e-Table 1. Eligibility criteria for inclusion in the study sample

	Included		Excluded
	N	%	N
Baseline sample (2014-2019)	204 895	100.0	-
Invited for participation in the COVID follow-up (2020)	197 834	96.6	7 061
Completion of the questionnaire (2020)	161 849	79.0	35 985
Participants not unemployed or inactive at time of the COVID-19 questionnaire	109 328	53.1	52 521
If tested for SARS-CoV-2: Test date not before 01.02.2020 or after 31.08.2020	108 960	52.9	368
Study sample	108 960	100.0	

e-Table 2. Missing values in variables of interest

Variable	Label	Missing		Complete		Total	
		N	%	N	%	N	%
Dependent variable							
a_postest	Infection with SARS-CoV-2	272	0.2	108 611	99.8	108 883	100.0
Independent variables							
timerisk	Person-time at risk	0	0.0	108 960	100.0	108 960	100.0
age	Age in years	0	0.0	108 960	100.0	108 960	100.0
gender	Sex	0	0.0	108 960	100.0	108 960	100.0

a_postest	108 688	0.00	0.06	0	1	108 960	0.00	0.06	0	1

e-Table 4. Incidence rates (IR) of SARS-CoV-2 infections per 1 000 workers (01.02-31.08.2020) by occupational major group (ISCO)

ISCO major groups (1st digit ISCO)	Number (N)		Person-days (\bar{x})	Unadjusted		Model 1		Model 2	
	Total	Cases		IR	95% CI	IR	95% CI	IR	95% CI
Technicians and professionals	27 292	127	109.0	4.7	3.9–5.5	4.5	3.7–5.3	4.8	3.9–5.7
Managers	7 752	39	109.4	5.0	3.5–6.6	4.3	2.9–5.7	3.7	2.2–5.3
Armed forces occupations	326	1	110.7	3.0	-2.9–9.0	3.3	-3.3–10.0	3.4	-3.3–10.1
Professionals	35 947	141	108.3	4.0	3.3–4.6	3.6	3.0–4.2	3.3	2.6–4.0
Skilled agricultural, forestry and fishery workers	886	3	112.4	3.3	-0.4–7.0	3.1	-0.4–6.5	3.2	-0.4–6.9
Clerical support workers	13 772	40	109.0	2.9	2.0–3.8	2.8	1.9–3.7	2.9	2.0–3.8
Services and sales workers	10 594	30	111.1	2.8	1.8–3.8	2.7	1.7–3.7	2.8	1.7–3.9
Elementary occupations	1 932	7	112.7	3.5	0.9–6.1	3.3	0.8–5.8	2.6	0.0–5.2
Craft and related trades workers	7 252	12	112.5	1.6	0.7–2.5	1.5	0.6–2.4	1.6	0.7–2.6
Plant and machine operators and assemblers	3 207	4	112.8	1.2	0.0–2.4	1.1	0.0–2.3	1.1	-0.0–2.3
<i>Wald chi2 test for significance</i>				p < 0.001		p = 0.001		p = 0.001	

IR=Incidence rate. \bar{x} =Mean. CI=Confidence interval. IRs based on Poisson regression analysis. Person-days at risk were specified as an exposure variable to control for different lengths in observation times. Estimates of Model 1 were adjusted for age group (in five-year increments), sex, migration background, study centre, weekly working hours, and self-employment. Estimates of Model 2 were additionally adjusted for occupational skill level (5th digit of the KldB 2010), and supervisory/managerial responsibility (4th digit of the KldB 2010). N=108 960 employed individuals.

e-Figure 1. Cumulative number of SARS-CoV-2 tests and infections by occupational segment, essential occupation, skill level and supervisory/managerial responsibility.

N=108,960 employed individuals. Cumulative numbers per 1000 workers in each category of occupational grouping.
