Quantum Phase Transitions in Clean Ising Superconductors

Puhua Wan

Zernike Institute PhD thesis series 2023-07

ISSN: 1570-1530

The work described in this thesis was performed in the Device Physics of Complex Materials group of the Zernike Institute for Advanced Materials at the University of Groningen, the Netherlands. This work was supported by NanoLab NL and the Zernike Institute for Advanced Materials.

This work is partly financed by the Chinese Scholarship Council (CSC No. 201606020099), and partly financed by TOPCORE (with project number OCENW.GROOT.2019.048)

Quantum Phase Transitions in Clean Ising Superconductors

PhD thesis

To obtain the degree of PhD at the
 University of Groningen
 On the authority of the
 Rector Magnificus Prof. C. Wijmenga
 And in accordance with
 The decision by the college of Deans.

This thesis will be defended in public on
 Tuesday 31 January 2023 at 12.45 hours

by

Puhua Wan

Born on 1 November 1989
 in Hubei, China

Supervisor

Prof. dr. Jianting Ye

Co-supervisor

Prof. dr. Beatriz Noheda

Assessment committee

Prof. dr. Yoshihiro Iwasa

Prof. dr. Maxim Mostovoy

Prof. dr. Jan Aarts

Contents

1. Introduction	1
Abstract	1
1.1 Two-dimensional Transition metal dichalcogenides	2
1.2 Spin-orbit coupling in TMDs	5
1.2 Inducing superconductivity in semiconductor MoS ₂	7
1.3 Intrinsic superconductivity in 2H-NbSe ₂	12
1.4 Quantum phases in clean 2D superconductors.....	15
1.5 Motivation and outline of this thesis	23
Reference	24
2. Universal power-law scaling in Bose-metal-like states	31
Abstract	31
2.1 Introduction.....	32
2.2 Methods.....	35
2.2.1 Device fabrication.....	35
2.2.2 Continuously tuning disorder strength	36
2.3 Results and discussions	39
2.3.1 Superconducting transitions within the clean limit.....	39
2.3.2 Power-law scaling of Bose-metal-like states.....	44
2.3.3. Thermal activation of vortex dislocations	48
2.4 Conclusion.....	50
Reference	51
3. Universal Scaling in the quantum Griffiths states	55
Abstract	55
3.1 Introduction.....	56
3.2 Methods.....	57
3.3 Results and discussions	57
3.3.1 Universal scaling in the quantum Griffiths regions	57
3.3.2 Phase diagram of disorder-dependent quantum Griffiths.....	68
3.3.3 Effects of spin-orbit coupling	72
3.4 Conclusion.....	73

Reference	74
4. Orbital Fulde–Ferrell–Larkin–Ovchinnikov States in a Layer-Coupled Ising Superconductor	77
Abstract	77
4.1 Introduction	78
4.2 Methods	81
4.3 Results and discussions	82
4.3.1. Mean-free path and clean superconductivity	82
4.3.2 Transport Characterization	84
4.3.3 Breaking the translational symmetry	87
4.3.4 Breaking the rotation symmetry in the FFLO state	90
4.3.7. Phase diagram of orbital FFLO states	97
4.4. Supplementary materials	100
4.4.1. Subtracting the canting angle	100
4.4.2. In-plane isotropy of monolayer MoS ₂	104
4.4.3. Ginzburg-Landau model for the six-fold orbital FFLO	105
4.5 Conclusion	107
Reference	108
5. Vortex dynamics in the Orbital FFLO States	115
Abstract	115
5.1 Introduction	116
5.2 Methods	117
5.3 Results and discussions	117
5.3.1 Reentrant superconductivity in the orbital FFLO phase	117
5.3.2 Harmonic resistance in the mixed state	123
5.4 Conclusion	127
Reference	128
Summary	131
Samenvatting	135
Acknowledgment	139
List of publications	143
