for many years. It shapes who we are and helps determine who we may become. And while it is a universal phenomenon, it has been practiced quite differently at various times and places in human history. And while we all have an intimate, personal and practical knowledge of friendship through our own experiences, sometimes things that are so close and so obvious to us can be hard to see. Over the course of the semester we will inquire into friendship from many different angles, trying to gain both a broader and a deeper understanding than our own individual experience allows. We will look at friendship first through the lens of philosophy, particularly through the foundational text of Aristotle, *The Nicomachean Ethics*. We will look at other views of friendship from the ancient world, starting in the past to help us see that friendship has not always been thought of the way we think of it now. After this initial foundation is laid, we will examine other writers and thinkers and take up additional topics like friendship in different cultures, friendship and gender, friendship in and through the arts and include an examination of friendship through the lenses of many different academic disciplines to see how other systematic thinkers conceive of friendship. All along we will be comparing and contrasting with our own personal experiences and considering what modern technology, such as social networking sites, has done to influence friendship, in the way we practice it and the way we conceive it. It is the aim of this class that students not just study different academic points of view, but that they take up the questions and challenges that these thinkers present to them and fully engage with them on a meaningful personal level.

- **SF-1171 Living on and Beyond the Hyphen/Latino Writers in the USA**

Credits:

4.00

Description:

Hyphenated-Americans of Latino origin come from many places and backgrounds. Often perceived as a divide, an either/or that separates and distinguishes one ethnic group from another, the hyphen can also be viewed as a link that connects, integrates and facilitates the formation of new cultural spaces. Through films and written narratives by and about U.S.A. Latino(a)(x)-Americans, students will examine how individuals who live on the threshold between two languages and cultures embrace the challenge of preserving their own identity and moving beyond stereotypes. Each of the Latino/a/x authors that we will read in this course will describe his/her own experiences living in the U.S.A. By examining their views through our own filtered lens we shall try to answer questions like the following: 1. What role does language have in our definition/understanding of cultural identity? 2. How do individuals move beyond the hyphen and stop seeing themselves as hybrids? 3. How can an individual who does not belong to a marginalized group (i.e. one considered less powerful and secondary) understand and empathize with those who do? 4. How does globalization affect the dichotomies that arise in bi-cultural and multi-cultural communities?

- **SF-1172 The United States Mexican Border**

Credits:

4.00

Description:

One hundred and sixty nine years have passed since the Treaty of Guadalupe Hidalgo was signed. It is only fitting to analyze the profound changes that the gain/loss of these territories caused for the citizens of both sides of the border. This course will explore the literature, culture, and history of the United States-Mexican Border and the most pressing problems pertaining to the region. Emphasis will be on contemporary border theater and film. The works of Salcedo, Galindo, Lopez and others will be studied as well as contemporary films and documentaries such as *Alambrista*, *Senorita Extraviada*, *The Gatekeeper*, *Sin Nombre*, *Wetback: the Undocumented Documentary*, *Victoria para Chino*, *Which Way Home*, and much more. There are no prerequisites for this course. Though the course is conducted in English, parallel readings in Spanish will be made available to those who wish to read and/or compare the original texts.

Students in the CAS Honors Program should choose one Seminar for Freshmen course from those listed below:

- **SF-H101 Fixing the World- Energy and Water: The Science of Solutions**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

Two of the most daunting challenges the world faces (or will face) is how to provide for both its growing energy needs and potable drinking water. Regular news events include climate change, droughts, flooding, and petroleum struggles. Human nature often requires a severe crisis before it responds. This course will investigate the historical science driving the use of energy since the Industrial Revolution to convert energy resources into work, including the steam engine, the electric motor, and the internal combustion engine. It will also consider alternative energy options to fossil fuels, such as solar, wind, geothermal, and ocean power. Along the way we will consider the evidence for Global Warming and Climate Change. We will look into human nature, simple life styles, conspiracy theories, and the influence of those in power to shape human opinion. We will also consider how our water supply is provided and where it goes after being used. What options do developing countries or drought racked areas have to remedy their water needs? Although the course pursues a scientific understanding of these issues, the mathematics used will be gentle, and a larger emphasis will be placed on the intuitive appreciation of these concerns.

- **SF-H116 Enlightened Insanity**

Prerequisites:

CAS Honors students only.

Credits:

4.00

Description:

Rain or shine, the great 18th century Enlightenment philosophers would meet at the famous cafes of Paris to discuss their ideas, and to observe and criticize society. From these informal debates emerged ideas that are at the core of our modern understanding of the nature of society, marginality, human nature, civil rights, the essence of creativity and genius. Come join us in the quest to understand, define, observe, and analyze the key ideas and concepts of these great thinkers, such as Rousseau, Diderot, and Voltaire, still so relevant in our time. We will read key works of these creative thinkers and philosophers. We will enrich our experience and understanding through the use of film, theatre performances, museum visits, as well as the occasional cafe debate.

Type:

Honors

- **SF-H126 The Boston Theatre Scene: The Inside Experience**

Credits:

4.00

Description:

Using the current Boston theatre season as its syllabus, this writing- and analysis-intensive course will explore several plays in production at some of Boston's many professional theatres. We will study the script of four to five plays before attending performances of those works. Students will gain insights on the world of theatre through backstage tours and conversations with theatre professionals such as producers, directors, actors, designers, playwrights, and critics. Students must be available for evening (usually Wednesday) performances. A fee for student-rate tickets will be assessed.

Type:

Honors

- **SF-H178 Sacred Hoops & Sneaker Pimps: Understanding the American Hoop Dream**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

This course is about the basketball hoop dream played out at the high school and college levels. We will study a wide variety of materials - novels, films, websites, reference works - to understand both the construction, and destruction, of the hoop dream in such diverse places as New York City, Seattle, rural Indiana, suburban Georgia, and the Wind River Reservation in Wyoming. Issues of race and culture will serve as guiding themes as we develop critical theory explaining why the hoop dream has persisted, and adapted, over time, to fit the needs of its believers and supporters.

Type:

Honors

- **SF-H182 Heroes, Antiheroes and Outsiders: Reading the Graphic Novel**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

How is it that comics", a genre often viewed as entertainment for children and adolescents, has become one of the most exciting forms of narrative and visual art? To answer this question, this seminar will examine a range of graphic novels, from those that celebrate their origins in superhero comics, such as Alan Moore's *Watchmen*, to those that treat subjects not usually considered proper to the comics genre, such as Art Spiegelman's *Maus*, about the Holocaust, and Alison Bechdel's *Fun Home*, about the complexities of sexual identity. As we read these works, we will look at how the combination of words and still images makes the graphic novel a unique storytelling form, as well as how artists and writers push the envelope to create new styles and challenge our expectations. In addition to class discussions and writing assignments, we will take a field trip to the Museum of Fine Arts and create a collaborative group graphic novel step-by-step over the course of the semester (all abilities welcome).

Type:

Honors

- **SF-H197 Sustainability, Energy, and Technology At Suffolk University**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

In this project and team-based course, students study a sustainability problem at Suffolk University and spend the semester developing proposals to address the problem. At the end of the course students will present their proposals to Suffolk University's sustainability committee, and will exhibit their websites and visual aids in the Donahue lobby to educate the Suffolk community about sustainability. If their proposals are well-researched and well-communicated, students can see their ideas actualized while they are still undergraduates.

- **SF-H1134 The Meaning of Life**

Prerequisites:

CAS honors students only.

Credits:

4.00

Description:

What do we live for? Which beliefs, values, and experiences sustain meaningful, fulfilling existence? Are we authors of our destinies or powerless pawns in an unfathomable cosmic game? Does death render all our efforts superfluous? This award-winning course offers a cross-cultural, interdisciplinary exploration of these questions through philosophical and religious texts, art, fiction, autobiography, and psychological studies. The course opens with the Old Testament's book of Ecclesiastes, followed by three units: 1) A Life Worth Living: Humanity's Ideals focuses on the ancient and modern visions of human flourishing; 2) Threats to Meaning: Humanity's Discontents, discusses the disillusionments leading to the loss of meaning; and 3) Recovery of Meaning: Crises and Hopes, explores the post-crisis possibilities of self-discovery and growth. Please visit <http://meaningoflife.cherkasova.org/>

Type:

Honors

- **SF-H1135 Women Warriors: Stories of Captivity, Conversion, and Confession**

Credits:

4.00

Description:

Since the beginning of time, women have been doing battle to themselves, while men have gone to battle against others. Whether it is through converting to Christ, yielding to captors in order to survive, or carrying a baby, this course introduces students to the many ways in which, whatever battles they face, women are warriors; they survive. Utilizing an array of captivity, conversion, and confession narratives by women, and pairing them across the centuries, students will make connections and draw conclusions between early-and mid-19th-century-American and contemporary women. Students will connect, for example, the trials of the 17th-century Puritan captive, Mary Rowlandson, and contemporary hostage, Elizabeth Smart, to explore how women (no matter how different they seem) draw upon unique inner resources to survive.

Type:

Honors

- **SF-H1146 Fido the Friendly Wolf: A Natural History of Dogs**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

This course explores the evolution of dogs from wolves and the ways in which dogs have adapted to their niche in human society. The ecology, behavior, genetics, and adaptations of dogs will be explored in relation to both their wolf ancestry and artificial selection by humans. The course includes 2 mandatory field trips to a wolf sanctuary and an animal shelter.

Type:

Honors

- **SF-H1148 Brave New Worlds**

Prerequisites:

Restricted to CAS Honors students

Credits:

4.00

Description:

Explores themes of adventure, self-discovery, exile, and culture shock in classic and contemporary travel writing (including fiction, poetry, and non-fiction) as well as film. Students will experiment with creative writing of their own, develop theories of cosmopolitan world citizenship, travel through the city of Boston on field trips, and team up to learn about different countries in Suffolk's global network of study abroad programs.

Type:

Honors

- **SF-H1152 The Idea of America: Past, Present, Future**

Credits:

4.00

Description:

A systematic exploration of thinking of and about America, from the founding of the republic to American issues and traditions of thought that reflect upon the founding principles and the unfolding American experiment. The Declaration of Independence and the Constitution will be studied with an eye to their philosophical content and sources. The course will also examine works of philosophers and other thinkers who address conflicts over the meaning of founding principles in the course of the nation's history, from the struggle over slavery to America's contemporary role in the world. Because this course intends to apply theoretical understanding to real life, students will be expected to read contemporary journalism on a regular basis and assess the controversies of today in the light of the nation's philosophical and historical currents.

Type:

Honors

- **SF-H1161 The Playwright and the Stage**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

This writing and script analysis intensive course will explore plays across a range periods and styles. The scripts of five plays will be studied and we will attend performances of two of those works at professional theatres in Boston. Other activities will range from a backstage tour to conversations with theatre professionals such as producers, directors, actors, designers, playwrights and critics, in order to lift the script off the page and provide a living experience of theatre. Requires students to be available for evening (usually Wednesday) performances. A fee for tickets at student rates will be assessed.

Type:

Honors

Major Requirements Minimum: 8 courses, 32 credits

Complementary Major Requirements, Minor Requirements, and Free Electives: credit varies

Minimum Total Credits Required for Degree Conferral: 126 credits

Note:

Courses may also count toward major if taken at appropriate level.

Some degree programs exceed 126 credits.

2017-2018 Archived Catalog Information

Bachelor of Science in Journalism

The Bachelor of Science in Journalism is available to Journalism and Public Relations majors only.

Please note that these requirements are for students matriculating in or after fall, 2017. Students matriculating prior to fall, 2017 must reference the [Pre-Fall 2017 Degree Requirements \(Archives\)](#).

The BSJ degree requires the successful completion of the following courses:

Core Requirements: 14 courses, 51-52 credits

- [First-Year Experience](#)
- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Ethical & Philosophical Inquiry](#)
- [Social Science](#)
- [Humanities/History](#)

First-Year Writing: 2 courses, 8 credits

- WRI-101 First Year Writing I

Credits:

4.00

Description:

Study and practice of the writing process and revision in terms of expository writing modes for an academic audience.

- **WRI-102 First Year Writing II**

Prerequisites:

WRI-101 or ENG-099 with at least a B and ENG-P099 with a P or WRI-H103

Credits:

4.00

Description:

Study and practice of argumentative and research writing through further work with writing process and revision and the critical reading of a variety of texts.

A student may be assigned to other writing courses or may be invited to take WRI-H103. Students required to complete ENG-099 may be allowed to waive WRI-101 with a grade of “B” or better and the approval of the English department. Students who are invited to complete WRI-H103 and earn a “B” or better satisfy the two Writing Requirements. Waiving a course does not earn credits.

- **WRI-H103 Advanced First Year Writing**

Prerequisites:

By Invitation Only.

Credits:

4.00

Description:

This course is by invitation only and reserved for incoming Suffolk students with high admission scores. Advanced study and practice of writing process, revision, and research, based on close readings of a variety of texts. Fall semester only.

Type:

Honors

Major Requirements Minimum: 8 courses, 32 credits

Complementary Major Requirements, Minor Requirements, and Free Electives: credit varies

Creativity & Innovation: 1 course, 3 credits

Choose one Creativity & Innovation course from those listed below:

- **ADF-S171 CI: Integrated Studio 1**

Prerequisites:

Non-majors interesting in taking art and design courses for elective credit should refer to offerings under the ART course listings.

Credits:

3.00

Description:

This cross-disciplinary course will integrate the ideas and practices of two-dimensional design, color and drawing emphasis will be placed on understanding the creative process, exploring concepts and developing research skills. Students will undertake individual and collaborative projects in three spaces; the studio classroom, the digital world and the city at large.

Type:

Creativity and Innovation, Arts Admin Minor Elective

- **ADF-S172 CI: Integrated Studio II**

Prerequisites:

ADF S101; Non-majors interesting in taking art and design courses for elective credit should refer to offerings under the ART course listings.

Credits:

3.00

Description:

This course builds on the Integrated Studio 1 experience: synthesizing fundamental visual ideas. IS 2 investigates the construction, documentation, and transformation of volumetric form, environmental space, and time. Projects will explore narrative strategies and the creation of immersive experiences. Students will develop critical and analytical skills while employing a range of traditional and digital media-including video/sound capture and editing-as they explore the creative boundaries of the classroom studio, the city of Boston, and virtual space.

Type:

Creativity and Innovation

- **CI-000 CI Place Holder**

Credits:

0.00

Description:

Place holder for rooming purposes.

- **CI-101 Process and Epiphany**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Despite its mystical connotations, creative epiphany is the result of a long engagement with the creative process that results in a surprising and unpredictable understanding of a concept or the solution to a problem. In the way that the discoveries of science are guided by the scientific method, the path to creative innovation is through a directed creative process. All creative innovators follow such a directed creative process, whether they are industrial designers or fine artists, performers or inventors, architects or entrepreneurs. This course explores both historical examples of individuals whose creative innovation changed the world, as well as hands-on collaborative, practical problem solving employing the creative process.

Type:

Creativity and Innovation

- **CI-H101 Honors- Process and Epiphany**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

• CI-102 The End of Global Poverty

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course is designed to demystify the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking. More than one-third of our global population lives in poverty, earning less than two dollars a day. Governments, businesses, social enterprises, and charitable organizations have tried to solve the global poverty issue with mixed results. What is the solution? Is entrepreneurship the solution, part of the solution, or has no impact whatsoever? In this course, you will gain an understanding of the power of entrepreneurship (in the context of creativity and innovation), the definition and depth of global poverty (in the context of constraints, such as human, financial and physical resources embedded in local, regional, national and global cultures), and successes and failures of past initiatives to reduce poverty. This is not a course about politics or business, but rather finding a solution to a problem that has eluded mankind since the beginning of time.

Type:

Creativity and Innovation

- **CI-H102 The End of Global Poverty**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office. Honors students only

- **CI-103 Making Inventions: Sticking Your Neck Out**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course examines cutting edge technologies, the science behind them, and their practical application and follow-up success or failure. It also provides the students a chance to consider the relevance of identified needed inventions from the 1950s, and whether those projections were correct. The history behind some remarkable inventions will be presented. Finally, working in small teams, students will brainstorm to identify something useful to invent and determine several approaches to implementing it.

Type:

Creativity and Innovation

- **CI-104 Historic Mentors: Biographies of the Creative and Innovative**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course introduces students to creative and innovative practices as a disciplined approach to problem-solving. Students are presented with diverse individuals and environments, thoughts and actions, challenges and opportunities, approaches and alternatives, successes and failures, and ethical behavior--all within the context of historical biographies of inventors, entrepreneurs, artists, musicians, writers, politicians, leaders- nationally and globally. Mentoring is becoming a lost art form. However, it is crucial for passing down the best of our civilization. This course offers a vicarious mentoring that enables students to critically learn from and assess the experience of others in a vast array of contexts. Thus, students are presented with a cross-section of role models for creative, innovative and ethical success.

Type:

Creativity and Innovation

- **CI-106 Failing Successfully**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course is designed to demystify the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking. Did you know Netscape was the internet browser? What about MySpace, arguably the Facebook of the last decade? What led Apple from being innovative pioneers of the 70's to the verge of extinction in the 80's to the technological giant they are today? Technologies come and go, but what leads to organizations lasting more than 100 years such as IBM, General Electric, etc.? What role does failure play in successful innovation, decision-making, and business viability? In this course, you will learn about innovation that may have been successful and well-executed. You will also learn about innovation that was a viable business opportunity, but poorly executed: one phase of failure. In addition, you will learn about innovation that had no real market viability, but was launched anyway: another phase of failure. Can failure lead to success? If so, how?

Type:

Creativity and Innovation, Honors

• CI-107 Going Up: Skyscraper Design in Emerging Economies

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The human population is expected to be between 8.5 and 9 billion persons by the mid-21st century. The majority of those individuals will be living in urban communities. With large populations, high real estate costs, and limited land areas, the only way to construct in urban environments is to go up! In this course, students will have an opportunity to look at traditional and novel skyscraper designs, to consider the cultural and economic significance of such structures, and to use their imagination to develop a conceptual design of a skyscraper.

Type:

Creativity and Innovation

• CI-108 Designing the Next Best Thing

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Demystifies the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking.

Term:

Offered Both Fall and Spring

- **CI-109 Virtual Globe Trekking: an Alternate View of the World**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will examine creativity and innovation through the lens of place. Modern geography is an all-encompassing discipline that seeks to understand the earth and all of its human and natural complexities - not merely where objects are, but how they have changed and come to be. The world is filled with ideas and perspectives. By changing your location, new perspectives emerge. This course will focus on the creative process to understand that each person creates in their own way. The students will test many methods to draw forth creative thought and seek to identify their own best method for calling on their own inner genius. Often this will involve failure and mixed results, yet this is where the students will learn their strengths and weaknesses.

Type:

Creativity and Innovation

- **CI-110 The Entrepreneur's Cocktail**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

How do you and your story drive business? This course takes an innovative look at human creativity and entrepreneurship. As an entrepreneur needs perseverance and high motivation, we will explore the importance of values, risk taking, problem solving, and the discovery of the market opportunities. In order for you to be creative and essentially create successful ventures, you will discover the nuances between the three factors and explore them further through interactive discussion and debate as well as collaborative group work. You will be encouraged to think in non-conforming ways and apply new concepts and develop your own personal operating principles.

Type:

Creativity and Innovation

• CI-111 The Future of Boston

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course introduces students to creative and innovative thinking based in the field of communication. Students will work in teams to wrestle with the challenges Boston will face in the future and propose feasible strategies to meet them.

Type:

Creativity and Innovation

• CI-112 Creating Problems: a New Solution for Sustainability

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

As the majority of the world population now lives in cities, for the first time in human history, issues of urban sustainability have become more complex and more important than ever before. Presented with case studies of urban efforts to gain a sustainability foothold, students will utilize ideation, critical thinking, and strategic decision making to both identify root problems and to present solutions. This course will lean heavily on ideation processes, teamwork, and logical methods of analysis to pursue actionable solutions for significant problems. The methods of problem identification and solution analysis learned in this class will be readily adaptable to many complex problems, helping the students to make informed and decisive determinations in their careers.

Type:

Creativity and Innovation

• CI-113 Revising Reality

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Reality and perception have been debated and discussed for millennia. Humans see and experience their world in different ways. How do humans determine what is true and good and what advancements are necessary? In this course, students will creatively explore these big questions and revisit knowledge using new and sometimes divergent perspectives. Students will participate in dirty and courageous learning by crafting products,

creating visual projects, and coming into original thought via trial and error. Students will also develop their analytical and critical thinking skills, while learning to communicate effectively and honestly.

Type:

Creativity and Innovation

• CI-114 Creating the Dream Team

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Every successful venture today is based on effective teamwork. Unlike a typical lecture format, Creating the Dream Team is a course that utilizes experiential group learning to provide students with pivotal team-building skills. These essential skills are vital for everyone's future success in the business world. As team players, students are challenged to think creatively. A collaborative problem-solving process is used to analyze real life business situations. Teamwork involves research, data collection and information analysis to develop creative solutions to typical business problems. Teams will utilize multi-media tools to present their innovative ideas. Classmates will provide peer feedback and review. Through iterations, all students will assume roles as project leaders, keynote speakers and collaborators on a series of Team Challenges. Upon successful completion of this course, all students will have formed working dream teams. As reinforcement and final evaluation, Dream Teams are required to create a multi-media Capstone Event as a course performance measure. This capstone presentation will showcase all of their newly acquired dream team-player skills.

Type:

Creativity and Innovation

• CI-115 Poetry Out Loud

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Students will develop a deep understanding of two seminal books of 20th century poetry and other key 20th century poems as they plan and execute small-group, end of semester reading performances. Students will write creative response poems to increase their understanding of the texts, and through cooperative decision making strategize effective ways to present their own poems and poems by Bishop or Frost. The class format will foster direct spoken engagement with matters of sound, rhythm, tone, and meaning. Final reading aloud performances will be recorded and added to the Suffolk University Poetry Center Archive.

Type:

Creativity and Innovation

• CI-117 Writing for Stage and Screen

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will engage students in the process of script writing. Working in groups of four or five they will craft adaptations of stories, create original scenes, or review sketches. By the end of the semester they will produce a complete script. Each alternating week, one group will serve as the executive committee that will approve the final draft of the script of the week. There will be exams based on the textual study of collaborative and adaptation techniques.

Type:

Creativity and Innovation

• CI-119 Theatre at Work

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Theatre at Work is an introduction to creative practice using live performance as a problem solving tool in an educational environment. Specifically, students will create a performance piece in response to an issue they have uncovered in collaboration with select groups of students in a host Boston Public School. There will be a special focus on normalizing risk-taking and the learning that comes from false starts and failed ideas. Students will be responsible for creating every aspect of their performance testing its feasibility on a limited budget, ensuring that the content meets established criteria, and successfully implementing and evaluating their success both with their peers and their audience.

Type:

Creativity and Innovation, Local Engagement Experience

• CI-H119 Theatre at Work

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office. Honors students only.

Credits:

3.00

Type:

- **CI-121 Catastrophe Management: From 9/11 to the Boston Marathon Bombings**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will introduce students to the exciting world of emergency management from the perspective of scientists who are often utilized as experts during both small scale adverse events and large scale catastrophes. Students will actively and creatively explore the psychological, economic, and medical dimensions of these events and participate in role play in the classroom and site visits. By the end of the course, students will have a keen appreciation of emergency planning and management on the local and national levels.

Type:

Creativity and Innovation

- **CI-123 Comics & Co.**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Using visual narrative as the means of exploration, students will be led through a series of exercises that challenge their assumptions, broaden their perspectives, and excite their imagination. The relationship between critical, creative and inventive thinking will be the basis for individual and collaborative projects.

Type:

Creativity and Innovation

- **CI-125 Boston's Creative History in Perspective**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Our collective social consciousness is formed by physical space; through a mixture of exploration, discovery, and making, students will delve into the city that surrounds them, developing a sense of ownership and engagement in Boston's public space. During the course of the semester, students will uncover the ways that art and architecture have shaped the souls of cities around the world, using Boston as a template. In a series of local field trips, students will explore Boston through its art and architecture, focusing not only what is, but on what might have been -- designs that were ultimately unrealized. Through interview and visits with local artists and designers, students will also learn about the process of shaping public space, uncovering the myriad of ways that design decisions are political in nature. As a capstone to the course, students will create their own city plan -- identifying and researching a chosen social or physical challenge the city faces, then developing a proposal that would address their chosen issue. These design proposals will then be enacted using augmented reality. Like a layer of invisible ink, these projects will form a phantom city over the physical realities that surround us, displaying the dramatic potential of the imagination.

Type:

Creativity and Innovation

- **CI-127 Visual Perspectives: Coastline, Symmetries and Illusions**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

How do you measure the length of a coastline? How much symmetry is possible? What is an impossible object? How did the Mayans measure proportions? In this course, students will delve into these and other questions with a visual theme. While some will be clear-cut, others will be open-ended and require some choices, estimates or assumptions to be made. Throughout, the emphasis will be on creative problem solving.

Type:

Creativity and Innovation

- **CI-129 Elements of Attraction- Supply and Demand**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The intent of this course is for students to examine and effectively express in writing their ideas on creativity and to inspire undergraduate students to exceed their current levels of learning. Students will learn to meaningfully integrate course content into long term-retained useful skills through applied creative collaborations. This course is based on the idea that exposure and insight development will enable students to better visualize themselves in their desired fields and make informed choices within the variety of options available to them. The focus of the course will help students to assess their personal interests and strengths as they plan for their own educational and professional futures.

Type:

Creativity and Innovation

- **CI-131 Off to the Future: Leadership Through Compromise**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Some past political issues were resolved with great success (the Compromise of 1820), and some resulted in great failures (the US Civil War). In this course, students will study noteworthy political dilemmas of the past, identify the major problem solvers and examine the art of compromise. These investigations will provide guidance and inspiration for students to develop innovative and creative solutions to present day political problems such as climate change, immigration, Social Security, income distribution, higher education affordability, and homelessness. Students will work in teams and propose creative and innovative solutions that will convince the affected interest groups favorably, represented by teams of other students in the class, and result in compromises solving tomorrow's problems today.

Type:

Creativity and Innovation

- **CI-H133 Franklin and the American Experiment**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office. Honors students only.

Credits:

3.00

Description:

What made Benjamin Franklin such a creative force in American history? We will explore the many facets of Franklin's life (printer, writer, scientist, statesman) and learn about Benjamin Franklin's political and diplomatic ventures, and will recreate some of his scientific experiments.

Type:

Creativity and Innovation, Honors

- **CI-135 The Design of Everything**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will explore a selection of the genius personalities and their creative work in 5 distinct areas of human creative endeavor; art, science, nature, technology and the built environment. The course explores the underlying similarities in the process of their discovery, invention and creativity across the disciplines. Studying such names as Newton, Warhol, Hawking, Jobs, Gaudi and Banksy, students will uncover the process of design through research, analysis, synthesis, iteration and error. In class group projects will allow a hands-on opportunity to create.

Type:

Creativity and Innovation

• CI-137 Re-write for Rights: Drafting a New US Constitution

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The American Constitution is an important document, framing the basis for our lives and the lives of our neighbors. Yet it is also a very old document, which may be seen as lacking when it is compared to newer constitutions from around the world, even places that we may regard as undeveloped. In this class we will study many constitutions and also talk to many people to craft a new constitution that reflects contemporary American society and its values.

Type:

Creativity and Innovation

• CI-H139 Creating, Promoting, and Participating in the Literary Arts

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office. CAS and SBS honors students or GPA of 3.5 or above only.

Credits:

3.00

Description:

With the launch of Boston's new Literary Cultural District, we have renewed cause to celebrate the history and industry of literature in our city. This course will immerse students in the world of literary culture and its many branches: writing, editing, reviewing, and publicity. Students will practice the art of creative writing, and learn how writers find publishing venues, how authors build platforms for their work, and how literature reaches the public through readings, social media, book trailers and other marketing campaigns, authors interviews, and reader reviews. Various industry professionals, authors, editors and publicists will speak to the class about the artistic and business opportunities, trends, and futures of literature and literary publishing. Students will apply their knowledge and interests to a variety of projects, including book reviews, author interviews, social media campaigns, literary events, and other collaborative projects. We will also work as a class to launch a new digital literary journal at Suffolk.

Type:

Creativity and Innovation, Honors

• CI-141 Science = Creativity

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course is focusing on the creative process by introducing students to creative practice as a disciplined approach to problem solving and innovation requiring research, persistence and grit. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in

original ways, embrace ambiguity and support divergent thinking and risk taking. The course will have an undertone based on science, but it is suitable for non-science majors too!

Type:

Creativity and Innovation

- **CI-143 Dreams, Demons, and Dynamic Artists Creative Nature**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

What motivates your creative nature? This course will explore converging themes in Art and Psychology in order to give students the tools they need to unblock their creative potential. Collaborative small team activities, assigned readings, large group discussions, and personal reflection exercises will provide an avenue for students to explore their own creative patterns and how they are influenced by, and perceived within, the world around them. Dreams, mental illness and psychosocial theories of self will also be widely discussed in order to give students context for this inter/intrapersonal exploration.

Type:

Creativity and Innovation

- **CI-145 Living and Laughing**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This is a course about laughing and living. While it sounds fun, it can also be complex, confusing, complicated, and convoluted. Laughter and humor are also very personal. The things that make you laugh are rooted in family, culture, and personality. We are going to spend the semester getting to know ourselves and each other in an attempt to understand more about why we enjoy what we enjoy.

Type:

Creativity and Innovation

• CI-147 Seeing Double, Printmaking, the Art of Discovery, Experimentation and Process

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Always wanted to explore a creative side but never had the opportunity to take an art class? Here's your chance! Sync the power of icons/ images with ideas and making. We will use cellphone and printmaking technologies in a workshop style environment. Rather than a lecture based class, this class we will play, learn and build new Neurological pathways towards creative thinking. Come to every class excited to learn, make and discover. This course will give you the building blocks for innovative thinking beyond the classroom. Power is in the image. As in the way a dream can grip you, images carry incredible amount of influence and creative potential, when they are seen. Glimpses of these images circulate in media, movies, cell phones, and so on. Learn to develop your own images and understand the broad world of images of human culture.

Type:

Creativity and Innovation

• CI-149 SL-Creative Writing and Literacy

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

In this course, students meet community needs by engaging in service-learning outside the classroom. This course will explore the value of creativity and play in developing reading and writing skills and the habits of lifelong learning, both in our own lives and in the lives of young people in Boston. In this course, we will work closely with the non-profit literacy organization 826 Boston, which works with students ages 6-18 on reading and writing skills through playful, creative workshops, as well as tutoring and other kinds of support. Students will learn about the work of 826 Boston by volunteering with the organization, and by the end of the semester you will conceive, plan, and run creative writing workshops of your own at 826 Boston.

Type:

Creativity and Innovation,Service Learning

• CI-H149 SL-Creative Writing and Literacy

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office. Honors students only.

Credits:

3.00

• CI-151 Finding Your Creative Voice

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Schools and workplaces are becoming increasingly demanding and competitive, relying on unique ideas to continue innovation. Where do fresh ideas come from? This class will provide students with the tools they need to find creativity within themselves, and set them apart in the competitive arena. Students will explore who they really are at their core, identify their innermost thoughts and feelings, and uncover their creative identity while having fun! They will also learn to communicate, or share their creative voice clearly and honestly.

Type:

Creativity and Innovation

• CI-153 Branding and Visual Identity

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

A brand may be a product, service, an organization, or a person, and at the core of every brand is a visual identity. A brand's visual identity is its strategically planned and purposeful presentation of itself. It is manifest in the brand's name, logo, tagline (slogan), color palette and other sensory elements (visual, aural, olfactory and tactile) that identity that brand and make it unique. This course will focus on analyzing the success and failure of brand's visual identities as a way of teaching students how to brainstorm and develop a new visual identity from concept through execution. The focus in this course will be on applying creative thinking to create a cohesive and meaningful visual identity.

Type:

Creativity and Innovation

- CI-155 Improvising for Everyone, Everywhere

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Improv Comedy has become the cornerstone training of movies and television for the past 20 years. More recently, Corporate America has begun to recognize the importance of the skills improv teaches - agreement, listening, moving forward as a group and out-of-the-box thinking. This course immerses students in improv theatre exercises to apply not for performance, but to shed light on how to collaborate with others. Students will be required to actively participate in exercises in class, experiencing the benefits and takeaways first-hand. Students will be able to connect these exercises with the theories of creativity presented in text books and use both to create a final presentation piece. By the end of the semester, students will understand how to recognize and foster creative thinking to solve problems leveraging the power of a group. Students will gain confidence with presenting new ideas and responding to other student's ideas, understanding how to create and maintain relationships as part of an ensemble that encourages and values ideas.

Type:

Creativity and Innovation

- CI-157 Mindful Journal

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

To keep a journal is to make an investment, often long before we understand the value. A journal is a personal database of snapshots in time, good ideas and bad, observational doodles and unfiltered emotions. On any given page a journal may appear inconsequential but within the rigor of filling a whole notebook (and another, and another) an individual viewpoint emerges. This class will facilitate a student's ability to draw from his or her own lived experience and discover unique springboards into universal issues by making mindful connections. An entire lifetime of images, stories and details resides within each of our minds but the ability to explore that richness requires dedication to documentation. Mindful Journal is a process class fostering focus through mindfulness practices, content generation and meaning making.

Type:

Creativity and Innovation

• CI-159 Building a Better T

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

If any set of problems could use creative and innovative thinking, it's the myriad of problems facing the T. The Boston Globe is filled with stories about financial and organizational problems in the system, and you only have to spend a few minutes on the green line to feel the effects of those issues. Still, millions depend on it every day - it is the circulatory system of our city, and it is more than a way to get around: the T increases accessibility and functions as a democratizing force. That is, when it's running. In this class we will study the MBTA and other mass transit systems in order to propose creative solutions to the T's most pressing problems. We will read articles about the T and other transit systems, we will look at interactive maps that express different kinds of data, and we will visit local stations. In addition, we will study the process of creative thinking, in order to apply those skills to the issues at hand. You will be asked to create both stand-alone short writing assignments and visual representations of your ideas, accompanied by short, written explanations, both alone and in group projects.

Type:

Creativity and Innovation

• CI-161 Making History: Public Memory in the Digital Age

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

You live in Boston now. At least for a while. Perhaps you've noticed that it has its own ways of remembering things. Consider The Boston Literary District, The Freedom Trail, and all the many events and festivals devoted to history, culture, and identity. From guided tours and colonial cosplay to images and written texts to monuments, memorials, and museums, this city tells stories about itself today in the ways it tells stories about its past. In this class, you're going to tell more stories about Boston. You're going to help it find other things to remember, and other ways of remembering them. You'll likely need to focus on parts of the real events that Boston doesn't prefer to include in its stories, emphasizing issues of race, socioeconomic class, nationality, colonialism, gender, sexuality, and other stories of unequal power and how that manifests in real people's lives and in the culture of this city.

Type:

Creativity and Innovation

• CI-H161 Making History: Public Memory in the Digital Age

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office. Honors students only.

Credits:

3.00

Type:

Creativity and Innovation, Honors

- **CI-163 A Course on Skepticism and Rationality**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Magician James The Amazing Randi reminds us that No matter how smart or how well educated you are, you can be deceived. In an age fraught with deception and misinformation, students need tactics and strategies in order to separate truth from falsity. This course encourages its participants to act as skeptics - not cynics, necessarily - by requiring evidence and proof before believing or accepting claims. Students are urged to identify the most-likely-to occur opportunities for deception in their major fields and draw from the tenets of classical rhetoric, logic, and the scientific method in order to develop safeguards. Frequent collaboration with classmates will allow for dynamic solutions to small and large-scale contemporary problems ranging from the personal (e.g. used car prices and avoiding fraud) to the universal(e.g. fake news and God).

Type:

Creativity and Innovation

- **CI-165 Becoming a Zig-Zag Master**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

We will be discovering the process of becoming more creative. The emphasis is on understanding the creative process and applying effective team-working strategies towards a shared goal. Each team will choose a project and develop it during the semester with the goal of improving a product, raising awareness about an issue in a creative way, designing a board game, designing a card game, etc. Inspiration will be drawn from the numerous successful innovators in the Boston area.

Type:

Creativity and Innovation

- **CI-167 Public Health: A Need to Think Outside The Box**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course seeks to make you an innovative public health thinker by examining past campaigns and making the necessary frameshifts to help promote, protect and preserve health of the Suffolk community through the innovative thinking process. Public health activists and designers can have a positive impact on the lives of citizens living in small communities. However, the agreed rules and regulations that make up this policy landscape are created by paradigms which can be constricting. The issues the course addresses will include Suffolk's current plans for reducing carbon emission, behavioral determinants such as alcohol consumption among college students, and improving eating habits on campus. The final project will be peer reviewed and presented to the class. Programs may then be forwarded to university departments for possible integration and implementation.

Type:

Creativity and Innovation

- **CI-204 Prague: Castles to Barbwire**

Prerequisites:

At least 24 credits earned.

Credits:

3.00

Description:

Prague offers students a more recent view into history and will serve as a backdrop to learning Design Thinking. The curriculum will use Czech and Central European cultural features as the inspiration for learning the creative process, skills that can be applied broadly and globally across disciplines. WWII and its fall to Communism left the Czech Republic undamaged. Artists played a vital part in the country's rise to a Republic during the Velvet Revolution. These dissidents, including writers, actors, artists and musicians were innovators who were the catalyst for change. One could say that creative minds changed this country. This course is designed to demystify the creative process by introducing the creative practice as a disciplined approach to problem solving and innovation requiring research. This one-month study abroad experience will offer a more worldly insight to the significance of developing skills where divergent thinking and risk taking are one of many key tools in learning to generate new ideas. Travel fee covers accommodations, transfers, some meals and cultural visits. Airfare and tuition not included.

Type:

Creativity and Innovation, Global Engagement Experience

Note: Students with 30+ transfer credits are exempt from this requirement.

Major Requirements Minimum: 8 courses, 32 credits

Complementary Major Requirements, Minor Requirements, and Free Electives: credit varies

Minimum Total Credits Required for Degree Conferral: 126 credits

Note:

Courses may also count toward major if taken at appropriate level.

Some degree programs exceed 126 credits.

2017-2018 Archived Catalog Information

Bachelor of Science in Journalism

The Bachelor of Science in Journalism is available to Journalism and Public Relations majors only.

Please note that these requirements are for students matriculating in or after fall, 2017. Students matriculating prior to fall, 2017 must reference the [Pre-Fall 2017 Degree Requirements \(Archives\)](#).

The BSJ degree requires the successful completion of the following courses:

Core Requirements: 14 courses, 51-52 credits

- [First-Year Experience](#)
- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Ethical & Philosophical Inquiry](#)
- [Social Science](#)
- [Humanities/History](#)

Math: 1 course, 4 credits

Choose one Math course from those listed below:

- **MATH-128 Math for the Modern World**

Prerequisites:

MATH level 2, or Mathshop, or MATH-104

Credits:

4.00

Description:

From the ISBN on a book, to buying a car, from the size of small chips in a cell phone, to the size of the national debt, or just reading a graph in the daily newspaper, mathematics plays an important and vital role in countless areas of life and your future career and courses included. Mathematics is both an art and a tool created by humans. The common bond is a way of thinking and a way of reasoning to describe and solve problems of many types. This course uses the context of modern real life problems to introduce math needed for literacy and problem solving in contemporary life and work. It uses a minimal amount of algebra and focuses on math models, concepts and basic math manipulations. It encourages students to move from anxiety about math, to using formulas well, to thinking critically in the math context to use math to solve problems and pose new problems. Topics include scientific notation, basic financial math, linear, exponential and polynomial models and an introduction to probability. (Formerly Math 132)

- **MATH-130 Topics in Finite Mathematics**

Prerequisites:

MATH-104, or MATH-121, or MATH level 3

Credits:

4.00

Description:

Linear Modeling (for example, using linear functions to model supply/demand situations), graphing, linear programming, financial functions (compound interest, annuities, and amortization of loans) sets, Venn diagrams, counting and combinatorics, discrete probability, conditional probability, Bernoulli experiments, Bayes theorem. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

- **MATH-132 Math-Art, Tool and Human Side**

Prerequisites:

MATH-000 or appropriate Math Placement Exam score. Course does not fulfill math requirement for SBS majors.

Credits:

4.00

Description:

Mathematics is both an art and a tool. It has been used in many ways in contemporary and ancient society. The common bond is a way of thinking and a way of using reason to solve problems and describe things of all sorts. The course is designed to cultivate an appreciation of the significance of mathematics in daily life and develop students' mathematical reasoning. Topics will vary from section to section. Examples of topics that might be included are: the real meaning of a newspaper graph, methods to tally votes, fair division, routes and networks, consumer mathematics, the 'real' cost of a house, shapes and patterns, fractals, soap film surfaces, prime numbers and encryption, new discoveries in mathematics.

- **MATH-134 Calculus for Management & Social Sciences**

Prerequisites:

MATH-104, MATH-121 or MATH level 4

Credits:

4.00

Description:

A one-semester introduction to differential and integral calculus. Theory is presented informally and topics and techniques are limited to polynomials, rational functions, logarithmic and exponential functions. Topics include a review of precalculus, linear regression, limits and continuity, derivatives, differentiation rules, implicit differentiation, related rates, applications of derivatives to graphing, minima/maxima, applications of the derivative, marginal analysis, differential equations of growth and decay, anti-derivatives, the definite integral, the Fundamental Theorem of Calculus, area measurements. This course cannot be used to satisfy core or complementary requirements by students majoring in chemistry, computer science, engineering, mathematics, or physics. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

- **MATH-164 Calculus 1 Bridge With Trigonometry**

Prerequisites:

Permission of Instructor

Credits:

4.00

Description:

This course provides an alternative to MATH 165 (Calculus I) for those students who have taken MATH 134 (Calculus for Management and Social Sciences) but who do not have the trigonometric precalculus prerequisite (such as MATH 121) for MATH 165. In other words, the sequence MATH 134 / MATH 164 serves as an alternative to the sequence MATH 121 / MATH 165, and similarly prepares students to take MATH 166 (Calculus II). The course includes a thorough review of trigonometry and other precalculus topics. Aspects of limits and differentiation which students have already seen in MATH 134 are presented briefly, but in most cases with more emphasis on conceptual understanding, and often illustrated using more complicated examples. New calculus topics (i.e. not covered in MATH 134) include one-sided limits, special trigonometric limits, differentiability, derivatives of trigonometric functions and their inverses, derivatives of general inverse functions, logarithmic and implicit differentiation, related rates, L'Hopital's rule, intermediate values theorem, Rolle's theorem, mean values theorem, Newton's method, and linearization. 4 lecture hours plus 1 recitation session each week. Normally offered in spring.

- **MATH-165 Calculus I**

Prerequisites:

MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

Credits:

4.00

Description:

Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-166 Calculus II**

Prerequisites:

MATH-164 or MATH-165 with a minimum grade of C

Credits:

4.00

Description:

Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation, convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

Major Requirements Minimum: 8 courses, 32 credits

Complementary Major Requirements, Minor Requirements, and Free Electives: credit varies

Minimum Total Credits Required for Degree Conferral: 126 credits

Note:

Courses may also count toward major if taken at appropriate level.

Some degree programs exceed 126 credits.

2017-2018 Archived Catalog Information

Bachelor of Science in Journalism

The Bachelor of Science in Journalism is available to Journalism and Public Relations majors only.

Please note that these requirements are for students matriculating in or after fall, 2017. Students matriculating prior to fall, 2017 must reference the [Pre-Fall 2017 Degree Requirements \(Archives\)](#).

The BSJ degree requires the successful completion of the following courses:

Core Requirements: 14 courses, 51-52 credits

- [First-Year Experience](#)
- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Ethical & Philosophical Inquiry](#)
- [Social Science](#)
- [Humanities/History](#)

Social, Cultural, & Global Perspectives: 1 course, 3-4 credits

Choose one SCGP course from those listed below:

- **ADPR-217 Gay and Lesbian Studies**

Credits:

4.00

Description:

Examines the portrayal of homosexuality in political, social, and cultural discourse. Analyzes the role of media and symbolic construction in the shaping of public values, opinions, and social movements.

Term:

Alternates Fall & Spring

- **ADPR-219 Rhetoric of Protest and Reform**

Credits:

4.00

Description:

Examines the persuasive strategies of social reform movements with special emphasis on the civil rights', women's rights, and gay rights movements in the United States.

Term:

Alternates Fall & Spring

- **ARH-205 Gender, Class and Alterity in Ancient And Medieval Art**

Credits:

4.00

Description:

Explores issues of sexuality, gender, race, and social class in the ancient and medieval worlds. Examines key artworks from ancient Greece, the Roman Empire and medieval Europe within historical, social and cultural contexts.

- **ARH-321 Women, Art & Society**

Credits:

4.00

Description:

Surveys women artists from the sixteenth century to the present and examines new direction in art-historical scholarship developed by feminist art historians during recent decades.

Term:

Offered Spring Term

- **AS-100 Introduction to Asian Studies: Culture, People, Ideas**

Credits:

4.00

Description:

An interdisciplinary introduction to Asian Studies will touch upon the history, politics, economics, philosophy, geography, arts, and cultures of Asia. Sample topics include political economy, religious and cultural exchanges, international relations, Asian experience in America, and the role of Asia in the twenty-first century. Students will develop conceptual frameworks for exploring the subjects covered by the Asian Studies curriculum.

Term:

Offered Both Fall and Spring

Type:

Asian Studies, Social & Intellectual HST

- **AS-500 Asian Studies Internship**

Credits:

4.00

Description:

Engages in an internship in a business or non-profit organization that deals with Asia or an Asian American community. Students may complete the internship either in Asia or in the U.S. Students will complete appropriate exercises and reports to document their learning. (1 course, 4-12 credits; can be taken multiple times in different semesters)

Term:

Offered Both Fall and Spring

Type:

Global Engagement Experience

- **BLE-325 Global Business Ethics**

Prerequisites:

BLE-215, PHIL-119, PHIL-120, PHIL-123 or PHIL-127

Credits:

3.00

Description:

Surveys business ethics as they transcend the diverse perspectives of global business. Explores current global ethics standards and values, ethical challenges, controversies, convergence and trends. Students explore famous global business cases through films, websites and independent research. Emphasizes identification and resolution of global business ethical issues within the context of ethical decision-making and sustainability. Analyzes corporate social responsibility ; hence, transforming global business ethics through business.

Type:

Global Engagement Experience

- **BLKST-250 Haiti, Guadalupe and Martinique**

Credits:

4.00

Description:

This course explores the rich intellectual tradition of Haiti, Guadeloupe, and Martinique by considering historical moments linked to colonialism, the abolition of slavery, the representation of gender, departmentalization, and decolonization through essays, films, poems, novels, and short stories by critics and writers from the 19th-21st centuries.

- **CI-204 Prague: Castles to Barbwire**

Prerequisites:

At least 24 credits earned.

Credits:

3.00

Description:

Prague offers students a more recent view into history and will serve as a backdrop to learning Design Thinking. The curriculum will use Czech and Central European cultural features as the inspiration for learning the creative process, skills that can be applied broadly and globally across disciplines. WWII and its fall to Communism left the Czech Republic undamaged. Artists played a vital part in the country's rise to a Republic during the Velvet Revolution. These dissidents, including writers, actors, artists and musicians were innovators who were the catalyst for change. One could say that creative minds changed this country. This course is designed to demystify the creative process by introducing the creative practice as a disciplined approach to problem solving and innovation requiring research. This one-month study abroad experience will offer a more worldly insight to the significance of developing skills where divergent thinking and risk taking are one of many key tools in learning to generate new ideas. Travel fee covers accommodations, transfers, some meals and cultural visits. Airfare and tuition not included.

Type:

Creativity and Innovation, Global Engagement Experience

- **CJN-216 Intercultural Communication**

Credits:

4.00

Description:

An examination of communication variations and cultural viewpoints and their impact on cross-cultural communication. A special emphasis is placed on rituals and message patterns in non-Western cultures.

Term:

Offered Both Fall and Spring

- **CJN-225 World Cinema**

Credits:

4.00

Description:

An introductory course in film studies with a focus on foreign films. Movies studied include masterpieces of cinema from Europe, Asia, the Middle East, and other nations (Films have subtitles).

Term:

Alternates Fall & Spring

- **CJN-281 Asian Popular Culture**

Credits:

4.00

Description:

Students critically analyze Asian popular culture since the 1980s using a cultural ethnographic approach. Students apply the lenses of gender, identity, globalization, and business strategies to examine pop phenomena such as Korean Wave, Cool Japan, and Cantonese popular music.

Term:

Occasional

- **CJN-293 Hong Kong Cinema**

Credits:

4.00

Description:

By examining the film texts of Hong Kong auteurs such as John Woo, Wong Kar-wai, Tsui Hark, Andrew Lau, and Alan Mak, the course examines issues such as film genres, colonization/decolonization, transnational political economy, the Greater Chinese media market, and the diaspora.

Term:

Occasional

- **CJN-301 Documentary Film and the Image of Conflict in the Middle East**

Credits:

4.00

Description:

The course focus is on some of the divisions and conflicts within Israeli society. Students analyze and compare mainstream media discourse to alternative representations in documentary film. Analysis also covers media representation of the Israeli-Palestinian conflict.

Term:

Occasional

- **CJN-385 Globalization of Media and Telecommunications**

Credits:

4.00

Description:

A critique of the circulation of media goods and ideologies from both a cultural and political/economic perspective. Topics include global Hollywood, the images of Muslim women in transnational media, the information society, and global social movements.

Term:

- **EC-141 Development Economics**

Credits:

4.00

Description:

Why do so many countries remain so poor? Why have some (e.g. the Asian tigers) grown so rapidly? Why have most of the countries of Eastern Europe and the Former Soviet Union been slow to ignite economic growth? These questions are addressed by looking at domestic factors (government policies, resource endowments) as well as the international environment (mobile investors, international financial institutions). Asks what economic choices these countries face now. Normally offered yearly. Cultural Diversity B

Type:

Asian Studies

- **EC-151 Economic & Human Geography**

Credits:

4.00

Description:

The study of how economic and human activity is distributed across space, the reasons for these spatial distributions, and the processes that change the spatial organization of economic activity over time. Topics include: maps, map projections, and geographic information systems; population geography; the organization and location of cities, towns and villages; transportation and communication policy; industrial location; the geography of world trade; and geographic features of economic development. The course takes a global perspective, and draws on cases and examples from all over the world. Cultural Diversity B

Type:

Asian Studies, Human Behavior & Societies

- **EDUC-310 Culturally Responsive Education**

Credits:

4.00

Description:

The relationship between cultural diversity and schooling is explored by examining impediments to academic achievement and advancement by minority students, non-native English speaking students, and other under-represented groups. Topics include: standardized testing, identification of inequities, legal and ethical responsibilities of teachers, and promoting equity. Ten pre-practicum observation hours required for teacher candidates.

Term:

Offered Fall Term

- **EDUC-315 Strategies for Emerging English Learners**

Credits:

4.00

Description:

This course examines the specific needs and challenges of the various language and cultural groups in schools. Topics include: theories of 1st and 2nd language acquisition, strategies for teaching academic content, modifying instruction in the mainstream classroom, creating classroom cultures that invite all students into learning, the role of advocacy and professional collaboration in ESL, and analysis of policies related to assessment and placement of English Language Learners.

- **ENG-123 Great Books of the World I Great Books of World Lit. I**

Credits:

4.00

Description:

Literary masterpieces from ancient times to the Renaissance, including: Homer's Odyssey, Sophocles' Oedipus, Virgil's Aeneid, selections from the Hebrew Bible and the Gospels, and Dante's Divine Comedy. List may vary at the discretion of the instructor.

Term:

Offered Fall Term

Type:

Classics Minor, Social & Intellectual HST

- **ENG-124 Great Books of the World II**

Credits:

4.00

Description:

This course will introduce students to a selection of Great Books from around the world from the 17th century to the 21st, such as Don Quixote (Spain), Madame Bovary (France), The Communist Manifesto (Germany), The Origin of Species (England), War and Peace (Russia), On Dreams (Austria), Night (Hungary), Things Fall Apart (Nigeria), Satyagraha (India), I Am Prepared to Die (South Africa), Saeed the Pessoptomist (Israel), The Rouge of the North (China), and The House of Spirits (Chile). Readings may vary at the discretion of the instructor.

Term:

Offered Spring Term

Type:

Social & Intellectual HST

- **ENG-135 World Literature in English**

Credits:

4.00

Description:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

Term:

Offered Both Fall and Spring

Type:

Studies in Literature

- **ENG-216 World Literature in English**

Prerequisites:

WRI-102 or WRI-103

Credits:

4.00

Description:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

Term:

Offered Both Fall and Spring

- **ENG-362 Asian American Literature**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

An introduction to selected Asian-American writers with an emphasis on socio-cultural issues, such as race, gender and ethnicity. Authors include Bulosan, Hwang, Jen, Kingston, Lee, Mukherjee, Odada, and Tan. Cultural Diversity A

Term:

Occasional

Type:

Asian Studies

- **FR-202 Intermediate French II**

Prerequisites:

Take FR-201 or Instructor's consent

Credits:

4.00

Description:

Continues to review grammar, practice speaking, and explore authentic cultural and literary texts in this writing-intensive course. Examines short readings, films, and print media.

Term:

Offered Spring Term

Type:

Modern Language

- **FR-205 The Francophone World**

Prerequisites:

FR 202 or Instructor's consent

Credits:

4.00

Description:

Explores the francophone world through the study of short stories, print media, and film, by engaging with the rich textured and diverse francophone literary canon. Teaches advance notions of French grammar, write compositions, and the art of conversation related to cultural themes.

Term:

Alternates Fall & Spring

- **FR-216 Masterpieces of French and Francophone Literature in English Translation**

Credits:

4.00

Description:

Masterpieces of French and Francophone Literature in English Translation. Studies works translated into English by major authors from the Middle Ages to the present. Explores drama, fiction, and poetry from many regions of the world: Africa, Western Europe, North America, the Caribbean, and Vietnam.

Term:

Alternates Fall & Spring

Type:

Studies in Literature

- **GVT-208 Politics / Religion**

Credits:

4.00

Description:

This course explores what major religions say about the status and responsibilities of the state and how, in turn, selective states have, in theory and practice, structured the place of religions in political life. Particular attention is given to issues of politics and religion in the United States. Cultural Diversity A

- **GVT-115 Evolution of the Global System**

Credits:

4.00

Description:

The goal of this course is to introduce the student to the main actors, social facts and processes that shaped the international system in the nineteenth and twentieth centuries. By analyzing the spread of industrialization, the race for colonies, the thrust of imperialism, and the rapid growth of nationalism, among other factors, this course explains the contradictory and simultaneous trends of unprecedented levels of prosperity and violence in Europe and beyond. While the course examines the role of the United States in the international system, particularly in light of its dominant role since the early twentieth century, it also emphasizes the developments taking place in other regions such as Asia, Africa and Latin America. This will allow students to understand the global arena as a space of complex interconnections involving varieties of forms of production, national political cultures and idiosyncratic traditions. This course sets the foundations for other courses in International Relations and Regional Studies

Type:

Human Behavior & Societies

- **GVT-281 Intro to Comparative Politics**

Prerequisites:

GVT 110, GVT 115, and GVT 120 or consent of instructor; Sophomore status or higher

Credits:

4.00

Description:

This course examines various methods of comparing political systems. Institutions such as executive departments, legislatures, court systems and local governmental systems are examined comparatively. It includes analysis of the impact of different economic systems on political/governmental institutions, and on economic circumstances that impact government. It also looks at political socialization both in terms of process and comparative content. An effort is made to include countries from all regions of the world. Normally offered every year.

- **GVT-359 Hockey, International Development & Politics**

Credits:

4.00

Description:

This class examines the way in which national identity, global and regional economics and international development intersect. It uses the professionalization of the sport of hockey and its subsequent spread around the globe as its case. It will look at the rise of the pro game, the way in which it shapes national identity in the Canadian case, the way in which the pro business model has changed in response to broad socio-economic changes in North America and geo-political shifts around the globe, especially in Eastern Europe and the Former Soviet Union.

• GVT-360 Elections and Voting

Credits:

4.00

Description:

How are elections administered in the United States? Do Americans have confidence in the electoral process? Should they? Why or why not? This course will examine elections in the United States in detail -- from how they are funded to how they are administered to how voters behave. Students will have a choice of either serving as poll workers during the November election or organizing and conducting research of potential voters. Students will gain hands-on experience in actual research design, election administration, and non-partisan get-out-the-vote activities. In addition, students will gain a deeper understanding of the relationship between attitudes, opinion, and voting behavior in American politics and institutions. ECR

• GVT-391 Canada: Multicultural Politics

Prerequisites:

GVT 110/120 or Instructor's permission

Credits:

4.00

Description:

This course examines the Canadian model of incorporating diverse communities into its constitutional and political framework, including the founding British North American Act of 1867, the 1982 Constitution Act, and two later attempts at constitutional reform. Canada's role in balancing two official languages, English and French, is discussed, as is its recognition of a First Nations native-governed territory in the Arctic. This course introduces students to the Canadian polity and compares its parliamentary system with the U.S. separation of powers system. Prerequisites: GVT 110, GVT 120 or instructor's consent. Normally offered alternate years. Cultural Diversity B

- **GVT-467 Comparative Social Movements**

Prerequisites:

Junior status

Credits:

4.00

Description:

How do we explain the appearance or absence of social movements? What social or individual factors explain their development and decline? Who joins social movements? Who does not? Why? What ideas or ideals animate those who do participate? What is it like to be part of a social movement? What effect do they or have they had on politics, power and efforts at social change? These are some of the questions that have traditionally shaped debates over social movements, both domestically and internationally. They will form the analytical core of the work in this course. By critically evaluating several competing schools of thought in social movement theory and history we will attempt to highlight the social forces that have, at varying points in times, facilitated, maintained, as well as blocked the development of social movements in the US and beyond.

- **HST-100 Introduction to Asian Studies: Culture, People, Ideas**

Credits:

4.00

Description:

An interdisciplinary introduction to Asian Studies will touch upon the history, politics, economics, philosophy, geography, arts, and cultures of Asia. Sample topics include political economy, religious and cultural exchanges, international relations, the Asian experience in America, and the role of Asia in the twenty-first century. Students will develop conceptual frameworks for exploring the subjects covered by the Asian Studies curriculum.

Term:

Offered Fall Term

- **HST-246 History of Modern Iran**

Credits:

4.00

Description:

Examines the contemporary history of Persia (Iran) from the time of its independence in the beginning of the sixteenth century to the present with special concentration on geographical/historical background; social structure, ethnic, religious, and linguistic diversities; Safavid and Qajar dynasties; Anglo-Russian interventions and occupations; constitutional revolution and reform; centralization, secularization and modernization under Pahlavi dynasty; opposition to westernization and Islamic revolution.

- **HST-247 History of Modern Middle East**

Credits:

4.00

Description:

Explores the broad historical forces, conflicts and major events that have shaped the contemporary nations of the modern Middle East. Topic include: the emergence of the modern Middle East from the empires of the sixteenth and seventeenth centuries; the age of colonialism; the rise of nationalism; socialism, capitalism; the impact of Israeli and Palestinian conflict on the region; oil, the Islamic Revolution in Iran and the rise of Islamic fundamentalist movements; U.S. policy; and Saddam Hussein's Iraq.

Term:

Offered Fall Term

- **HST-251 Modern East Asia**

Credits:

4.00

Description:

China, Japan, and Korea - East Asia's critical players - share many historical influences, but each has a distinct culture, and they competed with each other for much of the twentieth century, proud of their achievements but feeling threatened by their neighbors. Lectures interspersed with movies and documentaries to show how East Asia has developed in the past one-hundred-plus years.

Type:

- **HST-263 Comparative Race Relations**

Credits:

4.00

Description:

Compares and analyzes the history of race and politics in South Africa and the United States from the 17th century to the present. Examines how race as a social and ideological construct influenced and informed political conflicts over land, labor, and social relations in the two countries including slavery, segregation, apartheid, and the struggle to create racial democracies.

Term:

Offered Fall Term

- **HST-268 History of the Mediterranean**

Credits:

4.00

Description:

Explores the history of the Mediterranean from the ancient times to the 20th century, with emphasis on the extraordinary interaction between the rich cultural, ethnic and religious backgrounds of the peoples of Europe, Middle East, and North Africa.

Term:

Occasional

Type:

Social & Intellectual HST

- **HST-274 Women in 19TH-CENTURY Europe**

Credits:

4.00

Description:

Explores the condition of European women from 1800 to 1914. Readings focus primarily on women's experiences in France and Great Britain. Topics include: the effects of industrialization on the lives of working-class women; working and middle-class women's negotiation of marriage, work, and family life; the rise of feminism, women's greater participation in the public sphere, and conservative reaction to these changes in women's place in society; women and crime; Victorian ideas about female sexuality; the politics of class and gender in nineteenth-century European society.

Term:

Occasional

- **HST-275 Women in 20TH-CENTURY Europe**

Credits:

4.00

Description:

Examines the changing place of women in European society since 1900. Topics include: women's suffrage and the political advances of the 1920s and 1930s; the revolution in sexual mores, birth control, and the rise of companionate marriage; women and the consumer economy; the anti-woman policies of Fascist Italy and Germany under National Socialism; liberation of women and retrenchment in the Soviet Union; World War II; feminism, sexual liberation, and women's political engagement since the 1960s; and, throughout the twentieth century, women's continuing negotiation of work and family responsibilities.

Term:

Occasional

- **HST-321 History of Islam**

Credits:

4.00

Description:

Presents a coherent account of the origin and history of Islam since its foundation in Arabia in the seventh century A.D. to the present. Analyzes the terms, events, characteristics, developments, movements, and institutions that have been part of the shaping of Islam. Ideological challenges and impact of Islam in the world today from both spiritual and political perspectives are examined.

Term:

Occasional

- **HST-371 U.S. Women's History Colonial to 1865**

Credits:

4.00

Description:

Traces the roles, images and experiences of women in America from colonial times to 1865. Topics include the family, work, religion, education, health care, motherhood, sexuality, social and political activism legal status, labor activism and popular culture. With attention to ethnicity, race, class, age, region of residence, disability and sexual orientation, the course focuses primarily on the everyday lives of ordinary women.

Term:

Offered Fall Term

- **HST-372 U.S. Women's History: 1865-present**

Credits:

4.00

Description:

Examines the social and cultural history of women in the United States from the close of the Civil War to the present. Using not only gender but also race, ethnicity, class, age, disability, region of residence, and sexual orientation as important categories of analysis, this course focuses on women's private and public lives. Topics include the family, work, religion, education, health care, private lives, motherhood, sexuality, social and political activism, legal status, labor activism, and popular culture.

Term:

Offered Spring Term

- **HST-484 History of the Emotions**

Credits:

4.00

Description:

Explores ideas about emotional life from the fields of history, anthropology, sociology, and psychology as well as the evolution of emotion rules and prescriptions, focusing on western Europe and the United States since 1700. In the eighteenth century, emotions were seen as a positive influence on politics and public life, especially during the French Revolution. After the fall of Robespierre, the emotions were banished to the private sphere - so we will read both primary sources and recent scholarship on 19th- and 20th- century ideas about masculinity and femininity, romantic love and marriage, childrearing, and about what parents and children are supposed feel toward each other, how ideas about these subjects have changed over time, and whether our feelings change with them.

Term:

Occasional

- **MUH-223 World Music**

Credits:

4.00

Description:

Covers topics in folk, traditional, and modern music of Africa, the Middle East, Asia, and Europe in the context of the cultures and lives of the indigenous peoples of those regions; examines how music interacts with the issues of race, gender, class, religion, politics, and social movements. Normally offered every other year.

Term:

Occasional

- **P.AD-201 Social Change**

Credits:

3.00

Description:

This course will examine social change in the U.S. and abroad. The course will also examine the role of business, nonprofits, and the public sector in addressing social problems. Topics studied may include the Industrial Revolution, the civil rights movement, the women's movement, environmentalism, and the gay and lesbian movement.

- **P.AD-H201 Honors Social Change**

Credits:

3.00

Description:

This course will examine social change in the U.S. and abroad. The course will also examine the role of business, nonprofits, and the public sector in addressing social problems. Topics studied may include the Industrial Revolution, the civil rights movement, the women's movement, environmentalism, and the gay and lesbian movement.

Type:

Honors

- **PHIL-120 Ethics and Civic Life**

Credits:

4.00

Description:

In this class you will be introduced to the perspectives and methods of politics, philosophy, and economics and see how these three disciplines present distinct but interconnected dimensions of current social and political issues.

- **PHIL-228 Feminist Philosophy**

Credits:

4.00

Description:

This course is an introduction to the philosophy of feminist thought. Feminist theories of epistemology, metaphysics and morality will be examined as critiques of traditional philosophy,. Feminist perspectives and methodologies include radical, liberal, postmodern, as well as more recent trends in ecofeminism. Special emphasis will be placed on explicit and implicit practices of alienation and exclusion as they have unfolded in the gendering of thought, truth, and reality. 1 term - 4 credits. Normally offered every third year. C b

Term:

Occasional

• PHIL-229 Eco-Feminism

Prerequisites:

PHIL 119, or PHIL 123, or PHIL 127

Credits:

4.00

Description:

Examines the political, social, and ecological problems facing us as a global community. Having its roots in feminist theory and deep-ecology, eco-feminism provides a critical framework for ecological responsibility and accountability. Writings from eco-feminist thinkers and environmental activists around the world will be used to highlight the philosophical and political conflicts and challenges, including globalization and loss of biodiversity, global warming, international human rights, the relationship of gender and nature, and modes of redress for eco-justice and sustainable development.

• PHIL-261 Eastern Philosophy

Credits:

4.00

Description:

The exposition and critical evaluation of Hinduism, Buddhism, Confucianism, Taoism, and Islam. Special attention is given to foundation principles as well as to the similarities and differences of each of these philosophies to basic ideas in Western philosophy. 1 term - 4 credits. Normally offered

alternate years. C b

Term:

Occasional

Type:

Asian Studies

- **PHIL-262 Buddhism**

Credits:

4.00

Description:

An historical survey of Buddhist philosophy. We will explore Buddhist origins, central teachings, devotional and meditational practices, ritual and institutions as developed from classical to modern times. Special attention given to the philosophical diversity of the Buddhist world view. 1 term - 4 credits. Normally offered alternate years. C b

Term:

Occasional

Type:

Asian Studies

- **PHIL-265 Women in Spirituality**

Credits:

4.00

Description:

An exploration into the various dimensions and ideologies concerning the role of the feminine in relation to the Divine. Belief systems, myths and archetypes from ancient Goddess worship to 20th century feminist theology will be examined in terms of the philosophical content and psychological

consequences. Special emphasis will be placed on feminist metaphysical structures for understanding consciousness and Reality. Classes will be conducted by means of lectures, primary and secondary texts and class discussions. Normally offered alternate years. Cultural Diversity A

Term:

Occasional

- **PHIL-267 Chinese Philosophy**

Credits:

4.00

Description:

A survey of the main developments in Chinese Philosophy. The course begins with the early dynastic concept of humanism and then turns to Confucius and Mencius. Having developed the central Confucian doctrines, students next examine the Taoist response to Confucianism in the writings of Lao Tzu and Chuang Tzu. The course then considers Zen Buddhism, which is called Ch'an Buddhism in China, where it originated. In particular, students study the concept of sudden enlightenment before turning to the Neo-Confucian scholars.

Term:

Occasional

- **PSYCH-243 Organizational Psychology**

Prerequisites:

Take PSYCH-114;

Credits:

4.00

Description:

Focuses on diversity concerns in various aspects of the psychology of the workforce. This includes job analysis, recruitment, selection, evaluation, training, retention, and termination. Employee morale, well-being, stress, and hardiness are considered.

- **PSYCH-247 Asian Perspectives on Health and Work**

Credits:

4.00

Description:

Examines theoretical and empirical approaches that provide insight into Asian viewpoints on socialization practices, family systems, health/well-being, cultural traditions/values, and spiritual philosophy/literature. Explores the diversity among Asian cultures in terms of language, history, religion/spiritual faith, and healthcare practices, all of which play a significant role in shaping the psychological characteristics, interpersonal relationships, and work dynamics of Asians and Asian immigrants. Students critically analyze similarities and differences between Asian and Western psychological perspectives of health and work through didactic and experiential learning components. This course fulfills the Cultural Diversity Requirement and may fulfill the Expanded Classroom Requirement. Normally offered alternate years.

Term:

Offered Spring Term

Type:

Asian Studies

- **RS-111 Introduction to World Religions: Western Traditions**

Credits:

4.00

Description:

This course will explore the comparative history and structure of Western religious traditions, broadly understood, and their impact on other world religions, while attempting to recognize the similarities and the differences among them. Traditions to be studied include Greek and Roman religion, the monotheistic faiths (Judaism, Christianity, and Islam, as well as Zoroastrianism, Sikhism and Bahaism). We will also explore the impact of the Western religions on indigenous traditions, such as African religion, Native American religion, and Pacific Island religion. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. 1 term - 4 credits. Normally offered every year.

- **RS-112 Introduction to World Religions: Eastern Traditions**

Credits:

4.00

Description:

This course will examine a variety of Eastern religions, including Hinduism, Buddhism, Jainism, Confucianism, Taoism, and Shintoism. Possible connections to be explored will be the impact of these traditions on others, such as Pacific Islands and African religion, as well as the growing place of Eastern religion in the West. This course will explore the history and structure of each tradition, while attempting to recognize the similarities and the differences among them. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. Normally offered every year. Cultural Diversity B

Type:

Asian Studies

- **SIB-550 Global Travel Seminar**

Prerequisites:

Please email Hillary Sabbagh at hsabbagh@suffolk.edu to register for a travel seminar.

Credits:

3.00

Description:

An in-depth analysis of timely special issues in international business. Specific topics are announced when the course is scheduled.

Type:

Global Engagement Experience

- **SF-190 Asia in America Fiction and Fact**

Credits:

4.00

Description:

With a focus on some selected ethnic groups from Asia, Asia in America studies the history and current status of Asian Americans in Boston and other parts of the country. We will examine the major reasons why these immigrants chose to leave their home country as well as their expectations and experiences here in America. We will also discuss the issues Asian immigrants have faced in this adopted home as well as the connections and conflicts among different ethnic groups or even within the same ethnic group due to political and socio-economic reasons. The course will include some level of community engagement, through Chinatown tour and service, which may enable us to have a direct contact with the Asian American population and reflect on what is being discussed in class. Through this course, we hope to gain a better understanding of the racial and cultural history of the country and arrive at a deep appreciation of the dynamics of cultural interactions in the twenty-first century. The course fulfills the SCGP requirement.

Type:

Global Engagement Experience

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

- **SOC-227 Race in American Society**

Credits:

4.00

Description:

Despite the election of Barack Obama as President of the United States, race remains one of the most divisive forces in U.S. society. While many of us struggle against racism, racial classification continues to affect where we live, where we work, and how we see ourselves. Racial classification affects our access to health care and our encounters with police officers. Distorted images of racial groups fill television and movie screens. Appeals to racism and fear of foreigners are dominant themes in elections to state and national offices. This course examines the formation and re-formation of racial classifications: how particular groups become racially identified, how these classifications change over time, and how conflicts over race have shaped American society. The meanings of race, as seen from a variety of perspectives, will be a consistent theme throughout the course.

Term:

Occasional

- **SOC-228 Cultural, Global and Social Perspectives**

Credits:

4.00

Description:

Enables students to examine, as well as develop an awareness and appreciation of, diversity within today's society. Providing an overview of the major racial, ethnic, and cultural groups in the U.S., the focus is on the ways in which cultural awareness enhances professional helping relationships and improves the operation of human services systems.

Term:

Occasional

- **SOC-275 Women and Crime**

Credits:

4.00

Description:

This course examines the complex relationships between women and crime today. This focus will include women as criminal offenders; women as victims of crime; and women as both offenders and victims. Course materials draw from recent feminist scholarship on these issues in the social sciences. Topics include the causes of women's crime women, drugs, and crime; child abuse and trauma; prostitution and sex trafficking; race, gender and victimization; and feminist social movements against violence. Crimes of violence against women are a central focus in the course.

Term:

Occasional

- **SOC-329 Sociology of Globalization**

Prerequisites:

Prerequisite: SOC 113 or SOC 116.

Credits:

4.00

Description:

Globalization is shrinking the world. How and why did this happen? This course will explore global change and the global processes which effect key social institutions: culture, the economy and politics. Students will study the processes of globalization and its impact on our lives and people around the globe.

Term:

Occasional

- **SOC-341 International Drug Control Policy**

Credits:

4.00

Description:

Relying on a simplistic demand or supply explanation of why Americans use/abuse drugs obscures the reality of America's drug problem, is ineffective as a guide to public policy and has unforeseen, often negative consequences. Drug use is a complex and multi-faceted issue. There are no easy answers. To comprehend the complexity of America's drug problem one needs an understanding of the geography, history, religion, law, economics and international politics of the Middle and Far East, Eastern Europe, Africa, Mexico, and Central and South America. This class will provide this basic understanding without losing sight that the problem we seek to remedy is our own.

Term:

Offered Spring Term

- **SOC-354 Death and Dying**

Credits:

4.00

Description:

An examination of changing definitions of life and death, social factors affecting causes and rates of death, care of the dying and their families, institutionalization, the funeral industry, suicide, crisis intervention, and the impact of technology on the dying process.

Term:

Occasional

- **SOC-357 Global Health and Healing**

Credits:

4.00

Description:

An examination of how different cultures understand health and illness. Healing approaches from Asia, Africa and the Americas will be explored.

Term:

Occasional

- **SPAN-202 Intermediate Spanish II**

Prerequisites:

SPAN 201 or Instructor's consent.

Credits:

4.00

Description:

Continues skills development from 201. Students read a collection of short stories, write compositions, develop cultural insights through comparative and contrastive assignments, and practice listening and speaking skills in weekly conversation sessions.

Term:

Offered Spring Term

Type:

Modern Language

- **SPAN-290 Advanced Composition & Conversation**

Prerequisites:

Prerequisite: Spanish 202, 203 or 250 or Instructor's consent

Credits:

4.00

Description:

Develops written and oral skills in various contexts and registers. Emphasis on strengthening written skills and learning to speak clearly and persuasively in Spanish. Short texts and audio-visual materials provide the basis for classroom activities which include regularly assigned essays, group discussions and debates.

Term:

Offered Fall Term

Type:

Modern Language

- **SPAN-300 Intro to Cultural Texts**

Prerequisites:

Spanish 202, 203, 250 or Instructor's consent.

Credits:

4.00

Description:

Explores a selection of Peninsular and Latin American cultural materials. Primarily examines texts from different literary genres (narrative, drama, essay, and poetry). Develops critical skills required in more advanced Spanish courses, through close readings and textual analysis. Activities include regularly assigned essays, group discussions, and short scene work.

Term:

Offered Spring Term

- **SPAN-301 Spanish Culture and Civilization**

Prerequisites:

Spanish 202, 203 or 250. Spanish 290 or 300 are strongly recommended

Credits:

4.00

Description:

Examines the civilization and culture of Spain highlighting its historical development and cultural manifestations from pre-historic times to the nineteenth century. Students improve their four skills through activities that include discussions, oral presentations, and writing assignments based on reading and films.

Term:

Alternates Fall & Spring

- **SPAN-302 Indigenous and Colonial Latin America**

Prerequisites:

Spanish 202, 203 or 250 or Instructor's consent. Span 290 or 300 strongly recommended.

Credits:

4.00

Description:

Introduces students to the complexity Latin America by examining its roots in pre-Columbian America and the impact of Spanish exploration and colonization. Places emphasis on cultural, economic, historical, philosophical, political and religious patterns that define the region. Includes class discussions, oral presentations, and writing assignments based on reading and audio-visual material.

Term:

Alternates Fall & Spring

- **SPAN-303 Modern and Contemporary Latin America**

Prerequisites:

SPAN 202 or 203 or Instructor's consent. SPAN 290 or 300 strongly recommended.

Credits:

4.00

Description:

Examines the path taken by Latin American and Caribbean countries to build independent nations out of colonial territories highlighting the 19th, 20th, and 21st centuries, ethnic plurality, and cultural complexity in areas such as politics, religion, sociology, economics, customs, music & film. The cultural contributions of Spanish-speaking minorities in the United States are also addressed. Includes class discussions, oral presentations, and writing assignments based on readings and audio-visual material.

- **SPAN-315 Spanish for the Professions**

Prerequisites:

SPAN 290 or SPAN 300 or Instructor's consent.

Credits:

4.00

Description:

Integrates language learning with culture via business context of the Hispanic world. Spanish for banking and finance, marketing and advertising, and international commerce are highlighted. Students increase their cross-cultural understanding and written and oral proficiency in business Spanish through a wide range of assignments.

Type:

Global Engagement Experience

- **SPAN-390 Introduction to Latin American and Caribbean Literature**

Prerequisites:

SPAN 300; SPAN 302 is strongly recommended

Credits:

4.00

Description:

Examines authors from Latin America and the Caribbean in their historical and cultural contexts. Reading and class discussions consider the relationship between the writer and society by covering such topics as colonialism, the oral tradition, modernism and the emergence of new narratives in the twentieth century. The Inca Garcilaso, Sor Juana, Carlos Fuentes, Rigoberta Menchu, and Pablo Neruda are among some writers studied.

Term:

Occasional

- **THETR-260 Broadway Musicals**

Credits:

4.00

Description:

This course is a survey of American musical theatre from its roots in the mid-19th century to the present. It provides the analytical tools and historical insight to more fully appreciate Broadway's greatest musicals and musical theatre artists. Students will explore the ways in which American forms of popular entertainment helped to shape Broadway musicals from their infancy through their adulthood. The course also explores the ways in which musicals provided opportunities for African-Americans, women, immigrants, and the GLBT community.

Term:

Offered Fall Term

- **THETR-267 Introduction to Theatre: Contemporary American**

Credits:

4.00

Description:

This course provides a formal introduction to the theories and practices strategically used by American theatre artists after the Second World War. Special emphasis is placed on theatre artists exploring issues of cultural identity including works by GLBT, African-American, Asian-American, and Latin American playwrights. These playwrights may include Tony Kushner, Paula Vogel, Suzan-Lori Parks, Adrienne Kennedy, August Wilson, David Henry Hwang, Philip Kan Gotanda, Eduardo Machado, and Melinda Lopez. The course will also provide an introduction to trends in post-modern theatre practices related to emerging work of the auteur director, solo performers, and interdisciplinary collectives. Satisfies a core requirement for Theatre majors. Normally offered alternate years.

Term:

Occasional

- **WGS-111 Women, History, & Culture**

Credits:

4.00

Description:

Explores the roles and images of women in Western culture and the realities of women's everyday lives through literature, film, history, art, psychology, and recent feminist scholarship. Analyzes gender inequalities and the influence of gender on social structure, human behavior, and artistic expression. Topics include: the social construction of gender and identity; domestic prescriptions for women; women and work; intersections of gender, class, and race in American society; sexualities and identity; the politics of motherhood and reproductive rights; educating girls; negotiating male privilege and structural inequalities; representations of women in Western art and film; and women as artists and gendered models of creativity in art, film, fiction, and science.

Term:

Offered Both Fall and Spring

Type:

Social & Intellectual HST

- WGS-H111 Women, History, & Culture

Prerequisites:

At least a 3.3 GPA required.

Credits:

4.00

Description:

Explores the roles and images of women in Western culture and the realities of women's everyday lives through literature, film, history, art, psychology, and recent feminist scholarship. Analyzes gender inequalities and the influence of gender on social structure, human behavior, and artistic expression. Topics include: the social construction of gender and identity; domestic prescriptions for women; women and work; intersections of gender, class, and race in American society; sexualities and identity; the politics of motherhood and reproductive rights; educating girls; negotiating male privilege and structural inequalities; representations of women in Western art and film; and women as artists and gendered models of creativity in art, film, fiction, and science.

Term:

Offered Both Fall and Spring

Type:

Honors

- WGS-113 Women, Science, & Society

Credits:

4.00

Description:

Explores women's lives from the perspective of the social and natural sciences, including examination of recent biological, psychological, and sociological theories about gender and gender roles, as well as the influence of feminist scholarship in these areas. Topics include: the social construction of gender; the psychology and biology of sex and gender; women and work; media representations of women; the female body and eating disorders; women's health and lifecycle; women and sexuality; reproduction, abortion, and motherhood; and sexual violence against women.

Term:

- **WGS-115 Introduction to Gender Studies**

Credits:

4.00

Description:

Introduces the key topics and debates that have shaped the field of gender studies, including queer studies, masculinity studies, and women's studies. Through lecture and class discussion of texts from literature, film, history, psychology, and sociology, explores the pervasive influence of gender on the structure of society and our everyday experiences and the role that gender plays in our understanding of love, friendship, sexuality, and even violence. Topics include: biological arguments about gender and sexuality; the social construction of gender and identity; intersections of gender, race, class, and sexuality; masculinity and femininity; and theories of sexual difference and the construction of sexuality.

Term:

Occasional

Type:

Social & Intellectual HST

- **WGS-311 Engendering Entertainment: Feminism and Popular Culture**

Credits:

4.00

Description:

Investigates the complex intersections between feminism and popular culture through several different lenses: by exploring, how feminists make arguments about popular culture; by looking at the complexities of public femininity in today's popular culture, including figures such as Lady Gaga and Katy Perry and television shows like The Bachelor and Grey's Anatomy; by focusing on a variety of articulations of feminism within mass media, blogs, social media, and popular books such as Ariel Levy's Female Chauvinist Pigs, and Caitlin Moran's How to Be a Woman. Along the way we will ask questions about: what makes a work of art feminist; how modern media contributes to or distracts us from a variety of political debates in the realm of female equality and how can we, as individuals, use modern media to create and advance smart, feminist arguments.

Type:

- WGS-315 Feminist Thought

Credits:

4.00

Description:

Investigates how feminists, both today and in history, have understood inequality and difference and looked for the best ways to address these issues and bring about social justice. Examines how feminist theorists help us to understand how gender and other social categories, such as race, class, sexuality, disability, age and nationality, are constructed within and through each other; and analyzes feminist engagements with liberalism, socialism, psychoanalysis, existentialism, post-colonialism, critical race theory, and queer theory, as well as consider anti-feminist arguments. Readings include classic critical texts by authors including Mary Wollstonecraft, Emma Goldman, Virginia Woolf, Chandra Mohanty, Gloria Anzaldua, and Judith Butler.

Type:

Social & Intellectual HST

- WGS-325 Global Women's Fiction

Credits:

4.00

Description:

Explores of various cultural worldviews in order to reveal and assess the voices of women from around the world as they respond to important global issues such as sexual violence and gendered oppression. Topics include: national citizenship, sexual politics, legal discourse, aesthetic representation, literary movements, genre, constructions of femininity, sexual identities, and representations of gender in relation to race and class and international cultures, and the relationship of self-image to the body politic.

Term:

Occasional

- WGS-335 Queer Narratives

Credits:

4.00

Description:

Explores the stories that help us to understand communities, identities, and bodies that could be considered queer, and the ways that film, music, memoir and fiction have discussed queer as different, unusual, or other. Texts include the documentary, "Paris Is Burning", Frank Ocean's 2012 album, "Channel Orange", and Janet Mock's recent memoir, "Redefining Realness", as well as foundational queer theory from Judith Butler, Eve Kosofsky Sedgwick, and Lee Edelman, among others, to help build a framework for approaching and interpreting both fictional and non-fictional accounts of queer lives.

Type:

Social & Intellectual HST

Courses that fulfill the Creativity and Innovation, Humanities/History, Language, Literature, Quantitative Reasoning, Seminar for Freshmen, Social Science, or VPATH requirements may double count to fulfill the Social, Cultural, and Global Perspectives (SCGP) requirement.

Major Requirements Minimum: 8 courses, 32 credits

Complementary Major Requirements, Minor Requirements, and Free Electives: credit varies

Minimum Total Credits Required for Degree Conferral: 126 credits

Note:

Courses may also count toward major if taken at appropriate level.

Some degree programs exceed 126 credits.

2017-2018 Archived Catalog Information

Bachelor of Science in Journalism

The Bachelor of Science in Journalism is available to Journalism and Public Relations majors only.

Please note that these requirements are for students matriculating in or after fall, 2017. Students matriculating prior to fall, 2017 must reference the [Pre-Fall 2017 Degree Requirements \(Archives\)](#).

The BSJ degree requires the successful completion of the following courses:

Core Requirements: 14 courses, 51-52 credits

- [First-Year Experience](#)
- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Ethical & Philosophical Inquiry](#)
- [Social Science](#)
- [Humanities/History](#)

Science, Technology, & Engineering (STE): 2 courses and corresponding laboratories where applicable, 8 credits

Choose two STE courses (and corresponding laboratory where applicable) from those listed below. Courses do not need to be in a sequence. In the case of a course that is a lecture plus a lab, the student must complete both components to earn credit for the STE requirement.

Biology:

- **BIO-104 Environmental Biology**

Prerequisites:

BIO 101 and BIO L101, can also be taken concurrently BIO L104 must be taken concurrently

Credits:

3.00

Description:

An introduction to basic evolutionary, behavioral and ecological principles. Readings and discussions emphasize the ways that humans are affected by ecological processes and principles as well as how humans and their technology affect ecosystems. May not be taken by Biology majors or minors. This course will not fulfill requirements for a major or a minor in Biology. It is intended for non-biology majors as a follow-up to Biology 101. 3 hours lecture. Days Only. Madrid Campus only.

Type:

SCI TECH ENGNR

- **BIO-L104 Environmental Bio Lab**

Prerequisites:

BIO-104 must be taken concurrently

Credits:

1.00

Description:

Exercises and field trips designed to complement and demonstrate the ecological principles developed in the lecture section. The lab emphasizes the scientific method and employs long term group projects. Madrid Campus only.

Type:

SCI TECH ENGNR

- **BIO-105 Humans and the Evolutionary Perspective**

Prerequisites:

Non Science Majors Only

Credits:

4.00

Description:

Major topics include the scientific basis of evolution, the fossil history of vertebrates, evidence of evolution in the human body, and applying an evolutionary perspective to the social interactions and possible futures of humanity. Meets one of the non laboratory science requirements for the non-science major. This reading and writing intensive course is a non-laboratory science option for non-science majors. This course will not fulfill requirement for a major or a minor in Biology.

Term:

Occasional

Type:

SCI TECH ENGNR

- **BIO-111 Introduction to the Cell**

Prerequisites:

Must take BIO L111 concurrently

Credits:

3.00

Description:

Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L111 Introduction to the Cell Laboratory**

Prerequisites:

Concurrently with BIO 111

Credits:

1.00

Description:

Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-114 Organismal Biology**

Prerequisites:

Must take BIO L114 concurrently.

Credits:

3.00

Description:

Rigorous introduction to organismal biology emphasizing evolution, phylogenetics, form, and function. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L114 Organismal Biology Laboratory**

Prerequisites:

Must take BIO 114 concurrently

Credits:

1.00

Description:

A series of laboratory experiences in evolution, diversity, anatomy and physiology.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-201 Biology's Big Questions**

Prerequisites:

Non Science Majors Only.

Credits:

4.00

Description:

This course seeks to answer five current questions from all levels of biology, from the subcellular to the ecosystem level. Topics will be discussed in the context of genetics, evolution, and ecology. We will focus on the process of doing science, including how scientists evaluate ideas and communicate their findings. Emphasis will be placed on topics in biology that impact daily life.

Type:

SCI TECH ENGR

Chemistry:

- **CHEM-105 Chemical New Product Development**

Prerequisites:

ENT 101

Credits:

4.00

Description:

This course addresses the crucial intersection between chemistry and business, and the impact of these fields on society. It provides an introduction to important chemistry concepts and practices of business management. Primary focus is on understanding the chemistry principles behind some of the consumer products in our everyday lives, and using this knowledge to create and evaluate ideas for new products. The course also introduces the business aspects involved in the development and marketing of new products. An important component of the course is in making effective presentations; this component concludes the course, culminating in team presentations of a new chemical product to panel of executives and peers. This course satisfies the Sawyer Business School Science requirement.

Type:

- **CHEM-106 Biotechnology & Its Applications in Medicine, Agriculture, Law**

Credits:

4.00

Description:

Introduces the latest discoveries and applications of biotechnology. Topics include genetically modified food, stem cells, genetic testing, cloning, and forensics. A combination of lectures, discussions, short documentaries, mock congressional hearings, and hands-on activities will provide insight into the numerous medical, social, legal, and ethical issues surrounding this technology.

Type:

SCI TECH ENGR

- **CHEM-111 General Chemistry I**

Prerequisites:

Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:

3.00

Description:

Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- CHEM-L111 General Chemistry Laboratory I

Prerequisites:

MATH-104 MATH-108 MATH-121 MATH-128 MATH-130 MATH-134 MATH-164 MATH-165 MATHT-MPEL1 MATHT-MPEL2 or MATHT-MPEL3. Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

Computer Science:

- CMPSC-F107 Ants, Rumors and Gridlocks

Prerequisites:

Math placement level of 2 or above or any MATH course at the level 100 or above

Credits:

4.00

Description:

Do viruses and rumors spread like forest fires? How do ants cooperate? Do spoken languages and biological species evolve in a similar way? Ants, Rumors, and Gridlocks exposes students to introductory aspects of computational science by addressing and answering these and many other questions. Students use and modify virtual experiments preprogrammed in the NetLogo programming language to investigate these topics and others in Social Sciences, Biology, and Environmental Science. No prior knowledge of computer programming or NetLogo is required.

Type:

SCI TECH ENGR

Electrical Engineering:

- **ECE-288 Measuring the World**

Credits:

4.00

Description:

The world is addicted to quantifying the essence of everything, from personal IQ, to the speed of a baseball, to our healthiness, or our chances of winning the lottery. Behind most of these numeric values exists a science of measurement. Some of this is referenced to international standards, such as for length, time, weight, or temperature. Others are more arbitrary and subjective, such as ranking Olympic performance in gymnastics, beauty pageants, or popular responses as found in the game show Family Feud. A third category includes controversial areas, such as measuring whether a person is lying when interrogated, or using hype rather than reality to market products. Sometimes statistics are used to predict sports outcomes, such as in the annual March Madness NCAA basketball brackets. Finally, in a world subject to fraud and deception, it can be essential to distinguish legitimate from counterfeit items, such as in money, art, collectibles, and historical documents. Don't get hoodwinked! This course examines all of these, starting with how measurements have been made throughout history, along with a full deck of entertaining terms used during the ages. This may help you sort out your weight, whether given in pounds, kilos, or stones. Often these terms will provide insights into how people lived in different eras. We will also look at some of the technologies currently available to provide these measurements, and unravel the complexities of various sensors that are used. As we consider the meaning of accuracy we may become less naive about how much confidence to ascribe to the results given us. Hovering around all of these measurements should be the question of validity - are they meaningful, useful, or misleading? And the impact they have on society - whether they steer behavior more powerfully than one might originally suspect. Each student will also be given an opportunity to become an expert in an area of measurement of personal interest. By the end o

Type:

SCI TECH ENGR

- **ENS-103 Introduction to Engineering**

Prerequisites:

ENS L103 MUST BE TAKEN CONCURRENTLY.

Credits:

3.00

Description:

This course provides exposure to engineering practice, with particular focus on electrical engineering components such as circuit elements and systems. It seeks to go beyond the mathematics and provide an intuitive appreciation of functional devices. Examples taken from a broad swath of technological history illustrate significant crossroads, decisions, and inventiveness. Emphasis is placed on learning to think as an engineer - assessment of problems, candidate solution tradeoffs, and implementations. Frequent exercises in creative engineering design will be used. Students will be required to design several elementary devices, such as a magnet, a capacitor, a timing device, and a motor, which they will enter in a competition for overall strength, compactness, accuracy, or speed. Sometimes assignments relate to "survival on an island" concerns, such as communication or drinking water. Students also learn about reverse engineering by selecting, building, troubleshooting, and presenting an electronic kit of their choice. A term paper determining the engineering behind a topic of their choice will also be written and presented. On occasion (see ENS L103) there will be team competitions between various smaller groups in the class.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **ENS-L103 Intro to Engineering Lab**

Prerequisites:

Must be taken Concurrently w/ ENS-103

Credits:

1.00

Description:

The Lab is designed to provide opportunities to gain familiarity with engineering tools. Students will be introduced to parts (e.g. learn the resistor color code), test equipment (multimeters, prototyping trainers, signal generators, and oscilloscopes), and construction techniques (wiring, soldering, troubleshooting). Although it varies from year to year, Class Projects can be built during the Lab sessions. In the past these have included a 25 Watt electric generator, various door lock systems (both mechanical and electronic), and an AM transmitter and receiver (all projects made from scratch). It is likely that 2010-2011 may introduce some robotic creations for a competition. Electronic kits and motors can also be built and serviced in the Lab. There is an adjoining machine shop, which can be utilized (with supervision), for fabricating items. Individual creativity is encouraged, and informal problem solving sessions occasionally occupy lab time. However, the lab is accessible outside of the traditional scheduled time.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

Environmental Science:

- **UES-107 Introduction to Drones**

Prerequisites:

UES-L107

Credits:

3.00

Description:

Unmanned autonomous systems (UAS) or Drones are high-tech, intelligent machines capable of traveling by air, land, or sea via a remote connection. This course presents concepts and practical methods of using Unmanned Vehicles in a professional context, particularly for environmental projects. UAVs are increasingly being used in a professional capacity such as cinematography and filming, real estate, construction, surveying, mapping, agriculture, industrial inspections, utilities inspections and many more. The course covers mission planning, operations, field data collection, data processing, legal implications, data analysis and data deliverables. The course and laboratory will include learning flying micro-drones and preparing to pass the Federal Aviation Administration's Unmanned Aerial Vehicle Airmen (Part 107) exam. The course will have an associated Laboratory component in which students will learn how to properly plan effective flight missions, fly safely and legally, develop risk management strategies, analyze the data captured and convert it into a useful data deliverable.

Type:

SCI TECH ENGR

- UES-L107 Introduction to Drones Lab

Prerequisites:

UES-107

Credits:

1.00

Description:

Unmanned autonomous systems (UAS) or Drones are high-tech, intelligent machines capable of traveling by air, land, or sea via a remote connection. This course presents concepts and practical methods of using Unmanned Vehicles in a professional context, particularly for environmental projects. UAVs are increasingly being used in a professional capacity such as cinematography and filming, real estate, construction, surveying, mapping, agriculture, industrial inspections, utilities inspections and many more. The course covers mission planning, operations, field data collection, data processing, legal implications, data analysis and data deliverables. The course and laboratory will include learning flying micro-drones and preparing to pass the Federal Aviation Administration's Unmanned Aerial Vehicle Airmen (Part 107) exam. The course will have an associated Laboratory component in which students will learn how to properly plan effective flight missions, fly safely and legally, develop risk management strategies, analyze the data captured and convert it into a useful data deliverable.

Type:

SCI TECH ENGR

- UES-111 Environmental Science

Prerequisites:

Must be taken concurrently with UES-L111

Credits:

3.00

Description:

Applies the fundamentals of science to environmental issues. Topics include population dynamics and resources, environmental degradation, ecosystems, geologic processes, deforestation, biodiversity, climate change, air, soil, and water resource management, and pollution and risks to health.

Term:

Offered Spring Term

Type:

SCI TECH ENGNR

- **UES-L111 Environmental Science Lab**

Prerequisites:

Must be taken concurrently with UES-111.

Credits:

1.00

Description:

Laboratory exercises are used to illustrate topics covered in UES 111. Field testing and analysis of environmental samples. Field trips may be required.

Term:

Offered Spring Term

Type:

SCI TECH ENGNR

- **UES-121 Science, Art, and the Environment**

Prerequisites:

Take UES-L121 concurrently

Credits:

3.00

Description:

Examines art and cultural objects through the lens of the biological, chemical, and physical principles of the materials and processes we use to make them. Includes consideration of factors important in art conservation. Provides an environmental context for the manufacture and use of art materials and the preservation of cultural objects.

Type:

SCI TECH ENGR

- **UES-L121 Science, Art, and the Environment Lab**

Prerequisites:

Take UES-121 concurrently

Credits:

1.00

Description:

Provides hands-on work with pigments, dyes, and other art materials using the basic principles of science and technology. Students will conduct laboratory experiments that produce art objects and other consumer products. Instruction in safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables, graphs, and graphics. Practice in synthesizing compounds like paints and finishes and in evaluating methods of art conservation.

Type:

SCI TECH ENGR

- **UES-225 Geographical Information Science**

Prerequisites:

Take UES-L225 concurrently

Credits:

3.00

Description:

Provides the fundamentals of geographic information science (GIS) including the history of automated mapping. A review of the necessary hardware and software elements used in GIS is presented. Hands-on exercises with computerized mapping software are required.

Type:

SCI TECH ENGNR

- **UES-L225 Geographic Information Science Lab**

Prerequisites:

Must be taken concurrently with UES-225

Credits:

1.00

Description:

Required companion computer laboratory to be taken concurrently with UES 225.

Type:

SCI TECH ENGNR

Forensic Science

- **FS-103 Introduction to Forensic Science**

Prerequisites:

FS-L103

Credits:

3.00

Description:

Application of the principles of forensic science in evaluating physical evidence, with emphasis on its role in criminal investigation. Class experiences may include guest lectures and field trips. 3-hour lecture. Normally offered Fall

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **FS-L103 Introduction to Forensic Science Lab**

Prerequisites:

FS 103 concurrently

Credits:

1.00

Description:

Laboratory experiences related to the collection and analysis of physical evidence as performed by forensic science professionals. Experiments may include forensic microscopy, drug analysis, forensic serology, physical patterns, fingerprint and firearm evidence analysis techniques. 3-hour laboratory. Normally offered Fall

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

Neuroscience:

- **NEUR-101 Intro to Neuroscience**

Credits:

4.00

Description:

Introduces the field of neuroscience, the study of the organization and function of the nervous system of humans and other animals. Neuroscientists examine how individual neurons function as signaling devices, how groups of neurons operate as circuits to produce fundamental units of behavior, and how much larger systems in the brain subserve complex functions such as memory and consciousness. Topics include the neuron and neural transmission, the overall function and organization of the nervous system, the development of the brain, neural plasticity, sleep, memory and other higher cognitive functions. Normally offered alternate years.

Type:

SCI TECH ENGR

Physics:

- **PHYS-111 College Physics I**

Prerequisites:

Take MATH-121 or MATH-134 or MATH-165 or permission of Physics department chair; PHYS L111 taken concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course.

Term:

Offered Fall Term

Type:

- **PHYS-L111 College Physics Lab I**

Prerequisites:

PHYS 111 concurrently

Credits:

1.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course. Error propagation, use of Excel, laboratory notebooks and formal reports required.

Term:

Offered Fall Term

Type:

SCI TECH ENGR

- **PHYS-151 University Physics I**

Prerequisites:

MATH-121, MATH-165 or MATH-164 and PHYS L151 concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **PHYS-L151 University Physics Lab I**

Prerequisites:

PHYS 151 concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **PHYS-152 University Physics II**

Prerequisites:

PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

Credits:

3.00

Description:

This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **PHYS-L152 University Physics Lab II**

Prerequisites:

PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **PHYS-153 University Physics III**

Prerequisites:

MATH-121, MATH-164 or MATH-165

Credits:

3.00

Description:

This calculus-based course is the introduction of the topics of modern physics. It begins with special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom. Then Schrodinger's equation is introduced with use of wave functions, particle box, barrier penetration, quantum mechanical tunneling, the Pauli Exclusion principle, the development of the periodic table, and the X-ray spectra. Development of solid state physics with bonding in molecules, band theory of solids and semiconductor behavior. The final topics cover nuclear physics, radioactivity, half-life, nuclear fission and fusion, medical uses of radiation, elementary particle physics and introduction to astrophysics.

Term:

Offered Fall Term

Type:

SCI TECH ENGR

- **PHYS-L153 University Physics III Lab**

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts of special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom.

Type:

SCI TECH ENGR

- **SCI-103 Environmental Science**

Prerequisites:

SCI-L103 must be taken concurrently

Credits:

3.00

Description:

Case study approach to the fundamentals of science applied to environmental degradation, ecosystems, geological processes, population dynamics, deforestation and biodiversity, climate change, ozone depletion, air soil, and water resource management, pollution and risks to health, economics and the environment, politics and the environment, and ethics and the environment.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **SCI-L103 Environmental Science Lab**

Prerequisites:

Must take SCI-103 concurrently

Credits:

1.00

Description:

Laboratory exercises to illustrate the topics covered in Science 103. Field-testing and analysis of environmental samples. Field trip required.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **SCI-108 Introduction to Cancer Care**

Credits:

4.00

Description:

This course will introduce the students to the top ten U.S. adult cancers, as well as the most common pediatric cancers. Topics to be covered include cancer causes, detection, and prevention. Psychosocial aspects of being diagnosed with cancer and the role nutrition plays for cancer patients will be described. The course will also discuss the major treatment modalities for each cancer including radiation therapy, surgery, chemotherapy, and bone marrow transplants. The goals and objectives of the course will be met through the use of various teaching tools including but not limited to: PowerPoint presentations, videos, guest lectures, and a poster project with a presentation component. Cognitive assessment of the students will be accomplished through homework, quizzes, exams, and a group poster and oral presentation. Students with any type of academic background are welcome.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **SCI-111 Introduction to Astronomy**

Prerequisites:

MATH-128 or higher and SCI-L111 must be taken concurrently.

Credits:

3.00

Description:

History of Astronomy from the ancients to Newton; light; telescopes; sun, earth, moon planets, comets, asteroids, meteors; space programs, science and technology in society. Course culminates with a visit to the Clay Center Observatory, where students will be able to make first hand observations. For non-science majors.

Term:

Occasional

Type:

SCI TECH ENGNR

- **SCI-L111 Introduction to Astronomy Lab**

Prerequisites:

Take SCI-111 concurrently

Credits:

1.00

Description:

Laboratory experiments and exercises to illustrate the principles discussed in Science 111. Observational exercises using the Celestron telescope, astrophotography exercises, and computer simulations. Course culminates with a visit to the Clay Center Observatory, where students will be able to make first hand observations.

Term:

Occasional

Type:

SCI TECH ENGNR

- **SCI-112 Structure of the Universe**

Prerequisites:

MATH-128 or higher and SCI-L112 concurrently

Credits:

3.00

Description:

Astronomy of the cosmos; sun, stars, interstellar materials, galaxies, pulsars, quasars, black holes; nature of time relativity, cosmology. Course culminates with a visit to the Clay Center Observatory, where students will be able to make first hand observations. For non-science majors.

Term:

Occasional

Type:

SCI TECH ENGNR

• **SCI-L112 Structure of the Universe Lab**

Prerequisites:

Take SCI-112 concurrently

Credits:

1.00

Description:

Laboratory experiments and exercises to illustrate the principles discussed in Science 112. Observational exercises using the Celestron telescope, astrophotography exercises, and computer simulations. Course culminates with a visit to the Clay Center Observatory, where students will be able to make first hand observations.

Term:

Occasional

Type:

SCI TECH ENGNR

- **SCI-113 A Habitable Earth Within the Solar System**

Credits:

4.00

Description:

This course introduces non-science majors to concepts that are central to making our planet habitable. It presents Earth in context of the solar system with a broad view of global climate change and energy resources in a quest to better understand the workings our planet. This course on Earth and Planetary Science is suitable for students who may have taken their last science and math course several years ago, or are just curious about knowing facts on major issues that pertain to the future of our planet. Together with a reading component, this course aims to give students a flavor of how researchers think, investigate and develop conclusions that directly affect our political and economic future. Topics covered in this course range from the solar system to the study of search for other habitable Earth-like planets, search for extraterrestrial life, and evolution of life on Earth. Other characteristics of this course are heavy use of audio-visual materials often including computer animations and simulations, in-class experiment demonstration, and intensive use of INTERNET-based resources.

Type:

SCI TECH ENGR

- **SCI-165 Inner Workings of Physics Universe**

Credits:

4.00

Description:

About 15 billion years ago, (data indicate) the big bang occurred and the universe was born. With it came physical laws and a spectacular array of consequences that lead to the universe as we know it. This non-lab , 4 credit course explores the inner workings of the physical universe in terms of the scientific inquiry which lead to Newton's laws, an understanding of energy, waves, light, electricity, atomic structure, chemical reactions, nuclear physics, particle physics, relativity, and the big bang theory. During the course, students will learn to make use of modern resources to access scientific and technical literature to research a scientific topic. They will learn to distinguish between science and technology (e.g. quantum mechanics and nanotechnology, the discovery of the Higgs boson and the large hadron collider that made it possible, etc.) and to understand how the science, technology, and engineering disciplines play a crucial role in recognizing and solving problems of society and the world that we share.

Type:

SCI TECH ENGR

- **SCI-171 The Built World: How Humans Engineer Environments**

Credits:

4.00

Description:

The most basic needs of humans have not changed - water, food, and shelter - but the means of meeting these needs has. In this course, we will examine how technology-driven societies operate by studying how cities are built and how they function. Topics will include water supply and distribution systems; transportation systems (including road and bridge design and construction); building design, construction, and operation (including skyscraper and sustainable building design), and waste removal systems (municipal and industrial wastewater removal and treatment, solid waste removal and treatment). This is not a course about little gadgets and widgets; this is a course about big engineering marvels; and it emphasizes applications of science - how things work - rather than scientific theory.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **SCI-173 Mapping Our World The Power of Digital Maps**

Prerequisites:

SCI L173 Must be taken concurrently Knowledge of Windows type Application

Credits:

3.00

Description:

Geographic Information Science (GIS) link information (number of fire hydrants on a block) to features on a map (e.g., a point representing street address) that has a designated geographic location (as designated by global coordinates). Unlike paper maps, GIS software allows the production of interactive maps that allows the user to layer data, to indicate spatial patterns, to analyze trends, and to combine different features of the mapped area in novel ways. For example, a business person may wish to use GIS to determine the optimum location of retail outlet (based on the mapped demographics of a neighborhood), while an environmental engineer may use GIS to describe the location of outfalls to see how they correlate to areas

of stream pollution. In this course, students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **SCI-L173 Mapping Our World Lab**

Prerequisites:

Must be taken concurrently with SCI-173

Credits:

1.00

Description:

This laboratory illustrates concepts and methods taught in SCI 173. In this lab students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **SCI-181 Science and Life in the 21st Century**

Credits:

4.00

Description:

No longer offered on Boston campus This is a four credit, non-lab, science course that examines the central scientific problems confronting the 21st century. The course studies particular topics and teaches the necessary science around these topics to provide a good understanding of the issues. The topics currently are: Energy, Science and Economic Decisions, Sustainability of Life on Earth, Health and Science.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **SCI-184 Contemporary Science and Innovation**

Credits:

4.00

Description:

This is a 4 credit, project based science course that examines the central scientific problems confronting the 21st century. The course consists of lectures, class discussions, field trips, and in-class hands-on activities designed to familiarize the student with different concepts of the lectures. The current focus is on sustainable energy production. A final team project related to the course topics will be given. This is the version of SCI 183 without a separate lab component. Students who have taken SCI 183, L183 are not allowed to take this course.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **SCI-201 Physics for Future Presidents**

Credits:

4.00

Description:

This course presents a topical introduction to the key principles and concepts of physics in the context of the world events and natural phenomena that confront world leaders and that require informed decisions and responses. Energy, health, counter-terrorism, remote sensing, space programs, nuclear proliferation, and a host of other modern challenges have technological and scientific dimensions, the understanding of which is essential to avoiding disastrous policy decisions. This course considers the application of physics to these societal challenges. The material is covered at a level and pace that a future world leader should be able to handle; the emphasis is on the development of physical reasoning skills, and not on detailed, mathematical problem solving.

Type:

SCI TECH ENGR

• SCI-210 Earth and Planetary Crystals

Prerequisites:

Take SCI-L210 concurrently

Credits:

3.00

Description:

This course will provide undergraduate students of various disciplines with an introduction to gems and crystals using interactive, evidence-based teaching approaches. Crystalline forms of matter are critical to our existence. Using innovative teaching strategies of in-class hands-on demonstration, supplemented with visuals of crystal details, the course provides students insights into the formation, alteration and unique properties that make crystals invaluable. Topics range from the study of proteins and nucleic acids to the interior of planets. The in-class lectures will provide a basic guide that will serve as a platform for individually catered in-depth study. Therefore, the course is open to advanced students as well, who can pick up higher level of information for discussion and class projects.

Type:

SCI TECH ENGR

Some Science division courses may have Math or Computer Science prerequisites; many have other Science prerequisites.

Major Requirements Minimum: 8 courses, 32 credits

Complementary Major Requirements, Minor Requirements, and Free Electives: credit varies

Minimum Total Credits Required for Degree Conferral: 126 credits

Note:

Courses may also count toward major if taken at appropriate level.

Some degree programs exceed 126 credits.

2017-2018 Archived Catalog Information

Bachelor of Science in Journalism

The Bachelor of Science in Journalism is available to Journalism and Public Relations majors only.

Please note that these requirements are for students matriculating in or after fall, 2017. Students matriculating prior to fall, 2017 must reference the [Pre-Fall 2017 Degree Requirements \(Archives\)](#).

The BSJ degree requires the successful completion of the following courses:

Core Requirements: 14 courses, 51-52 credits

- [First-Year Experience](#)
- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Ethical & Philosophical Inquiry](#)
- [Social Science](#)
- [Humanities/History](#)

Ethical & Philosophical Inquiry: 1 course, 4 credits

Choose one Ethics course from those listed below:

- **PHIL-119 Ethics**

Credits:

4.00

Description:

A systematic introduction to the major thinkers and their positions on the main issues of ethics, such as: What is morality? What are moral values? How should we live our lives? Are there objective, universal, absolute moral standards? If so, what are they, and what is their basis? 1 term - credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- **PHIL-120 Ethics and Civic Life**

Credits:

4.00

Description:

In this class you will be introduced to the perspectives and methods of politics, philosophy, and economics and see how these three disciplines present distinct but interconnected dimensions of current social and political issues.

- **PHIL-123 Social Ethics: The Good Life**

Credits:

4.00

Description:

An examination of contemporary Western society, particularly in the United States, in relation to philosophical attempts to define the good life. Current books that exhibit a philosophical approach towards important contemporary social issues will be discussed, as well as classics in philosophy. Topics may include: civic virtue, consumerism, current events, economic justice, popular culture (film, music, television), religion and secularism, etc. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- **PHIL-127 Contemporary Moral Issues**

Credits:

4.00

Description:

A critical examination of a number of contemporary moral issues such as: abortion, affirmative action, animal rights, capital punishment, cloning, drug legalization, environmental ethics, euthanasia, genetic engineering, gun control, pornography, same-sex marriage, suicide, war and terrorism, etc. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

Major Requirements Minimum: 8 courses, 32 credits

Complementary Major Requirements, Minor Requirements, and Free Electives: credit varies

Minimum Total Credits Required for Degree Conferral: 126 credits

Note:

Courses may also count toward major if taken at appropriate level.

Some degree programs exceed 126 credits.

2017-2018 Archived Catalog Information

Bachelor of Science in Journalism

The Bachelor of Science in Journalism is available to Journalism and Public Relations majors only.

Please note that these requirements are for students matriculating in or after fall, 2017. Students matriculating prior to fall, 2017 must reference the [Pre-Fall 2017 Degree Requirements \(Archives\)](#).

- [Social Science](#)
- [Humanities/History](#)

Social Science: 2 courses, 8 credits

Economics:

- **EC-151 Economic & Human Geography**

Credits:

4.00

Description:

The study of how economic and human activity is distributed across space, the reasons for these spatial distributions, and the processes that change the spatial organization of economic activity over time. Topics include: maps, map projections, and geographic information systems; population geography; the organization and location of cities, towns and villages; transportation and communication policy; industrial location; the geography of world trade; and geographic features of economic development. The course takes a global perspective, and draws on cases and examples from all over the world. Cultural Diversity B

Type:

Asian Studies, Human Behavior & Societies

Government:

Choose one Government course from those listed below:

- **GVT-110 Introduction to American Democracy**

Credits:

4.00

Description:

An introduction to the American political system and constitutional framework. Focus will be on the interplay of various institutions (the Presidency, Congress and the Judiciary) in creating public policies. Contemporary public issues will be discussed, as will the role of political theory in shaping American democracy. Attention will be given to the role of the news media, public opinion, political ideology, political parties and interest groups in the American system.

Type:

Human Behavior & Societies

- **GVT-115 Evolution of the Global System**

Credits:

4.00

Description:

The goal of this course is to introduce the student to the main actors, social facts and processes that shaped the international system in the nineteenth and twentieth centuries. By analyzing the spread of industrialization, the race for colonies, the thrust of imperialism, and the rapid growth of nationalism, among other factors, this course explains the contradictory and simultaneous trends of unprecedented levels of prosperity and violence in Europe and beyond. While the course examines the role of the United States in the international system, particularly in light of its dominant role since the early twentieth century, it also emphasizes the developments taking place in other regions such as Asia, Africa and Latin America. This will allow students to understand the global arena as a space of complex interconnections involving varieties of forms of production, national political cultures and idiosyncratic traditions. This course sets the foundations for other courses in International Relations and Regional Studies

Humanities/History: 2 courses, 8 credits

Choose one History course from those listed below:

- **HST-101 History of Western Civilization I**

Credits:

4.00

Description:

Surveys European culture, politics, and society from antiquity to the seventeenth century. Topics include: the Greek, Judaic, and Roman heritage; the rise of Christianity; feudal society in the Middle Ages; Renaissance and Reformation; the Scientific Revolution; and the development of absolutist and constitutional governments.

Term:

Offered Fall Term

Type:

Classics Minor, Social & Intellectual HST

- **HST-102 History of Western Civilization II**

Credits:

4.00

Description:

Surveys European culture, politics, and society from the Scientific Revolution to the present. Topics include: the development of absolutist and constitutional governments; the Enlightenment; the French Revolution; Industrialization and urbanization; nationalism and imperialism; World War I, World War II, and the Cold War; the decline of Europe as a world power.

Term:

Offered Spring Term

Type:

Social & Intellectual HST

- **HST-121 World History I**

Credits:

4.00

Description:

Explores the major themes of human history to 1500. Topics include: hunter-gathering, the migration of humans across the globe, transitions to food production, and the development of complex societies based on agriculture. Major early Eurasian civilizations (China, India, the Middle East, and Europe) are examined (alongside their interactions with Inner Asia and the Arabian Peninsula). So too are Sub-Saharan Africa and the Americas.

Term:

Offered Fall Term

Type:

Social & Intellectual HST

• **HST-149 Empires & Globalization in World History I**

Credits:

4.00

Description:

This is the first of the two-course series of Empires and Globalization in World History. Course discusses the origins and development of globalization and capitalism from the perspective of economic history. Major issues include the formation of the medieval trade system, the development of finance and capitalism in the early modern ages, and economic changes prior to the Industrial Revolution. The specific topics may change every year due to new academic developments and publications. Cultural Diversity B

Term:

Offered Fall Term

Type:

Social & Intellectual HST

• **HST-150 Empires & Globalization in World History II**

Credits:

4.00

Description:

This is the second of the two-course series of Empires and Globalization in World History. Course discusses the origins and development of globalization and capitalism from the perspective of economic history. Major issues include state-making, wars, and the rivalry among early modern empires, economic development, the Industrial Revolution and the formation of the global trade system. The specific topics may change every year due to new academic developments and publications. Cultural Diversity B

Term:

Offered Spring Term

Type:

Social & Intellectual HST

• **HST-181 American Life to the Civil War Era**

Credits:

4.00

Description:

Surveys American history from European colonization up through the era of the Civil War. Topics include interactions with Native Americans; slavery; the American Revolution; the founding of a new republic; social and economic developments in the early nineteenth century; expansion; party politics; sectional conflict; the Civil War and Reconstruction.

Term:

Offered Fall Term

Type:

Social & Intellectual HST

• **HST-182 American Life Since the Civil War Era**

Credits:

4.00

Description:

Surveys American history from the 1870s to the present. Topics include the new industrial order; farmer and worker protests; progressivism; America's emergence as a world power; the two World Wars; the Great Depression; the New Deal; the Cold War; post-World War II American society; the Civil rights movement; Vietnam; dissent and counterculture in the 1960s; the women's movement; economic, social, and political changes in the late-twentieth century; America's relationship to a globalized world.

Term:

Offered Spring Term

- **HST-251 Modern East Asia**

Credits:

4.00

Description:

China, Japan, and Korea - East Asia's critical players - share many historical influences, but each has a distinct culture, and they competed with each other for much of the twentieth century, proud of their achievements but feeling threatened by their neighbors. Lectures interspersed with movies and documentaries to show how East Asia has developed in the past one-hundred-plus years.

Type:

Social & Intellectual HST

- **HST-260 Asian Peoples and Cultures**

Credits:

4.00

Description:

Introduces the peoples of Asia and the cultures they have created. Particular attention is paid to the lives of the common people in both historical and contemporary times. By understanding the richness and complexities of daily life in Asia, we will understand the continuities and discontinuities brought on by social, cultural, and economic changes. We will gain an appreciation of our fellow human beings in Asia.

Type:

Social & Intellectual HST

• HST-268 History of the Mediterranean

Credits:

4.00

Description:

Explores the history of the Mediterranean from the ancient times to the 20th century, with emphasis on the extraordinary interaction between the rich cultural, ethnic and religious backgrounds of the peoples of Europe, Middle East, and North Africa.

Term:

Occasional

Type:

Social & Intellectual HST

• HST-312 Renaissance and Reformation Europe

Credits:

4.00

Description:

Explores the intellectual and cultural developments of the Renaissance, and of the Protestant and Catholic Reformations in their social and political contexts. Topics include: Humanism, the rise of the city-state; art, and science; changes in family and social life; the causes of the Reformation (intellectual, social, technological); Calvinists, Lutherans, and Radical Reformers; Counter-Reformation and its political consequences; the Wars of Religion.

Social & Intellectual HST

- **HST-383 Boston: Heritage of a City**

Prerequisites:

One History course

Credits:

4.00

Description:

Boston from its foundation in 1630 to its development as a 21st century metropolis. From the Massachusetts Bay Colony, to cradle of the American Revolution, to a Yankee merchant capital, Brahmin cultural center, and immigrant melting pot. When offered in the hybrid format, this course will meet

at the regularly-scheduled time, but lectures and other course materials will be available on the course Blackboard site in case you cannot attend.

Term:

Offered Fall Term

Type:

Social & Intellectual HST

- **HST-394 Slavery in Film, Literature and History**

Credits:

4.00

Description:

A seminar on slavery in the United States as depicted in history, literature, and film. Topics may include resistance to slavery, honor, the attack on slavery, the cultural and social worlds of masters and enslaved people, the thought of masters and enslaved people, women and slavery, and/or slavery as an economic institution.

Type:

Social & Intellectual HST

- **HST-412 Europe in the 20th Century**

Credits:

4.00

Description:

Examines the political, economic, social and cultural developments of the principal European states since 1900. Topics include: World War I; the social and economic dislocations of the 1920s and 1930s; the rise of Fascism and National Socialism; World War II; the remains of colonialism; modernization and Americanization since the 1960s; the European Union; Europe after the Cold War; and throughout the twentieth century, the importance of class and class conflict, nationalism, and war in shaping the European experience.

Term:

Occasional

Type:

Social & Intellectual HST

- **HST-426 Politics and Culture in Europe 1919-1939**

Credits:

4.00

Description:

Explores the social and political development of European society between the two world wars, primarily through the literature, art, and films of the period. Topics include: the dissolution of pre-1914 middle class society; deviance and sexuality in the 1920s; the role of decadence in art and the Fascist response to deviance in life and art; women, workers, and the new technology; the rise of Fascism; political engagement and polarization throughout European society in the face of economic and social crisis.

Choose one course from those listed below:

American Studies:

- **AMST-111 Defining America and Americans**

Credits:

4.00

Description:

Examines artistic, social, and political imaginings of America and Americans. We will read works by American and foreign observers of the United States to ask how Americans define themselves and how others see them. Course assignments will introduce students to themes, perspectives, and methods in the field of American Studies.

Type:

Social & Intellectual HST

Art & Design:

- **ADG-224 History of Graphic Design**

Credits:

4.00

Description:

The first part of the course will focus on the history of graphic design from prehistoric times to the Industrial Revolution, including the origins of graphic communications in the ancient world, the development of the alphabet and early printing and typography. The second portion will concentrate on the period from the late 19th century to the present, and will include the Arts and Crafts Movement, the various-isms and their influence on modern art, the Bauhaus and International Style, and contemporary visual systems and image making.

Term:

Offered Fall Term

Asian Studies:

- **AS-100 Introduction to Asian Studies: Culture, People, Ideas**

Credits:

4.00

Description:

An interdisciplinary introduction to Asian Studies will touch upon the history, politics, economics, philosophy, geography, arts, and cultures of Asia. Sample topics include political economy, religious and cultural exchanges, international relations, Asian experience in America, and the role of Asia in the twenty-first century. Students will develop conceptual frameworks for exploring the subjects covered by the Asian Studies curriculum.

Term:

Offered Both Fall and Spring

Type:

Asian Studies, Social & Intellectual HST

Philosophy:

- **PHIL-210 History of Ancient & Medieval Philosophy**

Credits:

4.00

Description:

The study of philosophical thought from the period of the ancient Greek philosophers through the Medieval thinkers, including such philosophers as Socrates, Plato, Aristotle, Epicurus, Zeno, Parmenides, Pythagoras, Protagoras, Augustine, Aquinas, Anselm, and Abelard. An introductory course designed to equip the student with a well grounded understanding and appreciation of Philosophy. 1 term - 4 credits. Normally offered every year.

Term:

Offered Fall Term

Type:

Classics Minor, Social & Intellectual HST

- **PHIL-250 Social & Political Philosophy**

Credits:

4.00

Description:

An examination of persistent debates in political and social philosophy, such as the meaning of property and welfare, the tensions between liberty and equality, censorship and freedom of expression, the relation of church and state, the possibility of political education and civic virtue, legitimacy of the state and revolution, war and problems of end and means, addressing historic injustice, such as racism, genocide, or sexism, among other topics. The class will focus on no more than two such themes. Students will read both classic and contemporary writings to address both the historical roots and the contemporary treatment of these questions. 1 term - 4 credits. Normally offered every year.

Term:

Occasional

Social & Intellectual HST

Women's & Gender Studies:

- **WGS-111 Women, History, & Culture**

Credits:

4.00

Description:

Explores the roles and images of women in Western culture and the realities of women's everyday lives through literature, film, history, art, psychology, and recent feminist scholarship. Analyzes gender inequalities and the influence of gender on social structure, human behavior, and artistic expression. Topics include: the social construction of gender and identity; domestic prescriptions for women; women and work; intersections of gender, class, and race in American society; sexualities and identity; the politics of motherhood and reproductive rights; educating girls; negotiating male privilege and structural inequalities; representations of women in Western art and film; and women as artists and gendered models of creativity in art, film, fiction, and science.

Term:

Offered Both Fall and Spring

Type:

Social & Intellectual HST

- **WGS-115 Introduction to Gender Studies**

Credits:

4.00

Description:

Introduces the key topics and debates that have shaped the field of gender studies, including queer studies, masculinity studies, and women's studies. Through lecture and class discussion of texts from literature, film, history, psychology, and sociology, explores the pervasive influence of gender on the structure of society and our everyday experiences and the role that gender plays in our understanding of love, friendship, sexuality, and even violence. Topics include: biological arguments about gender and sexuality; the social construction of gender and identity; intersections of gender, race, class, and sexuality; masculinity and femininity; and theories of sexual difference and the construction of sexuality.

Term:

Occasional

Type:

Social & Intellectual HST

- **WGS-311 Engendering Entertainment: Feminism and Popular Culture**

Credits:

4.00

Description:

Investigates the complex intersections between feminism and popular culture through several different lenses: by exploring, how feminists make arguments about popular culture; by looking at the complexities of public femininity in today's popular culture, including figures such as Lady Gaga and Katy Perry and television shows like *The Bachelor* and *Grey's Anatomy*; by focusing on a variety of articulations of feminism within mass media, blogs, social media, and popular books such as Ariel Levy's *Female Chauvinist Pigs*, and Caitlin Moran's *How to Be a Woman*. Along the way we will ask questions about: what makes a work of art feminist; how modern media contributes to or distracts us from a variety of political debates in the realm of female equality and how can we, as individuals, use modern media to create and advance smart, feminist arguments.

Type:

Social & Intellectual HST

• WGS-315 Feminist Thought

Credits:

4.00

Description:

Investigates how feminists, both today and in history, have understood inequality and difference and looked for the best ways to address these issues and bring about social justice. Examines how feminist theorists help us to understand how gender and other social categories, such as race, class, sexuality, disability, age and nationality, are constructed within and through each other; and analyzes feminist engagements with liberalism, socialism, psychoanalysis, existentialism, post-colonialism, critical race theory, and queer theory, as well as consider anti-feminist arguments. Readings include classic critical texts by authors including Mary Wollstonecraft, Emma Goldman, Virginia Woolf, Chandra Mohanty, Gloria Anzaldua, and Judith Butler.

Type:

Social & Intellectual HST

• WGS-335 Queer Narratives

Credits:

4.00

Description:

Explores the stories that help us to understand communities, identities, and bodies that could be considered queer, and the ways that film, music, memoir and fiction have discussed queer as different, unusual, or other. Texts include the documentary, "Paris Is Burning", Frank Ocean's 2012 album, "Channel Orange", and Janet Mock's recent memoir, "Redefining Realness", as well as foundational queer theory from Judith Butler, Eve Kosofsky Sedgwick, and Lee Edelman, among others, to help build a framework for approaching and interpreting both fictional and non-fictional accounts of queer lives.

Seminar for Freshmen: 1 course, 4 credits

Students with 15+ transfer credits of college or university work are exempt.

Please note that not all courses are offered each semester. Students should contact their advisor to learn about current course offerings.

Choose one Seminar for Freshmen course from those listed below:

- **SF-101 Fixing the World- Energy and Water: The Science of Solutions**

Credits:

4.00

Description:

Two of the most daunting challenges the world faces (or will face) is how to provide for both its growing energy needs and potable drinking water. Regular news events include climate change, droughts, flooding, and petroleum struggles. Human nature often requires a severe crisis before it responds. This course will investigate the historical science driving the use of energy since the Industrial Revolution to convert energy resources into work, including the steam engine, the electric motor, and the internal combustion engine. It will also consider alternative energy options to fossil fuels, such as solar, wind, geothermal, and ocean power. Along the way we will consider the evidence for Global Warming and Climate Change. We will look into human nature, simple life styles, conspiracy theories, and the influence of those in power to shape human opinion. We will also consider how our water supply is provided and where it goes after being used. What options do developing countries or drought racked areas have to remedy their water needs? Although the course pursues a scientific understanding of these issues, the mathematics used will be gentle, and a larger emphasis will be placed on the intuitive appreciation of these concerns.

- **SF-116 Enlightened Insanity**

Credits:

4.00

Description:

Rain or shine, the great 18th century Enlightenment philosophers would meet at the famous cafes of Paris to discuss their ideas, and to observe and criticize society. From these informal debates emerged ideas that are at the core of our modern understanding of the nature of society, marginality, human nature, civil rights, the essence of creativity and genius. Come join us in the quest to understand, define, observe, and analyze the key ideas and concepts of these great thinkers, such as Rousseau, Diderot, and Voltaire, still so relevant in our time. We will read key works of these creative thinkers and philosophers. We will enrich our experience and understanding through the use of film, theatre performances, museum visits, as well as the occasional cafe debate.

- **SF-126 The Boston Theatre Scene: the Inside Experience**

Credits:

4.00

Description:

Using the current Boston theatre season as its syllabus, this writing- and analysis-intensive course will explore several plays in production at some of Boston's many professional theatres. We will study the script of four to five plays before attending performances of those works. Students will gain insights on the world of theatre through backstage tours and conversations with theatre professionals such as producers, directors, actors, designers, playwrights, and critics. Students must be available for evening (usually Wednesday) performances. A fee for student-rate tickets will be assessed.

- **SF-132 The Beatles: Here, There & Everywhere**

Credits:

4.00

Description:

This seminar will investigate the impact and legacy of the Beatles. The Fab Four deserve our scholarly attention as musical innovators and as cultural avatars of the 1960s, an era that still exerts influence today. We will examine the many ways in which the Beatles rocked the establishment and became defining figures in post-war youth culture. We will also discuss other media (the visual arts, film, fashion, style) and fields of study (mass media, marketing, recording technology, copyright law, English history) using the Beatles as our guides.

- **SF-151 Getting Over It: Dealing With the Aftermath of Group Conflict/Mass Atrocity**

Credits:

4.00

Description:

Once violent conflict between two groups has ended, what is the best way to transition back to normality coming to terms with the past or simply moving on? To answer these questions we will examine the debates surrounding war crime tribunals, truth commissions, lustration policies, and reparations in the second half of the 20th century. Case studies will include post-apartheid South Africa, post-WWII Germany, and the Israeli/Palestinian conflict. We will discuss the philosophical problems raised by each of these instruments, as well as on the political, legal, and practical difficulties their implementation present. Cultural Diversity B

- **SF-156 The Mask Behind the Face: Personas, Personalities, and Perception. Acting in /Out Life**

Credits:

4.00

Description:

The theatre has always been a metaphor for life. In modern times life has become theatre. This seminar will confront the idea of real life and the eroding boundary between performers and audience. Students will study the roots of the contemporary obsession with stars and stardom, a mania that began in the 18th century and flourished in the 19th century. We will look at performance studies, performers memoirs, plays, and films that dramatize this dilemma.

- **SF-173 Crime in American Society**

Credits:

4.00

Description:

Popular beliefs about crime are often inspired by the media and by specific criminological theories. These theories about and media images of crime will be examined in detail, including the hits and misses.

- **SF-174 Tragedy and Literature**

Credits:

4.00

Description:

This course will focus on classic works of ancient and modern literature that examine the human condition from a tragic perspective. We will concentrate on close readings from the following texts: Homer's Iliad, Sophocles' Antigone, The Bhagavad-Gita, Shakespeare's Othello, Chekhov's short stories, and Joyce's Dubliners.

Type:

Classics Minor

- **SF-175 War and Apocalypse in Science Fiction**

Credits:

4.00

- SF-178 Sacred Hoops & Sneaker Pimps: Understanding the American Hoop Dream

Credits:

4.00

Description:

This course is about the basketball hoop dream played out at the high school and college levels. We will study a wide variety of materials - novels, films, websites, reference works - to understand both the construction, and destruction, of the hoop dream in such diverse places as New York City, Seattle, rural Indiana, suburban Georgia, and the Wind River Reservation in Wyoming. Issues of race and culture will serve as guiding themes as we develop critical theory explaining why the hoop dream has persisted, and adapted, over time, to fit the needs of its believers and supporters.

- SF-182 Heroes, Antiheroes and Outsiders: Reading the Graphic Novel

Credits:

4.00

Description:

How is it that comics", a genre often viewed as entertainment for children and adolescents, has become one of the most exciting forms of narrative and visual art? To answer this question, this seminar will examine a range of graphic novels, from those that celebrate their origins in superhero comics, such as Alan Moore's Watchmen, to those that treat subjects not usually considered proper to the comics genre, such as Art Spiegelman's Maus, about the Holocaust, and Alison Bechdel's Fun Home, about the complexities of sexual identity. As we read these works, we will look at how the combination of words and still images makes the graphic novel a unique storytelling form, as well as how artists and writers push the envelope to create new styles and challenge our expectations. In addition to class discussions and writing assignments, we will take a field trip to the Museum of Fine Arts and create a collaborative group graphic novel step-by-step over the course of the semester (all abilities welcome).

- SF-183 Politics, Power and the Media

Credits:

4.00

Description:

Is there a relationship between accumulated political power and mass media representations? Is news content impacted by existing political power relations? It is the object of this course to critically analyze the role of the mass media within the framework of existing political power relations in the United States. In particular, the course will focus on the role the mass media plays in promoting and reinforcing dominant political practices and ideologies. The course will begin by exploring various theories of the press, notably its function in a democratic society, as well as the concepts of power and propaganda. We will continue with a series of case studies, complemented by secondary sources that highlight how media representations affect the contemporary distribution of political power in the US. Topics of discussion will include the current US war on terrorism, the ongoing health care debate, the public disavowal of big government", and the concept of a liberal media.

- **SF-189 American Gothic: Edgar Allan Poe, Flannery O'Connor and Annie Proulx**

Credits:

4.00

Description:

This literature seminar will study and compare the short stories of Edgar Allan Poe, Flannery O'Connor, and Annie Proulx. Beginning with Poe as the father of the short story genre in America and exploring his critical theory of the grotesque and arabesque", the class will examine the emergence of the gothic literary idiom as a classic American genre. Critical essays on the gothic aesthetic will be analyzed and film adaptations and documentaries will be viewed.

- **SF-190 Asia in America Fiction and Fact**

Credits:

4.00

Description:

With a focus on some selected ethnic groups from Asia, Asia in America studies the history and current status of Asian Americans in Boston and other parts of the country. We will examine the major reasons why these immigrants chose to leave their home country as well as their expectations and experiences here in America. We will also discuss the issues Asian immigrants have faced in this adopted home as well as the connections and conflicts among different ethnic groups or even within the same ethnic group due to political and socio-economic reasons. The course will include some level of community engagement, through Chinatown tour and service, which may enable us to have a direct contact with the Asian American population and reflect on what is being discussed in class. Through this course, we hope to gain a better understanding of the racial and cultural history of the country and arrive at a deep appreciation of the dynamics of cultural interactions in the twenty-first century. The course fulfills the SCGP requirement.

Type:

Global Engagement Experience

- **SF-191 Film Adaptation Film Adaptation**

Credits:

4.00

Description:

Why did they change the ending of the book? The novel is so much better! We will explore the concept and industry of film adaptation. Students will read novels and watch respective film adaptations to explore how the written word is adapted to the screen; both fiction and non-fiction works will be considered. Also, field trips to past film locations in Boston will be taken to explore why specific settings were chosen for respective situations. Additionally, students will create their own written adaptations of source materials, putting into practice the concepts studied in class.

- **SF-197 Sustainability, Energy, and Technology At Suffolk University**

Credits:

4.00

Description:

In this project and team-based course, students study a sustainability problem at Suffolk University and spend the semester developing proposals to address the problem. At the end of the course students will present their proposals to Suffolk University's sustainability committee, and will exhibit their websites and visual aids in the Donahue lobby to educate the Suffolk community about sustainability. If their proposals are well-researched and well-communicated, students can see their ideas actualized while they are still undergraduates.

- **SF-198 Music and the Brain**

Credits:

4.00

Description:

What accounts for the power of music to move us so profoundly? This course explores how our brains and music evolved together: What music can teach us about the brain, what the brain can teach us about music, and what both can teach us about ourselves.

- **SF-199 Unfolding the European Union**

Credits:

4.00

Description:

The EU is a powerful political, economic and cultural block that is meant to play a major role, together with the USA and China, in the creation of a new post-crisis world order. The seminar is intended to cover, at a basic but reachable level, the history, the politics, the culture and the functions of the EU in the beginning of the Twentieth Century. An extraordinary experiment of sociopolitical engineering, comparable to that of the United States of America, the EU has been changing the life of an increasing number of Europeans for over 50 years. No American student could afford to ignore the inner structure as well as the particular peculiarities of such inclusive supranational organization in today's world. Issues as institutional functioning, problems derived from individual state sovereignty, economic coordination to face common challenges, cultural integration, future enlargement, etc. are all indispensable to understand the way in which Europe is changing. But also much more day-to-day issues, such as travel mobility, education exchange programs, citizen's participation, supranational networks of people in the arts or in business, unified labor market, gender participation, human rights, consumer's protection, etc. are all in the process of developing a more robust and functional European Citizenship.

- **SF-1110 Decoding Boston: Signs and the City**

Credits:

4.00

Description:

This interdisciplinary seminar will explore the buildings, monuments, sites, and signs around Boston from the point of view of Visual and Culture Studies. In addition to providing a compelling introduction to the history, major landmarks, and culture of the city, the seminar is specifically intended to improve students' visual literacy: that is, their awareness of their visual environment and their ability to critically analyze the rhetoric of the spaces, buildings, and images with which they are surrounded.

Type:

Local Engagement Experience

- **SF-1122 The Ethics of Peace and War: From The Ancient World to the Present**

Credits:

4.00

Description:

This course will explore historical, ethical and political issues concerned with matters of peace and war. We will examine a variety of different texts: religious, historical, philosophical and literary, but the main emphasis will be philosophical justifications for war and philosophical visions of just peace, with an eye to contemporary questions in the War on Terror. To the extent that we use non-philosophical texts, this will be in the service of focusing the imagination on the philosophical issues and applying theoretical frameworks to historical events.

• SF-1127 The Vietnam and Iraq Wars: Polarized Perspectives

Credits:

4.00

Description:

This class will examine some of the many controversies surrounding the Vietnam and Iraq Wars, two conflicts that have been profoundly polarizing for the American people. There are widely divergent perspectives regarding the fundamental questions surrounding each war. Were the reasons for American involvement just? To what extent were the methods used by the United States military during each war just? To what extent did the media play an appropriate role before, during, and after each war? Did opposition to these wars serve primarily to benefit the enemies of the United States or did it constitute a form of patriotism and love of country? This interdisciplinary course will address these and other complex questions by examining the histories, literature, and films (both documentaries and dramatic) that have been produced in response to these wars.

• SF-1128 Sustainable Media

Credits:

4.00

Description:

Contrary to a popular perception that information, communication and entertainment technologies are clean, ecologically benign and paperless, the reality of an increasingly digital life is that our fascination with the next best thing in mobile phones, video game consoles, personal computers, digital cameras, tablets, etc., has devastating impacts on our environment. These media devices are manufactured using toxic ingredients in poisonous working condition, require an abundance of energy to operate, and create hazardous waste when disposed. Media technology companies and the advertising industry that markets their wares have successfully persuaded consumers to accept rapid obsolescence and to highly anticipate the latest upgrade. But some consumers, electronics manufacturers, policy makers, and environmental groups are working to change the culture of

consumption in favor of sustainable media practices that lessen the environmental footprint of the digital devices we use everyday. The purpose of this course is to understand the problem of unsustainable media, and the possible solutions for a sustainable media system.

- **SF-1129 Beacon Hill: Fact, Fiction, and Fantasy**

Credits:

4.00

Description:

The course will explore the physical geography, history, and image in literature, film, and pop culture of Suffolk University's Beacon Hill neighborhood. The purpose and objective of the course is to provide students with a deep knowledge, understanding, and appreciation of Beacon Hill through examination of written and visual sources, and feet-on and eyes-on experience of the public parts of the Hill.

Type:

Local Engagement Experience

- **SF-1133 Problems and Solutions in Early American History**

Credits:

4.00

Description:

This course will examine four major problems in the early American republic: forming a government; bridging vast distances on the American continent; slavery; international relations. We will explore the various proposed solutions to these problems. Some of the solutions worked well, others were more disastrous than the initial problem. We will read primary documents pertaining to these issues, and try to imagine how men and women considering the problems might have responded to them. What solutions could be proposed? What solutions would work? What were the political, economic, or social difficulties generated by the problem and by the proposed solutions? In considering the problems, we will also learn how to use the various archives close at hand: the Sawyer Library, the Boston Public Library, the Massachusetts Historical Society, and the Massachusetts State Archives. Students will also post their findings on a class blog, and present their work to one another in class.

- **SF-1134 The Meaning of Life**

Credits:

4.00

Description:

What do we live for? Which beliefs, values, and experiences sustain meaningful, fulfilling existence? Are we authors of our destinies or powerless pawns in an unfathomable cosmic game? Does death render all our efforts superfluous? This award-winning course offers a cross-cultural, interdisciplinary exploration of these questions through philosophical and religious texts, art, fiction, autobiography, and psychological studies. The course opens with the Old Testament's book of Ecclesiastes, followed by three units: 1) A Life Worth Living: Humanity's Ideals focuses on the ancient and modern visions of human flourishing; 2) Threats to Meaning: Humanity's Discontents, discusses the disillusionments leading to the loss of meaning; and 3) Recovery of Meaning: Crises and Hopes, explores the post-crisis possibilities of self-discovery and growth. Please visit <http://meaningoflife.cherkasova.org/>

- **SF-1135 Women Warriors: Stories of Captivity, Conversion, and Confession**

Credits:

4.00

Description:

Since the beginning of time, women have been doing battle to themselves, while men have gone to battle against others. Whether it is through converting to Christ, yielding to captors in order to survive, or carrying a baby, this course introduces students to the many ways in which, whatever battles they face, women are warriors; they survive. Utilizing an array of captivity, conversion, and confession narratives by women, and pairing them across the centuries, students will make connections and draw conclusions between early-and mid-19th-century-American and contemporary women. Students will connect, for example, the trials of the 17th-century Puritan captive, Mary Rowlandson, and contemporary hostage, Elizabeth Smart, to explore how women (no matter how different they seem) draw upon unique inner resources to survive.

- **SF-1141 Classical Civilizations: Pathways to Wisdom**

Credits:

4.00

Description:

How is it that the knowledge, intelligence, wisdom and values of the Greeks and Romans still educate and edify the world by providing venues towards leading fulfilling and dignified lives? The guiding principles of their respective civilizations rested upon eight pillars: - Humanism: It was recognized that humans have the potential to master their world and live life to the fullest. -The Pursuit of Excellence: To imagine the highest good and strive to attain it. - Self Knowledge: It is imperative to know oneself before seeking to know the world. - Rationalism: Always question, reason and discern truth from falsehood and never consider any matter superficially. - Restless Curiosity: Often the resolution of one issue leads to the revelations

of others mysteries and pursuits which compels further investigation. The wise individual makes this a lifelong endeavor. -Love of Freedom: As long as one brings no harm to others, one must be free to live and discover as much as possible. - Individualism: All are unique and, therefore, must recognize individual strengths and identity. -The Practice of Moderation: The prudence of avoiding extremes in personal and social conduct. In this course, students will read two (brief) texts on the Greek and Roman contributions to the world and then will proceed with specific readings which illuminate the eight principles above for achieving the good life.

- **SF-1143 In the First-Person: Storytelling in the 21st Century**

Credits:

4.00

Description:

This section of the Seminar for Freshmen will consider the forms, venues, and impacts of narrative nonfiction in contemporary culture. From the exploding popularity of personal essays in the digital age to the living, evolving essays we create on social media, we are constantly narrating and archiving our lives, shaping their content for specific audiences. In doing so, we shape what our experiences mean and represent. In order to analyze the power of narrative nonfiction, we will look at a variety of multimodal texts: essays, podcasts, Instagram and Twitter feeds, stand-up comedy, and storytelling slams, as well historical texts such as the essays of Michel de Montaigne and historical artifacts at the National Archives in Boston. We will also write our own narrative nonfiction, and adapt our first-person stories for listening and viewing audiences, such as the MassMouth story slam and podcasts like This American Life. Additionally, we will practice narrative nonfiction for professional audiences, using storytelling as a way to showcase personal strengths to employers, internship coordinators, and the like.

- **SF-1144 Native Americans: Walking in Two Worlds?**

Credits:

4.00

Description:

Native Americans are often described as walking in two worlds, as they attempt to navigate the process of maintaining their tribal identity and heritage while living in mainstream America. In recent years there has been a shift towards tradition and heritage, and a rejection of Western values and norms in both the US and Canada. In this course we will look at how Native people live in the US and Canada today, and examine the extent to which they are either trying to walk in two worlds or perhaps rejecting the two worlds model. To help us answer this question, we will read about reservation life, the Idle No More Movement, Indigenous History, and current events. We will also watch videos and explore indigenous culture.

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

- **SF-1146 Fido the Friendly Wolf: A Natural History of Dogs**

Credits:

4.00

Description:

This course explores the evolution of dogs from wolves and the ways in which dogs have adapted to their niche in human society. The ecology, behavior, genetics, and adaptations of dogs will be explored in relation to both their wolf ancestry and artificial selection by humans. The course includes 2 mandatory field trips to a wolf sanctuary and an animal shelter.

- **SF-1147 Global (In) Security: From ISIS to Ebola**

Credits:

4.00

Description:

This course reviews the principal features of global and national security as it is currently practiced by tracing the evolution of theories, policies and circumstances whereby current international security is developed. Students will evaluate the nature and origins of war, arms proliferation, military instability, terrorism, genocide, health threats and natural resources depletion.

- **SF-1148 Brave New Worlds**

Credits:

4.00

Description:

Explores themes of adventure, self-discovery, exile, and culture shock in classic and contemporary travel writing (including fiction, poetry, and non-fiction) as well as film. Students will experiment with creative writing of their own, develop theories of cosmopolitan world citizenship, travel through the city of Boston on field trips, and team up to learn about different countries in Suffolk's global network of study abroad programs.

• SF-1150 Religion in Contemporary Society

Credits:

4.00

Description:

This course is design to provide students with an overview of the social settings and cultural meanings of religion in the contemporary world. Topics that will be covered in reading and discussions include the rise of religious fundamentalism, religion and violence, women's and men's religious experiences, new religions, and portrayals of religion in popular films. In addition to the readings, students will observe and experience religious expressions and activities through fieldwork assignments. The emphasis on films and fieldwork reflects my belief that religion is made up of lived experiences of actual individuals and communities. In order to understand religion in contemporary society we will make every effort to see (in person or in film) a wide range of religious activities. The films we will see include some of the following: Leap of Faith, Devil's Playground, Kadosh, Women of Hizballah, Singing Stream, A Still Small Voice.

• SF-1151 Reproduction and Society

Credits:

4.00

Description:

This course explores relationships between reproductive health and rights both nationally and internationally. Many of our topics fit into two broad areas: conflicts over the control of childbearing (sterilization abuse, birth control, and abortion) and conflicts over who deserves to be a mother, especially when the mothers in question face social stigma and lack political power. Other topics include safe birth and maternal mortality, breastfeeding, infertility and reproductive technology. We also examine the politics of women's sexual and reproductive autonomy, including the policies that shape women's choices to prevent, achieve, abort, or carry to term a pregnancy. Throughout, we are guided by the following questions: Why is reproduction an important site through which to understand society? How do statuses such as race, class, gender, sexuality and ability influence people's reproductive possibilities? What is the role of the state in shaping these experiences? How have communities supported or resisted efforts at reproductive control? Why is reproductive justice central to these answers?

- **SF-1152 The Idea of America: Past, Present, Future**

Credits:

4.00

Description:

A systematic exploration of thinking of and about America, from the founding of the republic to American issues and traditions of thought that reflect upon the founding principles and the unfolding American experiment. The Declaration of Independence and the Constitution will be studied with an eye to their philosophical content and sources. The course will also examine works of philosophers and other thinkers who address conflicts over the meaning of founding principles in the course of the nation's history, from the struggle over slavery to America's contemporary role in the world. Because this course intends to apply theoretical understanding to real life, students will be expected to read contemporary journalism on a regular basis and assess the controversies of today in the light of the nation's philosophical and historical currents.

- **SF-1153 Law, Disease, and Public Health**

Credits:

4.00

Description:

This course is about public health law, which is the study of the legal powers and duties of the various systems of government in the United States (federal, state, and local) in collaboration with their partners (e.g., health care, business, the community, the media, and academe), to ensure the conditions for people to be healthy (to identify, prevent, and ameliorate risks to health in the population), and of the limitations on the power of these systems of government to constrain for the common good the autonomy, privacy, liberty, proprietary, and other legally protected interests of individuals. The prime objective of public health law is to pursue the highest possible level of physical and mental health in the population, consistent with the values of social justice. The course will focus especially on public health law in the area of epidemic disease. Case studies will be made of the Great Influenza of 1918 and the origins and spread of the Ebola virus, culminating in an examination of outbreaks of Ebola in the United States.

- **SF-1154 Introduction to Visual Studies**

Credits:

4.00

Description:

This seminar provides an introduction to Visual Studies, a relatively new interdisciplinary field that examines how images communicate and the roles that they play in society. Students will apply the concepts and techniques of Visual Studies to analyze sites and signs around Boston, such as advertisements, street signs, fashions, newspaper photographs, buildings, and public spaces. Class projects will increase students' awareness of their visual environment and their ability to critically analyze the visual rhetoric that surrounds us and is often used to manipulate us.

Type:

Local Engagement Experience

- **SF-1155 The Boston Olympics**

Credits:

4.00

Description:

This class will teach students about the key role that sporting events can play in building a city, building its brand and the politics surrounding the process of these things occurring. Topics may include: urban development in general and the transformation of the industrial to the post-industrial Boston; the way in which cities use events like the Olympics to build their place brands; the way an effort like the Olympics can be used to encourage large scale public investment in longer term infrastructure projects that otherwise might not be justifiable; and the way government works with interest and community groups to try to shape public policy.

- **SF-1156 Thinking About the Insanity Defense**

Credits:

4.00

Description:

This course examines sixteen case examples providing a clear and compelling introduction to one of the most important topics in the relation between public policy and law. This course addresses: the history of the insanity defense; the effects of different standards for determining insanity; the arguments for its retention; abolition, and revision; media and other responses to it; and the controversies around pre and post conviction commitment. The case examples illustrates a variety of outcomes and include individuals who were found not guilty by reason of insanity; found guilty even though mentally ill; and not charged because of mental illness.

- **SF-1157 Germany in Film and History, 1945-2015**

Credits:

4.00

Description:

Since 1945, Germany has had a lot of history to reckon with- and 21st century Germany history through film, newsreels and other archival footage, radio and TV shows, war memorials and museums built since 1945, novels, published diaries, and memoirs. We will also read recent historical scholarship to put these cultural texts in context. Topics include the representation, in film and other texts; of: post-war rebuilding, the German Economic Miracle; the building of the Berlin Wall; radical politics of the 1960s and 1970s; coming to terms since 1945 with Germany's Nazi past and the Holocaust; coming to terms since 1990 with the Stasi and East German past; Ostalgie (nostalgia in the 21st century for some aspects of East German socialism); the multicultural society that is Germany today, with new Turkish, Greek, Russian, Arab, and even Israeli communities.

• SF-1158 Global Climate Change

Credits:

4.00

Description:

Conversation about the weather is considered to be the universal icebreaker. Yesterday's sweltering heat, the storm predicted for this weekend, even long-term climate shifts find their way in our daily conversation. Today, however, such casual conversations have an edge to them, because we are realizing that humans play a role in determining the climate shift. In fact, understanding the human fingerprint in the Arctic tundra melting, or a devastating hurricane, has gone well-beyond small talk to become one of the most important challenges our society faces today, and on that is wedded to geopolitics. To meaningfully participate in any dialogue that addresses this challenge people have to be aware of certain key ideas of Physics and Planetary Science. The aim of this course is to provide you with some of the essential facts and pieces of science underlying such questions. This course will enable you to grasp many of the issues that dominate today's political discourse and to develop an informed opinion (your, not our!) for which you can rationally argue.

• SF-1160 Individuals and Society in the Zombie Apocalypse

Prerequisites:

CAS Freshmen Only

Credits:

4.00

Description:

The Walking Dead tells viewers that life in the zombie apocalypse requires people to fight the dead, fear the living. Sociologists want to know why we should fear the living. How do individuals come together and try to recreate society for themselves: either to build community or fight other groups? What role do morals and values have in a society? How does all of this determine life, death, and the struggles people must face? Questions like these will give our class a new view of The Walking Dead and can help us to learn more about the society that we live in where so far the dead have remained in the ground.

- **SF-1162 Space Missions: From Moon to Mars and Beyond**

Credits:

4.00

Description:

It is hard to believe that only 60 years ago, our only close-up view of a planetary body was that of Earth. We are truly living in the Golden Age of Space Exploration, when a new mission every few years brings us spectacular images from either a neighbor in the solar system or galaxies at the edge of the universe. This course will describe the dozen space missions that changed our view of the universe, ranging from our solar system to the most distant galaxies.

- **SF-1163 Spellbound! Witches, Wizards and Spirits In American Literature**

Credits:

4.00

- **SF-1164 Reinventing Europe: Beyond Brexit and Secular Stagnation**

Credits:

4.00

Description:

While newspaper headlines focus on the multiple problems Europe is facing today, the evolving adaptation of European nation states and the integration process receive less attention. Brexit and economic crises seem to be synonymous of Europe today, but facts such as the European Union accepting five new members in the coming five years or Europe being the most advanced environmental actor or the main international provider of official aid are often ignored by public opinion. This Seminar for Freshman examines the dynamic evolution of the integration process in Europe in the

context of globalization. Three sections articulate the main debates and tensions in the interplay between national and supranational institutions and policies. The first part analyzes how eight European countries have forged their national preferences to delineate their level of immersion in the integration process; it later proceeds with the examination of the main historical events in the history of the integration process. The second part explores the functioning of the EU institutions in order to grasp the essence of the complex policy-making in the Europe of 28 members. The third and final section presents the analysis of the main areas of the EU policy making such as agriculture, monetary and economic issues, among others, and observes the main developments in the area of EU external relations.

- **SF-1165 History of Boston**

Credits:

4.00

- **SF-1166 Cinema-Monde: Global Challenges on Film**

Credits:

4.00

Description:

This course focuses on French-language films - with subtitles! - that address pressing social issues of the 20th and 21st centuries, such as hunger, female genital mutilation, immigration, racism, economic inequality, genocide, gender, sexuality, colonialism and post-colonialism.

- **SF-1167 Fantasy Fiction: Imaginary Worlds**

Credits:

4.00

- **SF-1168 The Real Thing: the Pursuit and Problems Of Authenticity**

Credits:

4.00

Description:

This course will focus on the concept of authenticity in American culture, from its origins in the early 19th century to the present. When the advertising gurus of Coca-Cola branded it as "The Real Thing," they were exploiting something powerful: the idea of something real, stripped of any falsity or illusion. Humans have always desired to know the world and others as they really are," but this desire is particularly strong in the modern world: witness the eagerness to discover one's true self," cut through the B.S., obtain the genuine article, and live authentically. In this course we will interrogate this pursuit of the Real Thing. In various ways, the texts we study both embrace authenticity as an ideal and also question its goodness, usefulness, or even its very possibility. We will thus confront a number of interrelated questions: Where does this desire for authenticity come from? What counts as authenticity," in life and in art? Is authenticity really a virtue to live by? How does it shape artistic and literary expression? Is there even such a thing as the real you This course will be divided into three units. In the first unit, "Counterfeiters and Self-Made Men," we will study how a commitment to authenticity arises in antebellum American literature and culture during a time of rapid national expansion and invention. Readings will include texts by Henry David Thoreau, Ralph Waldo Emerson, Herman Melville, and P.T. Barnum. In the second unit, "Authenticity and Contamination," we will consider two major ways in which authenticity becomes idealized around the turn of the 20th century: as artistic ideal set against fears of mass cultural production, and as a cultural ideal set against fears of racial and cultural mixing. Readings will include texts by Ernest Hemingway, Nella Larsen, Jean Toomer, and William Carlos Williams. In Unit Three, "Buying and Selling Authenticity," we will examine how authenticity becomes commodified (

- **SF-1169 Immortality: Real and Imagined**

Credits:

4.00

Description:

Most of the world's religious traditions have as a part of their doctrines some notion of immortality, rendered both in scriptures as well as iconographically. What precisely is entailed by immortality and why does it constitute such a significant element of so many religious traditions? What can we learn about immortality by investigating various conceptions of the afterlife? Is immortality truly a desirable thing? These questions among others will be examined from the perspectives of philosophy, religion, psychology, anthropology, and biology. Besides being cross-disciplinary, the course will be multi-media in nature. In addition to reading philosophical and religious texts concerning the nature of immortality, students will study various accounts of immortality and the afterlife, examine how the afterlife has been dealt with in (visual) art, literature, and film, and investigate current research into life prolongation (biomedical gerontology).

- **SF-1170 From Philia to Facebook: the Meaning of Friendship**

Credits:

4.00

Description:

The thematic focus of this seminar will be friendship. Friendship is one of the most important of human relationships; one that every student in this seminar has already participated in for many years. It shapes who we are and helps determine who we may become. And while it is a universal phenomenon, it has been practiced quite differently at various times and places in human history. And while we all have an intimate, personal and practical knowledge of friendship through our own experiences, sometimes things that are so close and so obvious to us can be hard to see. Over the course of the semester we will inquire into friendship from many different angles, trying to gain both a broader and a deeper understanding than our own individual experience allows. We will look at friendship first through the lens of philosophy, particularly through the foundational text of Aristotle, *The Nicomachean Ethics*. We will look at other views of friendship from the ancient world, starting in the past to help us see that friendship has not always been thought of the way we think of it now. After this initial foundation is laid, we will examine other writers and thinkers and take up additional topics like friendship in different cultures, friendship and gender, friendship in and through the arts and include an examination of friendship through the lenses of many different academic disciplines to see how other systematic thinkers conceive of friendship. All along we will be comparing and contrasting with our own personal experiences and considering what modern technology, such as social networking sites, has done to influence friendship, in the way we practice it and the way we conceive it. It is the aim of this class that students not just study different academic points of view, but that they take up the questions and challenges that these thinkers present to them and fully engage with them on a meaningful personal level.

- **SF-1171 Living on and Beyond the Hyphen/Latino Writers in the USA**

Credits:

4.00

Description:

Hyphenated-Americans of Latino origin come from many places and backgrounds. Often perceived as a divide, an either/or that separates and distinguishes one ethnic group from another, the hyphen can also be viewed as a link that connects, integrates and facilitates the formation of new cultural spaces. Through films and written narratives by and about U.S.A. Latino(a)(x)-Americans, students will examine how individuals who live on the threshold between two languages and cultures embrace the challenge of preserving their own identity and moving beyond stereotypes. Each of the Latino/a/x authors that we will read in this course will describe his/her own experiences living in the U.S.A. By examining their views through our own filtered lens we shall try to answer questions like the following: 1. What role does language have in our definition/understanding of cultural identity? 2. How do individuals move beyond the hyphen and stop seeing themselves as hybrids? 3. How can an individual who does not belong to a marginalized group (i.e. one considered less powerful and secondary) understand and empathize with those who do? 4. How does globalization affect the dichotomies that arise in bi-cultural and multi-cultural communities?

- **SF-1172 The United States Mexican Border**

Credits:

4.00

Description:

One hundred and sixty nine years have passed since the Treaty of Guadalupe Hidalgo was signed. It is only fitting to analyze the profound changes that the gain/loss of these territories caused for the citizens of both sides of the border. This course will explore the literature, culture, and history of the United States-Mexican Border and the most pressing problems pertaining to the region. Emphasis will be on contemporary border theater and film. The works of Salcedo, Galindo, Lopez and others will be studied as well as contemporary films and documentaries such as *Alambrista*, *Senorita Extraviada*, *The Gatekeeper*, *Sin Nombre*, *Wetback: the Undocumented Documentary*, *Victoria para Chino*, *Which Way Home*, and much more. There are no prerequisites for this course. Though the course is conducted in English, parallel readings in Spanish will be made available to those who wish to read and/or compare the original texts.

Students in the CAS Honors Program should choose one Seminar for Freshmen course from those listed below:

- **SF-H101 Fixing the World- Energy and Water: The Science of Solutions**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

Two of the most daunting challenges the world faces (or will face) is how to provide for both its growing energy needs and potable drinking water. Regular news events include climate change, droughts, flooding, and petroleum struggles. Human nature often requires a severe crisis before it responds. This course will investigate the historical science driving the use of energy since the Industrial Revolution to convert energy resources into work, including the steam engine, the electric motor, and the internal combustion engine. It will also consider alternative energy options to fossil fuels, such as solar, wind, geothermal, and ocean power. Along the way we will consider the evidence for Global Warming and Climate Change. We will look into human nature, simple life styles, conspiracy theories, and the influence of those in power to shape human opinion. We will also consider how our water supply is provided and where it goes after being used. What options do developing countries or drought racked areas have to remedy their water needs? Although the course pursues a scientific understanding of these issues, the mathematics used will be gentle, and a larger emphasis will be placed on the intuitive appreciation of these concerns.

- **SF-H116 Enlightened Insanity**

Prerequisites:

CAS Honors students only.

Credits:

4.00

Description:

Rain or shine, the great 18th century Enlightenment philosophers would meet at the famous cafes of Paris to discuss their ideas, and to observe and criticize society. From these informal debates emerged ideas that are at the core of our modern understanding of the nature of society, marginality, human nature, civil rights, the essence of creativity and genius. Come join us in the quest to understand, define, observe, and analyze the key ideas and concepts of these great thinkers, such as Rousseau, Diderot, and Voltaire, still so relevant in our time. We will read key works of these creative thinkers and philosophers. We will enrich our experience and understanding through the use of film, theatre performances, museum visits, as well as the occasional cafe debate.

Type:

Honors

- **SF-H126 The Boston Theatre Scene: The Inside Experience**

Credits:

4.00

Description:

Using the current Boston theatre season as its syllabus, this writing- and analysis-intensive course will explore several plays in production at some of Boston's many professional theatres. We will study the script of four to five plays before attending performances of those works. Students will gain insights on the world of theatre through backstage tours and conversations with theatre professionals such as producers, directors, actors, designers, playwrights, and critics. Students must be available for evening (usually Wednesday) performances. A fee for student-rate tickets will be assessed.

Type:

Honors

- **SF-H178 Sacred Hoops & Sneaker Pimps: Understanding the American Hoop Dream**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

This course is about the basketball hoop dream played out at the high school and college levels. We will study a wide variety of materials - novels, films, websites, reference works - to understand both the construction, and destruction, of the hoop dream in such diverse places as New York City, Seattle, rural Indiana, suburban Georgia, and the Wind River Reservation in Wyoming. Issues of race and culture will serve as guiding themes as we develop critical theory explaining why the hoop dream has persisted, and adapted, over time, to fit the needs of its believers and supporters.

Type:

Honors

- **SF-H182 Heroes, Antiheroes and Outsiders: Reading the Graphic Novel**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

How is it that comics", a genre often viewed as entertainment for children and adolescents, has become one of the most exciting forms of narrative and visual art? To answer this question, this seminar will examine a range of graphic novels, from those that celebrate their origins in superhero comics, such as Alan Moore's Watchmen, to those that treat subjects not usually considered proper to the comics genre, such as Art Spiegelman's Maus, about the Holocaust, and Alison Bechdel's Fun Home, about the complexities of sexual identity. As we read these works, we will look at how the combination of words and still images makes the graphic novel a unique storytelling form, as well as how artists and writers push the envelope to create new styles and challenge our expectations. In addition to class discussions and writing assignments, we will take a field trip to the Museum of Fine Arts and create a collaborative group graphic novel step-by-step over the course of the semester (all abilities welcome).

Type:

Honors

- **SF-H197 Sustainability, Energy, and Technology At Suffolk University**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

In this project and team-based course, students study a sustainability problem at Suffolk University and spend the semester developing proposals to address the problem. At the end of the course students will present their proposals to Suffolk University's sustainability committee, and will exhibit their websites and visual aids in the Donahue lobby to educate the Suffolk community about sustainability. If their proposals are well-researched and well-communicated, students can see their ideas actualized while they are still undergraduates.

- **SF-H1134 The Meaning of Life**

Prerequisites:

CAS honors students only.

Credits:

4.00

Description:

What do we live for? Which beliefs, values, and experiences sustain meaningful, fulfilling existence? Are we authors of our destinies or powerless pawns in an unfathomable cosmic game? Does death render all our efforts superfluous? This award-winning course offers a cross-cultural, interdisciplinary exploration of these questions through philosophical and religious texts, art, fiction, autobiography, and psychological studies. The course opens with the Old Testament's book of Ecclesiastes, followed by three units: 1) A Life Worth Living: Humanity's Ideals focuses on the ancient and modern visions of human flourishing; 2) Threats to Meaning: Humanity's Discontents, discusses the disillusionments leading to the loss of meaning; and 3) Recovery of Meaning: Crises and Hopes, explores the post-crisis possibilities of self-discovery and growth. Please visit <http://meaningoflife.cherkasova.org/>

Type:

Honors

- **SF-H1135 Women Warriors: Stories of Captivity, Conversion, and Confession**

Credits:

4.00

Description:

Since the beginning of time, women have been doing battle to themselves, while men have gone to battle against others. Whether it is through converting to Christ, yielding to captors in order to survive, or carrying a baby, this course introduces students to the many ways in which, whatever battles they face, women are warriors; they survive. Utilizing an array of captivity, conversion, and confession narratives by women, and pairing them across the centuries, students will make connections and draw conclusions between early-and mid-19th-century-American and contemporary women. Students will connect, for example, the trials of the 17th-century Puritan captive, Mary Rowlandson, and contemporary hostage, Elizabeth Smart, to explore how women (no matter how different they seem) draw upon unique inner resources to survive.

Type:

Honors

- **SF-H1146 Fido the Friendly Wolf: A Natural History of Dogs**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

This course explores the evolution of dogs from wolves and the ways in which dogs have adapted to their niche in human society. The ecology, behavior, genetics, and adaptations of dogs will be explored in relation to both their wolf ancestry and artificial selection by humans. The course includes 2 mandatory field trips to a wolf sanctuary and an animal shelter.

Type:

Honors

- **SF-H1148 Brave New Worlds**

Prerequisites:

Restricted to CAS Honors students

Credits:

4.00

Description:

Explores themes of adventure, self-discovery, exile, and culture shock in classic and contemporary travel writing (including fiction, poetry, and non-fiction) as well as film. Students will experiment with creative writing of their own, develop theories of cosmopolitan world citizenship, travel through the city of Boston on field trips, and team up to learn about different countries in Suffolk's global network of study abroad programs.

Type:

Honors

- **SF-H1152 The Idea of America: Past, Present, Future**

Credits:

4.00

Description:

A systematic exploration of thinking of and about America, from the founding of the republic to American issues and traditions of thought that reflect upon the founding principles and the unfolding American experiment. The Declaration of Independence and the Constitution will be studied with an eye to their philosophical content and sources. The course will also examine works of philosophers and other thinkers who address conflicts over the meaning of founding principles in the course of the nation's history, from the struggle over slavery to America's contemporary role in the world. Because this course intends to apply theoretical understanding to real life, students will be expected to read contemporary journalism on a regular basis and assess the controversies of today in the light of the nation's philosophical and historical currents.

Type:

Honors

- **SF-H1161 The Playwright and the Stage**

Prerequisites:

CAS Honors students only

Credits:

4.00

Description:

This writing and script analysis intensive course will explore plays across a range periods and styles. The scripts of five plays will be studied and we will attend performances of two of those works at professional theatres in Boston. Other activities will range from a backstage tour to conversations with theatre professionals such as producers, directors, actors, designers, playwrights and critics, in order to lift the script off the page and provide a living experience of theatre. Requires students to be available for evening (usually Wednesday) performances. A fee for tickets at student rates will be assessed.

Type:

Honors

Major Requirements Minimum: 8 courses, 32 credits

Complementary Major Requirements, Minor Requirements, and Free Electives: credit varies

Minimum Total Credits Required for Degree Conferral: 126 credits

Note:

Core Requirements may also count toward major if taken at appropriate level.

Some degree programs exceed 126 credits.

2017-2018 Archived Catalog Information

Bachelor of Science Degree

Please note that these requirements are for students matriculating in or after fall, 2017. Students matriculating prior to fall, 2017 must reference the [Pre-Fall 2017 Degree Requirements \(Archives\)](#).

All BS degree programs require the successful completion of the following courses:

Core Requirements: 15 courses, 54-56 credits

- [First-Year Experience](#)
- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Studies in Literature](#)
- [Ethical & Philosophical Inquiry](#)
- [Human Behavior and Societies](#)
- [Social and Intellectual History](#)
- [Visual & Performing Arts Theory and History](#)
- [Quantitative Analysis](#)

First-Year Writing: 2 courses, 8 credits

- **WRI-101 First Year Writing I**

Credits:

4.00

Description:

Study and practice of the writing process and revision in terms of expository writing modes for an academic audience.

- **WRI-102 First Year Writing II**

Prerequisites:

WRI-101 or ENG-099 with at least a B and ENG-P099 with a P or WRI-H103

Credits:

4.00

Description:

Study and practice of argumentative and research writing through further work with writing process and revision and the critical reading of a variety of texts.

A student may be assigned to other writing courses or may be invited to take WRI-H103. Students required to complete ENG-099 may be allowed to waive WRI-101 with a grade of “B” or better and the approval of the English department. Students who are invited to complete WRI-H103 and earn a “B” or better satisfy the two Writing Requirements. Waiving a course does not earn credits.

- **WRI-H103 Advanced First Year Writing**

Prerequisites:

By Invitation Only.

Credits:

4.00

Description:

This course is by invitation only and reserved for incoming Suffolk students with high admission scores. Advanced study and practice of writing process, revision, and research, based on close readings of a variety of texts. Fall semester only.

Type:

Honors

Major Requirements Minimum: 8 courses, 32 credits

Complementary Major Requirements, Minor Requirements, and Free Electives: credit varies

Minimum Total Credits Required for Degree Conferral: 126 credits

Note:

Core Requirements may also count toward major if taken at appropriate level.

Some degree programs exceed 126 credits.

Creativity & Innovation: 1 course, 3 credits

Choose one Creativity & Innovation course from those listed below:

- **ADF-S171 CI: Integrated Studio 1**

Prerequisites:

Non-majors interesting in taking art and design courses for elective credit should refer to offerings under the ART course listings.

Credits:

3.00

Description:

This cross-disciplinary course will integrate the ideas and practices of two-dimensional design, color and drawing emphasis will be placed on understanding the creative process, exploring concepts and developing research skills. Students will undertake individual and collaborative projects in three spaces; the studio classroom, the digital world and the city at large.

Type:

Creativity and Innovation, Arts Admin Minor Elective

- **ADF-S172 CI: Integrated Studio II**

Prerequisites:

ADF S101; Non-majors interesting in taking art and design courses for elective credit should refer to offerings under the ART course listings.

Credits:

3.00

Description:

This course builds on the Integrated Studio 1 experience: synthesizing fundamental visual ideas. IS 2 investigates the construction, documentation, and transformation of volumetric form, environmental space, and time. Projects will explore narrative strategies and the creation of immersive experiences. Students will develop critical and analytical skills while employing a range of traditional and digital media-including video/sound capture and editing-as they explore the creative boundaries of the classroom studio, the city of Boston, and virtual space.

Type:

Creativity and Innovation

- **CI-000 CI Place Holder**

Credits:

0.00

Description:

Place holder for rooming purposes.

- **CI-101 Process and Epiphany**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Despite its mystical connotations, creative epiphany is the result of a long engagement with the creative process that results in a surprising and unpredictable understanding of a concept or the solution to a problem. In the way that the discoveries of science are guided by the scientific method, the path to creative innovation is through a directed creative process. All creative innovators follow such a directed creative process, whether they are industrial designers or fine artists, performers or inventors, architects or entrepreneurs. This course explores both historical examples of individuals whose creative innovation changed the world, as well as hands-on collaborative, practical problem solving employing the creative process.

Type:

Creativity and Innovation

- **CI-H101 Honors- Process and Epiphany**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Creativity and Innovation, Honors

• CI-102 The End of Global Poverty

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course is designed to demystify the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking. More than one-third of our global population lives in poverty, earning less than two dollars a day. Governments, businesses, social enterprises, and charitable organizations have tried to solve the global poverty issue with mixed results. What is the solution? Is entrepreneurship the solution, part of the solution, or has no impact whatsoever? In this course, you will gain an understanding of the power of entrepreneurship (in the context of creativity and innovation), the definition and depth of global poverty (in the context of constraints, such as human, financial and physical resources embedded in local, regional, national and global cultures), and successes and failures of past initiatives to reduce poverty. This is not a course about politics or business, but rather finding a solution to a problem that has eluded mankind since the beginning of time.

Type:

Creativity and Innovation

• CI-H102 The End of Global Poverty

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office. Honors students only

Type:

Creativity and Innovation, Honors

• CI-103 Making Inventions: Sticking Your Neck Out

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course examines cutting edge technologies, the science behind them, and their practical application and follow-up success or failure. It also provides the students a chance to consider the relevance of identified needed inventions from the 1950s, and whether those projections were correct. The history behind some remarkable inventions will be presented. Finally, working in small teams, students will brainstorm to identify something useful to invent and determine several approaches to implementing it.

Type:

Creativity and Innovation

- **CI-104 Historic Mentors: Biographies of the Creative and Innovative**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course introduces students to creative and innovative practices as a disciplined approach to problem-solving. Students are presented with diverse individuals and environments, thoughts and actions, challenges and opportunities, approaches and alternatives, successes and failures, and ethical behavior--all within the context of historical biographies of inventors, entrepreneurs, artists, musicians, writers, politicians, leaders- nationally and globally. Mentoring is becoming a lost art form. However, it is crucial for passing down the best of our civilization. This course offers a vicarious mentoring that enables students to critically learn from and assess the experience of others in a vast array of contexts. Thus, students are presented with a cross-section of role models for creative, innovative and ethical success.

Type:

Creativity and Innovation

- **CI-106 Failing Successfully**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course is designed to demystify the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking. Did you know Netscape was the internet browser? What about MySpace, arguably the Facebook of the last decade? What led Apple from being innovative pioneers of the 70's to the verge of extinction in the 80's to the technological giant they are today? Technologies come and go, but what leads to organizations lasting more than 100 years such as IBM, General Electric, etc.? What role does failure play in successful innovation, decision-making, and business viability? In this course, you will learn about innovation that may have been successful and well-executed. You will also learn about innovation that was a viable business opportunity, but poorly executed: one phase of failure. In addition, you will learn about innovation that had no real market viability, but was launched anyway: another phase of failure. Can failure lead to success? If so, how?

Type:

Creativity and Innovation

• CI-H106 Failing Successfully

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Type:

Creativity and Innovation, Honors

• CI-107 Going Up: Skyscraper Design in Emerging Economies

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The human population is expected to be between 8.5 and 9 billion persons by the mid-21st century. The majority of those individuals will be living in urban communities. With large populations, high real estate costs, and limited land areas, the only way to construct in urban environments is to go up! In this course, students will have an opportunity to look at traditional and novel skyscraper designs, to consider the cultural and economic significance of such structures, and to use their imagination to develop a conceptual design of a skyscraper.

Type:

Creativity and Innovation

• CI-108 Designing the Next Best Thing

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Demystifies the creative process by introducing students to creative practice as a disciplined approach to problem-solving and innovation. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in original way, embrace ambiguity and support divergent thinking and risk taking.

Term:

Offered Both Fall and Spring

Type:

Creativity and Innovation

- **CI-109 Virtual Globe Trekking: an Alternate View of the World**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will examine creativity and innovation through the lens of place. Modern geography is an all-encompassing discipline that seeks to understand the earth and all of its human and natural complexities - not merely where objects are, but how they have changed and come to be. The world is filled with ideas and perspectives. By changing your location, new perspectives emerge. This course will focus on the creative process to understand that each person creates in their own way. The students will test many methods to draw forth creative thought and seek to identify their own best method for calling on their own inner genius. Often this will involve failure and mixed results, yet this is where the students will learn their strengths and weaknesses.

Type:

Creativity and Innovation

- **CI-110 The Entrepreneur's Cocktail**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

How do you and your story drive business? This course takes an innovative look at human creativity and entrepreneurship. As an entrepreneur needs perseverance and high motivation, we will explore the importance of values, risk taking, problem solving, and the discovery of the market opportunities. In order for you to be creative and essentially create successful ventures, you will discover the nuances between the three factors and explore them further through interactive discussion and debate as well as collaborative group work. You will be encouraged to think in non-conforming ways and apply new concepts and develop your own personal operating principles.

Type:

Creativity and Innovation

• CI-111 The Future of Boston

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course introduces students to creative and innovative thinking based in the field of communication. Students will work in teams to wrestle with the challenges Boston will face in the future and propose feasible strategies to meet them.

Type:

Creativity and Innovation

• CI-112 Creating Problems: a New Solution for Sustainability

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

As the majority of the world population now lives in cities, for the first time in human history, issues of urban sustainability have become more complex and more important than ever before. Presented with case studies of urban efforts to gain a sustainability foothold, students will utilize ideation, critical thinking, and strategic decision making to both identify root problems and to present solutions. This course will lean heavily on ideation processes, teamwork, and logical methods of analysis to pursue actionable solutions for significant problems. The methods of problem identification and solution analysis learned in this class will be readily adaptable to many complex problems, helping the students to make informed and decisive determinations in their careers.

Type:

Creativity and Innovation

• CI-113 Revising Reality

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Reality and perception have been debated and discussed for millennia. Humans see and experience their world in different ways. How do humans determine what is true and good and what advancements are necessary? In this course, students will creatively explore these big questions and revisit knowledge using new and sometimes divergent perspectives. Students will participate in dirty and courageous learning by crafting products,

creating visual projects, and coming into original thought via trial and error. Students will also develop their analytical and critical thinking skills, while learning to communicate effectively and honestly.

Type:

Creativity and Innovation

• CI-114 Creating the Dream Team

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Every successful venture today is based on effective teamwork. Unlike a typical lecture format, Creating the Dream Team is a course that utilizes experiential group learning to provide students with pivotal team-building skills. These essential skills are vital for everyone's future success in the business world. As team players, students are challenged to think creatively. A collaborative problem-solving process is used to analyze real life business situations. Teamwork involves research, data collection and information analysis to develop creative solutions to typical business problems. Teams will utilize multi-media tools to present their innovative ideas. Classmates will provide peer feedback and review. Through iterations, all students will assume roles as project leaders, keynote speakers and collaborators on a series of Team Challenges. Upon successful completion of this course, all students will have formed working dream teams. As reinforcement and final evaluation, Dream Teams are required to create a multi-media Capstone Event as a course performance measure. This capstone presentation will showcase all of their newly acquired dream team-player skills.

Type:

Creativity and Innovation

• CI-115 Poetry Out Loud

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Students will develop a deep understanding of two seminal books of 20th century poetry and other key 20th century poems as they plan and execute small-group, end of semester reading performances. Students will write creative response poems to increase their understanding of the texts, and through cooperative decision making strategize effective ways to present their own poems and poems by Bishop or Frost. The class format will foster direct spoken engagement with matters of sound, rhythm, tone, and meaning. Final reading aloud performances will be recorded and added to the Suffolk University Poetry Center Archive.

Type:

Creativity and Innovation

• CI-117 Writing for Stage and Screen

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will engage students in the process of script writing. Working in groups of four or five they will craft adaptations of stories, create original scenes, or review sketches. By the end of the semester they will produce a complete script. Each alternating week, one group will serve as the executive committee that will approve the final draft of the script of the week. There will be exams based on the textual study of collaborative and adaptation techniques.

Type:

Creativity and Innovation

• CI-119 Theatre at Work

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Theatre at Work is an introduction to creative practice using live performance as a problem solving tool in an educational environment. Specifically, students will create a performance piece in response to an issue they have uncovered in collaboration with select groups of students in a host Boston Public School. There will be a special focus on normalizing risk-taking and the learning that comes from false starts and failed ideas. Students will be responsible for creating every aspect of their performance testing its feasibility on a limited budget, ensuring that the content meets established criteria, and successfully implementing and evaluating their success both with their peers and their audience.

Type:

Creativity and Innovation, Local Engagement Experience

• CI-H119 Theatre at Work

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office. Honors students only.

Credits:

3.00

Type:

- **CI-121 Catastrophe Management: From 9/11 to the Boston Marathon Bombings**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will introduce students to the exciting world of emergency management from the perspective of scientists who are often utilized as experts during both small scale adverse events and large scale catastrophes. Students will actively and creatively explore the psychological, economic, and medical dimensions of these events and participate in role play in the classroom and site visits. By the end of the course, students will have a keen appreciation of emergency planning and management on the local and national levels.

Type:

Creativity and Innovation

- **CI-123 Comics & Co.**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Using visual narrative as the means of exploration, students will be led through a series of exercises that challenge their assumptions, broaden their perspectives, and excite their imagination. The relationship between critical, creative and inventive thinking will be the basis for individual and collaborative projects.

Type:

Creativity and Innovation

- **CI-125 Boston's Creative History in Perspective**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Our collective social consciousness is formed by physical space; through a mixture of exploration, discovery, and making, students will delve into the city that surrounds them, developing a sense of ownership and engagement in Boston's public space. During the course of the semester, students will uncover the ways that art and architecture have shaped the souls of cities around the world, using Boston as a template. In a series of local field trips, students will explore Boston through its art and architecture, focusing not only what is, but on what might have been -- designs that were ultimately unrealized. Through interview and visits with local artists and designers, students will also learn about the process of shaping public space, uncovering the myriad of ways that design decisions are political in nature. As a capstone to the course, students will create their own city plan -- identifying and researching a chosen social or physical challenge the city faces, then developing a proposal that would address their chosen issue. These design proposals will then be enacted using augmented reality. Like a layer of invisible ink, these projects will form a phantom city over the physical realities that surround us, displaying the dramatic potential of the imagination.

Type:

Creativity and Innovation

- **CI-127 Visual Perspectives: Coastline, Symmetries and Illusions**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

How do you measure the length of a coastline? How much symmetry is possible? What is an impossible object? How did the Mayans measure proportions? In this course, students will delve into these and other questions with a visual theme. While some will be clear-cut, others will be open-ended and require some choices, estimates or assumptions to be made. Throughout, the emphasis will be on creative problem solving.

Type:

Creativity and Innovation

• CI-129 Elements of Attraction- Supply and Demand

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The intent of this course is for students to examine and effectively express in writing their ideas on creativity and to inspire undergraduate students to exceed their current levels of learning. Students will learn to meaningfully integrate course content into long term-retained useful skills through applied creative collaborations. This course is based on the idea that exposure and insight development will enable students to better visualize themselves in their desired fields and make informed choices within the variety of options available to them. The focus of the course will help students to assess their personal interests and strengths as they plan for their own educational and professional futures.

Type:

Creativity and Innovation

• CI-131 Off to the Future: Leadership Through Compromise

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Some past political issues were resolved with great success (the Compromise of 1820), and some resulted in great failures (the US Civil War). In this course, students will study noteworthy political dilemmas of the past, identify the major problem solvers and examine the art of compromise. These investigations will provide guidance and inspiration for students to develop innovative and creative solutions to present day political problems such as climate change, immigration, Social Security, income distribution, higher education affordability, and homelessness. Students will work in teams and propose creative and innovative solutions that will convince the affected interest groups favorably, represented by teams of other students in the class, and result in compromises solving tomorrow's problems today.

Type:

Creativity and Innovation

- **CI-H133 Franklin and the American Experiment**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office. Honors students only.

Credits:

3.00

Description:

What made Benjamin Franklin such a creative force in American history? We will explore the many facets of Franklin's life (printer, writer, scientist, statesman) and learn about Benjamin Franklin's political and diplomatic ventures, and will recreate some of his scientific experiments.

Type:

Creativity and Innovation, Honors

- **CI-135 The Design of Everything**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course will explore a selection of the genius personalities and their creative work in 5 distinct areas of human creative endeavor; art, science, nature, technology and the built environment. The course explores the underlying similarities in the process of their discovery, invention and creativity across the disciplines. Studying such names as Newton, Warhol, Hawking, Jobs, Gaudi and Banksy, students will uncover the process of design through research, analysis, synthesis, iteration and error. In class group projects will allow a hands-on opportunity to create.

Type:

Creativity and Innovation

• CI-137 Re-write for Rights: Drafting a New US Constitution

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

The American Constitution is an important document, framing the basis for our lives and the lives of our neighbors. Yet it is also a very old document, which may be seen as lacking when it is compared to newer constitutions from around the world, even places that we may regard as undeveloped. In this class we will study many constitutions and also talk to many people to craft a new constitution that reflects contemporary American society and its values.

Type:

Creativity and Innovation

• CI-H139 Creating, Promoting, and Participating in the Literary Arts

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office. CAS and SBS honors students or GPA of 3.5 or above only.

Credits:

3.00

Description:

With the launch of Boston's new Literary Cultural District, we have renewed cause to celebrate the history and industry of literature in our city. This course will immerse students in the world of literary culture and its many branches: writing, editing, reviewing, and publicity. Students will practice the art of creative writing, and learn how writers find publishing venues, how authors build platforms for their work, and how literature reaches the public through readings, social media, book trailers and other marketing campaigns, authors interviews, and reader reviews. Various industry professionals, authors, editors and publicists will speak to the class about the artistic and business opportunities, trends, and futures of literature and literary publishing. Students will apply their knowledge and interests to a variety of projects, including book reviews, author interviews, social media campaigns, literary events, and other collaborative projects. We will also work as a class to launch a new digital literary journal at Suffolk.

Type:

Creativity and Innovation, Honors

• CI-141 Science = Creativity

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course is focusing on the creative process by introducing students to creative practice as a disciplined approach to problem solving and innovation requiring research, persistence and grit. Students will be encouraged to synthesize existing ideas, images, concepts, and skill sets in

original ways, embrace ambiguity and support divergent thinking and risk taking. The course will have an undertone based on science, but it is suitable for non-science majors too!

Type:

Creativity and Innovation

- **CI-143 Dreams, Demons, and Dynamic Artists Creative Nature**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

What motivates your creative nature? This course will explore converging themes in Art and Psychology in order to give students the tools they need to unblock their creative potential. Collaborative small team activities, assigned readings, large group discussions, and personal reflection exercises will provide an avenue for students to explore their own creative patterns and how they are influenced by, and perceived within, the world around them. Dreams, mental illness and psychosocial theories of self will also be widely discussed in order to give students context for this inter/intrapersonal exploration.

Type:

Creativity and Innovation

- **CI-145 Living and Laughing**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This is a course about laughing and living. While it sounds fun, it can also be complex, confusing, complicated, and convoluted. Laughter and humor are also very personal. The things that make you laugh are rooted in family, culture, and personality. We are going to spend the semester getting to know ourselves and each other in an attempt to understand more about why we enjoy what we enjoy.

Type:

Creativity and Innovation

- **CI-147 Seeing Double, Printmaking, the Art of Discovery, Experimentation and Process**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Always wanted to explore a creative side but never had the opportunity to take an art class? Here's your chance! Sync the power of icons/ images with ideas and making. We will use cellphone and printmaking technologies in a workshop style environment. Rather than a lecture based class, this class we will play, learn and build new Neurological pathways towards creative thinking. Come to every class excited to learn, make and discover. This course will give you the building blocks for innovative thinking beyond the classroom. Power is in the image. As in the way a dream can grip you, images carry incredible amount of influence and creative potential, when they are seen. Glimpses of these images circulate in media, movies, cell phones, and so on. Learn to develop your own images and understand the broad world of images of human culture.

Type:

Creativity and Innovation

- **CI-149 SL-Creative Writing and Literacy**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

In this course, students meet community needs by engaging in service-learning outside the classroom. This course will explore the value of creativity and play in developing reading and writing skills and the habits of lifelong learning, both in our own lives and in the lives of young people in Boston. In this course, we will work closely with the non-profit literacy organization 826 Boston, which works with students ages 6-18 on reading and writing skills through playful, creative workshops, as well as tutoring and other kinds of support. Students will learn about the work of 826 Boston by volunteering with the organization, and by the end of the semester you will conceive, plan, and run creative writing workshops of your own at 826 Boston.

Type:

Creativity and Innovation,Service Learning

• CI-H149 SL-Creative Writing and Literacy

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office. Honors students only.

• CI-151 Finding Your Creative Voice

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Schools and workplaces are becoming increasingly demanding and competitive, relying on unique ideas to continue innovation. Where do fresh ideas come from? This class will provide students with the tools they need to find creativity within themselves, and set them apart in the competitive arena. Students will explore who they really are at their core, identify their innermost thoughts and feelings, and uncover their creative identity while having fun! They will also learn to communicate, or share their creative voice clearly and honestly.

Type:

Creativity and Innovation

• CI-153 Branding and Visual Identity

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

A brand may be a product, service, an organization, or a person, and at the core of every brand is a visual identity. A brand's visual identity is its strategically planned and purposeful presentation of itself. It is manifest in the brand's name, logo, tagline (slogan), color palette and other sensory elements (visual, aural, olfactory and tactile) that identity that brand and make it unique. This course will focus on analyzing the success and failure of brand's visual identities as a way of teaching students how to brainstorm and develop a new visual identity from concept through execution. The focus in this course will be on applying creative thinking to create a cohesive and meaningful visual identity.

Type:

Creativity and Innovation

- CI-155 Improvising for Everyone, Everywhere

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Improv Comedy has become the cornerstone training of movies and television for the past 20 years. More recently, Corporate America has begun to recognize the importance of the skills improv teaches - agreement, listening, moving forward as a group and out-of-the-box thinking. This course immerses students in improv theatre exercises to apply not for performance, but to shed light on how to collaborate with others. Students will be required to actively participate in exercises in class, experiencing the benefits and takeaways first-hand. Students will be able to connect these exercises with the theories of creativity presented in text books and use both to create a final presentation piece. By the end of the semester, students will understand how to recognize and foster creative thinking to solve problems leveraging the power of a group. Students will gain confidence with presenting new ideas and responding to other student's ideas, understanding how to create and maintain relationships as part of an ensemble that encourages and values ideas.

Type:

Creativity and Innovation

- CI-157 Mindful Journal

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

To keep a journal is to make an investment, often long before we understand the value. A journal is a personal database of snapshots in time, good ideas and bad, observational doodles and unfiltered emotions. On any given page a journal may appear inconsequential but within the rigor of filling a whole notebook (and another, and another) an individual viewpoint emerges. This class will facilitate a student's ability to draw from his or her own lived experience and discover unique springboards into universal issues by making mindful connections. An entire lifetime of images, stories and details resides within each of our minds but the ability to explore that richness requires dedication to documentation. Mindful Journal is a process class fostering focus through mindfulness practices, content generation and meaning making.

Type:

Creativity and Innovation

• CI-159 Building a Better T

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

If any set of problems could use creative and innovative thinking, it's the myriad of problems facing the T. The Boston Globe is filled with stories about financial and organizational problems in the system, and you only have to spend a few minutes on the green line to feel the effects of those issues. Still, millions depend on it every day - it is the circulatory system of our city, and it is more than a way to get around: the T increases accessibility and functions as a democratizing force. That is, when it's running. In this class we will study the MBTA and other mass transit systems in order to propose creative solutions to the T's most pressing problems. We will read articles about the T and other transit systems, we will look at interactive maps that express different kinds of data, and we will visit local stations. In addition, we will study the process of creative thinking, in order to apply those skills to the issues at hand. You will be asked to create both stand-alone short writing assignments and visual representations of your ideas, accompanied by short, written explanations, both alone and in group projects.

Type:

Creativity and Innovation

• CI-161 Making History: Public Memory in the Digital Age

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

You live in Boston now. At least for a while. Perhaps you've noticed that it has its own ways of remembering things. Consider The Boston Literary District, The Freedom Trail, and all the many events and festivals devoted to history, culture, and identity. From guided tours and colonial cosplay to images and written texts to monuments, memorials, and museums, this city tells stories about itself today in the ways it tells stories about its past. In this class, you're going to tell more stories about Boston. You're going to help it find other things to remember, and other ways of remembering them. You'll likely need to focus on parts of the real events that Boston doesn't prefer to include in its stories, emphasizing issues of race, socioeconomic class, nationality, colonialism, gender, sexuality, and other stories of unequal power and how that manifests in real people's lives and in the culture of this city.

Type:

Creativity and Innovation

• CI-H161 Making History: Public Memory in the Digital Age

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office. Honors students only.

- **CI-163 A Course on Skepticism and Rationality**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

Magician James The Amazing Randi reminds us that No matter how smart or how well educated you are, you can be deceived. In an age fraught with deception and misinformation, students need tactics and strategies in order to separate truth from falsity. This course encourages its participants to act as skeptics - not cynics, necessarily - by requiring evidence and proof before believing or accepting claims. Students are urged to identify the most-likely-to occur opportunities for deception in their major fields and draw from the tenets of classical rhetoric, logic, and the scientific method in order to develop safeguards. Frequent collaboration with classmates will allow for dynamic solutions to small and large-scale contemporary problems ranging from the personal (e.g. used car prices and avoiding fraud) to the universal(e.g. fake news and God).

Type:

Creativity and Innovation

- **CI-165 Becoming a Zig-Zag Master**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

We will be discovering the process of becoming more creative. The emphasis is on understanding the creative process and applying effective team-working strategies towards a shared goal. Each team will choose a project and develop it during the semester with the goal of improving a product, raising awareness about an issue in a creative way, designing a board game, designing a card game, etc. Inspiration will be drawn from the numerous successful innovators in the Boston area.

Type:

Creativity and Innovation

- **CI-167 Public Health: A Need to Think Outside The Box**

Prerequisites:

Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

Credits:

3.00

Description:

This course seeks to make you an innovative public health thinker by examining past campaigns and making the necessary frameshifts to help promote, protect and preserve health of the Suffolk community through the innovative thinking process. Public health activists and designers can have a positive impact on the lives of citizens living in small communities. However, the agreed rules and regulations that make up this policy landscape are created by paradigms which can be constricting. The issues the course addresses will include Suffolk's current plans for reducing carbon emission, behavioral determinants such as alcohol consumption among college students, and improving eating habits on campus. The final project will be peer reviewed and presented to the class. Programs may then be forwarded to university departments for possible integration and implementation.

Type:

Creativity and Innovation

- **CI-204 Prague: Castles to Barbwire**

Prerequisites:

At least 24 credits earned.

Credits:

3.00

Description:

Prague offers students a more recent view into history and will serve as a backdrop to learning Design Thinking. The curriculum will use Czech and Central European cultural features as the inspiration for learning the creative process, skills that can be applied broadly and globally across disciplines. WWII and its fall to Communism left the Czech Republic undamaged. Artists played a vital part in the country's rise to a Republic during the Velvet Revolution. These dissidents, including writers, actors, artists and musicians were innovators who were the catalyst for change. One could say that creative minds changed this country. This course is designed to demystify the creative process by introducing the creative practice as a disciplined approach to problem solving and innovation requiring research. This one-month study abroad experience will offer a more worldly insight to the significance of developing skills where divergent thinking and risk taking are one of many key tools in learning to generate new ideas. Travel fee covers accommodations, transfers, some meals and cultural visits. Airfare and tuition not included.

Type:

Creativity and Innovation, Global Engagement Experience

Note: Students with 30+ transfer credits are exempt from this requirement.

Major Requirements Minimum: 8 courses, 32 credits

Complementary Major Requirements, Minor Requirements, and Free Electives: credit varies

Minimum Total Credits Required for Degree Conferral: 126 credits

Note:

Core Requirements may also count toward major if taken at appropriate level.

Some degree programs exceed 126 credits.

2017-2018 Archived Catalog Information

Bachelor of Science Degree

Please note that these requirements are for students matriculating in or after fall, 2017. Students matriculating prior to fall, 2017 must reference the [Pre-Fall 2017 Degree Requirements \(Archives\)](#).

All BS degree programs require the successful completion of the following courses:

Core Requirements: 15 courses, 54-56 credits

- [First-Year Experience](#)
- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Studies in Literature](#)
- [Ethical & Philosophical Inquiry](#)
- [Human Behavior and Societies](#)
- [Social and Intellectual History](#)
- [Visual & Performing Arts Theory and History](#)
- [Quantitative Analysis](#)

Math: 1 course, 4 credits

Choose one Math course from those listed below:

- **MATH-128 Math for the Modern World**

Prerequisites:

MATH level 2, or Mathshop, or MATH-104

Credits:

4.00

Description:

From the ISBN on a book, to buying a car, from the size of small chips in a cell phone, to the size of the national debt, or just reading a graph in the daily newspaper, mathematics plays an important and vital role in countless areas of life and your future career and courses included. Mathematics is both an art and a tool created by humans. The common bond is a way of thinking and a way of reasoning to describe and solve problems of many types. This course uses the context of modern real life problems to introduce math needed for literacy and problem solving in contemporary life and work. It uses a minimal amount of algebra and focuses on math models, concepts and basic math manipulations. It encourages students to move from anxiety about math, to using formulas well, to thinking critically in the math context to use math to solve problems and pose new problems. Topics include scientific notation, basic financial math, linear, exponential and polynomial models and an introduction to probability. (Formerly Math 132)

- **MATH-130 Topics in Finite Mathematics**

Prerequisites:

MATH-104, or MATH-121, or MATH level 3

Credits:

4.00

Description:

Linear Modeling (for example, using linear functions to model supply/demand situations), graphing, linear programming, financial functions (compound interest, annuities, and amortization of loans) sets, Venn diagrams, counting and combinatorics, discrete probability, conditional probability, Bernoulli experiments, Bayes theorem. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

- **MATH-132 Math-Art, Tool and Human Side**

Prerequisites:

MATH-000 or appropriate Math Placement Exam score. Course does not fulfill math requirement for SBS majors.

Credits:

4.00

Description:

Mathematics is both an art and a tool. It has been used in many ways in contemporary and ancient society. The common bond is a way of thinking and a way of using reason to solve problems and describe things of all sorts. The course is designed to cultivate an appreciation of the significance of mathematics in daily life and develop students' mathematical reasoning. Topics will vary from section to section. Examples of topics that might be included are: the real meaning of a newspaper graph, methods to tally votes, fair division, routes and networks, consumer mathematics, the 'real' cost of a house, shapes and patterns, fractals, soap film surfaces, prime numbers and encryption, new discoveries in mathematics.

• MATH-134 Calculus for Management & Social Sciences

Prerequisites:

MATH-104, MATH-121 or MATH level 4

Credits:

4.00

Description:

A one-semester introduction to differential and integral calculus. Theory is presented informally and topics and techniques are limited to polynomials, rational functions, logarithmic and exponential functions. Topics include a review of precalculus, linear regression, limits and continuity, derivatives, differentiation rules, implicit differentiation, related rates, applications of derivatives to graphing, minima/maxima, applications of the derivative, marginal analysis, differential equations of growth and decay, anti-derivatives, the definite integral, the Fundamental Theorem of Calculus, area measurements. This course cannot be used to satisfy core or complementary requirements by students majoring in chemistry, computer science, engineering, mathematics, or physics. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

• MATH-164 Calculus 1 Bridge With Trigonometry

Prerequisites:

Permission of Instructor

Credits:

4.00

Description:

This course provides an alternative to MATH 165 (Calculus I) for those students who have taken MATH 134 (Calculus for Management and Social Sciences) but who do not have the trigonometric precalculus prerequisite (such as MATH 121) for MATH 165. In other words, the sequence MATH 134 / MATH 164 serves as an alternative to the sequence MATH 121 / MATH 165, and similarly prepares students to take MATH 166 (Calculus II). The course includes a thorough review of trigonometry and other precalculus topics. Aspects of limits and differentiation which students have already seen in MATH 134 are presented briefly, but in most cases with more emphasis on conceptual understanding, and often illustrated using more complicated examples. New calculus topics (i.e. not covered in MATH 134) include one-sided limits, special trigonometric limits, differentiability, derivatives of trigonometric functions and their inverses, derivatives of general inverse functions, logarithmic and implicit differentiation, related rates, L'Hopital's rule, intermediate values theorem, Rolle's theorem, mean values theorem, Newton's method, and linearization. 4 lecture hours plus 1 recitation session each week. Normally offered in spring.

- **MATH-165 Calculus I**

Prerequisites:

MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

Credits:

4.00

Description:

Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-166 Calculus II**

Prerequisites:

MATH-164 or MATH-165 with a minimum grade of C

Credits:

4.00

Description:

Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation, convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

Major Requirements Minimum: 8 courses, 32 credits

Complementary Major Requirements, Minor Requirements, and Free Electives: credit varies

Minimum Total Credits Required for Degree Conferral: 126 credits

Note:

Core Requirements may also count toward major if taken at appropriate level.

Social, Cultural, & Global Perspectives: 1 course, 3-4 credits

Choose one SCGP course from those listed below:

- **ADPR-217 Gay and Lesbian Studies**

Credits:

4.00

Description:

Examines the portrayal of homosexuality in political, social, and cultural discourse. Analyzes the role of media and symbolic construction in the shaping of public values, opinions, and social movements.

Term:

Alternates Fall & Spring

- **ADPR-219 Rhetoric of Protest and Reform**

Credits:

4.00

Description:

Examines the persuasive strategies of social reform movements with special emphasis on the civil rights', women's rights, and gay rights movements in the United States.

Term:

Alternates Fall & Spring

- **ARH-205 Gender, Class and Alterity in Ancient And Medieval Art**

Credits:

4.00

Description:

Explores issues of sexuality, gender, race, and social class in the ancient and medieval worlds. Examines key artworks from ancient Greece, the Roman Empire and medieval Europe within historical, social and cultural contexts.

- **ARH-321 Women, Art & Society**

Credits:

4.00

Description:

Surveys women artists from the sixteenth century to the present and examines new direction in art-historical scholarship developed by feminist art historians during recent decades.

Term:

Offered Spring Term

- **AS-100 Introduction to Asian Studies: Culture, People, Ideas**

Credits:

4.00

Description:

An interdisciplinary introduction to Asian Studies will touch upon the history, politics, economics, philosophy, geography, arts, and cultures of Asia. Sample topics include political economy, religious and cultural exchanges, international relations, Asian experience in America, and the role of Asia in the twenty-first century. Students will develop conceptual frameworks for exploring the subjects covered by the Asian Studies curriculum.

Term:

Offered Both Fall and Spring

Type:

Asian Studies, Social & Intellectual HST

- **AS-500 Asian Studies Internship**

Credits:

4.00

Description:

Engages in an internship in a business or non-profit organization that deals with Asia or an Asian American community. Students may complete the internship either in Asia or in the U.S. Students will complete appropriate exercises and reports to document their learning. (1 course, 4-12 credits; can be taken multiple times in different semesters)

Term:

Offered Both Fall and Spring

Type:

Global Engagement Experience

- **BLE-325 Global Business Ethics**

Prerequisites:

BLE-215, PHIL-119, PHIL-120, PHIL-123 or PHIL-127

Credits:

3.00

Description:

Surveys business ethics as they transcend the diverse perspectives of global business. Explores current global ethics standards and values, ethical challenges, controversies, convergence and trends. Students explore famous global business cases through films, websites and independent research. Emphasizes identification and resolution of global business ethical issues within the context of ethical decision-making and sustainability. Analyzes corporate social responsibility ; hence, transforming global business ethics through business.

Type:

Global Engagement Experience

- **BLKST-250 Haiti, Guadalupe and Martinique**

Credits:

4.00

Description:

This course explores the rich intellectual tradition of Haiti, Guadeloupe, and Martinique by considering historical moments linked to colonialism, the abolition of slavery, the representation of gender, departmentalization, and decolonization through essays, films, poems, novels, and short stories by critics and writers from the 19th-21st centuries.

- **CI-204 Prague: Castles to Barbwire**

Prerequisites:

At least 24 credits earned.

Credits:

3.00

Description:

Prague offers students a more recent view into history and will serve as a backdrop to learning Design Thinking. The curriculum will use Czech and Central European cultural features as the inspiration for learning the creative process, skills that can be applied broadly and globally across disciplines. WWII and its fall to Communism left the Czech Republic undamaged. Artists played a vital part in the country's rise to a Republic during the Velvet Revolution. These dissidents, including writers, actors, artists and musicians were innovators who were the catalyst for change. One could say that creative minds changed this country. This course is designed to demystify the creative process by introducing the creative practice as a disciplined approach to problem solving and innovation requiring research. This one-month study abroad experience will offer a more worldly insight to the significance of developing skills where divergent thinking and risk taking are one of many key tools in learning to generate new ideas. Travel fee covers accommodations, transfers, some meals and cultural visits. Airfare and tuition not included.

Type:

Creativity and Innovation, Global Engagement Experience

- **CJN-216 Intercultural Communication**

Credits:

4.00

Description:

An examination of communication variations and cultural viewpoints and their impact on cross-cultural communication. A special emphasis is placed on rituals and message patterns in non-Western cultures.

Term:

Offered Both Fall and Spring

- **CJN-225 World Cinema**

Credits:

4.00

Description:

An introductory course in film studies with a focus on foreign films. Movies studied include masterpieces of cinema from Europe, Asia, the Middle East, and other nations (Films have subtitles).

Term:

Alternates Fall & Spring

- **CJN-281 Asian Popular Culture**

Credits:

4.00

Description:

Students critically analyze Asian popular culture since the 1980s using a cultural ethnographic approach. Students apply the lenses of gender, identity, globalization, and business strategies to examine pop phenomena such as Korean Wave, Cool Japan, and Cantonese popular music.

Term:

Occasional

- **CJN-293 Hong Kong Cinema**

Credits:

4.00

Description:

By examining the film texts of Hong Kong auteurs such as John Woo, Wong Kar-wai, Tsui Hark, Andrew Lau, and Alan Mak, the course examines issues such as film genres, colonization/decolonization, transnational political economy, the Greater Chinese media market, and the diaspora.

Term:

Occasional

- **CJN-301 Documentary Film and the Image of Conflict in the Middle East**

Credits:

4.00

Description:

The course focus is on some of the divisions and conflicts within Israeli society. Students analyze and compare mainstream media discourse to alternative representations in documentary film. Analysis also covers media representation of the Israeli-Palestinian conflict.

Term:

Occasional

- **CJN-385 Globalization of Media and Telecommunications**

Credits:

4.00

Description:

A critique of the circulation of media goods and ideologies from both a cultural and political/economic perspective. Topics include global Hollywood, the images of Muslim women in transnational media, the information society, and global social movements.

Term:

- **EC-141 Development Economics**

Credits:

4.00

Description:

Why do so many countries remain so poor? Why have some (e.g. the Asian tigers) grown so rapidly? Why have most of the countries of Eastern Europe and the Former Soviet Union been slow to ignite economic growth? These questions are addressed by looking at domestic factors (government policies, resource endowments) as well as the international environment (mobile investors, international financial institutions). Asks what economic choices these countries face now. Normally offered yearly. Cultural Diversity B

Type:

Asian Studies

- **EC-151 Economic & Human Geography**

Credits:

4.00

Description:

The study of how economic and human activity is distributed across space, the reasons for these spatial distributions, and the processes that change the spatial organization of economic activity over time. Topics include: maps, map projections, and geographic information systems; population geography; the organization and location of cities, towns and villages; transportation and communication policy; industrial location; the geography of world trade; and geographic features of economic development. The course takes a global perspective, and draws on cases and examples from all over the world. Cultural Diversity B

Type:

Asian Studies, Human Behavior & Societies

- **EDUC-310 Culturally Responsive Education**

Credits:

4.00

Description:

The relationship between cultural diversity and schooling is explored by examining impediments to academic achievement and advancement by minority students, non-native English speaking students, and other under-represented groups. Topics include: standardized testing, identification of inequities, legal and ethical responsibilities of teachers, and promoting equity. Ten pre-practicum observation hours required for teacher candidates.

Term:

Offered Fall Term

- **EDUC-315 Strategies for Emerging English Learners**

Credits:

4.00

Description:

This course examines the specific needs and challenges of the various language and cultural groups in schools. Topics include: theories of 1st and 2nd language acquisition, strategies for teaching academic content, modifying instruction in the mainstream classroom, creating classroom cultures that invite all students into learning, the role of advocacy and professional collaboration in ESL, and analysis of policies related to assessment and placement of English Language Learners.

- **ENG-123 Great Books of the World I Great Books of World Lit. I**

Credits:

4.00

Description:

Literary masterpieces from ancient times to the Renaissance, including: Homer's Odyssey, Sophocles' Oedipus, Virgil's Aeneid, selections from the Hebrew Bible and the Gospels, and Dante's Divine Comedy. List may vary at the discretion of the instructor.

Term:

Offered Fall Term

Type:

Classics Minor, Social & Intellectual HST

- **ENG-124 Great Books of the World II**

This course will introduce students to a selection of Great Books from around the world from the 17th century to the 21st, such as Don Quixote (Spain), Madame Bovary (France), The Communist Manifesto (Germany), The Origin of Species (England), War and Peace (Russia), On Dreams (Austria), Night (Hungary), Things Fall Apart (Nigeria), Satyagraha (India), I Am Prepared to Die (South Africa), Saeed the Pessoptomist (Israel), The Rouge of the North (China), and The House of Spirits (Chile). Readings may vary at the discretion of the instructor.

Term:

Offered Spring Term

Type:

Social & Intellectual HST

- **ENG-135 World Literature in English**

Credits:

4.00

Description:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

Term:

Offered Both Fall and Spring

Type:

Studies in Literature

- **ENG-216 World Literature in English**

Prerequisites:

WRI-102 or WRI-103

Credits:

4.00

Description:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

Term:

Offered Both Fall and Spring

- **ENG-362 Asian American Literature**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

An introduction to selected Asian-American writers with an emphasis on socio-cultural issues, such as race, gender and ethnicity. Authors include Bulosan, Hwang, Jen, Kingston, Lee, Mukherjee, Odada, and Tan. Cultural Diversity A

Term:

Occasional

Type:

Asian Studies

- **FR-202 Intermediate French II**

Prerequisites:

Take FR-201 or Instructor's consent

Credits:

4.00

Description:

Continues to review grammar, practice speaking, and explore authentic cultural and literary texts in this writing-intensive course. Examines short readings, films, and print media.

Term:

Offered Spring Term

Type:

Modern Language

- **FR-205 The Francophone World**

Prerequisites:

FR 202 or Instructor's consent

Credits:

4.00

Description:

Explores the francophone world through the study of short stories, print media, and film, by engaging with the rich textured and diverse francophone literary canon. Teaches advance notions of French grammar, write compositions, and the art of conversation related to cultural themes.

Term:

Alternates Fall & Spring

- **FR-216 Masterpieces of French and Francophone Literature in English Translation**

Credits:

4.00

Description:

Masterpieces of French and Francophone Literature in English Translation. Studies works translated into English by major authors from the Middle Ages to the present. Explores drama, fiction, and poetry from many regions of the world: Africa, Western Europe, North America, the Caribbean, and Vietnam.

Term:

Alternates Fall & Spring

Type:

Studies in Literature

- **GVT-208 Politics / Religion**

Credits:

4.00

Description:

This course explores what major religions say about the status and responsibilities of the state and how, in turn, selective states have, in theory and practice, structured the place of religions in political life. Particular attention is given to issues of politics and religion in the United States. Cultural Diversity A

- **GVT-115 Evolution of the Global System**

Credits:

4.00

Description:

The goal of this course is to introduce the student to the main actors, social facts and processes that shaped the international system in the nineteenth and twentieth centuries. By analyzing the spread of industrialization, the race for colonies, the thrust of imperialism, and the rapid growth of nationalism, among other factors, this course explains the contradictory and simultaneous trends of unprecedented levels of prosperity and violence in Europe and beyond. While the course examines the role of the United States in the international system, particularly in light of its dominant role since the early twentieth century, it also emphasizes the developments taking place in other regions such as Asia, Africa and Latin America. This will allow students to understand the global arena as a space of complex interconnections involving varieties of forms of production, national political cultures and idiosyncratic traditions. This course sets the foundations for other courses in International Relations and Regional Studies

Type:

Human Behavior & Societies

- **GVT-281 Intro to Comparative Politics**

Prerequisites:

GVT 110, GVT 115, and GVT 120 or consent of instructor; Sophomore status or higher

Credits:

4.00

Description:

This course examines various methods of comparing political systems. Institutions such as executive departments, legislatures, court systems and local governmental systems are examined comparatively. It includes analysis of the impact of different economic systems on political/governmental institutions, and on economic circumstances that impact government. It also looks at political socialization both in terms of process and comparative content. An effort is made to include countries from all regions of the world. Normally offered every year.

- **GVT-359 Hockey, International Development & Politics**

Credits:

4.00

Description:

This class examines the way in which national identity, global and regional economics and international development intersect. It uses the professionalization of the sport of hockey and its subsequent spread around the globe as its case. It will look at the rise of the pro game, the way in which it shapes national identity in the Canadian case, the way in which the pro business model has changed in response to broad socio-economic changes in North America and geo-political shifts around the globe, especially in Eastern Europe and the Former Soviet Union.

• GVT-360 Elections and Voting

Credits:

4.00

Description:

How are elections administered in the United States? Do Americans have confidence in the electoral process? Should they? Why or why not? This course will examine elections in the United States in detail -- from how they are funded to how they are administered to how voters behave. Students will have a choice of either serving as poll workers during the November election or organizing and conducting research of potential voters. Students will gain hands-on experience in actual research design, election administration, and non-partisan get-out-the-vote activities. In addition, students will gain a deeper understanding of the relationship between attitudes, opinion, and voting behavior in American politics and institutions. ECR

• GVT-391 Canada: Multicultural Politics

Prerequisites:

GVT 110/120 or Instructor's permission

Credits:

4.00

Description:

This course examines the Canadian model of incorporating diverse communities into its constitutional and political framework, including the founding British North American Act of 1867, the 1982 Constitution Act, and two later attempts at constitutional reform. Canada's role in balancing two official languages, English and French, is discussed, as is its recognition of a First Nations native-governed territory in the Arctic. This course introduces students to the Canadian polity and compares its parliamentary system with the U.S. separation of powers system. Prerequisites: GVT 110, GVT 120 or instructor's consent. Normally offered alternate years. Cultural Diversity B

- **GVT-467 Comparative Social Movements**

Prerequisites:

Junior status

Credits:

4.00

Description:

How do we explain the appearance or absence of social movements? What social or individual factors explain their development and decline? Who joins social movements? Who does not? Why? What ideas or ideals animate those who do participate? What is it like to be part of a social movement? What effect do they or have they had on politics, power and efforts at social change? These are some of the questions that have traditionally shaped debates over social movements, both domestically and internationally. They will form the analytical core of the work in this course. By critically evaluating several competing schools of thought in social movement theory and history we will attempt to highlight the social forces that have, at varying points in times, facilitated, maintained, as well as blocked the development of social movements in the US and beyond.

- **HST-100 Introduction to Asian Studies: Culture, People, Ideas**

Credits:

4.00

Description:

An interdisciplinary introduction to Asian Studies will touch upon the history, politics, economics, philosophy, geography, arts, and cultures of Asia. Sample topics include political economy, religious and cultural exchanges, international relations, the Asian experience in America, and the role of Asia in the twenty-first century. Students will develop conceptual frameworks for exploring the subjects covered by the Asian Studies curriculum.

Term:

Offered Fall Term

- **HST-246 History of Modern Iran**

Credits:

4.00

Description:

Examines the contemporary history of Persia (Iran) from the time of its independence in the beginning of the sixteenth century to the present with special concentration on geographical/historical background; social structure, ethnic, religious, and linguistic diversities; Safavid and Qajar dynasties; Anglo-Russian interventions and occupations; constitutional revolution and reform; centralization, secularization and modernization under Pahlavi dynasty; opposition to westernization and Islamic revolution.

- **HST-247 History of Modern Middle East**

Credits:

4.00

Description:

Explores the broad historical forces, conflicts and major events that have shaped the contemporary nations of the modern Middle East. Topic include: the emergence of the modern Middle East from the empires of the sixteenth and seventeenth centuries; the age of colonialism; the rise of nationalism; socialism, capitalism; the impact of Israeli and Palestinian conflict on the region; oil, the Islamic Revolution in Iran and the rise of Islamic fundamentalist movements; U.S. policy; and Saddam Hussein's Iraq.

Term:

Offered Fall Term

- **HST-251 Modern East Asia**

Credits:

4.00

Description:

China, Japan, and Korea - East Asia's critical players - share many historical influences, but each has a distinct culture, and they competed with each other for much of the twentieth century, proud of their achievements but feeling threatened by their neighbors. Lectures interspersed with movies and documentaries to show how East Asia has developed in the past one-hundred-plus years.

Type:

- **HST-263 Comparative Race Relations**

Credits:

4.00

Description:

Compares and analyzes the history of race and politics in South Africa and the United States from the 17th century to the present. Examines how race as a social and ideological construct influenced and informed political conflicts over land, labor, and social relations in the two countries including slavery, segregation, apartheid, and the struggle to create racial democracies.

Term:

Offered Fall Term

- **HST-268 History of the Mediterranean**

Credits:

4.00

Description:

Explores the history of the Mediterranean from the ancient times to the 20th century, with emphasis on the extraordinary interaction between the rich cultural, ethnic and religious backgrounds of the peoples of Europe, Middle East, and North Africa.

Term:

Occasional

Type:

Social & Intellectual HST

- **HST-274 Women in 19TH-CENTURY Europe**

Credits:

4.00

Description:

Explores the condition of European women from 1800 to 1914. Readings focus primarily on women's experiences in France and Great Britain. Topics include: the effects of industrialization on the lives of working-class women; working and middle-class women's negotiation of marriage, work, and family life; the rise of feminism, women's greater participation in the public sphere, and conservative reaction to these changes in women's place in society; women and crime; Victorian ideas about female sexuality; the politics of class and gender in nineteenth-century European society.

Term:

Occasional

- **HST-275 Women in 20TH-CENTURY Europe**

Credits:

4.00

Description:

Examines the changing place of women in European society since 1900. Topics include: women's suffrage and the political advances of the 1920s and 1930s; the revolution in sexual mores, birth control, and the rise of companionate marriage; women and the consumer economy; the anti-woman policies of Fascist Italy and Germany under National Socialism; liberation of women and retrenchment in the Soviet Union; World War II; feminism, sexual liberation, and women's political engagement since the 1960s; and, throughout the twentieth century, women's continuing negotiation of work and family responsibilities.

Term:

Occasional

- **HST-321 History of Islam**

Credits:

4.00

Description:

Presents a coherent account of the origin and history of Islam since its foundation in Arabia in the seventh century A.D. to the present. Analyzes the terms, events, characteristics, developments, movements, and institutions that have been part of the shaping of Islam. Ideological challenges and impact of Islam in the world today from both spiritual and political perspectives are examined.

Term:

Occasional

- **HST-371 U.S. Women's History Colonial to 1865**

Credits:

4.00

Description:

Traces the roles, images and experiences of women in America from colonial times to 1865. Topics include the family, work, religion, education, health care, motherhood, sexuality, social and political activism legal status, labor activism and popular culture. With attention to ethnicity, race, class, age, region of residence, disability and sexual orientation, the course focuses primarily on the everyday lives of ordinary women.

Term:

Offered Fall Term

- **HST-372 U.S. Women's History: 1865-present**

Credits:

4.00

Description:

Examines the social and cultural history of women in the United States from the close of the Civil War to the present. Using not only gender but also race, ethnicity, class, age, disability, region of residence, and sexual orientation as important categories of analysis, this course focuses on women's private and public lives. Topics include the family, work, religion, education, health care, private lives, motherhood, sexuality, social and political activism, legal status, labor activism, and popular culture.

Term:

Offered Spring Term

- **HST-484 History of the Emotions**

Credits:

4.00

Description:

Explores ideas about emotional life from the fields of history, anthropology, sociology, and psychology as well as the evolution of emotion rules and prescriptions, focusing on western Europe and the United States since 1700. In the eighteenth century, emotions were seen as a positive influence on politics and public life, especially during the French Revolution. After the fall of Robespierre, the emotions were banished to the private sphere - so we will read both primary sources and recent scholarship on 19th- and 20th- century ideas about masculinity and femininity, romantic love and marriage, childrearing, and about what parents and children are supposed feel toward each other, how ideas about these subjects have changed over time, and whether our feelings change with them.

Term:

Occasional

- **MUH-223 World Music**

Credits:

4.00

Description:

Covers topics in folk, traditional, and modern music of Africa, the Middle East, Asia, and Europe in the context of the cultures and lives of the indigenous peoples of those regions; examines how music interacts with the issues of race, gender, class, religion, politics, and social movements. Normally offered every other year.

Term:

Occasional

- **P.AD-201 Social Change**

Credits:

3.00

Description:

This course will examine social change in the U.S. and abroad. The course will also examine the role of business, nonprofits, and the public sector in addressing social problems. Topics studied may include the Industrial Revolution, the civil rights movement, the women's movement, environmentalism, and the gay and lesbian movement.

- **P.AD-H201 Honors Social Change**

Credits:

3.00

Description:

This course will examine social change in the U.S. and abroad. The course will also examine the role of business, nonprofits, and the public sector in addressing social problems. Topics studied may include the Industrial Revolution, the civil rights movement, the women's movement, environmentalism, and the gay and lesbian movement.

Type:

Honors

- **PHIL-120 Ethics and Civic Life**

Credits:

4.00

Description:

In this class you will be introduced to the perspectives and methods of politics, philosophy, and economics and see how these three disciplines present distinct but interconnected dimensions of current social and political issues.

- **PHIL-228 Feminist Philosophy**

Credits:

4.00

Description:

This course is an introduction to the philosophy of feminist thought. Feminist theories of epistemology, metaphysics and morality will be examined as critiques of traditional philosophy,. Feminist perspectives and methodologies include radical, liberal, postmodern, as well as more recent trends in ecofeminism. Special emphasis will be placed on explicit and implicit practices of alienation and exclusion as they have unfolded in the gendering of thought, truth, and reality. 1 term - 4 credits. Normally offered every third year. C b

Term:

Occasional

• PHIL-229 Eco-Feminism

Prerequisites:

PHIL 119, or PHIL 123, or PHIL 127

Credits:

4.00

Description:

Examines the political, social, and ecological problems facing us as a global community. Having its roots in feminist theory and deep-ecology, eco-feminism provides a critical framework for ecological responsibility and accountability. Writings from eco-feminist thinkers and environmental activists around the world will be used to highlight the philosophical and political conflicts and challenges, including globalization and loss of biodiversity, global warming, international human rights, the relationship of gender and nature, and modes of redress for eco-justice and sustainable development.

• PHIL-261 Eastern Philosophy

Credits:

4.00

Description:

The exposition and critical evaluation of Hinduism, Buddhism, Confucianism, Taoism, and Islam. Special attention is given to foundation principles as well as to the similarities and differences of each of these philosophies to basic ideas in Western philosophy. 1 term - 4 credits. Normally offered

alternate years. C b

Term:

Occasional

Type:

Asian Studies

- **PHIL-262 Buddhism**

Credits:

4.00

Description:

An historical survey of Buddhist philosophy. We will explore Buddhist origins, central teachings, devotional and meditational practices, ritual and institutions as developed from classical to modern times. Special attention given to the philosophical diversity of the Buddhist world view. 1 term - 4 credits. Normally offered alternate years. C b

Term:

Occasional

Type:

Asian Studies

- **PHIL-265 Women in Spirituality**

Credits:

4.00

Description:

An exploration into the various dimensions and ideologies concerning the role of the feminine in relation to the Divine. Belief systems, myths and archetypes from ancient Goddess worship to 20th century feminist theology will be examined in terms of the philosophical content and psychological

consequences. Special emphasis will be placed on feminist metaphysical structures for understanding consciousness and Reality. Classes will be conducted by means of lectures, primary and secondary texts and class discussions. Normally offered alternate years. Cultural Diversity A

Term:

Occasional

- **PHIL-267 Chinese Philosophy**

Credits:

4.00

Description:

A survey of the main developments in Chinese Philosophy. The course begins with the early dynastic concept of humanism and then turns to Confucius and Mencius. Having developed the central Confucian doctrines, students next examine the Taoist response to Confucianism in the writings of Lao Tzu and Chuang Tzu. The course then considers Zen Buddhism, which is called Ch'an Buddhism in China, where it originated. In particular, students study the concept of sudden enlightenment before turning to the Neo-Confucian scholars.

Term:

Occasional

- **PSYCH-243 Organizational Psychology**

Prerequisites:

Take PSYCH-114;

Credits:

4.00

Description:

Focuses on diversity concerns in various aspects of the psychology of the workforce. This includes job analysis, recruitment, selection, evaluation, training, retention, and termination. Employee morale, well-being, stress, and hardiness are considered.

- **PSYCH-247 Asian Perspectives on Health and Work**

Credits:

4.00

Description:

Examines theoretical and empirical approaches that provide insight into Asian viewpoints on socialization practices, family systems, health/well-being, cultural traditions/values, and spiritual philosophy/literature. Explores the diversity among Asian cultures in terms of language, history, religion/spiritual faith, and healthcare practices, all of which play a significant role in shaping the psychological characteristics, interpersonal relationships, and work dynamics of Asians and Asian immigrants. Students critically analyze similarities and differences between Asian and Western psychological perspectives of health and work through didactic and experiential learning components. This course fulfills the Cultural Diversity Requirement and may fulfill the Expanded Classroom Requirement. Normally offered alternate years.

Term:

Offered Spring Term

Type:

Asian Studies

- **RS-111 Introduction to World Religions: Western Traditions**

Credits:

4.00

Description:

This course will explore the comparative history and structure of Western religious traditions, broadly understood, and their impact on other world religions, while attempting to recognize the similarities and the differences among them. Traditions to be studied include Greek and Roman religion, the monotheistic faiths (Judaism, Christianity, and Islam, as well as Zoroastrianism, Sikhism and Bahaism). We will also explore the impact of the Western religions on indigenous traditions, such as African religion, Native American religion, and Pacific Island religion. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. 1 term - 4 credits. Normally offered every year.

- **RS-112 Introduction to World Religions: Eastern Traditions**

Credits:

4.00

Description:

This course will examine a variety of Eastern religions, including Hinduism, Buddhism, Jainism, Confucianism, Taoism, and Shintoism. Possible connections to be explored will be the impact of these traditions on others, such as Pacific Islands and African religion, as well as the growing place of Eastern religion in the West. This course will explore the history and structure of each tradition, while attempting to recognize the similarities and the differences among them. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. Normally offered every year. Cultural Diversity B

Type:

Asian Studies

• **SIB-550 Global Travel Seminar**

Prerequisites:

Please email Hillary Sabbagh at hsabbagh@suffolk.edu to register for a travel seminar.

Credits:

3.00

Description:

An in-depth analysis of timely special issues in international business. Specific topics are announced when the course is scheduled.

Type:

Global Engagement Experience

• **SF-190 Asia in America Fiction and Fact**

Credits:

4.00

Description:

With a focus on some selected ethnic groups from Asia, Asia in America studies the history and current status of Asian Americans in Boston and other parts of the country. We will examine the major reasons why these immigrants chose to leave their home country as well as their expectations and experiences here in America. We will also discuss the issues Asian immigrants have faced in this adopted home as well as the connections and conflicts among different ethnic groups or even within the same ethnic group due to political and socio-economic reasons. The course will include some level of community engagement, through Chinatown tour and service, which may enable us to have a direct contact with the Asian American population and reflect on what is being discussed in class. Through this course, we hope to gain a better understanding of the racial and cultural history of the country and arrive at a deep appreciation of the dynamics of cultural interactions in the twenty-first century. The course fulfills the SCGP requirement.

Type:

Global Engagement Experience

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

- **SOC-227 Race in American Society**

Credits:

4.00

Description:

Despite the election of Barack Obama as President of the United States, race remains one of the most divisive forces in U.S. society. While many of us struggle against racism, racial classification continues to affect where we live, where we work, and how we see ourselves. Racial classification affects our access to health care and our encounters with police officers. Distorted images of racial groups fill television and movie screens. Appeals to racism and fear of foreigners are dominant themes in elections to state and national offices. This course examines the formation and re-formation of racial classifications: how particular groups become racially identified, how these classifications change over time, and how conflicts over race have shaped American society. The meanings of race, as seen from a variety of perspectives, will be a consistent theme throughout the course.

Term:

Occasional

- **SOC-228 Cultural, Global and Social Perspectives**

Credits:

4.00

Description:

Enables students to examine, as well as develop an awareness and appreciation of, diversity within today's society. Providing an overview of the major racial, ethnic, and cultural groups in the U.S., the focus is on the ways in which cultural awareness enhances professional helping relationships and improves the operation of human services systems.

Term:

Occasional

- **SOC-275 Women and Crime**

Credits:

4.00

Description:

This course examines the complex relationships between women and crime today. This focus will include women as criminal offenders; women as victims of crime; and women as both offenders and victims. Course materials draw from recent feminist scholarship on these issues in the social sciences. Topics include the causes of women's crime women, drugs, and crime; child abuse and trauma; prostitution and sex trafficking; race, gender and victimization; and feminist social movements against violence. Crimes of violence against women are a central focus in the course.

Term:

Occasional

- **SOC-329 Sociology of Globalization**

Prerequisites:

Prerequisite: SOC 113 or SOC 116.

Credits:

4.00

Description:

Globalization is shrinking the world. How and why did this happen? This course will explore global change and the global processes which effect key social institutions: culture, the economy and politics. Students will study the processes of globalization and its impact on our lives and people around the globe.

Term:

Occasional

- **SOC-341 International Drug Control Policy**

Credits:

4.00

Description:

Relying on a simplistic demand or supply explanation of why Americans use/abuse drugs obscures the reality of America's drug problem, is ineffective as a guide to public policy and has unforeseen, often negative consequences. Drug use is a complex and multi-faceted issue. There are no easy answers. To comprehend the complexity of America's drug problem one needs an understanding of the geography, history, religion, law, economics and international politics of the Middle and Far East, Eastern Europe, Africa, Mexico, and Central and South America. This class will provide this basic understanding without losing sight that the problem we seek to remedy is our own.

Term:

Offered Spring Term

- **SOC-354 Death and Dying**

Credits:

4.00

Description:

An examination of changing definitions of life and death, social factors affecting causes and rates of death, care of the dying and their families, institutionalization, the funeral industry, suicide, crisis intervention, and the impact of technology on the dying process.

Term:

Occasional

- **SOC-357 Global Health and Healing**

Credits:

4.00

Description:

An examination of how different cultures understand health and illness. Healing approaches from Asia, Africa and the Americas will be explored.

Term:

Occasional

- **SPAN-202 Intermediate Spanish II**

Prerequisites:

SPAN 201 or Instructor's consent.

Credits:

4.00

Description:

Continues skills development from 201. Students read a collection of short stories, write compositions, develop cultural insights through comparative and contrastive assignments, and practice listening and speaking skills in weekly conversation sessions.

Term:

Offered Spring Term

Type:

Modern Language

- **SPAN-290 Advanced Composition & Conversation**

Prerequisites:

Prerequisite: Spanish 202, 203 or 250 or Instructor's consent

Credits:

4.00

Description:

Develops written and oral skills in various contexts and registers. Emphasis on strengthening written skills and learning to speak clearly and persuasively in Spanish. Short texts and audio-visual materials provide the basis for classroom activities which include regularly assigned essays, group discussions and debates.

Term:

Offered Fall Term

Type:

Modern Language

- **SPAN-300 Intro to Cultural Texts**

Prerequisites:

Spanish 202, 203, 250 or Instructor's consent.

Credits:

4.00

Description:

Explores a selection of Peninsular and Latin American cultural materials. Primarily examines texts from different literary genres (narrative, drama, essay, and poetry). Develops critical skills required in more advanced Spanish courses, through close readings and textual analysis. Activities include regularly assigned essays, group discussions, and short scene work.

Term:

Offered Spring Term

- **SPAN-301 Spanish Culture and Civilization**

Prerequisites:

Spanish 202, 203 or 250. Spanish 290 or 300 are strongly recommended

Credits:

4.00

Description:

Examines the civilization and culture of Spain highlighting its historical development and cultural manifestations from pre-historic times to the nineteenth century. Students improve their four skills through activities that include discussions, oral presentations, and writing assignments based on reading and films.

Term:

Alternates Fall & Spring

- **SPAN-302 Indigenous and Colonial Latin America**

Prerequisites:

Spanish 202, 203 or 250 or Instructor's consent. Span 290 or 300 strongly recommended.

Credits:

4.00

Description:

Introduces students to the complexity Latin America by examining its roots in pre-Columbian America and the impact of Spanish exploration and colonization. Places emphasis on cultural, economic, historical, philosophical, political and religious patterns that define the region. Includes class discussions, oral presentations, and writing assignments based on reading and audio-visual material.

Term:

Alternates Fall & Spring

- **SPAN-303 Modern and Contemporary Latin America**

Prerequisites:

SPAN 202 or 203 or Instructor's consent. SPAN 290 or 300 strongly recommended.

Credits:

4.00

Description:

Examines the path taken by Latin American and Caribbean countries to build independent nations out of colonial territories highlighting the 19th, 20th, and 21st centuries, ethnic plurality, and cultural complexity in areas such as politics, religion, sociology, economics, customs, music & film. The cultural contributions of Spanish-speaking minorities in the United States are also addressed. Includes class discussions, oral presentations, and writing assignments based on readings and audio-visual material.

- **SPAN-315 Spanish for the Professions**

Prerequisites:

SPAN 290 or SPAN 300 or Instructor's consent.

Credits:

4.00

Description:

Integrates language learning with culture via business context of the Hispanic world. Spanish for banking and finance, marketing and advertising, and international commerce are highlighted. Students increase their cross-cultural understanding and written and oral proficiency in business Spanish through a wide range of assignments.

Type:

Global Engagement Experience

- **SPAN-390 Introduction to Latin American and Caribbean Literature**

Prerequisites:

SPAN 300; SPAN 302 is strongly recommended

Credits:

4.00

Description:

Examines authors from Latin America and the Caribbean in their historical and cultural contexts. Reading and class discussions consider the relationship between the writer and society by covering such topics as colonialism, the oral tradition, modernism and the emergence of new narratives in the twentieth century. The Inca Garcilaso, Sor Juana, Carlos Fuentes, Rigoberta Menchu, and Pablo Neruda are among some writers studied.

Term:

Occasional

- **THETR-260 Broadway Musicals**

Credits:

4.00

Description:

This course is a survey of American musical theatre from its roots in the mid-19th century to the present. It provides the analytical tools and historical insight to more fully appreciate Broadway's greatest musicals and musical theatre artists. Students will explore the ways in which American forms of popular entertainment helped to shape Broadway musicals from their infancy through their adulthood. The course also explores the ways in which musicals provided opportunities for African-Americans, women, immigrants, and the GLBT community.

Term:

Offered Fall Term

- **THETR-267 Introduction to Theatre: Contemporary American**

Credits:

4.00

Description:

This course provides a formal introduction to the theories and practices strategically used by American theatre artists after the Second World War. Special emphasis is placed on theatre artists exploring issues of cultural identity including works by GLBT, African-American, Asian-American, and Latin American playwrights. These playwrights may include Tony Kushner, Paula Vogel, Suzan-Lori Parks, Adrienne Kennedy, August Wilson, David Henry Hwang, Philip Kan Gotanda, Eduardo Machado, and Melinda Lopez. The course will also provide an introduction to trends in post-modern theatre practices related to emerging work of the auteur director, solo performers, and interdisciplinary collectives. Satisfies a core requirement for Theatre majors. Normally offered alternate years.

Term:

Occasional

- **WGS-111 Women, History, & Culture**

Credits:

4.00

Description:

Explores the roles and images of women in Western culture and the realities of women's everyday lives through literature, film, history, art, psychology, and recent feminist scholarship. Analyzes gender inequalities and the influence of gender on social structure, human behavior, and artistic expression. Topics include: the social construction of gender and identity; domestic prescriptions for women; women and work; intersections of gender, class, and race in American society; sexualities and identity; the politics of motherhood and reproductive rights; educating girls; negotiating male privilege and structural inequalities; representations of women in Western art and film; and women as artists and gendered models of creativity in art, film, fiction, and science.

Term:

Offered Both Fall and Spring

Type:

Social & Intellectual HST

- WGS-H111 Women, History, & Culture

Prerequisites:

At least a 3.3 GPA required.

Credits:

4.00

Description:

Explores the roles and images of women in Western culture and the realities of women's everyday lives through literature, film, history, art, psychology, and recent feminist scholarship. Analyzes gender inequalities and the influence of gender on social structure, human behavior, and artistic expression. Topics include: the social construction of gender and identity; domestic prescriptions for women; women and work; intersections of gender, class, and race in American society; sexualities and identity; the politics of motherhood and reproductive rights; educating girls; negotiating male privilege and structural inequalities; representations of women in Western art and film; and women as artists and gendered models of creativity in art, film, fiction, and science.

Term:

Offered Both Fall and Spring

Type:

Honors

- WGS-113 Women, Science, & Society

Credits:

4.00

Description:

Explores women's lives from the perspective of the social and natural sciences, including examination of recent biological, psychological, and sociological theories about gender and gender roles, as well as the influence of feminist scholarship in these areas. Topics include: the social construction of gender; the psychology and biology of sex and gender; women and work; media representations of women; the female body and eating disorders; women's health and lifecycle; women and sexuality; reproduction, abortion, and motherhood; and sexual violence against women.

Term:

- **WGS-115 Introduction to Gender Studies**

Credits:

4.00

Description:

Introduces the key topics and debates that have shaped the field of gender studies, including queer studies, masculinity studies, and women's studies. Through lecture and class discussion of texts from literature, film, history, psychology, and sociology, explores the pervasive influence of gender on the structure of society and our everyday experiences and the role that gender plays in our understanding of love, friendship, sexuality, and even violence. Topics include: biological arguments about gender and sexuality; the social construction of gender and identity; intersections of gender, race, class, and sexuality; masculinity and femininity; and theories of sexual difference and the construction of sexuality.

Term:

Occasional

Type:

Social & Intellectual HST

- **WGS-311 Engendering Entertainment: Feminism and Popular Culture**

Credits:

4.00

Description:

Investigates the complex intersections between feminism and popular culture through several different lenses: by exploring how feminists make arguments about popular culture; by looking at the complexities of public femininity in today's popular culture, including figures such as Lady Gaga and Katy Perry and television shows like The Bachelor and Grey's Anatomy; by focusing on a variety of articulations of feminism within mass media, blogs, social media, and popular books such as Ariel Levy's Female Chauvinist Pigs, and Caitlin Moran's How to Be a Woman. Along the way we will ask questions about: what makes a work of art feminist; how modern media contributes to or distracts us from a variety of political debates in the realm of female equality and how can we, as individuals, use modern media to create and advance smart, feminist arguments.

Type:

- WGS-315 Feminist Thought

Credits:

4.00

Description:

Investigates how feminists, both today and in history, have understood inequality and difference and looked for the best ways to address these issues and bring about social justice. Examines how feminist theorists help us to understand how gender and other social categories, such as race, class, sexuality, disability, age and nationality, are constructed within and through each other; and analyzes feminist engagements with liberalism, socialism, psychoanalysis, existentialism, post-colonialism, critical race theory, and queer theory, as well as consider anti-feminist arguments. Readings include classic critical texts by authors including Mary Wollstonecraft, Emma Goldman, Virginia Woolf, Chandra Mohanty, Gloria Anzaldua, and Judith Butler.

Type:

Social & Intellectual HST

- WGS-325 Global Women's Fiction

Credits:

4.00

Description:

Explores of various cultural worldviews in order to reveal and assess the voices of women from around the world as they respond to important global issues such as sexual violence and gendered oppression. Topics include: national citizenship, sexual politics, legal discourse, aesthetic representation, literary movements, genre, constructions of femininity, sexual identities, and representations of gender in relation to race and class and international cultures, and the relationship of self-image to the body politic.

Term:

Occasional

- WGS-335 Queer Narratives

Credits:

4.00

Description:

Explores the stories that help us to understand communities, identities, and bodies that could be considered queer, and the ways that film, music, memoir and fiction have discussed queer as different, unusual, or other. Texts include the documentary, "Paris Is Burning", Frank Ocean's 2012 album, "Channel Orange", and Janet Mock's recent memoir, "Redefining Realness", as well as foundational queer theory from Judith Butler, Eve Kosofsky Sedgwick, and Lee Edelman, among others, to help build a framework for approaching and interpreting both fictional and non-fictional accounts of queer lives.

Type:

Social & Intellectual HST

Courses that fulfill the Creativity and Innovation, Humanities/History, Language, Literature, Quantitative Reasoning, Seminar for Freshmen, Social Science, or VPATH requirements may double count to fulfill the Social, Cultural, and Global Perspectives (SCGP) requirement.

Major Requirements Minimum: 8 courses, 32 credits

Complementary Major Requirements, Minor Requirements, and Free Electives: credit varies

Minimum Total Credits Required for Degree Conferral: 126 credits

Note:

Core Requirements may also count toward major if taken at appropriate level.

Some degree programs exceed 126 credits.

2017-2018 Archived Catalog Information

Bachelor of Science Degree

Please note that these requirements are for students matriculating in or after fall, 2017. Students matriculating prior to fall, 2017 must reference the [Pre-Fall 2017 Degree Requirements \(Archives\)](#).

All BS degree programs require the successful completion of the following courses:

Core Requirements: 15 courses, 54-56 credits

- [First-Year Experience](#)
- [Seminar for Freshmen](#)
- [First-Year Writing](#)
- [Creativity & Innovation](#)
- [Math](#)
- [Social, Cultural, & Global Perspectives](#)
- [Science, Technology, & Engineering](#)
- [Studies in Literature](#)
- [Ethical & Philosophical Inquiry](#)
- [Human Behavior and Societies](#)
- [Social and Intellectual History](#)
- [Visual & Performing Arts Theory and History](#)
- [Quantitative Analysis](#)

Science, Technology, & Engineering (STE): 2 courses, at least one with a laboratory, 8 credits

Choose two STE (Science, Technology, and Engineering) courses, at least one with a corresponding laboratory, from those listed below. Courses do not need to be in a sequence. In the case of a course that is a lecture plus a lab, the student must complete both components to earn credit for the STE requirement.

Biology:

- **BIO-104 Environmental Biology**

Prerequisites:

BIO 101 and BIO L101, can also be taken concurrently BIO L104 must be taken concurrently

Credits:

3.00

Description:

An introduction to basic evolutionary, behavioral and ecological principles. Readings and discussions emphasize the ways that humans are affected by ecological processes and principles as well as how humans and their technology affect ecosystems. May not be taken by Biology majors or minors. This course will not fulfill requirements for a major or a minor in Biology. It is intended for non-biology majors as a follow-up to Biology 101. 3 hours lecture. Days Only. Madrid Campus only.

Type:

SCI TECH ENGNR

- **BIO-L104 Environmental Bio Lab**

Prerequisites:

BIO-104 must be taken concurrently

Credits:

1.00

Description:

Exercises and field trips designed to complement and demonstrate the ecological principles developed in the lecture section. The lab emphasizes the scientific method and employs long term group projects. Madrid Campus only.

Type:

- **BIO-105 Humans and the Evolutionary Perspective**

Prerequisites:

Non Science Majors Only

Credits:

4.00

Description:

Major topics include the scientific basis of evolution, the fossil history of vertebrates, evidence of evolution in the human body, and applying an evolutionary perspective to the social interactions and possible futures of humanity. Meets one of the non laboratory science requirements for the non-science major. This reading and writing intensive course is a non-laboratory science option for non-science majors. This course will not fulfill requirement for a major or a minor in Biology.

Term:

Occasional

Type:

SCI TECH ENGR

- **BIO-111 Introduction to the Cell**

Prerequisites:

Must take BIO L111 concurrently

Credits:

3.00

Description:

Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **BIO-L111 Introduction to the Cell Laboratory**

Prerequisites:

Concurrently with BIO 111

Credits:

1.00

Description:

Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **BIO-114 Organismal Biology**

Prerequisites:

Must take BIO L114 concurrently.

Credits:

3.00

Description:

Rigorous introduction to organismal biology emphasizing evolution, phylogenetics, form, and function. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L114 Organismal Biology Laboratory**

Prerequisites:

Must take BIO 114 concurrently

Credits:

1.00

Description:

A series of laboratory experiences in evolution, diversity, anatomy and physiology.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-201 Biology's Big Questions**

Prerequisites:

Non Science Majors Only.

Credits:

4.00

Description:

This course seeks to answer five current questions from all levels of biology, from the subcellular to the ecosystem level. Topics will be discussed in the context of genetics, evolution, and ecology. We will focus on the process of doing science, including how scientists evaluate ideas and communicate their findings. Emphasis will be placed on topics in biology that impact daily life.

Type:

SCI TECH ENGR

Chemistry:

- **CHEM-105 Chemical New Product Development**

Prerequisites:

ENT 101

Credits:

4.00

Description:

This course addresses the crucial intersection between chemistry and business, and the impact of these fields on society. It provides an introduction to important chemistry concepts and practices of business management. Primary focus is on understanding the chemistry principles behind some of the consumer products in our everyday lives, and using this knowledge to create and evaluate ideas for new products. The course also introduces the business aspects involved in the development and marketing of new products. An important component of the course is in making effective presentations; this component concludes the course, culminating in team presentations of a new chemical product to panel of executives and peers. This course satisfies the Sawyer Business School Science requirement.

Type:

SCI TECH ENGR

- **CHEM-106 Biotechnology & Its Applications in Medicine, Agriculture, Law**

Credits:

4.00

Description:

Introduces the latest discoveries and applications of biotechnology. Topics include genetically modified food, stem cells, genetic testing, cloning, and forensics. A combination of lectures, discussions, short documentaries, mock congressional hearings, and hands-on activities will provide insight into the numerous medical, social, legal, and ethical issues surrounding this technology.

Type:

SCI TECH ENGNR

- **CHEM-111 General Chemistry I**

Prerequisites:

Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:

3.00

Description:

Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **CHEM-L111 General Chemistry Laboratory I**

Prerequisites:

MATH-104 MATH-108 MATH-121 MATH-128 MATH-130 MATH-134 MATH-164 MATH-165 MATHT-MPEL1 MATHT-MPEL2 or MATHT-MPEL3. Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

Computer Science:

- **CMPSC-F107 Ants, Rumors and Gridlocks**

Prerequisites:

Math placement level of 2 or above or any MATH course at the level 100 or above

Credits:

4.00

Description:

Do viruses and rumors spread like forest fires? How do ants cooperate? Do spoken languages and biological species evolve in a similar way? Ants, Rumors, and Gridlocks exposes students to introductory aspects of computational science by addressing and answering these and many other questions. Students use and modify virtual experiments preprogrammed in the NetLogo programming language to investigate these topics and others in Social Sciences, Biology, and Environmental Science. No prior knowledge of computer programming or NetLogo is required.

Type:

SCI TECH ENGR

Electrical Engineering:

- **ECE-288 Measuring the World**

Credits:

4.00

Description:

The world is addicted to quantifying the essence of everything, from personal IQ, to the speed of a baseball, to our healthiness, or our chances of winning the lottery. Behind most of these numeric values exists a science of measurement. Some of this is referenced to international standards, such as for length, time, weight, or temperature. Others are more arbitrary and subjective, such as ranking Olympic performance in gymnastics, beauty pageants, or popular responses as found in the game show Family Feud. A third category includes controversial areas, such as measuring whether a person is lying when interrogated, or using hype rather than reality to market products. Sometimes statistics are used to predict sports outcomes, such as in the annual March Madness NCAA basketball brackets. Finally, in a world subject to fraud and deception, it can be essential to distinguish legitimate from counterfeit items, such as in money, art, collectibles, and historical documents. Don't get hoodwinked! This course examines all of these, starting with how measurements have been made throughout history, along with a full deck of entertaining terms used during the ages. This may help you sort out your weight, whether given in pounds, kilos, or stones. Often these terms will provide insights into how people lived in different eras. We will also look at some of the technologies currently available to provide these measurements, and unravel the complexities of various sensors that are used. As we consider the meaning of accuracy we may become less naive about how much confidence to ascribe to the results given us. Hovering around all of these measurements should be the question of validity - are they meaningful, useful, or misleading? And the impact they have on society - whether they steer behavior more powerfully than one might originally suspect. Each student will also be given an opportunity to become an expert in an area of measurement of personal interest. By the end o

Type:

SCI TECH ENGR

Engineering Science:

- **ENS-103 Introduction to Engineering**

Prerequisites:

ENS L103 MUST BE TAKEN CONCURRENTLY.

Credits:

3.00

Description:

This course provides exposure to engineering practice, with particular focus on electrical engineering components such as circuit elements and systems. It seeks to go beyond the mathematics and provide an intuitive appreciation of functional devices. Examples taken from a broad swath of technological history illustrate significant crossroads, decisions, and inventiveness. Emphasis is placed on learning to think as an engineer - assessment of problems, candidate solution tradeoffs, and implementations. Frequent exercises in creative engineering design will be used. Students will be required to design several elementary devices, such as a magnet, a capacitor, a timing device, and a motor, which they will enter in a competition for overall strength, compactness, accuracy, or speed. Sometimes assignments relate to "survival on an island" concerns, such as communication or drinking water. Students also learn about reverse engineering by selecting, building, troubleshooting, and presenting an electronic kit of their choice. A term paper determining the engineering behind a topic of their choice will also be written and presented. On occasion (see ENS L103) there will be team competitions between various smaller groups in the class.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

• ENS-L103 Intro to Engineering Lab

Prerequisites:

Must be taken Concurrently w/ ENS-103

Credits:

1.00

Description:

The Lab is designed to provide opportunities to gain familiarity with engineering tools. Students will be introduced to parts (e.g. learn the resistor color code), test equipment (multimeters, prototyping trainers, signal generators, and oscilloscopes), and construction techniques (wiring, soldering, troubleshooting). Although it varies from year to year, Class Projects can be built during the Lab sessions. In the past these have included a 25 Watt electric generator, various door lock systems (both mechanical and electronic), and an AM transmitter and receiver (all projects made from scratch). It is likely that 2010-2011 may introduce some robotic creations for a competition. Electronic kits and motors can also be built and serviced in the Lab.

There is an adjoining machine shop, which can be utilized (with supervision), for fabricating items. Individual creativity is encouraged, and informal problem solving sessions occasionally occupy lab time. However, the lab is accessible outside of the traditional scheduled time.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

Environmental Science:

- **UES-107 Introduction to Drones**

Prerequisites:

UES-L107

Credits:

3.00

Description:

Unmanned autonomous systems (UAS) or Drones are high-tech, intelligent machines capable of traveling by air, land, or sea via a remote connection. This course presents concepts and practical methods of using Unmanned Vehicles in a professional context, particularly for environmental projects. UAVs are increasingly being used in a professional capacity such as cinematography and filming, real estate, construction, surveying, mapping, agriculture, industrial inspections, utilities inspections and many more. The course covers mission planning, operations, field data collection, data processing, legal implications, data analysis and data deliverables. The course and laboratory will include learning flying micro-drones and preparing to pass the Federal Aviation Administration's Unmanned Aerial Vehicle Airmen (Part 107) exam. The course will have an associated Laboratory component in which students will learn how to properly plan effective flight missions, fly safely and legally, develop risk management strategies, analyze the data captured and convert it into a useful data deliverable.

Type:

SCI TECH ENGNR

- **UES-L107 Introduction to Drones Lab**

Prerequisites:

UES-107

Credits:

1.00

Type:

SCI TECH ENGR

• UES-111 Environmental Science**Prerequisites:**

Must be taken concurrently with UES-L111

Credits:

3.00

Description:

Applies the fundamentals of science to environmental issues. Topics include population dynamics and resources, environmental degradation, ecosystems, geologic processes, deforestation, biodiversity, climate change, air, soil, and water resource management, and pollution and risks to health.

Term:

Offered Spring Term

Type:

SCI TECH ENGR

- **UES-L111 Environmental Science Lab**

Prerequisites:

Must be taken concurrently with UES-111.

Credits:

1.00

Description:

Laboratory exercises are used to illustrate topics covered in UES 111. Field testing and analysis of environmental samples. Field trips may be required.

Term:

Offered Spring Term

Type:

SCI TECH ENGR

- **UES-121 Science, Art, and the Environment**

Prerequisites:

Take UES-L121 concurrently

Credits:

3.00

Description:

Examines art and cultural objects through the lens of the biological, chemical, and physical principles of the materials and processes we use to make them. Includes consideration of factors important in art conservation. Provides an environmental context for the manufacture and use of art materials

and the preservation of cultural objects.

Type:

SCI TECH ENGR

- **UES-L121 Science, Art, and the Environment Lab**

Prerequisites:

Take UES-121 concurrently

Credits:

1.00

Description:

Provides hands-on work with pigments, dyes, and other art materials using the basic principles of science and technology. Students will conduct laboratory experiments that produce art objects and other consumer products. Instruction in safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables, graphs, and graphics. Practice in synthesizing compounds like paints and finishes and in evaluating methods of art conservation.

Type:

SCI TECH ENGR

- **UES-225 Geographical Information Science**

Prerequisites:

Take UES-L225 concurrently

Credits:

3.00

Description:

Provides the fundamentals of geographic information science (GIS) including the history of automated mapping. A review of the necessary hardware and software elements used in GIS is presented. Hands-on exercises with computerized mapping software are required.

Type:

SCI TECH ENGNR

- **UES-L225 Geographic Information Science Lab**

Prerequisites:

Must be taken concurrently with UES-225

Credits:

1.00

Description:

Required companion computer laboratory to be taken concurrently with UES 225.

Type:

SCI TECH ENGNR

Forensic Science:

- **FS-103 Introduction to Forensic Science**

Prerequisites:

FS-L103

Credits:

3.00

Description:

Application of the principles of forensic science in evaluating physical evidence, with emphasis on its role in criminal investigation. Class experiences may include guest lectures and field trips. 3-hour lecture. Normally offered Fall

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **FS-L103 Introduction to Forensic Science Lab**

Prerequisites:

FS 103 concurrently

Credits:

1.00

Description:

Laboratory experiences related to the collection and analysis of physical evidence as performed by forensic science professionals. Experiments may include forensic microscopy, drug analysis, forensic serology, physical patterns, fingerprint and firearm evidence analysis techniques. 3-hour laboratory. Normally offered Fall

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

Neuroscience:

- **NEUR-101 Intro to Neuroscience**

Credits:

4.00

Description:

Introduces the field of neuroscience, the study of the organization and function of the nervous system of humans and other animals. Neuroscientists examine how individual neurons function as signaling devices, how groups of neurons operate as circuits to produce fundamental units of behavior, and how much larger systems in the brain subserve complex functions such as memory and consciousness. Topics include the neuron and neural transmission, the overall function and organization of the nervous system, the development of the brain, neural plasticity, sleep, memory and other higher cognitive functions. Normally offered alternate years.

Type:

SCI TECH ENGNR

Physics:

- **PHYS-111 College Physics I**

Prerequisites:

Take MATH-121 or MATH-134 or MATH-165 or permission of Physics department chair; PHYS L111 taken concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **PHYS-L111 College Physics Lab I**

Prerequisites:

PHYS 111 concurrently

Credits:

1.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course. Error propagation, use of Excel, laboratory notebooks and formal reports required.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

• **PHYS-151 University Physics I**

Prerequisites:

MATH-121, MATH-165 or MATH-164 and PHYS L151 concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **PHYS-L151 University Physics Lab I**

Prerequisites:

PHYS 151 concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **PHYS-152 University Physics II**

Prerequisites:

PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

Credits:

3.00

Description:

This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **PHYS-L152 University Physics Lab II**

Prerequisites:

PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **PHYS-153 University Physics III**

Prerequisites:

MATH-121, MATH-164 or MATH-165

Credits:

3.00

Description:

This calculus-based course is the introduction of the topics of modern physics. It begins with special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom. Then Schrodinger's equation is introduced with use of wave functions, particle box, barrier penetration, quantum mechanical tunneling, the Pauli Exclusion principle, the development of the periodic table, and the X-ray spectra. Development of solid state physics with bonding in molecules, band theory of solids and semiconductor behavior. The final topics cover nuclear physics, radioactivity, half-life, nuclear fission and fusion, medical uses of radiation, elementary particle physics and introduction to astrophysics.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **PHYS-L153 University Physics III Lab**

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts of special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom.

Type:

SCI TECH ENGNR

Science:

- **SCI-103 Environmental Science**

Prerequisites:

SCI-L103 must be taken concurrently

Credits:

3.00

Description:

Case study approach to the fundamentals of science applied to environmental degradation, ecosystems, geological processes, population dynamics, deforestation and biodiversity, climate change, ozone depletion, air soil, and water resource management, pollution and risks to health, economics and the environment, politics and the environment, and ethics and the environment.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

• **SCI-L103 Environmental Science Lab**

Prerequisites:

Must take SCI-103 concurrently

Credits:

1.00

Description:

Laboratory exercises to illustrate the topics covered in Science 103. Field-testing and analysis of environmental samples. Field trip required.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

• **SCI-108 Introduction to Cancer Care**

Credits:

4.00

Description:

This course will introduce the students to the top ten U.S. adult cancers, as well as the most common pediatric cancers. Topics to be covered include cancer causes, detection, and prevention. Psychosocial aspects of being diagnosed with cancer and the role nutrition plays for cancer patients will be described. The course will also discuss the major treatment modalities for each cancer including radiation therapy, surgery, chemotherapy, and bone marrow transplants. The goals and objectives of the course will be met through the use of various teaching tools including but not limited to: PowerPoint presentations, videos, guest lectures, and a poster project with a presentation component. Cognitive assessment of the students will be accomplished through homework, quizzes, exams, and a group poster and oral presentation. Students with any type of academic background are welcome.

Term:

Offered Fall Term

Type:

SCI TECH ENGR

• SCI-111 Introduction to Astronomy

Prerequisites:

MATH-128 or higher and SCI-L111 must be taken concurrently.

Credits:

3.00

Description:

History of Astronomy from the ancients to Newton; light; telescopes; sun, earth, moon planets, comets, asteroids, meteors; space programs, science and technology in society. Course culminates with a visit to the Clay Center Observatory, where students will be able to make first hand observations. For non-science majors.

Term:

Occasional

Type:

SCI TECH ENGNR

- **SCI-L111 Introduction to Astronomy Lab**

Prerequisites:

Take SCI-111 concurrently

Credits:

1.00

Description:

Laboratory experiments and exercises to illustrate the principles discussed in Science 111. Observational exercises using the Celestron telescope, astrophotography exercises, and computer simulations. Course culminates with a visit to the Clay Center Observatory, where students will be able to make first hand observations.

Term:

Occasional

Type:

SCI TECH ENGNR

- **SCI-112 Structure of the Universe**

Prerequisites:

MATH-128 or higher and SCI-L112 concurrently

Credits:

3.00

Description:

Astronomy of the cosmos; sun, stars, interstellar materials, galaxies, pulsars, quasars, black holes; nature of time relativity, cosmology. Course culminates with a visit to the Clay Center Observatory, where students will be able to make first hand observations. For non-science majors.

Term:

Occasional

Type:

SCI TECH ENGNR

- **SCI-L112 Structure of the Universe Lab**

Prerequisites:

Take SCI-112 concurrently

Credits:

1.00

Description:

Laboratory experiments and exercises to illustrate the principles discussed in Science 112. Observational exercises using the Celestron telescope, astrophotography exercises, and computer simulations. Course culminates with a visit to the Clay Center Observatory, where students will be able to make first hand observations.

Term:

Occasional

Type:

SCI TECH ENGNR

- **SCI-113 A Habitable Earth Within the Solar System**

Credits:

4.00

Description:

This course introduces non-science majors to concepts that are central to making our planet habitable. It presents Earth in context of the solar system with a broad view of global climate change and energy resources in a quest to better understand the workings our planet. This course on Earth and Planetary Science is suitable for students who may have taken their last science and math course several years ago, or are just curious about knowing facts on major issues that pertain to the future of our planet. Together with a reading component, this course aims to give students a flavor of how researchers think, investigate and develop conclusions that directly affect our political and economic future. Topics covered in this course range from the solar system to the study of search for other habitable Earth-like planets, search for extraterrestrial life, and evolution of life on Earth. Other characteristics of this course are heavy use of audio-visual materials often including computer animations and simulations, in-class experiment demonstration, and intensive use of INTERNET-based resources.

Type:

SCI TECH ENGNR

• SCI-165 Inner Workings of Physics Universe

Credits:

4.00

Description:

About 15 billion years ago, (data indicate) the big bang occurred and the universe was born. With it came physical laws and a spectacular array of consequences that lead to the universe as we know it. This non-lab , 4 credit course explores the inner workings of the physical universe in terms of the scientific inquiry which lead to Newton's laws, an understanding of energy, waves, light, electricity, atomic structure, chemical reactions, nuclear physics, particle physics, relativity, and the big bang theory. During the course, students will learn to make use of modern resources to access scientific and technical literature to research a scientific topic. They will learn to distinguish between science and technology (e.g. quantum mechanics and nanotechnology, the discovery of the Higgs boson and the large hadron collider that made it possible, etc.) and to understand how the science, technology, and engineering disciplines play a crucial role in recognizing and solving problems of society and the world that we share.

Type:

SCI TECH ENGNR

• SCI-171 The Built World: How Humans Engineer Environments

Credits:

4.00

Description:

The most basic needs of humans have not changed - water, food, and shelter - but the means of meeting these needs has. In this course, we will examine how technology-driven societies operate by studying how cities are built and how they function. Topics will include water supply and distribution systems; transportation systems (including road and bridge design and construction); building design, construction, and operation (including skyscraper and sustainable building design), and waste removal systems (municipal and industrial wastewater removal and treatment, solid waste removal and treatment). This is not a course about little gadgets and widgets; this is a course about big engineering marvels; and it emphasizes applications of science - how things work - rather than scientific theory.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

• SCI-173 Mapping Our World The Power of Digital Maps

Prerequisites:

SCI L173 Must be taken concurrently Knowledge of Windows type Application

Credits:

3.00

Description:

Geographic Information Science (GIS) link information (number of fire hydrants on a block) to features on a map (e.g., a point representing street address) that has a designated geographic location (as designated by global coordinates). Unlike paper maps, GIS software allows the production of interactive maps that allows the user to layer data, to indicate spatial patterns, to analyze trends, and to combine different features of the mapped area in novel ways. For example, a business person may wish to use GIS to determine the optimum location of retail outlet (based on the mapped demographics of a neighborhood), while an environmental engineer may use GIS to describe the location of outfalls to see how they correlate to areas of stream pollution. In this course, students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

- **SCI-L173 Mapping Our World Lab**

Prerequisites:

Must be taken concurrently with SCI-173

Credits:

1.00

Description:

This laboratory illustrates concepts and methods taught in SCI 173. In this lab students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **SCI-181 Science and Life in the 21st Century**

Credits:

4.00

Description:

No longer offered on Boston campus This is a four credit, non-lab, science course that examines the central scientific problems confronting the 21st century. The course studies particular topics and teaches the necessary science around these topics to provide a good understanding of the issues. The topics currently are: Energy, Science and Economic Decisions, Sustainability of Life on Earth, Health and Science.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **SCI-184 Contemporary Science and Innovation**

Credits:

4.00

Description:

This is a 4 credit, project based science course that examines the central scientific problems confronting the 21st century. The course consists of lectures, class discussions, field trips, and in-class hands-on activities designed to familiarize the student with different concepts of the lectures. The current focus is on sustainable energy production. A final team project related to the course topics will be given. This is the version of SCI 183 without a separate lab component. Students who have taken SCI 183, L183 are not allowed to take this course.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **SCI-201 Physics for Future Presidents**

Credits:

4.00

Description:

This course presents a topical introduction to the key principles and concepts of physics in the context of the world events and natural phenomena that confront world leaders and that require informed decisions and responses. Energy, health, counter-terrorism, remote sensing, space programs, nuclear proliferation, and a host of other modern challenges have technological and scientific dimensions, the understanding of which is essential to avoiding disastrous policy decisions. This course considers the application of physics to these societal challenges. The material is covered at a level and pace that a future world leader should be able to handle; the emphasis is on the development of physical reasoning skills, and not on detailed, mathematical problem solving.

Type:

SCI TECH ENGR

- **SCI-210 Earth and Planetary Crystals**

Prerequisites:

Take SCI-L210 concurrently

Credits:

3.00

Description:

This course will provide undergraduate students of various disciplines with an introduction to gems and crystals using interactive, evidence-based teaching approaches. Crystalline forms of matter are critical to our existence. Using innovative teaching strategies of in-class hands-on demonstration, supplemented with visuals of crystal details, the course provides students insights into the formation, alteration and unique properties that make crystals invaluable. Topics range from the study of proteins and nucleic acids to the interior of planets. The in-class lectures will provide a basic guide that will serve as a platform for individually catered in-depth study. Therefore, the course is open to advanced students as well, who can pick up higher level of information for discussion and class projects.

Type:

SCI TECH ENGR

Studies in Literature: 1 course, 4 credits

Choose one Studies in Literature course from those listed below:

- **ENG-113 World Drama I**

Credits:

4.00

Description:

Survey of drama and theatre as part of world culture from classical Greece through 18th-century China. Normally offered yearly.

Term:

Offered Fall Term

Type:

Studies in Literature

- **ENG-114 World Drama II**

Credits:

4.00

Description:

Survey of drama and theatre as part of world culture from the 19th century to the present.

Term:

Offered Spring Term

Type:

Studies in Literature

- **ENG-130 Introduction to Literature**

Credits:

4.00

Description:

Study of poetry, prose, and drama, with emphasis on close reading and literary analysis. Students will compose formal essays discussing the meanings and relationship between texts as well as the author's craft and relationship to the reader. Offered every semester.

Type:

Studies in Literature

- **ENG-135 World Literature in English**

Credits:

4.00

Description:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

Term:

Offered Both Fall and Spring

Type:

Studies in Literature

- **ENG-141 Studies in British Literature**

Credits:

4.00

Description:

Study of poetry, prose, and drama from the British literary tradition, with emphasis on close reading and literary analysis. Students will compose formal essays discussing the meanings and relationship between texts as well as the author's craft and relationship to the reader. Offered every semester.

Type:

Studies in Literature

- **ENG-142 Studies in American Literature**

Credits:

4.00

Description:

Study of poetry, prose, and drama from the American literary tradition, with emphasis on close reading and literary analysis. Students will compose formal essays discussing the meanings and relationship between texts as well as the author's craft and relationship to the reader. Offered every semester.

Type:

Studies in Literature

- **ENG-151 Introduction to African-American Literature**

Credits:

4.00

Description:

Literature has the capacity to record and interrogate history in an imaginative and artistic context. African-American literature is a rich, varied, and complex body of literature that faces our tainted history directly. The authors we will read in this class examine slavery's long-term psychological and social effects while forging a literary history that is at once a part of and apart from American literary history more generally.

Type:

Studies in Literature

- **ENG-152 Horror Fiction**

Credits:

4.00

Description:

This course focuses on the reading and analysis of horror literature and the ways in which horror reflects and represents personal and cultural anxieties. Readings will include both classic and contemporary authors, for example, Edgar Allan Poe, H.P. Lovecraft, Shirley Jackson, Stephen King, and others. Assignments will include analytical essays as well as creative writing.

Type:

Studies in Literature

- **ENG-153 Literature of War**

Credits:

4.00

Type:

Studies in Literature

- **ENG-155 Young Adult Literature**

Credits:

4.00

Description:

Young Adult Literature's recent explosion in popularity raises important questions about the stories it tells, the values it promotes, and the audiences it seeks. This course approaches the YA phenomenon as one with deep historical roots as well as contemporary cultural relevance. From nineteenth century classics to current series favorites, literary works focused on young people reframe perennially fresh narratives about coming of age, negotiating personal identity, and navigating a complex moral universe. This course also considers YA literature as part of an evolving network of writers, readers, publishers, critics and filmmakers.

- **ENG-157 Poetry and Religion**

Credits:

4.00

Description:

This course will use close readings to examine poetry as a heightened form of language seeking to make contact with divine sources of faith. We will consider poems that provide examples of the struggle to attain belief, as well as poems that deny belief. Language as both the grammar of ascent and the locus of descent. The position of human beings in relation to God, or the gods, or the absence of the divine.

Type:

Studies in Literature, Classics Minor

- **ENG-161 Writing the American West**

Credits:

4.00

Description:

In 1893, Frederick Jackson Turner famously declared that the American frontier (i.e., the West) had closed for good. To a certain extent, Jackson's proclamation was meant to demarcate the end of the 19th century. But perhaps more importantly, it marks the beginning of a distinctly American literature that began, ironically, by mourning its own demise. In this course, we will journey among some of the more significant signposts and detours that have marked Western U.S. literature in the 20th Century. Along the way, we will question just where, exactly, the West begins and ends (The Mississippi River? The Great Plains? The Rockies?), and think about whether or not Turner's frontier thesis continues to hold true (if it ever did). We will consider whether the broad rubric of The West is adequate to describe the various sub-regions within this portion of the United States, and we'll examine the genres which seem as if they could not have happened anywhere else. We will also interrogate differences in the literature across gender lines: how, if at all, does the literature written by men and by women differ? Above all, we will strive to come away with a deeper understanding of this vitally American, and vitally Wild literary place.

Type:

Studies in Literature

- **ENG-213 English Literature I**

Credits:

4.00

Description:

Study of major writers of England from the beginning to the mid-18th century. Regularly assigned essays on the reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Studies in Literature

- **ENG-214 English Literature II**

Credits:

4.00

Description:

Study of major English writers from the mid-18th century to the present. Regularly assigned essays on the reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Studies in Literature

- **ENG-217 American Literature I**

Credits:

4.00

Description:

Study of major American writing from its origins through 1865. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Studies in Literature

- **ENG-218 American Literature II**

Credits:

4.00

Description:

Study of major American writing from 1865 through the present. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Studies in Literature

- **FR-216 Masterpieces of French and Francophone Literature in English Translation**

Credits:

4.00

Description:

Masterpieces of French and Francophone Literature in English Translation. Studies works translated into English by major authors from the Middle Ages to the present. Explores drama, fiction, and poetry from many regions of the world: Africa, Western Europe, North America, the Caribbean, and Vietnam.

Term:

Alternates Fall & Spring

Type:

Studies in Literature

- **FR-309 Survey of French Literature I**

Prerequisites:

FR 202 or Instructors permission

Credits:

4.00

Description:

Analyzes and discusses canonical works of French literature from medieval times to the eighteenth century.

Term:

Offered Fall Term

Type:

Studies in Literature

- **FR-310 Survey of French Literature II**

Prerequisites:

FR-202 or instructor's permission

Credits:

4.00

Description:

Study, analyze and discuss canonical works of French-language literature from the nineteenth through the twenty-first centuries, as they relate to important events in the art, culture, and history of the Francophone world.

Term:

Offered Spring Term

Type:

Studies in Literature

- **FR-315 Mots Doux: Love, Lust and Literature**

Prerequisites:

Take FR-205 or Instructor's consent

Credits:

4.00

Description:

Explores the theme of love and its manifestation in representative works while being aware of the evolution of French Literature. Addresses various thematics that accompany a traditional survey of literature course such as critical discourse, aesthetic representation, literary movements, genre, construction of sexual identities, sexual politics as well as representations of ethnicity, class, and culture.

Term:

Occasional

Type:

Studies in Literature

- **FR-318 Face in the Mirror: Writing & Reflecting the Self in French**

Prerequisites:

FR-205 and FR-305 or Instructor's consent

Credits:

4.00

Description:

Examines literature in the French language focusing on memoir, essay, and autobiography. Read authors such as, Montaigne, Rousseau, Lamartine, Colette, Duras, Beauvoir, Le, Chamoiseau, Djébar, Conde, Ernaux, Genet, and Satrapi. Develops an appreciation of the differences between autobiography and autofiction. Explores the question of truth and the fallibility of memory.

Type:

Studies in Literature

• **WGS-211 Heroines, Hotties & Hubris: Adolescent Girl's Books**

Credits:

4.00

Description:

Explores what we can learn from the books that teenage girls read. In addition to a wide array of interesting and complex Young Adult novels targeted to young female readers, students will be exposed to theories of adolescent development, literary criticism, and social theory. Topics include how the dilemmas of girlhood have changed or stayed constant and the urge, so common in books for children and teens, to teach kids how to think and behave.

Term:

Occasional

Type:

Studies in Literature

• **WGS-220 Other Worlds, Other Genders: Women and Science Fiction**

Credits:

4.00

Description:

Examines through both classic and contemporary science fiction a variety of possibilities for world-reimagining in the realms of gender, sexuality, race, and other forms of difference. Draws on theories of utopian and dystopian discourse, engages with questions of biology and reproduction, and explores colonialism through first-contact and space empire narratives.

Ethical & Philosophical Inquiry: 1 course, 4 credits

Choose one Ethics course from those listed below:

- **PHIL-119 Ethics**

Credits:

4.00

Description:

A systematic introduction to the major thinkers and their positions on the main issues of ethics, such as: What is morality? What are moral values? How should we live our lives? Are there objective, universal, absolute moral standards? If so, what are they, and what is their basis? 1 term - credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- **PHIL-120 Ethics and Civic Life**

Credits:

4.00

Description:

In this class you will be introduced to the perspectives and methods of politics, philosophy, and economics and see how these three disciplines present distinct but interconnected dimensions of current social and political issues.

- **PHIL-123 Social Ethics: The Good Life**

Credits:

4.00

Description:

An examination of contemporary Western society, particularly in the United States, in relation to philosophical attempts to define the good life. Current books that exhibit a philosophical approach towards important contemporary social issues will be discussed, as well as classics in philosophy. Topics may include: civic virtue, consumerism, current events, economic justice, popular culture (film, music, television), religion and secularism, etc. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- **PHIL-127 Contemporary Moral Issues**

Credits:

4.00

Description:

A critical examination of a number of contemporary moral issues such as: abortion, affirmative action, animal rights, capital punishment, cloning, drug legalization, environmental ethics, euthanasia, genetic engineering, gun control, pornography, same-sex marriage, suicide, war and terrorism, etc. 1 term - 4 credits. Normally offered every year.

Human Behavior and Societies: 1 course, 4 credits

Choose one Human Behavior and Societies course from those listed below:

Advertising and Public Relations:

- **ADPR-285 Media and Pop Culture I**

Credits:

4.00

Description:

Examines the influence of media on contemporary society from a social science perspective. Television, radio, film, and print formats are discussed in terms of their persuasive impact on mass culture in the U.S.. The emergence and development of Rock N Roll is discussed in unison with the Civil Rights, Student's Rights, and anti-War movements of the period from 1946-1972.

Term:

Offered Spring Term

Type:

Human Behavior & Societies

Communication:

- **CJN-255 Introduction to Media**

Credits:

4.00

Description:

An introduction to the role of media in contemporary society, focusing on media's influence on cultural, political, and ideological processes. An examination of the historical contexts within which newspapers, radio, television, and new media technologies develop, and how audiences interact with and influence the use of media.

Term:

Offered Both Fall and Spring

Type:

Human Behavior & Societies

- **CJN-375 Organizational Communication**

Credits:

4.00

Description:

Historical development of the theory of organizations, examination of information flow, network analysis, communication overload and underload, corporate culture, superior-subordinate communications, organizational effectiveness, and change processes.

Term:

Offered Fall Term

Type:

Human Behavior & Societies

Economics:

- **EC-151 Economic & Human Geography**

Credits:

4.00

Description:

The study of how economic and human activity is distributed across space, the reasons for these spatial distributions, and the processes that change the spatial organization of economic activity over time. Topics include: maps, map projections, and geographic information systems; population geography; the organization and location of cities, towns and villages; transportation and communication policy; industrial location; the geography of world trade; and geographic features of economic development. The course takes a global perspective, and draws on cases and examples from all over the world. Cultural Diversity B

Type:

Asian Studies, Human Behavior & Societies

Government

- **GVT-110 Introduction to American Democracy**

Credits:

4.00

Description:

An introduction to the American political system and constitutional framework. Focus will be on the interplay of various institutions (the Presidency, Congress and the Judiciary) in creating public policies. Contemporary public issues will be discussed, as will the role of political theory in shaping American democracy. Attention will be given to the role of the news media, public opinion, political ideology, political parties and interest groups in the American system.

Type:

Human Behavior & Societies

- **GVT-115 Evolution of the Global System**

Credits:

4.00

Description:

The goal of this course is to introduce the student to the main actors, social facts and processes that shaped the international system in the nineteenth and twentieth centuries. By analyzing the spread of industrialization, the race for colonies, the thrust of imperialism, and the rapid growth of nationalism, among other factors, this course explains the contradictory and simultaneous trends of unprecedented levels of prosperity and violence in Europe and beyond. While the course examines the role of the United States in the international system, particularly in light of its dominant role since the early twentieth century, it also emphasizes the developments taking place in other regions such as Asia, Africa and Latin America. This will allow students to understand the global arena as a space of complex interconnections involving varieties of forms of production, national political cultures and idiosyncratic traditions. This course sets the foundations for other courses in International Relations and Regional Studies

Type:

Psychology:

- **PSYCH-114 General Psychology**

Credits:

4.00

Description:

Surveys core theoretical concepts and contemporary empirical research from the major sub-fields of psychology: physiology; perception; cognition; learning; emotion; motivation; development; personality; psychopathology; psychotherapy; and social behavior. Required for psychology majors. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Human Behavior & Societies

Sociology:

- **SOC-113 Introduction to Sociology**

Credits:

4.00

Description:

An introduction to the sociological understanding of human interaction, group process and social structures. Students are introduced to basic concepts, theories and methods of sociological investigation. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Human Behavior & Societies

- **SOC-116 Social Justice**

Credits:

4.00

Description:

An examination of traditional and contemporary problems associated with major social institutions such as the family, economics, government and education. Social forces related to ethnicity, social class, health and welfare, and urbanization are also included. Alternative remedial measures based on behavioral science theories are discussed. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Human Behavior & Societies

- **SOC-224 Families in Contemporary Society (Spain)**

Credits:

4.00

Description:

Spain has experienced major socio-demographic changes since the mid 1970s. These transformations mainly arise from the new role of women in society and, in particular, women's higher levels of education, work experience, and labor market attachment. The changes in women's labor force participation have occurred in conjunction with a progressive postponement of main family events, such as leaving the parental home, forming a partnership and having children, as well as with a reduction in the family size. Spain is, indeed, characterized as having one of the lowest low fertility levels within Western industrialized countries, a pattern that is exacerbating the ongoing process of population aging. This picture partly reflects the conflicting relationship that currently exists between women's labor force participation and the accommodation of family responsibilities: the so-called work/ family balance. Ongoing differences among countries have been accounted for by different explanatory factors that involve socio-economic,

cultural and social policy dimensions. From a comparative perspective, the course is intended to cover recent debates, controversies, and research on family formation and family dilemmas in contemporary Spain.

Type:

Human Behavior & Societies

Occasional

Type:

Social & Intellectual HST

Women's & Gender Studies:

- **WGS-111 Women, History, & Culture**

Credits:

4.00

Description:

Explores the roles and images of women in Western culture and the realities of women's everyday lives through literature, film, history, art, psychology, and recent feminist scholarship. Analyzes gender inequalities and the influence of gender on social structure, human behavior, and artistic expression. Topics include: the social construction of gender and identity; domestic prescriptions for women; women and work; intersections of gender, class, and race in American society; sexualities and identity; the politics of motherhood and reproductive rights; educating girls; negotiating male privilege and structural inequalities; representations of women in Western art and film; and women as artists and gendered models of creativity in art, film, fiction, and science.

Term:

Offered Both Fall and Spring

Type:

Social & Intellectual HST

- **WGS-115 Introduction to Gender Studies**

Credits:

4.00

Description:

Introduces the key topics and debates that have shaped the field of gender studies, including queer studies, masculinity studies, and women's studies. Through lecture and class discussion of texts from literature, film, history, psychology, and sociology, explores the pervasive influence of gender on the structure of society and our everyday experiences and the role that gender plays in our understanding of love, friendship, sexuality, and even violence. Topics include: biological arguments about gender and sexuality; the social construction of gender and identity; intersections of gender, race, class, and sexuality; masculinity and femininity; and theories of sexual difference and the construction of sexuality.

Term:

Occasional

Type:

Social & Intellectual HST

- **WGS-311 Engendering Entertainment: Feminism and Popular Culture**

Credits:

4.00

Description:

Investigates the complex intersections between feminism and popular culture through several different lenses: by exploring, how feminists make arguments about popular culture; by looking at the complexities of public femininity in today's popular culture, including figures such as Lady Gaga and Katy Perry and television shows like *The Bachelor* and *Grey's Anatomy*; by focusing on a variety of articulations of feminism within mass media, blogs, social media, and popular books such as Ariel Levy's *Female Chauvinist Pigs*, and Caitlin Moran's *How to Be a Woman*. Along the way we will ask questions about: what makes a work of art feminist; how modern media contributes to or distracts us from a variety of political debates in the realm of female equality and how can we, as individuals, use modern media to create and advance smart, feminist arguments.

Type:

Social & Intellectual HST

- **WGS-315 Feminist Thought**

Credits:

4.00

Description:

Investigates how feminists, both today and in history, have understood inequality and difference and looked for the best ways to address these issues and bring about social justice. Examines how feminist theorists help us to understand how gender and other social categories, such as race, class, sexuality, disability, age and nationality, are constructed within and through each other; and analyzes feminist engagements with liberalism, socialism, psychoanalysis, existentialism, post-colonialism, critical race theory, and queer theory, as well as consider anti-feminist arguments. Readings include classic critical texts by authors including Mary Wollstonecraft, Emma Goldman, Virginia Woolf, Chandra Mohanty, Gloria Anzaldua, and Judith Butler.

Type:

Social & Intellectual HST

- **WGS-335 Queer Narratives**

Credits:

4.00

Description:

Explores the stories that help us to understand communities, identities, and bodies that could be considered queer, and the ways that film, music, memoir and fiction have discussed queer as different, unusual, or other. Texts include the documentary, "Paris Is Burning", Frank Ocean's 2012 album, "Channel Orange", and Janet Mock's recent memoir, "Redefining Realness", as well as foundational queer theory from Judith Butler, Eve Kosofsky Sedgwick, and Lee Edelman, among others, to help build a framework for approaching and interpreting both fictional and non-fictional accounts of queer lives.

Visual & Performing Arts Theory and History: 1 course, 3-4 credits

Choose one course from those listed below:

- **ADG-224 History of Graphic Design**

Credits:

4.00

Description:

The first part of the course will focus on the history of graphic design from prehistoric times to the Industrial Revolution, including the origins of graphic communications in the ancient world, the development of the alphabet and early printing and typography. The second portion will concentrate on the period from the late 19th century to the present, and will include the Arts and Crafts Movement, the various-isms and their influence on modern art, the Bauhaus and International Style, and contemporary visual systems and image making.

Term:

Offered Fall Term

- **ADI-234 History & Theory of Interior Architecture**

Prerequisites:

Taken concurrently with ADI S201

Credits:

3.00

Description:

This course introduces students to the important individuals, ideas and issues that have shaped the direction of contemporary interior design practice in the twentieth century, building upon the historical foundation established by the Ideas of Western Art and History of Furniture and Architecture classes. Intermixing lectures and readings with visits to important local buildings, it discusses the influences of culture, technology, fashion and media upon the work and thinking of the first generation of modern designers, as well as emerging social, moral and environmental imperatives that will form the basis of future practice; cultural identity, interdisciplinary collaboration, sustainability and universal design.

Term:

Offered Fall Term

- **ARH-101 Art History I**

Credits:

4.00

Description:

Surveys the art of Western civilization from prehistoric caves to medieval cathedrals. Considers works from the Ancient Near East, Ancient Egypt, Ancient Greece and Rome, the Byzantine Era, the Romanesque Period, and the Gothic Period in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

- **ARH-102 Art History II**

Credits:

4.00

Description:

Surveys the art of Europe and America from the Renaissance to the present. Considers work of painting, sculpture, and architecture from periods such as the Renaissance, the Baroque, the Rococo, Neoclassicism, Romanticism, Impressionism, Abstract Impressionism, and Post-Modernism in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

- **ARH-205 Gender, Class and Alterity in Ancient And Medieval Art**

Credits:

4.00

Description:

Explores issues of sexuality, gender, race, and social class in the ancient and medieval worlds. Examines key artworks from ancient Greece, the Roman Empire and medieval Europe within historical, social and cultural contexts.

- **ARH-307 Art of the Italian Renaissance**

Credits:

4.00

Description:

Examines painting, sculpture and architecture of the 14th, 15th, and 16th centuries in Italy in their cultural context. Artists include Giotto, Masaccio, Donatello, Leonardo da Vinci, Raphael, Michelangelo, and Titian.

Term:

Occasional

- **ARH-308 Art of the Baroque & Rococo**

Credits:

4.00

Description:

Explores painting, sculpture and architecture in Italy, Spain and Northern Europe during the 17th and 18th century. Works by Rembrandt, Rubens, Caravaggio, Bernini, Poussin, Velasquez, Watteau, Boucher, Fragonard, Chardin, Hogarth and others considered within their historical contexts.

Term:

Occasional

- **ARH-309 Art of the 19th Century**

Credits:

4.00

Description:

Examines Neoclassicism, Romanticism, Realism and Impression in the European painting. Considers works by artists such as David, Ingres, Friedrich, Constable, Delacroix, Goya, Courbet, Millet, Daumier, Manet, Monet, Renoir, Degas, and Cassatt within their historical contexts.

Term:

Occasional

- **ARH-310 Modernism in Art**

Credits:

4.00

Description:

Examines European painting and sculpture from around 1880 to 1940, including Symbolism, Post-Impressionism, Fauvism, Expressionism, Cubism, Futurism, The Bauhaus, Dada, and Surrealism. Considers works by artists such as Gauguin, Cezanne, Van Gogh, Matisse, Kandinsky, Picasso, Braque, Mondrian, Duchamp, Magritte, Dali, and Ernst within their historical contexts.

- **ARH-311 American Art**

Credits:

4.00

Description:

Surveys American painting, sculpture, photography and architecture from the colonial period through WWII. Considers works by artists such as Smibert, Copley, West, Stuart, Whistler, Sargent, Eakins, Homer, Ryder, Bierstadt, Cole, Inness, Sloan, Sullivan, Wright, Hopper, O' Keefe, Dove, Hartley, Bellows, Stieglitz, Weston, and Steichen.

Term:

Occasional

- **ARH-312 Art of the Northern Renaissance**

Credits:

4.00

Description:

Examines painting, sculpture, and architecture of the 14th, 15th and 16th centuries in Northern Europe, within their historical context. Topics include the rise of oil painting, the development of woodcut and engraving, the effect of the Reformation on art. Artists include van Eyck, Bosch, Durer, Holbein and Brueghel.

Term:

Occasional

- **CJN-152 Visual Aesthetics**

Credits:

4.00

Description:

This course provides an introduction to a humanities approach to a range of media, including but not limited to film and television. The course helps students develop visual literacies, enriching their understanding of multiple forms of media. The class also explores how media texts are constructed for specific cultural, entertainment, informative and propaganda purposes.

Term:

Offered Both Fall and Spring

- **CJN-292 Film History: From Silent Cinema to the Modern Era**

Credits:

4.00

Description:

An introductory film studies course that covers the history of the film medium from its birth until the 1970s. It provides an introduction to major film theory concepts, such as genre and/or auteur studies, as well as key films and stars in movie history.

Term:

Alternates Fall & Spring

- **ENG-266 Mad Men: Reading Visual Narratives**

Credits:

4.00

Description:

This course will focus on the cultural phenomenon of the TV Series Mad Men, considered by many to be the foremost example of Quality TV produced during the so-called golden age of television and engage with it on visual, cultural, literary and filmic levels. The basic premise of the course is that the current practice of binge watching one's favorite shows should be a heightened experience rather than a guilty pleasure, one akin to reading a novel. Watching a complex and sophisticated TV narrative involves taking into account the viewer's positionality as a filmic consumer, textual critic and social commentator. The class will consider various theoretical approaches to television narrative, beginning with ideas gleaned from the discourse of visual literacy, and proceed by applying textual analysis adapted from the more traditional modes of literary studies and film analysis. A combination of critical and evaluative sources will be examined, including book-length studies of the series, individual essays based on the series' appeal to style, American popular culture, advertising, gender roles, race, and 60s nostalgia. Additionally, the recent phenomenon of the series recap will serve as the touchstone to the class's collective viewing of the series and students will be challenged to synthesize and assess these popular on-line critiques as they draft their own recaps and creative readings of the episodes. The entire first two seasons of Mad Men will be studied and the invaluable resource of director/producer commentaries will be incorporated into the study of the series with a view to acquiring critical insights and analytical skills that may be applied to other quality TV series that students currently enjoy watching.

- **FR-220 French & Francophone Cinema**

Credits:

4.00

Description:

Discusses and deepens understanding of French and Francophone cinema from its origins in the late nineteenth century to the early twenty-first century. Explores early works from France, by the Lumiere Brothers and Georges Melies as well as contemporary films from France, Algeria, Burkina Faso, Canada, Haiti, and Senegal.

Term:

Occasional

- **MUH-101 History of Music I**

Credits:

4.00

Description:

Surveys Western music from CE800-1800, from Gregorian to Beethoven; selected major composers, representative masterworks, and the musical styles of the Medieval, Renaissance, Baroque, and Classical periods; links the music to some of the major historical, cultural, artistic, and intellectual trends of these periods. Normally offered yearly.

Term:

Offered Fall Term

- **MUH-102 History of Music II**

Credits:

4.00

Description:

Surveys Western art music from 1800-present, from Schubert to Jennifer Higdon; selected major composers, representative masterworks, and the musical styles of Romantic, Contemporary, and post-Modern periods; links the music to some of the major historical, cultural, artistic, and intellectual trends of these periods. Normally offered yearly.

Term:

Offered Spring Term

- **MUH-211 Music of the United States**

Credits:

4.00

Description:

Surveys American music from Colonial times to the present; various attempts to create an indigenous musical style; vernacular and art music genres including folk, concert, and religious music, jazz and musical theatre; includes music of Billings, Amy Beach, Ives, Copland, Bernstein, and Libby Larsen. Normally offered yearly.

Term:

- **PHIL-219 Philosophy of Art**

Credits:

4.00

Description:

What counts as art? What is beauty? Are there objective standards of beauty? This course examines the nature of aesthetic experience, art, beauty, and creativity. Through the classic and contemporary readings, the students will be introduced to philosophical issues concerning the meaning of art, artistic representation, perceptions of art, interpretation, and criticism. Students will be encouraged to reflect on their own experience of art and explore the relationships among the artist, the audience, the artwork, and the world. 1 term - 4 credits. Normally offered every third year.

- **THETR-260 Broadway Musicals**

Credits:

4.00

Description:

This course is a survey of American musical theatre from its roots in the mid-19th century to the present. It provides the analytical tools and historical insight to more fully appreciate Broadway's greatest musicals and musical theatre artists. Students will explore the ways in which American forms of popular entertainment helped to shape Broadway musicals from their infancy through their adulthood. The course also explores the ways in which musicals provided opportunities for African-Americans, women, immigrants, and the GLBT community.

Term:

Offered Fall Term

- **THETR-266 Intro to Theatre: 20th Century**

Credits:

4.00

Description:

Picking up chronologically where THETR 225 leaves off, this survey course is designed to provide students with an understanding of modern Western theatre. Beginning with a melodrama, plays will include representative works of realism, naturalism, expressionism, epic theatre, theatre of cruelty, theatre of the absurd, and metatheatricality. Lectures and class discussions will explore how these concepts translate to acting and production techniques as well as what they imply as artistic responses to a modern and post-modern world. Satisfies a core requirement for Theatre Majors.

4.00

Description:

This is a hands-on course aimed at non-CS students who want to learn how to build interesting and interactive web pages. We do not use any drag-and-drop software for this purpose. Instead we cover the basics of HTML and PHP and, if time permits, we look at some ways of building web pages that interact with databases. Each student will have, for the duration of the course, an account on a server that permits individuals to have web pages that are visible on the World Wide Web.

Type:

Quantitative Analysis

- **CMPSC-F124 Game Programming**

Credits:

4.00

Description:

This course introduces students to computer game development, including, but not limited to, game programming. We use Game Maker, a framework for personal computers that runs equally well on XP, Vista, and Linux. We learn about the foundational concepts of two-dimensional (flat) games: graphics, sound, objects, actions, rooms, scores, levels, multiplayer support, artificial intelligence, and more. Game Maker has an intuitive interface that makes game development approachable for everyone, including those who have never written a single game or a single computer program. All games created by Game Maker can be saved as standalone applications and can be shared freely with classmates, friends, and family. This is not a course in graphics design, audio editing, or scriptwriting. Students are encouraged to use their creativity and imagination to design games and the correctness of game implementation is stressed throughout the course.

Type:

Government:

- **GVT-201 Data Analysis and Politics**

Prerequisites:

Sophomore Standing GVT 110 and 120 and Math 128 or higher.

Credits:

4.00

Description:

Quantitative analysis is quickly changing the way we understand and engage in politics, how we implement policy, and how organizations across the world make decisions. In this course, we will learn the fundamental principles of statistical inference and develop the necessary programming skills to answer a wide range of political and policy oriented questions with data analysis. Who is most likely to win the upcoming presidential election? Do countries become less democratic when leaders are assassinated? Is there racial discrimination in the labor market? These are just a few of the questions we will work on in the course.

Type:

Quantitative Analysis

Philosophy:

- **PHIL-212 Formal Logic**

Credits:

4.00

Description:

An introduction to formal (or semi-formal) study of the basic types of deductive arguments (propositional and syllogistic logic). 1 term - 4 credits. Normally offered every year.

Term:

Occasional

Type:

Quantitative Analysis

Psychology:

- **PSYCH-215 Behavioral Statistics**

Prerequisites:

PSYCH 114; Restricted to majors only unless with permission of instructor.

Credits:

4.00

Description:

Introduces the use of statistics as tools for description and decision-making, including hypothesis testing. Prepares students for the analysis, interpretation, and evaluation of psychological research. Required for psychology majors; should be taken before the junior year. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Quantitative Analysis

Sociology:

- **SOC-212 Statistics for Sociology**

Prerequisites:

SOC-113 OR SOC-116 and MATH-128 or higher

Credits:

4.00

Description:

In this course, students will be introduced to descriptive and basic inferential statistical techniques. The course will provide information on the following topics: Description - measures of central tendency (mean, median, mode) and measures of dispersion (range, standard deviation); logic of statistical inference, including normal curve and sampling distribution; hypothesis testing with one sample and two samples; measures of association between two variables (bivariate analysis), including chi-square, regression, and correlation; and introduction to multivariate regression. Students will utilize SPSS (Statistical Package for the Social Sciences) software to input and analyze data. The goals of the course are for students to appreciate the need for statistical methods in the broad field of sociology and to gain basic statistical literacy.

Term:

Offered Both Fall and Spring

Type:

Quantitative Analysis

Statistics:

- **STATS-240 Introduction to Statistics**

Prerequisites:

Math 128 or higher. REMINDER: STATS 240 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

Credits:

4.00

Description:

Topics include: data presentation, measures of central locations and dispersion, probability and probability distributions, estimation, hypothesis testing, simple and multiple regression models. The use of Excel and SPSS will be emphasized throughout the course. 1 term - 4 credits (4 hours per week). Normally offered each semester. STATS 240 satisfies the same requirements as STATS 250

Type:

- **STATS-250 Applied Statistics**

Prerequisites:

MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

Credits:

4.00

Description:

Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

Type:

Quantitative Analysis

Major Requirements Minimum: 8 courses, 32 credits

Complementary Major Requirements, Minor Requirements, and Free Electives: credit varies

Minimum Total Credits Required for Degree Conferral: 126 credits

Note:

Core Requirements may also count toward major if taken at appropriate level.

Some degree programs exceed 126 credits.

Major Requirements: 13 courses, 49 credits

Advertising and Public Relations Core (3 courses, 9 credits)

- **ADPR-101 Introduction to Advertising, Public Relations, and Social Media**

Credits:

4.00

Description:

An introduction to the discipline addressing social science, humanities and practical approaches to the study of Advertising, Public Relations & Social Media. Students investigate the broad themes and foundational concepts which unify these diverse fields.

Term:

Offered Both Fall and Spring

- **ADPR-102 Professional Development**

Prerequisites:

ADPR-101 must be taken concurrently

Credits:

1.00

Description:

In this hands-on experiential course, students examine potential career paths in Advertising, Public Relations, and Social Media, become oriented to the university and the surrounding Boston area, and identify professional resources in Boston that foster career development.

- **ADPR-103 Presentations Skills**

Credits:

4.00

Description:

The development and delivery of oral presentations. Students acquire skills in oral and physical delivery, organization, persuasion, critical thinking, and use of support media.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

Note: All students should take ADPR-101, ADPR-102, and ADPR-103 during their first year. ADPR-101 and ADPR-102 should be taken during a student's first semester in the major.

Advertising Core (7 courses, 28 credits)

- **ADPR-247 Design Lab**

Credits:

4.00

Description:

Computer applications for advertising and communication design. Using various graphical editing and design programs, students learn the theory and practice of design for layout, logos, and graphic elements in communication.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **ADPR-257 Advertising**

Credits:

4.00

Description:

A survey course that introduces students to advertising concepts and practices from the perspective of agencies, clients, the media, and consumers. Students learn to think critically about advertising messages and learn practical techniques for developing effective advertising in various media.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **ADPR-289 Social Media**

Credits:

4.00

Description:

Social media sites such as Facebook, Instagram, Snapchat and Twitter are examined from a cultural and critical perspective. Students use of social media for community formation, social presence, identity building, and social activism. The roles of advertising, public relations, and branding are examined.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **ADPR-297 New Media New Markets**

Credits:

4.00

Description:

Students learn HTML, CSS and Widgets for the construction, design and posting of web sites. In addition, we examine the use of websites, mobile sites for advertising, public relations, search engine optimization, and marketing.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **ADPR-347 Media Planning**

Prerequisites:

CJN 257

Credits:

4.00

Description:

The planning and purchasing of advertising space and time. Examines media costs, budgets, and media strategy for different audiences and markets.

Term:

Offered Both Fall and Spring

- **ADPR-359 Advertising Copy**

Prerequisites:

CJN 257

Credits:

4.00

Description:

Continuation of basic advertising, with an emphasis on developing effective advertising messages and advertising campaigns.

Term:

Offered Both Fall and Spring

- **ADPR-437 Ad Campaigns**

Prerequisites:

CJN 359, CJN 257

Credits:

4.00

Description:

Principles of advertising campaigns. Students design, plan, and produce a national advertising campaign for a client as members of a simulated agency team.

Term:

Offered Spring Term

Advertising Electives (3 courses, 12 credits)

Choose three of the following:

- **ADPR-2277 Public Relations I: Principles**

Credits:

4.00

Description:

Effective public relations involve an understanding of the history, theory, and practice of public relations including public relations concepts, the role of the practitioner, and the foundations of public relations. This course seeks to provide that foundation as an introduction to the field of public relations. Issues surrounding the history, legality, process, and principles of public relations are explored.

Term:

Offered Both Fall and Spring

- **ADPR-299 Blogs and Blogging**

Credits:

2.00

Description:

Introduces students to the elements of professional blogs and blogging, including blog structures, use of images, creation of podcasts, and appropriate writing. Examines the social influence of blogs and the ethical responsibilities of bloggers. Students create their own blogs as part of the course.

- **ADPR-317 Principles of Branding and Visual Identity**

Prerequisites:

ADPR-257

Credits:

4.00

Description:

Examines the success and failure of the visual identities of brands as well developing a new visual identity and launching a campaign for an existing brand. Includes an analysis of the strategically planned and purposeful presentation of a brand's visual identity as well as a brand's name, logo, tagline (slogan), color palette and other sensory elements that make a brand unique.

- **ADPR-383 Online Advertising**

Prerequisites:

CJN-257;

Credits:

4.00

Description:

All forms of online advertising are explored, including paid search, with a focus on building a brand online.

Term:

Alternates Fall & Spring

Type:

Arts Admin Minor Elective

- **ADPR-409 Content Management**

Prerequisites:

ADPR-2277

Credits:

4.00

Description:

Examines best practices for web publishing, including creating, editing and maintaining content for online and social media platforms. Students analyze the content of websites and then produce their own content in a variety of forms. Covers content creation and maintenance techniques, as well as customer and client relationship skills, with an emphasis on effective writing. Includes practical experience creating, editing and maintaining content for online and social media platforms.

- **ADPR-430 Social Media Campaigns**

Prerequisites:

ADPR-389

Credits:

4.00

Description:

Covers the development of a social media campaign for a target audience using a variety of platforms. Students will use social media and design tools to create a campaign for a client, moving it from concept through execution.

- **ADPR-431 Multi-Platform Marketing Communication**

Prerequisites:

ADPR-257

Credits:

4.00

Description:

Focuses on creating an integrated multi-platform brand campaign that spans various media, including television, social media, search and print. Students will analyze the success and failure of brands' campaigns and will also develop a multi-platform campaign for an existing brand.

- **ADPR-457 Integrated Marketing Communication**

Prerequisites:

CJN-2277(formerly CJN-277)

Credits:

4.00

Description:

Examines the integration of advertising, promotion, public relations and marketing communication in the strategic communication process. By learning the fundamentals of interpersonal and persuasive communication, students have an opportunity to develop an effective communication plan for a brand that includes creative copy.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **ADPR-492 Special Topics in Public Relations**

Credits:

4.00

Description:

Explores current issues in public relations.

Term:

Occasional

Residency Requirement Policy: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.

- [Advertising Major Requirements](#)
- [Advertising Minor Requirements](#)
- [Accelerated Bachelor's/Master's Degree in Communication](#)
- [Honors](#)
- [Courses](#)

Degree Requirements

1. Students admitted to this dual degree program must meet all the requirements of an undergraduate degree program within the departments of Communication & Journalism or Advertising, Public Relations, & Social Media.
2. Student must also meet all requirements for the Master's degree in Communication.
3. Students will take two Communication graduate courses during their senior year; one during the fall semester and one during the spring semester. The two graduate courses taken during the senior year will count toward BOTH the undergraduate and graduate degree requirements. Credit hours will be awarded based on the graduate course description.
4. The graduate courses taken during the senior year will be determined by the Communication graduate program director.
5. Students are subject to the usual standards for academic standing, i.e., undergraduate standards for undergraduate courses and graduate standards for graduate courses.

Upon successful completion of all of the degree requirements, a student will receive a dual Bachelor's and Master's degree. The exact degree will be awarded based on the specific undergraduate program the student completes. A student may permanently exit the dual degree program and opt to graduate with a Bachelor's degree if all the requirements for a Bachelor's degree have been met. In this case, the graduate courses taken in the senior year will be counted as 4-credit courses applied toward the undergraduate degree requirements.

Credits:

4.00

Description:

Explores current issues in public relations.

Term:

Occasional

- **ADPR-494 Special Topics in Advertising**

Credits:

4.00

Description:

Current issues in the field of advertising. Normally offered every semester.

Term:

Occasional

- **ADPR-503 Experiential Learning in Communication**

Prerequisites:

16 Hrs of CJA coursework or CJA advisor consent

Credits:

1.00-12.00

Description:

Internships and practicum in Advertising, Public Relations & Social Media are available prior to the start of each semester.

Term:

Offered Both Fall and Spring

- **ADPR-506 Honors Seminar**

Prerequisites:

Senior CJA majors with an overall cumulative grade point average of 3.0, and a major GPA of 3.4

Credits:

4.00

Description:

Senior CJN majors meeting requirements for Departmental Honors are invited to participate in this seminar, which entails research and presentation of an approved topic.

Term:

Offered Spring Term

- **ADPR-510 Independent Study**

Prerequisites:

An independent study form must be submitted to the CAS Dean's Office.

Credits:

1.00-12.00

Description:

An independent study experience in Advertising, Public Relations & Social Media is available prior to the start of each semester.

Term:

Offered Both Fall and Spring

- **ADPR-2277 Public Relations I: Principles**

Credits:

4.00

Description:

Effective public relations involve an understanding of the history, theory, and practice of public relations including public relations concepts, the role of the practitioner, and the foundations of public relations. This course seeks to provide that foundation as an introduction to the field of public relations. Issues surrounding the history, legality, process, and principles of public relations are explored.

Term:

Offered Both Fall and Spring

- **ADPR-3376 Public Relations II: Research**

Prerequisites:

CJN-2277 (Formerly CJN-277)

Credits:

4.00

Description:

Examines how research aids the public relations practice. Students learn research methods that address public relations planning and problem-solving. Assignments provide students with hands-on practice using research for a PR project.

Term:

Offered Both Fall and Spring

- **ADPR-3377 Public Relations III: Strategic Writing**

Prerequisites:

CJN-2277(formerly CJN-277);

Credits:

4.00

Description:

Focuses on writing principles for public relations including the formulation of clear PR objectives, determining the knowledge of the target audience, and the development of key messages. Students apply these principles to common PR formats, including news releases, pitch letters, biographies, speeches, emails, digital content, and social media posts.

Term:

Offered Both Fall and Spring

- **ADPR-4477 Public Relations IV: Campaigns**

Prerequisites:

ADPR-2277(formerly CJN-2277) and ADPR-3377(formerly CJN-3377) and Senior Standing.

Credits:

4.00

Description:

Examines typical public relations problems experienced by profit and not-for-profit organizations. Provides students with an opportunity to demonstrate their mastery of the skills, techniques, and knowledge of public relations by creating a comprehensive campaign plan for a community client.

Term:

Offered Both Fall and Spring

2017-2018 Archived Catalog Information

American Studies

The American Studies minor engages students in the study of historical and contemporary U.S. identities, cultures, and societies. This program allows students to create an individualized course of study that draws on insights and methods from the arts, history, literature, and the social sciences. Each student must complete an introductory course, AMST-111 Defining America and Americans and may select four elective courses that relate in some coherent way. With his/her American Studies minor advisor, a student will identify a particular focus (e.g., an era, a topic, a theme, a region, a population, or a problem in American culture) that he or she wishes to explore closely.

There is no major available in American Studies.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Minor Requirements](#)
- [American Studies Courses](#)

Minor Requirements: 5 courses, 20 credits

Core Requirement (1 course, 4 credits)

- AMST-111 Defining America and Americans

Credits:

4.00

Description:

Examines artistic, social, and political imaginings of America and Americans. We will read works by American and foreign observers of the United States to ask how Americans define themselves and how others see them. Course assignments will introduce students to themes, perspectives, and

methods in the field of American Studies.

Type:

Social & Intellectual HST

Electives (4 courses, 16 credits)

Choose four courses from the following, with no more than eight credits in one department.

Art History

- **ARH-311 American Art**

Credits:

4.00

Description:

Surveys American painting, sculpture, photography and architecture from the colonial period through WWII. Considers works by artists such as Smibert, Copley, West, Stuart, Whistler, Sargent, Eakins, Homer, Ryder, Bierstadt, Cole, Inness, Sloan, Sullivan, Wright, Hopper, O' Keefe, Dove, Hartley, Bellows, Stieglitz, Weston, and Steichen.

Term:

Occasional

Black Studies

- **BLKST-469 Research Seminar: African American Life in Slavery and Freedom- Reconstruction and the Freedman's Bureau**

Credits:

4.00

Description:

Introduces students to the Reconstruction era in American history, and uses Reconstruction as a bridge to look at enslavement, which preceded the era, and the issue of freedom during, and after the era. In the first half of the class students read from texts that will provide them with an understanding of slavery, emancipation and reconstruction. The second half of the class will utilize on-line collections of the Freedman's Bureau Papers to allow students to use documents to deepen their understanding of the Reconstruction era. The class will also provide a comparative approach by considering questions of citizenship in the 19th century for people of African descent in the United States, Latin America and the Caribbean. This course is identical to HST 469.

Term:

Occasional

Communication and Journalism

- **CJN-365 American Cinema**

Credits:

4.00

Description:

Trends in Hollywood and U.S. independent cinema from 1970 onwards, including maverick directors, Hollywood blockbusters, and, when possible, class visits by New England-based filmmakers.

Term:

Occasional

English

4.00

Description:

An introduction to selected Asian-American writers with an emphasis on socio-cultural issues, such as race, gender and ethnicity. Authors include Bulosan, Hwang, Jen, Kingston, Lee, Mukherjee, Odada, and Tan. Cultural Diversity A

Term:

Occasional

Type:

Asian Studies

Government

- **GVT-223 American Politics & Institutions**

Prerequisites:

GVT 110 or GVT 120 or instructor's permission

Credits:

4.00

Description:

This course will provide an examination of the institutions that are involved in the American policy-making process. The student will learn about the presidential, (as opposed to the parliamentary) system that exists in the United States. The course will focus on a relationship between the President and Congress and how that relationship impedes or facilitates the public policy process, including the budgetary process. The course will include a discussion of the president's role as head of the executive branch, and the implementation of congressional policies. Attention will be given to the role of the judiciary in the policy process. Normally offered every year.

- **GVT-244 Civil Liberties**

Prerequisites:

Not open to Freshmen

Credits:

4.00

Description:

Analysis of Supreme Court decisions in regard to political and civil rights including freedom of speech, press, assembly and religion, obscenity, race and sex discrimination, and criminal procedure. Normally offered every year.

- **GVT-279 Minority Politics in the United States**

Prerequisites:

Sophomore Status Required

Credits:

4.00

Description:

This course is designed to provide an intensive survey of minority politics in the political development of the United States. We will focus on the historical and contemporary experiences of several groups in American politics. In particular, the course will look at four groups that, for reasons of race, have been subjected to systematic discrimination and political subordination in U.S. history: American Indians, African Americans, Latino Americans, and Asian/Pacific Americans. In this course we will work toward an understanding of American politics from the point of view of politically active and engaged persons of color. This course will also take a close look at the future of race and ethnicity in American politics. It is a fundamental premise of this course that an understanding of race and minority politics is necessary to comprehensively understand American political development and many important issues in contemporary American politics. Cultural Diversity A

- **GVT-346 The American Presidency**

Prerequisites:

GVT 110 AND GVT 120 OR INSTRUCTOR'S CONSENT

Credits:

4.00

Description:

Perspectives on the role and problems of the presidency in American political life; the nature and difficulties of presidential influence and effectiveness, presidential authority within our system of government, and the impact of presidential character. Normally offered alternate years.

- **GVT-355 American Parties & Politics**

Prerequisites:

GVT 110 AND GVT 120, or instructor's consent

Credits:

4.00

Description:

Historical overview of party development in the U.S. and of ideological and political trends as reflected in voting behavior. Recent developments in party structure, electoral strategies and political style. The party crisis vs. the art of political campaigning. Normally offered alternate years.

- **GVT-363 American Foreign Policy**

Prerequisites:

GVT 281 and GVT 261

Credits:

4.00

Description:

A decision-making approach to understanding the domestic and institutional context of U.S. foreign policy. Includes analysis of continuity and change since WWII using case studies of critical decisions, e.g., Korea, Cuba, Vietnam, etc. Not open to freshmen. Prerequisites: GVT 110, GVT 120, GVT 261 or instructor's consent. 1 term - 4 credits. Normally offered every year.

• GVT-434 Immigration Policy and Politics

Prerequisites:

Junior Status required

Credits:

4.00

Description:

This course examines how American governmental institutions, political actors, and processes have both shaped and responded to one of the most significant and complex issues of public policy facing the nation: immigration to the United States. This class will explore a number of intriguing and difficult policy topics related to the almost unprecedented level of immigration that the U.S. has been experiencing. The focus of the class will include the following: admissions, citizenship, deportation and detention (including that of suspected terrorists), refugee/asylum law, and highly contested issues of today, such as definitions of citizenship, immigrant rights, and border enforcement. A major objective of this course is to provide students with the opportunity to conduct their own original research in American politics by delving into some aspect of immigration as a public policy issue.

• GVT-438 Environmental Policy & Politic

Prerequisites:

This course will have a service learning component Junior Status required

Credits:

4.00

Description:

From Rio to the Boston Harbor Project, this course examines the policies and politics of the environment. It examines the origins of the environmental movement in the United States focusing on the development and present function of government and non-government organizations responsible for the development and implementation of global, national, state and local environmental policies.

History

- **HST-271 African-American History 1619-1860**

Credits:

4.00

Description:

Examines the history of Africans in the United States from their arrival in the colonies to the Civil War and the end of legal slavery. Topics examined include: the development of the slave system, African-Americans, and the Declaration of Independence, and the abolition movement.

Term:

Occasional

- **HST-272 African-American History From 1860**

Credits:

4.00

Description:

Examines African American history from the end of slavery to the twenty first century. Topics examined include: Emancipation and Reconstruction, Reconstruction and the Constitution, the Harlem Renaissance, the Civil Rights and Black Power Movements, and African-Americans at the start of the twenty-first century.

Term:

Occasional

- **HST-290 19th Century America**

Credits:

4.00

Description:

Explores the history of the United States from 1810 to 1910. Students study the growth of American institutions, the rise and effects of a market society, westward expansion and Indian affairs, the enlivening of U.S. civic ideals, debates over free labor and slavery, the causes and effects of the Civil War, post-Civil War redefinitions of citizenship, immigration, Progressivism, and the nation's entry on to the world stage.

Term:

Occasional

• HST-292 American Foreign Relations Since 1898

Credits:

4.00

Description:

Surveys the history of the U.S. as a world power. Examines officials' motives and methods, as well as influences on policy in the form of social and economic forces, interest groups, and foreign challenges. Explores public debates over America's role (as well as debates among historians and international relations theorists), and discusses the domestic and foreign impact of America's world role. Major events addressed include the two world wars, the Cold War, Vietnam, and the U.S. recent history of involvement in the Middle East.

Term:

Occasional

• HST-318 History of Sports in America

Credits:

Occasional

Philosophy

- **PHIL-263 Native American Religion**

Credits:

4.00

Description:

This course is an examination of Native American (Indian) religious experience, both the similarities and differences among the myths and rituals of the major tribes which comprise the background of our nation's history of Western migration and settlement. The emphasis will be on understanding how life was experienced by these peoples through a close look at the philosophical meanings of their mythology and ethics. 1 term - 4 credits. Normally offered alternate years. C a

Term:

Occasional

Psychology

- **PSYCH-241 Social Psychology**

Prerequisites:

PSYCH 114

Credits:

4.00

Description:

Studies the social determinants of the behavior of individuals in relation to groups and surveys current research findings in such major content areas as attribution, prejudice, conformity, obedience, social cognition, interpersonal attraction, altruism, and aggression. Normally offered every semester.

Term:

Offered Both Fall and Spring

Sociology

- **SOC-227 Race in American Society**

Credits:

4.00

Description:

Despite the election of Barack Obama as President of the United States, race remains one of the most divisive forces in U.S. society. While many of us struggle against racism, racial classification continues to affect where we live, where we work, and how we see ourselves. Racial classification affects our access to health care and our encounters with police officers. Distorted images of racial groups fill television and movie screens. Appeals to racism and fear of foreigners are dominant themes in elections to state and national offices. This course examines the formation and re-formation of racial classifications: how particular groups become racially identified, how these classifications change over time, and how conflicts over race have shaped American society. The meanings of race, as seen from a variety of perspectives, will be a consistent theme throughout the course.

Term:

Occasional

- **SOC-238 Cops & Robbers: Crime on Film**

Credits:

4.00

Description:

An examination of images of crime and justice portrayed in the American cinema. Special attention is paid to the social and historical forces that have shaped popular representations of good and evil during the modern era.

Term:

Occasional

- **SOC-275 Women and Crime**

Credits:

4.00

Description:

This course examines the complex relationships between women and crime today. This focus will include women as criminal offenders; women as victims of crime; and women as both offenders and victims. Course materials draw from recent feminist scholarship on these issues in the social sciences. Topics include the causes of women's crime women, drugs, and crime; child abuse and trauma; prostitution and sex trafficking; race, gender and victimization; and feminist social movements against violence. Crimes of violence against women are a central focus in the course.

Term:

Occasional

- **SOC-325 Popular Culture in America**

Prerequisites:

Prerequisite: SOC 113 or SOC 116.

Credits:

4.00

Description:

An investigation of the images of life provided by mass communications, the educational system and official culture. Topics include: the growth of the youth culture since the 1950s; images of working people; women, minorities and advertising; changing ideas of success; consciousness-raising and contra-cultures.

4.00

Description:

This course offers a basic introduction to American culture and society through the study of American History. The city of Boston and its extraordinary history and institutions will be at the heart of the class and students will frequently visit sites close to the campus. Topics will focus on areas such as the way people from different cultures have understood and misunderstood each other; the evolution of American politics and political institutions; the American Revolution and the founding documents and institutions of the United States; the distinct forms of American religion, American literature and the American economy; slavery and race in American society; the rise of America to world power; the changing role of women; the New Deal and the rise of the modern welfare state; immigration; the development of popular culture; and the meaning of Donald Trump.

- AMST-111 Defining America and Americans

Credits:

4.00

Description:

Examines artistic, social, and political imaginings of America and Americans. We will read works by American and foreign observers of the United States to ask how Americans define themselves and how others see them. Course assignments will introduce students to themes, perspectives, and methods in the field of American Studies.

Art & Design Foundation Studies

The Foundation Studies program or its equivalent is generally a prerequisite for major-specific coursework.

Foundation Studies Course Codes and Sequencing

The letter “S” preceding a course number indicates a studio course. A studio fee is assessed for all studio courses.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Requirements](#)
- [Foundation Studies Minor Requirements](#)
- [Foundation Courses](#)

Requirements: 8-10 courses, 26-32 credits

- ADF-S101 Foundation Drawing I

Prerequisites:

Non-majors interesting in taking art and design courses for elective credit should refer to offerings under the ART course listings

Credits:

3.00

Description:

This course concentrates on the traditional techniques of observational drawing. Fundamental principles and elements of drawing are introduced in structured lessons and exercises, which are supplemented by additional outside assignments. Foundation Drawing I stresses the development of visual skills as well as the broad use of drawing concepts, vocabulary, techniques and variety of materials.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **ADF-S102 Foundation Drawing II**

Prerequisites:

ADF S101; Non-majors interesting in taking art and design courses for elective credit should refer to offerings under the ART course listings.

Credits:

3.00

Description:

This course will refine the basic visual skills developed in Foundation Drawing I (ADF S101). The elements of color and mixed media are introduced to expand technical possibilities, while more intensive work with the nude human figure provides exposure to gesture, structure and complex form. As students begin to develop a more sophisticated and personal approach, issues of expression and interpretation will be investigated, focusing on personal style and expression.

Term:

Offered Both Fall and Spring

- **ADF-S152 3-Dimensional Design**

Prerequisites:

ADF S151 or ADF S166; Non-majors interesting in taking art and design courses for elective credit should refer to offerings under the ART course listings.

Credits:

3.00

Description:

This course focuses on the fundamental elements of three-dimensional form. Line, plane and volume will be explored as students develop visual analysis and critical thinking skills in the round. The role of scale, proportion, structure, surface, light and display will be addressed, as students create forms that activate space and engage the viewer. The course will proceed from work with simple forms and techniques to more challenging and comprehensive problems addressing both additive and subtractive methods.

Term:

Offered Both Fall and Spring

• ADF-S166 2D/Color

Prerequisites:

Non-majors interesting in taking art and design courses for elective credit should refer to offerings under the ART course listings.

Credits:

3.00

Description:

This is an introductory-level course in the basic concepts and practices of two-dimensional design and color theory. The study of color and design is supportive of all studio disciplines and is vital to the understanding of all visual media. This course features an intensive, hands-on approach to color and design as students create, modify and master the three dimensions of color (hue, value, and strength) plus the principles of design (line, shape, value, composition and image). This in-depth study is essential and underlies all of the visual arts as they are practiced today. An understanding of color and design influences all artists' decisions, affecting the look, meaning and use of visual phenomena.

Type:

Arts Admin Minor Elective

• ADF-S172 CI: Integrated Studio II

Prerequisites:

ADF S101; Non-majors interesting in taking art and design courses for elective credit should refer to offerings under the ART course listings.

Credits:

3.00

Description:

This course builds on the Integrated Studio 1 experience: synthesizing fundamental visual ideas. IS 2 investigates the construction, documentation, and transformation of volumetric form, environmental space, and time. Projects will explore narrative strategies and the creation of immersive experiences. Students will develop critical and analytical skills while employing a range of traditional and digital media-including video/sound capture and editing-as they explore the creative boundaries of the classroom studio, the city of Boston, and virtual space.

Type:

Creativity and Innovation

- **ARH-101 Art History I**

Credits:

4.00

Description:

Surveys the art of Western civilization from prehistoric caves to medieval cathedrals. Considers works from the Ancient Near East, Ancient Egypt, Ancient Greece and Rome, the Byzantine Era, the Romanesque Period, and the Gothic Period in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

- **ARH-102 Art History II**

Credits:

4.00

Description:

Surveys the art of Europe and America from the Renaissance to the present. Considers work of painting, sculpture, and architecture from periods such as the Renaissance, the Baroque, the Rococo, Neoclassicism, Romanticism, Impressionism, Abstract Impressionism, and Post-Modernism in

their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

Fine Arts majors add:

- **ADF-S171 CI: Integrated Studio 1**

Prerequisites:

Non-majors interesting in taking art and design courses for elective credit should refer to offerings under the ART course listings.

Credits:

3.00

Description:

This cross-disciplinary course will integrate the ideas and practices of two-dimensional design, color and drawing emphasis will be placed on understanding the creative process, exploring concepts and developing research skills. Students will undertake individual and collaborative projects in three spaces; the studio classroom, the digital world and the city at large.

Type:

Creativity and Innovation, Arts Admin Minor Elective

Graphic Design majors add:

- **ADF-S156 Imaging**

Prerequisites:

ADF S166; Non-majors interesting in taking art and design courses for elective credit should refer to offerings under the ART course listings.

Credits:

3.00

Description:

Digital visual image generation and modification, especially when combined with traditional hand techniques, are essential skills for artists and designers of the 21st century. This course introduces techniques of image capture, manipulation and output. Weekly and longer-length assignments will address creative and innovative idea generation using these approaches.

Term:

Offered Both Fall and Spring

• ADF-S171 CI: Integrated Studio 1

Prerequisites:

Non-majors interesting in taking art and design courses for elective credit should refer to offerings under the ART course listings.

Credits:

3.00

Description:

This cross-disciplinary course will integrate the ideas and practices of two-dimensional design, color and drawing emphasis will be placed on understanding the creative process, exploring concepts and developing research skills. Students will undertake individual and collaborative projects in three spaces; the studio classroom, the digital world and the city at large.

Type:

Creativity and Innovation, Arts Admin Minor Elective

Interior Design majors add:

• ADI-S106 Interior Design Communications

Prerequisites:

Take ADF-S101 ADI-S108 OR ADI-S205;

Credits:

3.00

Description:

Interior Design Communications teaches students how drawing media, observational drawing, perspective theory, color and design graphics can be integrated into the designer's process. In addition to exploring contrast, accent, reflection, shade and shadow, the course underscores the importance of freehand sketching as a tool to foster intellectual inquiry and convey design concepts to a wider audience. The course introduces students to manual and digital methods for composing work for conceptual expression, technical drawing presentation, and portfolio purposes.

Term:

Offered Both Fall and Spring

- **ADI-S107 Spatial Graphics**

Credits:

3.00

Description:

Students will be exposed to a range of software applications commonly used in the design industry. Exercises will be used to enhance compositional skills, demonstrate the effective utilization of color and how to integrate images, drawings and vector graphics. Work will be presented in a variety of formats common to studio and client presentations. Students will compose multi-page documents and develop an understanding of appropriate file hierarchies. Exercises expose students to the experiential qualities of design through an exploration of signs, symbols and maps. In addition to 2D graphic solutions, vector graphics for generating 3D artifacts using digital fabrication tools, will be employed.

- **ADI-S110 Digital Orthographics**

Credits:

3.00

Description:

This course will provide students with an understanding of orthographic principles and their importance to spatial thinking and design communication. Students will produce manual drawings in order to manipulate scale. Students will employ Computer Aided Drafting (CAD) software to create measured architectural plans, elevations and sections. The course will introduce students to file management skills and develop proficiency in using cloud based resources. Students will employ virtual workspaces to conduct work in, and out of class. Vector graphic software will also be used to compose work, manipulate technical drawings and illustrate plans and sections for portfolio use.

Term:

Offered Both Fall and Spring

• ADF-110 Discovering Boston's Art and Design

Credits:

2.00

Description:

Explore, investigate and savor Boston's rich variety of visual art and design with Professor Brown, New England School of Art & Design Program Director and practicing multi-media artist, as your guide. Visit museums, galleries and artists' studios and meet professional designers in their work spaces. Exercise your own creativity too, with fun cell phone photo tours of the Boston waterfront and the Italian North End and Beacon Hill neighborhoods. Throughout the course, you will create a visual journal in collage to record your own unique experiences in Boston's world of art and design. A studio fee of \$40 applies. This course does not fulfill core requirements.

- **ADF-181 Ideas of Western Art I**

Credits:

4.00

Description:

This course will survey the major concepts and issues of Western Art, from prehistoric to the Early Renaissance. Architecture, sculpture and paintings will be studied individually for their formal elements and visual importance, and also within their own aesthetic, historic and cultural context. Class discussion and visual analysis of works of art will encourage personal interpretation and critical thinking.

Term:

Offered Fall Term

- **ADF-182 Ideas of Western Art II**

Credits:

4.00

Description:

This course will survey the major concepts and issues of Western Art, from Renaissance to contemporary art. Architecture, sculpture and paintings will be studied individually for their formal elements and visual importance, and also within their own aesthetic, historic and cultural context. Class discussion and visual analysis of works of art will encourage personal interpretation and critical thinking.

- **ADF-S123 Painting**

Prerequisites:

ADF S101, ADF S166

Credits:

3.00

Description:

In this introductory course, students will learn to accurately perceive relationships of shape, form, color and value, and to translate that information through the medium of paint. In a series of in-class and outside projects on canvas, prepared paper and panel, students will explore various approaches to the use of acrylic and oil paint. Emphasis will be placed on the development of disciplined technical skills as well as the exploration of painting's potential as a medium of communication and creative visual expression.

Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

- **CAS-201 College to Career: Explore Your Options And Find Your Path**

Prerequisites:

CAS students only. SBS students by special permission. Restricted to the following majors: Art History, Asian Studies, Biology, Economics, English, French, History, Humanities, International Economics, Music History, Philosophy, Physics, Radiation Science, Spanish, and Undeclared. Instructor consent required for all other majors.

Credits:

1.00

Description:

This course engages students in the early stages of career planning. Students will explore their interests, skills, values, and strengths, which will allow them to begin setting appropriate goals for professional development. Once students understand themselves in relation to the world of work, they will learn how to research careers and employment paths that fit with their goals.

Electives (8 courses, 30-32 credits)

Students must complete eight electives: six or more from the following, and up to two from the Related Options list.

At least one of the upper-level courses must be an ARH 400-level seminar in Art History or ARH-502 Honors Thesis.

- **ARH-205 Gender, Class and Alterity in Ancient And Medieval Art**

Credits:

4.00

Description:

Explores issues of sexuality, gender, race, and social class in the ancient and medieval worlds. Examines key artworks from ancient Greece, the Roman Empire and medieval Europe within historical, social and cultural contexts.

- **ARH-305 Art of Greece and Rome**

Credits:

4.00

Description:

Examines the civic, religious, and domestic art and architecture of the Ancient Mediterranean cultures of Greece and Rome. Considers temples, forums, basilicas, city planning, sculpture, pottery, wall painting, mosaics, and engineering achievements in their cultural contexts.

Term:

Occasional

Type:

Classics Minor

- **ARH-307 Art of the Italian Renaissance**

Credits:

4.00

Description:

Examines painting, sculpture and architecture of the 14th, 15th, and 16th centuries in Italy in their cultural context. Artists include Giotto, Masaccio, Donatello, Leonardo da Vinci, Raphael, Michelangelo, and Titian.

Term:

Occasional

- **ARH-308 Art of the Baroque & Rococo**

Credits:

4.00

Description:

Explores painting, sculpture and architecture in Italy, Spain and Northern Europe during the 17th and 18th century. Works by Rembrandt, Rubens, Caravaggio, Bernini, Poussin, Velasquez, Watteau, Boucher, Fragonard, Chardin, Hogarth and others considered within their historical contexts.

Term:

Occasional

- **ARH-309 Art of the 19th Century**

Credits:

4.00

Description:

Examines Neoclassicism, Romanticism, Realism and Impression in the European painting. Considers works by artists such as David, Ingres, Friedrich, Constable, Delacroix, Goya, Courbet, Millet, Daumier, Manet, Monet, Renoir, Degas, and Cassatt within their historical contexts.

Term:

Occasional

- **ARH-310 Modernism in Art**

Credits:

4.00

Description:

Examines European painting and sculpture from around 1880 to 1940, including Symbolism, Post-Impressionism, Fauvism, Expressionism, Cubism, Futurism, The Bauhaus, Dada, and Surrealism. Considers works by artists such as Gauguin, Cezanne, Van Gogh, Matisse, Kandinsky, Picasso, Braque, Mondrian, Duchamp, Magritte, Dali, and Ernst within their historical contexts.

- **ARH-311 American Art**

Credits:

4.00

Description:

Surveys American painting, sculpture, photography and architecture from the colonial period through WWII. Considers works by artists such as Smibert, Copley, West, Stuart, Whistler, Sargent, Eakins, Homer, Ryder, Bierstadt, Cole, Inness, Sloan, Sullivan, Wright, Hopper, O' Keefe, Dove, Hartley, Bellows, Stieglitz, Weston, and Steichen.

Term:

Occasional

- **ARH-312 Art of the Northern Renaissance**

Credits:

4.00

Description:

Examines painting, sculpture, and architecture of the 14th,15th and 16th centuries in Northern Europe, within their historical context. Topics include the rise of oil painting, the development of woodcut and engraving, the effect of the Reformation on art. Artists include van Eyck, Bosch, Durer, Holbein and Brueghel.

Term:

Occasional

- ARH-316 Contemporary Art

Credits:

4.00

Description:

Explores European and American art since WWII, including Abstract Expressionism, Colorfield Painting, Pop Art, Minimalism, Neo-Dada, Performance Art, Feminism, Neo-Expressionism and Post-Modernism. Artists include Bacon, Giacometti, Pollock, De Kooning, Frankenthaler, Rothko, Stella, Judd, Calder, David Smith, Serra, Johns, Rauschenberg, Warhol, Lichtenstein, Smithson, Christo, Nevelson, Kosuth, Kruger, Sherman, Basquiat, Kiefer, and Haring.

Term:

Arts Admin Minor Elective

- ARH-318 Art and Museums Today

Credits:

4.00

Description:

Examines the art world of the past few decades with special attention to the roles and exhibition practices of contemporary art museums and galleries. Considers the major artists and trends in today's art world, the history of museums, and the effect of museums on art produced today. Students will visit local museums, including the Institute of Contemporary Art (ICA) individually and in groups. This course fulfills the ECR requirement.

Term:

Offered Fall Term

Type:

Arts Admin Minor Elective

- ARH-321 Women, Art & Society

Credits:

4.00

Description:

Surveys women artists from the sixteenth century to the present and examines new direction in art-historical scholarship developed by feminist art historians during recent decades.

Term:

Offered Spring Term

- ARH-404 Seminar in Art History: Caravaggio

Prerequisites:

Permission of instructor required

Credits:

4.00

Description:

Explores the art of Caravaggio within the historical context of the Early Baroque period in Italy. The course emphasizes research skills and the methodology of art history. Designed as a foundation for students intending to pursue a career in the world of art and/or museums.

- ARH-406 Seminar in Art History: Bernini

Prerequisites:

Instructor's consent required.

Credits:

4.00

Description:

Explores the art of Gian Lorenzo Bernini, arguably the most important and influential figure in the world of 17th-century art. Designed for art history majors & minors, the seminar explores Bernini's career within the context of the religious, political, and artistic upheavals of his time; it also helps students develop research skills and provides a foundation that will be valuable for anyone pursuing a career in the world of art and museums.

- **ARH-411 Seminar in Art History: Impressionism**

Prerequisites:

Permission of instructor required

Credits:

4.00

Description:

Explores the Impressionist movement of the late nineteenth-century, including Monet, Renoir, and Pissaro, within its historical context. The course emphasizes research skills and the methodology of art history. Designed as a foundation for students intending to pursue a career in the world of art and/or museums.

- **ARH-502 Honors Thesis**

Prerequisites:

Senior standing & permission of the Dept.Chair.

Credits:

4.00

Description:

A major research project completed under the supervision of a regular faculty member.

Term:

Occasional

- **ARH-510 Independent Study**

Prerequisites:

An independent study form must be submitted to the CAS Dean's Office.

Credits:

1.00- 4.00

Description:

Students meet with a departmental faculty member to pursue advanced studies in areas of particular interest to them.

Term:

Occasional

Related Options

Two of the eight upper-level courses may be taken outside of the Department of World Languages & Cultural Studies, through the art history offerings at NESAD, or in related areas of visual culture such as the philosophy of art, photojournalism, advertising, cinema, and select 3-credit studio art and design courses, such as the following:

- **ADF-S101 Foundation Drawing I**

Prerequisites:

Non-majors interesting in taking art and design courses for elective credit should refer to offerings under the ART course listings

Credits:

3.00

Description:

This course concentrates on the traditional techniques of observational drawing. Fundamental principles and elements of drawing are introduced in structured lessons and exercises, which are supplemented by additional outside assignments. Foundation Drawing I stresses the development of visual skills as well as the broad use of drawing concepts, vocabulary, techniques and variety of materials.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

• ADF-S123 Painting

Prerequisites:

ADF S101, ADF S166

Credits:

3.00

Description:

In this introductory course, students will learn to accurately perceive relationships of shape, form, color and value, and to translate that information through the medium of paint. In a series of in-class and outside projects on canvas, prepared paper and panel, students will explore various approaches to the use of acrylic and oil paint. Emphasis will be placed on the development of disciplined technical skills as well as the exploration of painting's potential as a medium of communication and creative visual expression.

Term:

Offered Spring Term

• ADF-S152 3-Dimensional Design

Prerequisites:

ADF S151 or ADF S166; Non-majors interesting in taking art and design courses for elective credit should refer to offerings under the ART course listings.

Credits:

3.00

Description:

This course focuses on the fundamental elements of three-dimensional form. Line, plane and volume will be explored as students develop visual analysis and critical thinking skills in the round. The role of scale, proportion, structure, surface, light and display will be addressed, as students create forms that activate space and engage the viewer. The course will proceed from work with simple forms and techniques to more challenging and comprehensive problems addressing both additive and subtractive methods.

Term:

Offered Both Fall and Spring

- **ADFA-304 Art and Architecture of the Italian Renaissance**

Prerequisites:

ADF-182 and the Fine Art Program Director's consent.

Credits:

4.00

Description:

This course introduces the students to Italian Renaissance art, artists and culture from the first evidence in the Italian Gothic (around the 1260's) to the Early and High Renaissance, predominantly in Florence and Venice, up to the 1600's. The course will survey the history of painting, sculpture and architecture as we study the works individually, for their formal elements and visual importance, but also within their aesthetic, historic, political and cultural context. Class discussion and a visual analysis of works of art will encourage personal interpretation and critical thinking. A list of terms related to the Renaissance introduces the language of art. Normally offered during the summer. Offered in Italy only.

- **ADPR-257 Advertising**

Credits:

4.00

Description:

A survey course that introduces students to advertising concepts and practices from the perspective of agencies, clients, the media, and consumers. Students learn to think critically about advertising messages and learn practical techniques for developing effective advertising in various media.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **ARH-290 Internship in Art History**

Prerequisites:

ARH-101 and ARH-102 and Instructor consent

Credits:

1.00- 4.00

Description:

Designed to accompany an internship at a local museum, gallery, archive, or other art institution, this independent study course will carry variable credit depending on the number of hours devoted to the internship and the related academic work done by the student. Interested students should consult the instructor as they are applying for internships.

- **CJN-L218 Photojournalism**

Credits:

4.00

Description:

An introduction to the role of photography in the journalistic process. A discussion of photography as communication and a survey of the history of photography.

Term:

Offered Both Fall and Spring

- **CJN-288 Film Language: From Silents to Citizen Kane**

Credits:

4.00

Description:

Film history from 1895 - 1940. An introduction to the language and technology of cinema as developed by pioneering filmmakers, and a basic discussion of aesthetics and criticism of film. Key films from the silent era through Orson Welles' Citizen Kane.

Term:

Offered Both Fall and Spring

- **CJN-291 Film Studies: the Modern Era**

Credits:

4.00

Description:

Film history mostly from 1940 until 1970. Includes an emphasis on film aesthetics, criticism, and history from World War II through the end of the Hollywood studio system; from film noir to Italian Neo-Realism to the French New Wave.

Term:

Alternates Fall & Spring

- **GER-306 German Cinema**

Credits:

4.00

Description:

A survey of films produced in the German speaking countries from the 1920's to the present. Includes the Weimar republic, the Nazi period, postwar production from both East and West Germany, and new trends since reunification. Film esthetics and socio-historical context. All films shown in German with English subtitles.

Term:

Occasional

- **FR-220 French & Francophone Cinema**

Credits:

4.00

Description:

Discusses and deepens understanding of French and Francophone cinema from its origins in the late nineteenth century to the early twenty-first century. Explores early works from France, by the Lumiere Brothers and Georges Melies as well as contemporary films from France, Algeria, Burkina Faso, Canada, Haiti, and Senegal.

Term:

Occasional

- **SPAN-408 Latin American Cinema**

Prerequisites:

Take ENG-102 or ENG-103 or Instructor's consent. Span 302 is strongly recommended for Spanish and Latin American & Caribbean Studies majors and minors.

Credits:

4.00

Description:

Begins with the Cuban revolution as a point of departure and examines films from Argentina, Chile, Colombia, Mexico, and other Latin American countries. Students explore the relationship between film & society and consider how knowledge of a culture and its history is influenced and shaped by what is seen on the screen. Films in Spanish with English subtitles.

Term:

Occasional

• PHIL-219 Philosophy of Art

Credits:

4.00

Description:

What counts as art? What is beauty? Are there objective standards of beauty? This course examines the nature of aesthetic experience, art, beauty, and creativity. Through the classic and contemporary readings, the students will be introduced to philosophical issues concerning the meaning of art, artistic representation, perceptions of art, interpretation, and criticism. Students will be encouraged to reflect on their own experience of art and explore the relationships among the artist, the audience, the artwork, and the world. 1 term - 4 credits. Normally offered every third year.

Notes:

- A relevant Seminar for Freshmen with a strong concentration in art history or visual culture may also count toward one of the related options at the discretion of the major advisor.
- Upper-level Art History courses taken at other institutions or through study abroad must be approved by the student's Art History advisor (preferably prior to being taken), and must not overlap significantly with any other upper-level Art History course(s) counted toward the major.
- Except under special circumstances approved by the student's Art History advisor, at least six of the 11 courses (24 of the 39-41 credit hours) must be fulfilled through coursework offered by the World Languages & Cultural Studies Department.
- AP credit cannot be applied toward the major.

Residency Requirement Policy: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.

Description:

Examines painting, sculpture and architecture of the 14th, 15th, and 16th centuries in Italy in their cultural context. Artists include Giotto, Masaccio, Donatello, Leonardo da Vinci, Raphael, Michelangelo, and Titian.

Term:

Occasional

- **ARH-308 Art of the Baroque & Rococo**

Credits:

4.00

Description:

Explores painting, sculpture and architecture in Italy, Spain and Northern Europe during the 17th and 18th century. Works by Rembrandt, Rubens, Caravaggio, Bernini, Poussin, Velasquez, Watteau, Boucher, Fragonard, Chardin, Hogarth and others considered within their historical contexts.

Term:

Occasional

- **ARH-309 Art of the 19th Century**

Credits:

4.00

Description:

Examines Neoclassicism, Romanticism, Realism and Impression in the European painting. Considers works by artists such as David, Ingres, Friedrich, Constable, Delacroix, Goya, Courbet, Millet, Daumier, Manet, Monet, Renoir, Degas, and Cassatt within their historical contexts.

Term:

Occasional

- **ARH-310 Modernism in Art**

Credits:

4.00

Description:

Examines European painting and sculpture from around 1880 to 1940, including Symbolism, Post-Impressionism, Fauvism, Expressionism, Cubism, Futurism, The Bauhaus, Dada, and Surrealism. Considers works by artists such as Gauguin, Cezanne, Van Gogh, Matisse, Kandinsky, Picasso, Braque, Mondrian, Duchamp, Magritte, Dali, and Ernst within their historical contexts.

- **ARH-311 American Art**

Credits:

4.00

Description:

Surveys American painting, sculpture, photography and architecture from the colonial period through WWII. Considers works by artists such as Smibert, Copley, West, Stuart, Whistler, Sargent, Eakins, Homer, Ryder, Bierstadt, Cole, Inness, Sloan, Sullivan, Wright, Hopper, O' Keefe, Dove,

Hartley, Bellows, Stieglitz, Weston, and Steichen.

Term:

Occasional

- **ARH-312 Art of the Northern Renaissance**

Credits:

4.00

Description:

Examines painting, sculpture, and architecture of the 14th, 15th and 16th centuries in Northern Europe, within their historical context. Topics include the rise of oil painting, the development of woodcut and engraving, the effect of the Reformation on art. Artists include van Eyck, Bosch, Durer, Holbein and Brueghel.

Term:

Occasional

- **ARH-316 Contemporary Art**

Credits:

4.00

Description:

Explores European and American art since WWII, including Abstract Expressionism, Colorfield Painting, Pop Art, Minimalism, Neo-Dada, Performance Art, Feminism, Neo-Expressionism and Post-Modernism. Artists include Bacon, Giacometti, Pollock, De Kooning, Frankenthaler, Rothko, Stella, Judd, Calder, David Smith, Serra, Johns, Rauschenberg, Warhol, Lichtenstein, Smithson, Christo, Nevelson, Kosuth, Kruger, Sherman, Basquiat, Kiefer, and Haring.

Term:

Occasional

Type:

- **ARH-318 Art and Museums Today**

Credits:

4.00

Description:

Examines the art world of the past few decades with special attention to the roles and exhibition practices of contemporary art museums and galleries. Considers the major artists and trends in today's art world, the history of museums, and the effect of museums on art produced today. Students will visit local museums, including the Institute of Contemporary Art (ICA) individually and in groups. This course fulfills the ECR requirement.

Term:

Offered Fall Term

Type:

Arts Admin Minor Elective

- **ARH-321 Women, Art & Society**

Credits:

4.00

Description:

Surveys women artists from the sixteenth century to the present and examines new direction in art-historical scholarship developed by feminist art historians during recent decades.

Term:

Offered Spring Term

- **ARH-404 Seminar in Art History: Caravaggio**

Prerequisites:

Permission of instructor required

Credits:

4.00

Description:

Explores the art of Caravaggio within the historical context of the Early Baroque period in Italy. The course emphasizes research skills and the methodology of art history. Designed as a foundation for students intending to pursue a career in the world of art and/or museums.

- **ARH-406 Seminar in Art History: Bernini**

Prerequisites:

Instructor's consent required.

Credits:

4.00

Description:

Explores the art of Gian Lorenzo Bernini, arguably the most important and influential figure in the world of 17th-century art. Designed for art history majors & minors, the seminar explores Bernini's career within the context of the religious, political, and artistic upheavals of his time; it also helps students develop research skills and provides a foundation that will be valuable for anyone pursuing a career in the world of art and museums.

- **ARH-411 Seminar in Art History: Impressionism**

Prerequisites:

Permission of instructor required

Credits:

4.00

Description:

Explores the Impressionist movement of the late nineteenth-century, including Monet, Renoir, and Pissaro, within its historical context. The course emphasizes research skills and the methodology of art history. Designed as a foundation for students intending to pursue a career in the world of art and/or museums.

Notes:

- Upper-level Art History courses taken at other institutions or through study abroad must be approved by the student's Art History advisor (preferably prior to being taken), and must not overlap significantly with any other upper-level Art History course(s) counted toward the minor.
- Except under special circumstances approved by the student's Art History advisor, at least four of the six courses (16 of the 24 credit hours) must be fulfilled through coursework offered by the World Languages & Cultural Studies Department.
- AP credit cannot be applied toward the minor.
- The Art History requirement for the BFA degree (ARH 101, ARH 102) and one additional Art History course required by a BFA major may be used to satisfy the requirements of the minor in Art History.

Residency Requirement Policy: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.

The Art History major and minor are offered through the World Languages & Cultural Studies Department.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Minor Requirements](#)
- [Honors](#)
- [Art History Courses](#)

In order to be considered for honors in Art History, a student must satisfy the following criteria:

- Students interested in honors should consult with the department chair during the spring semester of their junior year. Qualifying students must have a 3.2 overall GPA as well as a 3.5 overall GPA in their major coursework.
- Honors candidates should register for ARH-502 (Honors Thesis) in the fall semester of their senior year. Under the guidance of an Art History faculty member, they will use this course to complete a research paper. This paper will be evaluated by all Art History faculty. If the evaluation is positive, the student will make an oral presentation of the paper in the spring.

• ARH-502 Honors Thesis

Prerequisites:

Senior standing & permission of the Dept.Chair.

Credits:

4.00

Description:

A major research project completed under the supervision of a regular faculty member.

Arts Administration

As a complement to their undergraduate major, students who take a minor in Arts Administration will have basic knowledge in the following areas:

- Arts administration, including the managerial, financial, and legal needs of arts organizations
- Marketing strategies and outreach programming for the arts
- Resource development for the arts, with an emphasis on grant and proposal writing

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Minor Requirements](#)

Minor Requirements: 5 courses, 17-19 credits

Core Requirements (3 courses, 11 credits)

- **ADPR-488 Grant Writing**

Credits:

4.00

Description:

Hands-on course that explores the process of writing and submitting grants to foundations, associations, the government, and other grantors on behalf of nonprofit organizations. Students learn how to identify grant resources through research, compile an effective submission, and write supporting material such as cover letters and appendices. Also covers how grants are reviewed and tips for successful grant submissions.

Term:

Occasional

- **MKT-210 Principles of Marketing**

Prerequisites:

WRI-101, WRI-102 or WRI-H103

Credits:

3.00

Description:

As part of the core curriculum for the BSBA, this course provides a comprehensive, innovative, managerial, and practical introduction to marketing. Students will learn and apply basic concepts and practices of modern marketing as used in a wide variety of settings. Technological advances, rapid globalization, economic shifts and cultural and environmental developments are causing profound changes in the marketplace. As the marketplace changes, so must the marketers who serve it. These new developments signify a brand new world of opportunities for forward thinking marketers. In response to these new developments, the focus of this course is on four major themes that go to the heart of modern marketing theory and practice: 1. Building and managing profitable customer relationships; 2. Building and managing strong brands; 3. Harnessing new marketing technologies in this digital age; and 4. Marketing in a socially responsible way around the globe.

- **THETR-281 Arts Administration I**

Credits:

4.00

Description:

The expansive world of arts administration provides a wealth of rewarding career opportunities. This course will provide a fundamental overview of the managing, marketing, fundraising, and financial management functions of the performing and visual arts organizations. Using Suffolk's Modern Theatre as a laboratory, as well as site visits to some of Boston's greatest arts and culture institutions, we will investigate real world successes and challenges and discover what special talents each individual student can bring to the management mix. This course is a core requirement for Suffolk's new interdisciplinary Arts Administration minor.

Electives (2 courses, 6-8 credits)

Choose two of the following:

- **ADPR-103 Presentations Skills**

Credits:

4.00

Description:

The development and delivery of oral presentations. Students acquire skills in oral and physical delivery, organization, persuasion, critical thinking, and use of support media.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **ADPR-247 Design Lab**

Credits:

4.00

Description:

Computer applications for advertising and communication design. Using various graphical editing and design programs, students learn the theory and practice of design for layout, logos, and graphic elements in communication.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **ADPR-257 Advertising**

Credits:

4.00

Description:

A survey course that introduces students to advertising concepts and practices from the perspective of agencies, clients, the media, and consumers. Students learn to think critically about advertising messages and learn practical techniques for developing effective advertising in various media.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **ADPR-289 Social Media**

Credits:

4.00

Description:

Social media sites such as Facebook, Instagram, Snapchat and Twitter are examined from a cultural and critical perspective. Students use of social media for community formation, social presence, identity building, and social activism. The roles of advertising, public relations, and branding are examined.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **ADPR-297 New Media New Markets**

Credits:

4.00

Description:

Students learn HTML, CSS and Widgets for the construction, design and posting of web sites. In addition, we examine the use of websites, mobile sites for advertising, public relations, search engine optimization, and marketing.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **ADPR-378 Event Planning and Promotion**

Prerequisites:

CJN-2277(formerly CJN-277)

Credits:

4.00

Description:

Examines how events are built, promoted, managed, and assessed, with an emphasis on conventions, trade shows, and nonprofit events. Issues analyzed include facilities planning and contracts, legal issues, volunteer management, budgeting, marketing, and planner/staff communication.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **ADPR-2277 Public Relations I: Principles**

Credits:

4.00

Description:

Effective public relations involve an understanding of the history, theory, and practice of public relations including public relations concepts, the role of the practitioner, and the foundations of public relations. This course seeks to provide that foundation as an introduction to the field of public relations. Issues surrounding the history, legality, process, and principles of public relations are explored.

Term:

Offered Both Fall and Spring

Art & Design/Art History

- **ADF-S101 Foundation Drawing I**

Prerequisites:

Non-majors interesting in taking art and design courses for elective credit should refer to offerings under the ART course listings

Credits:

3.00

Description:

This course concentrates on the traditional techniques of observational drawing. Fundamental principles and elements of drawing are introduced in structured lessons and exercises, which are supplemented by additional outside assignments. Foundation Drawing I stresses the development of visual skills as well as the broad use of drawing concepts, vocabulary, techniques and variety of materials.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **ADF-S166 2D/Color**

Prerequisites:

Non-majors interesting in taking art and design courses for elective credit should refer to offerings under the ART course listings.

Credits:

3.00

Description:

This is an introductory-level course in the basic concepts and practices of two-dimensional design and color theory. The study of color and design is supportive of all studio disciplines and is vital to the understanding of all visual media. This course features an intensive, hands-on approach to color and design as students create, modify and master the three dimensions of color (hue, value, and strength) plus the principles of design (line, shape, value, composition and image). This in-depth study is essential and underlies all of the visual arts as they are practiced today. An understanding of color and design influences all artists' decisions, affecting the look, meaning and use of visual phenomena.

Type:

Arts Admin Minor Elective

• ADF-S171 CI: Integrated Studio 1

Prerequisites:

Non-majors interesting in taking art and design courses for elective credit should refer to offerings under the ART course listings.

Credits:

3.00

Description:

This cross-disciplinary course will integrate the ideas and practices of two-dimensional design, color and drawing emphasis will be placed on understanding the creative process, exploring concepts and developing research skills. Students will undertake individual and collaborative projects in three spaces; the studio classroom, the digital world and the city at large.

Type:

Creativity and Innovation, Arts Admin Minor Elective

• ARH-316 Contemporary Art

Credits:

4.00

Description:

Explores European and American art since WWII, including Abstract Expressionism, Colorfield Painting, Pop Art, Minimalism, Neo-Dada, Performance Art, Feminism, Neo-Expressionism and Post-Modernism. Occasional

Type:

Arts Admin Minor Elective

• **ARH-318 Art and Museums Today**

Credits:

4.00

Description:

Examines the art world of the past few decades with special attention to the roles and exhibition practices of contemporary art museums and galleries. Considers the major artists and trends in today's art world, the history of museums, and the effect of museums on art produced today. Students will visit local museums, including the Institute of Contemporary Art (ICA) individually and in groups. This course fulfills the ECR requirement.

Term:

Offered Fall Term

Type:

Arts Admin Minor Elective

• **ARH-401 Special Topic: Seminar in Art**

Prerequisites:

Permission of instructor needed

Credits:

4.00

Description:

Topic will vary from year to year.

Term:

Offered Spring Term

Type:

Arts Admin Minor Elective

• **ART-S209 Introduction to Drawing and Mixed Media**

Credits:

3.00

Description:

This course is an introduction to the fundamental principles of drawing using both traditional and experimental techniques. Media includes pencil, charcoal, pastels, oil pastels, image-transfer, and collage. This course is appropriate for beginners as well as more advanced students. Individual attention is given to students at various levels of ability and allows students to progress at their own pace. The lessons will be supplemented by lectures and visits to museums and galleries. Please note: This is a 3-credit studio course.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **ART-S211 Introduction to Painting**

Credits:

3.00

Description:

This introductory course is designed to encourage students with little or no knowledge of the use of various painting processes. The basic elements of painting are introduced in exercises enhanced by demonstrations and gallery visits. Students can choose to work with various painting mediums including oil, acrylic, or watercolor. Creative work is encouraged in a relaxed atmosphere where individual attention is given to students at various levels of ability. Please note: This is a 3-credit studio course.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

Business

- **ACCT-201 Accounting for Decision Making I**

Prerequisites:

MATH-128 or higher and WRI-102 or WRI-H103 or SBS-220

Credits:

3.00

Description:

Introduces students to the accounting cycle, the financial statements, and the theory underlying accounting as information. Provides users of accounting information with a basic understanding of how to appraise and manage a business. Addresses current accounting topics, including relevant ethical and international issues found in the financial press.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **BLE-214 Principles of Business Law**

Credits:

3.00

Description:

Introduces the field of business law. Provides an overview of the organization and operation of the American legal system, court system and legal procedure. Examines selected business law topics such as contracts, torts, criminal law, agency, and business organizations. Attention is given to the ways in which business law manifests important social and ethical precepts.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **ENT-101 Business Foundations**

Credits:

3.00

Description:

This course introduces students to foundational concepts in business, including functional areas, the life cycle, competition, stakeholders and ethical considerations. Students develop critical thinking by learning and using a problem solving process through a business situation analysis model to analyze various situations that confront managers and founders of small, medium, and large organizations. Students will also develop tools for analysis, allowing them to critically view business in a new and thoughtful way. The class culminates with student- teams presenting a detailed analysis and recommendations to a panel of executives and persuading them that the recommended strategy is not only feasible, but also practical for the stakeholders involved.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **ENT-320 Growing and Managing the Firm**

Prerequisites:

ENT-101 and Junior Standing

Credits:

3.00

Description:

How do you manage the day-to-day challenges of starting a new venture or working on a small business? This course is designed around problem-solving techniques that help you research the facts of a given situation, identify the problem, develop alternative solutions and defending the best solution. This course utilizes case analysis, role-plays, simulations, and other experiential lessons to help provide you with the knowledge and skills necessary to build and lead a new or innovative organization.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **MGT-401 Negotiations**

Prerequisites:

MGT 217 (formerly MGT 317); Junior standing

Credits:

3.00

Description:

This course is premised on the fact that whereas a manager needs analytical skills to discover optimal solutions to business problems, a broad array of negotiation skills is needed to implement these solutions. This experiential course is designed to improve your skills in all phases of negotiation: understanding prescriptive and descriptive negotiation theory as it applies to dyadic and multiparty negotiations, to buyer-seller transactions and the resolution of disputes, to the development of negotiation strategy, and to the management of integrative and distributive aspects of the negotiation process. The course is based on a series of simulated negotiations in a variety of contexts including one-on-one, multi-party, cross-cultural, third-party and team negotiations. Please note that given the experiential nature of the course, attendance is mandatory and will be strictly enforced beginning from the first class session.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

• MKT-315 Integrated Marketing Communication

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Integrated Marketing Communications (IMC) is a cross-functional process for managing customer relationships that drive brand value. This course examines the strategic foundations of IMC, the factors and processes necessary for creating, sending, and receiving successful brand messages. Furthermore, the social, ethical and legal issues as well as measurement and evaluation of marketing communication will be examined.

Type:

Arts Admin Minor Elective

• MKT-444 Social Media Marketing

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

Social media has altered the landscape of business, communications, marketing, and society as a whole. While some social media like Wikipedia and Facebook have become part of the fabric of many consumers' lives, new media like Snapchat and Tumblr are emerging. This constantly evolving landscape offers businesses innovative ways for generating awareness, demand and revenue. In this course students will take away a social media vocabulary, a set of social media skills and tools, and analytical frameworks for analyzing effective social media business practices. Naturally, student projects, assignments, and other activities will use social media tools.

Type:

Arts Admin Minor Elective

- **MKT-477 eMarketing**

Prerequisites:

MKT 210 or MKT-H210

Credits:

3.00

Description:

This course explores how we can use the principles of web marketing as effective marketing tools. The course will have the following learning components: lectures, guest lectures, web site analyses, and student project presentations.

Type:

Arts Admin Minor Elective

- **P.AD-325 Nonprofit Management**

Prerequisites:

Junior standing

Credits:

3.00

Description:

The primary focus will be on understanding the operational and strategic leadership aspects of managing mission driven, public service organizations. Specific emphasis will be placed on nonprofit corporations, including coursework that explores the legal, structural, and operational issues that are particular to such organizations.

Type:

Arts Admin Minor Elective

Note: BSBA students cannot count the following BSBA core requirements (ACCT-201, BLE-214, or ENT-101) as Arts Administration minor electives and should instead choose other courses from the full list of options provided.

Government

- **GVT-247 Intellectual Property- Authors, Inventors, & Brands**

Prerequisites:

GPA at least 3.3

Credits:

4.00

Description:

Are Neanderthal genes patentable? May a fan write Harry Potter 8? Could Amazon.com shut down Amazon Books, a women's bookstore? Is there copyright in a student's class paper? Why does so much copyrighted stuff stay up on YouTube? Can a video game company own its employees' ideas? This friendly, interactive introduction to intellectual property gives the lay of the land, covering the fundamental pillars of copyrights, patents, trademarks, and trade secret, and more far-reaching topics like international and internet intellectual property, and indigenous people and IP. The course is open to all majors, because it is relevant to anyone who deals with creative works, inventions, discoveries, or business. This undergraduate

course will be taught at the Suffolk Law School by a member of its faculty. To register students must have a GPA of 3.3 or permission of the instructor. There will be several quizzes and a final exam.

Type:

Arts Admin Minor Elective

Theatre

- **THETR-100 Theatre Practicum: Performance**

Prerequisites:

This is a no credit course.

Credits:

0.00

Description:

A non-credit course to satisfy the Theatre practicum requirement for theatre majors and minors. Students should register for this course when participating in Theatre Department performance activities such as acting, directing, playwriting, dramaturgy, choreography, or stage management may. May be taken more than once.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

- **THETR-102 Theatre Practicum: Production**

Prerequisites:

This is a no credit course.

Credits:

0.00

Description:

A non-credit course to satisfy the Theatre practicum requirement for theatre majors and minors. Students should register for this course when participating in Theatre Department production activities such as design or assistant design, load-in or run crews, board operators, carpenters, electricians, stitchers and painters. May be taken more than once.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

• **THETR-129 Acting**

Credits:

4.00

Description:

This introduction to acting prepares students for work in production and develops skills in all forms of communication. The first part of the course uses improvisational exercises based on the Stanislavski method to teach fundamental acting techniques. The second half of the course applies those techniques to scene work from major 20th century plays. This course is a core requirement for all Theatre Majors.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

• **THETR-187 Intro to Stage Management**

Credits:

4.00

Description:

This course will teach both the methods and principles behind stage management demonstrating how to support a production while facilitating the work of directors, designers, and actors. In addition to teaching the specific technical skills necessary to each part of the production process, this course will also address the more subtle intellectual and managerial skills that make stage management an art. Satisfies a core requirement for Theatre majors.

Term:

Offered Fall Term

Type:

Arts Admin Minor Elective

• THETR-375 Directing I

Credits:

4.00

Description:

This conservatory-style course provides students with fundamental directing skills through lectures, readings, and weekly projects that explore composition, staging, text analysis, and directorial communication skills. Students in this course become eligible to propose their own projects to the Theatre Department for production consideration. Directing students are also encouraged to stage manage and assistant direct faculty productions both in and outside of the Department.

Term:

Offered Fall Term

Type:

Arts Admin Minor Elective

Residency Requirement Policy: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.

2017-2018 Archived Catalog Information

Asian Studies

Asian Studies is an interdisciplinary program that offers courses in the humanities and social sciences with a focus on Asia.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Minor Requirements](#)
- [Asian Studies Courses](#)

Major Requirements: 15 courses, 56 credits

Core Requirements: 10 courses, 36 credits

- **CAS-201 College to Career: Explore Your Options And Find Your Path**

Prerequisites:

CAS students only. SBS students by special permission. Restricted to the following majors: Art History, Asian Studies, Biology, Economics, English, French, History, Humanities, International Economics, Music History, Philosophy, Physics, Radiation Science, Spanish, and Undeclared. Instructor consent required for all other majors.

Credits:

1.00

Description:

This course engages students in the early stages of career planning. Students will explore their interests, skills, values, and strengths, which will allow them to begin setting appropriate goals for professional development. Once students understand themselves in relation to the world of work, they will learn how to research careers and employment paths that fit with their goals.

- **AS-511 Professional Development for Asian Studies**

Prerequisites:

Instructor consent required

Credits:

1.00

Description:

Students will reflect on their college career and develop a personal strategy for attaining professional goals. They will understand ethical guidelines and professional conventions by examining the differences between American work culture and Asian work culture; by applying this understanding to a transnational/diverse professional world. Students will understand what the job market and graduate school opportunities are like for Asian Studies graduates.

Students must take courses from at least three departments, with no more than 20 credits from any one department. Some Freshman Seminar courses may qualify with the approval of the Program Director.

Choose eight of the following:

- **AS-100 Introduction to Asian Studies: Culture, People, Ideas**

Credits:

4.00

Description:

An interdisciplinary introduction to Asian Studies will touch upon the history, politics, economics, philosophy, geography, arts, and cultures of Asia. Sample topics include political economy, religious and cultural exchanges, international relations, Asian experience in America, and the role of Asia in the twenty-first century. Students will develop conceptual frameworks for exploring the subjects covered by the Asian Studies curriculum.

Term:

Offered Both Fall and Spring

Type:

Asian Studies, Social & Intellectual HST

- **AS-210 Traditional Chinese Society From 1800 to 1949**

Credits:

4.00

Description:

This course focuses on traditional Chinese society from 1800 to 1949, taking up such areas as family and kinship, social mobility, education, economic and social differentiation, community and social life, and popular belief. Examining the practices and ideologies underlying each area will enhance our understanding of the nature of traditional Chinese society, and help explain how elements of Chinese traditional culture contribute to modern Chinese identity and everyday life.

Term:

Occasional

- **AS-220 Chinese Food in America**

Credits:

4.00

Description:

There are more Chinese restaurants in the U.S. than MacDonald's, Burger Kings and KFC'S combined. This course examines the unique American phenomenon of Chinese food from a historical and anthropological viewpoint. Students will gain a better appreciation and understanding of the subject through the course and will probably never look at local Chinese takeout the same way afterwards

Term:

Offered Spring Term

Type:

- **AS-500 Asian Studies Internship**

Credits:

4.00

Description:

Engages in an internship in a business or non-profit organization that deals with Asia or an Asian American community. Students may complete the internship either in Asia or in the U.S. Students will complete appropriate exercises and reports to document their learning. (1 course, 4-12 credits; can be taken multiple times in different semesters)

Term:

Offered Both Fall and Spring

Type:

Global Engagement Experience

- **AS-510 Independent Study**

Credits:

1.00- 4.00

Description:

Works directly with a faculty member on an agreed topic related to Asia or an Asian language. Past topics include: intermediate Chinese and Japanese; Asian popular culture.

Term:

Offered Both Fall and Spring

- **CHIN-211 Survey of Chinese Literature and Culture I**

Credits:

3.00

Description:

This is an introductory and interdisciplinary course on Chinese civilization and traditional Chinese literature. It will provide the student with a brief introduction to the cultural legacy and literature of China from the archaeological origins of Chinese civilization to the present time. The diverse origins of China's civilization are stressed as topics in political, social, and economic history are explored, with a focus on developments in language, literature, and art. This course is a good introduction to further study of Chinese history and culture and, in particular, provides a valuable context for themes treated in Modern China.

• **CJN-281 Asian Popular Culture**

Credits:

4.00

Description:

Students critically analyze Asian popular culture since the 1980s using a cultural ethnographic approach. Students apply the lenses of gender, identity, globalization, and business strategies to examine pop phenomena such as Korean Wave, Cool Japan, and Cantonese popular music.

Term:

Occasional

• **CJN-293 Hong Kong Cinema**

Credits:

4.00

Description:

By examining the film texts of Hong Kong auteurs such as John Woo, Wong Kar-wai, Tsui Hark, Andrew Lau, and Alan Mak, the course examines issues such as film genres, colonization/decolonization, transnational political economy, the Greater Chinese media market, and the diaspora.

Term:

Occasional

- **ENG-362 Asian American Literature**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

An introduction to selected Asian-American writers with an emphasis on socio-cultural issues, such as race, gender and ethnicity. Authors include Bulosan, Hwang, Jen, Kingston, Lee, Mukherjee, Odada, and Tan. Cultural Diversity A

Term:

Occasional

Type:

Asian Studies

- **GVT-389 Politics of China**

Prerequisites:

Junior status or above

Credits:

4.00

Description:

Emphasis on a particular approach to the problems of economic modernization and political development. Historical background; the revolutionary movement; present political structures and current issues. Cultural Diversity B

Type:

- **GVT-411 Politics of North and South East Asia**

Prerequisites:

Junior Status required

Credits:

4.00

Description:

This course examines the cultural background and political systems mainly of China, Korea and Japan, also touching upon the small tiger states in South-East Asia. It elucidates the historical origins, evolution and current trajectory of these states with a particular concentration on North Korea. One further concentration is the interplay of domestic and foreign policy in the relations of these states, regional stability and cooperation. Topics include history, social structure, the interplay of culture and ideology, political economy, humanitarian issues, security, and the politics of North Korean domestic and foreign policy. We will spend considerable time analyzing China's and North Korea's relationship with regional and world powers and examining the origins, history, and implications of the North Korean nuclear weapons program. Students will be expected to demonstrate the ability to apply theoretical and historical knowledge toward analyzing the rapidly evolving landscape of contemporary issues related to East Asia.

Type:

Asian Studies

- **HST-115 Introduction to Chinese History and Culture**

Credits:

4.00

Description:

Discusses Chinese civilization from its origins to its recent rise as a world power. Spark students' interest in China and enable them to relate Chinese history and society to their lives and careers.

- **HST-251 Modern East Asia**

Credits:

4.00

Description:

China, Japan, and Korea - East Asia's critical players - share many historical influences, but each has a distinct culture, and they competed with each other for much of the twentieth century, proud of their achievements but feeling threatened by their neighbors. Lectures interspersed with movies and documentaries to show how East Asia has developed in the past one-hundred-plus years.

Type:

Social & Intellectual HST

- **HST-255 Films and Contemporary China**

Credits:

4.00

Description:

Uses a series of films to demonstrate the changes in people's lives in contemporary China. It focuses on the Reform Era between 1980 and present. The topics include Chinese politics, economic growth, social change, and popular cultures.

Term:

Occasional

Type:

Asian Studies

- **HST-260 Asian Peoples and Cultures**

Credits:

4.00

Description:

Introduces the peoples of Asia and the cultures they have created. Particular attention is paid to the lives of the common people in both historical and contemporary times. By understanding the richness and complexities of daily life in Asia, we will understand the continuities and discontinuities brought on by social, cultural, and economic changes. We will gain an appreciation of our fellow human beings in Asia.

Type:

Social & Intellectual HST

- **HST-342 Modern Japanese History**

Credits:

4.00

Description:

Examines Japanese history from the beginning of the seventeenth century to the end of the twentieth century. The topics include early modern Japan during the Tokugawa era, Meiji Restoration, Japanese imperialism and World War II, Japan's emergence as the second largest economy in the world.

Term:

Occasional

Type:

Asian Studies

- **HST-348 Samurai: History, Literature & Film**

Credits:

4.00

Description:

Explores the history of samurai and its cultural meaning for Japanese society. It examines not only how the samurai class developed into a major political force, but also how it has been represented by literatures and films in different eras.

Term:

Occasional

Type:

Asian Studies

- **PHIL-261 Eastern Philosophy**

Credits:

4.00

Description:

The exposition and critical evaluation of Hinduism, Buddhism, Confucianism, Taoism, and Islam. Special attention is given to foundation principles as well as to the similarities and differences of each of these philosophies to basic ideas in Western philosophy. 1 term - 4 credits. Normally offered alternate years. C b

Term:

Occasional

Type:

Asian Studies

- **PHIL-262 Buddhism**

Credits:

4.00

Description:

An historical survey of Buddhist philosophy. We will explore Buddhist origins, central teachings, devotional and meditational practices, ritual and institutions as developed from classical to modern times. Special attention given to the philosophical diversity of the Buddhist world view. 1 term - 4 credits. Normally offered alternate years. C b

Term:

Occasional

Type:

- **PHIL-267 Chinese Philosophy**

Credits:

4.00

Description:

A survey of the main developments in Chinese Philosophy. The course begins with the early dynastic concept of humanism and then turns to Confucius and Mencius. Having developed the central Confucian doctrines, students next examine the Taoist response to Confucianism in the writings of Lao Tzu and Chuang Tzu. The course then considers Zen Buddhism, which is called Ch'an Buddhism in China, where it originated. In particular, students study the concept of sudden enlightenment before turning to the Neo-Confucian scholars.

Term:

Occasional

- **PSYCH-247 Asian Perspectives on Health and Work**

Credits:

4.00

Description:

Examines theoretical and empirical approaches that provide insight into Asian viewpoints on socialization practices, family systems, health/well-being, cultural traditions/values, and spiritual philosophy/literature. Explores the diversity among Asian cultures in terms of language, history, religion/spiritual faith, and healthcare practices, all of which play a significant role in shaping the psychological characteristics, interpersonal relationships, and work dynamics of Asians and Asian immigrants. Students critically analyze similarities and differences between Asian and Western psychological perspectives of health and work through didactic and experiential learning components. This course fulfills the Cultural Diversity Requirement and may fulfill the Expanded Classroom Requirement. Normally offered alternate years.

Term:

Offered Spring Term

Type:

- **RS-112 Introduction to World Religions: Eastern Traditions**

Credits:

4.00

Description:

This course will examine a variety of Eastern religions, including Hinduism, Buddhism, Jainism, Confucianism, Taoism, and Shintoism. Possible connections to be explored will be the impact of these traditions on others, such as Pacific Islands and African religion, as well as the growing place of Eastern religion in the West. This course will explore the history and structure of each tradition, while attempting to recognize the similarities and the differences among them. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. Normally offered every year. Cultural Diversity B

Type:

Asian Studies

- **SF-190 Asia in America Fiction and Fact**

Credits:

4.00

Description:

With a focus on some selected ethnic groups from Asia, Asia in America studies the history and current status of Asian Americans in Boston and other parts of the country. We will examine the major reasons why these immigrants chose to leave their home country as well as their expectations and experiences here in America. We will also discuss the issues Asian immigrants have faced in this adopted home as well as the connections and conflicts among different ethnic groups or even within the same ethnic group due to political and socio-economic reasons. The course will include some level of community engagement, through Chinatown tour and service, which may enable us to have a direct contact with the Asian American population and reflect on what is being discussed in class. Through this course, we hope to gain a better understanding of the racial and cultural history of the country and arrive at a deep appreciation of the dynamics of cultural interactions in the twenty-first century. The course fulfills the SCGP requirement.

Type:

Global Engagement Experience

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

Students who choose the following courses and complete some specific reading and writing assignments may count them toward the Asian Studies major requirements. However, students need to consult the instructor and get the approval of the Asian Studies program director no later than the first week of the class.

- **CJN-216 Intercultural Communication**

Credits:

4.00

Description:

An examination of communication variations and cultural viewpoints and their impact on cross-cultural communication. A special emphasis is placed on rituals and message patterns in non-Western cultures.

Term:

Offered Both Fall and Spring

- **CJN-385 Globalization of Media and Telecommunications**

Credits:

4.00

Description:

A critique of the circulation of media goods and ideologies from both a cultural and political/economic perspective. Topics include global Hollywood, the images of Muslim women in transnational media, the information society, and global social movements.

Term:

Offered Spring Term

- **EC-141 Development Economics**

Credits:

4.00

Description:

Why do so many countries remain so poor? Why have some (e.g. the Asian tigers) grown so rapidly? Why have most of the countries of Eastern Europe and the Former Soviet Union been slow to ignite economic growth? These questions are addressed by looking at domestic factors (government policies, resource endowments) as well as the international environment (mobile investors, international financial institutions). Asks what economic choices these countries face now. Normally offered yearly. Cultural Diversity B

Type:

Asian Studies

- **EC-151 Economic & Human Geography**

Credits:

4.00

Description:

The study of how economic and human activity is distributed across space, the reasons for these spatial distributions, and the processes that change the spatial organization of economic activity over time. Topics include: maps, map projections, and geographic information systems; population geography; the organization and location of cities, towns and villages; transportation and communication policy; industrial location; the geography of world trade; and geographic features of economic development. The course takes a global perspective, and draws on cases and examples from all over the world. Cultural Diversity B

Type:

- **EC-430 International Trade Theory & Policy**

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

This course examines theories of international trade. The policy implications of each theory are explored and the effect of trade on the welfare of the nation is examined. Also the development of trade blocs and the political economy of trade are studied. Normally offered every year.

- **EDUC-315 Strategies for Emerging English Learners**

Credits:

4.00

Description:

This course examines the specific needs and challenges of the various language and cultural groups in schools. Topics include: theories of 1st and 2nd language acquisition, strategies for teaching academic content, modifying instruction in the mainstream classroom, creating classroom cultures that invite all students into learning, the role of advocacy and professional collaboration in ESL, and analysis of policies related to assessment and placement of English Language Learners.

- **HST-150 Empires & Globalization in World History II**

Credits:

4.00

Description:

This is the second of the two-course series of Empires and Globalization in World History. Course discusses the origins and development of globalization and capitalism from the perspective of economic history. Major issues include state-making, wars, and the rivalry among early modern empires, economic development, the Industrial Revolution and the formation of the global trade system. The specific topics may change every year due to new academic developments and publications. Cultural Diversity B

Term:

Offered Spring Term

Type:

Social & Intellectual HST

- **SOC-228 Cultural, Global and Social Perspectives**

Credits:

4.00

Description:

Enables students to examine, as well as develop an awareness and appreciation of, diversity within today's society. Providing an overview of the major racial, ethnic, and cultural groups in the U.S., the focus is on the ways in which cultural awareness enhances professional helping relationships and improves the operation of human services systems.

Term:

Occasional

- **SOC-329 Sociology of Globalization**

Prerequisites:

Prerequisite: SOC 113 or SOC 116.

Credits:

4.00

Description:

Globalization is shrinking the world. How and why did this happen? This course will explore global change and the global processes which effect key social institutions: culture, the economy and politics. Students will study the processes of globalization and its impact on our lives and people around the globe.

Term:

Occasional

- **SOC-357 Global Health and Healing**

Credits:

4.00

Description:

An examination of how different cultures understand health and illness. Healing approaches from Asia, Africa and the Americas will be explored.

Term:

Occasional

- **WGS-325 Global Women's Fiction**

Credits:

4.00

Description:

Explores of various cultural worldviews in order to reveal and assess the voices of women from around the world as they respond to important global issues such as sexual violence and gendered oppression. Topics include: national citizenship, sexual politics, legal discourse, aesthetic representation, literary movements, genre, constructions of femininity, sexual identities, and representations of gender in relation to race and class and international cultures, and the relationship of self-image to the body politic.

Term:

Occasional

Language Requirement (4 courses, 16 credits)

To qualify for the major, students must demonstrate proficiency in one Asian language at the advanced-intermediate level. This can be fulfilled by successful completion of an Intermediate Level II Asian language course with an average grade of “B” or by passing the same level language test offered by the World Languages & Cultural Studies Department.

- **CHIN-202 Intermediate Chinese II**

Prerequisites:

CHIN 201 or Instructor's consent.

Credits:

4.00

Description:

Continuation of skills developed in CHIN 201.

Term:

Offered Spring Term

OR

- **JPN-202 Intermediate Japanese II**

Prerequisites:

JPN-201 or Instructor's consent

Credits:

4.00

Description:

Continuation of skills developed from JPN 201. One language laboratory session per week.

Term:

Offered Spring Term

- **CHIN-101 Elementary Chinese I**

Credits:

4.00

Description:

Introduces Modern Standard Chinese (Mandarin) with an emphasis on developing conversational skills by using authentic materials such as video, audio, and various print media that teach fundamental grammatical patterns and vocabulary in functional contexts. Basic reading and writing (in Simplified Characters) are also taught.

Term:

Offered Fall Term

- **CHIN-102 Elementary Chinese II**

Prerequisites:

CHIN 101 or Instructor's consent.

Credits:

4.00

Description:

Continues to develop proficiency in reading, writing, and speaking Modern Standard Chinese (Mandarin). Helps to develop listening comprehension skills with the use of authentic materials, such as print media, audio, and video materials. Advanced beginning level of reading and writing of Simplified Chinese characters is taught.

Term:

Offered Spring Term

Type:

Modern Language

- **CHIN-202 Intermediate Chinese II**

Prerequisites:

CHIN 201 or Instructor's consent.

Credits:

4.00

Description:

Continuation of skills developed in CHIN 201.

Term:

Offered Spring Term

- **JPN-101 Elementary Japanese I**

Credits:

4.00

Description:

For students with no previous knowledge. An introduction to features of spoken and written Japanese. Stresses grammar, oral performance and simple characters.

Term:

Offered Fall Term

- **JPN-102 Elementary Japanese II**

Prerequisites:

JPN-101 or Instructor's consent

Credits:

4.00

Description:

Continues to develop proficiency in reading, writing, and speaking Japanese. Helps to further develop listening skills with the use of authentic materials, such as print media and audio files.

Term:

Offered Spring Term

Study Abroad or an Internship (4 credits, minimum)

Students must complete either option A or B:

A. A Semester, Summer or Short-Term Study Abroad in Asia (which must bear at least 4 credits)

B. AS-500 Asian Studies Internship (1 course, 4-8 credits; may be taken twice)

- **AS-500 Asian Studies Internship**

Credits:

4.00

Description:

Engages in an internship in a business or non-profit organization that deals with Asia or an Asian American community. Students may complete the internship either in Asia or in the U.S. Students will complete appropriate exercises and reports to document their learning. (1 course, 4-12 credits; can be taken multiple times in different semesters)

Term:

Offered Both Fall and Spring

Type:

Global Engagement Experience

Note:

AS-500 may not double count to fulfill major course requirements if taken as a substitute for study abroad.

Residency Requirement Policy: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.

2017-2018 Archived Catalog Information

Asian Studies

Asian Studies is an interdisciplinary program that offers courses in the humanities and social sciences with a focus on Asia.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Minor Requirements](#)
- [Asian Studies Courses](#)

Minor Requirements: 5 courses, 17-20 credits

The minor requires a minimum of five courses (at least 17 credits) from at least two departments, up to two of which may consist of Asian Language courses. For the minor, proficiency in an Asian language does not allow any reduction in the total number of courses.

Choose five of the following:

- AS-100 Introduction to Asian Studies: Culture, People, Ideas

Credits:

4.00

Description:

An interdisciplinary introduction to Asian Studies will touch upon the history, politics, economics, philosophy, geography, arts, and cultures of Asia. Sample topics include political economy, religious and cultural exchanges, international relations, Asian experience in America, and the role of Asia in the twenty-first century. Students will develop conceptual frameworks for exploring the subjects covered by the Asian Studies curriculum.

Term:

Offered Both Fall and Spring

Type:

Asian Studies, Social & Intellectual HST

- **AS-210 Traditional Chinese Society From 1800 to 1949**

Credits:

4.00

Description:

This course focuses on traditional Chinese society from 1800 to 1949, taking up such areas as family and kinship, social mobility, education, economic and social differentiation, community and social life, and popular belief. Examining the practices and ideologies underlying each area will enhance our understanding of the nature of traditional Chinese society, and help explain how elements of Chinese traditional culture contribute to modern Chinese identity and everyday life.

Term:

Occasional

- **AS-220 Chinese Food in America**

Credits:

4.00

Description:

There are more Chinese restaurants in the U.S. than MacDonald's, Burger Kings and KFC'S combined. This course examines the unique American phenomenon of Chinese food from a historical and anthropological viewpoint. Students will gain a better appreciation and understanding of the subject through the course and will probably never look at local Chinese takeout the same way afterwards

Term:

Offered Spring Term

Type:

Asian Studies

- **AS-500 Asian Studies Internship**

Credits:

4.00

Description:

Engages in an internship in a business or non-profit organization that deals with Asia or an Asian American community. Students may complete the internship either in Asia or in the U.S. Students will complete appropriate exercises and reports to document their learning. (1 course, 4-12 credits; can be taken multiple times in different semesters)

Term:

Offered Both Fall and Spring

Type:

Global Engagement Experience

- **AS-510 Independent Study**

Credits:

1.00- 4.00

Description:

Works directly with a faculty member on an agreed topic related to Asia or an Asian language. Past topics include: intermediate Chinese and Japanese; Asian popular culture.

Term:

Offered Both Fall and Spring

- **CHIN-211 Survey of Chinese Literature and Culture I**

Credits:

3.00

Description:

This is an introductory and interdisciplinary course on Chinese civilization and traditional Chinese literature. It will provide the student with a brief introduction to the cultural legacy and literature of China from the archaeological origins of Chinese civilization to the present time. The diverse origins of China's civilization are stressed as topics in political, social, and economic history are explored, with a focus on developments in language, literature, and art. This course is a good introduction to further study of Chinese history and culture and, in particular, provides a valuable context for themes treated in Modern China.

- **CJN-281 Asian Popular Culture**

Credits:

4.00

Description:

Students critically analyze Asian popular culture since the 1980s using a cultural ethnographic approach. Students apply the lenses of gender, identity, globalization, and business strategies to examine pop phenomena such as Korean Wave, Cool Japan, and Cantonese popular music.

Term:

Occasional

- **CJN-293 Hong Kong Cinema**

Credits:

4.00

Description:

By examining the film texts of Hong Kong auteurs such as John Woo, Wong Kar-wai, Tsui Hark, Andrew Lau, and Alan Mak, the course examines issues such as film genres, colonization/decolonization, transnational political economy, the Greater Chinese media market, and the diaspora.

Term:

Occasional

- **ENG-362 Asian American Literature**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

An introduction to selected Asian-American writers with an emphasis on socio-cultural issues, such as race, gender and ethnicity. Authors include Bulosan, Hwang, Jen, Kingston, Lee, Mukherjee, Odada, and Tan. Cultural Diversity A

Term:

Occasional

Type:

Asian Studies

- **GVT-389 Politics of China**

Prerequisites:

Junior status or above

Credits:

4.00

Description:

Emphasis on a particular approach to the problems of economic modernization and political development. Historical background; the revolutionary movement; present political structures and current issues. Cultural Diversity B

Type:

Asian Studies

- **GVT-411 Politics of North and South East Asia**

Prerequisites:

Junior Status required

Credits:

4.00

Description:

This course examines the cultural background and political systems mainly of China, Korea and Japan, also touching upon the small tiger states in South-East Asia. It elucidates the historical origins, evolution and current trajectory of these states with a particular concentration on North Korea. One further concentration is the interplay of domestic and foreign policy in the relations of these states, regional stability and cooperation. Topics include history, social structure, the interplay of culture and ideology, political economy, humanitarian issues, security, and the politics of North Korean domestic and foreign policy. We will spend considerable time analyzing China's and North Korea's relationship with regional and world powers and examining the origins, history, and implications of the North Korean nuclear weapons program. Students will be expected to demonstrate the ability to apply theoretical and historical knowledge toward analyzing the rapidly evolving landscape of contemporary issues related to East Asia.

Type:

Asian Studies

- **HST-115 Introduction to Chinese History and Culture**

Credits:

4.00

Description:

Discusses Chinese civilization from its origins to its recent rise as a world power. Spark students' interest in China and enable them to relate Chinese history and society to their lives and careers.

- **HST-251 Modern East Asia**

Credits:

4.00

Description:

China, Japan, and Korea - East Asia's critical players - share many historical influences, but each has a distinct culture, and they competed with each other for much of the twentieth century, proud of their achievements but feeling threatened by their neighbors. Lectures interspersed with movies and documentaries to show how East Asia has developed in the past one-hundred-plus years.

Type:

Social & Intellectual HST

- **HST-255 Films and Contemporary China**

Credits:

4.00

Description:

Uses a series of films to demonstrate the changes in people's lives in contemporary China. It focuses on the Reform Era between 1980 and present. The topics include Chinese politics, economic growth, social change, and popular cultures.

Term:

Occasional

Type:

Asian Studies

- **HST-260 Asian Peoples and Cultures**

Credits:

4.00

Description:

Introduces the peoples of Asia and the cultures they have created. Particular attention is paid to the lives of the common people in both historical and contemporary times. By understanding the richness and complexities of daily life in Asia, we will understand the continuities and discontinuities brought on by social, cultural, and economic changes. We will gain an appreciation of our fellow human beings in Asia.

Type:

Social & Intellectual HST

• HST-342 Modern Japanese History

Credits:

4.00

Description:

Examines Japanese history from the beginning of the seventeenth century to the end of the twentieth century. The topics include early modern Japan during the Tokugawa era, Meiji Restoration, Japanese imperialism and World War II, Japan's emergence as the second largest economy in the world.

Term:

Occasional

Type:

Asian Studies

• HST-348 Samurai: History, Literature & Film

Credits:

4.00

Description:

Explores the history of samurai and its cultural meaning for Japanese society. It examines not only how the samurai class developed into a major political force, but also how it has been represented by literatures and films in different eras.

Term:

Occasional

Type:

Asian Studies

- **PHIL-261 Eastern Philosophy**

Credits:

4.00

Description:

The exposition and critical evaluation of Hinduism, Buddhism, Confucianism, Taoism, and Islam. Special attention is given to foundation principles as well as to the similarities and differences of each of these philosophies to basic ideas in Western philosophy. 1 term - 4 credits. Normally offered alternate years. C b

Term:

Occasional

Type:

Asian Studies

- **PHIL-262 Buddhism**

Credits:

4.00

Description:

An historical survey of Buddhist philosophy. We will explore Buddhist origins, central teachings, devotional and meditational practices, ritual and institutions as developed from classical to modern times. Special attention given to the philosophical diversity of the Buddhist world view. 1 term - 4 credits. Normally offered alternate years. C b

Term:

Occasional

Type:

Asian Studies

- PHIL-267 Chinese Philosophy

Credits:

4.00

Description:

A survey of the main developments in Chinese Philosophy. The course begins with the early dynastic concept of humanism and then turns to Confucius and Mencius. Having developed the central Confucian doctrines, students next examine the Taoist response to Confucianism in the writings of Lao Tzu and Chuang Tzu. The course then considers Zen Buddhism, which is called Ch'an Buddhism in China, where it originated. In particular, students study the concept of sudden enlightenment before turning to the Neo-Confucian scholars.

Term:

Occasional

- PSYCH-247 Asian Perspectives on Health and Work

Credits:

4.00

Description:

Examines theoretical and empirical approaches that provide insight into Asian viewpoints on socialization practices, family systems, health/well-being, cultural traditions/values, and spiritual philosophy/literature. Explores the diversity among Asian cultures in terms of language, history, religion/spiritual faith, and healthcare practices, all of which play a significant role in shaping the psychological characteristics, interpersonal relationships, and work dynamics of Asians and Asian immigrants. Students critically analyze similarities and differences between Asian and Western psychological perspectives of health and work through didactic and experiential learning components. This course fulfills the Cultural Diversity Requirement and may fulfill the Expanded Classroom Requirement. Normally offered alternate years.

Term:

Offered Spring Term

Type:

Asian Studies

- **RS-112 Introduction to World Religions: Eastern Traditions**

Credits:

4.00

Description:

This course will examine a variety of Eastern religions, including Hinduism, Buddhism, Jainism, Confucianism, Taoism, and Shintoism. Possible connections to be explored will be the impact of these traditions on others, such as Pacific Islands and African religion, as well as the growing place of Eastern religion in the West. This course will explore the history and structure of each tradition, while attempting to recognize the similarities and the differences among them. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. Normally offered every year. Cultural Diversity B

Type:

Asian Studies

- **SF-190 Asia in America Fiction and Fact**

Credits:

4.00

Description:

With a focus on some selected ethnic groups from Asia, Asia in America studies the history and current status of Asian Americans in Boston and other parts of the country. We will examine the major reasons why these immigrants chose to leave their home country as well as their expectations and experiences here in America. We will also discuss the issues Asian immigrants have faced in this adopted home as well as the connections and conflicts among different ethnic groups or even within the same ethnic group due to political and socio-economic reasons. The course will include some level of community engagement, through Chinatown tour and service, which may enable us to have a direct contact with the Asian American population and reflect on what is being discussed in class. Through this course, we hope to gain a better understanding of the racial and cultural history of the country and arrive at a deep appreciation of the dynamics of cultural interactions in the twenty-first century. The course fulfills the SCGP requirement.

Type:

- **SF-1145 Emergence of Southeast Asia**

Credits:

4.00

Description:

Explores the eleven countries and 600 million people of Southeast Asia starting with foundations- geography and environment- and then looking at the human imprint, in the form of the history, religions, and cultures of the region. An examination of contemporary issues related to demography, politics, and (especially) economics.

Language Course Options

- **CHIN-101 Elementary Chinese I**

Credits:

4.00

Description:

Introduces Modern Standard Chinese (Mandarin) with an emphasis on developing conversational skills by using authentic materials such as video, audio, and various print media that teach fundamental grammatical patterns and vocabulary in functional contexts. Basic reading and writing (in Simplified Characters) are also taught.

Term:

Offered Fall Term

- **CHIN-102 Elementary Chinese II**

Prerequisites:

CHIN 101 or Instructor's consent.

Credits:

4.00

Description:

Continues to develop proficiency in reading, writing, and speaking Modern Standard Chinese (Mandarin). Helps to develop listening comprehension skills with the use of authentic materials, such as print media, audio, and video materials. Advanced beginning level of reading and writing of Simplified Chinese characters is taught.

Term:

Offered Spring Term

Type:

Modern Language

• **CHIN-202 Intermediate Chinese II**

Prerequisites:

CHIN 201 or Instructor's consent.

Credits:

4.00

Description:

Continuation of skills developed in CHIN 201.

Term:

Offered Spring Term

• **JPN-101 Elementary Japanese I**

Credits:

4.00

Description:

For students with no previous knowledge. An introduction to features of spoken and written Japanese. Stresses grammar, oral performance and simple characters.

Term:

Offered Fall Term

- **JPN-102 Elementary Japanese II**

Prerequisites:

JPN-101 or Instructor's consent

Credits:

4.00

Description:

Continues to develop proficiency in reading, writing, and speaking Japanese. Helps to further develop listening skills with the use of authentic materials, such as print media and audio files.

Term:

Offered Spring Term

Residency Requirement Policy: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.

• **AS-511 Professional Development for Asian Studies**

Prerequisites:

Instructor consent required

Credits:

1.00

Description:

Students will reflect on their college career and develop a personal strategy for attaining professional goals. They will understand ethical guidelines and professional conventions by examining the differences between American work culture and Asian work culture; by applying this understanding to a transnational/diverse professional world. Students will understand what the job market and graduate school opportunities are like for Asian Studies graduates.

Biochemistry

The Chemistry & Biochemistry Department offers a Biochemistry major. Through a wide variety of laboratory-based courses and opportunities for independent research with faculty, the department provides students with the tools that will allow them to achieve success in their field while learning in the heart of one of the most scientifically progressive cities in the world.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Honors](#)
- [Biochemistry Courses](#)

Biochemistry Major Requirements: 19 courses, 70-76 credits

The curricula for the BA and BS in Biochemistry satisfy the requirements for certification by the American Chemical Society if CHEM-375 and CHEM-L375 are elected, along with three combined credits of CHEM-428 and CHEM-429.

Core Requirements (17 courses and corresponding laboratories where applicable, 62-68 credits)

- CHEM-111 General Chemistry I

Prerequisites:

Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:

3.00

Description:

Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

• **CHEM-L111 General Chemistry Laboratory I**

Prerequisites:

MATH-104 MATH-108 MATH-121 MATH-128 MATH-130 MATH-134 MATH-164 MATH-165 MATHT-MPEL1 MATHT-MPEL2 or MATHT-MPEL3. Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

• **CHEM-112 General Chemistry II**

Prerequisites:

CHEM 111/L111; CHEM-L112 must be taken concurrently. MATH 104 placement or higher.

Credits:

3.00

Description:

This course is a continuation of General Chemistry I. Fundamental principles of chemistry are discussed. Introduces thermochemistry, gases, solution chemistry, chemical kinetics, chemical equilibrium, acid-base systems, and thermodynamics.

Term:

Offered Both Fall and Spring

• **CHEM-L112 General Chemistry Laboratory II**

Prerequisites:

MATHT-MPEL0 MATHT-MPEL1 MATHT-MPEL2 MATHT-MPEL3 MATH-104 MATH-130 MATH-134 MATH-164 or MATH-165. CHEM 112 must be taken concurrently;

Credits:

1.00

Description:

This course is a continuation of General Chemistry I Laboratory. Apply the basic principles of chemistry through discovery laboratory experiments with an emphasis on quantitative analysis. Execute basic analytical techniques such as the application of Beer's Law and acid-base titrations. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Both Fall and Spring

• **CHEM-211 Organic Chemistry I**

Prerequisites:

CHEM 112 and CHEM-L112. CHEM-L211 must be taken concurrently.

Credits:

3.00

Description:

Introduces basic theories of structure, bonding, and chemical reactivity as specifically applied to modern organic chemistry. Includes functional groups, acid/base chemistry, nomenclature, resonance, spectroscopy, and stereochemistry.

Term:

Offered Both Fall and Spring

- **CHEM-L211 Organic Chemistry Laboratory I**

Prerequisites:

CHEM-112 and CHEM-L112. Must be taken concurrently with CHEM 211.

Credits:

1.00

Description:

Introduces synthetic organic chemistry techniques. Includes melting point determination, distillation, crystallization, extraction, chromatographic separations, and infrared spectroscopy. Discusses experimental design within the context of green organic chemistry.

Term:

Offered Both Fall and Spring

- **CHEM-212 Organic Chemistry II**

Prerequisites:

CHEM 211 and CHEM L211. Must take CHEM-L212 concurrently.

Credits:

3.00

Description:

Builds on the core competencies acquired in Organic Chemistry I. Includes detailed mechanistic discussions of substitution, elimination, and addition reactions. Emphasizes organic synthesis, structure determination, and spectroscopy.

Term:

Offered Both Fall and Spring

- **CHEM-L212 Organic Chemistry Laboratory II**

Prerequisites:

CHEM-211 and CHEM-L211. Must be take CHEM-212 concurrently.

Credits:

1.00

Description:

Builds on the core competencies acquired in Organic Chemistry Laboratory I. Emphasizes the characterization of organic molecules via nuclear magnetic resonance spectroscopy. Discusses experimental design within the context of green organic chemistry.

Term:

Offered Both Fall and Spring

- **CHEM-314 Instrumental Analysis**

Prerequisites:

CHEM 211; CHEM L314 must be taken concurrently.

Credits:

3.00

Description:

Explores the basic techniques of collecting and analyzing data from different types of instrumentation, including: ultraviolet, visible, fluorescence, atomic and emission spectroscopy; chromatographic methods; electrochemical measurements. Students will apply these techniques to problems in chemistry, forensics, and environmental science.

Term:

Offered Fall Term

- **CHEM-L314 Instrumental Analysis Laboratory**

Prerequisites:

CHEM L211; CHEM 314 must be taken concurrently

Credits:

1.00

Description:

Laboratory experiments in chemical analysis using instrumental techniques, including spectroscopy and chromatography. Data collection and evaluation includes computer-based methods. Reports are prepared in professional style.

Term:

Offered Fall Term

- **CHEM-331 Biochemistry I**

Prerequisites:

CHEM 212/L212 or permission of instructor. CHEM L331 must be taken concurrently.

Credits:

3.00

Description:

Explores the foundations of biochemistry, including the structure, organization and behavior of proteins, carbohydrates, lipids, and nucleic acids. Topics include enzyme catalysis, kinetics, and inhibition as well as protein regulation and membrane structure. Introduces the use of biochemical

literature and bioinformatics techniques.

Term:

Offered Fall Term

- **CHEM-L331 Biochemical Techniques Lab**

Prerequisites:

CHEM 212/L212 or permission of instructor. CHEM 331 must be taken concurrently

Credits:

1.00

Description:

Laboratory course introducing biochemical techniques. Includes buffer preparation, PCR, purification of DNA and proteins, agarose and polyacrylamide gel electrophoresis, protein quantitation and detection, and enzyme kinetic assays.

Term:

Offered Fall Term

- **CHEM-332 Biochemistry II**

Prerequisites:

CHEM 331 and CHEM-L332 concurrently

Credits:

3.00

Description:

Explores the principles of bioenergetics and metabolism of biomolecules. Includes intermediary metabolism of carbohydrates, lipids, amino acids, and oxidative phosphorylation. Additional topics include signal transduction and the regulation and integration of metabolism.

Term:

Offered Spring Term

- **CHEM-L332 Advanced Biochemical Techniques and Research Lab**

Prerequisites:

CHEM 331/L331. CHEM 332 must be taken concurrently.

Credits:

1.00

Description:

Advanced biochemistry laboratory course where students learn experimental design and critical analysis of the scientific literature while conducting novel research. Projects vary from year to year, but may include recombinant DNA techniques, purification and quantitation of DNA and proteins, protein detection, enzyme kinetics, and bioinformatics. Research is presented as a poster at the annual STEM banquet.

Term:

Offered Spring Term

- **CHEM-411 Physical Chemistry I**

Prerequisites:

CHEM 112; MATH 166;

Credits:

3.00

Description:

Explores quantum chemistry through simple model systems such as particle in a box, harmonic oscillator, rigid rotor, and hydrogen atom. Applications to electronic, vibrational, and rotational spectroscopy and elements of atomic and molecular structure.

Term:

Offered Fall Term

- **CHEM-L411 Physical Chemistry Laboratory I**

Prerequisites:

CHEM 411 must be taken concurrently

Credits:

1.00

Description:

Experiments in molecular spectroscopy, quantum chemistry, nanomaterials, and introduction to computational chemistry. Emphasis will be placed on experimental design and data analysis skills in addition to technical writing skills as demonstrated through reports prepared in the professional style.

Term:

Offered Fall Term

- **CHEM-412 Physical Chemistry II**

Prerequisites:

CHEM 411

Credits:

3.00

Description:

Explores the laws of thermodynamics and their molecular basis through the kinetic theory of gases and statistical mechanics. Includes chemical kinetics and theories of reaction rates.

Term:

Offered Spring Term

- **CHEM-L412 Physical Chemistry Laboratory II**

Prerequisites:

CHEM L411; CHEM 412 must be taken concurrently.

Credits:

1.00

Description:

Experiments in thermodynamics, materials, chemical kinetics, and computational chemistry. Emphasis will be placed on experimental design and data analysis skills in addition to technical writing skills as demonstrated by laboratory reports prepared in the professional style.

Term:

Offered Spring Term

• CHEM-428 Research & Seminar I

Prerequisites:

CHEM 212; CHEM L212; Instructor's Consent required

Credits:

1.00- 4.00

Description:

First of a senior level, two-semester sequence of independent study under the supervision of faculty. Students may opt to conduct experimental research, proposal development, or literature review. Students desiring departmental honors and/or an ACS-accredited degree must conduct authentic research; consult with the course instructor. Development of a research report and poster presentation to the department are required elements. Depending on the project undertaken, students may obtain ECR credit.

Term:

Offered Fall Term

• CHEM-429 Research & Seminar II

Prerequisites:

CHEM 212 and CHEM L212 and instructor's consent required

Credits:

1.00- 4.00

Description:

Second of a senior level, two-semester sequence of independent study under the supervision of faculty. Students may opt to conduct experimental research, proposal development, or literature review. Students desiring departmental honors and/or an ACS-accredited degree must conduct authentic research; consult with the course instructor. Development of a final research report and oral presentation to the department and the SU community are required elements. Depending on the project undertaken, students may obtain ECR credit.

Term:

Offered Spring Term

• **BIO-111 Introduction to the Cell**

Prerequisites:

Must take BIO L111 concurrently

Credits:

3.00

Description:

Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

• **BIO-L111 Introduction to the Cell Laboratory**

Prerequisites:

Concurrently with BIO 111

Credits:

1.00

Description:

Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

• BIO-114 Organismal Biology

Prerequisites:

Must take BIO L114 concurrently.

Credits:

3.00

Description:

Rigorous introduction to organismal biology emphasizing evolution, phylogenetics, form, and function. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **BIO-L114 Organismal Biology Laboratory**

Prerequisites:

Must take BIO 114 concurrently

Credits:

1.00

Description:

A series of laboratory experiences in evolution, diversity, anatomy and physiology.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **MATH-165 Calculus I**

Prerequisites:

MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

Credits:

4.00

Description:

Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-166 Calculus II**

Prerequisites:

MATH-164 or MATH-165 with a minimum grade of C

Credits:

4.00

Description:

Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation, convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

• **PHYS-151 University Physics I**

Prerequisites:

MATH-121, MATH-165 or MATH-164 and PHYS L151 concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

• **PHYS-L151 University Physics Lab I**

Prerequisites:

PHYS 151 concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

• **PHYS-152 University Physics II**

Prerequisites:

PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

Credits:

3.00

Description:

This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **PHYS-L152 University Physics Lab II**

Prerequisites:

PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

Elective Requirements (2 courses and corresponding laboratories, 8 credits)

Choose two Biology electives from the following:

- **BIO-203 Anatomy and Physiology I**

Prerequisites:

BIO L203 MUST BE TAKEN CONCURRENTLY BIO 111, BIO L111.

Credits:

3.00

Description:

First part of a systematic survey of the structural and functional interrelations of the organ systems of the human body. This course emphasizes histology and physiology in the understanding of the integumentary, skeletal, muscular, and nervous systems. Medical terminology will be used.

Term:

Offered Fall Term

- **BIO-L203 Anatomy & Physiology Lab I**

Prerequisites:

BIO 111/L111; Must take BIO-203 concurrently

Credits:

1.00

Description:

A study of the human skeletal system and a comparative look at other organ systems involving observation of anatomical models and dissection of mammalian specimens. Also includes microscopy and computer simulations of physiological processes.

Term:

Offered Fall Term

- **BIO-204 Anatomy and Physiology II**

Prerequisites:

BIO 203, BIO L203; BIO L204 must be taken concurrently;

Credits:

3.00

Description:

Conclusion of a systematic survey of the structural and functional interrelations of the organ systems of the human body. This course investigates the endocrine, circulatory, respiratory, digestive, urinary, and reproductive systems as well as the physiology of immune responses, nutrition, and acid-base balance. Medical terminology will be used.

Term:

Offered Spring Term

- **BIO-L204 Anatomy & Physiology Lab II**

Prerequisites:

BIO 203/L203 and BIO 204 must be taken concurrently;

Credits:

1.00

Description:

A study of the human viscera using anatomical models and dissection of mammalian specimens. Also includes microscopy of tissues and physiological experiments.

Term:

Offered Spring Term

- **BIO-274 Genetics**

Prerequisites:

BIO 111/L111 and BIO 114/L114; BIO L274 concurrently;

Credits:

3.00

Description:

An examination of the basic principles of genetics in eukaryotes and prokaryotes at the level of molecules, cells, and multicellular organisms, including humans. Topics include Mendelian and non-Mendelian inheritance, structure and function of chromosomes and genomes, biological variation resulting

from recombination, mutation, and selection, and population genetics.

Term:

Offered Fall Term

- **BIO-L274 Genetics Lab**

Prerequisites:

BIO-111, BIO-L111, BIO-114, and BIO-L114. Must be taken concurrently with BIO 274.

Credits:

1.00

Description:

Experiments designed to demonstrate principles presented in lecture, using a range of genetic model organisms that include *E. coli*, *B. subtilis*, *S. cerevisiae*, *D. melanogaster*, *S. fimicola*, and *C. elegans*.

Term:

Offered Fall Term

- **BIO-285 Microbiology**

Prerequisites:

BIO-111 and BIO-L111; BIO-L285 concurrently;

Credits:

3.00

Description:

Viruses and bacteria are surveyed in terms of their ecology, biochemistry, taxonomy, molecular biology and control.

Term:

Offered Spring Term

- **BIO-L285 Microbiology Laboratory**

Prerequisites:

BIO 111/L111; BIO 285 concurrently;

Credits:

1.00

Description:

Introduction to microbiological techniques and their applications to health, research and industry.

Term:

Offered Fall Term

- **BIO-374 Genomics**

Prerequisites:

BIO 111/L111, CHEM 111/L111, BIO 274/L274 Must take BIO L374 concurrently

Credits:

3.00

Description:

What can we learn from genomics? In this course, you will develop an understanding of how cutting edge techniques from biotechnology are changing our views of biology. You will learn how genetic sequencing can be used for everything from tracing evolutionary histories in the tree of life to shedding light on biodiversity patterns of populations. With a focus on human genetics, you will also explore how genes are discovered and linked to phenotypic traits. Finally, you will consider methods of monitoring gene expression and how the resulting genetic networks can help medicine and drug development.

- **BIO-L374 Genomics Laboratory**

Prerequisites:

BIO 111/L111, CHEM 111/L111, BIO 274/L274 Must take BIO 374 concurrently

Credits:

1.00

Description:

In this course, you will develop an understanding of current genomic methods through collection and examination of your own data. In the first part of the lab, you will use sequencing techniques to compare genetic relationships and characterize the microbial biodiversity of a population. In the second part of the lab, you will focus on gene expression and functional genomics. You will determine the actions of a transcription factor through RNA-seq and also determine how a collection of uncharacterized transcription factors affect antibiotic sensitivity. In addition to reading primary literature and keeping a lab notebook, you will also learn how to analyze and present your genomics data.

• BIO-377 Immunology

Prerequisites:

BIO-114/L114; CHEM-211/L211; BIO-L377 concurrently;

Credits:

3.00

Description:

The concept of immunity, response to infection, structure of the immune system, biochemistry of immunoglobins, antigen-antibody interactions, allergy, immunological injury, lymphocyte subpopulations and cellular immunity, tolerance suppression and enhancement. Taught alternate/even years.

Term:

Offered Spring Term

• BIO-L377 Immunology Laboratory

Prerequisites:

BIO-114 and BIO-L114 and CHEM-211 and CHEM-L211. Must take BIO-377 concurrently.

Credits:

1.00

Description:

Anatomy of the immune system , immunoglobulin purification, hemagglutination, enzyme immunoassay. Immuno-chemistry, immunoelectrophoresis, gel precipitation assay.

Term:

Occasional

- **BIO-403 Cell Biology**

Prerequisites:

BIO 111/L111; CHEM-211/L211; BIO-L403 concurrently;

Credits:

3.00

Description:

The study of cells, approached through examinations of biochemical mechanisms, the relation between the structure and function of biological molecules and organelles, and the regulation of normal and diseased cells.

Term:

Offered Fall Term

- **BIO-L403 Cell Biology Lab**

Prerequisites:

BIO-111 and BIO-L11 and CHEM-211 and CHEM-L211. Must take BIO-403 concurrently.

Credits:

1.00

Description:

Examination of biological molecules and their role in cell function. Techniques used in these examinations will include enzymatic analyses, gel electrophoresis, immunologic identification, chromatography, and spectroscopy. Students are expected to develop their proficiency in the laboratory techniques used, to analyze their results in a quantitative manner, and to present their findings.

Term:

Offered Fall Term

- **BIO-474 Molecular Genetics**

Prerequisites:

CHEM-311 or BIO-274 and BIO-L274 and BIO-L474 concurrently

Credits:

3.00

Description:

An examination of concepts and techniques of modern molecular biology. Topics include the structure and function of DNA, RNA, and proteins, the regulation of gene expression in prokaryotes and eukaryotes at transcriptional and post-transcriptional levels, genetic modification of organisms, and genome analysis. This course will incorporate readings and discussions of primary scientific literature. Spring semester.

Term:

Occasional

- **BIO-L474 Molecular Genetics Lab**

Prerequisites:

Take CHEM-331 or BIO-274 and BIO-L274. BIO-474 must be taken concurrently.

Credits:

1.00

Description:

This upper level laboratory course will consist of a semester-long project in the form of a series of consecutive experiments involving the generation of a genetically modified organism and its subsequent molecular analysis. Techniques employed will include genetic screens, DNA isolation, restriction endonuclease analysis, transformation of bacteria, gel electrophoresis, gene reported assays, RNA isolation, reverse transcription, and quantitative PCR.

Term:

Occasional

Note: BIO-274, BIO-403, and BIO-474 are recommended for those planning to take the Biochemistry GRE examination for application to graduate school.

CHEM-428 and CHEM-429 are variable credit courses (1-4 credits are awarded based on coursework). Please discuss this possibility with your advisor before registering for these courses. Students must take a total of three credits of CHEM-428 and CHEM-429 in order to satisfy the American Chemical Society Certification Requirements.

Residency Requirement Policy: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.

2017-2018 Archived Catalog Information

Biochemistry

The Chemistry & Biochemistry Department offers a Biochemistry major. Through a wide variety of laboratory-based courses and opportunities for independent research with faculty, the department provides students with the tools that will allow them to achieve success in their field while learning in the heart of one of the most scientifically progressive cities in the world.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Honors](#)
- [Biochemistry Courses](#)

To qualify for department honors, students must be in the CAS honors program or have an overall GPA of 3.5 or higher and a major GPA of 3.5 or higher upon enrollment in the senior capstone courses (CHEM 428 and CHEM 429). Honors thesis work is then coupled to the capstone course requirements. Thesis work must be of outstanding quality and must involve original independent laboratory or field research and/or in-depth analysis. Job shadowing, data collection/organization (without analysis), or research summaries will generally not be sufficient for consideration. Upon completion of the capstone course requirements, the faculty of the department, along with the research advisor, will determine whether the final research project qualifies for departmental honors.

Eligible students should submit an application to the department for pre-approval in October in the academic year in which they plan to complete the capstone honors research project. Applications for departmental honors may be obtained from the department chair or from the capstone CHEM 428 course instructor. We highly recommend that students begin planning their capstone project in their junior year. Students should work with their advisor and the honors coordinator to identify on- and off-campus opportunities for completion of thesis work.

- CHEM-101 Chemical Concepts Contemporary Issues I

Credits:

3.00

Description:

No longer offered. Principles of chemistry with illustrations from everyday life. Basic chemical concepts are used to decode consumer product labels and form a basis for understanding contemporary issues. Specifically designed to satisfy the Science requirement when taken with CHEM 102, L101, L102. May not be used by science majors for science credit. Concurrent enrollment in CHEM L101 required. 3 hours lecture. 1 term - 3 credits. Normally offered Fall/Summer I.

- CHEM-L101 Chemical Concepts Contemporary Issues Lab I

Prerequisites:

Must be taken concurrently with CHEM 101

Credits:

1.00

Description:

No longer offered. Principles of chemistry and its applications demonstrated through experimentation. Experiments may include field testing and analysis of ocean and river water, testing of household products and sunscreens, determination of calorie content of foods, and molecular modeling with computers. May not be used by science majors for science credit. 2-hour laboratory. Normally offered Fall/Summer I.

- **CHEM-102 Chemical Concepts Contemporary Issues II**

Prerequisites:

It is strongly recommended that students enrolling in this course have some acquaintance of basic chemical principles either on the college or the pre-college level. Must be taken concurrently with CHEM L102

Credits:

3.00

Description:

No longer offered. A continuation of CHEM 101, including topics in organic chemistry, biochemistry, polymer chemistry, ecology, air and water pollution, food and food additives, pharmaceuticals, and forensic science. Basic Chemical concepts are used to decode consumer product labels and form a basis for understanding contemporary issues. Specifically designed to satisfy the science requirement. May not be used by science majors for science credit. Prerequisite: CHEM 101, CHEM 111 or pre-college chemistry. 3 hours lecture. Normally offered Spring/Summer II.

- **CHEM-L102 Chemical Concepts Contemporary Issues Lab II**

Prerequisites:

It is strongly recommended that students enrolling in this course have some acquaintance of basic chemical principles either on the college or the pre-college level. Must be taken concurrently with CHEM 102

Credits:

1.00

Description:

No longer offered. A continuation of CHEM L101. Experiments may include making plastics and drug products, analyzing food products, making a model of DNA, crime lab analysis procedures, making aspirin, and the study of flavors and fragrances using molecular models. Concurrent enrollment in CHEM 102 required. May not be used by science majors for science credit. Prerequisites: CHEM 101 and CHEM L101. 2-hour Laboratory. 1 term - 1 credit. Normally offered Spring/Summer II.

- CHEM-103 Chemical Concepts Contemporary Issues IIA

Prerequisites:

It is strongly recommended that students enrolling in this course have some acquaintance of basic chemical principles either on the college or the pre-college level.

Credits:

4.00

Description:

No longer offered. Topics include organic chemistry, biochemistry, polymer chemistry, ecology, air and water pollution, food and food additives, pharmaceuticals, and forensic science, with an emphasis on their application to current issues. Specifically designed to satisfy the non-laboratory science requirement for the B.A. degree. Science related information searches and writing assignments will be based on current topics from the semester's work. 3 hours lecture. It is strongly recommended that students enrolling in this course have some acquaintance of basic chemical principles either on the college or the pre-college level.

- CHEM-105 Chemical New Product Development

Prerequisites:

ENT 101

Credits:

4.00

Description:

This course addresses the crucial intersection between chemistry and business, and the impact of these fields on society. It provides an introduction to important chemistry concepts and practices of business management. Primary focus is on understanding the chemistry principles behind some of the consumer products in our everyday lives, and using this knowledge to create and evaluate ideas for new products. The course also introduces the business aspects involved in the development and marketing of new products. An important component of the course is in making effective presentations; this component concludes the course, culminating in team presentations of a new chemical product to panel of executives and peers. This course satisfies the Sawyer Business School Science requirement.

Type:

SCI TECH ENGNR

- **CHEM-106 Biotechnology & Its Applications in Medicine, Agriculture, Law**

Credits:

4.00

Description:

Introduces the latest discoveries and applications of biotechnology. Topics include genetically modified food, stem cells, genetic testing, cloning, and forensics. A combination of lectures, discussions, short documentaries, mock congressional hearings, and hands-on activities will provide insight into the numerous medical, social, legal, and ethical issues surrounding this technology.

Type:

SCI TECH ENGNR

- **CHEM-H106 Biotechnology & Its Applications in Medicine, Agriculture, Law**

Credits:

4.00

Description:

Introduces the latest discoveries and applications of biotechnology. Topics include genetically modified food, stem cells, genetic testing, cloning, and forensics. A combination of lectures, discussions, short documentaries, mock congressional hearings, and hands-on activities will provide insight into the numerous medical, social, legal, and ethical issues surrounding this technology.

Type:

- **CHEM-111 General Chemistry I**

Prerequisites:

Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:

3.00

Description:

Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **CHEM-L111 General Chemistry Laboratory I**

Prerequisites:

MATH-104 MATH-108 MATH-121 MATH-128 MATH-130 MATH-134 MATH-164 MATH-165 MATHT-MPEL1 MATHT-MPEL2 or MATHT-MPEL3. Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in

workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **CHEM-112 General Chemistry II**

Prerequisites:

CHEM 111/L111; CHEM-L112 must be taken concurrently. MATH 104 placement or higher.

Credits:

3.00

Description:

This course is a continuation of General Chemistry I. Fundamental principles of chemistry are discussed. Introduces thermochemistry, gases, solution chemistry, chemical kinetics, chemical equilibrium, acid-base systems, and thermodynamics.

Term:

Offered Both Fall and Spring

- **CHEM-L112 General Chemistry Laboratory II**

Prerequisites:

MATHT-MPEL0 MATHT-MPEL1 MATHT-MPEL2 MATHT-MPEL3 MATH-104 MATH-130 MATH-134 MATH-164 or MATH-165. CHEM 112 must be taken concurrently;

Credits:

1.00

Description:

This course is a continuation of General Chemistry I Laboratory. Apply the basic principles of chemistry through discovery laboratory experiments with an emphasis on quantitative analysis. Execute basic analytical techniques such as the application of Beer's Law and acid-base titrations. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Both Fall and Spring

• **CHEM-211 Organic Chemistry I**

Prerequisites:

CHEM 112 and CHEM-L112. CHEM-L211 must be taken concurrently.

Credits:

3.00

Description:

Introduces basic theories of structure, bonding, and chemical reactivity as specifically applied to modern organic chemistry. Includes functional groups, acid/base chemistry, nomenclature, resonance, spectroscopy, and stereochemistry.

Term:

Offered Both Fall and Spring

• **CHEM-L211 Organic Chemistry Laboratory I**

Prerequisites:

CHEM-112 and CHEM-L112. Must be taken concurrently with CHEM 211.

Credits:

1.00

Description:

Introduces synthetic organic chemistry techniques. Includes melting point determination, distillation, crystallization, extraction, chromatographic separations, and infrared spectroscopy. Discusses experimental design within the context of green organic chemistry.

Term:

Offered Both Fall and Spring

• CHEM-212 Organic Chemistry II

Prerequisites:

CHEM 211 and CHEM L211. Must take CHEM-L212 concurrently.

Credits:

3.00

Description:

Builds on the core competencies acquired in Organic Chemistry I. Includes detailed mechanistic discussions of substitution, elimination, and addition reactions. Emphasizes organic synthesis, structure determination, and spectroscopy.

Term:

Offered Both Fall and Spring

• CHEM-L212 Organic Chemistry Laboratory II

Prerequisites:

CHEM-211 and CHEM-L211. Must be take CHEM-212 concurrently.

Credits:

1.00

Description:

Builds on the core competencies acquired in Organic Chemistry Laboratory I. Emphasizes the characterization of organic molecules via nuclear magnetic resonance spectroscopy. Discusses experimental design within the context of green organic chemistry.

Term:

Offered Both Fall and Spring

- **CHEM-314 Instrumental Analysis**

Prerequisites:

CHEM 211; CHEM L314 must be taken concurrently.

Credits:

3.00

Description:

Explores the basic techniques of collecting and analyzing data from different types of instrumentation, including: ultraviolet, visible, fluorescence, atomic and emission spectroscopy; chromatographic methods; electrochemical measurements. Students will apply these techniques to problems in chemistry, forensics, and environmental science.

Term:

Offered Fall Term

- **CHEM-L314 Instrumental Analysis Laboratory**

Prerequisites:

CHEM L211; CHEM 314 must be taken concurrently

Credits:

1.00

Description:

Laboratory experiments in chemical analysis using instrumental techniques, including spectroscopy and chromatography. Data collection and evaluation includes computer-based methods. Reports are prepared in professional style.

Term:

Offered Fall Term

- **CHEM-331 Biochemistry I**

Prerequisites:

CHEM 212/L212 or permission of instructor. CHEM L331 must be taken concurrently.

Credits:

3.00

Description:

Explores the foundations of biochemistry, including the structure, organization and behavior of proteins, carbohydrates, lipids, and nucleic acids. Topics include enzyme catalysis, kinetics, and inhibition as well as protein regulation and membrane structure. Introduces the use of biochemical literature and bioinformatics techniques.

Term:

Offered Fall Term

- **CHEM-L331 Biochemical Techniques Lab**

Prerequisites:

CHEM 212/L212 or permission of instructor. CHEM 331 must be taken concurrently

Credits:

1.00

Description:

Laboratory course introducing biochemical techniques. Includes buffer preparation, PCR, purification of DNA and proteins, agarose and polyacrylamide gel electrophoresis, protein quantitation and detection, and enzyme kinetic assays.

Term:

Offered Fall Term

- **CHEM-332 Biochemistry II**

Prerequisites:

CHEM 331 and CHEM-L332 concurrently

Credits:

3.00

Description:

Explores the principles of bioenergetics and metabolism of biomolecules. Includes intermediary metabolism of carbohydrates, lipids, amino acids, and oxidative phosphorylation. Additional topics include signal transduction and the regulation and integration of metabolism.

Term:

Offered Spring Term

- **CHEM-L332 Advanced Biochemical Techniques and Research Lab**

Prerequisites:

CHEM 331/L331. CHEM 332 must be taken concurrently.

Credits:

1.00

Description:

Advanced biochemistry laboratory course where students learn experimental design and critical analysis of the scientific literature while conducting novel research. Projects vary from year to year, but may include recombinant DNA techniques, purification and quantitation of DNA and proteins, protein detection, enzyme kinetics, and bioinformatics. Research is presented as a poster at the annual STEM banquet.

Term:

Offered Spring Term

- **CHEM-355 Environmental Chemistry**

Prerequisites:

CHEM 211, or permission of instructor

Credits:

3.00

Description:

A study of the chemical processes (including biologically mediated ones) that affect the cycling and ultimate fate of chemicals in the environment. Topics include air, water, and soil chemistry as well as energy and climate change. The effects of pollutant loads on natural systems and the remediation and treatment methods used to minimize pollutant loads are investigated. 3 hour lecture. Normally offered spring, odd numbered years.

Term:

Alternates Fall & Spring

• **CHEM-L355 Environmental Chemistry Lab**

Prerequisites:

CHEM 355 must be taken concurrently. Take CHEM-L211;

Credits:

1.00

Description:

Laboratory exercises designed to illustrate principles covered by topics in CHEM 355. Prerequisites: CHEM L211, concurrent enrollment in CHEM 355 required. 4-hour laboratory. Normally offered spring, odd numbered years.

Term:

Alternates Fall & Spring

• **CHEM-375 Advanced Inorganic Chemistry**

Prerequisites:

CHEM 314/L314

Credits:

3.00

Description:

Topics in inorganic chemistry including bonding theories, chemical structures, symmetry and group theory, kinetics and mechanisms of reactions, and spectroscopy. Advanced topics may include bioinorganic chemistry, or organometallics.

Term:

Offered Every Other Year

- **CHEM-L375 Advanced Inorganic Laboratory**

Prerequisites:

CHEM 375 must be taken concurrently

Credits:

1.00

Description:

Laboratory exercises designed to illustrate principles covered by topics in CHEM 375. Prior or concurrent enrollment in CHEM 375 required.

Term:

Offered Every Other Year

- **CHEM-390 Advanced Organic Chemistry**

Prerequisites:

Prerequisite: CHEM 212.

Credits:

3.00

Description:

Expands on topics introduced in Organic Chemistry I and II; depending on student interest, may include in-depth discussions of carbonyl chemistry, industrial organic chemistry, organometallic chemistry and biomolecules.

Term:

Alternates Fall & Spring

- CHEM-411 Physical Chemistry I

Prerequisites:

CHEM 112; MATH 166;

Credits:

3.00

Description:

Explores quantum chemistry through simple model systems such as particle in a box, harmonic oscillator, rigid rotor, and hydrogen atom. Applications to electronic, vibrational, and rotational spectroscopy and elements of atomic and molecular structure.

Term:

Offered Fall Term

- CHEM-L411 Physical Chemistry Laboratory I

Prerequisites:

CHEM 411 must be taken concurrently

Credits:

1.00

Description:

Experiments in molecular spectroscopy, quantum chemistry, nanomaterials, and introduction to computational chemistry. Emphasis will be placed on experimental design and data analysis skills in addition to technical writing skills as demonstrated through reports prepared in the professional style.

Term:

Offered Fall Term

- **CHEM-412 Physical Chemistry II**

Prerequisites:

CHEM 411

Credits:

3.00

Description:

Explores the laws of thermodynamics and their molecular basis through the kinetic theory of gases and statistical mechanics. Includes chemical kinetics and theories of reaction rates.

Term:

Offered Spring Term

- **CHEM-L412 Physical Chemistry Laboratory II**

Prerequisites:

CHEM L411; CHEM 412 must be taken concurrently.

Credits:

1.00

Description:

Experiments in thermodynamics, materials, chemical kinetics, and computational chemistry. Emphasis will be placed on experimental design and data analysis skills in addition to technical writing skills as demonstrated by laboratory reports prepared in the professional style.

Term:

Offered Spring Term

- **CHEM-428 Research & Seminar I**

Prerequisites:

CHEM 212; CHEM L212; Instructor's Consent required

Credits:

1.00- 4.00

Description:

First of a senior level, two-semester sequence of independent study under the supervision of faculty. Students may opt to conduct experimental research, proposal development, or literature review. Students desiring departmental honors and/or an ACS-accredited degree must conduct authentic research; consult with the course instructor. Development of a research report and poster presentation to the department are required elements. Depending on the project undertaken, students may obtain ECR credit.

Term:

Offered Fall Term

- **CHEM-429 Research & Seminar II**

Prerequisites:

CHEM 212 and CHEM L212 and instructor's consent required

Credits:

1.00- 4.00

Description:

Second of a senior level, two-semester sequence of independent study under the supervision of faculty. Students may opt to conduct experimental research, proposal development, or literature review. Students desiring departmental honors and/or an ACS-accredited degree must conduct authentic research; consult with the course instructor. Development of a final research report and oral presentation to the department and the SU community are required elements. Depending on the project undertaken, students may obtain ECR credit.

Term:

Offered Spring Term

- **CHEM-L432 Advanced Biochemistry Research Laboratory**

Prerequisites:

CHEM-331; CHEM-L331

Credits:

3.00

Description:

No longer offered. Laboratory course where students apply the use of biochemical techniques acquired in Biochemical Techniques I (CHEM L331) to conduct novel research. Projects vary from year to year, but may include recombinant DNA techniques, purification and characterization of DNA and proteins, and bioinformatics. Emphasis on experimental design, data interpretation, analysis of the scientific literature, and writing. Includes field trip to local research university or biotechnology/pharmaceutical laboratory.

Term:

Alternates Fall & Spring

- **CHEM-453 Introduction to Toxicology**

Prerequisites:

CHEM-331 or instructor's consent

Credits:

3.00

Description:

The study of toxic actions of chemicals on biological systems, with discussion of general principles, methodology, and target organ toxicity. Topics may include pesticides, neurotoxicants, toxicity of metals, and carcinogenesis/ mutagenesis. Examples will be drawn from forensic toxicology, as well as environmental and occupational toxicology.

Term:

Offered Every Other Year

- **CHEM-500 Experiential Learning in Chemistry**

Credits:

0.00

Description:

This course requires students to complete a minimum of 15 engagement hours per semester. Students gain exposure to a variety of activities related to research in a laboratory or field setting with faculty oversight. Permission of instructor required. May be taken more than once.

- **CHEM-510 Independent Study**

Prerequisites:

An independent study form must be submitted to the CAS Dean's Office.

Credits:

1.00- 4.00

Description:

Advanced study of a special topic in chemistry, by arrangement with the chemistry faculty.

Academic Catalogs

[Academic Catalogs](#) > [Undergraduate Catalog](#) > [College of Arts & Sciences](#) > [Majors, Minors, & Certificates](#) > Biology

2017-2018 Archived Catalog Information

Biology

The Biology major introduces the breadth of contemporary biology while allowing students to pursue their individual interests.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [Major Requirements](#)
- [Concentrations](#)
- [Minor Requirements](#)
- [Honors](#)
- [Biology Courses](#)

Major Requirements: 19 courses and their corresponding laboratories, 73 credits

Concentrations in biotechnology, marine science, and health careers are also available. A Biology major must take 11 courses in biology plus designated related science and math courses, in addition to the all-college requirements.

Core Requirements (13 courses and their corresponding laboratories where applicable, 49 credits)

Biology Requirement (6 courses and corresponding laboratories where applicable, 21 credits)

- **CAS-201 College to Career: Explore Your Options And Find Your Path**

Prerequisites:

CAS students only. SBS students by special permission. Restricted to the following majors: Art History, Asian Studies, Biology, Economics, English, French, History, Humanities, International Economics, Music History, Philosophy, Physics, Radiation Science, Spanish, and Undeclared. Instructor consent required for all other majors.

Credits:

1.00

Description:

This course engages students in the early stages of career planning. Students will explore their interests, skills, values, and strengths, which will allow them to begin setting appropriate goals for professional development. Once students understand themselves in relation to the world of work, they will learn how to research careers and employment paths that fit with their goals.

- **BIO-111 Introduction to the Cell**

Prerequisites:

Must take BIO L111 concurrently

Credits:

3.00

Description:

Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-L111 Introduction to the Cell Laboratory**

Prerequisites:

Concurrently with BIO 111

Credits:

1.00

Description:

Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

• BIO-114 Organismal Biology

Prerequisites:

Must take BIO L114 concurrently.

Credits:

3.00

Description:

Rigorous introduction to organismal biology emphasizing evolution, phylogenetics, form, and function. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGR

- **BIO-L114 Organismal Biology Laboratory**

Prerequisites:

Must take BIO 114 concurrently

Credits:

1.00

Description:

A series of laboratory experiences in evolution, diversity, anatomy and physiology.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

- **BIO-274 Genetics**

Prerequisites:

BIO 111/L111 and BIO 114/L114; BIO L274 concurrently;

Credits:

3.00

Description:

An examination of the basic principles of genetics in eukaryotes and prokaryotes at the level of molecules, cells, and multicellular organisms, including humans. Topics include Mendelian and non-Mendelian inheritance, structure and function of chromosomes and genomes, biological variation resulting from recombination, mutation, and selection, and population genetics.

Term:

Offered Fall Term

- **BIO-L274 Genetics Lab**

Prerequisites:

BIO-111, BIO-L111, BIO-114, and BIO-L114. Must be taken concurrently with BIO 274.

Credits:

1.00

Description:

Experiments designed to demonstrate principles presented in lecture, using a range of genetic model organisms that include *E. coli*, *B. subtilis*, *S. cerevisiae*, *D. melanogaster*, *S. fimicola*, and *C. elegans*.

Term:

Offered Fall Term

- **BIO-302 Writing for Research**

Prerequisites:

BIO 111/L111 and WRI 101, WRI 102, or WRI-103. BIO and Radiation Therapy majors with junior standing only.

Credits:

4.00

Description:

Development of skills for writing clearly, concisely, and creatively in the style of scientific journals. This course emphasizes the formulation of a research project of the student's choice and leads to a formal manuscript on the topic. Instruction includes literature search methods and software for the graphical presentation of data. Professional development, including the preparation of job application materials and in-person interview skills, is also an integral part of this course. Required of all biology and radiation science majors. Junior standing required.

Term:

Offered Both Fall and Spring

- **BIO-333 Ecology**

Prerequisites:

BIO-114/L114; BIO-L333 concurrently;

Credits:

3.00

Description:

Areas of study include but are not limited to basic principles of population biology, community ecology, trophic dynamics, ecosystem structure and function and evolutionary theory.

Term:

Offered Fall Term

- **BIO-L333 Ecology Lab**

Prerequisites:

BIO-114, BIO-L114, and BIO-333 concurrently

Credits:

1.00

Description:
