

The Italian Society for Logic and the Philosophy of Science (SILFS) was founded in 1952 with the aim of promoting and encouraging research in logic and philosophy of science in Italy. On 18-20 June 2014, the Society held its Triennial International Conference, SILFS 14, at the University "Roma TRE". The conference was divided into several sessions, each centred on one of the main current topics in logic and philosophy of science, with a special focus on interdisciplinary approaches to logical and epistemological issues in the foundations of special sciences (both natural, social and human). The 100 contributed papers underwent a further selection, resulting into the 28 papers that are here published, subdivided into three macro-areas: *Epistemology and General Philosophy of Science, Logic and Philosophy of Logic, Philosophy of Natural Sciences*.

These articles offer a representative sample of the trends and developments of the contemporary research in logic and the philosophy of science in Italy, as well as reflecting the direction and themes that characterise the current international debate in these disciplines.
