Taxonomy

Kingdom	Phylum	Class	Order	Family
Animalia	Chordata	Reptilia	Squamata	Teiidae

Taxon Name: *Kentropyx viridistriga* (Boulenger, 1894)

Synonym(s):

- *Centropyx viridistriga* Boulenger, 1894

Common Name(s):

- English: Green Kentropyx

Taxonomic Source(s):

Harvey, M.B., Ugueto, G.N. and Gutberlet Jr., R.L. 2012. Review of Teiid morphology with a revised taxonomy and phylogeny of the Teiidae (Lepidosauria: Squamata). *Zootaxa* 3459: 1-156.

Assessment Information

Red List Category & Criteria: Least Concern [ver 3.1](#)

Year Published: 2019

Date Assessed: November 26, 2014

Justification:

Kentropyx viridistriga has been assessed as Least Concern as the species has a wide range across Paraguay, and areas of Argentina, Brazil, and Bolivia, with no known widespread threats.

Previously Published Red List Assessments

2010 – Least Concern (LC)
<http://dx.doi.org/10.2305/IUCN.UK.2010-4.RLTS.T178701A7598940.en>

Geographic Range

Range Description:

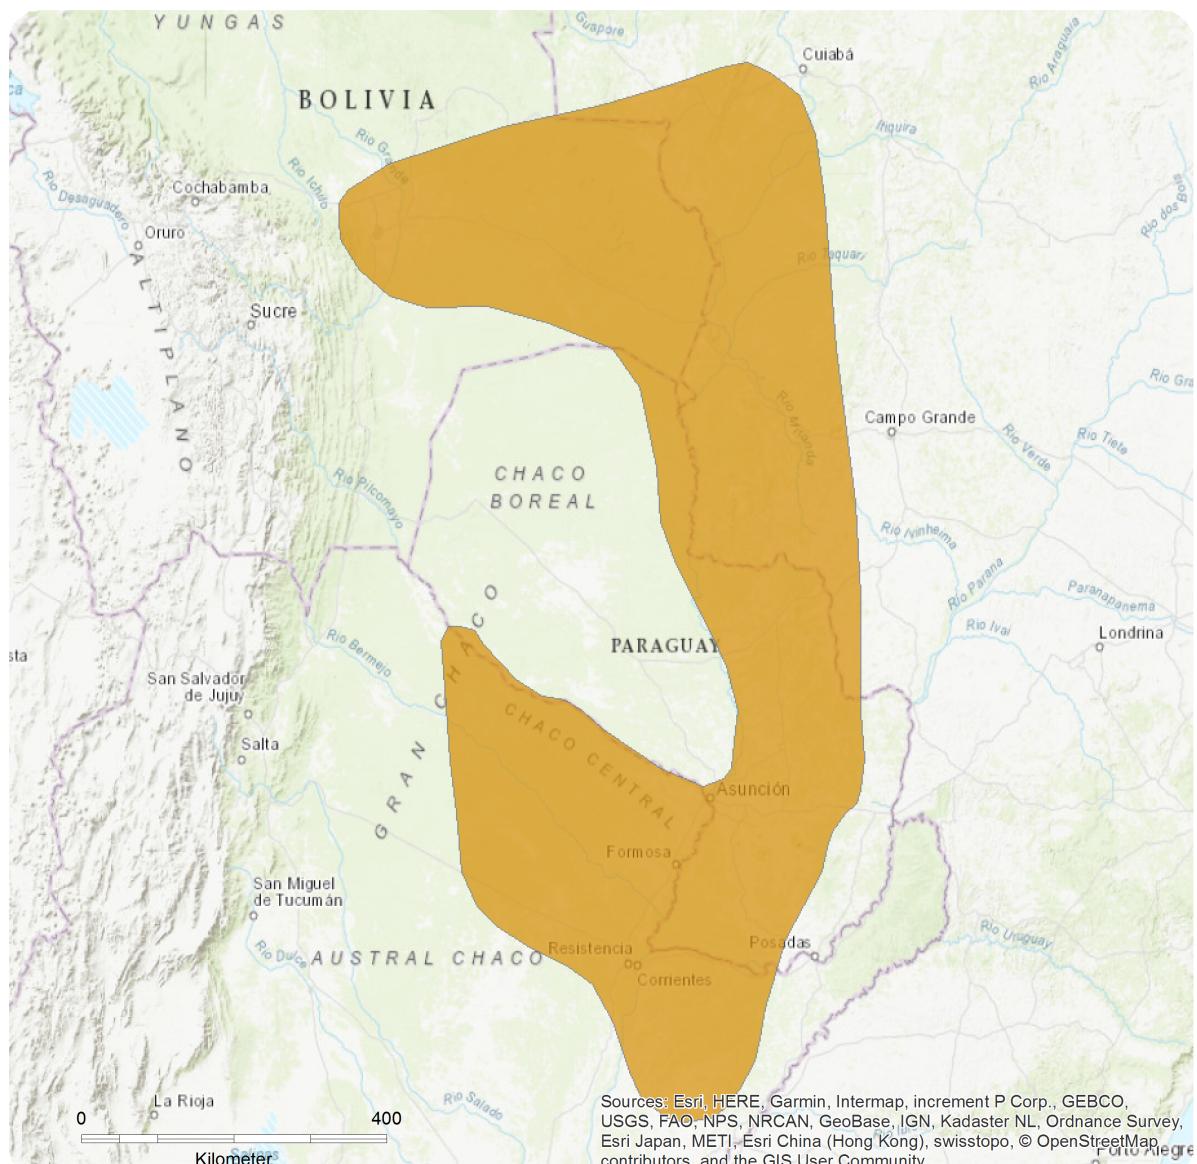

This species is known from Paraguay, northern Argentina, Brazil (in the state of Mato Grosso), and Bolivia (Beni, Santa Cruz and Cochabamba) (Embert 2007, Avila *et al.* 2012).

Country Occurrence:

Native: Argentina (Chaco, Corrientes, Formosa, Misiones, Santa Fé); Bolivia, Plurinational States of; Brazil (Mato Grosso); Paraguay

Distribution Map

Kentropyx viridistriga

Range

Extant (resident)

Compiled by:

Center for Biodiversity, Temple University

The boundaries and names shown and the designations used on this map do not imply any official endorsement, acceptance or opinion by IUCN.

Population

It is a common species in Bolivia. There is no information on the population trend.

Current Population Trend: Unknown

Habitat and Ecology (see Appendix for additional information)

This species is found in Cerrado, Chaco and Pantanal biomes. It also inhabits open areas within rainforest, often in moist conditions, occupying river beaches and flood plains. The species has been found on floating vegetation.

Systems: Terrestrial, Freshwater

Use and Trade

This species is not utilized or traded.

Threats

This species is considered to be threatened in Argentina by habitat loss (Abdala *et al.* 2012); but on a range-wide scale no major threats are known.

Conservation Actions (see Appendix for additional information)

There are no species-specific conservation measures in place or needed for this species. In Bolivia it occurs in Parque Nacional Otuquis and San Matías, and possibly in other protected areas in Brazil. Classified as Vulnerable in Argentina (Abdala *et al.* 2012).
