Correction to: Attention, Perception, & Psychophysics <https://doi.org/10.3758/s13414-020-02011-4>

The authors would like to correct the following:

1. The caption for Table 3 states: “Blank spaces indicate less than 0.03 factor loading” when it should indicate “Blank spaces indicate less than 0.30 factor loading.”
2. There is an unneeded bracket in the abstract of the paper, the following sentence should have read: “Additionally, decreased reports of PI-specific perceptual aberrations during two elicitations of the PI on the PIQ’s open-ended free-response section (percentage of sample endorsement = 5%, [first elicitation]; 8.3% [second elicitation]) compared with its 11-item section (endorsement of PI-specific items ranging from 30% to 53.33% [first]; 31.67% to 46.67% [second]) suggest that these responses may be heavily influenced by demand characteristics rather than accurately capturing PI perception.”
