AGRADECIMIENTOS

Primeramente a Dios por prestarme la vida, con pleno gozo de todas mis facultades física, mental y espiritual en perfecto estado, a mi madre la Señora María Naidú Ramírez, por tanto sacrificio y apoyo, a mi esposa Darlyn Yulieth Mora Flórez, por ese acompañamiento durante los momentos difíciles y su apoyo en mi proceso como esposo, trabajador y estudiante, a la UNAD y todo su cuerpo de Tutores y personal administrativo, quienes siempre estuvieron prestos a cualquier requerimiento durante mi tiempo como estudiante dentro y fuera del campus. Simplemente gracias por ser parte del cumplimiento de este gran sueño.

GLOSARIO

LAN: Local Area Network, (Red de Area Local). Básicamente es una red que interconecta ordenadores, servidores entre otros dispositivos en un área pequeña.

NAT: Network Address Translation, (Traducción de Dirección de Red). Es el mecanismo por el cual servidores, Routers, switches y ordenadores para intercambiar paquetes de datos, entre redes que se asignan con direcciones no compatibles o traducir su direccionamiento.

ROUTER: Un enrutador o encaminador es un dispositivo que permite interconectar redes con distinto prefijo en su dirección IP

VRF: El Enrutamiento Virtual y Reenvío (VRF) es una tecnología incluida en Routers d red IP (Internet Protocol) que permite a varias instancias de una tabla de enrutamiento existir en un Router y trabajar al simultáneamente.

VLAN: Virtual Local Area Network (Red de Area Local Virtual), Su función principal agrupar un conjunto de equipos por medio del direccionamiento, por medio de programación de red se limita la comunicación entre los diferentes equipos u ordenadores sin importar su arquitectura física.

WAN: Wide Area Network, (Red de Area Local). Como su nombre indica es una red de servidores y ordenadores que se prolonga en una gran extensión de tierra, puede ser intermunicipal, departamental, o incluso internacional.

RESUMEN

La cuarta revolución industrial requiere de grandes manejos de información, las nuevas tecnologías de información cada vez aumentan la infraestructura de comunicaciones y redes de transmisión de datos, con diferentes tipologías y tipos de conexión o cableado.

Es por este motivo la necesidad de profundizar mediante la plataforma Cisco, permite realizar comprensión de material teórico y práctico en la construcción, programación, conexión de redes LAN/WAN por medio de diferentes laboratorios remotos como Packet Tracer, GNS3, Smart LAB.

Palabras clave: LAN, NAT, ROUTER, VRF, VLAN, DHCP, EIGRP, RIPv2, DNS, OSPFv3.

ABSTRACT

The fourth industrial revolution requires great information management, new information technologies increasingly increase the communications infrastructure and data transmission networks, with different typologies and types of connection or wiring.

It is for this reason the need to deepen through the Cisco platform, allows understanding of theoretical and practical material in the construction, programming, connection of LAN / WAN networks through different remote laboratories such as Packet Tracer, GNS3, Smart LAB.

Keywords: LAN, NAT, ROUTER, VRF, VLAN, DHCP, EIGRP, RIPv2, DNS, OSPFv3.

INTRODUCCION

Con la solución de la prueba de habilidades, se llevará a cabo la configuración de una topología de red en la cual se podrá implementar una configuración de direccionamiento y enrutamiento de Routers en red, donde se permite tener varias tablas de enrutamiento trabajando simultáneamente, es por eso que se logró trabajar con una topología de red que contempla redes LAN independientes con hosts como dispositivos finales.

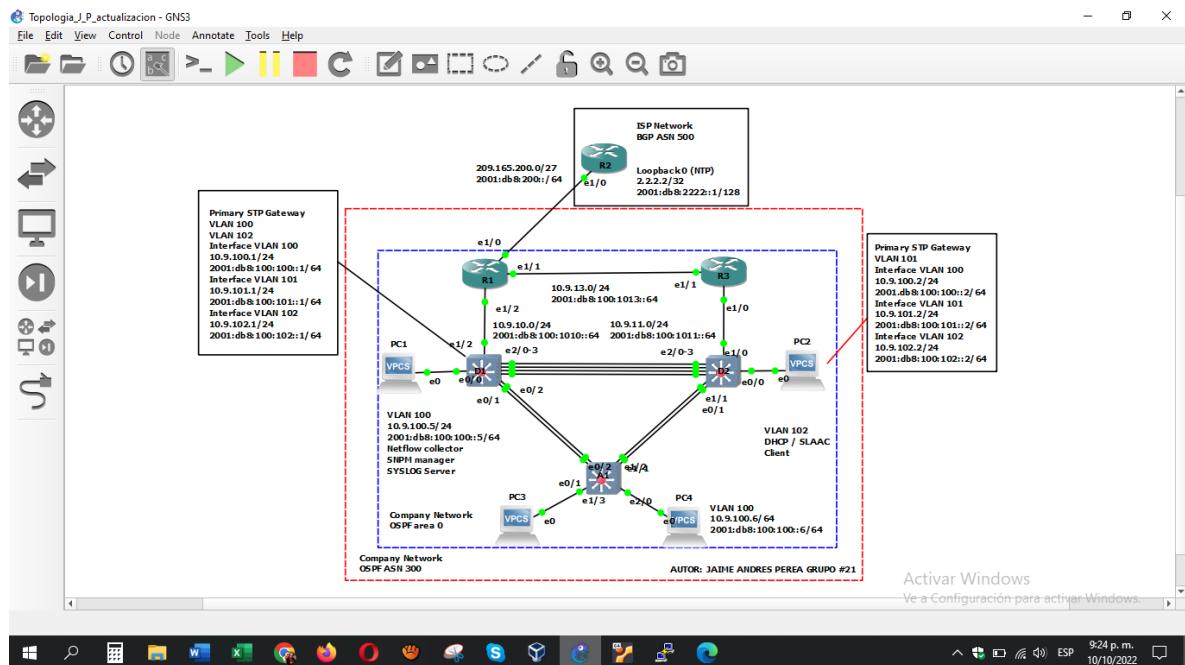

Se hará las configuraciones básicas de cada dispositivo, además de configurar la red de capa 2 y la compatibilidad con los hosts, se habilitará los enlaces troncales 802.1Q, se hará uso de la VLAN 999 como VLAN nativa, también se utilizará el árbol de expansión rápida, se configurará los puentes de raíz RSTP apropiados de acuerdo a la topología, se creará LACP EtherChannel y se llevará a cabo las configuraciones de los puertos de acceso de los hosts, por último, se hará la verificación de los servicios DHCP IPv4 e IPV6 y la conectividad LAN local.

Mediante comandos “show” y “ping” verificarán las configuraciones hechas en modo privilegiado de los equipos, dentro de la topología con los protocolos activos dentro los Router o switches, durante el desarrollo de este informe se adquirieron conocimientos con laboratorios remotos.

PARTE 1: construya la red y configure los ajustes básicos del dispositivo y el direccionamiento de la interfaz.

Paso 1: Cablee la red como se muestra en la topología. Conecte los dispositivos como se muestra en el diagrama de topología y cablee según sea necesario. Se realiza la topología planteada desde el simulador GNS3, usando la siguiente configuración en cada Router

Figura 1. Topología de red

- b.** Guarde la configuración en ejecución en startup-config en todos los dispositivos.

En este punto se debe digitar en los dispositivos R1, R2, R3, D1, D2, y A1 el comando

```
copy running-config startup-config //Comando guardar en la NVRAM//
Destination filename [startup-config]? //Confirmación arranque de los equipos//
Building configuration... //compilando información//
[OK]
```

- c. Configure el direccionamiento de host de PC 1 y PC 4 como se muestra en la tabla de direccionamiento. Asigne una dirección de puerta de enlace predeterminada de 10.09.100.254, que será la dirección IP virtual de HSRP utilizada en la Parte 4

Figura 2. Show IP PC1

PARTE 2: Configurar la red de capa 2 y la compatibilidad con el host

En esta parte de la evaluación de habilidades, completará la configuración de la red de capa 2 y configurará el soporte de host básico. Al final de esta parte, todos los interruptores deberían poder comunicarse. PC2 y PC3 deben recibir direccionamiento de DHCP y SLAAC.

:

Tabla 2: configuraciones de red de capa 2 y soporte de Host.

Tarea#	Tarea	Especificación	Puntos
2.1	En todos los commutadores, configure las interfaces troncales IEEE 802.1Q en los enlaces de commutador de interconexión	Habilite enlaces troncales 802.1Q entre: <ul style="list-style-type: none">• D1 y D2• D1 y A1• D2 y A1	6
2.2	En todos los commutadores, cambie la VLAN nativa en los enlaces troncales.	Utilice la VLAN 999 como la VLAN nativa.	6
2.3	En todos los commutadores, habilite el protocolo Rapid Spanning-Tree.	Utilice el árbol de expansión rápida.	3
2.4	En D1 y D2, configure los puentes raíz RSTP apropiados según la información del diagrama de topología. D1 y D2 deben proporcionar respaldo en caso de falla del puente raíz.	Configure D1 y D2 como raíz para las VLAN apropiadas con prioridades que se apoyen mutuamente en caso de falla del commutador.	2
2.5	En todos los switches, cree LACP EtherChannels como se muestra en el diagrama de topología.	Utilice los siguientes números de canal: <ul style="list-style-type: none">• D1 a D2 – Canal de puerto 12• D1 a A1 – Canal de puerto 1• D2 a A1 – Canal de puerto 2	3

Tarea#	Tarea	Especificación	Puntos
2.6	En todos los conmutadores, configure los puertos de acceso de host que se conectan a PC1, PC2, PC3 y PC4.	<p>Configure los puertos de acceso con la configuración de VLAN adecuada, como se muestra en el diagrama de topología.</p> <p>Los puertos de host deben pasar inmediatamente al estado de reenvío.</p>	4
2.7	Verifique los servicios DHCP IPv4.	PC2 y PC3 son clientes DHCP y deben recibir direcciones IPv4 válidas.	1
2.8	Verifique la conectividad LAN local.	<p>PC1 debería hacer ping con éxito:</p> <ul style="list-style-type: none"> • D1: 10.09.100.1 • D2: 10.09.100.2 • PC4: 10.09.100.6 <p>PC2 debería hacer ping con éxito:</p> <ul style="list-style-type: none"> • D1: 10.09.102.1 • D2: 10.09.102.2 <p>PC3 debería hacer ping con éxito:</p> <ul style="list-style-type: none"> • D1: 10.09.101.1 • D2: 10.09.101.2 <p>PC4 debería hacer ping con éxito:</p> <ul style="list-style-type: none"> • D1: 10.09.100.1 • D2: 10.09.100.2 • PC1: 10.09.100.5 	1

Tarea 2.1: En todos los switches configure interfaces troncales IEEE 802.1Q sobre los enlaces de interconexión entre switches.

Switch D1

```
D1(config)#interface range e2/0-3          //rangos de interfaz//  
D1(config-if-range) #switchport mode trunk    //modo truncall//  
D1(config-if-range) #switchport trunk encapsulation dot1q //etiqueta dot1q//  
D1(config)#interface range e0/1-2          //rango de interfaz//  
D1(config-if-range) #switchport mode trunk    //modo truncal//  
D1(config-if-range) #switchport trunk encapsulation dot1q //etiqueta dot1q//
```

Switch D2

```
D2(config)#interface range e2/0-3  
D2(config-if-range) #switchport mode trunk  
D2(config-if-range) #switchport trunk encapsulation dot1q  
D2(config)#interface range e1/1-2  
D2(config-if-range) #switchport mode trunk  
D2(config-if-range) #switchport trunk encapsulation dot1q
```

Switch A1

```
A1(config)#interface range e0/1-2  
A1(config-if-range) #switchport mode trunk  
A1(config-if-range) #switchport trunk encapsulation dot1q  
A1(config)#interface range e1/1-2  
A1(config-if-range) #switchport mode trunk  
A1(config-if-range) #switchport trunk encapsulation dot1q
```

Tarea 2.2 En todos los switches cambie la VLAN nativa en los enlaces troncales.

Switch D1

```
D1(config)#interface range e2/0-3          //rangos de las interfaces//
D1(config-if-range) #switchport trunk native vlan 999 //negociacion de enlaces//
D1(config-if-range) #exit                  //salir//
D1(config)#interface range e0/1-2
D1(config-if-range) #switchport trunk native vlan 999
D1(config-if-range) #exit
```

Switch D2

```
D2(config)#interface range e2/0-3
D2(config-if-range) #switchport trunk native vlan 999
D2(config-if-range) #exit
D2(config)#interface range e1/1-2
D2(config-if-range) #switchport trunk native vlan 999
D2(config-if-range) #exit
```

Switch A1

```
A1(config)#interface range e0/1-2
A1(config-if-range) #switchport trunk native vlan 999
A1(config-if-range) #exit
A1(config)#interface range e1/1-2
A1(config-if-range) #switchport trunk native vlan 999
A1(config-if-range) #exit
```

Tarea 2.3 En todos los switches habilite el protocolo Rapid Spanning-Tree (RSTP)

Switch D1

```
D1(config)#spanning-tree mode rapid-pvst // configuracion PVST rapida global//  
D1(config-if-range) #no shutdown //encender interfaz//  
D1(config-if-range) #exit //salir//
```

Switch D2

```
D2(config)#spanning-tree mode rapid-pvst  
D2(config-if-range) #no shutdown  
D2(config-if-range) #exit
```

Switch A1

```
A1(config)#spanning-tree mode rapid-pvst  
A1(config-if-range) #no shutdown  
A1(config-if) #exit
```

Tarea 2.4 En D1 y D2, configure los puentes raíz RSTP (root bridges) según la información del diagrama de topología.

D1 y D2 Deben proporcionar respaldo en caso de falla del puente raíz (root bridge).

Switch D1

```
D1(config)#spanning-tree vlan 100,102 root primary //raiz para vlan 110, 101//  
D1(config)#spanning-tree vlan 101 root secondary //raiz para vlan 101 apoyo//
```

Switch D2

```
D2(config)#spanning-tree vlan 101 root primary  
D2(config)#spanning-tree vlan 100,102 root secondary
```

Tarea 2.5 En todos los switches, cree EtherChannel LACP como se muestra en el diagrama de topología.

Switch D1

```
D1(config)#interface range e2/0-3          //rangos de interfaces o puertos//  
D1(config-if-range) #channel-group 12 mode active //agrupar enlaces canal 12//  
D1(config-if-range) #no shutdown             //encender interfaz//  
D1(config-if-range) #exit                  //salir//  
D1(config)#interface range e0/1-2          // Puerto e interfaz//  
D1(config-if-range) #channel-group 1 mode active //agrupar enlace//  
D1(config-if-range) #no shutdown             //encender interfaz//  
D1(config-if-range) #exit                  //salir//
```

Switch D2

```
D2(config)#interface range e2/0-3  
D2(config-if-range) #channel-group 12 mode active  
D2(config-if-range) #no shutdown  
D2(config-if-range) #exit  
D2(config)#interface range e1/1-2  
D2(config-if-range) #channel-group 1 mode active  
D2(config-if-range) #no shutdown  
D2(config-if-range) #exit
```

Switch A1

```
A1(config)#interface range e0/1-2  
A1(config-if-range) #channel-group 1 mode active  
A1(config-if-range) #no shutdown  
A1(config)#interface range e1/1-2  
A1(config-if-range) #channel-group 2 mode active  
A1(config-if-range) #no shutdown  
A1(config-if) #spanning-tree portfast  
A1(config-if) #no shutdown  
A1(config-if) #exit
```

Tarea 2.6 En todos los switches, configure los puertos de acceso del host (host access port) que se conectan a PC1, PC2, PC3 y PC4.

Switch D1

```
D1(config)#interface e0/0          // interface a configurar//  
D1(config-if-range) #switchport mode access // modo acceso al puerto//  
D1(config-if-range) #switchport access vlan 100 // asigna el acceso a vlan 100//  
D1(config-if-range) #spanning-tree portfast // acceso rapido//  
D1(config-if-range) #no shutdown        //encender interfaz//  
D1(config-if-range) #exit              //salir//
```

Switch D2

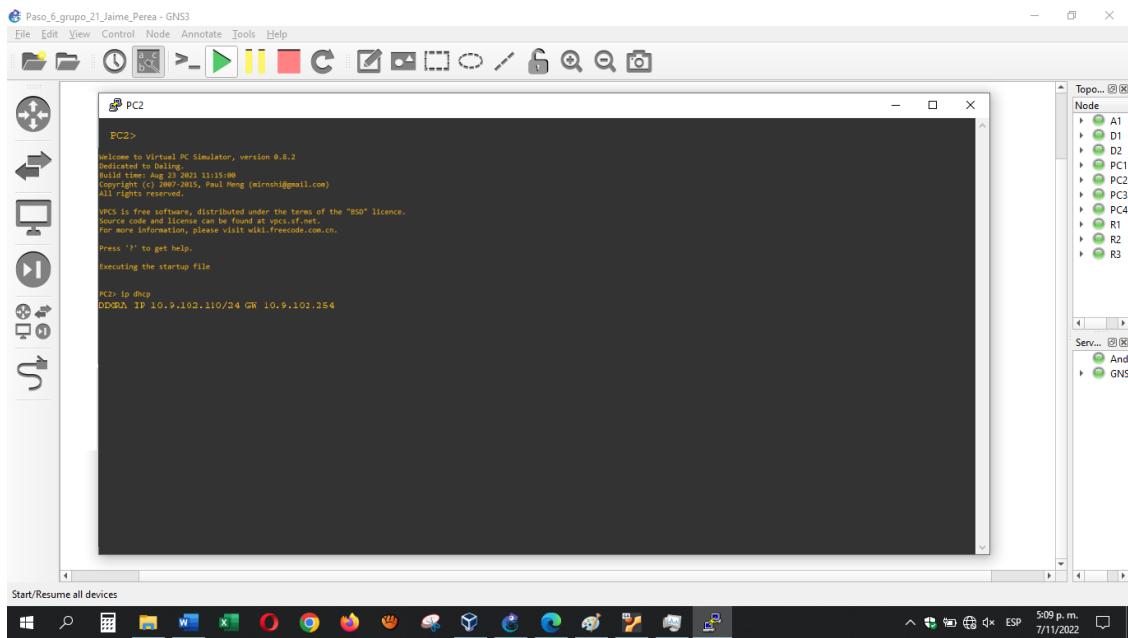

```
D2(config-if-range) #interface e0/0  
D2(config-if-range) #switchport mode access  
D2(config-if-range) #switchport access vlan 102  
D2(config-if-range) #spanning-tree portfast  
D2(config-if-range) #no shutdown  
D2(config-if-range) #exit
```

Switch A1

```
A1(config)#interface e1/3  
A1(config-if) #switchport mode access  
A1(config-if) #switchport access vlan 101  
A1(config-if) #spanning-tree portfast  
A1(config-if) #no shutdown  
A1(config)#interface e2/0  
A1(config-if) #switchport mode access  
A1(config-if) #switchport access vlan 100  
A1(config-if) #spanning-tree portfast  
A1(config-if) #no shutdown  
A1(config-if) #exit
```

PARTE 3: (Escenario 2)

Tabla 3. Configurar los protocolos de enrutamiento

Task#	Task	Specification	Points
3.1	On the “Company Network” (i.e., R1, R3, D1, and D2), configure single-area OSPFv2 in area 0.	<p>Use OSPF Process ID 4 and assign the following router-IDs:</p> <ul style="list-style-type: none"> • R1: 0.0.4.1 • R3: 0.0.4.3 • D1: 0.0.4.131 • D2: 0.0.4.132 <p>On R1, R3, D1, and D2, advertise all directly connected networks / VLANs in Area 0.</p> <ul style="list-style-type: none"> • On R1, do not advertise the R1 – R2 network. • On R1, propagate a default route. Note that the default route will be provided by BGP. <p>Disable OSPFv2 advertisements on:</p> <ul style="list-style-type: none"> • D1: All interfaces except E1/2 • D2: All interfaces except E1/0 	8
3.2	On the “Company Network” (i.e., R1, R3, D1, and D2), configure classic single-area OSPFv3 in area 0.	<p>Use OSPF Process ID 6 and assign the following router-IDs:</p> <ul style="list-style-type: none"> • R1: 0.0.6.1 • R3: 0.0.6.3 • D1: 0.0.6.131 • D2: 0.0.6.132 <p>On R1, R3, D1, and D2, advertise all directly connected networks / VLANs in Area 0.</p> <ul style="list-style-type: none"> • On R1, do not advertise the R1 – R2 network. • On R1, propagate a default route. Note that the default route will be provided by BGP. <p>Disable OSPFv3 advertisements on:</p> <ul style="list-style-type: none"> • D1: All interfaces except E1/2 • D2: All interfaces except E1/0 	8

Task#	Task	Specification	Points
3.3	On R2 in the “ISP Network”, configure MP-BGP.	<p>Configure two default static routes via interface Loopback 0:</p> <ul style="list-style-type: none"> • An IPv4 default static route. • An IPv6 default static route. <p>Configure R2 in BGP ASN 500 and use the router-id 2.2.2.2.</p> <p>Configure and enable an IPv4 and IPv6 neighbor relationship with R1 in ASN 300.</p> <p>In IPv4 address family, advertise:</p> <ul style="list-style-type: none"> • The Loopback 0 IPv4 network (/32). • The default route (0.0.0.0/0). <p>In IPv6 address family, advertise:</p> <ul style="list-style-type: none"> • The Loopback 0 IPv4 network (/128). • The default route (::/0). 	4
3.4	On R1 in the “ISP Network”, configure MP-BGP.	<p>Configure two static summary routes to interface Null 0:</p> <ul style="list-style-type: none"> • A summary IPv4 route for 10.XY.0.0/8. • A summary IPv6 route for 2001:db8:100::/48. <p>Configure R1 in BGP ASN 300 and use the router-id 1.1.1.1.</p> <p>Configure an IPv4 and IPv6 neighbor relationship with R2 in ASN 500.</p> <p>In IPv4 address family:</p> <ul style="list-style-type: none"> • Disable the IPv6 neighbor relationship. • Enable the IPv4 neighbor relationship. • Advertise the 10.09.0.0/8 network. <p>In IPv6 address family:</p> <ul style="list-style-type: none"> • Disable the IPv4 neighbor relationship. • Enable the IPv6 neighbor relationship. • Advertise the 2001:db8:100::/48 network. 	4

Tarea 3.1 En la "Red de la empresa" (es decir, R1, R3, D1 y D2), configure OSPFv2 de área única en el área 0.

Router 1

```
R1(config)#router ospf 4                                //protocolo ospf 4//  
R1(config-router) #router-id 0.0.4.1                  //id router//  
R1(config-router) #network 10.09.10.0 0.0.0.255 area 0 //notificacion de red//  
R1(config-router) #network 10.09.13.0 0.0.0.255 area 0 //notificacion de red//  
R1(config-router) #default-information originate //propagacion de ruta por defecto//  
R1(config-router) #exit                                //salir//
```

Router 3

```
R3(config)#router ospf 4  
R3(config-router) #router-id 0.0.4.3  
R3(config-router) #network 10.09.11.0 0.0.0.255 area 0 32  
R3(config-router) #network 10.09.13.0 0.0.0.255 area 0  
R3(config-router) #exit
```

Switch D1

```
D1(config)#router ospf 4                                //protocolo ospf 4//  
D1(config-router) #router-id 0.0.4.131                //id router//  
D1(config-router) #network 10.09.100.0 0.0.0.255 area 0 //notificacion de red//  
D1(config-router) #network 10.09.101.0 0.0.0.255 area 0 //notificacion de red//  
D1(config-router) #network 10.09.102.0 0.0.0.255 area 0 //notificacion de red//  
D1(config-router) #network 10.09.10.0 0.0.0.255 area 0 //notificacion de red//  
D1(config-router) #passive-interface default           // desactivar interfaces//  
D1(config-router) #no passive-interface e1/2          // exclusion de interfaz e1/2//  
D1(config-router) #exit                                //salir//
```

Switch D2

```
D2(config)#router ospf 4  
D2(config-router) #router-id 0.0.4.132  
D2(config-router) #network 10.09.100.0 0.0.0.255 area 0  
D2(config-router) #network 10.09.101.0 0.0.0.255 area 0  
D2(config-router) #network 10.09.102.0 0.0.0.255 area 0  
D2(config-router) #network 10.09.11.0 0.0.0.255 area 0  
D2(config-router) #passive-interface default  
D2(config-router) #no passive-interface e1/0  
D2(config-router) #exit
```

Tarea 3.2 En la “Red de la Compañía” (es decir, R1, R3, D1, y D2), configure classic single-area OSPFv3 en area 0.

Router 1

```

PARTE 4: (Escenario 2)

Tabla 4. Configurar la Redundancia del Primer Salto

Task#	Task	Specification	Points
4.1	On D1, create IP SLAs that test the reachability of R1 interface G0/0/1.	<p>Create two IP SLAs.</p> <ul style="list-style-type: none"> • Use SLA number 4 for IPv4. • Use SLA number 6 for IPv6. <p>The IP SLAs will test availability of R1 E1/2 interface every 5 seconds.</p> <p>Schedule the SLA for immediate implementation with no end time.</p> <p>Create an IP SLA object for IP SLA 4 and one for IP SLA 6.</p> <ul style="list-style-type: none"> • Use track number 4 for IP SLA 4. • Use track number 6 for IP SLA 6. <p>The tracked objects should notify D1 if the IP SLA state changes from down to up after 10 seconds, or from up to down after 15 seconds.</p>	2
4.2	On D2, create IP SLAs that test the reachability of R3 interface G0/0/1.	<p>Create two IP SLAs.</p> <ul style="list-style-type: none"> • Use SLA number 4 for IPv4. • Use SLA number 6 for IPv6. <p>The IP SLAs will test availability of R3 E1/0 interface every 5 seconds.</p> <p>Schedule the SLA for immediate implementation with no end time.</p> <p>Create an IP SLA object for IP SLA 4 and one for IP SLA 6.</p> <ul style="list-style-type: none"> • Use track number 4 for IP SLA 4. • Use track number 6 for IP SLA 6. <p>The tracked objects should notify D1 if the IP SLA state changes from down to up after 10 seconds, or from up to down after 15 seconds.</p>	2

Task#	Task	Specification	Points
4.3	On D1, configure HSRPv2.	<p>D1 is the primary router for VLANs 100 and 102; therefore, their priority will also be changed to 150.</p> <p>Configure HSRP version 2.</p> <p>Configure IPv4 HSRP group 104 for VLAN 100:</p> <ul style="list-style-type: none"> • Assign the virtual IP address 10.09.100.254. • Set the group priority to 150. • Enable preemption. • Track object 4 and decrement by 60. <p>Configure IPv4 HSRP group 114 for VLAN 101:</p> <ul style="list-style-type: none"> • Assign the virtual IP address 10.09.101.254. • Enable preemption. • Track object 4 to decrement by 60. <p>Configure IPv4 HSRP group 124 for VLAN 102:</p> <ul style="list-style-type: none"> • Assign the virtual IP address 10.09.102.254. • Set the group priority to 150. • Enable preemption. • Track object 4 to decrement by 60. <p>Configure IPv6 HSRP group 106 for VLAN 100:</p> <ul style="list-style-type: none"> • Assign the virtual IP address using ipv6 autoconfig. • Set the group priority to 150. • Enable preemption. • Track object 6 and decrement by 60. <p>Configure IPv6 HSRP group 116 for VLAN 101:</p> <ul style="list-style-type: none"> • Assign the virtual IP address using ipv6 autoconfig. • Enable preemption. • Track object 6 and decrement by 60. <p>Configure IPv6 HSRP group 126 for VLAN 102:</p> <ul style="list-style-type: none"> • Assign the virtual IP address using ipv6 autoconfig. • Set the group priority to 150. • Enable preemption. • Track object 6 and decrement by 60. 	8

Task#	Task	Specification	Points
	On D2, configure HSRPv2.	<p>D2 is the primary router for VLAN 101; therefore, the priority will also be changed to 150.</p> <p>Configure HSRP version 2.</p> <p>Configure IPv4 HSRP group 104 for VLAN 100:</p> <ul style="list-style-type: none"> • Assign the virtual IP address 10.09.100.254. • Enable preemption. • Track object 4 and decrement by 60. <p>Configure IPv4 HSRP group 114 for VLAN 101:</p> <ul style="list-style-type: none"> • Assign the virtual IP address 10.09.101.254. • Set the group priority to 150. • Enable preemption. • Track object 4 to decrement by 60. <p>Configure IPv4 HSRP group 124 for VLAN 102:</p> <ul style="list-style-type: none"> • Assign the virtual IP address 10.09.102.254. • Enable preemption. • Track object 4 to decrement by 60. <p>Configure IPv6 HSRP group 106 for VLAN 100:</p> <ul style="list-style-type: none"> • Assign the virtual IP address using ipv6 autoconfig. • Enable preemption. • Track object 6 and decrement by 60. <p>Configure IPv6 HSRP group 116 for VLAN 101:</p> <ul style="list-style-type: none"> • Assign the virtual IP address using ipv6 autoconfig. • Set the group priority to 150. • Enable preemption. • Track object 6 and decrement by 60. <p>Configure IPv6 HSRP group 126 for VLAN 102:</p> <ul style="list-style-type: none"> • Assign the virtual IP address using ipv6 autoconfig. • Enable preemption. • Track object 6 and decrement by 60. 	

4.1 En D1, cree IP SLAs que prueben la accesibilidad de la interfaz R1 G0/0/1

Switch D1

```
D1(config)#ip sla 4                                //asignar ip sla 4 para ipv4//  
D1(config-ip-sla) #icmp-echo 10.09.10.1          //asignar ipv4//  
D1(config-ip-sla-echo) #frequency 5                //frecuencia de 5//  
D1(config-ip-sla-echo) #exit                      //salir//  
D1(config) #ip sla 6                                //asignar ip sla 6 para ipv6//  
D1(config-ip-sla) #icmp-echo 2001:db8:100:1010::1    //asignar ipv6//  
D1(config-ip-sla-echo) #frequency 5                //frecuencia de 5//  
D1(config-ip-sla-echo) #exit //salir//  
D1(config) #ip sla schedule 4 life forever start-time now //mantener tiempo e inicio//  
D1(config) #ip sla schedule 6 life forever start-time now //mantener tiempo e inicio//  
D1(config) #track 4 ip sla 4                        //creacion de sla 4//  
D1(config-track) #delay down 10 up 15              //temporizador alto y bajo//  
D1(config-track) #exit                            //salir//  
D1(config) #track 6 ip sla 6                        //creacion de sla 6//  
D1(config-track) #delay down 10 up 15              //temporizador alto y bajo//  
D1(config-track) #exit                            //salir//
```

4.2 En D2, cree IP SLAs que prueben la accesibilidad de la interfaz R3 G0/0/1.

Switch D2

```
D2(config)#ip sla 4  
D2(config-ip-sla) #icmp-echo 10.09.11.1  
D2(config-ip-sla-echo) #frequency 5  
D2(config-ip-sla-echo) #exit  
D2(config) #ip sla 6  
D2(config-ip-sla) #icmp-echo 2001:db8:100:1011::1  
D2(config-ip-sla-echo) #frequency 5  
D2(config-ip-sla-echo) #exit  
D2(config) #ip sla schedule 4 life forever start-time now  
D2(config) #ip sla schedule 6 life forever start-time now  
D2(config) #track 4 ip sla 4  
D2(config-track) #delay down 10 up 15  
D2(config-track) #exit  
D2(config) #track 6 ip sla 6  
D2(config-track) #delay down 10 up 15  
D2(config-track) #exit 38
```

4.3 En D1 configure HSRPv2.

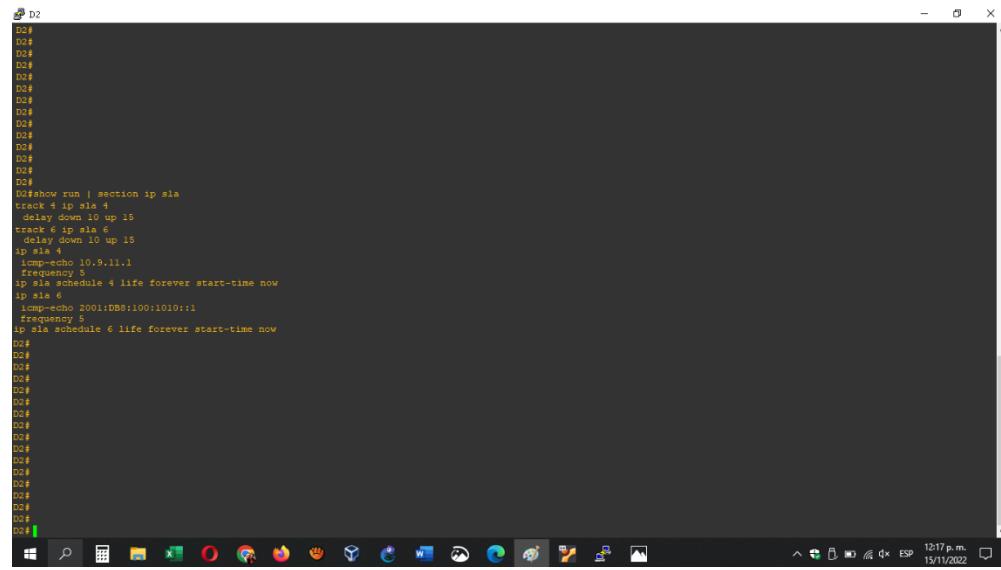

Switch D1

```
D1(config)#interface vlan 100 //vlan a configurar//
D1(config-if) #standby version 2 //asignar HSRPv2//
D1(config-if) #standby 104 ip 10.09.100.254 //asignar de ip virtual//
D1(config-if) #standby 104 priority 150 //asignar prioridad grupo 150//
D1(config-if) #standby 104 preempt //habilitacion de preferencia//
D1(config-if) #standby 104 track 4 decrement 60 //seguir y decrementar 60//
D1(config-if) #standby 106 ipv6 autoconfig //autoconfiguracion para ipv6//
D1(config-if) #standby 106 priority 150 //asignar prioridad grupo 150//
D1(config-if) #standby 106 preempt //asignar preferencia//
D1(config-if) #standby 106 track 6 decrement 60 //seguir y decrementar 60//
D1(config-if) #exit //salir//
D1(config) #interface vlan 101

CONCLUSIONES

Con el desarrollo de esta topología de red se afianzan los conocimientos sobre configuración, direccionamiento, enrutamiento de Routers y Switches, con uno de los principales fabricantes y el respaldo de la marca CISCO, líderes en el mercado, el conocimiento y digitación de los comandos, identificación de interfaces, protocolos como OSPF, BGP, interfaz loopback, direccionamiento IPV4, IPV6, VLAN, establecimientos de canales, árbol de expansión, encapsulamientos 809.1q, VTP.

El poder identificar redes, y establecer en ellas niveles de seguridad que permiten impedir el acceso no autorizado, este tipo de topologías son aplicables a redes administrativas, industriales, bancarias entre muchos otros tipos de aplicación, el manejo de este tipo de administración de redes, nos deja en un nivel avanzado y con las herramientas necesarias para ser parte del mundo laboral.

De acuerdo a pruebas de conexión y verificación de las diferentes topologías y los equipos que se encuentren conectados a la red podremos, realizar diagnósticos, mejoras, direccionar e implementar nuestras propias rutas, que pueden llegar a descongestionar las comunicaciones de los equipos, de acuerdo al tipo de redes que disponga la topología.
