

Sources, behaviour and mitigation strategies influencing indoor air quality

Dr Stephanie Gauthier (University of Southampton, UK)

Dr Vicki Stevenson (Cardiff University) **Dr Archit Mehra** (University of Chester) **Dr Zaheer Nasar** (Cranfield University) **Dr Stefano Rolfo** (STFC) **Dr Alejandro Moreno Rangel** (Lancaster University) **Dr Jo Zhong** (Nottingham Trent University) **Dr Rob Ferguson** (University of Essex) **Dr Douglas Booker** (NAQTS)

23rd September 2021

Indoor air quality

- Average UK person spends 90% time indoor
- High exposure to indoor air pollutants:
 - particulate matter
 - volatile organic compounds
 - carbon monoxide
 - biological materials

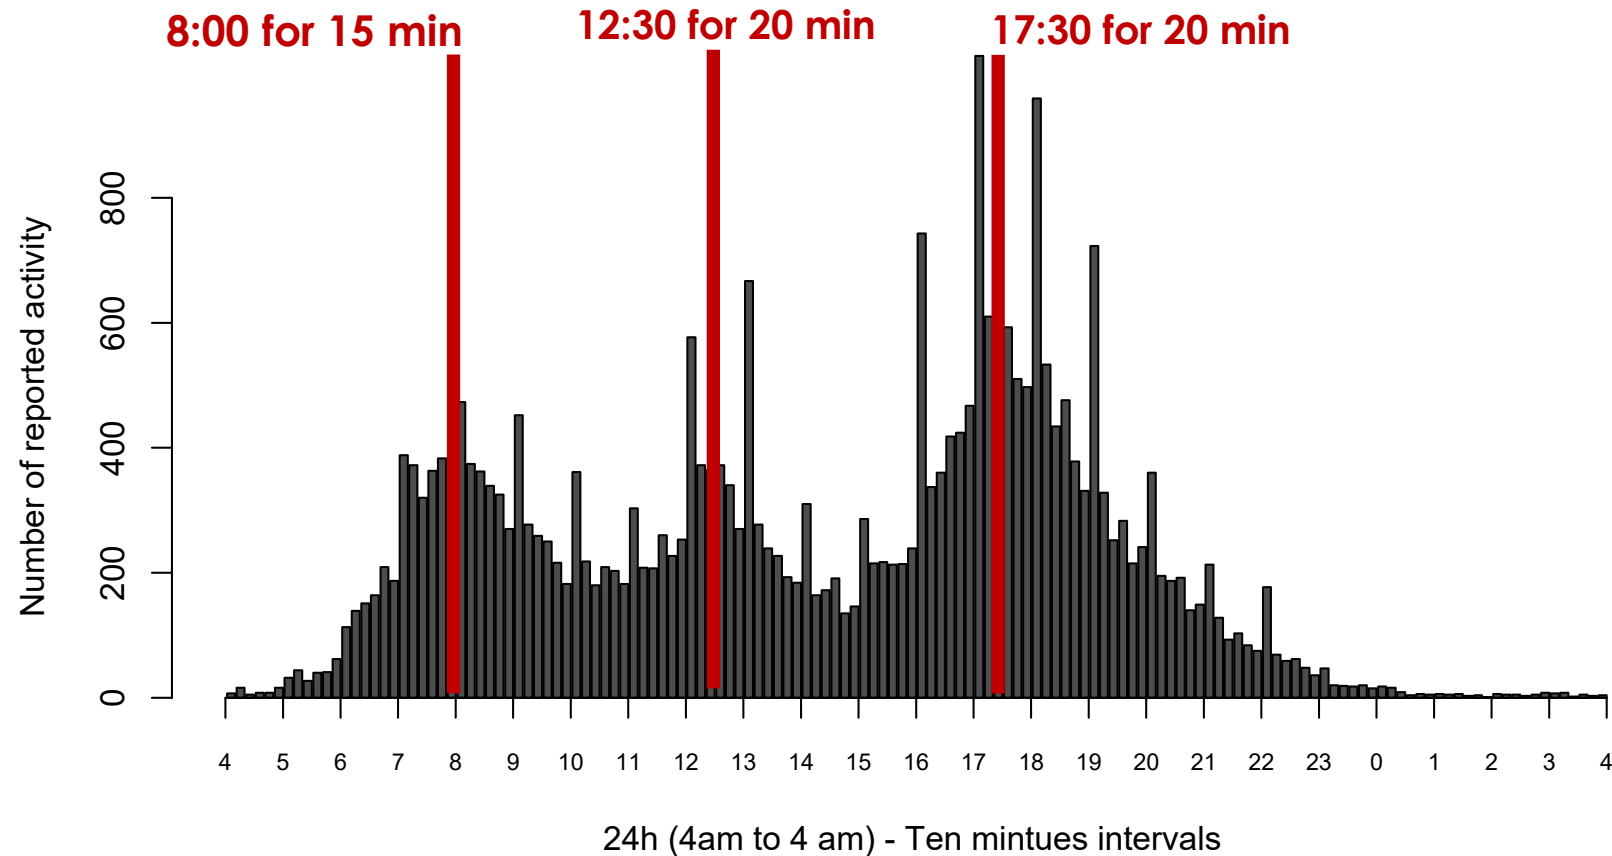

Sources of pollution

Behaviour: cooking

- UK Time Use Survey to establish frequency & duration of behaviour

Behaviour: cleaning

- UK Time Use Survey to establish frequency & duration of behaviour

Behaviour: typical schedule for a day

Activity	Time	Duration (mins)
Cooking		
Breakfast – Toast & Tea	08:00 – 08:16	16
Leave the room	08:16 – 09:10	
Washing up	09:10 – 09:25	15
Leave the room	09:25 – 09:50	
Cleaning the dwelling	09:50 – 10:15	25
Leave the room	10:15 – 12:30	
Cooking		
Pasta – low emission	12:30 – 12:48	18
Leave the room	12:48 – 13:30	
Washing up	13:30 – 13:46	16
Leave the room	13:46 – 17:30	
Cooking		
Stir fry - High emission	17:30 – 17:53	23
Leave the room	17:53 – 18:40	
Washing up	18:40 – 18:57	17

Question:

What would be the particulate emission from these two dishes under different ventilation scenarios?

Mitigation strategies

- Reduce behaviours – cooking, cleaning, solid-fuel fires, use of candles, smoking, etc.
- Choose low emission materials
- **Increase ventilation**

Tests

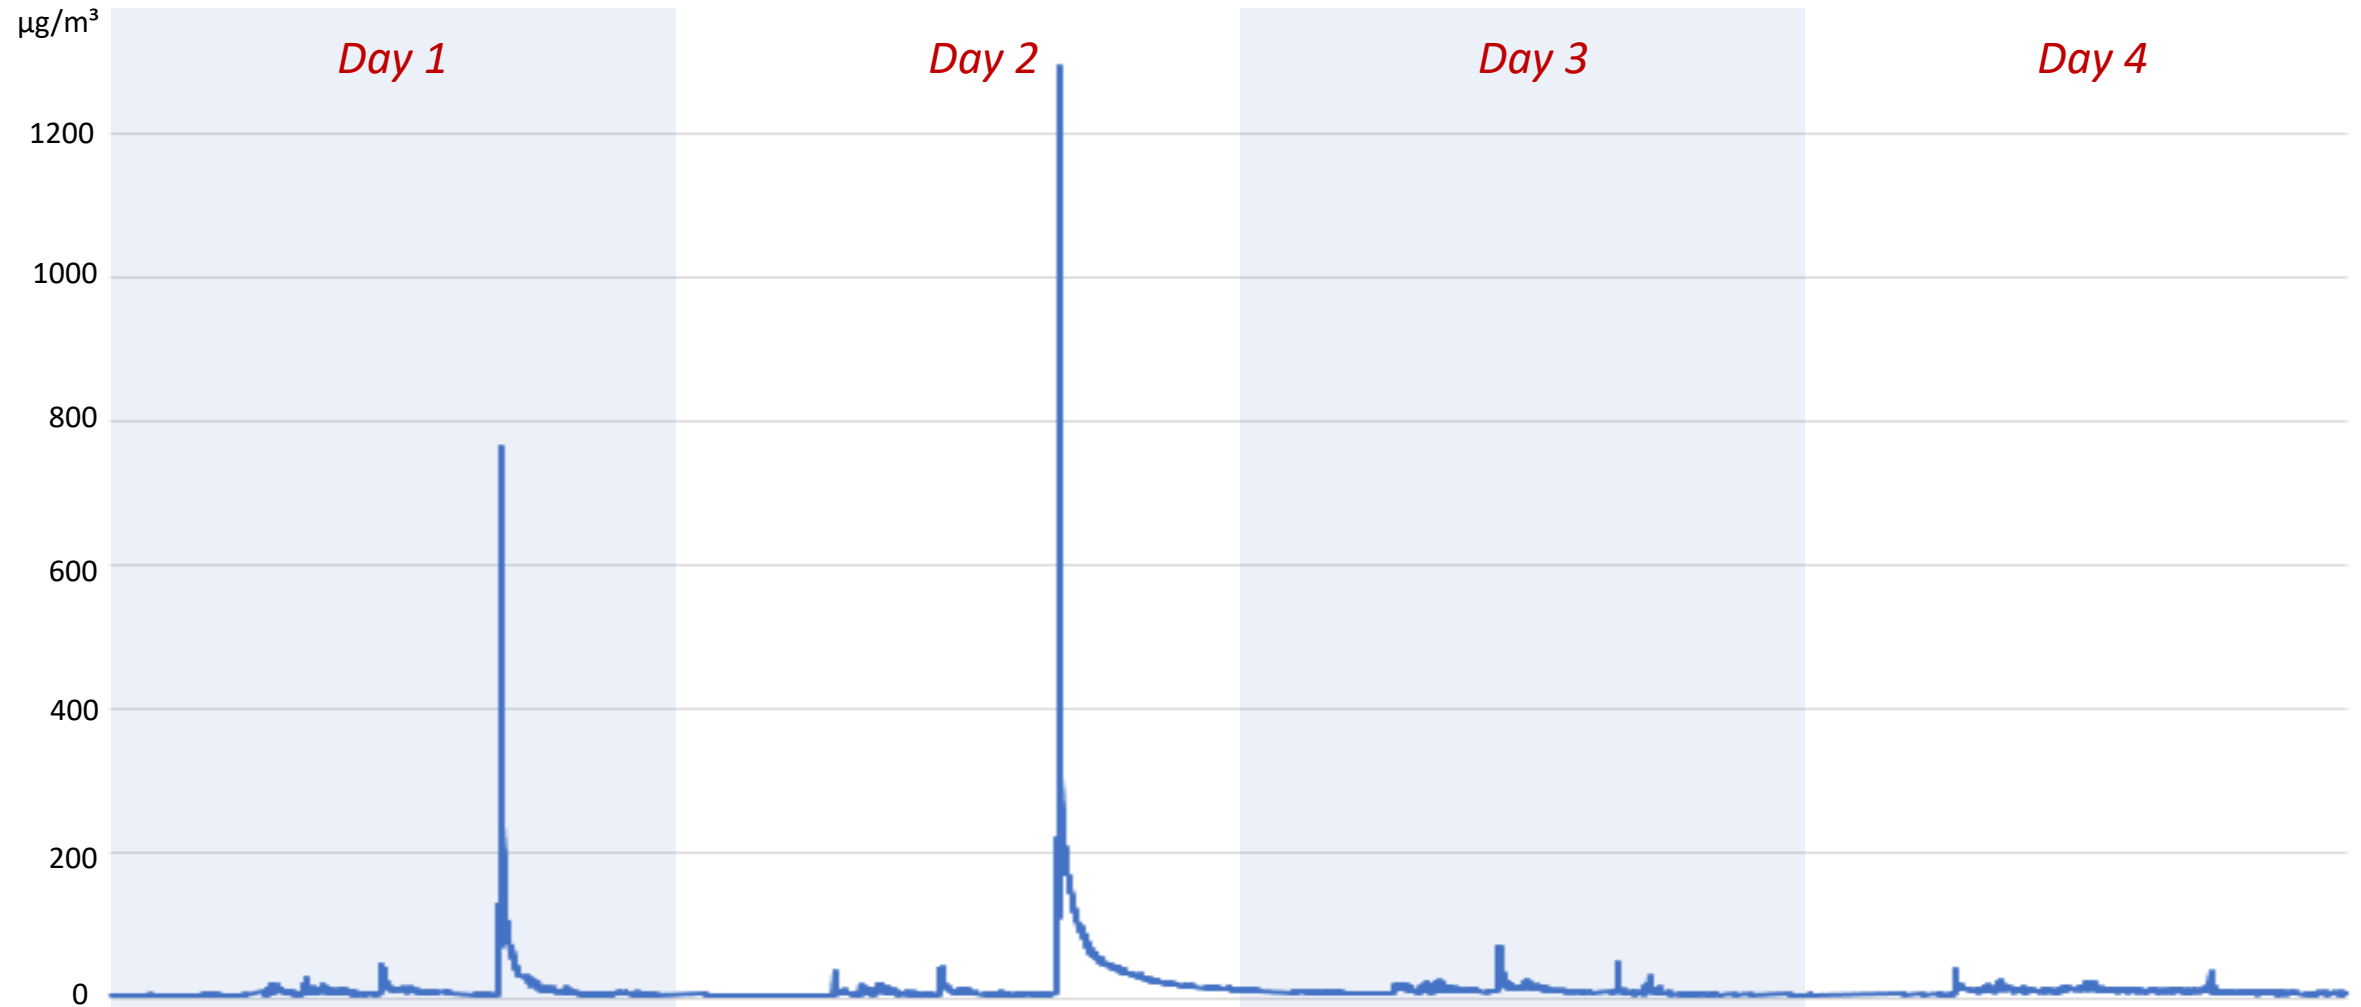

4 tests:

- two days *low* ventilation (Tue 6th & Wed 7th July 2021)
- two days *high* ventilation (Thu 8th & Fri 9th July 2021)

Measures: T, RH, V_a, CO₂, NO_x, PM₁, PM_{2.5}, PM₁₀, O₃, TVOC, CH₄, irradiance, bioaerosol

Early Results – PM10

Early Results – PM10

Low ventilation

Early Results – PM10

Conclusions

Exposure is linked to

- Behaviour: type, duration, frequency

stir fry cooking ($344 \mu\text{g}/\text{m}^3/20\text{min}$) = $19.2 *$ pasta cooking ($18 \mu\text{g}/\text{m}^3/20\text{min}$)

- Ventilation practices

low ventilation (daily mean $20.4 \mu\text{g}/\text{m}^3$) = $2.6 *$ high ventilation (daily mean $7.7 \mu\text{g}/\text{m}^3$)

WHO 09/2021 $15 \mu\text{g}/\text{m}^3$ annual mean & $45 \mu\text{g}/\text{m}^3$ 24-hour mean
