

# Have You Seen This Plant?

**Perennial Pepperweed** (*Lepidium latifolium*) is an invasive plant in New England. It is a threat to our native plants, animals and landscape.

## How to Identify Pepperweed:

- Found in coastal salt marsh & upland roadsides
- 1-5 feet tall
- Flowers mid-June to early-July
- Small white flowers, with four petals, clustered at the top
- Alternate leaves, which get smaller higher on the stem
- Smooth, lime-green stem

# Perennial Pepperweed Partnership

UNH Extension and the Maine Natural Areas Program are collaborating with the US Fish and Wildlife Service to map Pepperweed in NH & ME and work towards eradication.
