# Top Tips for Dyscalculia

1. Provide explicit instruction and drill and practice
2. Teach students to break problems down (use songs, mnemonics) to help them remember strategies to do this
3. Work on 1 problem at the time (cover all other items, remove irrelevant pictures)
4. Check on how student solves the problem and provide direct feedback on correct and incorrect answers.
5. Provide number lines, manipulatives, calculators and cheat sheets
6. Teach mathematical language explicitly and check understanding
