

# **Test: Internet Indexing Systems vs List of Known URLs: Revisited**

## **Preface**

This is a compilation of the tests done in Sept./Oct. 1997 by the author on the then existing search engines. It was published on the web on the author's home page. As the web pages changed, this was pushed off into the old site and forgotten.

The original HTML pages were converted into PDF using LibreOffice in Aug 2022 and is placed in the Spectrum repository for the record!

BTW, these tests were followed by another series of tests in 2001 and it will also be placed in

Bipin C. Desai

Montreal, August 2022

## Test: Internet Indexing Systems vs List of Known URLs: Revisited

(c) Bipin C. Desai

<i>WebCrawler</i>	7	3	0	21
<i>WWW</i>	2	0	0	23
<i>Yahoo</i>	none	-	-	25

**Table 1: Search statistics for using the search term  
Bipin (AND) Desai:  
June, 1995**

Many of the pioneering indexing systems, existing in mid 1995, are no longer accessible. In the meantime, a number of new systems, such as ALtaVista, OpenText, Hotbots etc. have emerged. Many workers in the digital virtual library feel that these newer systems have addressed many of the issues we raised in [Cindi System](#), still under active development at Concordia.

This series of tests was done in September thru October 1995 to find the number of relevant documents that would be able to located by these current search engines and evaluate the usefulness of the index entries so retrieved. We hence repeated the test performed in 1995 with the same search words. At the time of the test, some 325 URLs were known to contain the words "Bipin" and "Desai". These represents Web documents pertaining to the author. The complete list of these URLs is given [here](#).

The first test, given in Table 2 below, was done on the following search engines:

- AltaVista
- Excite
- [Infoseek](#)
- Lycos
- Hotbots
- OpenText
- Yahoo

For Web search, Yahoo appears to use the AltVista engine and DB and produces almost identical result; hence we have given a single result for both search systems in Table 2.

As in the previous test, we have given the result by noting the number of hits produced, the number of duplicates, number of mis-hits and the number of URLs which are no longer valid, and the number of documents not listed in the result. The duplicates are either the same document being served from two sites or same document listed twice. The latter errors seem to have been corrected in most search engines and they have eliminated such obvious duplicates.

The document missed could be due to the approximations used by engines such as AltaVista when it finds a large number of hits. However, the fact that these search engines could not locate all document indicates the inherent problem of isolated URLs.

The bigger problem is the lack of selectivity and a measure of usefulness of the documents found by the search engines. We have collated the result by following the trail of "next" set of URLs and these could be

viewed by pressing on the number of hits for each search engine in Table 2. A glance at the abstract or summary presented by the search engine indicates that they are not very revealing and except for the most pedestrian need, following the pointers would result in a drain of the searcher's time.

Search System	Number of Hits	Number of Duplicates	Number of Mis-hits	Number of Defunct	Number of Items Missed
<i>AltaVista/ Yahoo</i>	<u>97</u>	9	23	4	264
<i>Excite</i>	<u>114</u>	10	29	7	247
<i>Infoseek</i>	<u>8</u>	2	1	1	319
<i>Lycos</i>	<u>57</u>	7	15	14	297
<i>Hotbots</i>	<u>247</u>	28	58	19	155
<i>OpenText</i>	<u>19</u>	-	7	5	318

**Table 2: Search statistics for using the search term  
Bipin (AND) Desai  
Total known URLs: 325  
Sept-Oct 1997**

#### Search statistics for using various search strategies

In this set of tests, we used a simple search with the search terms 'Bipin Desai' the search expressions "Bipin Desai" and "Bipin C. Desai" respectively. These tests were made only on AltaVista/Yahoo. The results of these tests are given in Table 3.

The simple search shows high number of hits, but low selectivity and relevance. Most of the hits, in the top 160 entries are irrelevant and a large number of relevant documents are not located. Most users will not have the patience to go thru more than a few pages of the result.

The Search expression "Bipin Desai" gives a relatively low number of hits since the author prefers to include his middle initial in the name. Most searchers may not be aware of such details.

The search expression "Bipin C. Desai" gives a relatively large number of relevant documents. Some of which are duplicates, being accessible from more than one site. Some of the defunct URLs are not deleted by the search engines pointing to the maintenance problem of the underlying database. However, this search still missed about two thirds of the documents.

As such we feel that the Semantic Header based system where the provider of the resource is responsible for generating the entry would be a more useful scheme to support discovery. In the meantime, one uses the tools at hand!

Search System	Number of Items				
---------------	-----------	-----------	-----------	-----------	-----------------

	Hits	Duplicates	Mis-hits	Defunct	Missed
<i>AltaVista/Yahoo</i> [1]	<u>4285</u>	30-40%	40-50%	5%	250+
<i>AltaVista/ Yahoo</i> -1 [2]	<u>29</u>	2	13	3	312
<i>AltaVista/Yahoo -</i> 2 [3]	<u>128</u>	14	-	10	221

**Table 3: Search statistics for using various search strategies**  
**Total known URLs: 325**

# AltaVista: Advanced Query "Bipin C. Desai"

---

About **128** documents match your query.

*All these are collated into a single page here for easy reference. Any of the 12 pages found by Alta-Vista can be found by clicking on the appropriate button at the end of this page. Since the search is done by Alta-Vista each time, de nouveau, you would not get the same result as the one given below here. The reason for it is obvious: the DB for Alta-Vista is dynamic and it would most likely be changed since Oct, 1997!!!!*

### **68% WWW'95: Workshop A**

**URL:** <http://www.igd.fhg.de/www/www95/proceedings/workshops/work-a.html>

**Summary:** Several systems, notably Archie, Jumpstation, Lycos, WebCrawler, RBSE Index, and Harvest have attempted to solve this problem by building indices and allowing users to search them. Both goals stem from the need to address the increasing scale of the Internet: as the size of the problem increases, we need to be more efficient at building indices, and better at focusing on what the users are.

## List of Known URLs: Sept-Oct 1997

(c) Bipin C. Desai

Department of Computer Science  
1455 De Maisonneuve Blvd. West  
Montreal  
Canada H3G 1M8  
Email: [bcdesai@cs.concordia.ca](mailto:bcdesai@cs.concordia.ca)

The number of known URLs with string *Bipin (C.) Desai* referring to resources pertaining to the author in the period Sept.-Oct. 1997 was 325.

The actual number of documents is smaller. For example, the [CUFA](#) collective agreement is a single document containing a number of articles and would be described with a single semantic header. Similarly, the document for [Forum95](#) is also a single document, here having some 17 URLs, which would be described with a single semantic header. It may be also possible to have a semantic header for each component of such documents.

Each version of a document, such as the [CINDI](#) document, could have a separate Semantic header.

Multiple pointers to copies of the same document(e.g., [CINDI](#) - [another copy of CINDI](#)) are counted as separate URLs. However, these copies would be described by a single semantic header.
