

Erythema gyratum perstans: association with a familial neurologic disease.

Delfino M, Suppa F, Piccirillo A, Bruno G, Monfrecola G.

Dermatologica. 1986;172(5):268-71.

Two members of the same family with erythema gyratum perstans and hypertrophic neuritis are reported. The dermatosis could be an expression of localization of neuritis to nerva vasorum with abnormal neurovascular response of cutaneous small vessels to normal stimuli with active erythema followed by cyanosis.
