

Natural Headland Sand Bypassing

Towards identifying and modelling the
mechanisms and processes

Mohd Shahrizal bin Ab Razak

TABLE OF CONTENTS

ABSTRACT	vii
SAMENVATTING.....	ix
TABLE OF CONTENTS	xi
CHAPTER 1	1
1.0 Introduction	1
1.1 Background	1
1.1.1 Embayed beaches and sand bypassing in general	1
1.1.2 Beach nourishment on embayed beaches	2
1.1.3 The role of a permanent (fixed) sand bypassing system	3
1.2 Motivation of the thesis	3
1.3 Research objectives and questions	6
1.4 Thesis framework.....	6
References	8
CHAPTER 2	11
2.0 Review of sand bypassing processes and modelling approaches	11
2.1 Introduction	11
2.2 Headland and embayed beaches	12
2.2.1 Headland characteristics	12
2.2.2 Embayed beaches stability.....	13
2.3 Wave-induced alongshore sand bypassing.....	15
2.3.1 Headland sand bar bypassing	16
2.3.2 Headland bypassing strands	17
2.4 Wave-induced cross-shore sand bypassing	19
2.4.1 Bypass of sediment from cell boundaries.....	19
2.4.2 Surf zone currents in embayed beaches	20
2.4.3 Megarip currents	21
2.5 Analytical shoreline changes and analytical sand bypassing models	22
2.5.1 One-line theory model	23
2.5.2 Pelnard-Considerere model	24
2.5.3 Larson model.....	25
2.6 Parabolic bay shaped empirical model	26
2.7 Process based models.....	28
2.7.1 XBeach model	28
2.7.2 The choice of XBeach.....	29
2.8 Model selection: Gaussian shaped or rectangular shaped headland?.....	29
2.8.1 Model setups	29
2.8.2 Results of two different structural headland shapes	31
2.9 Conclusions	32
References.....	33

CHAPTER 3	35
3.0 Natural processes of sand bypassing around a groyne structure	35
3.1 Introduction	36
3.2 Model setup.....	37
3.2.1 Grid and bathymetry	37
3.2.2 Model scenarios and parameter settings	38
3.2.3 Stationary wave of XBeach.....	40
3.3 Results and discussions: Effect of wave angles.....	41
3.3.1 Shoreline evolution - Before initiation of bypassing	41
3.3.2 Shoreline evolution - After bypassing.....	43
3.3.3 Initiation of sand bypassing process	44
3.3.4 Sand bypassing volume.....	47
3.4 Results and discussions: Effect of wave heights	49
3.4.1 Shoreline pattern	49
3.4.2 Sand bypassing process	50
3.4.3 Sand bypassing rate	51
3.5 Results and discussions: Effect of sediment grain sizes.....	53
3.5.1 Shoreline pattern	53
3.5.2 Sand bypassing process	54
3.5.3 Sand bypassing rate	56
3.6 Effect of upstream and downstream model boundaries.....	57
3.7 Morphological scale factor (MF)	58
3.8 Further investigation of sand bypassing parameters.....	59
3.8.1 Longshore sand transport rate.....	60
3.8.2 Closure depth.....	61
3.8.3 Differences between XBeach stationary wave and non-stationary wave solvers	63
3.9 Conclusions.....	65
References.....	66
CHAPTER 4	69
4.0 Headland structural impact on the morphodynamics of embayed beaches	69
4.1 Introduction	70
4.1.1 Embayment scaling parameter (δ).....	71
4.1.2 Variability of embayed beach conditions.....	72
4.1.3 Wave-group effects on embayed beach circulation	74
4.1.4 Two dimensional (2DH) process based XBeach model	74
4.2 Model Setup	75
4.2.1 Hypothetical embayed beaches and model setup.....	75
4.2.2 Embayed beach circulations and test cases	76
4.3 Results and discussions: Effect of stationary waves	76
4.3.1 Typical rip channel system on embayed beaches : Low wave energy condition.....	76
4.3.2 Effect of increasing wave heights: The transition from a transitional to a cellular beach state	79
4.3.3 Inclusion of extreme wave condition.....	81
4.3.4 Limitations of the embayment scaling parameter	83
4.4 Results and discussions : Effect of non-stationary waves	83
4.4.1 General findings	84

4.4.2 Evolution of sand bars and rip channels under wave-group forcing.....	85
4.4.3 Effect of wave directional spreading.....	87
4.5 Mechanism for transporting material out of the surf zone	89
4.5.1 Medium embayment basin	89
4.5.2 Small embayment basin.....	93
4.6 Conclusions.....	96
References.....	97

CHAPTER 5	101
5.0 Embayed beach response due to sand nourishment on the east coast of Malaysia.....	101
5.1 Introduction.....	102
5.2 Literature review	102
5.2.1 Beach nourishment and sediment budget approach	102
5.2.2 Equilibrium stages of headland bay beaches.....	103
5.2.3 Parabolic bay equation of a headland bay model.....	104
5.3 Material and methods	106
5.3.1 Description of study area.....	106
5.3.2 Hydrodynamic and sediment transport condition.....	109
5.3.3 Beach nourishment.....	111
5.3.4 Beach stability assessment.....	112
5.4 Results of field survey analyses.....	112
5.4.1 Distribution pattern of sand volume changes.....	112
5.4.2 Distribution pattern of beach level changes.....	116
5.4.3 Development of beach width and beach rotation.....	118
5.4.4 Application of the parabolic bay model.....	121
5.5 Discussions.....	123
5.5.1 Distribution pattern of sand volume changes.....	123
5.5.2 Distribution pattern of beach level changes.....	125
5.5.3 Development of beach width and beach rotation.....	126
5.5.4 Application of the parabolic bay model.....	128
5.5.5 Sand bypassing across Tanjung Tembeling headland	130
5.6 Conclusions.....	131
References.....	133

CHAPTER 6	135
6.0 Impact of a permanent sand bypassing system on the natural sand distribution patterns, southern Gold Coast Australia.....	135
6.1 Introduction.....	136
6.2 Study area background	138
6.2.1 Location and setting	138
6.2.2 History of Coolangatta Bay prior to TRESB project	140
6.2.3 TRESB project and sand bypassing system overview.....	141
6.3 Wave data.....	144
6.3.1 Gold Coast offshore wave data.....	144
6.3.2 Nearshore wave measurement.....	145

6.4 Model setup	146
6.4.1 Grids and initial bathymetry.....	146
6.4.2 Offshore wave model boundary.....	147
6.4.3 Wave calibration model setup.....	148
6.4.4 Wave validation model setup.....	149
6.4.5 Statistical model evaluation (Error index).....	149
6.4.6 Morphological bed patterns without bypassing.....	150
6.4.7 Schematisation of sand bypassing system.....	150
6.4.8 High performance cloud (HPC) computer.....	152
6.5 Results and discussions	153
6.5.1 Wave calibration.....	153
6.5.2 Wave validation.....	155
6.5.3 Wave-induced surf zone current patterns.....	157
6.5.4 Morphological bed change patterns (without sand pumping operation).....	158
6.5.5 Impact of a permanent sand bypassing system.....	160
6.6 Conclusions	172
References	174
CHAPTER 7	177
7.0 Summary and conclusions	177
7.1 Conclusions	177
7.2 Responses to research questions	178
7.3 Practical implications of the findings and prospects for further researches	181

Natural headland sand bypassing: towards identifying and modelling the mechanisms and processes

ABSTRACT

This study contributes to the understanding of the mechanisms and processes of sand bypassing in artificial and non-artificial coastal environments through a numerical modelling study. Sand bypassing processes in general are a relevant but poorly understood topic. This study attempts to link the theory and physics of sand bypassing processes around headland and engineered structures which is significantly important in definition of coastal sedimentary budget. The main questions are how can we model sand bypassing processes and if the modelled sand bypassing processes represent the actual sand bypassing processes. In this study, it is shown that a process-based model can be used to simulate the processes of sand bypassing around groyne and headland structures. The morphological model developed in this study is useful to increase understanding of the natural sand distribution patterns due to combination of engineering efforts and natural coastal processes.

Keyword: Sand bypassing processes; Coastal environments
