

Data storage options

- I. Each interested LVIF project sets up its own free ODK server account at www.ona.io
 - ILRI assists in uploading the form builder file into this account
 - Each project can then independently monitor, visualize and download the collected data (in csv or excel format, advanced format customisation)

Data storage options

- **2.** ILRI sets up a ODK server account for each interested LVIF project on the ILRI ODK aggregate server
 - ILRI assists in uploading the form builder file to the server
 - Each project can download its own data (csv or excel)
 - Each project and ILRI signs a non-disclosure and non-liability agreement, including a data storage end-date

Data storage options

- **3.** In addition to 2., ILRI also transfers the collected data to its data portal
 - Allows data download in more formats (e.g. stata, spss) with variable and value labels
 - Requires a comprehensive agreement (e.g. Collaborative Research Agreement) and a couple of days of research technician staff-time) to adjust the data transfer protocols

Data storage options

Note: Decision on what option each project wants to go for, needs to be taken before fieldwork starts

- As soon as enumerators start collecting data, there needs to be a system to store the data
