Flow-sensing mechanisms and biomimetic potential of seal whiskers

Xingwen Zheng

university of
 groningen

Zernike Institute PhD thesis series 2022-12

ISBN: 978-94-646-9181-8

The work described in this thesis was performed in Engineering and Technology Institute Groningen, Faculty of Science and Engineering, University of Groningen, Groningen 9747AG, the Netherlands.

Funding: The research featured in this thesis has been supported by the University of Groningen's start-up grant and the European Research Council grant (grant no. ERC-STG-101042370) awarded to Dr. Ajay Kottapalli, the European Research Council grant (no. ERC-CoG-771687) and the Netherlands Organization for Scientific Research grant (no. NWO-vidi-14134) awarded to Prof. Ming Cao.

Cover design: Xingwen Zheng

Cover image: A harbor seal (*Phoca vitulina*) in Zeehondencentrum, Pieterburen, the Netherlands (front) and scanned harbor and grey seal whiskers (back).

Flow-sensing mechanisms and biomimetic potential of seal whiskers

PhD thesis

to obtain the degree of PhD at the
 University of Groningen
 on the authority of the
 Rector Magnificus Prof. C. Wijmenga
 and in accordance with
 the decision by the College of Deans.

This thesis will be defended in public on

Monday 19 December 2022 at 9:00 AM

by

Xingwen Zheng

born on 08 March 1993
 in Fujian, China

Supervisors

Prof. Ming Cao

Dr. Ajay Giri Prakash Kottapalli

Daily supervisor

Dr. Amar M. Kamat

Assessment Committee

Prof. Nicholas M. Patrikalakis

Prof. Marilena Greco

Prof. Petra Rudolf

Dedicated to my family

Xingwen Zheng

CONTENTS

1 Introduction	1
1.1 Research background	2
1.2 Thesis outline	7
References	9
2 Creating underwater vision through wavy whiskers: A review of the flow sensing mechanisms and biomimetic potential	11
2.1 Behavioral experiments on real seals	13
2.1.1 Hydrodynamic trail following	13
2.1.2 Response to controlled stimuli.	16
2.2 Seal whisker as a flow sensor	21
2.2.1 Role of undulating morphology	21
2.2.2 Effect of the angle of attack	28
2.2.3 Sensing mechanisms.	29
2.3 Structure of the seal whisker	34
2.3.1 Morphometrics	34
2.3.2 Material properties	37
2.3.3 Natural frequency measurements	39
2.4 Biomimetics	41
2.4.1 Whisker-inspired flow sensors	42
2.4.2 Engineering applications	45
2.5 Summary	46
References	47

3	Wavy whiskers in wakes: Explaining the trail-tracking capabilities of whisker arrays on seal muzzles	63
3.1	Introduction	65
3.2	Results and discussion	70
3.2.1	Morphometrics using 3D blue light scanning	70
3.2.2	Mathematical formulation of harbor and grey seal whiskers' 3D geometry	73
3.2.3	FSI studies of 3D-scanned harbor and grey seal whisker segments.	77
3.2.4	VIV suppression mechanism.	80
3.2.5	FSI studies of one single full-length seal whisker and seal whiskers in an array	83
3.2.6	VIV and WIV measurements of whiskers using 3D-printed graphene-based sensors	85
3.3	Conclusions.	87
3.4	Experimental section	88
3.4.1	Scans of seal whiskers	88
3.4.2	Cross-sectional morphological parameters measurements	89
3.4.3	FSI study.	90
3.4.4	3d-printed MEMS cantilever sensor	94
3.4.5	VIV and WIV measurements in the recirculating water flume	95
	References	96
4	3D printed graphene piezoresistive MEMS sensors to explain the ultrasensitive wake tracking of wavy seal whiskers	111
4.1	Introduction	113
4.2	Results and discussion	119
4.2.1	MEMS sensor and LDV aided natural frequency measurements of real seal whiskers.	119
4.2.2	Investigation of VIVs at various angles of attacks.	125
4.2.3	Long-distance wake detection	127

4.3	SUMMARY AND FUTURE WORK	132
4.4	Experimental Section	134
4.4.1	Scanned seal whiskers and constructed seal whiskers	134
4.4.2	3D-printed piezoresistive MEMS cantilever sensors	135
4.4.3	The LDV system	136
4.4.4	Finite element simulations of natural frequency	137
4.4.5	VIV and WIV measurements	138
	References	139
5	Have the undulations on the seal whiskers evolved to achieve a design that maximizes their sensitivity in tracking fish?	147
5.1	Introduction	149
5.2	Methods	153
5.2.1	COMSOL Multiphysics [®] -based fluid-structure interaction simulations	153
5.2.2	The 3D-printed MEMS sensor and seal whiskers.	155
5.2.3	The water tank experiments	156
5.3	Results and discussion	157
5.4	Conclusions.	161
	References	162
6	3D Distributions and geometry-frequency maps of wavy whiskers on the seal muzzle	167
6.1	Introduction	169
6.2	Results and discussion	173
6.2.1	The location map defined for seal whiskers	173
6.2.2	The length and thickness maps of seal whiskers	174
6.2.3	The curved structures of seal whiskers	176
6.2.4	The natural frequency maps of seal whiskers	178
6.2.5	Morphology-natural frequency relationship of seal whiskers.	181
6.2.6	The 3D distributions of seal whisker arrays	185

6.3	Conclusions	185
6.4	Methods	188
6.4.1	Length and thickness measurements of seal whiskers	188
6.4.2	Mapping seal whiskers on the Euler spirals	188
6.4.3	Distributing seal whiskers on a constructed seal muzzle	193
