

**International Conference on Electrical, Computer,  
Communications and Mechatronics Engineering  
(ICECCME 2022)**

**CONFERENCE PROCEEDINGS**

**16-18 November 2022**

**Male, Maldives**

**©IEEE 2022**

# ICECCME 2022

## TABLE OF CONTENTS

Paper ID	Paper Title	Authors	Page
8	Data-driven Predictive Model of Windows 10's Vulnerabilities	Freeh N. Alenezi, Tahir Mehmood	1
11	Golden Eagle Extreme Learning Machine for Hourly Solar Irradiance Forecasting	Sarunyoo Boriratrith, Rongrit Chatthaworn	6
13	Univariate Oscillation Detection using Kernel Density Estimation	Kurt Pichler, Martin Scherhauf, Christian Kastl, Florian Hammer	11
25	400 kV Power Substation Fire and Explosion Hazard Assessment to Prevent A Power Black-Out	Daniel N. Fita, Teodora Lazar, Florin G. Popescu, Dragos Pasculescu, Cristina Pupaza, Emilia Grigorie	17
35	Advantages and Disadvantages of Common used Fuels for Passenger Cars	Jan Furch, Zdeněk Krobot, Vlastimil Konečný, Jiří Stodola	21
37	Developing a Prototype of A Not in Kind Heat Pump Based on Elastocaloric Effect	Luca Cirillo, Adriana Greco, Claudia Masselli	27
39	STATCOM Allocation Using Firefly Algorithm for Loss Minimization and Voltage Profile Enhancement	Samson Oladayo Ayanlade, Emmanuel Idowu Ogunwole, Abdulrasaq Jimoh, Sunday Olufemi Ezekiel, Dolapo Eniola Owolabi, Abdulsamad Bolakale Jimoh	33
41	SentiMage: A Sentiment-Image-based COVID-19 Health Misinformation Detection using Machine Learning	Kalaimagal Ramakrishnan, Vimala Balakrishnan	39
42	Health Misinformation in the Covid-19 Era – Detecting Misinformation on Bi-lingual Corpora using Lexical Features	Kalaimagal Ramakrishnan, Vimala Balakrishnan	44
43	True Harmonic Identification-Based Monocomponent Signal Selection for The Instantaneous Rotational Speed Estimation Performed by TARSE	Andy Rodríguez Lorenzo, Fidel E. Hernández Montero, Mario L. Ruiz Barrios, Julio César Gómez Mancilla	49
44	Modeling and MPC Based Control of Line Power Flow in Smart Grid	Chakravarthi Kotakonda, Faheem Ul Haq, Abhishek Saini, Pratyasa Bhui, Pratim Kundu	56
45	Diagnostic of Selected Parts of Vehicle and its Internal Combustion Engine	Jiri Stodola, Petr Stodola, Jan Furch	61
46	Spectrum Sensing Based on An Improved Deep Learning Classification for Cognitive Radio	Zeghdoud Sabrina, Tanougast Camel, Teguig Djamel, Mesloub Ammar, Sadoudi Said, Bouteghrine Belqassim	66
47	Predicting Student's Internship Performance using J48 Algorithm	Riah Elcullada Encarnacion, Maria Elisa Linda Taeza Cruz	71
56	Severity Classification of COVID-19 Patients Data using Quantum Machine Learning Approaches	Ubaid Ullah, Danyal Maheshwari, Hanna Helene Gloyna, Begonya Garcia-Zapirain	77
58	Pixel-Changes-Based RGB Channels for a Novel Underwater Image Dehazing Technique	Fayadh Alenezi	83
62	Geo-targeted Emergency Alert Messaging to Direct-to-Home (DTH) subscribers	Saurabh Basu, Sandeep Sharma, Kamlesh Kumar Yadav, Suvam Suvabrata Behera, Anugandula Naveen Kumar, Pankaj Kumar Dalela	89
64	DLCSS: Dynamic Longest Common Subsequences	Daniel Bogdoll, Jonas Rauch, J. Marius Zöllner	95
69	Unsupervised Anomaly Detection Using Bidirectional GRU Autoencoder Neural Network for PLOAM Message Sequence Analysis in GPON	Tomas Horvath, Adrian Tomasov, Petr Munster, Petr Dejdar, Vaclav Ujezsky	100
73	PV/IoT based Smart Traffic Management System	Motaz Amer, Rana Maher	105
78	Review of Axial and Radial Flux PM Machines with Emphasis in High Power Density	Pedro L. Hernandez, Wulf-Toke Franke, Ramkrishan Maheshwari	111
79	Segmentation of Fetal 2D Images with Deep Learning: A Review	Pedro Rodrigues, M. Anees ur Rehman, Getúlio Igrejas Cedri	119
86	Designing and Optimization of Renewable Hybrid Energy System for Rural India - Feasibility Study	Dnyaneshwar Ankushrao Kawadgave, Mahadev G. Unde	127
90	Gravity Compensation Device to Reduce Load in Downward Drilling Work	Yoshimasa Nakano, Shen Tian, Hirokazu Matsui, Ken'ichi Yano, Toshihiko Arima, Shigeru Fukui	133

<b>93</b>	A Perspective Review on Digital Twins for Roads, Bridges, and Civil Infrastructures	Filippo Sanfilippo, Rein T. Thorstensen, Ajit Jha, Zhiyu Jiang, Kjell G. Robbersmyr	139
<b>94</b>	Joint Stochastic Prediction of Vessel Kinematics and Destination based on a Maritime Traffic Graph	Trym Tengesdal, Leonardo M. Millefiori, Paolo Braca, Edmund Brekke	145
<b>95</b>	Multi-Layer Segmentation Solution to Filter The Noise of Optical Flow Vectors to Assist Robots in Object Recognition Inside Buildings	Ngoc Anh Mai	153
<b>98</b>	Optimal Fractional Order PID based on a Modified Ziegler-Nichols method	Erwin T. Hegedus, Isabela R. Birs, Mihaela Ghita, Clara M. Ionescu, Robain De Keyser, Cristina I. Muresan, Maria Ghita, Ioan Nascu	159
<b>100</b>	Correlative Spectral Mapping of Surface Electromyography for the Detection of Temporomandibular Joint Disorder	Roopa Kakkeri, Bormane D.S, R. B. Kakkeri	165
<b>102</b>	Green Hydrogen Microgrid: a smart Home Energy Management System devoted to a Renewable energy system based on Hydrogen Energy Storage	Sami Ben Slama, Bassam Zafar, Emad Shafie	171
<b>104</b>	ESSA Scheduling Algorithm for Optimizing Budget-Constrained Workflows	C K Sripavithra, V B Kirubanand	178
<b>106</b>	Optimizing Charging Station Placement in Energy-Harvesting Wireless Sensor Networks	Ammar Gharaibeh, Osamah Badarneh, Mustafa Shawaqfeh	186
<b>108</b>	Use of Satellites for Observation of Objects in Agriculture	Dimitar Karastoyanov, Krasimir Terziev, Elena Blagoeva	191
<b>109</b>	Meta-Heuristic Algorithms-Based Feature Selection for Breast Cancer Diagnosis: A Systematic Review	Nour Ayman Abujabal, Ali Bou Nassif	196
<b>114</b>	Experiments on Anomaly Detection in Autonomous Driving by Forward-Backward Style Transfers	Daniel Bogdoll, Meng Zhang, Maximilian Nitsche, J.Marius Zöllner	202
<b>115</b>	Design and Implementation of Different Machine Learning Algorithms for Credit Card Fraud Detection	Aditi Singh, Anoushka Singh, Anshul Aggarwal, Anamika Chauhan	209
<b>117</b>	AI Based Actors Identification with High Intra-Class Variations	Costin Bernhart, Martin Kampel	215
<b>120</b>	Innovative Technologies for Efficient Power Supply Using Solar Systems and Phase-Change Materials	Dimitar Karastoyanov, Rosen Petrov, Milena Haralampieva	222
<b>121</b>	5G on the Cheap: Configurable Low-Cost Cellular Industrial Communication	Andreas Ingo Grohmann, Mauri Seidel, Christopher Lehmann, Thomas Höschele, Martin Reisslein, Frank H.P. Fitzek	228
<b>125</b>	A Semi-Automated Multi-Sensor Data Labeling Process for Deep Learning in Automotive Radar Environment	Daniel Scharf, Seifeddine Saadani, Mathias Schneider, Alfred Höß	234
<b>127</b>	Smartphone-based Vehicle Telematics For Naturalistic Driving Studies	Faris Tarlochan, Susan Dun, Semira Omer Mohammed, Mohamed Kharbeche, Abdrabo Soliman, Batool Gaben	242
<b>128</b>	Stacking Machine Learning Models using Factor Analysis to Predict the Output Laser Power	Snezhana Gocheva-Ilieva, Hristina Kulina, Antoaneta Yordanova	247
<b>130</b>	Robust Simulation of Advanced Water Treatment Employing Hybrid Modeling Approach	Antonija Tomic, Miroslav Jerkovic, Marin Kovacic, Erna Begovic Kovac, Hrvoje Kušić, Igor Peternel, Panagiotis Karamanis, Bakhtiyor Rasulev, Ana Loncaric Bozic	253
<b>131</b>	Compression and Privacy of Hyperspectral Images	Bruno Carpentieri	258
<b>132</b>	Design of an Innovative Zero-Emissions Braking System for Vehicles	Giovanni Imberti, Henrique De Carvalho Pinheiro, Massimiliana Carello	263
<b>133</b>	Brain Stimulation by noninvasive Transcranial Pulse Stimulation (TPS) improves cognitive Deficits and Mood in Alzheimer's Disease	Ulrich Sprick, Martin Köhne	269
<b>136</b>	Smooth Motion Planning of an Omnidirectional Mobile Robot in Dynamic Environments	Ana Šelek, Marija Seder	275
<b>139</b>	On Using Fuzzy Using C-Means Clustering in The Fuzzy Signature Concept Classification of Liver Lesions	Melinda Kovács, Ferenc Lilik, Szilvia Nagy, László T. Kóczy	281

<b>142</b>	Application of an Automotive Assurance Case Approach to Autonomous Marine Vessel Security	Luis-Pedro Cobos, Tianlei Miao, Kacper Sowka, Garikayi Madzudzo, Alastair R. Ruddle, Ehab el Amam	287
<b>144</b>	Embedded Measurement System in Mechatronic Capacitive Balance Based on Ceramic Coil Springs	A. Bourennane, C. Tanougast, C. Diou, M. Ben-Akka	296
<b>145</b>	Using Bluetooth Mesh to Enable Coordinate Charge of Domestic Charging Station for Electric Vehicles: An Experimental Analysis	Stefano Rinaldi, Alessandra Flammini, Marco Pasetti, Alessandro Depari, Elia Mondini, Emiliano Sisinni, Paolo Ferrari	301
<b>146</b>	Ensemble Learning for Predicting the Tensile Strength of Alloy Steels from Chemical Composition and Processing Parameters	Hristina Kulina, Mariana Koleva-Petrova, Snezhana Gocheva-Ilieva	308
<b>147</b>	Overview of Satellite Communications and its Applications in Telemedicine for the underserved in Nigeria: A case study	Lasisi Salami Lawal, Abiodun Musa Aibinu, Chatwin R. Chris, Ubong Udoyen, Theddeus Iheanacho, Abdulrahman Jaafar, Isa Ali Ibrahim	314
<b>148</b>	Self Supervised Traffic Scene Clustering using Graph Representations	Maximilian Zipfl, Moritz Jarosch, J. Marius Zöllner	324
<b>151</b>	A Simulation Study on the Effect of Lubricant Ageing on Ball Screws Behaviour	Antonio Carlo Bertolino, Andrea De Martin, Federico Fasiello, Stefano Mauro, Massimo Sorli	331
<b>152</b>	Experimental Proof of the Energy Advantage of In-Network Intelligence	Huanzhuo Wu, Máté Tömösközi, Riccardo Bassoli, Jiajing Zhang, Frank H. P. Fitzek	338
<b>153</b>	A 400 MHz 19 dBm Inverse Class-E Power Amplifier for Energy-Efficient Aggressive Duty-Cycling	Maximilian Gottfried Becker, Niko Joram, Frank Ellinger	344
<b>154</b>	A New Concept of Transmitting Antenna on Bi-Static Radar for Space Debris Monitoring	Germano Bianchi, Marco Felice Montaruli, Mauro Roma, Sergio Mariotti, Pierluigi Di Lizia, Andrea Maccaferri, Luca Facchini, Claudio Bortolotti, Rebecca Minghetti	349
<b>155</b>	Design of An Easy Upgradable Cost Efficient Autonomous Assistive Robot ROSWITHA	Sudeep Sharan, Peter Nauth, Julian Umansky, Robert Michalik, Juan José Domínguez-Jiménez	354
<b>156</b>	Signal Dimension Estimation in BSS Models with Serial Dependence	Klaus Nordhausen, Sara Taskinen, Joni Virta,	360
<b>157</b>	Lightweight Social Organization and Coordination System for Non-Profit Associations	Robert Manthey, Richard Vogel, Falk Schmidberger, Matthias Baumgart, Christian Roschke, Marc Ritter, Matthias Vodel	367
<b>158</b>	Multimedia Test Set System - MuTeSys	Robert Manthey, Steve Conrad, Richard Vogel, Falk Schmidberger, Matthias Baumgart, Christian Roschke, Marc Ritter, Matthias Vodel	371
<b>159</b>	Enabling Connectivity for Automated Mobility: A Novel MQTT-based Interface Evaluated in a 5G Case Study on Edge-Cloud Lidar Object Detection	Lennart Reiher, Bastian Lampe, Timo Woopen, Raphael van Kempen, Till Beemelmans, Lutz Eckstein	376
<b>160</b>	Electromagnetic Field Propagation Through a Clay Composite with Antimony Tin Oxide (ATO) Additive	Ivan Vrdoljak, Slavko Rupčić, Ivana Miličević, Vanja Mandrić	385
<b>161</b>	Swing up and Balance of An Inverted Pendulum using Reinforced Learning Approach Coupled with PID Controller	Amit Kumar Pal, Tamara Nestorovic	390
<b>162</b>	Heat Load Forecasting for District Heating Systems using Neural Networks	Christian Thommessen, Stephan Soltysik, Jürgen Roes	396
<b>164</b>	Tabu Search for Solving Multiple-Vehicle Bike Sharing System Routing Problem with Real Port Distribution	Honami Tsushima, Nina Sviridova, Tohru Ikeguchi,	402
<b>165</b>	Towards a Scalable Named Data Border Gateway Protocol	Manar Aldaoud, Dawood Al-Abri, Medhat Awadalla, Firdous Kausar	408
<b>171</b>	Wall Detection Algorithm for a Building Activity with a Robotic Arm	Benjamin Wauthion, Michele Ambrosino, Emanuele Garone, Michel Kinnaert	413
<b>174</b>	Realtime Safety Analysis System using Deep Learning for Fire Related Activities in Construction Sites	Uttam Kumar Dwivedi, Chayut Wiwatcharakoses, Yoshihide Sekimoto	420
<b>175</b>	An Agile Approach to Integrating Community Projects in HEI: a Qualitative Study	N. Madhav, T..J.W Chinamasa, M. Joseph	425

<b>176</b>	Evaluation of Ultrasonic Berth Sensors in The Port Environment: Case Study Port of Cristo	Livia Maglić, Ana Grbčić, Lovro Maglić, Antonio Blažina	430
<b>177</b>	Fully Decentralized Post-Quantum Resistant Authentication, Encryption Protocol with Full Data Interoperability Universally Deployable in any Network Environment	Christopher Patrick Autry, Wayne Henderson, Mykhailo Magal, Andrew William Roscoe	435
<b>178</b>	Sentiment Analysis of Bitcoin data by tweets through Naive Bayes	E.Padmalaatha, Sailekya Sheral, K.Dhanush S.Samveet, B. Ruchi Datta, K. Tarun Krishna	441
<b>179</b>	Real time Chest X-ray Pathology detection and localization framework with Convolutional Neural Networks and Ensembling	Akarsh Rastogi, Ankit Sati, Abhilash NVS, Gehna Ahuja, Tarun Srinivasan, Chirag Jain	445
<b>181</b>	Investigation of Power Generation using Thermoelectric Generators for Smart Window Applications	Ndakidzilo Nthoiwa, Einax Mario	451
<b>192</b>	A Review of Ni-based Superalloy Produced by the Additive Manufacturing Technology Powder Bed Fusion: Technologies, Materials, Applications, Challenges and Future Trends	Marek Pagáč, Jana Petrů, Robert Čep, Jiří Hajnyš, Josef Hlavsa, Pavel Krpec	457
<b>193</b>	Appraisal of a Random Bit Generator utilizing Smartphone Sensors as Entropy Source	Stefan Kutschera, Wilhelm Zugaj, Wolfgang Slany	462
<b>194</b>	Emotional States Discovery under Multiple Disguising Effects for Speaker Identification	Noor Ahmad Al Hindawi, Ismail Shahin, Ali Bou Nassif	468
<b>195</b>	A Mechatronics System Design to Current and Speed Control of DC Motors: an Experimental Setup	Juan L. Mata-Machuca, Brandon Areyzaga-Mendizaba, Misha J. Del Castillo-Aguirre	474
<b>198</b>	Trends and Applications of Model-Driven Approach for Leak Detection in Water Supply Networks	Shabangu T.H, Hamam Y, Jordaan J.A, and Adedeji, K.B.	479
<b>202</b>	Coffee Bean Inspection Machine with Deep Learning Classification	Terisara Micaraseth, Khemwutta Pornpipatsakul, Ratchatin Chancharoen, Gridsada Phanomchoeng	486
<b>203</b>	Detection of Human-Performance-Indicators with an intelligent seat post	Sebastian Rettlinger, Henrik Abel, Sophie Pickert, Bastian Knaus, Giang T. Nguyen, Frank H.P. Fitzek	491
<b>204</b>	Using Autoencoders to Reduce Dimensionality of DICOM Metadata	Mateja Napravnik, Franko Hrzic, Robert Bazdaric, Sebastian Tschauner, Damir Miletić, Mihaela Mamula, Ivan Stajduhar	497
<b>205</b>	Estimation of Missing Parameters for DICOM to 8-bit X-ray Image Export	Franko Hrzic, Mateja Napravnik, Robert Bazdaric, Ivan Stajduhar, Miheala Mamula, Damir Miletic, Sebastian Tschauner,	503
<b>206</b>	Thompson Sampling for Pursuit-Evasion Problems	Zhen Li, Eric Laber, Nick Meyer	509
<b>211</b>	Learning Implicit Depth Information for Monocular 3D Object Detection	Michael Weber, Rupert Polley, J. Marius Zöllner	517
<b>212</b>	Towards ON/OFF smart and low-cost optoelectronic biosensor systems	Nunzio Cennamo, Francesco Arcadio, Luigi Zeni, Girolamo D'Agostino, Chiara Perri, Giovanni Porto, Marco Rizzetti	524
<b>213</b>	The Digital Material Formatting App Prototype 3.0	Kristine Mackare, Anita Jansone, Martins Sneiders	529
<b>214</b>	Genetic Algorithm-based Variable Selection Approach for High-Growth Firm Prediction	Anna Kusetogullari, Huseyin Kusetogullari, Amir Yavariabdi, Martin Andersson, Johan Eklund	535
<b>218</b>	Edge Computing in Micro Data Centers for Firefighting in Residential Areas of Future Smart Cities	Venkateswarlu Gudepu, Bhavani Pappu, Tejasri Javvadi, Riccardo Bassoli, Frank H.P. Fitzek, Luca Valcarenghi, D V N Devi, Koteswararao Kondepu	541
<b>219</b>	Analysis, Design and Implementation of a PLL Synthesizer for a C-Band to L-Band Downconverter for a CubeSat Receiver System	Lilie Nalitye Leopold, Nganyang Paul Bayendang, Vipin Balyan	547
<b>221</b>	Penalty-based Numerical Representation of Rigid Body Interactions with Applications to Simulation of Robotic Grasping	Michael Zechmair, Yannick Morel	553

<b>223</b>	The Use of Computer Vision and Data Mining in Obtaining Subconscious User Experience	Jakub Berčík, Anna Mravcová, Jana Gálová, Simona Jadroňová	561
<b>224</b>	Analysis of mmWave 77 GHz Inter-vehicular Radar System	Guillaume Ndjamba Nyami, Jean-François Frigon	566
<b>225</b>	Temporal Attention for Monocular Depth Estimation in Aerial Scenarios	Vlad-Cristian Miclea, Sergiu Nedevschi	571
<b>226</b>	TecSEG Project – Research, Development and Innovation in Security Assessment Methodologies to Brazil	Alana Almeida, João Pedro de Lima Cassiano, Sérgio Ribeiro	577
<b>229</b>	Challenges of Real-time Processing with Embedded Vision for IoT Applications	Suk Jin Lee	583
<b>231</b>	Constriction Factor Based Particle Swarm Optimization for Solving Reactive Power Optimization Problem	Shaima Hamdan Shri, Ayad Fadhil Mijbas, Mohammed Jasim Mohammed	589
<b>235</b>	Determining The Minimal Battery Storage System Subsidy: The Internal Rate of Return-Based Optimisation Approach	Jura Jurčević; Davor Zoričić; Denis Dolinar; Ivan Pavić; Nikolina Čović	593
<b>237</b>	An Intelligent Solar-Driven Multi-Generation Energy Production/Storage System	Amirmohammad Behzadi, Trond Thorgeir Harsem, Sasan Sadrizadeh	600
<b>239</b>	Securing Nationwide Elections Through Blockchain Ledger, Utilising Encryption Hardware	Bogomil Alexandrov, Eugenia Kovatcheva	604
<b>241</b>	A Large Scale Dataset For Fire Detection and Segmentation in Indoor Spaces	Petar Maric, Matej Arlovic, Josip Balen, Krešimir Vdovjak, Davor Damjanovic	611
<b>251</b>	Two Nodes for Two-Dimensional Positioning System	Abbas Albaidhani, Ammar Fahem, Rashidah Arsat	619
<b>257</b>	GRU-based Power Consumption Prediction for Energy Management in Smart Building	Hwkyeong Park, Jongpil Jeong, Donghyun Jung, Chaewon Kwak	625
<b>261</b>	A Smart Automatic Agent Operating System Using Screen Analysis And Remote Control	Zi-Yi Lim, Hsien-Chou Liao	630
<b>265</b>	Multi-Objects Robotic Grasping Optimization Employing a 2D Camera	Loris Roveda, Gloria Farinella, Marco Maccarini, Filippo Pura, Nicola Castaman, Blerina Spahiu, Asad Ali Shahid, Mattia Marconi, Oscar Ferrato, Francesco Braghin, Dario Piga	636
<b>272</b>	Development of Transformerless Switching Mode Power Supply System for PMU Devices	Masum Reza, Hafiz Abdur Rahman	642
<b>289</b>	Connectivity Effectiveness of Autonomous and Connected Vehicles	Mahmoud Zaki Iskandarani	649
<b>290</b>	Towards Estimating Rainfall Using Cellular Phone Signal	Chun Yin Low, Mahmud Iwan Solihin, Yanto, Chun Kit Ang, Wei Hong Lim, Gasim Hayder	654
<b>291</b>	Tiled-DASH VR Video Streaming: Design and Implementation	Fenghe Hu, Hui Zhou, Yansha Deng, Arumugam Nallanathan, Hamid Aghvami	660
<b>298</b>	Design of A Heating System for A Solar Food Dryer, Powered by Term Solar and Photovoltaic Energy, for A Rural Production Unit	Ingram Aguilar Luis, Carlos Alvarez Macias, María Luisa Lopez Segura, Rodolfo Enrique Renteria Ramirez	665
<b>300</b>	Development and Deployment of a Hybrid Controller for a Dual-Axis Solar Tracker System	Yatharth Ahuja, Ghanvir Singh, Sushrut M. Singh, Suraj Bhat, Subir Kumar Saha	670
<b>303</b>	Improved Performance for the DC-AC Converters Control System Based on Robust Controller and Reinforcement Learning Agent	Marcel Nicola, Claudiu-Ionel Nicola	676
<b>307</b>	Big Data for Real-Time Processing on Streaming Data: State-of-the-art and Future Challenges	Sara Ashraf, Yasmine M. Afify, Rasha Ismail	682
<b>308</b>	Joint Impact of Fog Conditions and Antenna Misalignment on Outage and Bit Error Rate in Terahertz Communications	Osamah S. Badarneh	690
<b>310</b>	Selecting the Operating Frequency of Magnetic Components for DC-DC Converter	Abdulrhman Alshaabani, Bingsen Wang	696
<b>311</b>	Challenges of Shopping Cart Content Categorization with LSTM Neural Networks	Zoltán Balogh	702

<b>312</b>	Satellite Image Classification using HOG and DAISY Feature Descriptors	Themba Ngobeni, Ritesh Ajoodha	706
<b>313</b>	Predicting Students At-Risk Using Deep Learning Neural Network: a Comparison of Performance of Different Models	Tshepang Motaung, Kershree Padayachee, Ritesh Ajoodha	712
<b>314</b>	Device Scheduling for Wireless Federated Learning with Latency and Representativity	Zhixiong Chen, Wenqiang Yi, Yansha Deng, Arumugam Nallanathan	718
<b>315</b>	Optimal Cooperative Control of Mobile Robots Based on Pontryagin's Minimum Principle	José Varela-Aldás	724
<b>318</b>	Communication Patterns for Evaluating Vehicular E/E Architectures	Elena Lisova, Ruben Broux, Joachim Denil, Alessio Bucaioni, Saad Mubeen	730
<b>320</b>	Mixed Signal Simulation Marathon for Education and Employment	Sumanto Kar, Rahul Paknikar, Digvijay Singh, Kannan M. Moudgalya, Steve Hoover, Nalinkumar S., Charaan S., R.V. Rohinth Ram, Madhuri Hemant Kadam, Kunal Ghosh	738
<b>323</b>	Fingerprint Authentication in Smart Home Environment Based on Embedded System	Apri Siswanto, Akmar Efendi, Evizal Abdul Kadir	744
<b>325</b>	Real-time Optical Sensing and Analysis for Understanding Extreme Metal Production Processes	Ahmed Nabil Belbachir, Katarina Grujic, Harry Salvesen	750
<b>326</b>	Blending Ultra Spectral Images of Multi-Source Remote Sensors	Vishal Siddartha Chilkuri, D Bharathi, R Karthi	754
<b>327</b>	Development and Control of a Lower Limb Exoskeleton Robot	Anan Suebsomran, Nattapon Manoch, Peerapat Kwanthong	759
<b>329</b>	Determination of Operating Parameters of Hybrid System for Wave Energy Utilization	Rositsa Velichkova, Detelin Markov, Iskra Simova, Martin Pushkarov, Radostina Angelova, Ivan Denev,	765
<b>330</b>	Odyssey: A Social Network Mobile Application using Hybrid Recommender System	Reham Alabduljabbar, Nourah ALFulaij, Shatha Aldosari, Yara Alrubaiya	770
<b>337</b>	Optimized Artificial Neural Network-Based Control Strategy for Boost Converters	Reza Panahidoost, Hamid Mirshekali, Rahman Dashti, Reza Samsami, Mohammad Hossein Rezaei, Hamid Reza Shaker	776
<b>338</b>	Machine Learning-Based Control Framework For Boost Converters Applying Particle Swarm Optimization	Mohammad Hossein Rezaei, Hamid Mirshekali, Rahman Dashti, Reza Samsami, Reza Panahidoost, Hamid Reza Shaker	781
<b>343</b>	Exploration of the Vienna City Library Poster Collection using Computer Vision Approaches	Florian Kleber, Adam Novozamsky, Robert Sablatnig, Michael Dittenbach	786
<b>345</b>	Towards Sustainable Integration of Wind	Jan Emblemsvåg	792
<b>346</b>	Digital Narratives and Storytelling for Sharing Experiences: Social Prescribing Measures for Social Workers and Immigrants	Hiroko Oe, Yasuyuki Yamaoka, Natusko Minamino	800
<b>348</b>	Analysis of The Power System Stability upon Integration of PV System Into The National Grid of The Island of Mauritius	Dhirajsing Rughoo, Bhamini S Bhujun, Kelvinah Ragoopathe, Raj Kumar Dreepaul	806
<b>350</b>	Measurement and Analysis of MPT Multipath Throughput in Wire Channels	Naseer A. Jabbar, Gabor Lencse	811
<b>352</b>	Construction of Sichuan Cuisine Knowledge Graph: Methodology, Annotation Specification and Corpus	Gaorong Yan	816
<b>353</b>	5G and IoT: How Telecom Operators can Boost Innovation in Collaboration with HW labs	Per J. Nesse, Marlen Hamsund, Eirin Krogstad	820
<b>356</b>	Modelling of Occupancy and Photovoltaic Generation at The Residential Charging Station	Matej Tkac, Martina Kajanova, Peter Bracinik	826
<b>357</b>	IURA: An Inexpensive Underwater Robotic Arm for Kalypso ROV	Marios Vasileiou, Nikolaos Manos, Ergina Kavallieratou	832

<b>359</b>	Technological Solution for Remote Workplace Communication to Improve Employee Motivation and Satisfaction	Sarma Cakula, Madara Pratt	838
<b>361</b>	Decision Support for GSM Co-location using Machine Learning	Kennedy Amadasun, James Agajo	844
<b>364</b>	Nice Cross-gramian, the Generalized Symmetry and Determination of Controller Structure for Multivariable Switched Systems	Maryamsadat Tahavori, Hamid Reza Shaker, Rahman Dashti	849
<b>365</b>	Memristor based Reservoir Network for Chaotic Time Series Prediction	Md Razuan Hossain, Partha Sarathi Paul, Maisha Sadia, Anurag Dhungel, Joseph S. Najem, Md Sakib Hasan	855
<b>366</b>	Deep-Wrist: Reliable User Verification using Deep Representation of WristVein Patterns	Raghavendra Ramachandra	861
<b>367</b>	Blockchain-based Pharmaceutical Drug Supply Chain Management System	Kaushal Shah, Shivrajsinh Rana, Neel Solanki, Vomini Desai, Dhyani Prajapati, Urvashi Vasita	868
<b>368</b>	Application of Image Processing and Machine Learning Technologies for Home Care Bed	Artjoms Suponenkovs, Matiss Lacis, Zigurds Markovics, Mihails Kovalovs, Ardis Platkajis, Andrejs Kalnins	874
<b>369</b>	Em-RIPE: Runtime Intrusion Prevention Evaluator for ARM Microcontroller Systems	Gianluca Roascio, Gabriele Serra, Vahid Eftekhari Moghadam	881
<b>372</b>	Review of Different Optimization Techniques for Charging and Market Participation of Electric Vehicles	Mirna Gržanić, Tomislav Capuder, Hrvoje Pandzic, Alen Hrga	887
<b>373</b>	Design of a Gamified Training System for Human-Robot Cooperation	Gizem Ates, Erik Kyrkjebo	894
<b>374</b>	Super Capacitor and WiFi Speed Optimization for RF Energy Harvesting	Florian Grante, Ghalid Abib, Muriel Muller, Nel Samama	901
<b>375</b>	Identification of Optimal Training for Prediction of Glucose Levels in Type-1-Diabetes Using Edge Computing	Federico D'Antoni, Lorenzo Petrosino, Andrea Velieri, Daniele Sasso, Onorato d'Angelis, Tamara Boscarino, Luca Vollero, Mario Merone, Vincenzo Piemonte	907
<b>376</b>	Pitch Length Measurement of Stents using Dynamically Cropped Images	Benedikt Haas, Lukas Erlinghagen, Eric Sax	912
<b>378</b>	Wideband Low-Frequency Piezoelectric Energy Harvester with Two Concentrated Proof Masses	Muath A.Bani-Hani, Wael A. Altabey, Mohamed Abdelnaeem, Mohamed Hassan, Sallam A. Kouritem	918
<b>386</b>	Improved Prediction of MGMT Methylation Status in Glioblastoma using a Deep Attention Network	Azadeh Iranmehr, Sreedevi Gutta, Ahmad Hadaegh	924
<b>388</b>	Road Network Variation Based on HD Map Analysis for the Simulative Safety Assurance of Automated Vehicles	Daniel Becker, Christian Geller, Lutz Eckstein	930
<b>389</b>	Estimation of Volume and Weight of Apple by Using 2D Contactless Computer Vision Measuring Method	Afiq Ikhwan Mohd Fauzi, Mohd Zamri bin Ibrahim, Muhammad Salihin bin Saealal	936
<b>391</b>	Autoencoder-based Node Embedding Regeneration and Prediction in Dynamic Graphs	Mohamed Darghouthi, Hakim Ghazzai, Lokman Sboui, Yehia Massoud	942
<b>392</b>	Integrating Cognitive Radio MIMO UAVs in Cellular Networks for 5G and Beyond	Lokman Sboui, Hakim Ghazzai, Yehia Massoud	947
<b>393</b>	Efficient Simulation of Complex Capillary Effects in Advanced Manufacturing Processes using the Finite Volume Method	Patrick Zimbrod, Johannes Schilp	953
<b>394</b>	Development of Thermal Conductive Paste for Enhancing The Heat Transfer Rate in Electrical and Electronic Devices	Krushna Gouda, Sumit Bhowmik	959
<b>395</b>	Algebraic Approach in Molecular Modeling	Oleksandr Letychevskyi, Volodymyr Peschanenko, Vladislav Volkov, Yuliia Tarasich	964
<b>399</b>	Predictive Modeling of Thermo-Temporal Characteristics in Wireless Power Transfer - A Statistical Study	Myrel Tiemann, Sahar Qaadani, Marcel Stein, Benedikt Schmülling	971
<b>400</b>	Finite Element based Compression and Volumetric Load Analysis for Grasped Objects	Ludwig Vogt, Johannes Schilp	977
<b>412</b>	Deceptive Detection based on spectrogram images using Deep learning	Marwa Al-tahri, Nourah Al-tamimi, Shahad Al-harbi, Amina Abdallah, Haya Alaskar, Zohra Sbai	983

<b>414</b>	Neural Networks and Network Protocols to Predict Network Behavior	Haydar Teymourlouei, Vareva E. Harris	987

**Abstract** — The number of patients to be treated in healthcare facilities is increasing over time due to the growing awareness and importance of formal healthcare. Most healthcare centers lacked modern automation systems, such as continuous patient monitoring, which of schedule the doctor or nurse's visits with the patient. This research is designed to implement a new method of patient monitoring system in a treatment room, using wearable sensors enabled by the Internet of Things (IoT) technology and patient data analysis in cloud computing. The proposed system consists of several sensors to retrieve patient information, such as body temperature, heart rate, blood pressure, Electrocardiogram (ECG), and motion sensor. Those parameters are used to analyze patient disease and healthcare during treatment with real-time monitoring to ensure medical professionals obtain the latest update on patient health. The system is designed in an embedded module that is applicable for mobile phones and connected through a Wireless Fidelity (Wi-Fi) system in healthcare facilities. All the patient data retrieved by IoT sensors is delivered to cloud computing to store the data and then analyzed using Long Short-Term Memory (LSTM) Algorithm to examine data related to the patient health and illness. Results show the performance of the IoT sensing system working well and are able to detect and send the data in real-time to healthcare centers globally through a mobile device. Based on real case scenario testing performance, the system accuracy ability to send data is more than 95% while any abnormality is readily detected. Overall, the system has enormous potential for further development and widespread use in the healthcare industry for efficient operations.

**Keywords**—Patient Monitoring, Wearable Sensor, IoT, Cloud Computing

## I. INTRODUCTION

Progress within the medical industry has significantly increased as seen in many healthcare facilities and hospital structures over time. This is coupled with the raise of people awareness of the importance of formal medical treatment at healthcare facilities or hospitals especially in developing countries. Previously, the conventional method of medical treatment was implemented by consuming traditional medicine or staying at home for recovery due to the economic limitation of professional healthcare in some suburban and rural regions. Most healthcare facilities operated in semi digitalize systems; for example, the patient data record and

appointments which were implemented via computerizing. However, other standard operations would be handled manually, such as obtaining patient information and data updates within person visits by medical staff or nurses. This is combined with the limitation of the number of medical staff and the lack of convenient time screening for both parties. In some cases, such as the Corona Virus Disease 2019 (COVID-19) pandemic, the conditions in healthcare facilities can be worsened due to the increasing number of patients. In this case, patients' visits were restricted to once a day or once in two days, or were unable to visit because of infected COVID-19 disease [1].

IoT is a state-of-the-art technology applied to many applications such as transportation, environmental, manufacturing, automation system, etc. IoT technology can be used as well for remote monitoring in the medical industry, specifically healthcare facilities. The IoT sensing system has the potential in improving medical infrastructure and quality of patient medical care. It made it possible by the use of wearable sensors to continuous monitoring of patient health. Furthermore, wireless connectivity as required in medical devices makes IoT systems strongly applicable for future development for healthcare device connectivity and data acquisition. Cloud computing is a technology integrated with the computerized system through the cloud to conduct analysis, storage, networking, and intelligent support.

The use of cloud computing for patient data analysis reinforces its' flexibility since data stored in the cloud becomes easily accessible from anywhere at any time. Continuous patient monitoring with multiple sensors to collect and analyze the patient information for all the patients in real-time requires a flexible and high-performance systems, and hence, cloud computing is highly suitable for this purpose. This research proposed a new technique of patient data collection through multiple wearable IoT sensors attached to the patient with data filtering and classification. The method purports to achieve faster response time and minimize memory usage during analysis with data classification at the front-end process instead of the backend as commonly applied.

## II. LITERATURE REVIEW

Extensive research in patient health monitoring has been explored as discussed by [2-7]. The typical use of wearable sensors to monitor patients' health such as body temperature and ECG, are devices connected to the internet or computer systems through wireless or cellular data network. IoT-based technology for assisting patients monitoring as discussed in [8-12], involves the use of IoT system for patient data collecting in the healthcare center, with automatic data acquisition from sensors at a patient forwarded to the server. In addition, the use of IoT wireless polysomnography intelligent system for patient sleep monitoring in [13, 14] can continuously analyze and diagnose the health of patients during rest time. Integration and implementation of fog computing to IoT for patient monitoring is another method discussed in [15-19]. They discussed the use of fog computing to analyze patient data collected by IoT sensors. Several sensors have been applied according to the healthcare condition, specifically, in the intensive care unit (ICU) critical type of sensor has been used.

Application and implementation of machine learning for patient data analysis has been discussed in [20-22]. The main purpose to use machine learning and deep learning was to detect abnormal data retrieved by sensors and provide an early warning to the medical staff. Data encryption and classification is critical in the data server for the security and privacy of patient data. Big data techniques have been integrated into the IoT sensor system to collect patient data in healthcare for further analysis as elaborated in [23, 24]. The high volume of collected patient data has the potential to support and make a decision about the patient's illness and medical treatment. A smart disease classification based on patient data is discussed in [1]. An automatic evaluation of the patient database on body sensing and integration to a tri-axial accelerometer, a tri-axial gyroscope, and a tri-axial magnetometer. Energy efficiency and power saving for patient sensors needs to be applied in order to achieve a long-lasting patient sensing system as discussed in [25, 26]. The method to obtain energy efficiency in medical operations can be managed by conserving power of the device with sleep mode while being unused. A continuous patient monitoring with the centric agent for detecting patient disease is covered in [27-29]. End-to-end architecture from the sensing system to the database and data analysis is completely designed for patient treatment in a healthcare center.

The use of Virtual Reality (VR) for post-treatment and patient rehabilitation applied in healthcare centers is discussed in [30]. VR has the potential and ability to speed patients' recoveries and provide an effective assessment. Nowadays, there are rehabilitation treatments that use VR technology and accessible using mobile devices that patients can easily follow. Patient localization and movement monitoring through motion sensor is one technique to monitor patient health. During the COVID-19 pandemic, one of the symptoms is a cough, which can become one potential and highly suspicious variable of COVID-19 as elaborated in [31-33], in addition to other symptoms. Comprehensive machine learning techniques for patient health analysis is implemented and discussed in [34]. The machine learning

techniques was mainly used for medical treatment and to discover the trend, and prediction for future diseases. Followed by a normal basic algorithm is used for patient data with less accurate results for the prediction and advanced algorithm required for this condition.

## III. IOT SYSTEM FOR PATIENT MONITORING

Continuous monitoring of the patient during treatment in the healthcare center requires to obtain real-time data and the latest update on the status of the patient. Currently, the most common method to monitor patient health is face to face in person visits with medical staff consisting of an interview to gather information which includes any concerns. Several methods to monitor patient status and obtain information consist of for example, the conventional method of scheduled patient visits or an automation system of attaching sensors to the patient body. The increasing number of patients impacted by the time and scarcity of medical professionals and doctors becomes an issue which results in delayed response time and patient information. Therefore, an automation system that propels patient data to the system using information technology is urgently needed at many healthcare facilities.

### A. Patient Sensing System

Common parameters such as body temperature, blood pressure (systolic/diastolic), heart rate, and patient motion or movements are required by medical professionals as a basic indicator for further treatment and analysis. Fig. 1 shows a block diagram for the detection of basic parameters used for analysis to determine the potential illness. Internal signal conditioning and filtering are performed at this stage to avoid sending unnecessary data the cloud system. This method is applied to the proposed system to minimize storage and preserve data kept in the database. Raspberry Pi is used for data processing from a patient with multiple wearable sensors. Communication to backend system cloud computing, through Wi-Fi system that is normally available in many healthcare facilities.

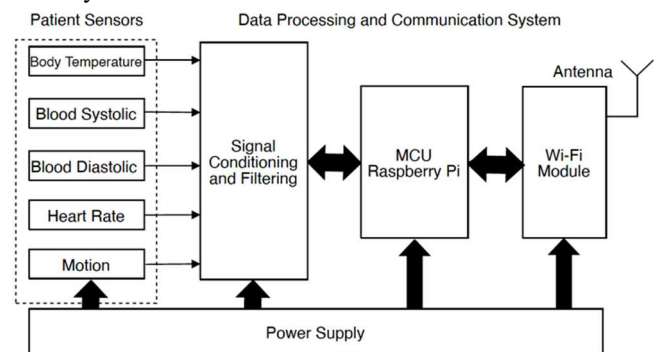

Fig. 1. Block diagram of patient sensing system.

### B. Architecture of Patient Monitoring System

The complete architecture of the patient monitoring system consists of many wearable sensors to achieve high accuracy data and real-time response. Cloud computing is also applied in this step due to the complex analysis and multi-sensors parameter of patient data. Fig. 2 shows a complete architecture of the patient monitoring system.

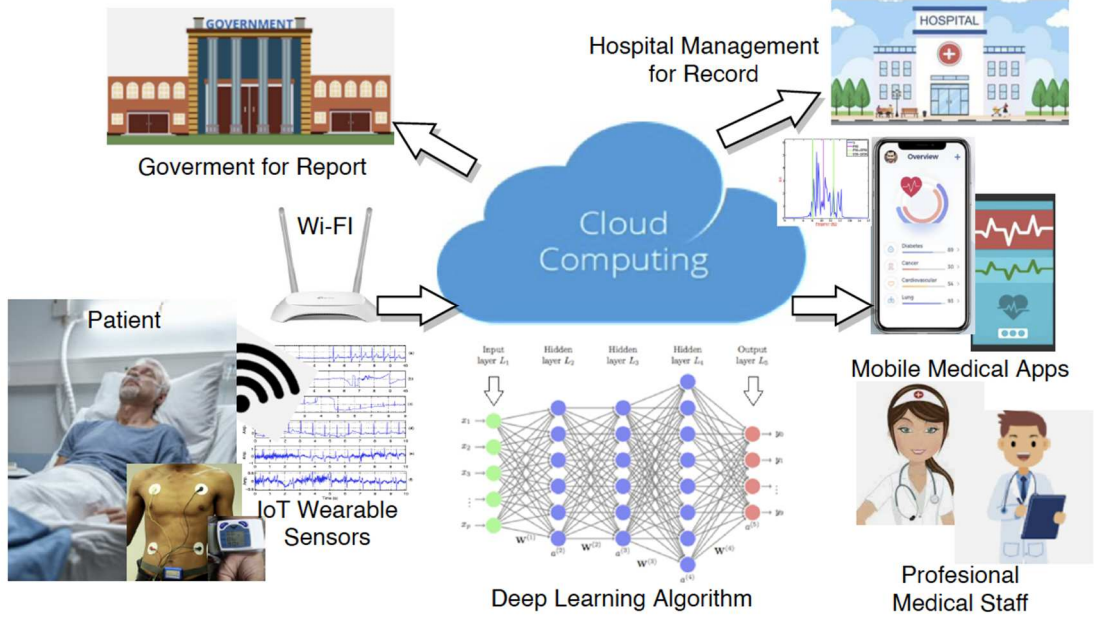

Fig. 2. The complete architecture of patient monitoring system using IoT wearable sensor.

The proposed system for patient monitoring application applies to a healthcare center such as a medical clinic or hospital. Currently, a Wi-Fi network is a common infrastructure in many buildings or offices available as a medium to connect to the Internet. Accordingly, this system is designed with internet connectivity through Wi-Fi, where all the information detected by IoT sensors is forwarded to cloud computing via a Wi-Fi network. Once data is available in cloud computing, a process to analyze patient data is achieved at this level and valuable information can be accessed by respective institutions. It can be accessed by hospital management for patients' records updates and by government for reporting, as well as by medical professionals who can use mobile applications for reports and follow up patient support.

### C. Deep Learning Algorithm

Deep learning, which is a subset of machine learning, enables processing of data in high variety and volume. Many types of algorithm are invented according to the application and prediction problems. Long Short-Term Memory (LSTM) is a deep learning algorithm invented by Hochreiter and Schmidhuber [35] to address problems of the aforementioned drawbacks of the Recurrent Neural Network (RNN), by adding additional interactions per module or cell. LSTM is a special model of RNN, that is capable of learning in long-term dependencies and remembering information for prolonged periods as a default. The ability to do analysis based on long-term data and actively change in short-term of data made LSTM algorithm suitable to apply in any case and achieve high accuracy results. Fig. 3 shows an architecture of the RNN-LSTM model which consists of several main blocks called "cell" such as the "input gate, output gate, and forget gate". In the dense output layer, the sigmoid activation function classifies the values in probabilities for the two predefined classes. The output named  $h_t$  is decision-based

input and pre-processing in every step is identified "forget gate" with function of  $f_t$ .

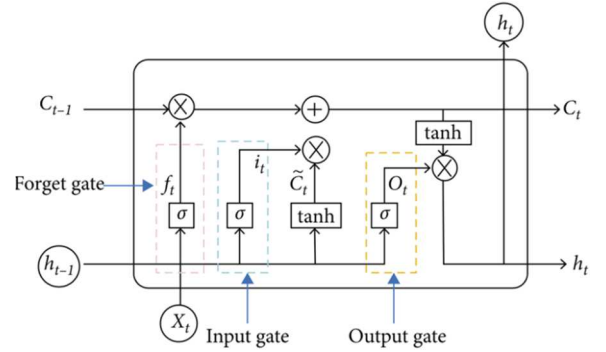

Fig. 3. The structure of RNN-LSTM algorithm

Moreover, the LSTM model can be elaborated as short-term memory which acts when the information is being acquired, retains that information for a few seconds, and then destined it to be stored for longer periods, or discarded. Long-term memory permanently retains information, allowing its recovery or recall. It contains all autobiographical data and all knowledge. Refer to the architecture of the LSTM model which consists of three major cells and the calculation of each cell in which the process can be written as equation (1) to (6).

$$f_t = \sigma(W_f \cdot [h_{t-1}, x_t] + b_f) \quad (1)$$

$$i_t = \sigma(W_i \cdot [h_{t-1}, x_t] + b_i) \quad (2)$$

$$\tilde{C}_t = \tanh(W_c \cdot [h_{t-1}, x_t] + b_c) \quad (3)$$

$$C_t = f_t * C_{t-1} + i_t * \tilde{C}_t \quad (4)$$

$$o_t = \sigma(W_o \cdot [h_{t-1}, x_t] + b_o) \quad (5)$$

$$h_t = o_t * \tanh(C_t) \quad (6)$$

LSTM model can handle the problem with long-term dependencies of RNN which the RNN algorithm cannot do in the prediction of the information stored in the long-term memory, but can give more accurate prediction from the recent information. LSTM can use by default, to retain the data for a long-term period, which is normally used for predicting, processing, and classifying, based on time-series data.

#### IV. RESULTS AND DISCUSSION

The patient monitoring system has been designed and implemented. Multiple testing scenarios have been conducted to check the performance of the sensors and proposed system. The sensors are attached to the patient body to detect human body temperature, blood pressure (systolic/diastolic), ECG (one pair), and movement or motion sensor. Fig. 4 shows complete sensors attached to the patient and console with a module of microcontroller to detect patient data. Collected data then is retrieved with a filtering feature before it is forwarded to the cloud computing. Therefore, placement of sensor is very important to achieve high accuracy data retrieved by all the sensors including system calibration. Valuable patient information is retained in local memory, even though the system is not connected to the Internet, however, once the system and connectivity are ready all the data will be forwarded to the cloud computing via a Local Area Network (LAN) or Wi-Fi system in a healthcare centre.

Fig. 4. Analysis diagram of real-time sensor data to forecasting number

Measurement and experiment were conducted as initial testing at one medical clinic with 10 volunteers with both male and female participants of varying ages. The measurement of human body parameters as a simulation for every participant over the duration of 5 hours, included all data and information in the monitoring system. During testing all the sensors were attached to the volunteers' person to record some basic scenarios such as walking, and sleeping, to obtain various information according to the activities. Table 1 displays complete information of volunteers in the testing phase, representing different genders chosen, different results of human, other parameters such as age, height, weight, and background or history of previous illness. The total time to collect information is 5 hours, which is an

estimate to achieve human properties as a normal patient and other additional features.

TABLE I. DETAIL OF VOLUNTEER IN EXPERIMENTS

No	Volunteer	Gender	Age (Years)	Height (cm)	Weight (Kg)	History
1	A	Male	42	160	68	Normal
2	B	Male	35	158	63	Normal
3	C	Male	45	163	73	High Blood
4	D	Female	46	155	56	Normal
5	E	Male	65	162	70	Normal
6	F	Male	28	165	73	Asthma
7	G	Female	31	153	56	Normal
8	H	Female	54	150	50	Normal
9	I	Female	44	155	60	Normal
10	J	Male	38	160	62	Coronary

Then results from the system collect information about the patient and send data to the cloud with the number of information as patient parameters from the sensor. Fig. 5 shows the graph data collection consisting of patient body temperature, blood pressure (systolic/diastolic), heart rate, and movement. The results as in Fig. 5 are in normal condition with data flow during collection within 5 hours that the volunteer requested to relaxed position and less movement.

Fig. 5. Patient data detected by sensors in normal condition

Another experimental scenario involved the request of the volunteer in an atypical stance, for example, demonstrating exercise to increase heart rate and blood pressure, such as a little bit of walking and increased movement to obtain simulation data in high as well as the abnormal graph. This scenario tests and checks whether the system can detect abnormal conditions based on data received and the sensitivity of the system. Fig. 6 shows the data received from the sensor as plotted in a graph with some abnormal points detected by the system and highlighted as alert from patient.

Fig. 6. Patient data detected by sensors in abnormal condition in red circle

Further, a mobile application was developed to assist medical staff, where medical doctors and/or nurses checked and monitored patient status. The proposed system using an IoT sensor monitors multiple patients simultaneously using IoT network and sends data to cloud computing. Once data is available and processing is done in the cloud the mobile device accesses the patient information from the cloud with an identity number based on the patient's information. This method is not only helpful for the healthcare facilities' patient data management but also for the exchange of information with the respective institution or government. Likewise, Fig. 7 shows a sample of mobile application to monitor patient data and information referring to the data uploaded to cloud computing, as well as subsequent processing displaying the latest information.

Fig. 7. Mobile application of patient monitoring system

## V. CONCLUSION

Ultimately a system for patient monitoring has been designed and developed to retrieve continuous patient health information. Several sensors are used to obtain valuable data from the patient, and pre-processing is applied to filter unnecessary data kept in cloud computing. Moreover, deep learning algorithms implemented in the cloud computing to analyze patient data achieve high accuracy in the decision-making process. Results reveal that all the patient data was detected and forwarded to cloud computing with a success rate of more than 95%, while error occur due to internet connectivity through Wi-Fi, all the data was successfully received by cloud computing but there is a delay in the data transfer. Overall patient data analysis is able to determine abnormal data including the status of the health or illness of the patient. Future development to achieve more detailed diseases and symptoms to patient potentially are next steps to consider, while also acknowledging how alertness of patient abnormality have been addressed in this initial stage.

**ICECCME - 2022**

16-18 November - Maldives

**IEEE**

# CERTIFICATE OF PARTICIPATION

*Presented to*

**EVIZAL ABDUL KADIR**

*for an oral presentation in the conference with paper title:*

**ID801: PATIENT MONITORING AND DISEASE ANALYSIS BASED ON IOT WEARABLE SENSORS AND CLOUD COMPUTING**

The contribution is awarded with this certificate.

Dr. Raheema Abdul Raheem  
Conference Arrangement Chair

Dr. Mahendra Gooroochurn  
Conference Co-Chair
