COTS Solution for Adaptive Communications Paths Using Tactical Handhelds

Singh, Gurminder; Prince, Charles; Beverly, Robert

Monterey, California: Naval Postgraduate School

<http://hdl.handle.net/10945/69937>

This publication is a work of the U.S. Government as defined in Title 17, United States Code, Section 101. Copyright protection is not available for this work in the United States.

Downloaded from NPS Archive: Calhoun

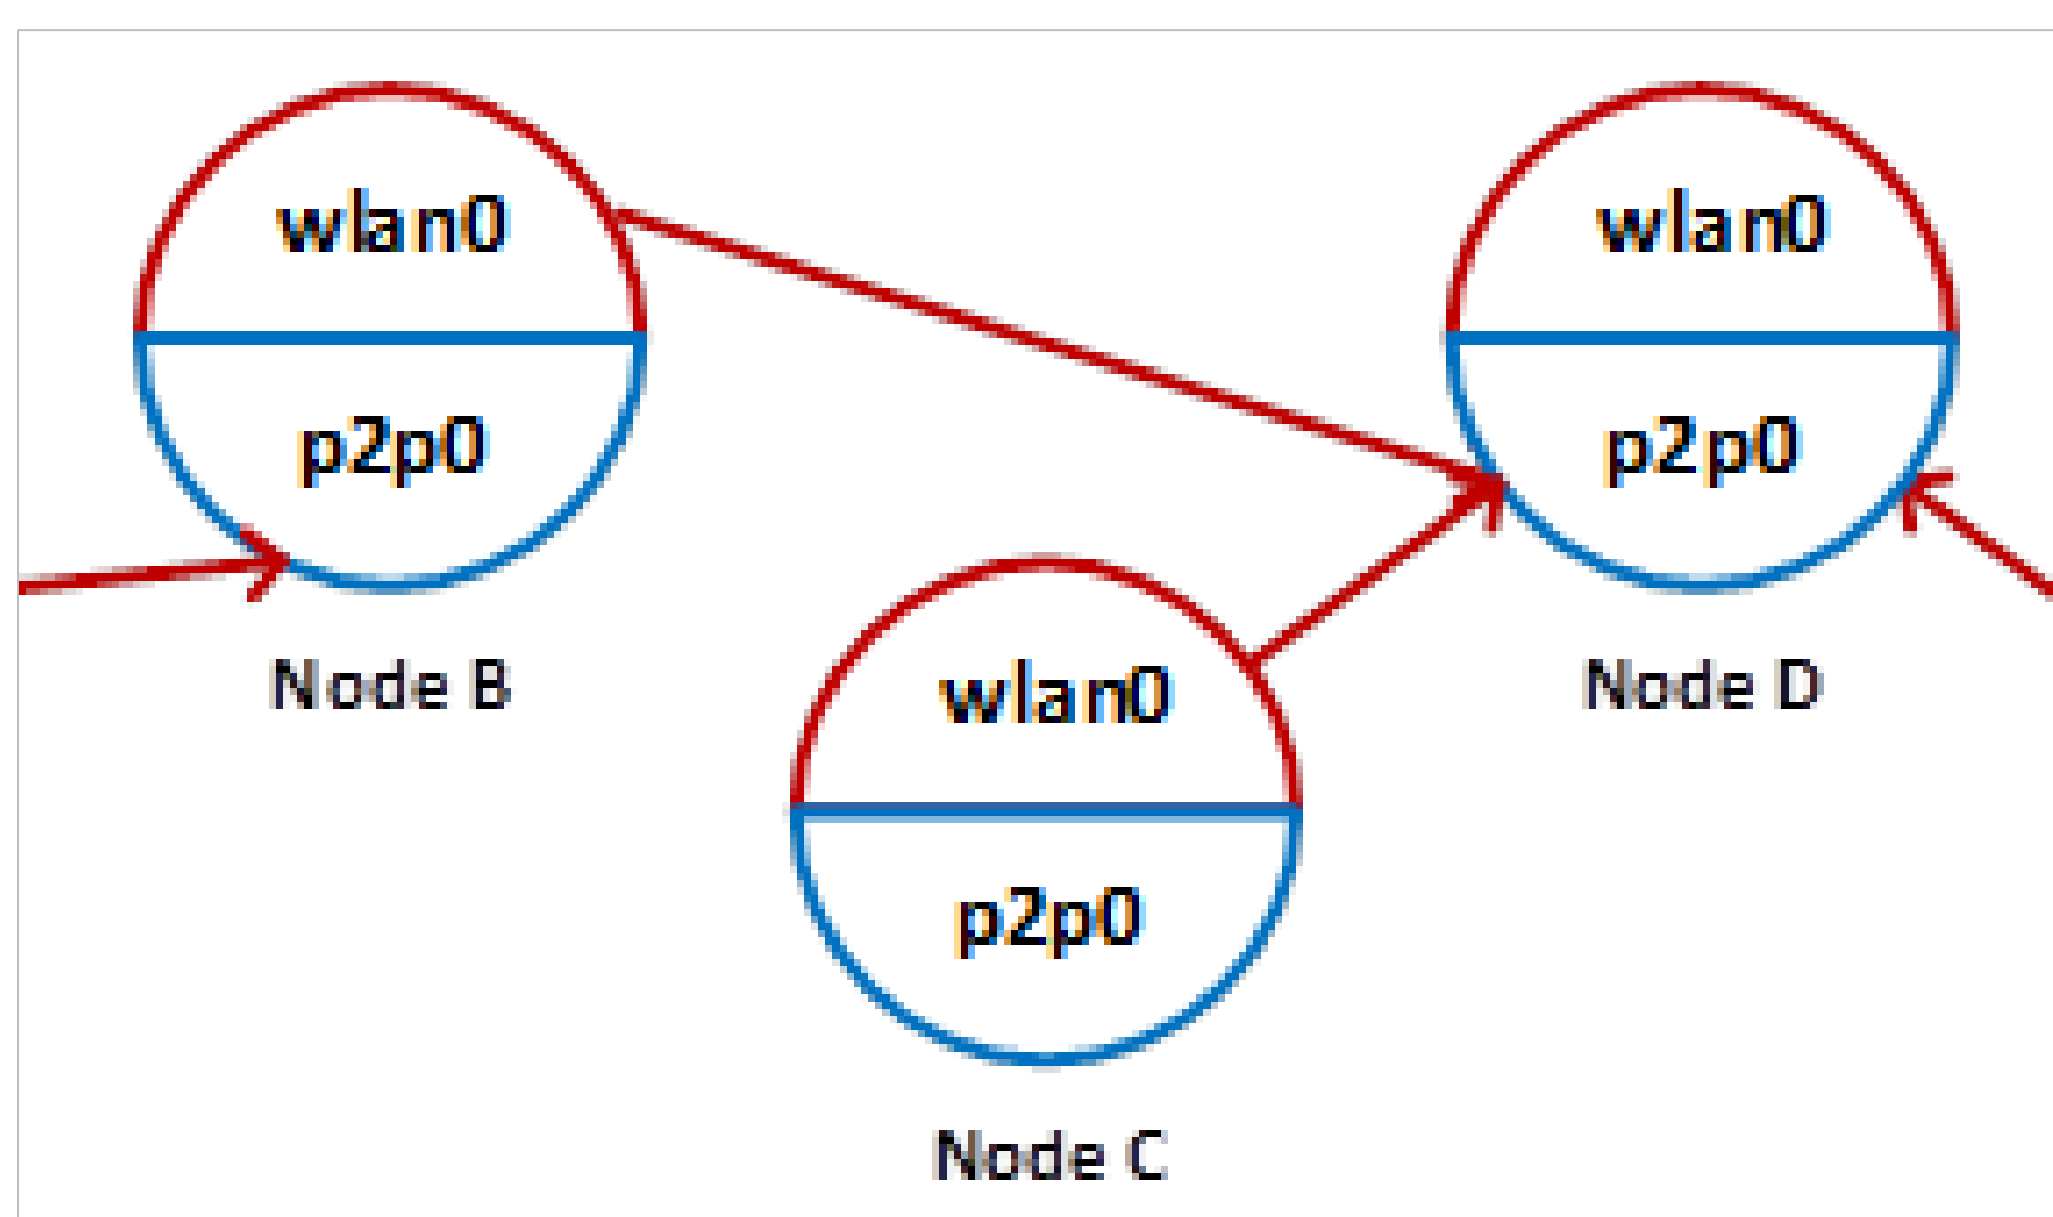

Calhoun is the Naval Postgraduate School's public access digital repository for research materials and institutional publications created by the NPS community. Calhoun is named for Professor of Mathematics Guy K. Calhoun, NPS's first appointed -- and published -- scholarly author.

Background

- Military often operates in austere networking environments which lack computing and communication infrastructure
- Tremendous progress has been made in networking, processing and sensing capability of mobile devices
- Exploit these capabilities to enable our military personnel to operate without having to rely constantly on external infrastructure

A Homogeneous WiFi Mesh Network

Infrastructure-less Comms

By exploiting such radio waveforms and protocols such as Bluetooth, WiFi Direct, and WiFi, the "tactical handheld" could change the communications domain in a satellite denied, bandwidth limited environment that we expect to see in our next engagement

Named Data Networking (NDN)

- NDN fundamentally changes the network service from delivering packets to a specified destination machine address to fetching data with a specified name
- Content, rather than end hosts, is named
- NDN has many potential benefits, including the ability to support infrastructure-less communication.
- Can operate over a variety of waveforms, radios and network topologies
- Easily exploits the broadcast capabilities of today's networking devices while also avoiding many of the problems that exist within IP networks

NDN for Infrastructure-less Comms

- Link-layer agnostic
- Does not require infrastructure or servers to run
- Can tolerate disruptions
- Is open-source licensed
- Supports many existing useful applications

Researchers: Prof. Gurminder Singh, Prof. Robert Beverly, Mr. Charles Prince, Mr. Shru Musukula, Mr. Daniel Duan, and Ms. Samantha Batson
Graduate School of Operations and Information Science

Topic Sponsor: Marine Corps Tactical Systems Support Activity (MCTSSA)

Distro A – Approved for public release; distribution is unlimited.
